including stamp collecting, natural and naval history, and sailing. Although his childhood was idyllic, Roosevelt developed what his biographer Ted Morgan called an “opaque core” and an “inner armor” to defend himself against his mother’s meddling (Morgan 1985, 50). At fourteen FDR entered the elite boys preparatory school, Groton, run by the legendary headmaster, Endicott Peabody, who instilled in his charges a simple, powerful Christian faith as well as a public spiritedness. Later in life, FDR would remark that, next to his parents, Peabody was the most formative influence in his boyhood. The future president performed well academically, finishing at the top of his class at Groton and later at Harvard, where he finished his degree in three years. FDR was a quick study with a flair for languages and had an encyclopedic knowledge of topics he loved. The flaw in Roosevelt’s mind, however, seemed to be rooted in his personality—he had little in the way of an introspective quality, as well as an inability to integrate ideas to think systematically or synthetically. Biographer Kenneth Davis argued that Roosevelt possessed a “collector’s mind” that was good with details but uncomfortable with generalities (Davis 1971, 140).

At Harvard, Roosevelt distinguished himself through his labors at the student newspaper, *The Crimson*. Although not a talented journalist, he became the paper’s chief editor by working hard as well as by employing an affable, accommodating manner that would define his leadership style. Despite his sunny optimism and easygoing manner, one member of the *Crimson* staff said of Roosevelt: “In his geniality there was a kind of frictionless command” (Davis 1971, 163).

ROOSEVELT’S EARLY LEADERSHIP

Roosevelt diffidently practiced law with a Wall Street firm until 1910, when he won a seat in the New York state Senate. In the election of 1912 FDR was an early backer of Woodrow Wilson. That backing got Roosevelt appointed assistant secretary of the navy. Roosevelt developed the reputation as a skilled administrator, although he was inclined to steal the spotlight and at times undercut the authority of the secretary under whom he served, Joseph Daniels.

Even as Roosevelt energetically engaged in the naval work, he kept an eye on New York politics, maintaining allegiances back home in anticipation of his eventual reemergence as an elected official. Roosevelt developed a considerable following. Tammany Hall (the Democratic political machine that dominated New York City politics) leadership, eager to keep him out of New York affairs in 1920, successfully advanced his candidacy for the Democratic nomination for vice president on the ticket headed by James Cox. Despite Roosevelt’s best attempts the Cox-Roosevelt ticket lost badly to the Calvin Coolidge ticket.

In the summer of 1921, Roosevelt contracted polio. Despite a strenuous exercise regimen and a two-year period of convalescence, Roosevelt would never regain use of his legs. The disability, in the judgment of his wife, Eleanor, made Roosevelt more compassionate and patient. In 1926, he purchased a resort in Warm Springs, Georgia, that became a rehabilitation center. He mixed with the patients there, who, like him, were stricken with polio, encouraging their recovery.

In the mid-1920s, Roosevelt began his political comeback, becoming active in Democratic Party affairs and winning the New York race for governor in 1928. Roosevelt took easily to his first elected executive position, but the state legislature resisted many of his progressive proposals. In 1933, Roosevelt launched his presidential bid as the choice of the progressive wing of the Democratic Party, the only truly national figure in the field. The general election against President Herbert Hoover was an easier contest. Roosevelt offered a “New Deal” for U.S. citizens. He offered few specifics other than to warn the country against the destructiveness of despair. However, Roosevelt’s victory was assured.

NEW DEAL LEADERSHIP

“There is nothing to fear but fear itself,” President Roosevelt announced in his inaugural address and with those words launched a historic period of legislative innovation and government expansion called the “first 100 days.” During this period Roosevelt’s landslide election, combined with the sense of despair over the Great Depression licensed the president to

exercise virtually unchecked power. During this great honeymoon period between the president and Congress, many of the “alphabet soup” federal agencies of the New Deal were formed. Just as important as the new interventionist thrust was Roosevelt’s leadership aimed at restoring public confidence in the economy and the nation. Although some of the policies enacted were contradictory and failed to help end the economic crisis, for Roosevelt the more important point was that vigorous activity would inspire a bedraggled people to no longer despair.

The New Deal as a leadership project was a series of interlocking commitments and goals that President Roosevelt persistently pursued. Roosevelt’s first and the most abiding goal was to restore confidence in U.S. constitutionalism and traditional democratic values at a time when they were under assault from the left and the right. He viewed the presidency as a preeminent position of moral authority. Roosevelt’s second goal was to bring about an economic revival that would demonstrate the practical value of a reaffirmation of U.S. traditionalism. Through a variety of methods—fiscal spending, market controls, and monetary manipulation—the administration sought to keep the economy on track. The third goal of the New Deal was modernization—to knit the country together through great public works projects in the underdeveloped South and West to create a truly national economy. The final goal was to render humanitarian assistance directly through the granting of welfare expenditures or indirectly through government jobs-creation projects. The common thread in all New Deal policies was to harness the power of an activist government to make the U.S. system work.

ROOSEVELT’S WAR LEADERSHIP

The events leading to U.S. entry into World War II in late 1941 are the most controversial aspect of Roosevelt’s leadership. In the early presidency, Roosevelt largely ignored foreign policy, focusing his attention on reviving the domestic economy, even as militarism took hold in Germany, Italy, and Japan. Yielding to congressional isolationists in 1935, Roosevelt signed the Neutrality Act, which prohibited the ship-

ment of arms to foreign belligerents. Roosevelt feared that a forceful, confrontational approach with the fascist powers would risk losing support for his New Deal policies. While Roosevelt complained, “it is a terrible thing to look over your shoulder when you are trying to lead—and find no one there,” he refused to engage in an extended dialogue with the public about the need for the United States to take an active role in world affairs (Davis 1993, 140). He feared that moving too forcefully would empower congressional isolationists to further constrict his power by strengthening of the prohibitions of the Neutrality Act. Although Roosevelt abhorred the fascist dictatorships, as late as 1941 he hoped to keep the United States out of war. That was a promise he made in the 1940 presidential race. As the German Nazi leader Adolf Hitler invaded European nations, Roosevelt moved to turn the United States into an “arsenal of democracy,” providing war supplies to England, a policy made much easier with the revision of the Neutrality Act in November 1939. The Japanese sneak attack at Pearl Harbor in December 1941, of course, forced U.S. entry into the war.

After the United States was committed to the war, Roosevelt’s primary leadership tasks were to work in concert with the important Allied powers—Britain and the Soviet Union—as well as to keep up morale on the home front. Roosevelt’s overarching goal was to marshal resources for an invasion of Europe across the English Channel. In this plan, he had to overcome the reservations of British Prime Minister Winston Churchill and the British military. (They feared catastrophic consequences if such a direct clash with German forces took place.) The D-Day invasion of 1944 was a military success, proof of the quality of U.S. military planning. Roosevelt also devoted considerable attention to the postwar international order, a matter that was a central topic of discussion at the Yalta Summit in 1945. There Churchill, Soviet leader Joseph Stalin, and Roosevelt agreed to create the United Nations and allowed Russia de facto dominance of eastern Europe. Although some have condemned Roosevelt for capitulating too readily to Stalin’s territorial demands, viewing Yalta as Roosevelt’s most glaring error of his long presidency, it is clear that Roosevelt

had little choice. Soviet troops held the territory, and Stalin was not prepared to negotiate away what he viewed as vital to the Soviet's military security.

ROOSEVELT'S LEADERSHIP STYLE

The defining characteristic of Roosevelt's leadership was the tactical use of political manipulation, feint, and misdirection to serve the strategic goal of allowing him maximum flexibility and freedom to act. This approach was rooted in Roosevelt's personality. He liked practical jokes, enjoyed fooling people, and took particular satisfaction in clever decisions that tied adversaries in knots. Roosevelt greatly amused himself when he appointed Joseph P. Kennedy—a slightly disreputable millionaire financier—to run the Securities and Exchange Commission to keep an eye on his former cronies. A few years later, Roosevelt enjoyed tweaking the British establishment with the appointment of the brusque Irish-American as ambassador to England. Roosevelt's staff and cabinet were subjected to the same treatment. Harold Ickes, secretary of the interior and head of the Public Works Administration, and Harry Hopkins, administrator of the Works Progress Administration, had overlapping authority for public works projects, a source of bitter rivalry between the two and a matter that Roosevelt never sought to straighten out. Secretary of State Cordell Hull and his powerful undersecretary, Sumner Wells, vied for the president's attention and held each other in mutual contempt. Roosevelt liked to position his underlings in competitive balance so that ideas flowed into the White House and no aide became too powerful. Many were amazed by how well Roosevelt tracked the gossip that circulated in Washington's rumor mill, information gained from the multiple sources he had around town. When mulling over the possibility of seeking a third term as president, at various junctures Roosevelt let many of his close associates believe they were his anointed candidates to succeed him as president, including Harry Hopkins, Agriculture Secretary Henry Wallace, and Postmaster James Farley. The subtle manipulation of those around him allowed Roosevelt to bide his time to see if the moment would ripen for him to seek a third term.

The famous Roosevelt charm masked—or at least took an edge off—much of the manipulation. Roosevelt was unfailingly familiar with all visitors, typically referring to all by their first name and engaging in amiable chatter. A common technique that Roosevelt employed when he wanted to avoid a confrontation or a difficult decision or topic was to dominate a conversation with irrelevant chatter until the time for a scheduled appointment was up. At times, Roosevelt overestimated his ability to charm adversaries. He clearly underestimated his ability to “handle” Stalin, for example.

All of Roosevelt's political machinations were conveyed with a mischievous humor that many—particularly members of the press—found disarming. Dismissing Republican charges that Roosevelt had ordered the navy to send a destroyer to fetch his Scottish terrier, Fala, Roosevelt said in a famous 1944 “Fala speech” to the Teamsters Union that the dog's “Scotch soul was furious. He has not been the same dog since” (Kennedy 2001, 792). In a speech at the University of North Carolina in 1938, amid charges that he practiced class warfare, Roosevelt noticed that his critics claimed that he “breakfasted every morning on a dish of grilled millionaire” (Roosevelt 1938, 147). Amid laughter at the comic exaggeration, Roosevelt assured the audience that he “was a devotee of scrambled eggs” (Roosevelt 1938, 147).

Most of the public experienced Roosevelt's charismatic personal leadership through a medium the president exploited well: radio. Roosevelt delivered many informal addresses that were dubbed “fireside chats” because of the great warmth and intimacy that Roosevelt projected. His first as president was his most memorable and came during the banking crisis of 1933. The president explained bank operations in clear, commonsense language during his first radio “Fireside Chat” (12 March 1933), noting, “I can assure you that it is safer to keep your money in a reopened bank than under the mattress” (Kennedy 2001, 136).

ROOSEVELT'S VISION AND LEGACY

The twelve years of Roosevelt's governance transformed the U.S. political system. The creation of the

New Deal voting coalition is Roosevelt's most enduring legacy. New loyalties among working-class and middle-class voters formed to make the Democratic Party the majority party from 1933 until the early 1990s. Roosevelt also transformed the commitments of the Democratic Party from a states' rights agenda to a liberal party supportive of big government activism. Programmatically, Roosevelt steered to passage legislation that created institutions that are still important today, including the Social Security Administration, the Securities and Exchange Commission, and many great public works projects initiated by the Public Works Administration, among others. Roosevelt changed the system of U.S. federalism, too, putting citizens in direct contact with the federal government and encouraging a system of intergovernmental cooperation to solve pressing problems. Politically, Roosevelt "personalized" the presidency through the use of radio, making direct appeals to the public to bring pressure to bear on Congress. The presidency under Roosevelt became the first among nominally equal branches, responsible for setting the nation's legislative agenda. Roosevelt also reengineered the organization of the executive branch, fortifying the power of the presidency with the creation of the Executive Office of the President, marking the start of the creation of an extensive staffing system to serve an advisory role to aid presidential decision making. In the historian William Leuchtenburg's term, subsequent presidents have labored in the "shadow" of FDR, forced to use his leadership as the yardstick for their own but never quite measuring up. Perhaps even more important than the revolutionary changes of the Roosevelt years were the aspects of U.S. life that Roosevelt preserved. In an era when Europe fell under the sway of dictatorships of the left and right, Roosevelt sought to preserve U.S. constitutionalism by expanding the power of the federal government to preserve fundamental commitments to civil liberties, democratic elections, and the separation of powers. Perhaps Schlesinger's classic formulation is the best summation of the Roosevelt's leadership: Roosevelt used Hamiltonian (relating to the U.S. politician Alexander Hamilton) means of vigorous federal

power to preserve the Jeffersonian (relating to the U.S. president Thomas Jefferson) ends of liberty and democracy.

ROOSEVELT, THEODORE (1858–1919)

U.S. president

Theodore Roosevelt was instrumental in transforming the United States into a world power, matching a U.S. military authority with a rising economic position. At home, he elevated the federal government to a then-unprecedented preeminence vis-à-vis private corporations and state governments—and with Hamiltonian "energy in the executive" (*The Feder-*

alist [No. 70] 1788)—he made the presidency the mainspring of the federal government. His accomplishments ranged from the construction of the Panama Canal (completed in 1914) to the establishment of the modern administrative state through dramatic expansion of federal regulatory authority. His environmental legacy—protecting more than 230 millions acres from development, including landmarks such as the Grand Canyon—now accepted was once controversial.

BIRTH AND EARLY YEARS

Roosevelt was born on 28 October 1858, in New York City. His father, Theodore Roosevelt Sr., used his family's established social and economic standing to become a noted philanthropist and leader in public affairs. Following a practice then customary among the most privileged, Roosevelt Sr. purchased the services of a second rather than fighting in the Civil War, but toiled as a noncombatant to assist the Union cause. Theodore Roosevelt's mother, Martha Bulloch Roosevelt, came from an established family in Georgia, bringing unaccustomed southern values of romance and militarism into the generally stolid Roosevelt line.

When young, Theodore was by all accounts very weak physically, tormented especially by asthma that was debilitating (he was often unable to summon sufficient breath to extinguish a bedside candle) that made him a center of his family's concerned attention. At the urging of his father, "Teedie" began remaking his body through laborious exertions in a household gymnasium. According to Roosevelt's *Autobiography* (1913, chap. 2), a fateful moment occurred when he was thirteen years of age. Humiliated by roughhousing boys who bullied him without apparent exertion or remorse during a summer retreat, he methodically undertook what became a defining, lifelong project of self-creation. The result was Roosevelt's "strenuous life . . . philosophy—of bodily vigor as a method for getting that vigor of soul without which vigor of the body counts for nothing."

Entering Harvard College after home schooling, Roosevelt asserted various aspects of his multifaceted personality, prefiguring his lifelong quest to

combine the life of action and the life of the mind. Successfully moving on from his grief at the death of his father during his junior year, Roosevelt participated in sports and literary activities, graduating with Phi Beta Kappa honors. He also became engaged to his first love, Alice Hathaway Lee, whom he married five months after graduation, on his birthday in 1880.

A "DUDE" ENTERS POLITICS

Roosevelt returned to New York City, where he entered the Columbia Law School, simultaneously writing what would become a standard reference, *The Naval War of 1812*. Uncommon for a person of high privilege at the time, Roosevelt soon left his law studies for politics. Beginning in 1881, he was elected to three terms in the state assembly, where he recalled he "rose like a rocket" (Morison 1951, 634).

Roosevelt's hitherto cosseted life turned difficult on 14 February 1884, when, in a hideous coincidence, his mother and wife both died, from separate and unexpected illnesses, in the family home where Roosevelt was born. Stricken with grief, he left his newborn daughter, Alice, in the care of his elder sister, and headed to the Dakota Territory. His experience there over the next two years completed his physical transformation into the masterly, robustly assertive individual that he later personified; he also transcended his former geographic and class-based snobbery. Roosevelt later said that his experiences in the West made possible his ultimate emergence as president.

Returning to New York in 1886, Roosevelt ran for mayor on the Republican ticket, placing third in a three-way contest. The next two years were marked by his remarriage (to Edith Kermit Carow, a family friend), the completion of his Long Island home, Sagamore Hill, the birth of his second child (four more would follow), and his writing of several books on history, politics and wilderness life.

Roosevelt's public career resumed in 1889, when he became a U.S. Civil Service Commissioner. He contemplated another run for New York City mayor in 1894 but, bowing to the wishes of his wife, declined. When his party's eventual nominee was elected, Roosevelt was given an unenviable consola-

tion prize, an appointment to the New York City Police Board. Becoming its president, he served until the spring of 1897. Although these positions afforded Roosevelt opportunities for recognition as a reformer, he and other politicians did not think public office in New York City would assist his climb to the higher appointive or elective office.

ROOSEVELT'S "CROWDED HOURS" BEGIN

In April 1897, President William McKinley (1843–1901) appointed Roosevelt to the position of assistant secretary of the navy. Though this was the number two position in the Navy Department, Roosevelt did not hesitate to move ahead of the president and the secretary in publicly advocating a world-class fleet and America's entry into the "great game" of imperialism. He verged on insubordination when he assumed responsibility for the department in the course of his superior's absence for an afternoon, ordering the navy to prepare for war against Spain in the Philippines.

When war with Spain finally arrived, he obtained a commission to serve in Cuba. Roosevelt's character was illuminated by his battlefield heroics, which bonded him for life with the "Rough Riders" under his command. His simultaneous readiness to publicly challenge his superiors furthered endeared him to his recruits, but was likely a factor in his being denied, until 2001, the Congressional Medal of Honor he coveted.

FROM ROUGH RIDER TO THE PRESIDENCY

Roosevelt's performance was habitually reported in the increasingly influential mass media, establishing him as an early celebrity in the modern sense. On the strength of the public acclaim he garnered, Roosevelt's independence was overlooked by party bosses seeking a plausible Republican gubernatorial candidate New York in 1898. Elected by a narrow margin, as Governor Roosevelt he established a creditable record, instituting corporate regulation (especially relating to taxation and public disclosure), civil service reform, and conservation policies that prefigured his presidency.

A year later, in 1899, McKinley's vice president unexpectedly died. Under the law at the time, the post would remain vacant through the election in November 1900. Against the president's initial inclinations, Roosevelt was placed on the McKinley ticket at the 1900 Republican convention. He was the choice of an unlikely coalition of supporters (seeking to move him toward the presidency) and detractors (who thought the vice presidency would signal the end of his political career). As McKinley's running mate, Roosevelt served as the primary traveling spokesman for the ticket that achieved a landslide victory in November.

Following McKinley's assassination just six months after their inaugural, on 14 September 1901, Roosevelt assumed the presidency. He remains the youngest individual to serve in the nation's highest office.

ROOSEVELT WIELDS THE BIG STICK AT HOME AND ABROAD

Though Roosevelt declared fidelity to the "stand pat" McKinley program, he inevitably left his own indelible mark on the presidency and the nation. He officially gave the executive mansion the name that the public had long used: The White House.

In February 1902, Roosevelt asserted the federal government's primacy over the private financial power that had dominated the post-Civil War period of breakneck industrialization. Without the then customary advance notice to the prospective corporate defendants, the new president ordered the attorney general to bring an antitrust suit against the Northern Securities trust. In one stroke, Roosevelt had openly defied the imperious J. P. Morgan (whose private power was comparable to today's secretary of the treasury and federal reserve chairman, combined), had put himself on the side of individual citizens against the often reviled railroads, and thrust the presidency—and himself—into the center of American life. Later that year, Roosevelt demonstrated that could indeed "speak softly" as well as "carry a big stick," successfully mediating a potentially ruinous anthracite coal strike that divided labor and management in the fall and winter of 1902.

With the strategic goal of increasing American commerce and military power by constructing a path between the Atlantic and Pacific, Roosevelt took on the Panama Canal. Beginning in 1903, Roosevelt combined ruthless *realpolitik* in obtaining rights from the new nation of Panama with a deft hand in managing one of the great public works projects of history.

THE "SQUARE DEAL" EMERGES

Elected in his own right by a record majority in 1904, Roosevelt could no longer be dismissed by critics as "His Accident." He had new power to advance his policies, which he said would provide a "Square Deal" for ordinary Americans seeking to lead lives reflecting what he called "the higher life of citizenship." Roosevelt believed that a democracy's well-being ultimately rested on the character of the people on whose consent government was based. The definition he offered varied, and was somewhat imprecise—yet it resonated with many Americans in the early twentieth century. For example, in California in 1903, the young president declared:

Character has two sides. It is composed of two sets of traits; in the first place the set of traits which we group together under such names as clean living, decency, morality, virtue, and the desire and power to deal fairly each by his neighbor, each by his friends, each toward the State. . . . In addition to decency, morality, virtue, clean living, you must have hardihood, resolution, courage, the power to do, the power to dare, the power to endure, and when you have that combination, then you get the proper type of American citizenship. (Roosevelt 1903, 22–23; 38)

After he established an agency to regulate corporations in 1903, in 1906 he succeeded in obtaining congressional approval of new railroad rate regulation (via the Hepburn Act), as well as the Pure Food and Drug Act, and federal meat inspection.

Roosevelt's oft-quoted "speak softly and carry big stick" is often associated with the jingoism of the Spanish-American War and his Rough Rider's apparent zest for a fight. This characterization, however, belies Roosevelt's true political acumen. Holding power, Roosevelt exhibited subtlety and skill in for-

Rough Rider Reenactment Groups

Although not as numerous as Civil War ones, there are several Rough Rider reenactment groups active in the United States. Their activities range from reenacting battles to marching in parades to giving historical talks and demonstrations. Some are listed below and additional information can be obtained from <http://home.sprynet.com/~frfrog/rough.htm#Reenactment>

eign affairs. He became the first American to win the Nobel Peace Prize for his successful mediation of the Russo-Japanese War in 1905. He established the Roosevelt Corollary to the Monroe Doctrine (asserting American rights to intervene in Latin America to enforce the historic U.S. policy against European intervention) with support for international legal institutions to render its application less likely.

He marked his presidency by the vigorous application of federal authority for environmental protection and thoughtful resource use. Employing every legal tool at his disposal, Roosevelt took this fight to every venue. Though successful in obtaining congressional approval for new initiatives in reclamation and preservation, he also made unprecedented use of executive authority to bring land within federal protection—at times in brazen defiance of powerful interests and their congressional allies. As his effectiveness with Congress waned, he developed new mechanisms such as national study commission including and a convocation of the governors that

The best executive is the one who has sense enough to pick good men to do what he wants done, and self-restraint enough to keep from meddling with them while they do it.

—Theodore Roosevelt

would become the National Governors' Association.

Roosevelt's presidency closed with the return of the Great White Fleet that between 1907 and 1909 circumnavigated the world as a symbol of America's newfound naval power. Its guns demonstrated power; its color communicated the desire for peace; its leaving the American shores relatively undefended conveyed confidence.

"THE GREATEST EX-PRESIDENT"

Though his public support remained high, Roosevelt honored an impulsive 1904 commitment not to seek another term (then allowed by the Constitution). He left office on a positive note, one of the few American presidents to succeed in turning over the White House to his chosen successor. Handing the reins to his friend William Howard Taft (1857–1930), Roosevelt embarked on a long-planned African safari, followed by a well-received European tour marked by several major speeches. Though Roosevelt's continuing effect on national life would lead one historian of the period—John Milton Cooper Jr.—to label him "the greatest ex-president," his remaining years were marked by challenge and disappointment.

Roosevelt returned in 1910 to an unsettled political situation. Taft, through his support for the conservative "Old Guard," as well as general political ineptitude, exacerbated a growing breach with the progressive Republican faction associated with Roosevelt.

A Taft-Roosevelt estrangement ultimately resulted in Roosevelt's February 1912 announcement that he would challenge the president for the Republican nomination. A bitter fight ensued. Though Roosevelt swept the direct primaries, the president's control of the largely unelected delegates proved impervious to Taft's bungling and Roosevelt's assault. Following an acrimonious national convention, Roosevelt and his

followers, charging theft, bolted, forming the National Progressive ("Bull Moose") Party.

The Democrats' subsequent nomination of New Jersey governor Woodrow Wilson, also identified as a progressive, made Roosevelt's defeat—and Wilson's triumph over the divided Republicans—all but certain. Nonetheless, Roosevelt managed to place second—the highest third-party total in American history—and the victorious Wilson was elected a plurality president, garnering fewer votes than his party's 1908 nominee achieved in defeat.

Roosevelt was politically marooned. He watched with mixed feelings as Wilson's New Freedom increasingly grasped the progressive mantle, though he was gratified that many of the 1912 Bull Moose proposals—from endorsement of woman's suffrage, to calls for a "living wage," and a stronger national government—were taken up by the Democrats. As a practical politician, Roosevelt returned to the Republican fold in 1916, assisting Charles Evans Hughes's narrowly unsuccessful campaign against Wilson.

As World War I engulfed Europe in 1914 and 1915, Roosevelt became an increasingly strong voice for "preparedness," unsympathetically contrasting the "milk and water" diplomacy of Wilson with the "blood and iron" of Wilhelmine Germany. When America entered the conflict in April 1917, Theodore Roosevelt unsuccessfully sought Wilson's approval for yet another return to military service. At the same time, he returned to public favor.

Roosevelt soldiered on at the home front, speaking and writing with customary robustness. His four sons saw combat and his daughter Ethel served as a nurse. In July 1918, his youngest child, Quentin, was killed in air combat in France. Observing an inconsolable Theodore Roosevelt, one friend said, "the boy in him finally died." Visibly in decline, increasingly in the hospital or confined to sedentary activities at his home, Sagamore Hill on Long Island, Theodore Roosevelt died in the early morning hours of January 6, 1919.

ROOSEVELT'S CONTINUING INFLUENCE

From the distance of a generation, the distinguished American journalist Walter Lippmann was not alone

in considering Roosevelt “the image of a great leader and the prototype of Presidents” (Lippmann 1935). Reflecting aspects of his original, multifaceted personality, liberals and conservatives alike acknowledge parts of Roosevelt’s wide-ranging political legacy. For example, liberals can point to his key role in the establishment of the modern regulatory state, based on strong national regulatory authority emanating from an empowered presidency. Conservatives similarly find inspiration in his muscular foreign policy, combining idealism with hard-headed realpolitik. In the early twenty-first century, otherwise contending interests pay obeisance to and find inspiration in his indispensable role in granting environmental protection and resource use a central place in American life.

Roosevelt’s ebullient, joyful embrace of power—underscored by his youth during his presidency, and his robust evocation of American national character and destiny—impart a timelessness and approachability being rediscovered in the early twenty-first century. In addition to his enduring accomplishments, Roosevelt is remembered for his animating faith in that the American nation is strong because of what he saw as the public and private “character” of its people. As he declared in 1915: “If I have anything at all resembling genius, it is in the gift for leadership. . . . To tell the truth, I like to believe that, by what I have accomplished *without* great gifts, I may be a source of encouragement to American[s]” (Street 1915, 53).

RUSSELL, BILL (b. 1934)

Professional basketball player

Bill Russell is considered by many to be the greatest team athlete of the twentieth century. In thirteen seasons with the legendary Boston Celtics, he led the team to eleven championships, including one stretch of eight straight. Russell was the spiritual and physical leader of the Celtic’s dynasty. As an individual, Russell redefined the center position and dominated games by playing intense defense and rebounding. Rather than selfishly worrying about personal statistics, he fit his own amazing skills into the team concept. He ultimately made those around him better,

In one of the most intense sports rivalries of all time, Bill Russell of the Celtics defends against Wilt Chamberlain of the Lakers in a championship series game on 27 April 1969 at the Boston Garden.

forcing his teammates to match his level of intensity and will to win.

Born in Monroe, Louisiana, in 1934, Russell grew up during the Depression and experienced the stifling segregation of West Monroe. His father, Charles, who had also been raised in the state, had known former slaves as a boy. Russell's mother, Katie, instilled in him the competitive fire that would make him such an outstanding athlete. When Russell was nine years old, a boy in a gang slapped him as he walked home. His mother's response was to make him fight each boy, one after the other. That incident taught Russell that—win or lose—he had to fight back.

Katie expected Bill and his older brother, Charlie Jr., not only to graduate from high school, but also to go to college. Unfortunately, Katie would never see either. She died of kidney failure in 1946, when she was only thirty-two years old. Her dying words to Charles were to make sure the boys went to college.

The family relocated to Oakland, California, after Charles was denied a raise at the mill in Louisiana because he was black. The Russell brothers flourished in their new home. Charlie Jr. eventually grad-

uated from college and became a playwright and social worker. Bill excelled in the classroom, but was a late bloomer on the basketball court. The turning point for the gangly boy was when the University of San Francisco offered him a scholarship. Coach Phil Woolpert was skeptical, but agreed to take him on.

Woolpert endured harsh criticism for starting three black players, but the USF team won its first NCAA title in 1955. Almost immediately, Russell changed the way the game was played. He blocked shots in an era when defensive players were taught not to jump. The next year, the team once again won the championship. Russell and Hall of Fame teammate K.C. Jones led the team to fifty-five straight wins. After winning the second championship, Russell led the 1956 Olympic basketball team to the gold medal. He dictated the pace of play while on defense, both altering and blocking shots.

A passionate and ferocious competitor, Russell gave his all out on the court. He worked himself into a competitive frenzy, often throwing up before big games. After the grueling NBA playoffs, Russell needed several weeks to recover from the ache in his bones. In Russell's professional career, he was named MVP of the league five times (1958, 1961–1963, 1965). In addition, he was a twelve-time All-Star and won many other accolades. In 1996, he was named one of the fifty greatest players of all time as the NBA celebrated its fiftieth anniversary. Over his career, Russell averaged an astounding 22.5 rebounds per game and 15.1 points per game.

Today's fans remember Russell for the great duels he had with offensive superstar Wilt Chamberlain. The debate over who was the greatest player ever (prior to Michael Jordan) focused on the two big men with contrasting styles. While Chamberlain set scoring records, Russell showed that a center could dominate games on the defensive end and the Celtics won championships.

In 1966, Russell became the first African-American to coach in a major professional sport when Celtic Coach Red Auerbach personally chose the heart and soul of the Celtic dynasty to take over the reins. The team won championships in two of the three years Russell served as player/coach.

After his playing career ended, Russell returned

to the NBA as coach and general manager of the Seattle SuperSonics from 1973 to 1977. The team he built there went on to win an NBA championship two years after he left. His brief tenure with the Sacramento Kings in the 1987–1988 season ended badly. He was fired and returned to Seattle, where he has lived ever since.

Despite the racial climate in the United States in the 1960s and an innate shyness, Russell always spoke openly about the issues that troubled him. Unlike many of today's athletes, who are mainly concerned about product endorsements, Russell willingly confronted societal ills, regardless of the criticisms he received from the primarily white media establishment. He called himself "black" when the term was an insult and played a significant role in the civil rights movement.

An intensely spiritual man and a person of great integrity, Russell remained true to his belief system. For example, the pinnacle of athletic accomplishment is induction into the hall of fame. But convinced that the basketball hall was a racist institution, Russell refused to attend his own induction, even though he was the first African-American to be inducted.

A loner by nature, Russell continues to enjoy long trips by himself, often driving alone and taking time for meditation. In the 1970s he took motorcycle trips

around the West, and he has more recently made several cross-country treks with his wife, Marilyn.

At various times since leaving basketball, Russell has served as a basketball commentator, though he has never been completely comfortable in that role. He has also dabbled in acting. Russell experienced the most post-basketball success as a writer and speaker. He has written three best-selling books: *Go Up for Glory* (1966), *Second Wind* (1979), and *Russell Rules* (2001). The first two were memoirs, and the third outlined his ideas on leadership. He now delivers motivational talks to various organizations around the nation. "For me," Russell (2001, 40) explains, "winning as a team is not a coincidence, it is a choice. In the end, you are judged by winning."

—Bob Batchelor

S

SACRED TEXTS

The earliest reflections on leadership occur in the sacred texts of the world's religious traditions. In them, we may find accounts of the exploits and character of heroes, people in power, and those entrusted with divine or social missions. These reflections often are passed from generation to generation in oral tradition before entering into written texts. Unlike later reflections in political or economic traditions, sacred texts focused on the moral values of leadership, in particular the relationship of humans to the divine and their relationship to one another in light of the divine.

HINDUISM

The sacred texts of Hindu have no author or clear origins. Indeed, they, like other sacred texts, were not so much written as they were seen or revealed. They began in oral traditions at least 2,000 years before the birth of Christ, and by the time they were written down, they had been highly polished by centuries of practice and revision. The *Vedas*, the first of the Hindu sacred texts, are among the world's oldest literature and contain poetic hymns for rituals. In the hands of the priestly class of Brahmins, they became an instrument of power and status. Another tradition developed that relied less on ritual, and thus priestly

intervention, and more on searching for truth and meaning within oneself. The *Upanishads* and *Bhagavad-Gita* express this latter tradition and today are still held in high regard for their insights into human consciousness and development.

Mahatma Gandhi (1869–1948) derived his fundamental belief in satyagraha from the *Vedas* and is said to have meditated daily on the closing eighteen lines of the second chapter of the *Bhagavad-Gita*. They begin with the lines:

They live in wisdom,
Who see themselves in all and all in them . . .

The lines continue to describe the highest development of human consciousness and in them, Gandhi found “in a nutshell the secret of the art of living” (Easwaran 1997, 121). It is a premise of most of the sacred texts that leadership is secondary to developing oneself as a human being and that one who has not sought this development is not qualified to lead. Plato will also use these premises in his model of a philosopher king.

In a period of about two hundred years (500–300 BCE), Hinduism, at least 1,000 years old by this time, turned to applied matters of individual development and social relations. Dharma, or righteousness, is one of the aims of life in the Hindu tradition. *The Laws of Manu* is a dharma-sastra, a code for righteousness and social stability. Book VII

deals with the responsibilities of the king; Book X explains social classes and codes of conduct; and Book XII offers the path to eternal bliss. The honored but restricted and subordinated place of women may be found in Book III, verses 55–60 and Book V, verses 147–168.

Kautilya's (flourished 300 BCE) *Artha-sastra* provides a code for other aims of life: wealth and power. It is the advice of the chief counselor to Chandragupta (died c. 297 BCE), who brought the first unified government to the Indian subcontinent and was a contemporary of Alexander the Great (356–323 BCE). Book VII outlines advice for a king that Machiavelli would repeat 2,000 years later. Chapters 1 to 3 of Book VII deal with traits and styles that are harbingers of leadership advice common in our own times.

BUDDHISM

Siddhartha Gautama (c. 563–c. 483 BCE), known as the Buddha, provides another set of instructions for enlightenment and some practical advice for various categories of people. Buddha took familiar norms and stories from Hindu scripture and applied them to his own time, the sixth century BCE, in a new fashion. He offered theories about the stages of development that preceded by 2,500 years some of the psychological theories that provide the basis of leadership theories today. In addition, the model for Robert Greenleaf's servant leadership, Leo, comes from *Journey to the East*, a novel by Herman Hesse, who adopted Buddhism as his beliefs. Hesse also wrote *Siddhartha*, a fictional account of the Buddha's life.

Two centuries after Christ, Nagarjuna (c. 150–250 CE) revised Buddhism in China. He developed a metaphysical theory of relativity in the *Madhyamika-sastra*, 1,800 years before Einstein developed his theory; therefore this work is one of the early important statements of the linkage of post-Newtonian physics and sacred texts. Some of the current emphasis in leadership theories on values, systems thinking, interconnectedness, and embodied narratives comes from this new science (Wheatley 1992) but often with less awareness than physi-

cists (Capra 1984) of the relevance of the sacred texts for this emphasis.

JUDAISM

The Torah or first five books of the Hebrew Scriptures neatly illustrate the manner in which sacred texts offer models for others to follow (Abraham and his submission to Yahweh); heroic figures carrying out the will of Yahweh (Moses); and the distillation of humans' relation to the divine into rituals and commandments. Exodus and Deuteronomy offer us an archetypical leader—Moses, who literally has charismatic authority—and an archetypical act of leadership, liberation of the Israelites from Egyptian oppression. Moses offers a renewed narrative about the dignity of God's chosen people and enters into conflicts with others—Egyptians—over their oppression. This narrative of selection and deliverance imparts a new sense of identity to the group. Moses also creates conflicts within the group to hold them to a new set of values. When some of their practices (the golden calf) violate the values they have received from God, he is outraged and destroys the calf.

Exodus, Numbers, and Deuteronomy offer an implicit treatment of leadership, by describing the actions of Moses. The books of Samuel deal with David and Solomon, some six hundred years after Moses. In contrast with these implicit treatments, the wisdom literature (Proverbs, Ecclesiastes) offers explicit guidance including the proverbs attributed to a wise ruler, Solomon; insights into the acquisition and character of wisdom; and the purpose and value of human life.

Sacred texts accumulate over centuries, as the interval between Moses and David suggests, with punctuation points of renewal. Isaiah, for example, provided prophetic leadership in the eighth century before Christ. Other prophets punctuated the evolving history of Israel in good times and bad. They interpreted events of their life times in light of the covenant the Israelites had with Yahweh. They spoke truth to powerful kings of Israel, as Nathan spoke to David; and they even enlightened Israel's captors, as Daniel did to the king of Babylon. Hebrew Scriptures

offer us depictions of heroes, rulers, and prophets, all of which bear on the common human experience of leadership extending back more than 3,500 years.

THE GODS MUST BE CRAZY

The Iliad and *The Odyssey*, like sacred texts, bridge the oral and written traditions of Greece, but they tell a very different story about human relations with the divine. The gods of these epic poems are made in the image of humans. The gods decide human events, often for trivial and all-too-human reasons, despite the best efforts of humans to have them do otherwise. Neither Achilles nor Odysseus offers much analytical insight into leadership. They are heroes, however, and as such display heroic traits that leaders may need. Battle brings out endurance, courage, and self-sacrifice in Achilles. The journey home requires the endurance and restraint of Odysseus. Plato and Aristotle will include these traits in the prescriptive work on leaders' traits. Homer tells us that Odysseus used deception and disguise, traits that Machiavelli will extol in some circumstances.

As much as *The Iliad* and *The Odyssey* differ from other sacred texts in the all-too-human nature of the gods, they provide for some a more human explanation of the heroes of other sacred texts. Sigmund Freud, for example, the founder of psychoanalysis, compares the story of Moses' birth and upbringing with common elements of other heroes—Gilgamesh, Perseus, Cyrus, and Romulus—as part of his very radical interpretation of Moses and monotheism.

TAOISM AND CONFUCIANISM

As Buddha developed his theories, around 500 BCE, Lao-tzu (sixth century BCE) put into writing centuries of Chinese thought and philosophy at the same time that Confucius (K'ung Ch'iu, 551–479 BCE), his contemporary, developed principles for the orderly administration of China. In a remarkable burst of spiritual energy, the late Jewish prophets—Jeremiah, Ezekiel, and Daniel—were active at the time Lao-tzu and Confucius were living and teaching in China, Buddha in India, and Zoroaster (Zarathushtra, c. 628–c. 551 BCE) in Persia. These roughly contemporary

paradigmatic figures preceded the golden age of philosophy in Greece by only a century.

Lao-tzu makes very specific references to leaders. Perhaps his most familiar aphorism explains:

As for the best leaders, the people do not notice their existence. The next best, the people honor and praise. The next, the people fear; and the next, the people hate. If you have no faith people will have no faith in you, and you must resort to oaths. When the best leader's work is done the people say: "We did it ourselves!" (Lao-tzu 1962, 17)

Confucius, at the same time, applied the way of Tao, which is at once the first principle of matters outside of ourselves and our internal pursuit and mastery of it, to very specific social and political roles, and he provided an outline for personal development of leaders and traits and styles of leadership. Confucius was interested in finding historical models for the good ruler and to provide training for major and minor political leaders. He provided protocols and rituals for all social relationships. Thus, Confucius and Lao-tzu present two different branches of ancient Chinese beliefs and parallel the differences of the *Vedas* and the more mystical *Upanishads* in Hinduism.

They also hold much in common, however. The origins of Tao, whether human or divine, are uncertain. It is certain, however, for both Confucius and Lao-tzu that humans extend Tao by excellence in an area of their choosing and practice rather than being chosen by an external authority or deity. Both understand the social nature of human identity so that distinctions among people, such as rich and poor, male and female, and even slave and master, involve a mutual bond of relationship with each required to play a role; each in part is defined by its opposite. Although Confucius plays more emphasis on ritual than Lao-tzu, both men prefer a society so orderly that people do not need the restraint of external laws and conduct rituals only from a reverence of Tao. According to Lao-tzu, "When *Tao* is lost 'compassion' becomes doctrine; when compassion is lost 'justice' becomes doctrine; when justice is lost ritual becomes doctrine; ritual is the slow loss of loyalty, the beginning of unprincipled confusion" (MacHovec 1962, 38).

Selection from *The Laws of Manu*, Chapter VII

1. I will declare the duties of kings, (and) show how a king should conduct himself, how he was created, and how (he can obtain) highest success.
2. A Kshatriya, who has received according to the rule the sacrament prescribed by the Veda, must duly protect this whole (world).
3. For, when these creatures, being without a king, through fear dispersed in all directions, the Lord created a king for the protection of this whole (creation),
4. Taking (for that purpose) eternal particles of Indra, of the Wind, of Yama, of the Sun, of Fire, of Varuna, of the Moon, and of the Lord of wealth (Kubera).
5. Because a king has been formed of particles of those lords of the gods, he therefore surpasses all created beings in lustre;
6. And, like the sun, he burns eyes and hearts; nor can anybody on earth even gaze on him.
7. Through his (supernatural) power he is Fire and Wind, he Sun and Moon, he the Lord of justice (Yama), he Kubera, he Varuna, he great Indra.
8. Even an infant king must not be despised, (from an idea) that he is a (mere) mortal; for he is a great deity in human form.
9. Fire burns one man only, if he carelessly approaches it, the fire of a king's (anger) consumes the (whole) family, together with its cattle and its hoard of property.
10. Having fully considered the purpose, (his) power, and the place and the time, he assumes by turns many (different) shapes for the complete attainment of justice.
11. He, in whose favour resides Padma, the goddess of fortune, in whose valour dwells victory, in whose anger abides death, is formed of the lustre of all (gods).
12. The (man), who in his exceeding folly hates him, will doubtlessly perish; for the king quickly makes up his mind to destroy such (a man).
13. Let no (man), therefore, transgress that law which favourites, nor (his orders) which inflict pain on those in disfavour.
14. For the (king's) sake the Lord formerly created his own son, Punishment, the protector of all creatures, (an incarnation of) the law, formed of Brahman's glory.
15. Through fear of him all created beings, both the immovable and the movable, allow themselves to be enjoyed and swerve not from their duties.
16. Having fully considered the time and the place (of the offence), the strength and the knowledge (of the offender), let him justly inflict that (punishment) on men who act unjustly.
17. Punishment is (in reality) the king (and) the male, that the manager of affairs, that the ruler, and that is called the surety for the four orders' obedience to the law.
18. Punishment alone governs all created beings, punishment alone protects them, punishment watches over them while they sleep; the wise declare punishment (to be identical with) the law.
19. If (punishment) is properly inflicted after (due) consideration, it makes all people happy; but inflicted without consideration, it destroys everything.
20. If the king did not, without tiring, inflict punishment on those worthy to be punished, the stronger would roast the weaker, like fish on a spit;
21. The crow would eat the sacrificial cake and the dog would lick the sacrificial viands, and ownership would not remain with any one, the lower ones would (usurp the place of) the higher ones.
22. The whole world is kept in order by punishment, for a guiltless man is hard to find; through fear of punishment the whole world yields the enjoyments (which it owes).
23. The gods, the Danavas, the Gandharvas, the Rakshasas, the bird and snake deities even give the enjoyments (due from them) only, if they are tormented by (the fear of) punishment.
24. All castes (varna) would be corrupted (by intermixture), all barriers would be broken through, and all men would rage (against each other) in consequence of mistakes with respect to punishment.
25. But where Punishment with a black hue and red eyes stalks about, destroying sinners, there the subjects are not disturbed, provided that he who inflicts it discerns well.
26. They declare that king to be a just inflicter of punishment, who is truthful, who acts after due consideration, who is wise, and who knows (the respective value of) virtue, pleasure, and wealth.
27. A king who properly inflicts (punishment), prospers with respect to (those) three (means of happiness); but he who is voluptuous, partial, and deceitful will be destroyed, even through the (unjust) punishment (which he inflicts).

CHRISTIANITY

Christ tells a visionary narrative of transcendental ties of the divine and the human that takes little account of ritual. There is also little explicit attention to leadership but a great deal of attention to personal development and an inclusive interdependence of caring. The paradox of higher stages of development and increased forms of meekness and commitment to justice are apparent in the Sermon on the Mount. That sermon echoes the reflections on the highest stages of human development common to other sacred texts, and presages a radical version of servant leadership articulated earlier in the book of Isaiah and of course in Buddhism, as we have seen.

The task of systematically explaining how Christian sacred texts apply to social relations, including leadership, fell to Saint Augustine (354–430 CE) about four hundred years after the death of Christ. The Roman Empire had fallen after five hundred years of power, and Augustine offered an outline for Christian reconstruction of authority and society. Augustine described levels of relationships—the household, the city, the nation, the world, the realm of angels, and the city of God—the goal of each is to find the peace that is ordered justice. The secret to peace is similar at every level.

Peace between man and man is well-ordered concord. Domestic peace is the well-ordered concord between those of the family who rule and those who obey. Civil peace is a similar concord among citizens. The peace of the celestial city is the perfectly ordered and harmonious enjoyment of God, and of one another in God. The peace of all things is the tranquility of order. Order is the distribution which allots things equal and unequal, each to its own place. (Augustine 1994/410, XIX, 13).

ISLAM

Several centuries after *The City of God* appeared, Muhammad (c. 570–632 CE) repeated Augustine's emphasis that "Peace between man and God is the well-ordered obedience of faith to eternal law." His revelations from Allah integrated the Judaic and Christian traditions into the Qur'an in the seventh century CE. The theocentric Qur'an offers the central

message of Islam: submission to the will of Allah, which Jesus, Moses, and the other prophets before Muhammad exemplified. The implications and means of this submission were later codified in the Sunnah and Hadith. *The Sealed Nectar* provides additional direction for Muslims, recounting the life and times of the prophet.

COMMON THEMES

There are differences among the texts according to the history and politics of their contexts. Confucius, for example, was more specific about leaders because he trained public administrators. Lao-tzu, on the other hand, was much more abstract and focused on the highest development of human beings. The evolution of sacred texts at some times emphasizes doctrine and ritual and thus promotes the importance of priests, while at other times it promotes the search for the divine or some transcendental element within individual humans and their relations with others and the earth. The kingdom of God is within us, according to Jesus.

We find instances of heroes and authorities common to all the sacred texts but with an understanding that leadership is authority made legitimate by submission to a divine will or to the principles of highest human development. The Qur'an advises that as others may submit to leaders, so too should leaders submit to a higher power. This makes leaders into servants, teachers, and caretakers. Leadership shares with all other people the task of caretaking but it uniquely provides a shield for the people, according to the Qur'an.

The servant role of leaders touches upon the strikingly paradoxical nature of leadership according to the sacred texts. Far from the power over others and perks commonly associated with leadership and authority, Jesus calls those blessed who hunger and thirst and explains that the first shall be last and the last shall be first. Lao-tzu explains that people do not notice the existence of the very best leaders and counsels a unique avenue to leadership:

To be elevated by the people, speak like their inferior.
To lead the people, walk behind them. Thus the truly

wise are above, but people do not feel their weight. They walk in front, but people do not feel blocked. The whole world respects and never grows tired of such leadership. (MacHovec 1962, 66)

The texts also emphasize the goals of peace and justice as the goal of human beings and the intention of the divine. Surveying the differences among human beings, Augustine still professed that we all tend to one and the same end of earthly peace (Augustine [c. 410 CE] 1994, XIX, 17, 21). The external peace and justice begins within individuals who seek to conform to the divine or transcendent order of nature. The best leadership produces peace and justice without laws and sanctions but by social order in which everyone shares a common belief of injuring no one and doing good to others as they would have others do to them. In this, the texts often suggest an interrelated system of parts—household, city, state, world, heaven—that observe the same principles of conduct.

Finally, the sacred texts offer traits of effective leaders who are also highly developed human beings. Wisdom, justice, forbearance, benevolence, and goodness are virtues of all humans seeking Allah. The *Bhagavad-Gita* adds peacefulness, self-control, austerity, purity, tolerance, and honesty. Jesus touches on several of these traits in explaining the nature of blessedness in his Sermon on the Mount. The sacred texts seem to suggest that leaders should be in pursuit of blessedness. And, in one last paradox, the sacred texts seem in agreement that the state of blessedness lacks a self-consciousness and hence the desire for power and authority. Ever the genius of paradox, Lao-tzu suggests that “Who has *Teh* [the highest human attainment] never boasts of it and so truly possesses it. Whoever has *Teh* and boasts of it no longer possesses it. Possessing *Teh* is to be serene; with little effort much is done and motives diminish” (Lao-tzu 1962/c. 500 BCE, 38).

By listing the virtues or traits of leaders, the sacred texts anticipate the way scholars analyze leadership. While some of the commentaries deal with the arts and skills of leadership, in the main the sacred texts deal with the purpose of leadership—order, justice, and peace—within individuals,

households, and society. Similarly, the emphasis, especially in the Oriental sacred texts, on the networks of interdependence of humans with each other and the natural world and the interrelatedness of the realms of our lives suggests some of the current emphasis on systems thinking and the insights of physics and biology into leadership and other social relationships.

—Richard A. Couto

SALADIN (1137–1193)

Kurdish sultan

Leaders derive their support from traditional, charismatic, or national authority. Saladin (the name is a European version of Salah ad-Din Yusuf ibn Ayyub, which means “Righteous of the Faith, Joseph, son of Job”) derived his authority from all three sources. Born into an aristocratic Kurdish family, he had qualities of head and heart, which attracted a following and served him in good stead when he became ruler.

Saladin possessed the ideal Islamic virtues: piety, generosity, commitment, and courage. Saladin preferred to spend time with scholars and the learned rather than with the rich and the powerful in court. He patronized colleges and mosques. Not many rulers in history can boast of friends who are moved to say at their death, as did a well-known contemporary of Saladin: “For I know that had our sacrifice been accepted, I and others would have given our lives for him” (Lyons and Jackson 1982, 374.)

SALADIN'S LIFE

Saladin was born in Tikrit, Mesopotamia (present-day Iraq), into a prominent Kurdish family. Saladin's father, Najm ad-Din Ayyub, moved to Aleppo to enter the service of 'Imad ad-din Zangi, the powerful Turkish governor of Syria. As a young man, Saladin joined the army of Nureddin, the son and successor of Zangi. In spite of the complex and changing political situation, Saladin emerged in 1169 at the age of thirty-one as commander of the Syrian troops in Egypt and vizier of the weak and unpopular Shi'ite Muslim Fatimid dynasty there. Soon he was known as the sultan, and his position was consolidated when in 1171 he set aside the Fatimid dynasty and announced a return to Sunni Islam in Egypt, which Saladin now ruled. Saladin remained nominally under the rule of Nureddin until the latter's death in 1174. For all his growing power, Saladin remained the target of the fanatic's blade, almost murdered in 1175 by a Nizari agent (the Nizaris, like the Fatimids, were Shi'ites).

As sultan, Saladin vigorously pursued his dream of uniting the Muslim territories of Syria, Mesopotamia,

Richard and Saladin

It is tempting and, at the same time, maybe not completely wrong to define the situation in this way: of the two, Richard and Saladin, only the latter fought a “crusade,” whereas Richard intended to conduct a completely normal war. This view is supported, amongst other things, by the way they focused on their objectives. Saladin’s priority was to rescue the “Holy City” of Jerusalem, even though individual emirs were of the opinion that, if necessary, Islam could exist perfectly well without it. He was realistic enough to recognize the key position of Ascalon—and yet he destroyed it (albeit with a bleeding heart) since he was convinced that it would be impossible for him to defend both cities, Ascalon and Jerusalem. Jerusalem took priority, despite the fact that—unlike Ascalon—it was of little strategic and even less economic importance. For Richard, too, the coastal fortress was of central significance, and he gave it priority over Jerusalem. After Jaffa, his next goal was Ascalon—and there he ultimately went, not to Jerusalem; he built it up, he haggled particularly persistently over Ascalon, not Jerusalem. This is where the difference lies between a warfare motivated primarily by strategic considerations and one motivated primarily by religion.

Palestine, and Egypt. He accomplished this through his growing reputation as a ruler of integrity, wisdom, and military skills. The stage was set for Saladin’s greatest victory: the recapture of Jerusalem, then in the hands of the Crusaders.

In 1187, within three months, a united Muslim front under Saladin recaptured one after the other the key cities of the Kingdom of Jerusalem, including Acre, Nazareth, Nablus, and Jaffa. On 2 October 1187, Saladin succeeded in taking Jerusalem itself, ending eighty-eight years of Crusader rule. In dramatic contrast to the Crusaders’ treatment of the city’s inhabitants upon their victory in 1099, when widespread slaughter had been seen and recorded, Saladin’s forces were a model of civilized behavior.

The Brethren, written by Rider Haggard (1856–1925) at the high noon of the British empire, paid tribute to Saladin by describing the capture of Jerusalem:

Then Saladin showed his mercy, for he freed all the aged without charge, and from his own treasure paid the ransom of hundreds of ladies whose husbands and fathers had fallen in battle, or lay in prison in other cities. . . .

At length it was over, and Saladin took possession of the city. . . . Thus did the Crescent triumph over the Cross in Jerusalem, not in a sea of blood, as ninety years before the Cross had triumphed over the Crescent within its walls, but with what in those days passed for gentleness, peace, and mercy. For it was left to the Saracens to teach something of their own doctrines to the followers of Christ. (Haggard 1904: 337)

The spectacular nature of Saladin’s victory has overshadowed his other success: facing and containing Europe’s reaction to the fall of Jerusalem, which came in the form of the third Crusade. Exhausted and often unwilling Muslim levies followed Saladin in that engagement because of his lustrous name and indomitable will, and had fought off the greatest champions of Christendom, including Richard I (“the Lionheart”) of England. When King Richard left the Middle East in October 1192, the might and fury of the Crusades was over. Saladin withdrew to Damascus, his capital, where he died the following year. His hard life, the endless campaigns, and the effort of uniting a divided people had taken their toll.

A mythology grew up around Saladin almost instantly. It was said that the most powerful ruler in the Muslim world had generously given away all he owned and had left behind only a copy of the Qur’an, a sword, and a saddle. There was not enough money, it was said, to pay for the grave.

SALADIN’S SIGNIFICANCE

Saladin is perhaps unique in the long historical interaction between the West and Islam in capturing the imagination of both worlds with affection. The thirteenth-century Italian poet Dante, while condemning Muslims to the depths of hell in *The Divine Comedy*, was pointedly soft on Saladin, and the British novelists Walter Scott (1771–1832) and Rider Haggard both depicted Saladin favorably in their historical novels. Hollywood has paid him tribute on numerous occasions, including a spirited if

unintentionally comic depiction by Rex Harrison with layers of boot polish on his face and a singsong “oriental” accent in *King Richard and the Crusaders*. The government of Egypt recently financed a lavish production of a film on the life of Saladin.

In the Arab world, Saladin’s successes and noble character have special poignancy because not long after Saladin retook Jerusalem, the power of the Arabs began to decline. In 1258, the Mongols captured and destroyed Baghdad. After dominating what is now the Middle East and most of North Africa for half a millennium, Arab rule gave way to rule by non-Arab dynasties. By the sixteenth century, there were three great Muslim empires and none of them was Arab. The Arab heartland was ruled by two non-Arab powers: first the Ottomans (who ruled the region from the late fifteenth century to the late nineteenth and early twentieth century) and then the Europeans. It is therefore not surprising that there is nostalgia and yearning for another Saladin. The reason Saladin remains popular in the Arab world in spite of the fact that he was a Kurd is that his rule, based in Egypt, is identified with Arab culture and history. Saladin himself identified with the larger Muslim culture that he came to represent. Nor is this yearning restricted to the Arab world. Even among Muslims in South Asia, boys are named Saladin in honor of the great ruler.

The memory of the Crusades has not faded; indeed the word is used commonly to describe the ongoing cultural, political, and, at times, military confrontation between the West and the Muslim world. Given this reality, the name and memory of Saladin will no doubt continue to be evoked by Muslims worldwide.

🌐 **SANGER, MARGARET (1879–1966)**

Founder and leader of the
U.S. birth control movement

Margaret Louise (Higgins) Sanger led the successful campaign to make birth control legal, safe, and accessible. Sanger’s law-defying tactics and shrewd

public relations maneuvers broke down long-standing anti-obscenity laws that prohibited the circulation of contraceptive information. Her activism educated and enlightened a repressive society and initiated a dramatic change in sexual mores. In a career spanning five decades, Sanger inspired a contentious alliance of radicals, society women, philanthropists, and medical professionals to open a network of birth control clinics, refine and develop contraceptives, and establish one of the most familiar and far-reaching women's health organizations in the world.

EARLY LIFE

Margaret Louise Higgins was the sixth of eleven children born to a freethinking Irish stonemason and his devout Catholic wife in Corning, New York. Margaret's mother weakened with each successive pregnancy, dying of tuberculosis at age fifty in 1899, a death Margaret blamed on excessive childbearing. Caring for her dying mother confirmed Margaret's interest in medicine, and she entered a nursing program the following year. She suspended her nursing career in 1902 to marry William Sanger, an artist and draftsman, and begin a family. From 1903 to 1910, Margaret gave birth to three children and lived a quiet suburban life, just outside New York City. Unsatisfied with the routines of family life, both Margaret and William sought to become more involved with socialist politics and to be nearer to the artistic and political radicalism of Greenwich Village. They moved to the city in 1911, joined the Socialist Party, and immersed themselves in the burgeoning bohemian culture that was attracting creative dissenters and reformers from all over the country.

RADICAL WORK

Sanger accepted a paid position as a lecturer for the Socialist Party and then moved on to an organizing role with the Industrial Workers of the World (IWW). While participating in IWW-led strikes in 1912–1913, Sanger closely observed the leadership styles of other organizers, including William (“Big Bill”) Haywood (1869–1928) and Elizabeth Gurley

Flynn (1890–1964), a highly effective orator who offered Sanger a model for an outspoken woman agitator. Sanger also admired the anarchist icon Emma Goldman (1869–1940), who had delineated the link between women's empowerment and voluntary motherhood more than a decade before Sanger came on the scene.

Sanger returned to nursing on a part-time basis in New York, accompanying obstetricians into the immigrant neighborhoods of Manhattan's Lower East Side, where she witnessed the devastating effects of indiscriminate child-bearing such as infant and maternal mortality, overcrowding, and dire poverty. She learned that the 1873 Comstock Act and associated laws that banned obscenity prohibited doctors from giving contraceptive information to patients, even when a woman's health was at risk. Sanger felt powerless to help; the only birth control methods she knew of at the time were condoms and withdrawal, which left the man solely in charge. “I resolved that women should have the knowledge of contraception. They have every right to know about their own bodies” (Sanger 1931, 56). Her nursing experience gave direction to her radicalism and later became her key credential when discussing the plight of poor women incapable of controlling their fertility.

FREE SPEECH AND BIRTH CONTROL

In her informal lectures to women for the Socialist Party and before IWW groups, Sanger increasingly discussed sexual hygiene and health. The lectures led to a series of articles in the radical daily *The New York Call*, under the title “What Every Girl Should Know.” In February 1913, the U.S. Post Office banned publication of an article that discussed venereal disease. This act of official suppression made Sanger more militant in her speech. In 1914, she published an extremist monthly newspaper, the *Woman Rebel*. The paper amounted to a big dare: a challenge to its readers to oppose conformity and convention; an announcement to authority that women would defy the laws that banned the circulation of contraceptive information. Each woman, Sanger insisted, must be the “absolute mistress of her own body” (quoted in Baskin 1976, 25), and

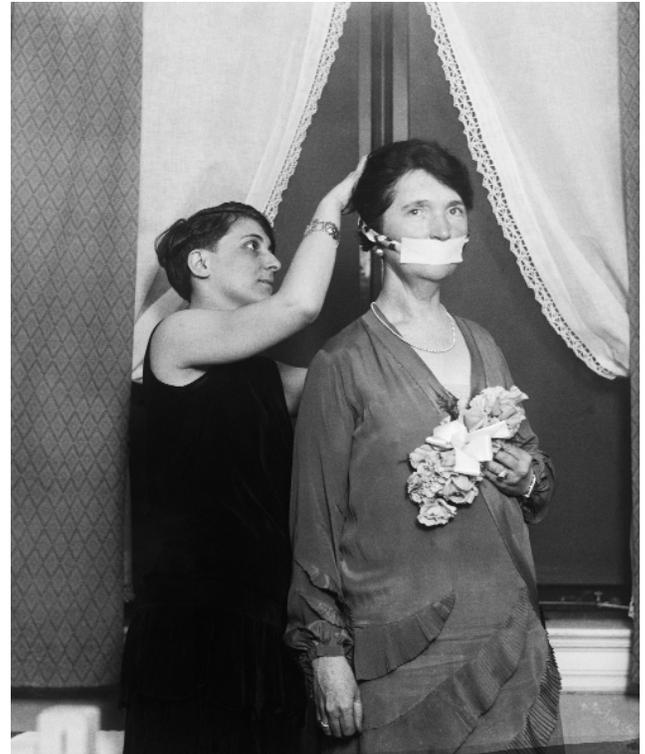

only through birth control—the term was first used in the *Woman Rebel*—could women ever achieve economic or political equality. The U. S. Post Office confiscated six issues of the *Woman Rebel*, and federal agents indicted Sanger for violating the Comstock Act.

In the midst of her free-speech battle, Sanger prepared *Family Limitation*, a how-to manual that outlined and illustrated various forms of birth control, including condoms, diaphragms, douches, sponges, and withdrawal. She instructed friends to release the pamphlet after she fled the country in October 1914 to escape the *Woman Rebel* charges and a potential prison sentence. *Family Limitation* marked Sanger's emergence as the leading proponent of birth control in America.

Her self-imposed yearlong exile in Europe in 1914–1915 gave Sanger an opportunity to develop the intellectual framework she needed to broaden interest in a birth control campaign. She formed a lasting friendship with the great pioneer of sexual modernism, Havelock Ellis (1859–1939), who became her chief mentor, and with leading Malthusians (those who believed, following the writings of the nineteenth-century economist Thomas Malthus, that unchecked population growth would lead eventually to worldwide famine) in England. Ellis helped Sanger to soften her antiestablishment arguments, celebrate birth control as a precondition to women's sexual pleasure, and more clearly articulate eugenics-based arguments for smaller families.

BUILDING A MOVEMENT

Sanger returned to the United States in the fall of 1915 to face trial on her *Woman Rebel* charges and take advantage of increased public interest in birth control following the arrest and imprisonment of her now estranged husband for distributing *Family Limitation*. On the eve of Sanger's trial in November 1915, her five-year-old daughter Peggy died of pneumonia. This personal tragedy intensified support for Sanger and prompted federal prosecutors to dismiss her case. In the spring and summer of 1916, Sanger crossed the country on a city-to-city speaking tour. Though still in mourning and unaccustomed to pub-

Margaret Sanger has her mouth covered in protest at not being allowed to speak about birth control in Boston, Massachusetts on 17 April 1929.

Source: Bettmann/Corbis; used with permission.

lic speaking, she exhibited a disarming frankness and sexual charisma. Pretty, feminine, even vulnerable looking, she spoke in a clear, musical voice that provided an effective contrast to her blunt statements about biological ignorance and the revolutionary power of birth control to free women, reform the capitalist labor system, control poverty and disease, and end war.

Upon her return to New York, Sanger directly challenged the Comstock laws by opening the nation's first contraceptive clinic in Brooklyn in October of 1916. The Brownsville clinic served more than four hundred women in a period of two weeks before Sanger, her sister Ethel Byrne, and an assistant were arrested. The ensuing trials and thirty-day prison sentences served by Sanger and Byrne catapulted the cause of birth control onto the front pages of the nation's newspapers and brought a number of prominent society women on board. Though Sanger lost an appeal of her Brownsville

conviction two years later, the courts recognized the health benefits of birth control and rendered a more liberal interpretation of the antiobscenity laws, paving the way for legal, doctor-run clinics.

Sanger skillfully orchestrated these dramatic events to put her name and the issue of birth control into the newspapers and before the public. She even used the new medium of film, writing and starring in the silent "Birth Control" in 1917, to enhance her charismatic hold over a growing number of young women activists. She retold and revised accounts of her early activism throughout her life to justify her leadership and attract new followers.

CLINICS AND A NEW COALITION

Immediately following World War I, Sanger distanced herself from her antiestablishment roots and pulled the birth control movement into the mainstream, partly by choice and partly out of necessity. The war left the U.S. radical movement in shambles, and Sanger recognized the need for a broader constituency to win over middle-class support needed to sustain the cause and change the laws. She sought alliances with doctors, advocates of population control, and eugenicists, and worked to transform the birth control movement from a free-speech campaign into a medically sanctioned public health program. It was no easy task, however, as her confrontational style alienated many in the medical and social science communities. She relied heavily on leveraging the publicity generated by continuing government interference—the suppression of speech, the seizure of medical records, the confiscation of contraceptives and literature by Post Office and Customs agents—to compel prominent medical men to stand behind her. Methodically, but not without many setbacks, Sanger built an impressive coalition out of groups that largely distrusted each other and at times agreed on little more than that birth control was vital to human progress.

In 1921, Sanger organized a birth control conference in New York to attract greater academic and medical support and to launch the American Birth Control League (ABCL), the organizational and financial centerpiece of the movement. Her two

books from this period, *Woman and the New Race* (1920) and *Pivot of Civilization* (1922), also attempted to redefine birth control along scientific lines and to draw the support of eugenicists, who enjoyed tremendous political influence in the 1920s. Sanger advocated a program of "negative eugenics" which sought to contain—largely through the voluntary use of birth control—those deemed "unfit" to procreate because of disease, mental deficiency, or delinquency. At no time did she define unfitness or inferiority in racial terms as did many leading eugenicists. Sanger opened the Clinical Research Bureau in New York in 1923, the first legal contraceptive clinic in the United States, and the model for physician-directed birth control clinics that opened across the country in the interwar years. She endorsed the diaphragm paired with a contraceptive jelly as the safest and most effective female birth control method. The diaphragm required medical fitting and instruction, further pushing the movement under medical supervision.

LEADING THE MOVEMENT TO THE MAINSTREAM

Sanger further insulated her leadership position by becoming a woman of wealth and social stature in the 1920s. After divorcing her first husband in 1921, she married millionaire businessman J. Noah Slee in 1922, a decision that paid off handsomely for a movement always short on funds. Her new wealth allowed Sanger to travel the world in style and gain notoriety in Asia and Europe, strengthening her sway over the movement at home. No other birth control leader could draw the media and create publicity as effectively as Sanger, whom the newspapers were now referring to as world renowned.

Sanger did not tolerate rivals and quickly defused attempts to undermine her authority as the movement's principal leader. She attacked and diminished the personalities and accomplishments of other birth control reformers, primarily the more deliberate, less provocative Mary Ware Dennett (1872–1947), who quickly faded from the movement. With few exceptions Sanger surrounded herself with passive followers who worked to satisfy her goals but exhibited lim-

ited personal ambition. When a factional dispute did develop within the ABCL in the late 1920s, primarily over Sanger's leadership approach, Sanger decided to resign as president (in 1928) and reassert her leadership outside of an inhibiting organizational structure.

A year later she established a new organization, the National Committee on Federal Legislation for Birth Control (NCFLBC), and instituted a much looser organizational framework than the ABCL. The NCFLBC lobbied Congress from 1930 to 1937 to pass legislation lifting the bans on birth control. It failed to push a bill through, but once again Sanger managed to create sustained publicity, this time through dramatic congressional testimony. The Committee disbanded soon after a significant court victory in 1936 in *United States v. One Package*, a case originated by Sanger in 1931, that opened the way for the legal distribution of contraception. By the end of the 1930s, a large majority of Americans—more than 70 percent—supported the legalization of birth control.

Having achieved many of her goals, including an American Medical Association endorsement of birth control in 1937, Sanger both stepped back from the movement and was pushed aside by an influx of younger public relations professionals and medical bureaucrats. She facilitated a merger between the two branches of the movement, the ABCL and her Clinical Research Bureau, to form the Birth Control Federation of America in 1939 (it changed its name to the Planned Parenthood Federation of America in 1942), then retreated to her Arizona home, serving little more than an honorific role in the new federation.

INTERNATIONAL BIRTH CONTROL AND THE PILL

After the war, in her late sixties, Sanger emerged from semiretirement to lead a new international coalition. Sanger had championed birth control abroad since the early 1920s. World tours in 1922 and 1935, along with her organization of several conferences fundamental to contraceptive research and population planning—including the 1927 World Population Conference in Geneva—had solidified her international leadership position. Challenged by

European birth control reformers to help rebuild a viable movement, and responsive to fears of population explosion in the developing world, Sanger played a pivotal role in organizing the International Committee on Planned Parenthood in 1948. This led to the International Planned Parenthood Federation (IPPF), which formed in 1952 with Sanger as its first president. She was unyielding, even imperious in steering the divisive organization through its first decade of existence, keeping it focused on contraceptive distribution through clinics and public health programs. A new generation of birth control activists complained about Sanger's peremptory manner and increasingly erratic leadership—she was in and out of hospitals with a heart condition and suffered from other infirmities. But none of them had a sufficient international following that would have enabled them to directly challenge her position. Sanger stepped down as president in 1959.

Both in the United States and abroad, Sanger had instigated and encouraged contraceptive research in hopes of discovering cheaper, more effective, and less intrusive methods. In 1951, she convinced the philanthropist Katharine Dexter McCormick (1875–1967) to support the research of the biologist Gregory Pincus (1903–1967) on a hormonal method of inhibiting human ovulation. Sanger had envisioned an oral contraceptive pill as early as 1930, though few scientists had any confidence in the idea. It was largely Sanger's initiative and fund-raising skill that enabled and accelerated the research and testing that brought the birth control pill to market in 1960. The pill brought to fruition Sanger's controversial crusade to provide women with the opportunity for greater autonomy in both their private and public lives. Six years later, Sanger died at age 87.

IMPACT AND LEGACY

The virtual elimination of religious, legal, and moral opposition to birth control during her career demonstrated Sanger's effectiveness as a leader. While she has been criticized for leading the movement away from a goal of woman-controlled healthcare that many feminists envisioned, the movement generated more momentous social change—as manifested in

the changed role of women and the dynamic of the family—than any other twentieth-century social movement. A historical reevaluation of Sanger is underway today, primarily because of her ties to the eugenics movement. Her leadership qualities and character should also be reexamined and compared with those of other U.S. social reform leaders, such as the abolitionist William Lloyd Garrison (1805–1879), who shared with Sanger an uncommon, lifelong allegiance to a single cause.

🌐 SARNOFF, DAVID (1891–1971)

Radio and television magnate

David Sarnoff was a man of great vision and creativity. As the founder of NBC and an early champion of radio and television, Sarnoff was largely responsible for bringing these modern media to the masses. According to Kotter, “vision helps align individuals, thus coordinating the actions of motivated people in a remarkably efficient way” (Kotter 1996, 70). Although Sarnoff was not knowledgeable about the technical aspects in the creation of radio and television, he was instrumental in aligning individuals and helping them see a vision that would change humankind forever.

HUMBLE BEGINNINGS

Born in 1891 in Uzilan, Russia (now Belarus), Sarnoff originally studied to be a rabbi under the tutelage of his granduncle. In 1900, he arrived in New York City with his mother and two brothers, and soon began his first job: selling penny newspapers before and after school.

In 1906, with an eighth-grade education, Sarnoff began working for Commercial Cable Telegraph Company and quickly switched to work as an office boy for Marconi Wireless Telegraph Company of America. He spent the next six years working through a series of promotions, eventually ending up as Marconi's youngest-ever manager when he was appointed station manager in Sea Gate, New York, at age nineteen. It was during this time that Sarnoff made his first major contribution to mass information. On the evening of 14 April 1912, Sarnoff began reporting on the *Titanic* disaster after receiving faint reports over his wireless telegraph. He would later claim to be the only wireless operator to remain on the air after President William Howard Taft ordered all operators to be silent. This was Sarnoff's first taste of what it meant to bring media to the masses.

A VISIONARY IN THE MAKING

By 1915, Sarnoff created a proposal for what he called a “radio music box.” He submitted his idea to Marconi, convinced that someday each American

household would own a radio. The idea was laughed off, but Sarnoff did not lose sight of the concept and waited for another opportunity to present it.

According to Kouzes and Posner, “The pioneers in any endeavor have no maps to study, no guidebooks to read, no pictures to view. They can only imagine the possibilities” (Kouzes and Posner 2002, 96). This was certainly the case with Sarnoff.

In 1919, Sarnoff was presented with an opportunity to make his vision a reality when Marconi was absorbed by RCA (part of General Electric) after World War I. Sarnoff maintained his post as commercial manager and began brainstorming types of programming to be played on his radio music box. By 1921, he arranged for the broadcast of the Jack Dempsey–Georges Carpenter prizefight, which was instrumental in more than \$83 million in radio sales. The information age was under way.

CREATIVE LEADERSHIP

Sarnoff did not stop after bringing the radio to the masses; his vision and creativity continued. With Owen D. Young, RCA chairman, as his mentor, Sarnoff soon became general manager of RCA and, in 1926, formed the National Broadcasting Company (NBC). Sarnoff saw the potential for creating national broadcasts and NBC became the first communication network.

Sarnoff was elected to RCA’s board in 1927 and negotiated contracts to create a motion picture company, introduce radios into automobiles, and consolidate all radio production under RCA. In 1930, Sarnoff became RCA’s president at the age of thirty-nine.

In many ways, Sarnoff and his associates at RCA were the architects of the information age. They were breaking new ground and establishing an industry. As Heifetz states, this can be difficult work—a razor’s edge—“because one has to oversee a sustained period of social disequilibrium during which people confront the contradictions in their lives and communities and adjust their values behavior to accommodate new realities” (Heifetz 1994, 127). New realities were becoming a norm and vision combined with creativity helped Sarnoff and his associates at RCA navigate the uncharted territory.

Whatever course you have chosen for yourself, it will not be a chore but an adventure if you bring to it a sense of the glory of striving, if your sights are set far above the merely secure and mediocre.

—David Sarnoff

James MacGregor Burns states,

the ultimate test of creative leadership lies not only in having a new idea but in bringing it to life, accomplishing the real-world changes it promises. To do so, the would-be leader must reach out to others for help. But would-be followers will respond only if the new frame articulated by creative leadership speaks directly to them, to their underlying wants, discontents and hopes. (Burns 2003, 168)

There are followers at all levels of society. Some followed Sarnoff’s lead by way of competing with him; others followed his lead by simply purchasing a radio for their home. Regardless, Sarnoff was responsible for creatively tackling myriad issues that came with trailblazing an industry.

VISION AND CREATIVITY COMBINED

In 1936, Sarnoff initiated a cross-licensing agreement that allowed RCA to create the first television. Sarnoff quickly worked to establish standards for the new broadcasting system, and the Federal Communication Commission (FCC) eventually set the standards. Amid disagreements between different television manufacturers, Sarnoff persisted and introduced television service at the New York World’s Fair in 1939.

As America entered World War II, Sarnoff used his visionary abilities to help develop radio and sonar equipment to help in the war effort. He was made a brigadier general and served as a communication consultant to General Dwight Eisenhower.

The war slowed television’s progress, but “the General” was eager to make a push for TV once again post–World War II, and its popularity soared. RCA introduced a monochrome television and CBS became RCA’s chief competitor, each racing to produce color programming.

Appointed chairman of the board of RCA in 1947, Sarnoff held the post until his death in 1971. His extensive *New York Times* eulogy (13 December 1971) referred to him as “a man of outstanding vision who was able to see with remarkable clarity the possibilities of harnessing an electron.”

A LASTING LEGACY

Kouzes and Posner state that “a vision is a mental picture of what tomorrow will look like” (Kouzes and Posner 2002, 111). David Sarnoff’s vision literally could be seen and heard by the masses. Radio and television fundamentally changed how the world and ultimately brought the world into the home.

SCHEMATA, SCRIPTS, AND MENTAL MODELS

In psychology, human mental representations are characterized in many ways. Three of the most com-

mon ways are schemata, scripts, and mental models. These three ways, however, take different approaches to explaining human cognition and, hence, have different implications for leadership literature.

SCHEMATA

Today, *schema* (plural *schemata*) is the most popular term used to describe the representation of mental concepts. In 1932, the English psychologist Sir Frederic Bartlett introduced the concept of a schema as “an active organization of past reactions, or of past experiences, which must always be supposed to be operating in any well-adapted organic response” (Bartlett 1932, 201). In other words, Bartlett suggested that a novel stimulus activates a schema and that the past knowledge and experience contained in the schema affect how the stimulus information is encoded and what it means. From this initial theory, researchers have concluded that schemata are beneficial to human information processors because they provide a set of potential inductive inferences, a means to compute similarity to the prototypes that define cognitive categories, and a means to combine simple concepts into composite concepts.

In its most basic form, current theory suggests that schemata organize memories that contain both general and specific information about concepts and objects as well as causal relationships. The result is unconscious expectations regarding what things look like and the order in which they occur. There are many types of schemata, two of which are of particular importance: script schemata and person schemata. Script schemata are in the form of a sequence of events directed at a particular goal. Person schemata, on the other hand, include trait attributes, ideas, and feelings associated with a particular type of individual (such as a leader). Person schemata are theorized to include both exemplar (specific people) information and prototype (an abstract set of representative characteristics) information about each type of individual. Interestingly, the leadership literature suggests that children use exemplar information encoded in leader schemata to make leadership judgments, whereas adults use prototype information to make leadership judgments.

Schemata in general, and leader schemata in particular, seem to be ordered hierarchically in a cognitive structure containing three levels. The most abstract categories (e.g., leader or non-leader) of schemata constitute the highest level of the hierarchy. The middle level is made up of a list of possible values a leader can assume, taking the context into account (i.e., military leader, business leader, religious, or sports leader). Finally, the lowest level further differentiates leaders within the context (e.g., a female leader or a rank of military leaders).

Leadership categorization theory was the first integrated attempt in leadership literature to suggest how leader schemata are used to process information by stressing that followers utilize a leader schema (called an “implicit leadership theory”) to process information regarding leaders. Leadership categorization theory suggests that leadership is the process of being perceived by others as a leader, which involves comparison of a pattern of stimulus characteristics to one’s leader schema. That is, leader schemata include a leader prototype; potential leaders are compared to the prototype, and if they “match” (are similar enough), others will classify them as a leader. The more consistent a person’s behavior is with the prototype, the more likely that person will be seen as a leader. Research has identified eight characteristics that underlie leader schemata: sensitivity, dedication, tyranny, charisma, attractiveness, masculinity, intelligence, and strength.

Recent advances in understanding the cognitive mechanisms that produce schemata have allowed researchers to develop a more sophisticated understanding of leader schemata. Industrial/organizational psychologist Robert Lord, for example, argues that one’s leader schema is activated by both contextual constraints and behavioral inputs from the stimulus person (Lord, Brown, & Harvey, 2001). Following this logic, individuals continually re-create behavioral schemata sensitive to contextual constraints rather than retrieving past schemata from memory. Lord et al. argue that both follower perceptions and leader behavior are guided by such flexible schemata. Hence, a leader’s behavioral schema will lead to different behaviors depending on the situation, and a follower will interpret the behaviors dif-

ferently depending on the context in which the follower’s schema is activated.

Another important notion of schemata relevant to leadership is a self-schema. A self-schema is an integrated set of memories, beliefs, and generalizations about one’s behavior, capabilities, or characteristics in a given domain. Similar to schemata in general, a self-schema influences the processing of information about the self and others. Individuals who are schematic in leadership, for example, would be more likely to analyze themselves and others in reference to a leadership category. Research in support of this notion suggests that schematic individuals, relative to non-schematic individuals, quickly generalize from leader categories to judgments when assessing leadership behaviors. Schematic individuals are also more stringent in their evaluations of leaders, seem to follow a different process in making leadership judgments across time, and may be more willing to assume leadership roles.

SCRIPTS

The notion of script-based cognitive processing, although related to the notion of schemata, has developed through a largely separate stream of research. Scripts are mental representations that describe the appropriate sequence of a typical event or behavior and are considered the behavioral repertoire part of a schema. Scripts are held in memory like a prototype; hence, generic scripts are appropriate for many situations. Further, scripts fulfill two functions in that they may act as guides for producing or for understanding behavior. Additionally, scripts can specify how to respond to emotional events.

Theory regarding scripts has identified several distinguishing features. Scripts are related to the goals of the individual; they include multiple paths to these goals; and the goals are arranged in a hierarchical means-end structure. Scripts also have clear temporal structures in terms of the necessity of completing lower-level goals prior to higher-level goals. Scripts are easily elaborated to include new experiences. Robert Lord and Mary Kernan (1987) suggest that common scripts for leaders may include con-

ducting meetings, dictating letters, interacting with employees, and performing other work tasks.

Business professors Dennis Gioia and Peter Poole (1984) agree that scripts facilitate understanding of the world and provide a guide to behavior in organizations as well as other settings. In fact, Gioia and Poole argue that script-based processing probably occurs readily in organizations because organizational situations tend to be predictable and repetitive (e.g., procedures, rituals, customs, etc.). The authors suggest that people have the basic scripts for most organizational situations; hence, people know what to expect from others and what is expected from them in situations such as meetings, performance appraisals, and selection interviews. Additionally, socialization can be viewed as the learning of appropriate scripts for organizational processes. Interestingly, research suggests that leaders act according to script-based processing and may have different scripts for interacting with and assessing low- and high-performing employees.

Leader behaviors are limited by the nature of the leader's underlying scripts and schemata (Wofford & Goodwin, 1994). Transformational leaders (those that inspire followers with a vision, high expectations, and personal attention), for example, store information in a higher-level manner and have more abstract, long-term schemata. Research suggests that transactional leaders (leaders that take a more hands-off, task-oriented leadership approach), on the other hand, store information as more concrete patterns of behavior. Accordingly, research suggests that transactional leaders do not have the appropriate schemata needed to act in a transformational way. Further, leader behavior (as determined by the cognitive representations available to the leader) is thought to activate certain scripts or schemata in followers that determine leader perceptions and judgments (Wofford & Goodwin, 1994). Thus, over time, leadership processes reflect the dynamic interaction of leader scripts and followers' perceptual schemata.

In an empirical test of these hypotheses, it was found that leader cognitions did indeed predict leader behaviors (Wofford, Goodwin, & Whittington, 1998). Specifically, leader cognitions were

assessed to determine if they held transformational or transactional scripts and schemata. The researchers found that (1) transformational cognitions were significantly predicted by script-based processing, but not by transformational self-schemata, whereas only transactional self-schemata loaded significantly on transactional cognitions, and (2) transformational cognitions significantly predicted transformational behavior, and transactional cognitions significantly predicted transactional behavior. Related research has found that leaders select different script traits in response to subordinate performance, becoming more directive when performance problems occur (Wofford, Joplin, & Cornforth, 1996).

Perceptions of leaders are also affected by the use of script-based processing. One study, for example, found that individuals with the goal to remember leader behavior exactly recalled more script-based behaviors, whereas individuals told to form an impression of the leader recalled more trait-based information (Foti & Lord, 1987). Additional research has found that bogus performance information affected leadership perceptions only when it was processed using person-based, rather than script-based, encoding (Murphy & Jones, 1993). Again, this research suggests that individual goals may determine the cognitive approach that a person uses to process information, which subsequently affects leader perceptions.

MENTAL MODELS

The concept of mental models, introduced by psychologist Kenneth Craik in 1943, suggests that external events are translated into internal models and that people use internal models to rationally evaluate external events. A mental model is an underlying cognitive framework that represents a body of knowledge in a structural way. Related theory suggests that people perceive a mental representation of the world and not the external world directly (although it may seem as if people perceive the external world directly). Hence, one's mental models constrain and limit how one sees the world.

Psychologist Philip N. Johnson-Laird suggested

that mental models, constructed out of basic processes and primitive symbols, translate external events into internal models consisting of symbolic representations. The concept of a mental model, then, includes what is evolutionarily wired and what is learned through experience. Importantly, mental models (1) correspond to the external world, (2) consist of things that people perceive (an image of perceptible entities) or abstract concepts, and (3) contain production rules (e.g., if A then B) rather than variables.

Mental models, as applied to organizational functioning, are often studied as mechanisms affecting team performance. That is, theorists generally suggest that team members with similar mental models will perform better as a team than will team members who do not share similar mental models. In this case, a mental model is defined as “the organization and understanding of relevant knowledge structures.” According to some of the literature, team mental models may include many types of knowledge to assist in the description, prediction, and explanation of organizational phenomena. Theorists think that team mental models explain the implicit coordination achieved by some teams, even in complex and ambiguous environments. For example, the analogy of a collective mind to suggest how teams on the flight deck of aircraft carriers dynamically interact in the takeoff and landing of airplanes (Weick & Roberts, 1993). Shared mental models connect one team member with another through interactions within a dynamic, overarching system created by their common task.

OUTLOOK IN THE TWENTY-FIRST CENTURY

Theories of mental representations including concepts such as schemata, scripts, and mental models played a large role in psychological literature for the latter part of the twentieth century. Investigation into these theories likely will continue as psychology advances. One potential for developing an integrated understanding of mental representations lies in developing a common theory pertaining to their development and use. In this respect, collective minds in organizations could be modeled by connec-

tionist architectures (a concept that explains in detail how cognitive processing occurs using the analogy of nodes in a network) (Weick & Roberts, 1993), and an experimental methodology and modeling program (Pathfinder) has been developed for representing mental models in this manner (Schvaneveldt, 1990). Similarly, Robert Lord and colleagues maintain that leadership scripts and person schemata can be represented by connectionist architectures (Lord, Brown, & Harvey, 2001). Because they allow for the processing of multiple stimuli simultaneously, such cognitive models also may help explain how schemata are adjusted to context and how they dynamically change over time as task circumstances evolve.

SCIENCE AND TECHNOLOGY

It is impossible to underestimate the importance of science and technology (S&T) in modern life, yet there is much room to doubt the influence of particular S&T leaders. If one scientist does not discover a particular truth, many others can do so, and many engineers are ready to invent any particular innovation that is feasible at a particular point in general technical progress. In 1999, according to the National Science Foundation, the workforce included approximately 11 million scientists and engineers in the United States, and 26,000 people received S&T doctorates. Europe surpassed the United States with 54,000 S&T doctorates that year; Asia was not far behind with 21,000, and more than 2.6 million students earned S&T bachelor's degrees worldwide. In 2000, approximately 265 billion dollars were invested in research and development in

the United States, about as much as in the other six most advanced industrial nations combined: Canada, France, Germany, Italy, Japan, and the United Kingdom. All aspects of the economy exploit the results of science and technology, so S&T leadership is a question of fundamental significance.

TECHNOLOGICAL, CULTURAL, AND SOCIAL DETERMINISM

Three distinct schools of social scientific thought argue that individual leaders are unimportant in science and technology and progress is really the result of impersonal forces:

Technological determinism holds that technology is the engine of its own development, and individual scientists and engineers play only subsidiary roles. William F. Ogburn (1886–1959) offered a four-step model:

1. *Invention*: New technology naturally evolves from the existing technical base, and a given innovation tends to occur simultaneously with several inventors as soon as it is technically feasible.
2. *Accumulation*: Inventions tend to accumulate over time, in an accelerating process, because the more inventions that already exist, the more opportunities there are to combine them in novel ways.
3. *Diffusion*: Inventions tend to spread beyond the geographic and technical area in which they arose.
4. *Adjustment*: New technology transforms social conditions, causing cultural lag as the institutions of society fail to change until social movements bring about needed adaptations.

Cultural determinism holds that the values of the wider society channel research investments into particular fields, and individuals merely innovate in those fields given highest priority by the surrounding culture. Robert K. Merton (1910–2003) charted the changing cultural emphasis across different scientific fields in England in the period just before the Industrial Revolution. Liah Greenfeld suggests that the specific value galvanizing rapid scientific progress in England was nationalism, as the English sought ways to compete the larger continental powers, France and Spain.

Social determinism views organizations as networks of communication, and innovation as a process in which the information necessary to develop a new idea happens to collect at one location. Kathleen Carley conceptualizes organizations as information systems, and Mark Granovetter stresses the importance of extended communication networks. Some individuals appear to innovate creatively, but that is an illusion caused by the fact that these individuals happen to hold particular positions in the social network. Innovative individuals are often marginal to two fields, thus receiving diverse information from different sources and in a good position to bring ideas together.

However, each of these theories leaves some scope for individual leaders. Someone has to organize the social movements that help society adopt new inventions. S&T culture does not simply happen by itself, but is shaped by intellectual leaders. Individuals act as information gatekeepers at narrow points in the social network. The example of space rocketry shows how leaders of different kinds play varying roles in the emergence of a radical new science-based technology.

THE SPACEFLIGHT MOVEMENT

Thomas Kuhn (1922–1996) argued that major advances occur in periods of scientific revolution. Kuhn distinguishes *normal science* from *revolutionary science*. Normal science is incremental progress following a well-established paradigm that defines a given field. Because this paradigm involves a widespread consensus about the phenomena to be studied and the proper methodology of research, scientists are like interchangeable parts in a well-oiled machine. During times of scientific revolution, however, an old paradigm is vanquished by a new one, and the form of the new paradigm can be shaped to a great extent by the personalities of the leaders who create it.

Spaceflight is a science-based technology that was revolutionary in both a technical and a political sense. Technically, spaceflight set entirely new goals (travel into outer space) and new means to achieve them (employing multistage rockets as vehicles). The key factor was a radical social movement that

The Vision for Jules Verne's "Moon Gun" in *From the Earth to the Moon*

Impey Barbicane was a man of forty years of age, calm, cold, austere; of a singularly serious and self-contained demeanor, punctual as a chronometer, of imperturbable temper and immovable character; by no means chivalrous, yet adventurous withal, and always bringing practical ideas to bear upon the very rashest enterprises; an essentially New Englander, a Northern colonist, a descendant of the old anti-Stuart Roundheads, and the implacable enemy of the gentlemen of the South, those ancient cavaliers of the mother country. In a word, he was a Yankee to the backbone.

Barbicane had made a large fortune as a timber merchant. Being nominated director of artillery during the war, he proved himself fertile in invention. Bold in his conceptions, he contributed powerfully to the progress of that arm and gave an immense impetus to experimental researches.

He was personage of the middle height, having, by a rare exception in the Gun Club, all his limbs complete. His strongly marked features seemed drawn by square and rule; and if it be true that, in order to judge a man's character one must look at his profile, Barbicane, so examined, exhibited the most certain indications of energy, audacity, and "sang-froid."

At this moment he was sitting in his armchair, silent, absorbed, lost in reflection, sheltered under his high-crowned hat—a kind of black cylinder which always seems firmly screwed upon the head of an American.

Just when the deep-toned clock in the great hall struck eight, Barbicane, as if he had been set in motion by a spring, raised himself up. A profound silence ensued, and the speaker, in a somewhat emphatic tone of voice, commenced as follows:

"My brave, colleagues, too long already a paralyzing peace has plunged the members of the Gun Club in deplorable inactivity. After a period of years full of incidents we have been compelled to abandon our labors, and to stop short on the road of progress. I do not hesitate to state,

baldly, that any war which would recall us to arms would be welcome!" (Tremendous applause!) "But war, gentlemen, is impossible under existing circumstances; and, however we may desire it, many years may elapse before our cannon shall again thunder in the field of battle. We must make up our minds, then, to seek in another train of ideas some field for the activity which we all pine for."

The meeting felt that the president was now approaching the critical point, and redoubled their attention accordingly.

"For some months past, my brave colleagues," continued Barbicane, "I have been asking myself whether, while confining ourselves to our own particular objects, we could not enter upon some grand experiment worthy of the nineteenth century; and whether the progress of artillery science would not enable us to carry it out to a successful issue. I have been considering, working, calculating; and the result of my studies is the conviction that we are safe to succeed in an enterprise which to any other country would appear wholly impracticable. This project, the result of long elaboration, is the object of my present communication. It is worthy of yourselves, worthy of the antecedents of the Gun Club; and it cannot fail to make some noise in the world."

A thrill of excitement ran through the meeting.

Barbicane, having by a rapid movement firmly fixed his hat upon his head, calmly continued his harangue:

"There is no one among you, my brave colleagues, who has not seen the Moon, or, at least, heard speak of it. Don't be surprised if I am about to discourse to you regarding the Queen of the Night. It is perhaps reserved for us to become the Columbuses of this unknown world. Only enter into my plans, and second me with all your power, and I will lead you to its conquest, and its name shall be added to those of the thirty-six states which compose this Great Union."

"Three cheers for the Moon!" roared the Gun Club, with one voice.

was created by a small number of people in several of the advanced industrial nations. They can usefully be categorized in terms of four generations of leaders, generations *0*, *1*, *2*, and *N*:

Generation *0* were would-be intellectual leaders who worked on the problem of spaceflight before technology had advanced to the point at which a feasible approach could be identified. The French writer Jules Verne (1828–1905) imagined that humans could be shot to the moon from a huge gun, whereas English writer H. G. Wells (1866–1946) postulated

that a substance could block the force of gravity. The Russian Nikolai Kibalchich (1854–1881) and the German Hermann Ganswindt (1856–1934) turned Verne's idea around, and imagined riding a gun up into space on the recoil of shooting downward.

Generation *1* were scientists who correctly discovered that a feasible means of space travel was with rockets employing high-energy liquid fuels (such as alcohol burned with liquid oxygen) and multiple stages that discarded most of the vehicle during the flight. It is hard to realize now, decades

"The moon, gentlemen, has been carefully studied," continued Barbicane; "her mass, density, and weight; her constitution, motions, distance, as well as her place in the solar system, have all been exactly determined. Selenographic charts have been constructed with a perfection which equals, if it does not even surpass, that of our terrestrial maps. Photography has given us proofs of the incomparable beauty of our satellite; all is known regarding the moon which mathematical science, astronomy, geology, and optics can learn about her. But up to the present moment no direct communication has been established with her."

A violent movement of interest and surprise here greeted this remark of the speaker.

"I have now enumerated," said Barbicane, "the experiments which I call purely paper ones, and wholly insufficient to establish serious relations with the Queen of the Night. Nevertheless, I am bound to add that some practical geniuses have attempted to establish actual communication with her. Thus, a few days ago, a German geometrician proposed to send a scientific expedition to the steppes of Siberia. There, on those vast plains, they were to describe enormous geometric figures, drawn in characters of reflecting luminosity, among which was the proposition regarding the 'square of the hypotenuse,' commonly called the 'Ass's Bridge' by the French. 'Every intelligent being,' said the geometrician, 'must understand the scientific meaning of that figure. The Selenites, do they exist, will respond by a similar figure; and, a communication being thus once established, it will be easy to form an alphabet which shall enable us to converse with the inhabitants of the moon.' So spoke the German geometrician; but his project was never put into practice, and up to the present day there is no bond in existence between the Earth and her satellite. It is reserved for the practical genius of Americans to establish a communica-

tion with the sidereal world. The means of arriving thither are simple, easy, certain, infallible—and that is the purpose of my present proposal."

A storm of acclamations greeted these words. There was not a single person in the whole audience who was not overcome, carried away, lifted out of himself by the speaker's words!

Long-continued applause resounded from all sides.

As soon as the excitement had partially subsided, Barbicane resumed his speech in a somewhat graver voice.

"You know," said he, "what progress artillery science has made during the last few years, and what a degree of perfection firearms of every kind have reached. Moreover, you are well aware that, in general terms, the resisting power of cannon and the expansive force of gunpowder are practically unlimited. Well! starting from this principle, I ask myself whether, supposing sufficient apparatus could be obtained constructed upon the conditions of ascertained resistance, it might not be possible to project a shot up to the moon?"

At these words a murmur of amazement escaped from a thousand panting chests; then succeeded a moment of perfect silence, resembling that profound stillness which precedes the bursting of a thunderstorm. In point of fact, a thunderstorm did peal forth, but it was the thunder of applause, or cries, and of uproar which made the very hall tremble. The president attempted to speak, but could not. It was fully ten minutes before he could make himself heard.

"Suffer me to finish," he calmly continued. "I have looked at the question in all its bearings, I have resolutely attacked it, and by incontrovertible calculations I find that a projectile endowed with an initial velocity of 12,000 yards per second, and aimed at the moon, must necessarily reach it. I have the honor, my brave colleagues, to propose a trial of this little experiment."

after this method was used to reach the Moon in 1969, how unorthodox these ideas originally were when developed by the Russian Konstantin Tsiolkovsky (1857–1935), the American Robert Goddard (1882–1945), and the Rumanian-German Hermann Oberth (1894–1989). On the basis of their ideas, amateur spaceflight organizations were established in several countries, leading to a small but highly visible pro-spaceflight movement that successfully built liquid-fuel test rockets.

Generation 2 consisted of effective entrepreneur-

engineers who created major government programs to develop the technology, notably Wernher von Braun (1912–1977) in Germany and Sergei Korolyov (1907–1966) in Russia. These men wanted to travel into space, but to achieve this practically they had to take a military detour, developing their vehicles for war. The crucial point was the successful use of von Braun's V-2 rocket in World War II, which led a decade later to the marriage of rockets with nuclear weapons to form the intercontinental ballistic missile. Korolyov and von Braun had been mem-

If I have seen further, it is by standing on the shoulders of giants.

bers of their countries' amateur rocket clubs at the beginning of the 1930s, and at the end of the 1950s they launched the first Earth satellites for Russia and the United States.

Generation *N* spaceflight leaders are all the generations of innovative scientists, engineers, and bureaucrats who promoted development in government agencies and corporations after the new spaceflight paradigm had been established.

Generation *0* was pre-revolutionary; generations *1* and *2* were revolutionary, and *N* continues normal science and technology. The different kinds of leader operate in very different social contexts:

Parallel behavior: Individual researchers or inventors act alone, without coordination or leadership.

Collective behavior: Individuals not only do their own private research, but also communicate with like-minded people, leading through the quality of their ideas and their ability to express shared values.

Social movement: Voluntary organization emerges, requiring leaders to have the entrepreneurial ability to attract financial investments and the messianic capacity to recruit new converts to their crusade.

Societal institution: Leaders hold bureaucratic positions in established organizations, such as corporations or government agencies.

These categories can be applied roughly to all S&T fields. In modern societies, societal institutions are constantly challenged by social movements, and social movements are co-opted or excluded by societal institutions. Thus, a fundamental tension exists between normal and revolutionary forms of leadership, between bureaucracies and lone inventors.

GENIUSES AND BUREAUCRACIES

Biographer Evan Schwartz argued that Philo T. Farnsworth (1906–1971), who almost single-handedly developed both the television camera and televi-

sion set, was the “last lone inventor.” Independent inventors like Alexander Graham Bell (1847–1922) and Thomas Alva Edison (1847–1931) could have become rich and influential through the products of their genius. But, then, large industrial corporations arose, established research and development laboratories, hiring scientists and engineers for modest salaries and garnering all the patents and profits for the company. With money from a friend and from local banks, Farnsworth established a tiny laboratory where he succeeded in developing fully electronic television. But broadcast technology was dominated by the Radio Corporation of America (RCA), a monopoly that held the radio patents. According to Schwartz, RCA intentionally delayed television because it wanted to own Farnsworth's patents, and commercial television began only as the patents were expiring.

Once a particular S&T field has been solidly established, the easiest discoveries or inventions may already have been made, and the vast resources of corporations or governments may be required to achieve further progress. Individuals who command significant resources can still be important, as can lone geniuses who open up new fields. Multimillionaire financier, Alfred Lee Loomis (1887–1975), established a physics laboratory in his mansion at Tuxedo Park, New York, and contributed both organizational leadership and solid scientific expertise to the radar and atom bomb projects of World War II. Lone inventors were important in the 1970s in the development of personal computers and software. Importantly, individual innovators can still play leadership roles within large bureaucracies such as government science agencies.

Among the most influential leaders was Vannevar Bush (1890–1974). After earning a doctorate in engineering jointly from Harvard University and the Massachusetts Institute of Technology, Bush taught at MIT for twenty years and then became head of the Carnegie Institution in Washington, D.C. In 1930, he built the differential analyzer, a mechanical, analog computer useful for calculating the artillery ballistic trajectories. In 1940, Bush personally convinced President Roosevelt to establish the National Defense Research Committee to advise the government on technical matters, with himself as chairman.

The spectacular successes of the radar and atomic bomb projects made government extremely receptive to future science-based engineering projects, and in 1945 Bush submitted a report to President Truman, *Science the Endless Frontier*, advocating a new government agency to support fundamental scientific research. The result, after five years of political debate, was the National Science Foundation (NSF).

The first of the great U.S. government research organizations founded after World War II was not NSF, however, but the Office of Naval Research (ONR), and its formation illustrates the irony that often attends leadership in S&T. The postwar success of the navy depended on continued technical innovation, and in 1943, a group of reserve officers developed a proposal for what later became the ONR. However, the key individual was Vice Admiral Harold G. Bowen (1883–1965) who wanted command over the development of nuclear-powered warships. Earlier, he had lost an influential position in naval research when he clashed with Bush over Bowen's reluctance to give civilian scientists much autonomy in working on military projects.

After a humiliating year on the sidelines, Bowen developed a friendship with James Forrestal (1892–1949), undersecretary of the navy. Death of the secretary led to Forrestal's promotion, and in 1945 he established the ONR with Bowen as first director. Bowen hoped he could now forge ahead with nuclear warships, but their rival, the U.S. Army, had control of the atom bomb project and rebuffed the navy's attempts to become involved. In response, Bowen switched his position on civilian scientists and now recruited them to build expertise in the ONR. As a final irony, the nuclear warship program was given not to ONR but to the Bureau of Ships. Thus, Bowen became the first director of an organization that was not at all what he would have designed, with purposes quite different from those he intended. Nonetheless, ONR became a sterling research organization and was a model for many that followed, including NSF.

The National Science Foundation is a preeminent example of a government agency that funds research in fundamental science, mathematics, and engineering through a system that combines several kinds of

leadership. The central concept is *peer review*, that the scientific merit of research proposals should be judged by scientists who are experts in the field. Most of the foundation's five billion dollar annual budget is invested in proposals submitted by researchers in response to very general competition announcements. The awards are grants, giving the researchers scope to modify the work creatively as it progresses, rather than contracts specifying particular deliverables. When NSF program directors receive these investigator-initiated proposals, they recruit experts to serve as volunteer reviewers. The program directors, who are scientists in the relevant field themselves, are either permanent government employees or "rotators," who come in temporarily from universities for a period of from one to three years. Many of the higher-level management positions are also filled by rotators, and the various divisions of the Foundation are deeply embedded in the communities of scientists they serve.

The director is a presidential appointee who serves for as long as six years and is the top bureaucratic leader in the foundation, holding a formal position in the command structure. Major policy decisions are made in consultation with a committee of presidential appointees, called The National Science Board. A common form of advisory board in universities and some government science agencies is the "committee of visitors" that comes in from other institutions every few years to monitor how well a particular department has been managed and to offer advice for improvements. Many organizations have similar sets of advisory councils, but their leadership function is highly variable. For example, in the 1960s and 1970s, the board of trustees of the Argonne Universities Association had little success in influencing operation of the Argonne National Laboratory. A key leader within large S&T organizations is the intellectual leader who coordinates the activities of scientists and engineers not by giving orders or policy advice, but by offering specific technical or theoretical ideas that reshape a field.

VISIONARY LEADERS

The potential importance of middle-level leadership in science agencies is illustrated by Joseph Licklider

(1915–1997), who was director of the behavioral science and computing programs at the Advanced Research Projects Agency (ARPA), today called DARPA with a *D* to emphasize that it is part of the Defense Department. According to biographer Mitchell Waldrop, Licklider was the most influential single individual in the development of the Internet and the entire modern conception of personal computing. ARPA was a direct response to the launch of the first earth satellites by Sergei Korolyov's team in Russia in 1957, and thus was a continuation of the international scientific competition between nations that had arisen in World War II. Licklider held a doctorate in psychology, gained practical experience working in a wartime Harvard psycho-acoustic laboratory, and helped develop computers at MIT and at the BBN Corporation, before joining ARPA in 1962.

At the time, batch processing was the chief manner in which humans interacted with computers. The user would prepare IBM cards, submit the run to the computer, then wait several hours for a paper print-out. Licklider was one of a small number of visionaries who believed that human interaction with computers should be much more rapid, fluid, and personal. At ARPA, he exercised his unusual discretion as a program director, and his powers of persuasion, to create several university-based projects developing time-sharing techniques that allowed several people to interact simultaneously in real time with a large computer. The next step in Licklider's vision, Arpanet, was launched in 1969 by his successors at ARPA, for the first time linking together computers in remote locations using modern methods. During the 1970s, the Internet grew directly out of Arpanet.

At the beginning of the twenty-first century, the role of a visionary leader is well illustrated by the success of NSF's Mihail C. Roco in creating first the National Nanotechnology Initiative and then the Converging Technologies movement. An inventor, university professor, and prolific author, Roco initiated an NSF program on synthesis and processing of nanoparticles in 1991. He had the vision to see farther than others did, and the social skills to help other creative scientists and engineers see how their own work

could contribute to the larger success. As a program director in NSF's Directorate for Engineering, Roco organized workshops, conferences, and other forms of communication—first to raise the consciousness of scientists and engineers about nanoscience and nanotechnology, then to help them see how nanoscale S&T could form the basis of convergence between other fields, potentially across all of science.

Nanotechnology is an interdisciplinary field that controls matter on the nanometer-length scale, to create new materials, devices, and systems. A nanometer is one billionth of a meter, or roughly one millionth of the thickness of an American dime. This is the size scale at which complex molecules exist, larger than individual atoms but much smaller than the cells of a human body. Only in the 1990s did a range of techniques exist to study and manipulate matter at the nanoscale, and the term *nanotechnology* was coined, but shared consciousness and communication systems were lacking that could bridge across the separate fields, notably complex molecule chemistry and materials science. Between 1996 and 1998, Roco worked with a panel that conducted a worldwide study of nanostructure science and technology, augmented in 1999 by a workshop on nanotechnology research directions and in 2000 by one on societal implications of nanoscience and nanotechnology. All three were published both online and as books, and Roco became founding editor of the *Journal of Nanoparticle Research* in 1999.

Nanotechnology is itself a convergence of physics, chemistry, and engineering, with connections to genomics and proteomics in biology. Beginning in 2001, Roco initiated a series of workshops, special sessions at larger conferences, and publications exploring the possibility that convergence of nanotechnology, biotechnology, information technology, and cognitive science could greatly improve human performance over the next ten to twenty years. Convergence would be based on the material unity of nature at the nanoscale, technology integration from the nanoscale, key transforming nanotechnology tools, and the concept of reality as closely coupled hierarchical complex systems. Clearly, Roco's success in mobilizing some of the world's best scientists and engineers around such concepts is

evidence that technically competent but visionary leadership continues to be important in S&T.

SEARS, ROEBUCK & CO. CATALOGUE

The most successful and endearing icon of U.S. consumerism from the late nineteenth century to the mid-twentieth century was the Sears, Roebuck & Co. catalogue. Known affectionately as “the Wishbook,” “Mr. Sears’s Catalogue,” and “the Farmer’s Bible,” the catalogue offered shoppers, especially in rural areas, a delightful and unprecedented cornucopia of consumer goods and a source of wonderment. This remarkable marketing tool revolutionized shopping and merchandising and in the process homogenized and democratized the market, making Sears the world’s largest merchandising corporation. Indeed, every company today—including those on the Internet, the latest incarnation of catalogue shopping—that uses mail-order catalogue sales (which reached \$110.2 billion in the United States in 2000) benefits from the model and trust established by Sears. At its core, the Sears catalogue helped people obtain the “good life”—making life easier, more pleasant, even fun—and acquire consumer goods at a good price.

THE INNOVATION OF CATALOGUE SHOPPING

Soon after the Civil War, residents of large U.S. cities could shop at new department stores, which allowed pleasurable access to more product choices and better products at affordable prices than ever before. The parallel innovation of catalogue marketing through mail order developed, ironically, from urban-based industry seeking to supply the needs of the nation’s predominately rural population. In 1890, 65 percent of U.S. residents still lived in rural areas, historically characterized by few shopping options

besides traveling salesmen and the general store, where product choices were few and prices high. Mail order revolutionized this environment. Railroad networks provided national mass distribution of goods, while rural free delivery (RFD) and parcel post guaranteed even isolated rural people home deliveries without the necessity of “going into town” to pick up their mail. Aaron Montgomery Ward, who had worked for Marshall Field’s department store in Chicago, seized the opportunity to supply products at discounted prices to rural people through catalogue sales with a satisfaction guarantee. His pioneering 1872 endeavor, headquartered in Chicago, inspired imitation, none more successful than that by a once-obscure Minnesota watch seller, Richard Warren Sears.

MR. SEARS, MR. ROEBUCK . . . AND MR. ROSENWALD?

The man whose name became synonymous with trust and value in catalogue sales, Richard Warren Sears (1863–1914), ventured off the farm at age sixteen into employment as a railroad station agent in North Redwood, Minnesota, where he utilized his natural gifts as an entrepreneur and salesman, first by selling lumber and coal on the side and then, fortuitously, watches. A shipment of gold-plated pocket watches from a Chicago manufacturer went unclaimed, so Sears contacted the manufacturer to purchase and sell the watches himself; he soon ordered more watches. Within six months, Sears netted five thousand dollars.

In 1886, at age twenty-three, he established the R. W. Sears Watch Company in Minneapolis, increasing sales by employing direct-mail campaigns; Sears had an exceptional talent for writing ad copy with a personal touch that was enticing and yet created trust. His watch business thriving, he relocated to Chicago in 1887 and hired his own watch repairman, Alvah Curtis Roebuck (1864–1948), launching his first catalogue, featuring only watches and jewelry, the following year. Sears “retired” in 1889, selling his watch company, only to repartner with Roebuck to create Sears, Roebuck & Co. in September 1893, devoted to selling a wide array of merchandise—and

issuing the catalogue that so dramatically captured the public’s imagination.

Whereas Sears was a risk taker who thrived on the bustle of business, Roebuck was not. Coping with illness, he sold out to Sears in 1895 for \$25,000, although the company would still bear his name. A pants manufacturer supplying Sears, Julius Rosenwald (1862–1932), was astonished at the catalogue’s volume of business. He entered into partnership with Sears in 1895, contributing new capital and a gift for business organization, which the company badly needed. Although Richard Sears was a promotional genius, his business operated in near chaos. In the early days, there were times when the orders generated by the catalogue were so voluminous that they were burned, unable to be filled. Rosenwald brought order out of this chaos. He expanded the catalogue and created the powerhouse organization that became the modern Sears company.

WORLD’S LEADING MERCHANDISING CORPORATION

Julius Rosenwald’s organization coupled with Sears’s promotions resulted in record sales; the company permanently passed frontrunner Montgomery Ward in 1900, generating \$10.6 million versus \$8.7 million in sales, respectively. Not surprisingly, differences between these two strong personalities created tensions. Rosenwald steered the company toward a tighter business ethic and away from hucksterism. He vertically integrated the company, acquiring ownership or controlling interest in at least sixteen enormous manufacturing plants in eleven states, thus guaranteeing dependable and constant access to goods. In 1906, he organized the creation of the colossal 40-acre Sears plant in North Lawndale on Chicago’s West Side, then the largest business building in the world (now the site of Homan Square Community Center Campus). A marvel of modern business processing, the plant had nine thousand employees who processed 100,000 orders per day, while a scheduling system allowed the company to ship merchandise within forty-eight hours of receiving even mixed orders for merchandise from various departments. The merchandise-assembly room col-

Ever Made,” “The Greatest Value Ever Offered,” and “The Most Reliable.” A famous story has Richard Sears personally replacing a watch that a streetcar conductor had dropped, asserting, “We guarantee our watches not to fall out of people’s pockets and break” (Emmet and Jeuck 1950, 84). A glance at any early catalogue demonstrates Richard Sears’s characteristic formula: Whatever the product category, Sears offered the best price, the best choice, the best quality, the best guarantee. Reading his descriptions is enticing even today.

“THE CHEAPEST SUPPLY HOUSE ON EARTH”

By 1897, as company profits exceeded \$1.3 million, the catalogue—subtitled in Sears’s signature style as “The Cheapest Supply House on Earth”—had grown to 786 pages, offering almost anything available for sale. “Don’t Say It Isn’t in the Catalogue,” Sears proclaimed boldly. “If you don’t find it in the index, look very carefully through the entire catalogue. Nearly everything in merchandise can be found in this book.” Moreover, the catalogue was meant as a source of dreams: “Refer to it constantly. . . . You will prize this catalogue as an actual necessity of life, and one that you will never be without” (Israel 1997, 775, 786).

The 1902 behemoth was more than twelve hundred pages, more than 100,000 illustrations and quotations, weighing nearly 2 kilograms. By 1903, the company had its own gigantic printing plant running 700,000 kilometers of paper through the presses to create the 6 million copies of the catalogue mailed each year. The 1908 issue featured more than six thousand items, from abdominal reducing corsets, baseball equipment, and cameras to face powder, guns, musical instruments, and paint, to rugs, tombstones, vehicles, wallpaper—and always, watches. For thirty-five cents, consumers could order fifty stereoscopic slides showing the colossal Chicago plant operating and the catalogue being made. The catalogue offered not only the kitchen sink, but also entire kit houses, complete with numbered parts, paint, nails, and instruction booklets, shipped by rail to nearly anywhere in the country.

Sears also published twenty-four specialty catalogues, allowing for target marketing of product lines.

Moreover, Sears advertised in magazines and newspapers circulating in the rural market in order to popularize the Sears name and increase demand for the catalogue. Indeed, Sears became the largest mail-order advertiser in the nation. This was not always easy. Local newspapers, under pressure of local merchants—who doggedly sought means to destroy catalogues, which they rightly saw as a threat—often refused advertising space to the so-called “Mail-Order Trust.” Sears countered by urging shoppers to use his catalogue—subtitled “The Great Price Maker” and “The Consumers Guide”—as their ally to see how much local retailers were overcharging them.

Ever the entrepreneur, Sears pioneered ways to get his catalogue into the hands of new people. In 1905, for example, he created a novel marketing campaign in Iowa, in which existing customers were offered premiums (a bicycle, furniture, sewing machine, or stove) for persuading others to order from the catalogue. The “Iowaization” plan was then utilized throughout the country. From 318,000 Sears catalogues in circulation in 1897 (the first year figures are available), the numbers soared to more than 1.5 million in 1902, to more than 6.5 million in 1908 (including both spring and autumn editions). By 1927, circulation totaled 75 million mailings—including 15 million “Big Books,” 10 million circular letters, and 23 million sales and specialty catalogues.

SEARS’S LEADERSHIP LEGACY

By specializing as a mail-order house rather than a retail store, Sears was not constrained by geographical space; indeed, the “market” was anywhere a catalogue could be—an innovation that even today remains strategic. Sears’s strategy was attracting otherwise reluctant customers by offering liberal guarantees, enticing product descriptions and illustrations, and sensationally low prices, which he was able to do by eliminating the middleperson and contriving exceptional deals with manufacturers based on mass sales—a strategy not lost on modern discounters such as Wal-Mart. However, the catalogue generated the huge volume of sales. Although today catalogue layouts are less crowded, and the appeals

are (perhaps) more sophisticated, the basic Sears formula remains effective. In this sense, Sears laid the foundation for modern advertising and billboard, catalogue, even television and Internet selling. Likewise, Rosenwald's organizational system became the model for the behind-the-scenes success of modern catalogue operations.

Beyond business leadership, the Sears catalogue profoundly influenced culture. In rural schoolhouses, it served as an encyclopedia of knowledge. Children practiced reading and spelling using the catalogue, studied arithmetic by adding up orders, honed artistic skills by copying catalogue pictures, and studied geography with the postal-zone maps. Mothers pacified children by using the catalogue as a storybook, girls made paper dolls by cutting out illustrations, boys decorated their walls with its pages. Most significantly, Sears united the country in a central cultural experience as folks all over the nation sent money to a trusted man in Chicago, whose catalogue increasingly homogenized, nationalized, and modernized the market and, in a real sense, democratized prosperity.

FROM CATALOGUE TO RETAIL STORE—AND BACK AGAIN

The company began shifting to retail stores to meet the demands of an increasingly urban and mobilized society. Rural shoppers who had so generously utilized the catalogue were becoming less isolated and more prosperous in the new century, able to afford cars to drive to towns to shop. Although Sears still did as much as 95 percent of its business by mail as late as 1925, the company's mail-order volume dropped to 54 percent by 1930 as its stores increasingly absorbed sales under the guidance of Julius Rosenwald's hand-picked successor, Robert E. Wood (1879–1969). Wood opened the first "experimental" store in 1925, ironically in the Chicago mail-order plant; by 1929 there were 319 stores. Exceeding catalogue sales for the first time in 1931, Sears stores accounted for almost 54 percent of business. Despite the Depression, the number of stores grew to six hundred by 1941.

Nevertheless, under Robert Wood's leadership,

Sears also transformed the catalogue to meet the needs of urban customers. Catalogue sales desks were installed in the retail stores, and catalogue sales offices were opened in towns too small to support a store. Moreover, post-World War II prosperity propelled the catalogue to legendary prominence again as the beloved Christmas "Wishbook" (first issued in 1933) was eagerly awaited by Baby Boomer children throughout the 1950s and 1960s yearning for Santa to bring Lionel trains, Marx playsets, Roy Rogers and Davy Crockett toys, Erector sets, G.I. Joe, Barbie and Ken, Chatty Cathy, Tiny Tears, the Easy Bake Oven, Marx dollhouses and kitchen sets, costumes, and games.

As Sears stores increasingly anchored newly developing shopping malls, Sears moved into its new headquarters in Chicago in 1973, the 110-story Sears Tower, then the tallest building in the world. In the wake of major corporate restructuring in the 1980s, Sears's merchandise division, amid \$3.3 billion in sales, abandoned the century-old "Big Book" catalogue in January 1993, even though 14 million consumers had received one. The catalogue shutdown caused public outcry, eliminated 3,400 full-time jobs, and left J. C. Penney the largest catalogue retailer in the United States.

Even so, Sears continued to issue specialty catalogues, notably for Craftsman brand tools, toys, and gifts (revived in 1995), and watches and jewelry. Sears Canada, which is partially owned by the U.S. company, still produces a "Big Book" catalogue. Electronic catalogue shopping is the latest avenue of growth. In 1997, Sears made Craftsman tools available online, then launched the websites Wishbook.com in 1998 and Sears.com in 1999. In 2002, in a bold move to reassert catalogue dominance, Sears acquired for \$1.9 billion Lands' End, the nation's largest specialty clothing catalogue company, with LandsEnd.com the nation's biggest Internet seller of clothing. Today Sears is increasingly focusing on Internet catalogue sales. Sears.com offers extensive goods and services and is the nation's largest online appliance source. The company's strategy, to become "the definitive online source for the home" while enabling consumers "to capture the American Dream," was launched in its

1999 marketing campaign: “The Good Life at a Great Price. Guaranteed”—which would surely bring a smile to the founder.

—Craig H. Roell

SELF-INTEREST

The philosophy of leadership presented in this entry dictates that leaders be selfish, that is, egoistic. Most people assume that egoism means amorality and the ruthless manipulation of others. In fact, however, egoism means acting in one’s own interest. But what does it mean to act in one’s own interest, and how does one go about doing so?

MORALITY

Before turning to those questions, let us first examine the nature of morality. The novelist-philosopher Ayn Rand (1905–1982) argued that the reason people need a moral code is that they cannot survive on the basis of instincts or spur-of-the-moment impulses. They need a code of values to guide their choices and actions. In Ayn Rand’s philosophy, life is the objective standard of morality. As Rand states, “It is only the concept of ‘Life’ that makes the concept of ‘Value’ possible” (Rand 1964, 15–16). As mortal beings, our existence is conditional on taking courses of action that will fulfill our needs. This means that a rational moral code

must be egoistic; that is, people must benefit from their choices and actions.

Observe that egoism is the polar opposite of altruism. Although often popularly understood to mean benevolence or good will towards others, or a willingness to help those in need, in actuality altruism means “other”-ism (etymologically the word ultimately derives from the Latin *alter*, “other”). The code of altruism asserts that moral virtue consists of sacrificing oneself for others. Insofar as a rational moral code must be egoistic, as argued above, altruism flies in the face of rational morality; indeed, Rand characterized altruism as an anti-life moral code.

The basic moral choice, however, is not between sacrificing oneself for the sake of others or sacrificing others for the sake of oneself. Criminality and amorality are not the proper alternatives to self-immolation—or vice versa. The proper alternative to altruism is rational egoism, which means dealing with others through voluntary trade.

But to know that it is good to act in one’s own self-interest does not tell one how to do it. Egoism points to the proper beneficiary of one’s actions—oneself—but that identification does not provide a specific code of virtues that will make possible pro-self, pro-life choices.

VIRTUE

If life is the ultimate standard of reality, then the question becomes, what specific virtues are pro-life? What virtues will enhance one’s long-term survival and happiness?

Ayn Rand answers that since one’s survival depends mainly on the use of one’s rational faculty, rationality is the primary virtue. Reason is the faculty that integrates and identifies the material provided by the senses. It is through reason that people are able to know the world and make the discoveries and decisions that enhance their lives and well-being. One should not act on the spur of the moment, based on emotion, but deliberately, after thought. Using reason means considering the consequences of one’s actions, both short and long term. It means integrating perceptual information into concepts and integrating conceptual knowledge into principles (gen-

eral truths), rather than viewing every concrete fact and situation as unrelated to every other. Using reason means having an active mind, a mind eager to grasp reality and to guide one’s choices and actions accordingly.

Ayn Rand identified six other virtues that are implicit in the virtue of rationality: honesty, integrity, independence, justice, productiveness, and pride. Honesty is the refusal to fake reality, to pretend that the unreal is real, that the untrue is true. Dishonesty separates one’s mind from reality and cripples one’s rational faculty.

Observe here that in the face of adversity dishonest leaders abandon reason; they look to fool others, as if faking reality would make reality into what they want it to be. In contrast, honest leaders use reason to look at the facts and ask: What are the causes of this problem? Are there any actions we can take to fix them? What are they? How can we take them? It is obvious which of the two types of leaders described above are acting in their own self-interest and dooming themselves to ruination.

Integrity is loyalty to one’s rational convictions in action. Note that integrity is not loyalty to whatever feelings one happens to have, but to what one has concluded, through a process of thought, to be right. The failure to have integrity divorces one’s judgment from what one does and thereby, like dishonesty, negates reason.

Independence is taking responsibility for doing one’s own thinking and not accepting the assertions of others out of conformity, passivity, or fear. It means looking at reality firsthand, examining the evidence (including any relevant information provided by others), and reaching conclusions based on one’s own best judgment. It also means taking responsibility for one’s own life. The refusal to act and think independently puts one entirely at the mercy of what other people say or do and destroys one’s control over the course of one’s life.

Justice means rationality applied to other people. It means making judgments of other people based on the facts and acting toward them in accordance with those facts. It means judging them by a rational standard and acting on that knowledge. It means rewarding the good and not compromising with evil,

rewarding the competent but not the incompetent. The consequence of failing to be just is that the good will be undermined and the bad will flourish and even destroy the good.

Productivity means taking the responsibility to produce those necessities required for life. People are not disembodied spirits; they are a unity of mind and body and need to survive as physical entities guided by the judgment of their rational faculty. The failure to produce in any form leads ultimately to death (unless other producers provide for one).

Pride means moral ambitiousness and is the consequence of living a fully and consistently moral life guided by the consistent use of one's rational faculty.

LEADERSHIP

Let us now apply the above principles to the sphere of leadership. Edwin Locke et al. (1991, 2) define leadership as "the process of inducing others to take action toward a common goal." There are many different types of leadership. For example, there is leadership in politics, in business, in the military, on sports teams, within nonprofit institutions, and within other contexts. Although all these contexts share certain elements, this discussion will be confined to the leadership of for-profit companies.

The purpose of a business is to make a profit over the long term, or, more specifically, an honest, long-term profit; widespread dishonesty leads eventually to disaster (as the case of companies such as Enron and WorldCom, which collapsed amid scandal in 2002, illustrates). If the goal is to make the business profitable, then it is clearly in the self-interest of business leaders to take actions that will make long-term profits possible. The following are some of the steps that self-interest dictates a business leader should take.

Formulate a Business Vision

An effective leader has to identify the potential of a market, technology, or service and then identify a business strategy that will make the business competitive in the marketplace. In formulating a vision, leaders have to be scrupulously honest, because if

they try to fake reality in any way—for example, by denying relevant facts, misrepresenting the capability of competitors, incorrectly estimating the value of their own products or services, or ignoring relevant financial information—they will risk, and in the end guarantee, failure. Viable business visions are not to be confused with wishes; they are not simply what leaders want to happen. They are what the leaders' best rational judgment tells them will enable the company to be profitable. A chief executive officer (CEO) can properly get input from others, especially from able executives and members of the board of directors, when formulating a vision, but, in the end, a company has to be guided by a single vision, else the result will be anarchy and chaos. Having multiple top leaders would be like having a boat with ten rowers moving in the direction of their choice; the boat would never go anywhere.

Establish Core Values for the Organization

The purpose of a business is to make a profit, but profitability cannot be the core value, because this would imply that it did not matter how the money was obtained. There has to be a set of values that guide the methods and procedures by which a profit is generated. Two types of values are relevant here. The first are the moral values that will guide the company; these should reflect the essence of the list of virtues discussed above. Organizations consist of and are run by people; thus they share the same need as individuals for moral principles to guide choices and actions.

Moral Values

There are two ways that leaders can default on the issue of core moral values. One is by engaging personally and deliberately in dishonest practices and pressuring other executives to do the same as a condition of continued employment. Some CEOs are dishonest to start with; others begin honestly but resort to dishonest practices when their businesses do badly (for example, when projected earnings do not materialize) and they do not want to acknowledge it. Often they end up in a downward spiral in which an initial dishonesty has to be covered by fur-

ther dishonesties until the whole scheme collapses. In the face of adversity, dishonest leaders abandon reason; they try to fool others, as if misrepresenting reality would make reality into what they want it to be. In contrast, honest leaders use reason to look at the facts and attempt to identify the causes of any problems they encounter.

A second pattern of value default is the tacit acceptance of dishonesty in others, which can come about if CEOs do not keep track of what is going on below them. When CEOs are getting good results, they may prefer not to look too closely at how they got those results. They delegate everything to those below, including core values. CEOs are not necessarily fully passive in these situations. They often actively do not want to know what is going on and take deliberate steps to isolate themselves from everyday events. This means that they are implicitly endorsing whatever their subordinates are doing without actually saying anything. By doing so, they can take credit as long as the company does well and claim ignorance if wrongdoing is exposed.

Core moral values cannot be delegated. They have to be promulgated from the top and enforced relentlessly. For example, dishonest employees should not be promoted or given raises, even if they get good results. And if it is clear that they will not reform (or if the dishonesty is flagrant), they should be fired. CEOs must make it clear that they *want* to know if anyone hears about any dishonest practices, and they must follow up on any information they are given. If the CEO remains morally passive, the entire organizational culture can become dishonest by default. Maintaining core moral values requires an active, hands-on approach.

Company Values

The other type of values that organizations need can be called company-specific values. These might include what the company views as its core business (for example, high technology) or its core strategic strengths (for example, customer service, low cost, speed, innovation, or quality). Unlike moral values, which should never change, company values can properly change with changing business conditions. Having low cost as a company value might not make

sense at one time (for example, at the beginning of the personal computer industry), but it might come to make sense later as price competition heats up. Core company values must evolve to match changing business conditions. But still these values—and value changes—need to be driven from the top.

Company values by themselves do not necessarily give a company any competitive advantage. Similar sets of values may be endorsed by many companies. What will set a company apart will be how well it executes those values—that is, applies the values in the realm of everyday action. For example, having quality as a company value will not work unless the products or services are, in reality, high quality, and unless that quality is perceived and valued by customers.

All business organizations that are to be led by a single vision, and a single set of core values must be hierarchically structured. A hierarchical structure is also necessary because people differ in their ambition, knowledge, and ability. The purpose of structuring is to tie the parts of the organization together. The type of leader who is often mistakenly called selfish will structure the organization in order to consolidate his power, but the truly selfish leader—the one acting in accordance with the principle of self-interest—will look at the facts and try to ascertain the best way to separate the parts, in line with the principle of specialization of labor, while still ensuring that the parts all work together as a whole. This requires, then, both differentiation and integration, or centralization and decentralization. There are no final rules about how best to structure organizations, and most of them are continually restructuring to respond to new business realities.

Select Able Employees

Successful organizations need able employees. Insecure leaders fear being shown up by talented employees, but real self-interest dictates that business leaders hire as many smart and capable people as they can, because the success of leaders depends on the quality of the people who work for them. In fact, a subordinate often should be smarter and more knowledgeable than the CEO in the subordinate's area of expert-

ise. Unless the organization is tiny, no one person can do all the work required to make it run.

After hiring able employees, the CEO must delegate enough responsibility to them to enable them to make full use of their talents. Although it is the CEO's job to choose the vision and establish the core values, subordinates should be given the authority to make business decisions in their areas of expertise. Not using the brains of one's subordinates is a sure route to organizational failure. In addition to losing the full benefits of the subordinates' talents, overcontrolling CEOs risk losing their best people to other companies because capable employees are always in high demand and will not usually stay long with a company that does not value their abilities.

In addition to requiring the freedom to achieve, able subordinates need to be given credit for their achievements, not only in words, but also in the form of promotions and raises. Insecure CEOs try to take credit for subordinates' successes and blame them when things go wrong. Such CEOs are routinely called selfish, but according to the philosophy of self-interest they are actually anti-self, because they are sabotaging their own long-range success by undermining the people who help make it possible. They usually end up with a cadre of cowed, mediocre executives who do what they are told but contribute little of value to the organization.

Motivate Subordinates

Although in the end motivation comes from within, leaders can influence this process. What leaders do after hiring can have profound effects on their subordinates' motivation, for better or for worse. Leaders motivate subordinates in part through the use of the power that goes with their position as the boss; the employment contract implies that they have the right to tell people what to do. But what is the best way to use this power?

Leaders who are conventionally called selfish are usually people who use their authority to motivate by fear. They use their power as a club; they threaten subordinates, they demand that orders be obeyed mindlessly, they publicly humiliate those who do not do what they want, they fire people arbitrarily, and

they rarely give credit for any positive achievements. Needless to say, such practices do not produce very motivated subordinates and thus work against the CEO's true self-interest.

Healthy motivation of subordinates starts with communication. The first thing to communicate is the organization's vision and core values. Leaders also have to build subordinate confidence. Partly this is achieved by ensuring that everyone has the training and experience they need, and partly it is achieved by expressing confidence when it is merited. Employees demoralized by failure can be helped by encouragement, training, and mentoring.

Empowerment was noted earlier. Empowerment, or delegation of responsibility, is a very successful way to motivate to people who have skill, ambition, and confidence. Empowerment is not, however, the panacea it is often made out to be. It must be tied to what the person can actually do and it cannot, as noted, include vision or core values.

Leaders also motivate subordinates through the use of performance goals. CEOs properly play a major role in setting goals for the organization, though goals at lower levels can be delegated. Goals that are clear but difficult to achieve lead to better performance than goals that are ambiguous and/or easy to achieve. For goals to work there must be feedback, so that the employees can track their progress; there must also be commitment to the goals, and there must be a viable plan for reaching the goals successfully. Commitment is highest when the individual considers the goal to be important and has confidence that it can be reached or approached. A common practice of good leaders is to assign goals but to empower subordinates to decide on the best methods or plans for attaining the goals.

Leaders must beware of employees' tendency to use shortcuts and dishonesty to make it look as if goals have been achieved when in fact things are not going well. Leaders must enforce core moral values so that this does not happen. Leaders who lead by fear are most likely to encourage dishonest behavior in subordinates, especially if the leaders do not care how success is achieved. Sometimes, as mentioned earlier, CEOs themselves instigate the dishonesty.

Leaders also motivate subordinates by offering

rewards. Leaders who are selfish in the conventional sense of the word take as much money as they can for themselves and dole out what is left to others, often based on arbitrary criteria. Rationally selfish leaders operate on the principle of justice. They first gather all the information they can, with the help of others, about what each subordinate has accomplished and how. They consider the business conditions the employees were faced with and the full range of actions taken. Then they reward on merit, with the best performers at each level getting the largest raises. Such a policy is objectively selfish because it means that the best performers will be the most motivated to work hard in the future and to stay with the company.

Incentive systems do not have to reward only successful achievement of goals. If goals are very challenging, they may elicit high performance and still not be fully reached. What should be rewarded is performance, with the goals being motivators.

Build Teams

Great business leaders such as Jack Welch, the former CEO of General Electric, develop outstanding top management teams. They do not want flunkies and yes-men but people of outstanding ability, including people who will disagree with them, argue with them, and challenge them. They want people who possess skills they themselves do not possess. The CEO is still the boss, but great CEOs want people who will stimulate their thinking before final decisions are made. The better the team, the better the CEO's own chances of success at the helm.

Promote Change

The conventionally selfish CEO, frightened by the dynamism of free-market capitalism, will often ask for government subsidies or protection from competitors (for example, in the form of import quotas or price supports). Such leaders do not think in terms of principles; they want special deals for their own companies but not for others, so, for example, they want to hinder the entrance of competitive foreign goods to their own country, but they want the export

of their own products to be unhindered by recipient countries. Their pursuit of self-interest comes at other people's expense. But such an unprincipled policy is not in their actual, long-range self-interest. Any special favor they get can be turned against them whenever some other CEO has more clout with the government. Further, once the principle of government controls is accepted, thousands upon thousands of additional controls will be heaped upon business, which, according to the principles of free-market capitalism, end up undermining all businesses and the economy at large.

The rational, principled response to the dynamism of capitalism is to stand for the principle of dealing with others only by voluntary trade, without government intervention, except to prevent fraud or coercion. When competitors appear, truly selfish business leaders look at the facts, decide if the competition can be dealt with, and then respond accordingly. If the threat can be met, they take steps to meet it; if not, they get out of the business they are in and choose one in which they can compete effectively.

OVERVIEW OF THE RATIONALLY EGOISTIC LEADER

As in the case of the business heroes in Ayn Rand's 1957 epic novel *Atlas Shrugged*, a true egoist puts reality first and relies on reason to understand it. A rational egoist thinks in terms of principles and acts on them. Objectively, egoistic business leaders succeed by thinking. They take the steps needed to make their businesses make a profit in the long run. They formulate a vision for the business based on facts. They operate by firm moral principles in all their dealings and enforce these throughout the organization. They select outstanding people to work for them. They structure the organization to ensure both differentiation and integration. They motivate subordinates through positive means. They build top management teams composed of people who offer new and challenging ideas. They cope with changes in the market by changing their business rather than through begging for government favors.

Great leaders are not people without ego. It sometimes appears this way because great leaders have

genuine inner confidence; they are not boastful, nor are they obsessed with getting attention. Their focus is on the business: how to make it work, how to make it prosper. Their motive power is their selfish love of the work and also their love of the rewards, such as money, that they earn from the work. Their work is their passion—passion guided by reason. They are not altruists and could not function as such—that is, by doing something they had no personal, selfish interest in doing out of duty to others. Their motive is to do what they love doing, and to do it well. Herb Kelleher, the founder of Southwest Airlines, identifies the essence of the great business leader's motivation when he says of his work, "I love it, I love it—I sure as heck do" (quoted in Locke 2000, 113).

SELF-MANAGEMENT

People who raise difficult issues, move their communities out of familiar comfort zones, and seek

change that some will experience as loss generate resistance that will feel personal. The form of the resistance can vary all the way from frontal personal attacks to the more subtle ploys of diversion, marginalization, and seduction. But whatever the form, the objective is clear: namely, to get the person exercising leadership to back off.

Success and survival in the practice of leadership depend significantly on dealing with resistance. And that requires considerable skill at managing not just the community—those who are pushing back—but managing your own response, managing the self as well. Understandably, this critical element of leadership is often ignored. Worrying about the self may feel self-indulgent, a diversion from the central task. It is easy to get so caught up in the cause that you become unmindful of what is going on inside yourself.

Self-management when exercising leadership has at least three central aspects: holding steady, managing your hungers, and anchoring yourself.

HOLD STEADY

Holding steady under the pressures of resistance is an essential skill if you are to stay alive and keep people focused on working the tough issues at hand. If you waver prematurely, they will surely lose their focus. Not wavering is difficult. The pressure on you may be almost unbearable. And you may harbor understandable doubts both about your own capabilities and about the direction in which you are pushing. However, leadership usually demands taking the heat and letting issues ripen.

Taking the Heat

Learning to take the heat and receive people's anger in a way that does not undermine your initiative is central to both survival and success. You are asking difficult questions, raising difficult issues, behaving in a way that may well frustrate and disappoint your closest friends and supporters. People become concerned, and their anxiety raises the tension level. They put pressure on you to back away, to drop the issue, and you feel the heat, uncomfortably.

Holding steady while exercising leadership

requires considerable tolerance for being the lightning rod of people's disappointment. Human beings vary in their ability to deal with the intensity of the environment. Some of us are comfortable taking more heat than others. The more heat you can take, the more likely you will be to hang in there, to keep your issue alive and yourself still in the game.

Taking heat from your friends and allies is toughest. Relatively speaking, most of us more easily tolerate heat from the opposition. After all, when bad guys say terrible things about you, it reinforces your sense of self-righteousness. You know you are doing something good if the "forces of evil" go after you and call you names. Or at least you can easily convince yourself you are in the right.

But the challenge of exercising leadership often involves taking enormous heat from people whose support you value and need. To do that well requires additional perspective, courage, strength, and grace. As your own people experience various forms of distress from the difficult issues you raise, they often express anger. They accuse you of disloyalty, and they may threaten to ostracize you informally, if not formally. Yet receiving their anger without becoming personally defensive generates increasing trust. If you can hold steady long enough, remaining respectful of their pain, defending your perspective without becoming personally defensive, you may find that in the ensuing calm, relationships become stronger and more resilient. Instead of blowing the relationships apart, divisive issues can then be contained and worked out.

Letting the Issues Ripen

People sometimes get taken out of action or pushed aside when trying to lead because the organization in general is not ready even to begin to address the issue they raise. In one sense, those who exercise leadership usually find themselves ahead of the community. But being too far ahead gives the organization an opportunity to push the issue, and you, aside. The issue needs to be ripe, or to be ripened, before it can be worked on by the larger community. That means exercising self-restraint and resisting the temptation to put the issue out there just because you see it and

care about it. Your self-discipline makes it possible for the issue to ripen and keeps you from provoking people too early—when you might lose any chance of progress.

Most organizations and communities have more than just one or two issues to worry about. Usually, they have a whole spectrum of challenges. But no group can do everything at once. Most organizations' list of problems that they *should* tackle is longer than the list of problems that they *are ready* to tackle. Just because an issue seems incredibly important to you does not mean that it seems important to others in your organization. It may, however, become more important to them in time.

How does an issue become ripe? How does an issue begin to take on generalized urgency, such that not just one faction but many factions within the community feel the need to address it? In a sense, this question lies close to the heart of leadership practice, particularly in politics and in social movements, and the answers lie beyond our scope here. But the answers begin with the self-discipline to distinguish between one's own passions and the passions among diverse constituents.

The first tasks then are diagnostic: identifying the relevant community of interests—the stakeholders—discovering what's on their minds and how much is on their minds. It is also important to assess what the stakeholders would need to internalize if they were to change their priorities—their interests, losses, and changes in competence and loyalty. One would also need to find out what the people in authority are saying and doing. While the rhetoric or even the commitment of people in authority often is not enough by itself to ripen an issue, it surely helps. People expect those in authority to set agendas. That expectation gives authority figures license and leverage to identify the issues for people's attention.

If you are the person in authority, you are expected to select for attention those issues that the stake-holding public already senses are ripe. You will risk your authority if you raise an unripe issue unless you expand your authority to include it, exceed your authority by raising the issue and managing the process very carefully, or protect voices of leadership below. Ripening an unripe issue may require protect-

ing voices of deviance, those people who are willing to ripen the issue and who have the latitude to be deviant from the current norms because they have little authority in the system.

For people leading without authority, ripening an issue is more difficult. To gain public attention without authority, you must take more dramatic and therefore riskier steps. You have to draw attention to the cause without having the attention stick to you, because if the attention sticks to you, you yourself become the issue and a source of distraction from the cause itself. The partnership between Lyndon Johnson and the organizers of the civil rights movement in the 1960s is the kind of partnership between people leading with and without authority that may be key to ripening an issue and therefore to generalizing a sense of urgency in the community to tackle it.

MANAGE YOUR HUNGERS

The cleanest way for an organization to bring you down when you are creating disequilibrium is by having you bring yourself down. Then no one else feels the need to bear responsibility. All too often, people self-destruct or give others the ammunition necessary to shoot them down.

You can bring yourself down by forgetting to pay attention to yourself. You get caught up in the cause and forget that exercising leadership is a very personal activity, challenging emotionally, intellectually, and even physically. With the adrenaline pumping because you are right in the middle of the dance floor with the most noble of purposes, it is easy to begin to believe you are physically and emotionally indestructible.

We all have normal hungers, which are expressions of our normal human needs. Every human being needs some degree of power and control, affirmation and importance, as well as intimacy and delight. Yet each of these normal human needs can get you into trouble if you lose the personal wisdom and discipline required to manage them and fulfill them productively and appropriately. Sometimes those needs become distorted because being in the center of the action is so heady. And sometimes people try to satisfy those needs in the public

sphere because they are not being met in their personal lives.

You are tuned like the strings of a harp. Your tuning is unique, flowing out of both your particular upbringing and your genetic heritage. Each person resonates a bit differently to the same stimulation. The tuning of your harp is never perfect. Each of us is sensitive to particular social dynamics and issues, and these sensitivities are a source of both strength and weakness. People who are particularly sensitive to certain forms of discrimination are likely both to see it before anyone else does and to see it where it does not exist. Although we may hear things that others cannot hear, and therefore may be ready for action early on, we also might launch ourselves into action in the wrong way or at the wrong time. We might pull people's attention away from more important or immediate issues. Moreover, our sensitivity to one theme of music may keep us from hearing other themes.

In leadership, as you tune in to other people's needs, to the way they are tuned, you cannot help but connect with them. As you resonate with their hopes and frustrations, you become the storehouse of their yearnings. This makes you vulnerable, because fulfilling their needs can feed into your own normal hungers. This is especially true if your needs are not already being met. But even if they are being met, being in the center of the dance floor with everyone's attention focused on you, where you are generating energy and receiving it, is likely to test your neediness beyond its normal boundaries. Too frequently, people in this situation lose their wisdom and self-discipline, slip out of control, and behave so as to collude in their own demise.

Just because you exercise leadership does not mean you have to repress your normal human passions. But you do have to get on the balcony, repeatedly, to get perspective on what is going on, to see how your passions are being stoked, and to begin to interpret events systemically. You have to be concerned about the issues and sentiments with which you particularly resonate; the ones you therefore carry in the organization, and how that burden affects you.

Thus, when exercising leadership you stimulate

and plug into collective emotions, which then generate a host of temptations: invitations to accrue power over others, appeals to your sense of grandiosity, and opportunities for intimacy and sexual satisfaction. Connecting to those emotions is different from giving in to them. Giving in to them destroys your capacity to lead. Power becomes an end in itself that gets in the way of your goals. Disproportionate self-aggrandizement breeds self-delusion and dysfunctional dependencies. Inappropriate sexual relationships damage trust, create confusion, and provide a diversionary justification for getting rid of you, and thereby your issue.

Acknowledging, honoring, and then fulfilling your own human needs in appropriate ways is a critical element for exercising leadership and surviving because doing so eliminates a significant personal vulnerability. Otherwise, your opponents and the communities with which you are trying to work will use your unfulfilled hungers as a way of taking your eye off the ball and bringing you down.

ANCHOR YOURSELF

Human beings were not designed to conduct the emotional currents produced by living in the midst of huge social networks. For most of our evolution, we have lived in small bands of fewer than twenty-five members. It is therefore entirely natural that people feel overwhelmed by modern life. Indeed, no matter how perfect your upbringing and the “software” your parents, culture, and community may have given you, you still need ongoing practices to compensate for your vulnerabilities. You need anchors. Three important ways to anchor yourself are by distinguishing yourself from your role, keeping confidants, and finding a sanctuary.

Distinguishing Self from Role

It is easy to confuse yourself with the role you play in an organization, community, or in regard to the issues. The world colludes in creating the confusion by reinforcing your professional persona. Colleagues, subordinates, and bosses treat you as if the role you are playing is the essential you.

One exercises leadership from a role in a group. The group may be as small as a family or as large as a country. When you exercise leadership, you perform a function for the group, at least for a period of time, just as the person who takes attendance, calls the meeting to order, or brings the cookies performs a function. If you are to be authentic and effective, the role you play has to reflect the particular way your heartstrings are tuned. You have to put yourself in the role, not only so that it brings satisfaction to you, but also so that the power of your passions flow into it.

Yet even though you may put all of yourself into your role, people will always be reacting to you not as a person, but as a role you play in their lives. Even when their responses to you seem very personal, they need to be read primarily as reactions to how well you are meeting their expectations of your role. In fact, it is vital to your stability and peace of mind that you understand this and then interpret and decipher people’s criticism in the light of that fact before internalizing it.

You have control over whether your self-worth is at stake. If you take what is said personally, that will make your self-esteem an issue. “You are a jerk” is not a personal attack, even though it is framed that way. It means that the speaker doesn’t like the way you are performing your role. Perhaps you have not been tactful enough in making your challenge. You may have raised the temperature too high too quickly for some to respond. The primary source of dissatisfaction with someone’s performance in the exercise of leadership is usually the challenge he or she presents, not the way in which it has been presented. In the guise of attacking you personally, the group is really attacking your point of view. When you take “personal” attacks personally, you collude with your attackers in replacing the issue you represent with you as a person. The real issue is pushed off the table; you become the issue.

Reacting literally and defensively to personal attacks perpetuates a diversion. This work avoidance mechanism almost always succeeds simply because it’s so natural to take a “personal” attack personally. We are normally inclined to confuse who we are with the roles we play in other people’s lives.

You should distinguish yourself from your role

not only to protect yourself from the damage of criticism but also to protect yourself from the damage of praise. If you begin to believe all the good things people are saying about you, you may lose yourself in your role. You may lose control of your own identity and self-image. People can control you because you need to maintain their approval.

When you take people's praise personally, you lose sight of the issues you represent to people. Just as people don't hate you, they don't love you either. Mostly they don't even know you. To draw people's attention back to the issues you represent in your role, you have to keep people from obsessing about you.

There is also a long-term value in distinguishing role from self. Roles end. If you become too caught up in your role, such that you think you are your role, then when your role ends, what will happen to you?

Keep Confidants

Perhaps no one can be sufficiently anchored within to sustain him- or herself in the practice of leadership without two kinds of partners: allies—those who are with you on the issue—and confidants. When you are trying to help groups and communities deal with difficult issues, it is just as important to have confidants, even just one or two, who care about you more than they care about your issue, as it is to have allies on the issue.

The best confidants are people who don't care about your issue at all, one way or the other. What they are concerned about is your welfare, not your issue's welfare. Their work is to help you come through the process whole and to tend to your wounds along the way. Even, and maybe particularly, when things are going well, you need someone who will tell you that you are too puffed up, and who will point out danger signals when you are too self-congratulatory to notice them. An old friend who lives in another city might do. A spouse might be able to be a confidant, except of course about the spousal relationship or family dynamics. Confidants are people who will tell you what you don't want to hear and can't hear from anyone else. They are people you can confide in without having your revelations spill back onto the job. These are people to

whom you can let out your emotions without affecting your reputation or undermining your work.

Sometimes a confidant can be explicitly engaged. "I'm about to start a difficult process here at work. Do you mind if I call you from time to time and just pour my guts out so you can tell me what you hear?"

Sometimes it is more spontaneous. When you are discouraged and feeling low, think about an old friend, a roommate you haven't seen in a decade or more, or an old employer or teacher who helped trained you and is invested in your success and survival rather than in any purpose you might be pursuing at the moment. Give them a call.

What you should not do, but might be tempted to do in a tough moment, is turn to a trusted ally, a partner on the issue, and try to make that person into a confidant as well. In your loneliness or insecurity at work, flushed with feelings from day-to-day politics, you can easily mistake allies for confidants and talk too openly to people in the wrong role. When you try to turn allies into confidants, you put them in a position where they may have to choose between their commitment to their own priorities and people and their commitment to you. And because by definition they came to the role of ally through a previous commitment to the issue, it's likely that their prior loyalty will prevail. When you try to turn allies into confidants, especially when the ally is in your own organization, you may lose on both counts. You won't get them as a confidant and you'll see them begin to slip away even as a reliable ally.

Find a Sanctuary

Like confidants, sanctuaries provide an indispensable anchor. To imagine that one can exercise leadership without a confidant and sanctuary is to imagine that you can survive a Chicago winter without a coat. No one would move to Chicago without a winter coat, yet countless people go into the practice of leadership without a place where they can be restored to themselves.

A sanctuary is a place where you can get away from the dance floor, from the blare of the music, where you can think and identify your own deeper truth, meaning, and purpose. You feel safe in a sanc-

tuary, both physically and psychologically. The rules as well as the stresses of everyday life are suspended temporarily. It is not a place to hide. It is a place to do the work of putting yourself back together, a haven in which to capture lessons from the painful moments. Too often, when we are under stress, a sanctuary is the first place that we give up. We consider it a luxury. Just when you need it the most, you cut out going to the gym or taking your daily walk, just to grab a few more minutes at the office. Clearly, when we are doing our most difficult work, we most need to maintain the structures in our lives that help us get away from it all, that remind us of our essential and inviolable identity and what we're trying to do.

THE IMPORTANCE OF SELF-MANAGEMENT

Self-management is essential in the exercise of leadership, but it is easy to bypass when one is caught up in the nobility of the cause and the excitement of the moment. But failing at self-management only exacerbates the already considerable risks of taking on a leadership challenge. Holding steady, managing your own hungers, and anchoring yourself are critical to both success and survival. Managing the self is just as important as managing the community, and no one is going to attend to it if you don't.

SEPTEMBER 11TH

At 5:14 pm on the evening of September 11 2001, CNN issued a statement:

In an apparently coordinated terrorist attack against the United States, four commercial passenger jets crashed on Tuesday, three of them into significant landmarks. . . . U.S intelligence officials tell CNN, "there are good indications that persons linked to Osama bin Laden may be responsible for these attacks." Bin Laden is the Saudi millionaire who has been blamed for terror attacks against U.S. interests and is believed to be in Afghanistan. (Terror Attack Hits U.S. 2001)

In the aftermath of the attack, many paid particular attention to the leadership demonstrated by Rudolph W. Giuliani, then the mayor of New York City, which suffered the greatest losses in the attack in the collapse of the twin towers of the World Trade Center. In Giuliani's book *Leadership*, published more than a year after the attack, he wrote that leadership varies from imposing a structure suitable to an organization's purpose to forming a team of people who bring out the best in one another. He suggested that personal attributes of leaders include strong beliefs and the ability to articulate them, and willingness to be accountable for the consequences of those beliefs. Giuliani displayed those characteristics during the immediate crisis.

GIULIANI IN THE AFTERMATH OF THE ATTACK

In the morning of September 11, when Giuliani first heard that a plane, at that time described as no more than a Cessna, had crashed into one of the towers of the World Trade Center, he left a political breakfast he was attending and headed downtown, whereupon he learned that a second plane had crashed into the other tower. As the original headquarters for New York City disasters were, ironically, located in the World Trade Center, Giuliani had to improvise. He set up two command posts. He wanted the police and fire departments to function separately, the police to protect the rest of the city, and the fire department to command the attack site. The new address for disaster headquarters was 75 Barclay Street. On September 12, at a news conference, Giuliani showed a personal, fatherly side, that led one columnist to describe him as "unstintingly there . . . calm, frank, patient, tender, egoless, and competent" (Hertzberg

Fireman leave the rescue area near the ruins of the World Trade Center on 13 September 2003.

Source: Corbis; used with permission.

2001). Both Giuliani and reporters were more worried about the dead and possible survivors than any other issue. Giuliani confirmed that three hundred firefighters were gone, and that some of his friends had been killed, but couldn't go much beyond that. His transparency was both honest and reassuring. If he didn't know something, he said so, going so far as to correct a colleague who had given out unsupported information. He let the public know that about two thousand emergency workers were on the site, twenty-four hours a day.

Two days later, at another news conference, Giuliani focused on reporters who were misinforming the public or just getting their facts wrong. He corrected false information about survivors, alleged arrests, and rumors about box cutters and knives found. He urged reporters to verify what they heard with the FBI or the police. He announced that schools were open north of Canal Street and that the Staten Island Ferry was running. He warned people about a telemarketing outfit that was calling people up and asking for donations, telling them that no one should be soliciting at that point.

On October 1, the mayor gave the opening remarks at a U.N. General Assembly special session on terrorism. Here, the mayor made unequivocal state-

ments about the nature of the terrorist attack and how to address it:

On one side is democracy, the rule of law, and respect for human rights; on the other is tyranny, arbitrary executions, and mass murder. . . . We're right, they're wrong, it's as simple as that. And by that I mean that America and its allies are right about democracy, about religious, political, and economic freedom. The terrorists are wrong and, in fact, evil, in their mass destruction of human life in the name of addressing alleged injustices.

(U.S. Mayor Articles 2001)

Comparing the population of New York City, a city of immigrants, with the United Nations, Giuliani tried to persuade the Assembly that to fail to condemn the terrorists was to undermine the very principles upon which the United Nations was built.

By October 15, Giuliani was addressing the financial impact of the attack on New York City. In a news conference held that day, he called upon the New York state government and the U.S. federal government to change their tax laws, stating that New Yorkers paid \$9 billion more to those governments than they got back. He also announced a hiring freeze and a budget cut of \$1 billion to help the reeling city.

COLLECTIVE LEADERSHIP

If Giuliani has been praised for his leadership in the face of the September 11 attack, the people of New York have been honored for their collective group leadership. The city's population as a whole behaved collectively the way Giuliani behaved as an individual. Houses of worship of all religions and denominations organized themselves and reached out to one another spontaneously. In less than twenty-four hours after the twin towers fell, for instance, Madison Avenue Presbyterian Church, the Park Avenue Synagogue, and the Episcopal Cathedral of St. John the Divine had collected funds for firefighters and their families. The New York City Crimes Board set itself up at Pier 54 and started writing out checks to people in need. Within a day, the Federal Emergency Management Agency (FEMA), the Red Cross, and Church

World Services (CWS) had established cooperative action plans. FEMA had set up a hotline, sending volunteers out to every section in the city to find out what was needed and where. Morgues were inundated with chaplains. Volunteers from other parts of the United States and soon from other countries began arriving. St. Paul's Chapel, located within a block of Ground Zero (as the site of the attack came to be called) and unscathed, became a volunteer respite center for site workers that became a symbol of national and international solidarity. To Kathleen J. Tierney, director of the Disaster Research Center and professor of criminal justice at the University of Delaware, New York City after the attack modeled how communities react successfully to crises:

This meshing of prior learning, planning and improvisation and this diverse panoply of organized and collective action enabled the City of New York to manage the Trade Center disaster. Effective responses to community crises often look messy from the outside, but that is part of what makes them effective. Critical observers may express exasperation because "no one is in charge." . . . All such criticisms fail to appreciate the strengths of situationally-driven, problem-focused, locally-based, and improvisational response strategies like those observed in New York on September 11 and in the days that followed. (Tierney n.d.).

OSAMA BIN LADEN: SHADOW LEADER OF THE SEPTEMBER 11 ATTACK

Osama bin Laden (b. 1957) is another leader in the story of the September 11 attack. He is the youngest of twenty sons and thirty daughters born to a Yemeni family living in Saudi Arabia; he himself was born in Saudi Arabia. His father made a fortune in the construction business. Of his father's four wives, three were Saudi, but Osama's mother was Syrian and had only one son, Osama. According to Mary Anne Weaver, who published "The Real bin Laden" in the January 24, 2000 issue of *New Yorker* magazine, bin Laden might have felt like a double outsider, both as the child of a Yemeni family in Saudi Arabia and as the child of a Syrian mother in the bin Laden family.

When bin Laden was thirteen, his father died in a plane crash, leaving his youngest son \$80 million. He attended a university in Saudi Arabia and earned a degree in civil engineering. It was only in 1979 that bin Laden began his political life, drawn into politics by the Soviet invasion of Afghanistan. From the mid 1980s, the world began hearing of a "Saudi prince" who comforted the wounded Afghan resistance fighters, sent checks to their families—and helped build tunnels and storage depots.

In 1991, the Gulf War and the billeting of U.S. troops on Saudi soil turned bin Laden's attention to the United States. In bin Laden's eyes, the presence of U.S. troops in Saudi Arabia was equivalent to the presence of Soviet troops in Afghanistan: It represented an infidel military occupation of an Islamic country. He saw the Saudi government as complicit in this occupation. After being expelled from Saudi Arabia in 1991 for antigovernment activities, he entered Sudan. He was held accountable for the 1993 bombing of the World Trade Center and, in 1996, for the killing of nineteen American soldiers in Saudi Arabia. Driven out of Sudan in that year, bin Laden returned to Afghanistan and joined with the Taliban, Afghanistan's fundamentalist Islamic government. In 1998, bin Laden was held responsible for U.S. embassy bombings in Kenya and Tanzania.

The brilliance of his leadership of al-Qaeda, his terrorist group, is that it "is not a terrorist organization in the traditional sense. It's more a clearing house from which other groups elicit funds, training, and logistical support. It's a chameleon, an amoeba, which constantly changes shape according to the whims of its leadership, and that leadership is Osama bin Laden" (Weaver 2000). The combination of the al-Qaeda network's training and bin Laden's funding and rhetoric resulted, on September 11, in the most dramatic terrorist attack in U.S. history.

ANALYSIS

Giuliani and bin Laden, leaders on opposite sides of the September 11 attack, show certain similarities. Each appealed to an audience in terms the audience could understand. Rudolph Giuliani brought New

Yorkers and the rest of the nation together to grieve, endure, heal, and live in hope. Osama bin Laden brought people together to triumph, fight selflessly for a cause, and die. Both spoke in terms of moral absolutes, and both characterized the enemy as evil. Both appealed to faith in God. Giuliani's God brought comfort. bin Laden's God brought glory. Both were public figures and targets. Giuliani appeared in the flesh before the masses, bin Laden appeared on tape, and operated in the shadows.

There is something morally neutral about leadership per se. Hitler, Stalin, Eisenhower, and Roosevelt were all effective leaders. But were they good men? What happened in New York City, Washington, D.C., and in a Pennsylvania field on September 11, 2001 brought to the surface a particular brand of leadership that prescribed perseverance, transparency, vulnerability, and conditions of trust among the people of the United States, at least for a time. Giuliani rose to the occasion and led both city and nation toward peace and reconciliation. For a while, he was both a good man and a good leader. As for Osama bin Laden, the world is divided in its opinion of him. Suffice it to say that spokespeople of all major religions, including Islam, decry the killing of innocent people, regardless of the cause.

SHAKA ZULU (1787–1828)

Founder of the Zulu kingdom

Shaka ka Senzangakhona, known as Shaka Zulu, has often been portrayed as a despotic and highly innovative leader. This assessment has been based on research on the development of the southern African Zulu state under Shaka—research that has concentrated largely on military, political, economic, and demographic developments. More recent work, however, has argued that he can be seen as a traditionalist whose power and leadership were reinforced by ideology and religion—invisible factors.

SHAKA'S LIFE

Shaka was the eldest son of Senganakhona, leader of a relatively small Zulu chiefdom. Shaka is often described as illegitimate, rejected by and separated from his father for many years; he grew up among his mother Nandi's Langeni people. Later, he joined the Mthethwa led by Dingiswayo where he became one of his warriors. Shaka's residence with his mother's people, however, was a common practice throughout the region. When Senzangakhona died, Shaka was installed as chief—possibly aided by Dingiswayo. It is important to note that the concept of a Zulu "nation" was in its infancy during the Shakan period. Variations existed in terms of political organization and ethnic identity.

The main political struggle by the early nineteenth century pitted the emerging Mthethwa state against the Ndwandwe. By 1816, Chief Zwide's Ndwandwe had attacked the Mthethwa, defeated the army and killed Dingiswayo. Following Dingiswayo's death, the Mthethwa were incorporated into the Zulu by Shaka. He mounted a successful campaign against the Ndwandwe in the early 1820s and the Zulu then moved to incorporate groups formerly tributary to Zwide. Shaka established dominance over much of the south "in a belt of territory on its south-western and southern borders which extended from the lower Mzinyathi south-eastward between the Thukela and Mvoti Rivers to the coast, and thence south to the lower Mngeni-Mlazi area" (Wright 1995, 172). Those groups that had been

jostling for dominance in the lower Thukela area (Qwabe, the Mbo, Ngcobo) were subjugated and the Hlubi of the upper Mzinyathi fragmented. It has often been argued that the emergence of the Zulu set in motion the period of turbulence, displacement and depopulation in the region referred to as the *mfecane*. However, in the early 1980s Julian Cobbing challenged the concept of the *mfecane* arguing that it was a settler myth sparking much debate among academic historians (see Hamilton 1995).

GREAT MAN THEORIES OF LEADERSHIP

From about the 1830s to the 1930s, Western scholarship interpreted the emergence of the Zulu kingdom as the ultimate in “primitive” and “savage” might. Internal cohesion was viewed as the product of repressive measures instituted by Shaka and subsequent leaders. Shaka initiated military innovations, commanded obedience, and was ruthless and cruel. Henry Francis Fynn (1803–1861) and Nathaniel Isaacs (1808–1872), who were among the first travelers to write about the Zulu, argued that the Zulu revolution began when Shaka’s ambitions led him to assassinate his protector, Dingiswayo. This allowed Shaka to unite groups under his authority, which he did with great ferocity. The state rested on Shaka’s personality, fights of succession, and ambition. According to this view, he was a horrible, detestable savage unparalleled in history and driven by his victories and a desire to expand his nation. In the words of one commentator, “this African Mars ultimately depopulated the whole line of coast from the Amaputa River to the Tugela” (Bird [1888] 1965, 1:168). Other early travelers, such as Adulphe Delegorgue (1814–1850), described Shaka as the “black Napoleon.” The only factor thought to account for internal social cohesion, or the legitimacy of the king, was force.

The Methodist missionary William Holden (1814–1897) also saw Shaka as motivated by blood lust and ambition; he described him as a modern Attila, one who seized leadership “by treachery and violence” (Holden 1963, 56). Amateur historian George McCall Theal (1837–1919) described Shaka as one of the world’s most ruthless conquerors. Theal argued that Shaka’s mentor Dingiswayo learned

about the European military system during his wanderings, which took him as far as the border of the Cape Colony. (Theal did admit the possibility that Dingiswayo may have been reintroducing an earlier African regimental system as well as a crescent battle formation known two centuries earlier, whose practice had declined under feeble chiefs). Shaka refined the regimental system and embarked on cruel, aggressive campaigns. According to Theal, Shaka was “utterly merciless [and] he set himself the task of not merely conquering but of exterminating the tribes as far as he could reach” (Theal 1917/1894, 163).

The work of Catholic clergyman (later faculty of the then Bantu Studies department of the University of the Witwatersrand) A. T. Bryant (1865–1953), like the work of Theal, was considered highly authoritative on precolonial history. Bryant’s work has often been accepted uncritically and merely reproduced. In this period of historical writing, the success of the Zulu state was attributed largely to Shaka.

THE IMPACT OF INTERNAL FORCES ON SHAKA’S LEADERSHIP AND DOMINANCE

In the 1960s, historians of southern Africa rejected great man theory and began to offer more complex views of the Zulu kingdom as Shaka’s response to regional change. His astute leadership skills were emphasized, and the previous negative assumptions of destruction and massive depopulation were challenged. As scholars came to challenge the notion that African societies were static and unchanging, some began to shift their attention to the study of dynamic internal forces. John Omer-Cooper reinterpreted the events that Eric Walker called the *mfecane* as positive, since they resulted in the formation of new states. Historical research began to look at the relationship between political structures and economic factors. In 1969, E. V. Walter argued that Shaka instituted a system of terror and violence as a mechanism for social control. According to Walter, Shaka directed his terror both inward and outward to counter resistance. Inwardly, he set one group (tribe) against another for the purpose of social control. Rather than Shaka being “motivated by blood lust

and ambition; a modern Attila,” Shaka effectively used a system of terror to govern.

In the 1960s and 1970s, the focus moved away from Shaka and his abilities to other explanations for the rise of the Zulu state. Scholars Alan Smith, David Hedges, and Henry Slater published influential studies that analyzed the relationship between trade, economics, and politics in southern Africa. Smith argued that the competition for control of European trade was instrumental in the consolidation of the Zulu kingdom. He argued that if “these were wars fought over matters of trade, then the increased militarism and consolidation which resulted could be viewed as a logical response to the necessities of the prosecution of trade” (Smith 1969, 183). Hedges greatly expanded this line of analysis, attempting to show how chiefs used control of trade and dispersal of imported goods to form allegiances and to consolidate power. Henry Slater also described changes in the Zulu political structure and power relationships as a result of transformation from a feudal mode to the emergence of a system with a power holder at the top where “no longer was it an office of ‘paramount’ chief amongst many chiefs, but of something approaching divine kingship” (Slater 1976, 317).

Historian Jeff Guy vastly extended the scope of environmental and ecological investigation in a series of important papers. He noted that successful cattle grazing in Zululand depended on two types of grass—sweetveld and sourveld—and access to both was of fundamental importance. Under favorable conditions, human population increased, making grasslands vulnerable to unbalanced stocking and erosion, which in turn, led to a crisis. Guy argues that by the end of the eighteenth century environmental equilibrium gave way to disequilibrium between grazing conditions and the human population. It was this imbalance, he argued, that underlay the sociopolitical changes that occurred. Guy argues that there was “increasing violence in an area as they struggled for access to diminishing resources . . . [and] that such a struggle was an important factor in the conflict which occurred in the region at the end of the eighteenth and the beginning of the nineteenth centuries, out of which Shaka and the Zulu kingdom

emerged” (Guy 1994, 9). For these historians, it was ecological and economic and demographic pressures that caused changes in the region which subsequently gave rise to the emergence of class and states such as the Zulu. The emphasis on Shaka the great man as sole cause was significantly reduced.

INVISIBLE FACTORS ASSOCIATED WITH ZULU LEADERSHIP

During the competition for political dominance that was occurring in southeast Africa in the early nineteenth century, opportunities to seize and enhance power were more than military. Shaka would have found it difficult to extend his power over people outside his immediate following without reference to religious beliefs and practices. However, Shaka was not considered a god or the reincarnation of a previous god-king, nor was he deified or worshipped. The prosperity and continuation of the Zulu “nation” did not depend upon him; the state continued after his death. The consolidation of the Zulu kingdom required accumulation of ideological, ritual, and religious power—invisible factors. Shaka did not reinvent the culture of his subjects; rather, he drew on a rich, deeply entrenched body of custom and tradition. Shaka’s aspiration for dominance in ritual and religion was not a Shakan leadership innovation, but rather a common aspect of chiefship that predated his leadership. It involved a number of ritual roles and religious practices. These were well established features of chieftainship among large and small groups in southeast Africa.

Chiefs used medicines and rituals for both offense (to overcome an enemy), and defense (to protect the community) to overcome rivals and aimed to incorporate groups who were recognized as ritually powerful. Shaka used such rituals, and strong medicines were seen to assist Shaka in gaining ascendancy over his rivals (such as Zwide) and other groups jostling for power. Traditions recall that Shaka’s forces were initially unable to overcome Zwide; only when Shaka’s *intelezi* medicine began to take effect were the Zulu successful. A great many recorded wars were marked by struggles for control of ritual power, special medicines, and important practitioners of the

rites of rainmaking and divination. Part of the process of political consolidation involved the acquisition of these powers. Thus Zulu conquest involved not only the conquest of land and political institutions and the establishment of economic power, but also the capture of invisible spiritual power. Through conquest, Shaka was increasing his ritual power by controlling chiefs, diviners, rainmakers, and medicines. No leader could risk opponents using powerful medicines against him. Once incorporated, Shaka had to hold the state together, maintain guard against his chiefs' assuming either too much political power or too much religious power. Enhancing his own ritual status and controlling ritual power, knowledge, activities, and alliances were an integral part of establishing supremacy. A leader such as Shaka would need to sort spiritual allies from enemies just as he differentiated between political allies and enemies. The Zulu king's position, policies, and practices were justified through old chiefly prerogatives (present before Shaka) and reinforced through ritual and ceremony. In this way, the ideology, values, and ideas of the Zulu rulers were passed onto the other members of the society. Shaka was dominating ritual and religious functions by

- taking control of and centralizing the *umkhosi* (first fruits ceremony);
- centralizing rainmaking ritual;
- taking control of and centralizing rites of passage such as marriage;
- extending the medicines of chiefship to medicine of stateship; and
- exerting greater control over possession and practice.

As the hierarchy of the state increased under Shaka, the figure of Shaka became more central in ritual and the ceremonies surrounding him were enhanced. Centralizing major rituals connected with fertility and well-being facilitated this process. Establishing the spiritual domination of incorporated groups helped to negate the need for overtly coercive measures. Nonetheless, it is likely that some conflict persisted.

As the state grew and became more complex, Shaka attempted to concentrate further the spiritual

power of the Zulu state. The legitimacy of Shaka's kingship and his authority rested on the dominance of the Zulu ancestors over those of incorporated groups. He drew attention to his communication with ancestors through dreams in which he received instructions from previous Zulu chiefs, and he emphasized the symbols of kingship such as the *inkatha* (grass coil symbolizing the binding together of the "nation"). It is highly likely that without this religious foundation, the Zulu kings (Shaka and his successor Dingane) would not have been able to hold their office. Similarly, Shaka could not have ruled without incorporating and accommodating the traditional power of key women. Zulu women held leadership positions at least as far back as the days of Jama (1727–1781), and they exerted more influence than has been previously recognized. Mnkabayi (died around 1835; Senzangakhona's sister), assumed a leadership role at three significant points in Zulu history—following the deaths of Jama, Senzangakhona, and Shaka. She retained a position of influence (as did other women) in the *amakhanda* (military "kraals") of the successive Zulu kings Shaka (1816–1828), Dingane (1828–1840), and Mpande (1840–1872) and survived the so-called ruthless despotism of both Shaka and Dingane. The consensus on "royal" female powerlessness in Zulu social and political life is very much a twentieth century phenomenon. It becomes possible to discard the widely accepted view of Shaka as the black Napoleon, the revolutionary, and the innovator said to have rejected many past practices and beliefs. Rather, he can be seen in many respects as a firm traditionalist, albeit one whose times and circumstances required new interpretations of old beliefs concerning the relationship between individuals, ancestors, diviners, and chieftainship.

SHARED LEADERSHIP

Shared leadership is a dynamic, interactive influence process among individuals in teams in which the objective is to lead one another to the achievement of team goals. Shared leadership often involves peer-based, or lateral, influence although at certain times it involves upward or downward hierarchically based influence. The fundamental distinction between shared leadership and traditional, top-down models of leadership is that influence does not merely move downward from leaders to subordinates or followers. On the contrary, with shared leadership, influence is broadly distributed among the members of the team.

Historically, theories of leadership have focused on a single individual and the relationship of that individual to his or her subordinates or followers. In recent years, however, that conceptualization of leadership has been challenged. Now, some scholars say that leadership involves behaviors, roles, and activities that can be shared or distributed among members of a team. According to this alternative conceptualization of leadership, individuals who are not formally designated leaders can rise to the occasion to exhibit leadership and then step back at other times to allow others to lead.

WHY THE INCREASED INTEREST IN SHARED LEADERSHIP?

Globalization of markets, hypercompetition, and shortened product life cycles are but a few of the forces driving organizations toward new modes of organizing. At present, the fastest-growing type of organizational unit is the team, specifically the temporary cross-functional team, which is valued for its flexibility and its ability to generate solutions to problems faster than traditional organizational units—flexibility and speed being of the essence in a hypercompetitive globalized market. What distinguishes a team of this type from traditional organizational units is the absence of formal hierarchical authority. While a cross-functional team may have an appointed team leader, this individual is quite commonly a peer, and is treated as such. Outside of the team, the team leader often does not possess

hierarchical authority over other members of the team. Moreover, because cross-functional teams bring people with diverse backgrounds and types of expertise together for a common purpose, the leader is often at a knowledge disadvantage—that is, his or her expertise normally represents only one of the numerous functional specialties brought to the task at hand. Thus, the team leader is highly dependent upon the expertise of the other team members. Leadership in these types of settings is therefore determined by an individual's capacity to influence peers and by the needs of the team in any given situation. Because the team members bring unique perspectives, knowledge, and capabilities to the team, at various crossroads in the team's life, there are moments when each may be called upon to provide leadership.

Shared leadership is also common in virtual teams, another sort of team that is popular at present. Virtual teams consist of individuals collaborating and working from geographically dispersed locations. Members may occasionally meet in person, but normally they rely on modern communication technology (e-mail, conferences in chat rooms, and so forth) for interaction. Importantly, research has shown that technology-mediated communication differs from face-to-face communication: Communication becomes depersonalized and more task-focused in technology-mediated team environments. When communication is more focused on the task and less preoccupied with authority relationships, leadership can be shared by several team members, with each providing leadership for different components of the team's tasks.

There are four fundamental types of leadership that team members might share—directive, transactional, transformational, and empowering. For example, shared directive leadership might be expressed as peers test one another with a directive “give-and-take” about how to resolve conflicting points of view, approach specific tasks, or assign accountability. Similarly, shared transactional leadership might be expressed through collegial recognition of efforts and contributions or through awarding valued rewards based on key performance metrics. Additionally, teams might engage in shared transformational leadership through peer exhortation or by

*To lead people, walk beside them . . .
As for the best leaders, the people do not notice
their existence.
The next best, the people honor and praise.
The next, the people fear;
and the next, the people hate . . .
When the best leader's work is done the people
say, "We did it ourselves!"*

—Lao-Tzu

appealing to desires to create break-through products or services. Finally, shared empowering leadership might be expressed in a team through peer-based encouragement and support of self-goal-setting, self-evaluation, self-reward, and self-development.

Ironically, while the need and appreciation for shared leadership has been steadily growing, scientific examination of shared leadership lags seriously behind. In large part, this is due to widely held romantic notions about leadership: Many people—journalists, reporters, historians, the public at large, and even leadership scholars—focus on the individual “heroic” leader, disregarding shared forms of leadership.

EVIDENCE OF SHARED LEADERSHIP

To date, there have been very few studies of shared leadership. Nonetheless, the initial evidence suggests that shared leadership can have a powerful effect on team behavior, attitudes, cognition, and performance, as outlined below.

Shared Leadership and Team Behavior

Three studies have examined the relationship between shared leadership and team behavior. The first study, reported in 1996 (Avolio et al.), examined U.S. undergraduate project teams and found shared leadership to be significantly related to team members' willingness to put in extra effort on the project. Similarly, a study of change management teams in the auto industry in the mid-Atlantic United States (Pearce 1997), found shared leadership to be positively related to citizenship

behavior—engaging in behavior that is above and beyond the call of duty—within the teams and increased networking behavior by team members. Finally, in a study of virtual teams of social workers in the United States reported in 2003 (Pearce, Yoo, and Alavi), it was found that teams characterized by shared leadership were more likely to be socially integrated than teams characterized by vertical leadership. Thus, the initial evidence seems to suggest that shared leadership is an important predictor of team behavior.

Shared Leadership and Team Attitudes

Two studies have examined the relationship between shared leadership and team attitudes. In the study of undergraduate students mentioned above, shared leadership was found to be significantly related to satisfaction on the part of team members. The second study, reported in 2003 (Shamir and Lapidot), examined officer training in the Israeli military. It found that shared leadership was positively correlated to trust in and satisfaction with the vertical leader. Thus, shared leadership also appears to be an important predictor of positive team attitudes.

Shared Leadership and Cognition

Four studies have examined the relationship between shared leadership and team cognition. The study of undergraduate teams revealed a significant relationship between shared leadership and collective efficacy and potency. The study of change management teams found shared leadership to be significantly related to potency. The study of virtual teams found shared leadership to be a better predictor of potency than measures of vertical leadership. Finally, researchers in a 2003 study of research and development labs (Hooker and Csikszentmihalyi), reported a reciprocal relationship between creativity and shared leadership. Thus, the initial evidence suggests that shared leadership enhances teams' cognitive abilities.

Shared Leadership and Team Effectiveness

The study of undergraduate teams found shared leadership to be significantly related to self-ratings

of effectiveness. The study of change management teams found shared leadership to be a better predictor of manager, customer, and team self-ratings of effectiveness than vertical leadership. The study of virtual teams found that members of those teams were more likely than people in vertically organized units to rate their own problem-solving ability and task effectiveness highly. Finally, a study, reported in 2000 (Ensley and Pearce), of entrepreneurial top management teams across a wide variety of industries in the United States found shared leadership to be more likely than vertical leadership to lead to increased revenue and improved venture growth rates. Thus, shared leadership appears to be an important predictor of a team's overall effectiveness.

MEASURING SHARED LEADERSHIP

To date, five alternate methods have been identified for examining shared leadership. Three of these are quantitative and questionnaire-based, and two are qualitative observation-based. Three quantitative, questionnaire-based approaches to the study of shared leadership have involved the study of the team as a (a) whole, (b) sum of its parts, and (c) social network. In terms of qualitative approaches, the two approaches to date include (a) leadership sociograms and (b) ethnographic methods. Each of these methods has its own strengths and weaknesses. While five methodological approaches have been identified for the study of shared leadership, this is not an exhaustive list of potential methodologies that might be employed in the future study of shared leadership.

THE FUTURE OF LEADERSHIP IN ORGANIZATIONS

As many leaders are well aware, true teamwork poses many challenges. In many cases it is difficult—even painful—to implement shared leadership. Ultimately, however, suboptimal teams and overburdened leaders result in even more pain.

Clearly, shared leadership is not a panacea for all organizational woes: It is only appropriate for certain team-based tasks. Moreover, if team members, par-

ticularly the team leader, are resistant to the notion of shared leadership, it will not be carried out effectively. Resistance to shared leadership is likely a cultural phenomenon, and cultural norms can be observed at the national, industrial, or even organizational level. As an example, the cultural attribute of power distance represents the degree to which members of a culture accept and expect that power will be distributed unequally. Clearly, people in cultures high in power distance are less likely to embrace the concept of shared leadership. Similarly, shared leadership will not work if the team members lack the requisite knowledge, skills, and abilities for their task. Another potential complicating factor is that a team may successfully employ shared leadership, yet work at odds with the overarching organizational mission. These are but a few of the potential limitations of shared leadership, but they make clear that shared leadership is not a simple plug-and-play technology.

There continues to be a role for vertical leadership. For example, the ultimate responsibility for the making of meaning and the articulation of purpose continues to rest with vertical, hierarchical leaders. Nonetheless, it would be foolish to ignore the potential contribution of shared leadership. By examining how both vertical and shared leadership can be utilized more fully, organizations could move toward a more optimal model of leadership in the age of teamwork.

 **SHIBUSAWA EIICHI (1841–1931)**
Japanese industrialist

A widely known pioneer of Japanese industrialization, Shibusawa Eiichi organized, supported, and/or promoted an astonishing five hundred enterprises during the Meiji period (1868–1912) of Japan.

Born in the farming village of Chiaraijima, northwest of present-day Tokyo, to a comparatively wealthy farming family who were involved in the production and distribution of indigo, silkworm cultivation, and other products, Shibusawa was better educated than average farm youths. With his father's support, he was educated in the Confucian classics, fencing, and calligraphy, much like the samurai class.

Appointed to accompany a Japanese delegation to the Universal Exposition in Paris, Shibusawa gained an early view of Western industrial and scientific progress between 1867 and 1868. Although he departed Japan with anti-foreign views, his experiences during those two years abroad convinced him that modern technology and commerce were essential for any modern nation, including Japan.

As William D. Hoover (2002) points out, Shibusawa observed the favorable social status and respect enjoyed by European businesspeople as an ideal alternative to the negative image attached to Japanese merchants. He further concluded that joint stock organizations could accomplish far greater goals than traditional individual capitalization, and that the conduit for Japanese commerce should be through stock exchanges and banks. Finally, he admired the

philanthropy of European businessmen and determined that business activities should serve the public good. Shibusawa saw himself not as a hands-on businessman, but as a supporter of businesses operated by specially selected and cultivated managers who were progressive and capable—but who would not have their own finances to start a business. To this end, he taught that education—not just possession of financial resources—was the key and that to overcome the traditional image of self-serving merchants, it was important to establish a reputation for honesty so that one could operate a business with self-respect. Shibusawa strongly believed that the pursuit of one's own advantage should be balanced by a keen sense of responsibility for the welfare of society and the importance of providing opportunities to others.

When he returned, he was appointed to the Finance Ministry, where he worked in modernizing Japan's tax and monetary systems. He believed, however, that businessmen would actually build the new Japanese economy, so in 1873 at the age of 34 he resigned from the Finance Ministry and began his business career. Significantly he also turned down tempting offers to take top positions within the Mitsui and Mitsubishi combines (complexes of enterprises and their subsidiaries sharing a common share ownership base) in order to remain free to promote modern industry in general.

Almost immediately, he became involved in two high-priority enterprises. In 1872 Shibusawa helped found the First National Bank of Japan, which he headed from 1873 to 1916. Under Shibusawa's leadership, Japan's cotton spinning mills were transformed from traditional enterprises producing relatively small amounts of poor quality cloth into large-capacity steam-powered factories with modern spindles. He accomplished this by collecting the necessary capital from private sources through the sale of stock and then secured the best management available to operate the plant. Shibusawa, a few top entrepreneurs, and a number of nobles founded the Osaka Cotton Spinning Mill in 1883. Within five years, the Osaka Spinning Mill employed over one thousand employees and Japanese textiles were approaching international competitiveness. With

four to ten times the ordinary mill capital, an expert technician as a manager, steam power, and a newly introduced night shift, after its first year of operations the mill was already yielding dividends of 18 percent. This success story proved that the methods Shibusawa promoted were quite effective and could be applied to other industries as well.

Other enterprises he helped found were Oji Paper Company (1872), Tokyo Marine Insurance (1879), Tokyo Gas (1885), Tokyo Electric Light (1886), Ishikawajima Shipyard (1893), and Osaka Cotton Spinning Company (1883). He was also instrumental in establishing the Tokyo Stock Exchange (1878) and the Tokyo Chamber of Commerce (1878).

Rather than being a hands-on manager, Shibusawa lent his name to firms to help them gain capital subscribers. The stock company allowed capable and progressive men, whether or not they had capital, to establish and operate large-scale ventures. When economic conditions turned down, he would counsel dividend-eager stockholders on the need for patience and social responsibility in business. Knowing that he himself was not simply in business to make himself rich—indeed in some cases he could expect little or no gain at all—stockholders were more easily convinced that they should hold stocks long term.

Through his own private community of young businessmen whom he taught informally, he propagated a new code of ethics based on honesty, independence, cooperation, and social responsibilities, most of which were adapted from the ethical principles of the samurai class. By training more capable entrepreneurs, he intended in turn to attract the brighter minds of the new generation into business activities. This determination put him in strong competition with the single leader theory of business organization, as practiced by such entrepreneurial rivals as Iwasaki Yataro of the Mitsubishi Shipping Company. Shibusawa saw such entrepreneurial rivals as virtual dictators seeking to carve out monopolies as virtual economic empires.

Partially as a result of his Confucian training, Shibusawa stressed the need for a new attitude in Japan toward economic activity, by businessmen's taking on of social responsibilities, promotion of

morality in business dealings, and contributions to national welfare.

SINGAPORE, FOUNDING OF

To many, the name Raffles is synonymous with Singapore. A statue of Sir Thomas Stamford Raffles stands at the Singapore River, where he is thought to have first landed in Singapore on 29 January 1819. Another stands in front of Singapore's Victoria Memorial Hall, a venue for arts and music performances. Among Singapore's landmarks—and nationally preserved monuments—is the Raffles Hotel. The Raffles Hotel group owns two other hotels—the Stamford and Raffles the Plaza, situated across the street. Singapore's second institute of higher learning, providing studies in the arts and sciences, was named Raffles College. One primary school, two secondary schools, a junior college, and some private schools have been named after Raffles. Streets and places with the Raffles name include Raffles Avenue, Raffles Place, Raffles Boulevard, Raffles Link, Raffles Quay, and Raffles Institution Lane.

Such social esteem is attached to Raffles's name that commercial organizations large and small have capitalized on it. Singapore Airlines' business class is named Raffles Class. Also named after Raffles are Raffles City (a shopping and office complex), Raffles Hospital and Raffles Medical Group, Raffles Marina, and Raffles Town Club. A search of Singapore's business directory reveals eighty businesses and organizations ranging from a dry cleaner and a dental clinic to a florist and photographers, all named Raffles.

Most Singaporeans acknowledge Sir Thomas

Stamford Raffles (1781–1826) as the founder of Singapore. What did Raffles do to earn the title of founder, and are there others who may be considered founders of Singapore as well? According to Professor Ernest Chew, one of Singapore's foremost local historians, there are at least two other contenders for the title: Major William Farquhar (1774–1836), who accompanied Raffles on his first visit to Singapore and was appointed Singapore's first Resident; and Dr. John Crawfurd (1783–1868), who succeeded Farquhar as Resident of Singapore. We shall now survey the events leading to the founding of Singapore, and examine the respective roles of Raffles, Farquhar, and Crawfurd.

THE FOUNDING

On 21 September 1818, the British officially transferred Melaka (Malacca) and its dependencies to the Dutch, an agreement established between the countries after the European War. Lord Hastings, the governor-general of India, gave orders for Sir Thomas Stamford Raffles, then lieutenant governor of Bencoolen, to make an expedition to the Strait of Melaka. Raffles was concerned about the growing influence of Dutch in the archipelago. His motive was to locate a port south of Melaka to replace Melaka as a station for British trade and counter the Dutch influence in the region.

Raffles was clear about his objectives, as shown in his correspondence with the governor of Penang and the chief secretary of the government in Bengal, according to Blagden (1991). On 12 December 1818, he wrote to a friend that his attention had turned to Johor and that his next letter might come from Singapore: On 19 January 1819, Raffles led a small fleet of six ships toward the south of Melaka. He was accompanied by Major William Farquhar, the previous Resident of Penang. On 29 January, Raffles arrived in Singapore, an island just off the tip of the Malayan Peninsula between Dutch-held Melaka to the north and Java to the south. Raffles recognized the advantages of Singapore's location and quickly moved to establish British control.

Raffles used local politics to his advantage. Historically, Singapore Island, Pahang, Johor, and the

Riau Archipelago were part of the empire of Johor. This empire had its heritage from a greater empire controlled by the Melaka sultanate. However, the sultanate had somewhat lost its influence over its territories to powerful Bugis chiefs from Sulawesi, who settled in the Riau Archipelago in the eighteenth century. Although the Melaka sultan lived on the island of Lingga, the Bugis Viceroy of Riau was the real power behind the throne. The two principal Malay officials, the Bandahara and the Temenggong, had also become territorial chiefs and *de facto* rulers in Pahang and Johor respectively.

At the time when Raffles was seeking to establish a British trading station in Singapore, there was a succession dispute in the Melaka sultanate. Since 1812, two royal brothers in Riau had been competing for the sultan's throne. The Bugis Viceroy, who was on friendly terms with the Dutch, recognized the younger brother as sultan. The Dutch did likewise. However, some of the leading Malay high officials did not give recognition to the younger brother as sultan. One of those officials was Temenggong Abdul Rahman, who controlled the island of Singapore and the surrounding peninsular Johor.

The older brother, Hussein, had the support of Temenggong Abdul Rahman, who was open to Raffles's proposal to set up a British trading station in Singapore. Aware of the local political situation, Raffles proceeded to use it to his advantage. He sent Farquhar to Riau on a mission to the viceroy and invited Tengku Hussein to Singapore. On 30 January 1819, Farquhar left for Riau while Raffles made a preliminary agreement with the Temenggong to establish a British post in Singapore. The agreement gave the British East India Company the right to establish a trading post in Singapore or any other place under the government of Singapore and Johor. In return, the British provided protection for the island and made an annual payment of \$3,000 to the Temenggong. The Temenggong agreed not to establish treaties with other nations or allow foreigners into his country.

Farquhar returned on 3 February. He had failed to get the support of the Bugis Viceroy, but he had gained his passive acquiescence. When Tengku Hussein arrived, Raffles proclaimed him Sultan Hussein

Muhammad Shah. On 6 February 1819, a formal treaty was made between Sultan Hussein and the British East India Company, on terms similar to those established between the Temenggong and the company on 30 January 1819. Sultan Hussein would get \$5,000 annually. By his actions, Raffles had side-stepped Hussein's brother, who had been acknowledged as the sultan of Johor by the Dutch.

Hereafter, Raffles made a public proclamation to the governor of India that he had founded a British settlement at Singapore. Farquhar was appointed the first Resident and commandant of Singapore. This residency was under Raffles's own supervision.

From his instructions to Farquhar, and his expressed concerns to Farquhar to deal carefully with the Dutch and their Malay protectorates, Raffles showed foresight in his recognition of Singapore as having the potential economic and strategic significance. Raffles saw the establishment of a British station in Singapore as his achievement.

I shall say nothing of the importance which I attach to the permanence of the position I have taken up at Singapore; it is a child of my own. . . . Our object is not territory, but trade; a great commercial emporium, and a *fulcrum*, whence we may extend our influence politically as circumstances may hereafter require. By taking immediate possession, we put a *negative* to the Dutch claim of exclusion. (T. S. Raffles, as quoted in Barley 1991, 213)

On 7 February 1819, Raffles departed from Singapore, leaving the new settlement in Farquhar's hands.

WILLIAM FARQUHAR

The sultan and Temenggong had allowed the British to administer their rights over an agreed area "along the coast and inland as far as the point blank range of a cannon shot all round the factory" (Lee 1991, 4). They did not cede or transfer sovereignty or landed property to the British. There were, however, demonstrations of power sharing with the British. The sultan, the Temenggong, and Farquhar made joint decisions on customs and revenue farms. Granted judicial and quasi-legislative powers, the three of them also tried cases in a courthouse.

1823, William Farquhar was "a man of good parts, slow at fault finding, treating rich and poor alike and very patient in listening to the complaints of any person who went to him" (Nunn 1991, 78). In general, he was well-liked by the local population.

Chew notes that "while Raffles described the new settlement as his Child and his Colony, in paternal and proprietary fashion, it was really Farquhar who had to play the role of mother and nurse to the infant in its first four years. He also had to combine the political, diplomatic and administrative roles of resident with the military functions of Commandant, protecting and defending the settlement against Dutch retaliation" (2002, April–June, 7). Farquhar had also, by his own account, improved Singapore's

political and trading relations in the region and advanced the prosperity of the settlement.

RAFFLES STRENGTHENS CONTROL

From October 1822 to June 1823, Raffles spent eight months in Singapore, strengthening British control over the settlement. During this period, however, Raffles and Farquhar had several points of disagreement on slavery, gambling, and Raffles's ideas for a new land-reserve system. Raffles judged Farquhar to be incapable of managing the new settlement and wrote to the British governor-general in Calcutta, expressing his views.

Raffles proceeded to redefine his treaty with the Malay rulers, planning to dominate the land of Singapore. He implemented a new land-reserve system, relocating the Malay rulers and their followers. Then, Raffles made a new agreement with the Malay rulers, known as the Convention of 7 June 1823. The convention stated that, with the exception of the lands given to the Malay rulers, all other parts of Singapore would be under the control of the British. Other measures to curb the sovereignty of the Malay rulers included giving them a fixed level of proceeds from the revenue farms, whose proceeds were growing. Previously, the Malay rulers had received half the proceeds from the farms. All these measures curtailed the influence and means of the Malay rulers.

Raffles strengthened the administration of justice by appointing magistrates, setting up Resident's courts, and instituting trial by jury. He founded an educational institution, known as the Raffles Institution today, and abolished slavery in Singapore and Melaka. He passed on the outlines of a constitution for the settlement for the new Resident, Dr. John Crawfurd. He handed court work to a bench of magistrates and the Malay rulers were robbed of their administrative power over the law.

DR. JOHN CRAWFURD

The growth of British influence over Singapore has been attributed to Dr. John Crawfurd. Formerly of the Bengal Medical Service, he had earlier served in Penang and Java. Crawfurd was Resident from

1823 to 1826. Building upon instructions from Raffles, he formed the outlines of a constitution for the settlement. Cautious and frugal, he managed the affairs of the settlement with energy and ability, but he was not popular.

To produce revenue, Crawfurd attempted to legalize gambling. He also established separate systems for executive and judicial authorities. Crawfurd's most important historical achievements during his term of office were the two treaties of 1824. The first treaty with the Johor authorities, the Treaty of Friendship and Alliance, saw the complete cessation of Singapore to the British. Singapore and the adjacent islands and waters within ten geographical miles were ceded to the British in "full sovereignty and property" (Lee 1991, 5). Crawfurd had forced the Malay rulers to accede to the British proposal by withholding their allowances from them.

Another treaty was made between Britain and Holland. The British gave up their possessions in Sumatra and consented that no future settlements be established on Dutch territories. In return, the Dutch gave up Melaka and agreed not to intervene in the governing of Malay Peninsula. The Dutch also ceased their protests against the British occupation of Singapore.

RAFFLES AS FOUNDER

A founding leader of an organization is one who starts it and lays a foundation for it in terms of organizational vision, goals, and values. The founder either provides resources for the organization or raises the resources for it. He or she garners support for the organization from stakeholders, investors, contributors, and others.

When referring to the founding of Singapore, one must note that Singapore existed before Raffles. According to Chew, Singapore already had a "historic existence and cartographic expression" (1991, 38). Moreover, it was Lord Hastings, the governor-general of India, who gave orders for Raffles to make the expedition to the Strait of Malacca. The search was expedited with some promptings and expressed concerns from Raffles about the growing influence of Dutch in the archipelago. However, Raf-

fles can be credited for starting a process that would fundamentally transform Singapore into a flourishing trading port and set Singapore on the path to modernization.

Vision and Goals

In the assessment of historians such as Chew (2002), Raffles was a man of vision. He recognized Singapore's strategic importance and its potential for helping the British to counter the Dutch influence in Southeast Asia. Raffles's strongest claim to being a founder comes from his vision of Singapore as "the most important station in the East, and as far as naval superiority and commercial interests are concerned, of much higher value than whole continents of territory" (Nunn 1991, 76). History proved that Raffles was right in his assessment of the strategic importance of Singapore for the British Empire. As Sir Frank Swettenham noted,

To him we owe Singapore, the gate of the Farther East, a naval base of the highest importance, a great commercial center and the most prosperous of British Crown Colonies. Indirectly, the foresight which secured Singapore for the British Empire led also to the extension of British influence through the States of the Malay Peninsula. . . . In this no British party and no British Government can claim to have taken any part. . . . The man to whom the credit belongs gave his talents and his life to achieve an end which he believed to be necessary to the prestige, the power and the trade of England in the Far East. (Nunn 1991, 76–77)

Values

By his actions, Raffles showed that he valued education and knowledge. As mentioned earlier, he founded an educational institution. Raffles also placed as much importance on natural history as he did on politics. He had a track record of hiring botanists to work with him and of working with British specialists in different areas of sciences. For him, "this was no mere distraction or consolation, the creation of knowledge was what he considered the ultimate justification of the European presence" (Barley 1991, 211). Soon after he established a

Important Dates in the Life of Stamford Raffles

1781	Born
1795	Enters East India Company as a clerk
1805	Assistant secretary to governor of Penang; marries Olivia
1807–1808	Visits Melaka
1810	To Calcutta
1811	Invasion of Java; Raffles appointed lieutenant-governor
1812	Land reform in Java
1813	Death of Olivia
1815	Dismissed
1816	Returns to England
1817	Writes <i>History of Java</i> ; knighted; marries Sophia
1818	Bengkulu
1819	Founds Singapore
1820	Death of son
1822	Deaths of two other children
1823	Death of infant daughter
1824	Fire on <i>Fame</i>
1826	Dies in England

British station in Singapore, he started work on the natural history of Singapore.

It has also been said that Raffles showed that he valued human dignity by his strong advocacy for the abolition of slavery. However, his political actions, while shrewd, have also been viewed as those of a schemer.

Defending the Settlement against Opposition

Besides having the foresight to recognize the prospects of Singapore as an entrepôt, Raffles also ensured support and resources for the settlement by defending it against various sources of opposition. According to Barley (1991), Raffles's home government was not pleased with his expedition because a British settlement on Singapore was likely to raise oppositions from the Dutch government. Raffles had "risked international controversy (between the Dutch

and the British), the censure of his official superiors, to the detriment of his own career, even though he got no personal reward” (Blagden 1991, 12). As soon as he had landed in Singapore, Raffles was shrewd enough to garner support for his idea of a settlement from the Temenggong, the de facto ruler, and from Hussein, whom he proclaimed sultan and de jure ruler.

Raffles had to defend the founding of Singapore against claims from the Dutch over Singapore. He also faced discouragements and opposition from his own countrymen. According to Sir Frank Swettenham, “Had it not been for Raffles, his insistence, his arguments, his labours to secure supporters for his scheme, it is certain that Singapore would have been abandoned by the British, and equally certain that it would now be a Dutch possession” (Nunn 1991, 75).

The evidence documented above shows that Raffles had vision and foresight, upheld certain values, and stood firm despite opposition. In laying the foundation for Singapore, he acted quickly to forge the alliances with the local Malay chiefs and drew plans to establish a government in Singapore’s early years. He also oversaw the settlement through the first two Residents, whom he appointed.

The two Residents may be thought of as “maintenance leaders,” who preserved and expanded upon Raffles’s vision. They helped to see Raffles’s plans through by building Singapore’s relations with commercial and political entities in the region, defending the settlement against Dutch claims, setting policies for the new settlement, and attending to the details of administration.

Although Raffles visited Singapore only three times, spending a total of less than ten months on the island, 6 February 1819 has been considered the official birthday of Singapore as a British settlement. In agreement with historians, later generations of Singaporeans have credited the founding of Singapore to Raffles.

SITUATIONAL AND CONTINGENCY APPROACHES TO LEADERSHIP

“Leadership is one of the most observed and least understood phenomena on earth” (Burns 1978, 19). Leadership has both fascinated and perplexed scholars and practitioners, creating an extraordinary amount of research and theories to conceptualize and explain the leadership phenomenon (Ayman, 2000). This body of knowledge is reflected in volumes of editorial and author reviews (e.g., Bass, 1990; Zaccaro and Klimoski, 2001). Among the approaches to examining leadership are the situational and contingency approaches.

Beginning in the 1960s, researchers developed models that conceptualize and explain the relationship between a situation and a leader. These models are referred to as “contingency approaches” to leadership. Of these models, some, such as the contingency model of leadership effectiveness and the cognitive resource theory (Fiedler, 1978; Fiedler and Garcia, 1987), focus on the leader’s internal state and traits, whereas others, such as the normative decision-making model (Vroom and Yetton, 1973; Vroom and Jago, 1978), the path-goal theory (Geogopoulos, Mahoney, and Jones, 1957; House and Mitchell, 1974), and the situational leadership theory (Hersey and Blanchard, 1969), focus on the leader’s perceived behaviors.

TRAIT CONTINGENCY MODELS OF LEADERSHIP

Fiedler (1963) was the first scholar to respond to Stogdill’s (1948) call to formulate trait contingency models. The contingency model of leadership effectiveness is considered to be a trait contingency model because the leader’s traits interact with the situation to predict the leader’s effectiveness. More specifically, the least preferred coworker (LPC) score interacts with the leader’s situational control to predict success. The LPC scale is a bipolar adjective (e.g., “good-bad,” “large-small”), quasi-projective test (Ayman and Romano, 1998). Quasi-projective tests usually have low face validity, and the respondent is

unaware of what is being measured. The assumption is that the respondents reflect their inner needs and values and frustration at the time onto the subordinate who caused them the frustration.

Contingency Model of Leadership Effectiveness

The contingency model of leadership effectiveness categorizes leaders into one of two groups: those who are more task oriented and those who are more relationship oriented. Additionally, the model determines which type of situation the leader will perform more effectively in (high-, medium-, or low-control situation). More specifically, the model predicts that those leaders who are more relationship oriented are more effective in medium situational control and that those who are more task oriented are more effective in high- and low-control situations. On the basis of the leader’s orientation and the situational control, a leader is considered either in match (predicted to perform effectively) or out of match (predicted to perform less effectively). Although recommendations for further developments of this model have been proposed (Peters, Hartke, and Pohlman, 1985; Schriesheim, Tepper, and Tetrault, 1994; Strube and Garcia, 1981), the predictions of this model have been tested and supported by thirty years of research.

The leader’s orientation is assessed by the LPC scale. It measures the leader’s internal state, not his or her behavior. Low scores on the LPC scale (63 and below) are indicative of a person being more intrinsically motivated, with a primary orientation and focus on the task. People with high scores on the LPC scale (73 and above) are more extrinsically motivated, with primary focus on relationships (Chemers and Ayman, 1985; Rice, Marwick, Chemers, and Bentley, 1982). Several construct validation studies (evaluating whether the items on an inventory sufficiently represent the construct) have been conducted using the LPC scale; however, the results have shown that LPC does not correlate with other self-report trait measures (e.g., Kennedy, Houston, Korsgaard, and Gallo, 1987; Rice 1978), and that it does not directly relate to leader behavior or effectiveness.

Fiedler (1978) defined the leader's situational control based on three aspects of the situation (a team's climate, the leader's task structure, and his or her position power). A team's climate, better known as "leader-member relationship," is reflected by the cohesion of team members and their support of the leader. The task structure includes three aspects of the leader's task: the dimensions of task structure, the leader's experience, and the leader's training. The final level of task structure is determined by adjusting the task's structure with the level of the leader's experience and training. The position power reflects the leader's legitimacy, as well as the authority of punishing and rewarding team members (Ayman, 2002).

The order of importance of the aspects of the situation was based on the aspects' significant contribution to the leader's sense of control and prediction in a situation. Therefore, Fiedler (1978) determined that leader-member relationship was twice as important as task structure and that task structure was twice as important as position power (Ayman, 2002; Ayman, Chemers, and Fielder, 1998). Although the levels of importance of the aspects of the situation were determined by empirical means, they resemble French and Raven's (1959) sources of power model. Independently of Fiedler's determination of the situational aspects' relative importance, Podsakoff and Shrieschier (1985) found that referent power (which comes from *who* a person knows) and expert power (based on *what* a person knows) are the most effective sources of power, therefore lending more credence to Fiedler's assigned order of importance to the situational aspects.

Finally, the effectiveness of the leader in the contingency model of leadership effectiveness has been primarily defined as group performance (Fiedler, 1978). In response to criticisms regarding the model's lack of inclusion of other indices of effectiveness, Rice (1981) found that the model could also predict team satisfaction. This finding was subsequently supported empirically in a field study (Ayman and Chemers, 1991). In addition, Chemers, Hays, Rhodewalt, and Wysocki (1985) included stress of the leader as another measure of leadership outcome. In their study they found that out-of-match

leaders, compared with in-match leaders, reported significantly more stress.

Overall the model is expanding and evolving as new studies are conducted. It has been used for leadership training (Fiedler and Chemers, 1984), and a meta-analysis (a statistical procedure that allows for a quantified summarization of the relationship between variables across studies) provided strong support for the leader-match training manual that is based on the contingency model of leadership effectiveness (Burke and Day, 1986). Research on this model has also expanded to examine the influence of subordinates' trait compositions on the model's prediction (Chemers, Goza, and Plumer, 1978; Tobey-Garcia, Ayman, and Chemers, 2000). In addition, researchers have examined the level of analysis in which the model operates (Ayman, Chemers, and Fielder, 1997), demonstrating that although the model is valid for group level prediction, it has potential for multi-level predictions. Overall, the model has the flexibility to assess a leader, subordinates' trait composition, and the effect/interaction of these factors on the situation and a team's effectiveness.

Cognitive Resource Theory

Cognitive resource theory (CRT) is a second contingency approach that examines the traits of a leader. In this theory, Fiedler examines two traits (intelligence and experience) as predictors of leadership effectiveness (Fiedler and Garcia, 1987). Intelligence has been one of the most frequently and inconsistently studied traits of leaders (Stogdill, 1948); and although Lord, DeVader, and Alliger (1986) found support for intelligence as a predictor, the support was only for a prediction of leadership emergence. Cognitive resource theory proposes that the situation affects whether a leader should rely on his or her intelligence or experience to be effective.

In this theory, the leader's level of stress defines the situation—more specifically, the level of stress that a leader encounters in a situation, which is usually measured by stress with the leader's boss (Fiedler, 1993). Using stress as the situational factor and intelligence and experience as the leader traits, the theory predicts that in low-stress situations lead-

ers who rely on their intelligence will be more effective and that in high-stress situations, leaders who rely on their experience will be more effective.

Fiedler (1993, 1995) summarized the findings of several studies, both in the laboratory (e.g., Murphy, Blyth, and Fiedler, 1992) and in the field (Potter and Fiedler, 1981). He found that under stress, leaders' performance was positively related to their experience and negatively related to their intelligence. In low-stress situations, leaders' intelligence was positively related to performance, and experience had less effect. He concluded that "people can be experienced and bright or experienced and stupid, but the performance of a particular job requires the leader to give priority either to experience or to analytical or creative analysis in solving the particular problem" (Fiedler 2002, 102). Despite these supportive findings, this theory is still under investigation, and more examination of its hypothesis is warranted.

The CRT model shows that those universal traits that were studied by early leadership researchers are important; however, the level of importance of those traits is dependent on the situation. Cognitive resource theory, in combination with the contingency model of leadership effectiveness, has provided a solid foundation for trait contingency models.

BEHAVIORAL CONTINGENCY MODELS

Normative Decision-Making Model

Vroom and Yetton (1973) presented the first version of a contingency model of leadership decision making that is considered to be a behavioral contingency model. Their normative decision-making model is more focused on the situation and on how leaders respond than on leaders' traits and how leaders interact with the situation (Sternberg and Vroom, 2002). Overall, the model focuses on the interaction between leaders' choices of decision-making strategies and the decision situation, which determine the quality of decisions and the subordinate commitment and support for decisions. This leadership model is narrower in focus than other leadership contingency approaches (Vroom and Jago, 1998) and is a prescriptive model of leaders' decision-making process.

Vroom and Jago (1998) identified five leadership strategies for decision making on a continuum from autocratic (autocratic I and II) to consultative (consultative I and II) to full group participation (GII). Respectively, the strategies represent solo decision making by the leader, the inclusion of subordinates at some level, and full involvement of subordinates in decision-making. Using this model, called the normative decision making model, a leader uses "decision heuristics" (aids in learning) to assess the situation. Using eleven heuristics, a leader is able to determine what the situation is and which type of decision-making strategy will be most effective.

In conjunction with the heuristics used to assess the situation, the leadership strategy is determined by a leader's desired outcome: improving the quality of the decision, improving subordinates' involvement, reducing the time spent, and developing subordinates (Vroom and Jago, 1998). These factors are also the basis for measuring the effectiveness of a decision. A leader is presented with a decision-making tree in which he or she answers yes/no questions (which reflect the heuristics). If decision quality is critical, the leader has to assess if he or she has the necessary information, the problem structure, and subordinates' agreeableness and knowledge about the issue. The less the leader knows and the more the subordinates are knowledgeable, the more group involvement is advised.

If time is of concern, the involvement of the group becomes less feasible. Research on group versus individual decision making has demonstrated that the quality and accuracy of a decision increase with group involvement. The more individuals who are involved, the more time it takes them to make a decision. However, a balance exists among the number of people involved, the traits of the individuals, the quality of the group process, and the final result. Therefore, in time-pressured situations most leaders avoid excessive group involvement, move toward more autocratic decision-making strategies, and may sacrifice quality for expediency.

If the acceptance and commitment of employees are critical for the decision to be implemented, then more employee involvement improves the final product. Therefore, a leader needs to consider the role of

the group, not only so that quality decisions are reached, but also so that the group treats the decisions as its own. Therefore, in these situations, a leader may have to sacrifice the cost of time, and perhaps the quality of decisions, to ensure group support and cohesion. Achieving a balance among quality, time spent, and maintenance of group support is a goal that leaders may need to attain rather than high-quality decisions and high acceptance by group members.

The normative decision-making model can assess a leader's decision-making style by having the leader choose the appropriate behavior over thirty situational conditions. On the other hand, the model is mostly prescriptive in that it helps a leader determine how to respond to a given situation. However, in descriptive studies, the model shows that the situation is three times stronger than the leader's style in affecting the way the leader responds (Vroom and Jago, 1998). Therefore, the model demonstrates that a leader needs to base the level of participative decision making on the situation and outcomes that are important to the leader (e.g., time, accuracy, commitment, etc.).

Path-Goal Theory

Researchers developed the path-goal theory out of Ohio State University leader behavior studies (Stogdill and Coons, 1957) and the expectancy theory of motivation (Vroom, 1964). The premise of the path-goal theory is to determine leader behaviors that increase subordinates' motivation by clearing the path to a goal. In other words, a leader's behavior is a major contributor to subordinates' satisfaction and motivation. However, the extent to which a leader's behavior is effective is determined by the extent to which the leader complements the environment in which subordinates work. In the original theory, House (1996), who was inspired by the work of Evans (1970), identified four leadership behaviors that can affect subordinate satisfaction: directive, achievement oriented, supportive, and participative behaviors. Furthermore, the extent to which these behaviors are effective is dependent on three groups of contingencies: the task, characteristics of the subordinates, and the nature of the subordinates' group.

Two meta-analyses (Indvik, 1986; Wofford and Liska, 1993) validated the path-goal theory by examining the moderators that are proposed to determine the effectiveness of leader behavior on subordinate motivation. These moderators can be considered contingencies that impact the relationship between the leader's behavior and the subordinate's motivation. After examining several of the proposed moderators, "the analyses indicated that much of the research testing path-goal theories has been flawed" (Wofford and Liska 1993, 857). This flaw may be due to the fact that of the sixteen possible moderator tests, only seven met the criteria as moderators, and one moderator was in the opposite direction than was hypothesized.

The most studied work-environment moderator in this paradigm (framework) has been subordinates' task structure (Evans, 1996). However, Wofford and Liska (1993) did not find support for the moderating effect of subordinates' task structure on the relationship between a leader's initiation of structure behavior (the extent to which a leader is likely to define and structure his or her role and those of subordinates in the search for goal attainment) and subordinates' satisfaction, performance, or role clarity. However, subordinates' task structure was found to have a positive effect on the relationship between considerate leader behavior and performance. When the task was unstructured, considerate leader behavior led to higher levels of performance.

Fewer studies have examined the personal characteristics of subordinates as moderators (e.g., ability, locus of control). Schriesheim and Schriesheim (1980) demonstrated that subordinates' need for affiliation, subordinates' authoritarianism, and subordinates' ability and experience moderated leader behavior and outcome relationship. Other studies have shown that subordinates with an external locus of control (believing that their lives are controlled by outside forces) were more satisfied and productive with participative and directive leaders, whereas subordinates with an internal locus of control were more productive and happier with task-oriented leaders. Finally, the results of a recent meta-analysis (Wofford and Liska, 1993) found that ability was the only subordinate characteristic that moderated the relationship between leader behavior and outcomes.

Researchers have highlighted several limitations of the path-goal theory. These limitations include problems with the instrumentation of the leader behavior measure (Schriesheim and von Glinow, 1977; Fisher and Edwards, 1988) as well as Yukl's (1989) concern relating to the broad conceptualization of the leader behaviors in the measure. Other problems stem from the lack of research that has examined moderators besides task and subordinate characteristics. Finally, Wofford and Liska (1993) expressed concern with the fact that the majority of the studies performed with the theory suffered from source bias. Source bias refers to overreliance on a single source for data, particularly when the information about the independent variable (i.e., leader behavior) and dependent variable (i.e., subordinate satisfaction) are both obtained from the subordinate.

On a positive note, path-goal theory encouraged evolution of important conceptualizations of leadership. House acknowledged that it was the basis of the development of charismatic leadership and substitutes for leadership theory (House, 1996) and potentially an impetus for the development of vertical dyad theory.

Situational Leadership Theory

Hersey and Blanchard (1969) based their situational leadership theory on previous studies of leader behavior. They identified four leadership behaviors: telling, selling, participating, and delegating, which are measured by the LEAD (leadership effectiveness and adaptability description) instrument. The theory predicts that the extent to which these behaviors are effective depends upon subordinates' task maturity and subordinates' psychological maturity. Subordinates' task maturity is measured using such factors as ability, education, and experience, whereas subordinates' psychological maturity is measured using such factors as willingness, self-esteem, and motivation.

The theory predicts that when subordinates are able and willing, a leader should delegate. When subordinates are willing and unable, a leader should sell (that is, decide on a course of action and "sell" it to the subordinate). When subordinates are unwilling

but able, the leader should engage in participative decision making. When subordinates are unwilling and unable, the leader should tell them what to do. Although the situational leadership theory is popular, it has received limited empirical examination, and the results have been mixed at best (Bass, 1990; Vecchio, 1997).

All leadership contingency models and theories acknowledge the role of the situation. However, two key factors make them different. First, some use the leader's traits, whereas others use the leader's perceived behavior as reported by direct reports. Second, some have shown validity for predicting employee satisfaction and job stress, and others have shown validity for predicting team effectiveness and morale. In addition, some have more face validity, whereas others have more empirical validity.

More specifically, among the behavioral contingency theories, the path-goal theory and situational leadership theory are different from the normative decision-making model on the basis of the scope of a leader's behavior. In the normative model, the leader's decision strategy is the focus, whereas in the path-goal and situational leadership theories, the leader's supervisory behaviors are the focus.

The difference between the contingency model of leadership effectiveness and the path-goal theory lies in how the leader is assessed and how the situation is approached, among other factors. In the path-goal theory, the perceived leader behavior is the focus, whereas in the contingency model of leadership effectiveness, the leader's trait or internal state is the focus. In path-goal theory, the situation is assessed through the eyes of subordinates; in the contingency model of leadership effectiveness, the situation is assessed through the eyes of the leader.

Most of the theories and models in the contingency approaches consider the situation as the contingent factor that interacts with the leader's characteristics (e.g., traits or behaviors). However, another set of theories attempts to determine the set of characteristics on which the situation varies (Sternberg and Vroom, 2002). Thus far, only two approaches attempt to conceptualize the characteristics of the situation, one being Fiedler's contingency model and the other the substitutes for leadership theory. Fiedler

defined the situation by the leader-member relationship, the leader's task structure, and his or her position power. However, the substitutes for leadership theory (Kerr and Jermier, 1978), which emerged from the path-goal theory, proposes a taxonomy (system of classification) of the situational contingencies by presenting fourteen situational factors that interact with a leader to determine leadership effectiveness. To clarify these concepts, Schriesheim (1997) described these types of situational factors as they relate to leadership and four classes of outcome variables.

These four classes of outcome variables are (1) substitutes, which are factors that are directly related to a subordinate's outcome and that block the effect of leader behavior; (2) neutralizers, which are factors that inhibit a leader's behavioral influence on the outcome; (3) enhancers, which are factors that augment the relationship of a leader's behaviors with the outcome; and (4) supplement factors, which are factors that are related to outcome variables but that neither augment nor cancel the effects of a leader's behaviors (Bass, 1990). Therefore, the substitutes for leadership theory focuses on how subordinates' needs, abilities, and perceptions interact with the situation. In contrast, the contingency model of leadership effectiveness focuses more on the power source of the leader and how that power source interacts with the situation. Although the theory and the model focus on two separate factors, both are important to examining situational contingencies.

In summary, leader traits, perceived behaviors, and situational contingencies influence leadership effectiveness. Therefore, the answer to the question, "Is there a universal leadership characteristic?" must be, based on situational and contingency approaches, "It depends." Contingency factors can manifest in various ways through particular traits, skills, or behaviors, depending on the person, the method of assessment, and the leadership situation. Therefore, if we want to really understand the leadership phenomenon, contingencies must not be ignored.

 **SLOAN, ALFRED (1875–1966)**
American business executive

Alfred Pritchard Sloan Jr. played a leading role in shaping the modern corporation. From the 1920s to the 1940s, Sloan built General Motors Corporation (GM) from a haphazard collection of automotive companies into the world's largest and most profitable commercial enterprise. Sloan's success helped GM become a mainspring of the American economy, and provided an influential leadership model for generations of American business executives.

Sloan was born in New Haven, Connecticut, and grew up in Brooklyn, the son of a successful coffee and tea merchant. He preferred reading books about engineering and the mechanical sciences to playing or working with his hands (unlike the first generation of automotive pioneers, Sloan was no tinkerer). An assiduous student—"a grind," in his words—he earned an electrical engineering degree from MIT in just three years, graduating in 1895 as the youngest member of his class. At age twenty-four, with his father's help, he became general manager of Hyatt Roller Bearings, a small, failing company. Sloan turned the company around and made it a successful supplier to the rapidly growing automobile industry. In 1916, Hyatt merged with other parts suppliers to form United Motors Company, and the forty-one-year-old Sloan became its president. Two years later, GM bought United Motors Company, and Sloan became a GM vice president.

GM was led by the brilliant but erratic William Durant, who had built the company through a series of bold and highly leveraged acquisitions. Durant had fashioned an empire of plants and factories that spanned forty cities, but he was interested more in speculative stock transactions than managing the sprawling operations. Sloan, the sober engineer, was

the antithesis of the flamboyant Durant. While Durant worked the telephones to corner GM's stock yet once more, Sloan developed a plan to bring order to the company. When Alfred Dupont became GM's president in 1920, he essentially adopted Sloan's plan; it guided GM for the next half-century.

When Sloan succeeded Dupont as president and chief executive in 1923, he continued his efforts to rationalize GM's vast operations. Sloan's vision for GM was founded on faith in what he called "scientific means of administration and control" (Kuhn 1986, 4). Such faith in science to manage human affairs was commonplace among elites in the first part of the twentieth century. What distinguished Sloan's vision was his realization that to survive in the capitalist economy a corporation needed a judicious balance of centralizing and decentralizing forces. Sloan recognized that the dynamics of the twentieth-century capitalist economy—economies of scale, the complexities of industrial production, the pace of innovation, and the increasing power of consumers—made a new kind of organizational structure imperative: Large industrial companies required a balance of centralization (strategic control) and decentralization (tactical flexibility and responsiveness to market signals). While Henry Ford imagined that a scientific approach meant absolute control—one pictures Ford running his wholly owned company like a giant machine, with himself at the controls—Sloan sought to develop, regularize, and maintain within GM a series of information flows among product divisions, the central office, and markets; one pictures Sloan, unlike Ford, running a committee meeting.

Sloan centralized key strategic functions like finance, research, and pricing, and set up an active executive committee (which he chaired) to hold the corporation together. At the same time, he delegated daily decision making to individual divisions and their managers, and encouraged each division to function as an independent profit center. Durant had absorbed existing car companies into GM without folding their operations together. While Sloan rationalized the range of models GM divisions built and sold ("A car for every purse and purpose," he boasted [Cray 1980, 243]), he retained and formalized

Durant's concept—product-division structure—because it both allowed divisions to be close to their markets and allowed the financial performance of each one to be tracked against the others. Sloan in effect built the capacity to receive and recognize market signals into GM's organizational DNA. "The big work behind business judgment," he wrote in his memoir, "is finding and acknowledging the facts and circumstances concerning technology, the market, and the like in their continuously changing forms" (Sloan [1964]1990, xxi). He endlessly addressed subordinates in memos, committees, and the regular gatherings for thousands of GM managers that he instituted and presided over, gatherings intended to disseminate his vision, strengthen informal lines of communication, and develop a common GM culture.

Sloan's interest in facts—"making things visible" as he put in his memoir ([1964]1990, 142)—included an early awareness that GM had to systematically monitor its environment, including the sentiments and wishes of the car-buying public. GM pioneered or accelerated American industry's use of consumer research, advertising, annual models, marketing, style, and recognizing women as an important market segment. Within a few years after Sloan took over GM's leadership, the company matched and surpassed Ford, bringing to an end the long run of the Model T. By the end of the 1920s, in the words of one scholar, "Sloanism had defeated Fordism" (Farber 2002, 104).

Sloan ran GM for more than two decades, serving as president until 1946 and as chairman of the board of directors from 1937 to 1956. GM's success inevitably bred arrogance and suspicion. In 1952 Sloan's successor as GM president, Charles Wilson, famously resisted selling his GM stock to avoid a conflict of interest when asked to become Secretary of Defense: "For years I thought what was good for our country was good for General Motors—and vice versa" (Cray 1980, 6–7). During the 1950s GM was the subject of antitrust suits and investigations, as its size and the degree of concentration in the automobile industry became objects of increasing public unease. GM's insular power, embodied by another of Sloan's successors, Roger Smith, was the subject of Michael Moore's scathing 1989 film lampoon, *Roger*

and Me. But the colossus that Alfred P. Sloan Jr. built remains today a bulwark of the American economy, and one of the largest and most powerful entities in the world.

In retirement, Sloan wrote a business memoir, *My Years with General Motors* (1964), a classic that has sold over a million copies and remains in print. Sloan's philanthropic foundation, the Alfred P. Sloan Foundation, supports research in a variety of fields, including medical research.

SMALL BUSINESS

Governmental policymakers, institutional organizations, and individuals have realized the potential of small business entrepreneurship as an economic "weapon" for building individual wealth, creating opportunity, and growing economies around the world. Within the United States, more than 75 percent of new jobs and 50 percent of the gross domestic product are the result of business entrepreneurship. On a global scale, entrepreneurial activity has been studied in numerous countries, with reports such as the *Global Entrepreneurship Monitor* producing annual interpretations of entrepreneurial activity within selected countries on six continents.

New trends in small business include the creation of virtual new venture top management teams (that is, team members that are connected electronically

rather than working in the same facility), the cognitive nature of business opportunity recognition within a global environment, and the growing realization of the importance of shared leadership within new business ventures. As a result, business scholars of the twenty-first century have concluded that we have entered a period best described as an entrepreneurial revolution and that leadership as it pertains to small business entrepreneurship is a key ingredient in the success of this revolution.

TRADITIONAL VIEW OF SMALL BUSINESS AND LEADERSHIP

Small business can be viewed from a number of perspectives. In some cases, small business represents a family or partnership venture and serves simply as an alternative income source for individuals or partners who undertake the business. This alternative income source can be viewed as a substitute for traditional sources of income from employment with public or private enterprises. For these types of sole proprietorships or partnerships, leadership is defined through the actions of the individual small business owner, who typically has total control over the tactical and strategic actions of the business. The vast majority of businesses in the United States, which are typically defined as sole proprietorships, are this class of business.

The demonstration of leadership within income-substitution businesses follows traditional leadership theories, which focus on instilling vision and exerting influence over others to create purpose and, ultimately, better performance. This leadership capability rests solely with the entrepreneurs and helps support the perception of small business entrepreneurs as “rugged individualists,” using their leadership capabilities to create opportunity for themselves. In fact, when prompted to identify entrepreneurial leadership successes of the nineteenth and twentieth centuries, we often create mental images of individuals such as Andrew Carnegie, Henry Ford, John D. Rockefeller, and Bill Gates, all giants of business who influenced the development of whole industries through their individual perseverance, vision, and business leadership.

Contemporary viewpoints of small business entrepreneurship and leadership have shifted from a focus on individual leadership styles and entrepreneurial success to a team approach. The concept of the high-potential new venture (start-ups based on technological innovation) and the recognition of the new venture top management team (NVTMT), which uses shared leadership and collective vision to achieve business survival and success, have replaced the “rugged individualist.”

CONTEMPORARY VIEW OF SMALL BUSINESS AND LEADERSHIP

Small businesses of the twenty-first century face pressures and obstacles that were smaller in scope or unknown in previous times. For many small businesses, survival and success are thwarted by several broad and industry-level environmental forces.

In some instances, the increasing reliance on technology development and application has created industry forces that lead to complex, highly related environments for small business. In other instances, the ability of small businesses to reach global customers has created time-sensitive markets, where the ability to exploit product or service logistics paths can become more valuable than the product or service itself. Finally, increasing regulatory requirements and litigation have built an entrepreneurial requirement to comprehensively understand the legislative and legal ramifications for small business products or services. Thus, for those small businesses that operate in these complex and hypercompetitive environmental landscapes, the ability to exploit niche opportunities and gain institutional legitimacy requires a team approach.

In essence, high-potential new ventures require a greater cognitive and business capability than the lone entrepreneur may have. Leading a high-potential small business of the twenty-first century requires a NVTMT comprising team members who can simultaneously provide individual perspective and expertise for these difficult environmental forces but who also have the key individual orientation to reach consensus and cohesiveness around shared team objectives. The twenty-first-century small business

requires collective vision and shared leadership within a NVTMT—an increasingly important component for understanding leadership in today’s high-potential new venture.

THE CONCEPT OF SHARED LEADERSHIP

Shared leadership is a key component for any high-potential new venture. It is defined generally as a team process where leadership is shared among team members, based upon the knowledge or experience they bring to the small business and its environment. To that end, the mantle of leadership shifts from one NVTMT member to another as the new venture seeks to survive and gain legitimacy within its industry environment. For example, when the new venture encounters technical capabilities that create a competitive advantage within older or more established firms, the shared leadership within the NVTMT may place greater weight on the advice and recommendations of technically oriented team members. Other members of the team sublimate their own personal or individual desire for control and follow the lead of the team member best qualified to lead the NVTMT.

However, the shifting of the leadership mantle from one team member to another does not fully encompass the concept of shared leadership with the NVTMT. Success is also dictated by how well the team members can cohesively and synergistically (relating to combined action) “lead together.” This process includes team members’ efforts to create cohesion by providing group support, sharing information, and creating constructive communication feedback loops. When faced with internal team disagreement, NVTMTs who use shared leadership practices are more likely to use constructive conflict resolution and are thus more likely to come to a more optimized decision with respect to the issue at hand.

By simultaneously assuming leadership and following others, the NVTMT can create effective responses to environmental challenges. Thus, shared leadership among high-potential new ventures can create an internal capability that is not easily replicated by other businesses.

One aspect of shared leadership that is particu-

larly valuable is the creation of a collective vision for the small business, which puts individual members of a high-potential new venture on the “same page.”

THE CONCEPT OF COLLECTIVE VISION

An important question that surrounds the concept of shared leadership and small business is “Why is a high-performance team member able to assume leadership within certain organizational situations and yet forgo the leadership mantle within others?” Entrepreneurship studies have long understood that one particularly important characteristic of entrepreneurs is their desire to “be their own boss.” In fact, the drive to be personally responsible and in charge of the business is a hallmark characteristic of entrepreneurs.

The answer to this question resides in the development of collective vision within the high-performance NVTMT. The development of shared leadership within a small business necessitates that high-performance new venture teams be more “aware” of the deeper purpose of the organization. With shared leadership, this deeper purpose is manifest in a collective vision that all of the NVTMT members have with respect to the concept, direction, and strategic intent of the organization.

Not surprisingly, collective vision can be attributed to the greater understanding that NVTMTs have of the entity (in this case a high-performance new venture) that they helped create. Through shared leadership, team members can internalize and ultimately become strongly committed to that shared understanding such that members of the team are able to trust the cognitive capabilities and behavioral contributions that each team member brings to the top management team. Therefore, a team member’s willingness to give up the leadership mantle is directly related to the collective vision that exists within that NVTMT.

In essence, because all members of the team identify with the deeper purpose of the organization and recognize the talents and capabilities of fellow team members, they become more willing to trust their fellow team members in assuming the leadership role in those areas where they have the most competence.

This “give-and-take” leadership approach within high-performance (successful) new ventures is a key competitive advantage that these ventures have over other ventures that may have a more vertical or hierarchical approach to entrepreneurial leadership. Thus, shared leadership and collective vision within entrepreneurial settings are a leadership approach that has distinct advantages over more traditional leadership approaches within small business.

THE RELATIONSHIP BETWEEN SHARED LEADERSHIP AND NEW VENTURE PERFORMANCE

The entrepreneurial success of a business is often dictated by the knowledge, skills, and abilities of the top management team who is charged with implementing a strategic plan to achieve that success. For example, venture capital investment is often driven more by the characteristics of the NVTMT than of the concept itself. To that end, shared leadership has been found to be an important characteristic of those small businesses that truly succeed in entrepreneurial settings.

Recent research that has examined leadership dynamics within NVTMTs has demonstrated how shared leadership leads to better performance among entrepreneurial businesses. The ability of the NVTMT to collectively determine who should lead and when has allowed those businesses to create a more effective team to respond to the changing dynamics of the environment. Shared leadership and collective vision are a key determinant of small business success.

SHARED LEADERSHIP AND NEW VENTURE PERFORMANCE: A PROPOSED MODEL

To understand the linkages among shared leadership, team dynamics, and business performance, several propositions and a model that illustrates these linkages have been developed.

Yukl defined leadership as “influence exerted . . . over other people . . . in a group or organization” (Yukl 1998, 3). Leadership has been linked to effective strategic decision making (e.g., Korsgaard,

Schweiger, and Sapienza 1995) and to entrepreneurial business performance (Baum, Locke, and Kirkpatrick, 1998). However, leadership research has had its critics. For example, Meindl and Ehrlich (1987) have suggested that researchers have a romanticized conception of leadership and that it may not make as much of an impact as all the interest in leadership would suggest. Further, findings in the substitutes-for-leadership literature suggest that such elements as professional standards account for more unique variance in criterion variables than does leader behavior (Podsakoff, MacKenzie, and Bommer 1996). Nonetheless, the emphasis of most leadership theory and research has been on the individual leader. For example, many researchers have attempted to understand the personality traits of leaders (House 1977). Others have focused on the behavior of leaders (Sims 1977).

One reason why some researchers have concluded that leadership is not particularly important (Meindl and Erlich 1987) is that researchers have been, perhaps, overly concerned with the role of the individual to the exclusion of the team in the examination of leadership. Some early research on shared leadership in intrapreneurial teams (new ventures within an existing company) (Pearce, 1999) and entrepreneurial teams (Ensley and Pearce 2000) suggests that shared leadership is a more important predictor of team effectiveness than is simply the leadership exhibited by the team leader. Thus, in this research, focus is on shared leadership as an important antecedent variable in the explanation of new venture performance.

Priem and associates (1999) argue for the use of substantive variables in models to better understand the “black box” of TMT (top management team) process. They propose the dimension of power as one possible variable to clarify TMT process. Many researchers have hypothesized about the power of the entrepreneurial leader. For example, Mintzberg and Waters (1985) developed a framework outlining the possible range of power that a top manager might exhibit.

Again, however, the issues of power and leadership have been only minimally examined in the new venture context. Smith and associates (1994) in a

study of high-tech firms found that tough financial times result in more stern leadership. Eisenhardt and Bourgeois (1988) found that firms where top managers shared power outperformed firms with dominating, power-controlling managers. Zenger and Lawrence (1989) suggested that when power is controlled by a single, dominant leader, the potential for negative politics increases.

Katzenbach argues that TMTs achieve real team performance when they learn to shift the leader role back and forth depending on needs and demands. He argues that an effective TMT will “draw on the leadership ability of each of its members at different times and in different ways. The leader’s mantle falls naturally on the shoulders of whichever executive has the knowledge or experience most relevant to the particular issue at hand” (Katzenbach 1997, 86).

Leadership of the NVTMT is a key determinant of how strategic choices are made (Manz and Sims 1993; Yeatts and Hyten 1998) and how team members relate to one another (Nurick 1993). Leadership involves the ability to influence others (Bass 1990; Yukl 1998). The exercise of leadership can affect team processes and functioning as well as the attitudes, beliefs, and behaviors of team members, all of which ultimately impact organizational strategy (e.g., Ensley et al. 2003).

The leadership process in NVTMTs is a little-researched topic. Many new venture performance models proposed during the last several years have overlooked the influence of entrepreneurs and their leadership behaviors on the strategy-making process (Ensley 1999). On the other hand, venture capitalists have long understood that the quality of the leadership process in the NVTMT is of paramount importance (Timmons 1999). However, this issue has basically gone unexplained in academic research during the past several decades, even though the leadership of the NVTMT has “significant impact on the resource levels and ultimately on the growth of young firms” (Eisenhardt and Schoonhoven 1990, 506). Thus, leadership of the NVTMT may provide vital insight into NVTMT processes that ultimately affect new venture performance.

Two sources of leadership exist in a TMT context:

vertical leadership and shared leadership. Vertical leadership is the more traditional, hierarchical leadership, wherein a specified leader directs all group activities, feedback, and rewards. Vertical leadership has received considerable attention and support in the literature (Bass 1990; Manz and Sims 1989; Yukl 1998). Vertical leadership is behavior of the designated team leader (Pearce 1999).

Shared leadership has been a focus of research that views the team as a source of leadership (e.g., Barry, 1991; R. J. Pearce 1997; E. Pearce 1999). Shared leadership is a team process by which leadership is carried out by the team as a whole rather than solely by the top executive. “Shared leadership” means the behavior of the team members as an aggregate (Pearce 1999). With this type of leadership, the team as a whole shares fully in the tasks of leadership, which Katzenbach (1997) deemed critical to the effective functioning of the team. This process includes team members motivating one another, sharing feedback, and directing activities of the team together. Recent findings have demonstrated that NVTMTs may utilize shared leadership more than other types of teams (Ensley and Pearce, 2000). Shared leadership represents a conceptualization of leadership wherein team members are empowered and leadership responsibilities are shared.

Research suggests that when shared leadership occurs, teams are more effective (Barry 1991; Katzenbach and Smith 1993; Manz and Sims 1993). With shared leadership, teams enjoy greater amounts of collaboration, coordination, cooperation, and innovation (Manz and Sims 1993; Yeatts and Hyten, 1998). Shared leadership has also been found to be an important predictor of new venture performance (Ensley and Pearce, 2000).

The majority of research on leadership has focused on vertical leadership, although a wealth of theoretical and empirical evidence supports the important role of shared leadership (Butler and Reese 1991; Jolson, Dubinsky, Yammarino, and Comer 1993). Relying solely on vertical leadership in TMTs would seem to “ignore leadership dynamics within the group context” (Barry 1991, 32). In empowered TMTs, power and authority are vested in the team itself, and the sharing of leadership is a nat-

ural outgrowth of vesting power and authority at the team level. In NVTMTs individual members will generally be highly skilled, educated, and self-confident individuals (Ensley, Carland, and Carland 1999). Thus, collectively, the NVTMT often has the potential knowledge, skills, and abilities to effectively engage in shared leadership.

Leadership (Greene and Schriesheim, 1980), especially shared leadership, has been linked to the development of group cohesion for some time. Shared leadership, because of its inherent contribution to the development of group interaction and socialization, has a logical link to cohesion of the NVTMT. Therefore, a first proposition is offered:

Shared Leadership Is Related to the Development of NVTMT Cohesion

Cohesion has been suggested to be the central mediator of group formation, maintenance, and productivity (Bollen and Hoyle 1990). Cohesion reveals itself not only at the cognitive level of group members, but also in their affective (emotional) state. Cohesion therefore has effects on motivation, morale, and willingness to engage in social and task-related activities, group potency, and, ultimately, performance. Researchers think that cohesion facilitates group productivity, whereas a lack of cohesion constrains group productivity (Greene 1989).

Research indicates that highly cohesive groups have a high degree of commitment to the group task and to group goals (Klein and Mulvey 1995). Cohesion has also been positively linked to group effectiveness (Klein and Mulvey 1995). In a meta-analysis of studies, which looked at a link between cohesiveness and performance, Mullen and Copper (1994) found a relatively small but significant effect. They suggest that commitment to the task is the most critical component of the cohesion-performance link. Overall, evidence seems to indicate that cohesiveness is a necessary condition for a group to be productive but that it is not sufficient in and of itself.

Moreover, studies have shown the benefits of cohesion and a related concept, social integration, to the performance of TMTs. Smith and associates

(1994) found social integration in the TMT to be directly related to ROI (return on investment) and sales growth. Similarly, Elron (1997) found cohesion of the TMT to contribute to TMT performance on issues such as implementation of decisions and strategies, comprehensive vision, and goals. Taken together, these findings point to a complex web of effects whereby cohesive teams interact more efficiently and disagree more effectively, without arousing the sorts of negative affections that can so undermine top management team performance. This leads to a second proposition:

Cohesion within NVTMTs Is Positively Related to New Venture Performance

With shared leadership in the NVTMT, development of collective vision is more likely than it would be if a vision were simply imposed from an appointed leader, as in vertical leadership. Researchers have described vision as a mental model, cognitive image, or ideal that encompasses a sought-after future state (e.g., Nanus 1992). Hambrick uses the term “corporate coherence” to represent the collective vision or “integrated logic and basis for action within a company—its unity of purpose, its unity of action” (Hambrick 1997, 24). Katzenbach alludes to the idea of collective vision when he proposes that “teams must be deeply committed to a purpose” (Katzenbach 1997, 84) in order to gain a common sense of direction.

The findings demonstrate that leadership behaviors that are more organic or transformational tend to have higher levels of understanding of the firm’s vision (Baum and associates 1998; Hewson 1997). Because Burns described transformational leadership as occurring when “leaders and followers raise one another to higher levels of morality and motivation” (Burns 1978, 20), shared leadership would then be the next logical step in the development and creation of collective vision. Shared leadership includes efforts by team members to motivate each other and create a leadership dynamic in which all are responsible for the task of leadership. Shared leadership is logically more closely related to collective vision than is vertical leadership. Team members would

surely have greater understanding of something that they helped to create rather than just had communicated to them to follow. Shared leadership is an important antecedent of collective vision in NVTMTs. Therefore, a third proposition is offered:

Shared Leadership in the NVTMT Is Positively Related to Higher Levels of Collective Vision

When shared leadership results in collective vision, what are the likely outcomes? Research on self-managing work teams suggests that group self-leadership (Manz and Sims, 1993), team self-leadership (Stewart and Barrick 2000), distributed leadership (Barry, 1991), and shared leadership (Katzenbach and Smith 1993; Pearce 1997, 1999) are strongly associated with more effective teams. For example, Katzenbach and Smith's (1993) study of teams showed that high-performance teams actively engaged in shared leadership much more than did other teams, and Pearce (1997) found shared leadership to be an important predictor of intrapreneurial team effectiveness.

The importance of this issue was highlighted in Yukl, who designated "heroic vs. shared leadership" as the most important current controversy in organizational leadership studies (Yukl 1998, 504). He states: "The extent to which leadership can be shared, . . . the success of shared leadership, and the implications [of shared leadership] for design of organizations are important and interesting questions that deserve more research. As yet, we have only begun to examine these research questions" (Yukl 1998, 504).

Accordingly, collective vision can be defined as the commonly held mental model of the desired future state of a group that provides the basis for planning, goal setting, coordination, and motivation within that group. In this definition of collective vision, the focus is on the clear articulation and understanding of the desired future state of the group.

Baum and associates (1998) found CEO vision to have an effect on firm performance; however, the link between collective vision and new venture performance has yet to be articulated. Because of the recent findings of Baum and associates (1998) and the role of collective vision in performance (Pearce

and Ensley, 2000; Timmons, 1999), the concept of collective vision is an important predictor of new venture performance.

Amason (1996) stated that collective vision is a group-level understanding of the reasoning behind a decision, which allows each team member to act independently but in a way that is consistent with the essence of the decision. This deep understanding helps team members articulate their mental models more fully, which, in turn, increases team success (Carley, 1997). Thus, a fourth proposition is posited:

Collective Vision within NVTMTs Is Positively Related to New Venture Performance

Cohesion and collective vision are positively and reciprocally related. Hambrick (1997) argued that teams need both cohesion and collective vision, which he labeled "behavioral integration," to be effective. These two elements tend to increase each other. When both cohesion and collective vision are present, a team is sharing information, acting in a collaborative fashion, making joint decisions, and sharing resources. This dynamic interplay, enhanced by the presence of both collective vision and cohesion, likewise helps to increase both. Therefore, a fifth proposition is posited:

Collective Vision Increases Levels of Cohesion, and Cohesion, in Turn, Increases Collective Vision

The model of shared leadership proposed here develops an understanding of leadership in new ventures that is different from that to which many people have become accustomed. As Gartner and associates (1995) noted, the new venture development process is not so much about individuals as it is about a team of people with the skills necessary to drive the new venture. Given the complex and ambiguous nature of new ventures, people should not think of new ventures as smaller firms operated by Lone Ranger-type characters with little reliance on anyone else. This is certainly true in relation to the task of leadership. Although leadership does serve as a citation for studies that still wish to cast entrepreneurs as rugged individualists, this task, too, is more team based.

To understand the development of new ventures and their leadership, we must understand the role of all of the founders and entrepreneurial team members. One of the great criticisms of new venture research and entrepreneurship research during the past several years is that they have long concentrated on the characteristics of the founder without fully understanding the founder's behavior. Leadership in new ventures may well take on dictatorial frames, such as exists with generals in battle, but the likelihood is that the new venture task is far too ambiguous for such a leadership style. As Ensley and associates (2003) noted in their study, it is nearly impossible for one person to envision the new venture task clearly. And decades earlier, Cybert and March (1963) wrote that the organizational task and the number of organizational options for businesses are too great for one person to ever conceive. Clearly, shared leadership and collective vision improve the potential of new ventures by overcoming their inherent ambiguity. To view the leadership task as anything other than shared in complex new ventures is both illogical and difficult to substantiate. Studies that include shared leadership variables as a part of their analysis will improve the studies' predictive power.

SOCIAL CAPITAL THEORIES

Social capital theories examine the moral resources and moral and collective goods that people invest in each other as members of a family, workplace, community, society, or nation. Moral goods such as truth, unlike other goods, are measured in value rather than price. Collective goods, such as environmental quality, are commonly shared to a greater degree than other goods. These theories may also narrowly examine civic associations and their role in democratic society or some other moral resource and a particular setting or purpose. In between these two subjects, social capital theories offer insight into the goals and processes of leadership in several contexts and the reason why people are willing to lead and follow.

SOCIAL CAPITAL “DISCOVERED”

The scholarship of Robert Putnam, a U.S. political scientist, on civic associations and democracy pre-

sented the most popular theory of social capital, albeit a narrow interpretation, and created enormous interest in the concept. Putnam compared two areas of Italy for their democratic governance and economic prosperity. He attributed the difference between the two areas on both measures to social capital or “norms of reciprocity and networks of civic engagement” (Putnam 1993, 167). Communities build up their stock of social capital, in Putnam’s assessment, by people associating with others in groups—choirs, bird-watching groups, craft guilds, as well as formal nongovernmental organizations such as Boy Scouts and Girl Scouts and Red Cross. In these groups—“networks of civic engagement”—people learn to work with others and to look out for each other—they learn “norms of reciprocity” that spill over into cooperation and success in economic activities and democratic processes in public decision making. Thick networks increase the likelihood of collaboration and cooperation for mutual purpose.

Putnam’s theory of social capital relies heavily on the role of civic associations and thus renews the importance that the French writer and politician Alexis de Tocqueville placed on them in one of the earliest systematic analyses of U.S. democracy. In subsequent work, Putnam focused primarily on the number and membership of civic associations to measure social capital and argued that increases and decreases in social capital mean more or less wealth, health, education, and civil society and stronger or weaker democratic governance.

A BRIEF HISTORY OF SOCIAL CAPITAL

Discoveries of social capital that preceded Putnam’s offer broader views of social capital. The story of the start of a domestic violence shelter in Swansea, Wales, inspired one such discovery in 1986. A rise in domestic violence occurred after a local steel works closed and left five thousand workers, mainly males, unemployed. Some women had no place to go with their children to escape harm. As the need for some form of safe space became clear, community volunteers found an unused rectory in the inner city of Swansea, gathered contributions of appliances, bedding, and clothes, found and trained volunteer staff,

and began offering haven to victims of domestic violence. Midway in a presentation about this project, one of the shelter’s founders explained, “We didn’t go about this in a very businesslike way.” On the contrary, one of her listeners pointed out, she found a market for a service and gathered the resources to go into the business of serving that market. Her work differed from other business plans only in that it never envisioned a profit. It viewed the women and children as worthy of investment because of their humanity, not their cash value to the labor force, which had just declined. This view distinguishes social capital for its investment in people to whom the existing set of social and public resources does not or will not provide needed services.

In another discovery, James Coleman, a leading U.S. sociologist, used social capital to explain the family origins of the success of students in high school. Stability, assistance with homework, parental education, and parent-teacher cooperation were all forms of social capital in his assessment and gave some children more chance of school success than others. Later, in an effort to apply his field of sociology to economics, he related social capital to three other forms of capital: financial, physical, and human. Financial capital is money. Physical capital is tools, machinery, and other productive equipment. Human capital is people in the production process. Social capital is the relationship among persons involved in the production process. Human capital resides in people; social capital resides in the relations among them.

These four forms of capital are related to each other, most obviously in a business organization created by owners of financial capital for their profit. Entrepreneurs turn financial capital into physical capital by acquiring tools and buildings, into human capital by recruiting or training people with the knowledge and skills required in production, and into social capital by investing in organizational culture—the design of obligations and expectations, responsibility and authority, and norms and sanctions among the people within the organization in order to achieve efficiency.

Other discoveries of social capital relate it to socioeconomic differences rather than the inner

The Origins of Social Capital

In 1916, Lyda J. Hanifan, state supervisor of rural schools in West Virginia, first used the term social capital in an article titled "The Rural School Community Center." Below is an excerpt from the article that explains his usage of the term.

In the use of the phrase social capital I make no reference to the usual acceptance of the term *capital*, except in a figurative sense. I do not refer to real estate, or to personal property or to cold cash, but rather to that in life which tends to make these tangible substances count for most of the daily lives of a people, namely, goodwill, fellowship, mutual sympathy and social intercourse among a group of individuals and families who make up a social unit, the rural community, whose logical center is the school. In community building as in business organization and expansion there must be an accumulation of capital before constructive work can be done. In building up a large business enterprise of modern proportions, there must first be an accumulation of capital from a large number of individuals. When the financial resources of these several individuals have been brought together under effective organization and skillful management, they take the form of a business corporation whose purpose is to produce an article of consumption—steel, copper, bread, clothing—or to provide personal conveniences—transportation, electricity, thoroughfares. The people benefit by having such products and conveniences available for their daily needs, while the capitalists benefit from the profits reserved to themselves as compensation for their services to society.

Now, we may easily pass from the business corporation

over to the social corporation, the community, and find many points of similarity. The individual is helpless socially, if left entirely to himself. Even the association of the members of one's own family fails to satisfy that desire which every normal individual has of being with his fellows, of being a part of a larger group than the family. If he may come into contact with his neighbor, and they with other neighbors, there will be an accumulation of social capital, which may immediately satisfy his social needs and which may bear a social potentiality sufficient to the substantial improvement of living conditions in the whole community. The community as a whole will benefit by the cooperation of all its parts, while the individual will find in his associations the advantages of the help, the sympathy, and the fellowship of his neighbors. First, then, there must be an accumulation of community social capital. Such accumulation may be effected by means of public entertainments, "sociables," picnics and a variety of other community gatherings. When the people of a given community have become acquainted with one another and have formed a habit of coming together upon occasions for entertainment, social intercourse and personal enjoyment, that is, when sufficient social capital has been accumulated, then by skillful leadership this social capital may easily be directed towards the general improvement of the community well-being.

workings of for-profit corporations. Glenn Loury, a U.S. social scientist, stressed that civic associations, such as churches and labor unions, may produce and reproduce the socioeconomic class structure. Pierre Bourdieu, a French sociologist, develops this notion further. He explains that people have different amounts of social capital depending on the actual or potential wealth, the size of the networks to which they are linked, and the amount of economic and cultural capital the members of that network have. Social capital is never independent of the other forms of capital, according to these discoveries.

The first discovery of social capital substantially precedes these others. The first mention of the term occurs in the writing of Lyda J. Hanifan, state super-

visor of rural schools in West Virginia. Writing in 1916, Hanifan urged community involvement to improve rural schools. He spoke of social capital as "good will, fellowship, sympathy, and social intercourse" that may come from contact with neighbors and networks of neighbors. Social capital also may become "a social potentiality sufficient to the substantial improvement of living conditions in the whole community" (Hanifan, as cited in Putnam 2000, 19). Hanifan focused on the manner in which one community "actually developed social capital and then used this capital in the improvement of its recreational, intellectual, moral, and economic conditions" (Hanifan, as cited in Putnam 2000, 445–446).

Hanifan's early discovery suggested many ele-

ments of the later discussion of social capital, including confusion over the term. He described social capital as characteristics of people but related it to the conditions of the whole neighborhood. Presently, some development economists talk of the living conditions in the whole community as “social capital overhead.” This notion begins to suggest some of the confusion in the discussions of social capital: Do improvements in the community come from the characteristics of the people who live there, or do the characteristics of people come from the community in which they live? To confuse matters further, Hanifan was writing about events in the coal mining region of West Virginia at the time of great labor unrest but did not mention it. This presents the possibility that people acquired “good will, fellowship, sympathy, and social intercourse” in pitched battles to improve their working conditions and in time the social capital overhead that employers were not providing. To reduce this confusion here, the term *social capital* is used to encompass moral resources, the characteristics of people and individual behavior, moral and collective goods, and the mutual exchange among them. Hanifan’s silence on the “coal wars” of the area is an indication of the political nature of social capital that many social scientists, including Putnam, avoid.

The discoveries of social capital provide theories about the moral resources with which people relate to each other (fellowship, sympathy, communication, empathy, shared norms of responsibility and authority, trust) and the production of moral goods—security, truth, justice, honest government, and so forth—and collective goods—such as schools, environmental quality, social services, efficient productivity, and other goods and services that no one can have or produce without sharing.

PREMISES OF SOCIAL CAPITAL

Theories of social capital have several premises that bear upon the human condition. The first of these is the premise that people do not and should not work exclusively for their own advantage and profit. The second is that people make real, although non-monetary, gains in the pursuit of moral and collective goods. The founders of the domestic violence

shelter in Swansea, for example, did not profit from their work in a narrow monetary sense. People know also from everyday experience that people spend countless hours in actions that are not instrumental to their monetary benefit. An individual may paint, master an intricate ice-skating jump, or climb the face of a vertical cliff without the intention of producing anything of monetary value. In the narrow focus of economic, instrumental activity, this effort amounts to unproductive time. However, this effort produces vast amounts of moral resources such as aesthetic appreciation, patience, discipline, and mutual dependence. Moral resources—or what have been called the “social norms” and other features of an organization with which people relate to each other—along with moral and collective goods make up the twin pillars of social capital.

The third premise of social capital theories holds that people use their moral resources to pursue moral and collective goods. This pursuit also makes no sense in terms of individual and market capital. Actions to achieve moral goods have uncertain outcomes. People can never be sure, for example, that their efforts to attain justice will succeed. Market capital entrepreneurs also take risks. That is what entitles them to large rewards. Social capital entrepreneurs, however, take risks for moral goods—truth, beauty, justice, liberty, community, friendship, love, or salvation—that they cannot possibly enjoy privately. Making an effort to produce something that is not a certain outcome and that if attained must be shared, even with those who made no effort, violates the narrow norms of individual calculation for financial and physical capital: the predominant assumptions of market economics.

Why then do people develop moral resources and use them in the pursuit of moral and collective goods? There is rich satisfaction in the pursuit of moral and collective goods. For example, the volunteers who worked to gain a majority vote on the referendum for the peace accord in Northern Ireland in 1998 reported feeling more alive during their intense period of activity than at any other time in their lives except for those in the civil rights movement in Northern Ireland in the late 1960s. Participants in intense campaigns on behalf of some moral

or collective good frequently report this euphoria. Student council members “enjoy,” in this sense, a successful school activity because of their part in producing it more than do other students who only participate in it. Part of the intoxicating quality of striving for moral and collective goods comes in the feeling of being a “real person” and of belonging to a group. In economic terms, non-instrumental action represents an investment in individual and group identity. In political and social terms, non-instrumental action may provide a glimmer of solidarity and community, the thick horizontal network that Putnam described that individual action for individual gain can never achieve.

Moral goods also differ from other capital goods because they increase through use and diminish through disuse. Justice increases with use, unlike automobiles, which depreciate with use. Similarly, an increase in the stock of moral goods increases the stock of moral resources used to achieve them, unlike economic goods and natural resources used to produce them. As justice increases, so does civility, unlike the production process of automobiles, which does not increase the resources it uses.

Moral resources—*aesthetic appreciation, discipline, mutual dependence*—resemble moral goods in their contrast with economic resources. *Courtesy*—a moral and not an economic resource—does not occur in finite amounts that may be depleted. In simple terms, permitting another driver to merge into one’s lane does not diminish one’s capacity for courtesy for the day. The efficient system of traffic to keep several lanes of vehicles flowing—a moral and collective good—depends upon individual acts of courtesy—moral resources. Although permitting a driver or drivers to merge before one in one’s lane may delay one’s travel, it assists everyone to move at a slower but reasonable rate. Not only does one’s stock of courtesy remain intact, but also, seeing how moral and collective goods come from moral resources, the latter may actually lead one to increase and improve one’s stock of moral resources. One learns that a modest sacrifice of individual well-being can provide for the benefit of everyone and apply this lesson of the road to other areas of life.

SOCIAL CAPITAL AND LEADERSHIP

The traffic example illustrates the broad consensus of the several theories and discoveries of social capital around Putnam’s description of it as the “features of social organization, such as trust, norms, and networks that can improve the efficiency of society by facilitating coordinated actions” (Putnam 1993, 167). In addition, there seems to be consensus that in daily interactions—structured by family, groups, schools, workplaces, civil society, and civic associations—people learn trust, social norms, and effective networks for public action. Social capital, according to its theories, underwrites all transactions, private and social as well as economic and political. It is not surprising then that social capital will also play a large role in leadership as a human transaction.

Indeed, theories of social capital intersect with theories of leadership at several places. Most explicitly, Hanifan explained that “skillful leadership” provides the means of transferring social capital into community improvement or realizing social capital’s “potentiality” (Hanifan 1916, 131). By narrow rational and economic calculation, leadership, just as social capital, makes little sense. Both take an investment of time, energy, and other resources in risky efforts to achieve uncertain goals, the benefits of which accrue to others disproportionately to their effort. Only in the intoxicating quality of using moral resources to strive for moral and collective goods and in the feeling that being a “real person” means belonging to and taking responsibility for a group does leadership make sense. These qualities also make sense of “followership” and explain the bond of leaders and followers in the features of social organization such as trust and norms of behavior that instill hope that coordinated and collective action can improve a state, society, organization, or other group.

The stock of moral resources of leaders and followers provides further understanding of specific theories of leadership. Innovative narratives of moral values and collective goods, in the framework of developmental psychologist Howard Gardner, trade on the stock of moral resources—such as trust, loyalty, courtesy, honesty, and other norms—in the minds and hearts of audiences and may increase that

stock. The nature of adaptive work in the theory of leadership scholar Ronald Heifetz is also a deficit of social capital that can be reduced only by an investment of moral resources to increase moral or collective goods. Customer satisfaction, no less than justice, cannot be produced exclusively or primarily by instrumental means; striving is required to satisfy a customer or to be just. Striving for moral and collective goods requires moral, not instrumental, resources. Adaptive work reminds people that actions are aligned with values when they are understood, like moral resources, to be the expression of all or some part of the values. Social capital also relates clearly with the servant leadership theory of Robert Greenleaf, the author of the landmark study of the same name. His theory calls for people within social institutions, including business, to take responsibility for their values. The servant leader invests in the human resources of a group or enterprise—Greenleaf spent his career in human resource development—but also in the bonds among the people of a group and enterprise and in the bond of that group and enterprise with its public purpose. Greenleaf challenges leaders to be stewards of the social capital of organizations, which can be preserved only by being renewed and increased.

A final intersection of social capital and leadership theories is the several leadership studies that list the characteristics and habits of effective people and leaders. Viewed through the lens of social capital, these studies are depositories of moral resources, and the items they list, like moral resources, increase and improve upon their use. Independence and interdependence are not things that people can “own.” People attain them by their pursuit of them and begin to lose them when they stop their pursuit. People also attain them more surely when they pursue them for themselves rather than as instruments to individual gain.

Social capital theories provide a path for the improved understanding and practice of leadership as well as intersections with its theories. James MacGregor Burns, author of the landmark study *Leadership*, for example, distinguishes between modal values, or what we call moral resources, and end values, moral goods. If people relate these values as moral resources and moral goods, they have a continuum

rather than categories. Similarly, transactional leadership, which depends heavily on modal values or moral resources, becomes better integrated with transforming leadership for end values or moral and collective goods. Indeed, Burns understands the fusion of modal and end values over time in personal development. “Typical modal values, such as honesty, responsibility, courage, and simple fairness, in the sequence of moral stages [of development] take on increasingly the qualities of more broadly and socially defined morality. . . . *At the highest level* modal values . . . merge with the end-values of justice, equity, and human rights” (Burns 1978, 429–430). Social capital relates modal and end values, moral resources and moral goods in actions of people of all ages. Moreover, the development of modal values into end values within a person requires the continued practice of the first for the second. In the connection of moral resources and moral and collective goods, people no longer have a distinction between means and ends, modal and end values, but rather a continuum; as the Indian nationalist Mohandas Gandhi suggested, people’s means are their ends in the making.

It would be an error to assume that moral resources and moral and collective goods go hand in hand with transforming leadership for increased democratic practice and reduced socioeconomic inequalities. Some theories of social capital explain that it may preserve and increase class distinctions and inequalities. Indeed, transforming leadership for increased democracy may have to start with transforming some moral resources and the immoral and collective goods they support. For example, Gandhi had to draw on the practice and goal of *satyagraha* (forceful love and truth) to transform the oppressive colonial social capital of British imperialism in South Africa and India.

Similarly, it would be shortsighted to think that social capital applies to only grand efforts of social and political leadership. Social capital theories help people understand instrumental leadership, that is, leadership that uses social capital for its own profit. In particular, Bernard Bass, the very distinguished scholar of leadership and management, has adapted Burns’s dramatic notions of transforming leadership

to the for-profit organizational setting. In Bass's work, leaders may foster performance beyond expected performance—an instrumental end for productivity and profit—but only by adopting moral resources that imply a broader focus on the well-being of employees and not just their productivity. Bass's associates summarize years of work and research with their observation that combines an instrumental goal with moral resources: "Certain leaders foster performance beyond expected standards by developing an emotional attachment with followers and other leaders, which is tied to a common cause, which contributes to the 'greater good' or larger collective. . . . [This] involves a unique bonding among leaders and followers—emotional attachment, respect, and trust form the basis of these approaches" (Avolio & Yammarino 2002, xvii). Without naming it, Bass and his associates explain the nature and value of the social capital that Coleman took pains to distinguish from other forms of capital.

The bottom line seems to be that leadership requires that people look beyond the bottom line. When they do, they see social capital or networks of engagement, the investment of moral resources for moral and collective goods in varying forms and amounts, and the return on those investments in the form of increased moral resources.

SOCIAL DILEMMAS

Many of the world’s most pressing environmental, natural resource, and public goods problems are social dilemmas—situations where the long-term benefit of the collective (for instance, society, an organization, or a team) conflicts with the short-term benefit of the individual. For example, it is very nice to huddle in front of a roaring log fire on a cold winter night—there is a clear benefit for the individual. However, if everyone did this every single winter night every year in a very large high-density city like London or Paris, then the quality of the air would be appalling and everyone would suffer. Another example—there is a clear short-term benefit for an individual to avoid paying television license fees in the UK or making a contribution to the Public Broadcasting System in the United States. But if everyone avoided paying, then everyone would suffer—no commercial-free radio or television. There are thousands of other examples to do with overfishing, tree-clearing, automobile pollution, traffic congestion, and so forth.

Social dilemmas are notoriously difficult to resolve, because people are basically self-oriented, or selfish, and have short-term goals. One of the most common ways to resolve a dilemma is to have an individual or a group manage the resource and regulate people’s access or contribution to it and use of it. These structural solutions require leadership. This entry focuses on the ways in which leadership is used to resolve social dilemmas.

DEFINING SOCIAL DILEMMAS

Social dilemmas are situations in which the short-term benefit of the individual is, if pursued by all

individuals, in conflict with the long-term benefit of the group or collective. Perhaps the best illustration of a social dilemma is “the tragedy of the commons,” which gets its name from the common pasture that English towns used to have. People were free to graze their cattle on this land, and if everyone used it in moderation it would regenerate and continually benefit them all. Imagine, however, one hundred farmers surrounding a common that could support only one hundred cows. If each farmer grazed one cow, the common would be maximally utilized and minimally taxed. One farmer, however, might reason that if he or she grazed an additional cow, his or her output would be doubled, minus a very small cost due to overgrazing—a cost borne equally by all hundred farmers. So this farmer adds a second cow. If all one hundred farmers reasoned in this way they would rapidly destroy the common, thus producing the tragedy of the commons.

The commons dilemma is an example of a *replenishable resource dilemma*. The commons is a renewable resource that will continually support many people provided that all people show restraint in harvesting the resource. Many of the world’s most pressing environmental and conservation problems are replenishable resource dilemmas—for example, rain forests and the world’s population of ocean fish are renewable resources only if they are harvested appropriately.

Another type of social dilemma is a *public goods dilemma*. Public goods are provided for everyone or no one—for example, public health, national parks, clean air, national road networks, public radio, and public television. Because public goods are available to all, people are tempted to use them without contributing to their maintenance. There is a “free-rider effect” in which people self-interestedly use a resource without taking care of it. An example of a public goods dilemma is tax evasion—taxation pays for roads, health, social security, and other goods that all people use. People are in favor of these goods but still try to avoid paying for them via taxes. Another example is national parks—most people are strongly in favor of national parks and derive great pleasure from visiting them, and yet many people try to avoid paying for them through taxes or entry fees.

Self-Interest and the Collective Good

Reflecting on the commons dilemma, Garrett Hardin observed pessimistically: “Ruin is the destination to which all men rush, each pursuing his own best interest in a society that believes in the freedom of the commons. Freedom in a commons brings ruin to all” (1968, 162). Experimental research on social dilemmas finds that when self-interest is pitted against the collective good, the usual outcome is competition among people and resource destruction—people find it very difficult to escape the trap of a social dilemma.

One reason why this happens is that people generally believe that others will pursue their own self-interest; therefore, people do not trust others to sacrifice immediate self-gain for long-term collective good. People also have a strong belief in equity and reciprocity (if someone treats you nicely, then you should do the same back; if someone is selfish, then you should also be selfish), which causes them to reciprocate the actions of others. Together, distrust and reciprocity readily produce social dilemmas. If you assume that others will behave selfishly, there is little reason for you not to do so also—if you know that others are free-riding, you certainly do not want to be taken for a sucker.

Social dilemmas seem to rest on people’s basic concern in life to look after themselves and people’s basic lack of trust that other people will put the social good before their own selfish interest.

RESOLVING SOCIAL DILEMMAS

Because social dilemmas can have disastrous consequences (for example, environmental destruction, famine, or the collapse of public goods), the question of how to resolve such dilemmas is probably one of humanity’s most significant challenges. Research indicates that dilemmas are very difficult to resolve, because it is difficult to build sufficient long-term trust among people to promote collective restraint and positive social behavior. Even appeals to basic human norms that promote altruistic behavior are surprisingly ineffective. There are, however, two general ways to combat social dilemmas: social identity and structural solutions.

Social Identity

Although people may generally be self-interested or selfish in their behavior, what would happen if “self” could be extended to include others? The answer is that self-interest becomes group interest and you have a situation where individual people trust one another and behave in ways that serve the collective good of the group. This often happens in families, where members of the family have an enduring sense of commitment to and trust in the family group, which allows them to behave in ways that benefit the family as a whole even though they themselves may suffer personal losses.

According to the *social identity approach* in social psychology, which is a general theory of group processes and the collective self-concept (self as “we” not “I”), this state of affairs arises, psychologically, when people categorize themselves as members of a social group and identify strongly with that group. Self-categorization and social identification, as subjectively experienced, produce a web of positive regard and trust within a group, as well as common goals and a common will to pursue the group’s goals. Identification facilitates communication that develops conserving norms, encourages adherence to those norms, encourages perceptions of distributive and procedural justice, and makes people feel that their group-serving actions really do have an effect.

Therefore, if a particular resource is accessed by only one group, then as increasing numbers of people identify with the group, people will behave increasingly in ways that conserve the resource, thus avoiding or resolving a social dilemma. For example, if a single group with a strong sense of common identity and group membership relied on a particular fishery, then overfishing would be extremely unlikely—the group would harvest the resource responsibly so that it would endure and continue to benefit the group as a whole. Where people identify very strongly with a group that accesses a shared resource, those people act in ways that benefit the group as a whole rather than themselves as separate from the group. It is as if a large number of individuals (defining themselves as “I”) competing for

access have been transformed into a single person (defining themselves as “we”) who carefully tends the resource. Indeed, privatization of a public good, which transforms “we” to “I,” can increase selfish non-conserving behaviors, precisely because it inhibits these social identity processes.

This rosy picture, however, has a dark side. Social identity processes transform self-interest (“I”) into group interest (“we”) and thus promote not only trust among people within the group (ingroup trust), but distrust and hostility between groups (“us” vs. “them”). Intergroup behavior is often more fiercely distrustful and competitive than interpersonal behavior. So if two groups, rather than a large number of isolated individuals, have access to a limited resource, then we are left with a social dilemma that can be immeasurably worse and will destroy the resource very quickly. “I” versus “you” is transformed into “us” versus “them.” War can often be the ultimate consequence of this type of dilemma—groups actually fight over access to the resource (which can be oil, land, food, wealth, and so on).

Structural Solutions

Structural solutions cause the dilemma to disappear. They include a range of measures, such as limiting the number of people accessing the resource (for instance, via permits), limiting the amount of the resource that people can take (for instance, via quotas), facilitating free communication among those accessing the resource, shifting the payoff to favor cooperation over competition, and handing over management of the resource to an individual (a leader) or a single group.

The problem with structural solutions is that they require an enlightened and powerful authority to draw up measures, implement those measures, manage the bureaucracy, and police violations. This can be very difficult to bring about. A case in point is the inability, in the face of global catastrophe, for the world’s nations to put a structural solution in place to limit carbon emissions and halt global warming. There has been the Rio summit, the Kyoto protocol, and in 2000 the meeting in The Hague, and still selfishness prevails and the social dilemma persists,

capped by the United States' withdrawal from the process in early 2001, which set up an intergroup orientation over the issue of global warming between the United States and the rest of the world.

LEADERSHIP AND THE RESOLUTION OF SOCIAL DILEMMAS

Leadership plays a key role in structural solutions to dilemmas. People typically do not like to have a leader manage a resource, although there are individual differences revolving on people's social value orientations. People with a more pro-social orientation than a pro-self orientation generally show a greater preference for appointing a leader.

Groups as a whole do, however, sometimes choose to have a leader manage a resource. This is most likely to occur when the group, left to its own devices, has clearly failed to manage the resource properly, or when the group has allocated the resource unfairly so that there are large differences in outcomes among group members. One thing that a leader can do is facilitate group identification among people who access a collective resource, and thus help make those people act responsibly toward the resource. Leadership can build a sense of common identity, shared fate, interindividual trust, and custodianship of the resource.

In this respect, the effect of leadership on the resolution of social dilemmas can only be properly understood by considering leadership in the context of the extent to which the leader and/or followers identify with the group. A number of studies of leadership in social dilemmas, mainly conducted by Mark van Vugt and David de Cremer and their colleagues, have done this by adopting a social identity model of leadership. The key question is what kind of leadership is most effective in building identity-related trust, and thus in abolishing the dilemma.

Research Findings

In one study, the strength of identification with a small group was varied, and preferences for different types of leaders, including an ingroup versus an outgroup leader were measured. Participants preferred ingroup

(that is, representative of the group) over outgroup (that is, non-representative) leaders. This differential preference was more pronounced among participants who identified strongly with the group than among participants who did not identify strongly.

Other experiments on how leadership shapes individual contributions in small groups facing public goods dilemmas have shown that leaders who express group commitment, behave in a group-oriented manner, engage in self-sacrificing behavior, and show fairness toward group members are better at raising contributions by the group to the public good. But this happens only when social identity is psychologically salient and participants identify strongly with the group. Furthermore, highly committed leaders are more influential when social identity is salient, whereas leaders with intrinsic leadership skills are more influential when social identity is not salient and participants are focused more on their personal identity. This research suggests that the effectiveness of leadership as a solution to social dilemmas depends upon the fit between the leader's characteristics and the expectations that members have of the leader's behavior.

Contemporary leadership research places a great deal of emphasis on the way that charismatic leaders are able to motivate followers to work for collective goals that transcend self-interest and transform organizations. Presumably, charismatic leaders will be particularly effective at resolving social dilemmas, because they can effectively transform self-oriented behavior into group behavior. Research on decision makers in public goods dilemmas has shown that the role of charismatic leadership is complex. It has been shown that, in dilemmas, self-sacrificing leaders are perceived as more charismatic than self-benefiting leaders, and the former are better able than the latter to motivate decision-makers to cooperate. The motivation effect is more pronounced among people who are oriented toward maximizing their own self-interest (that is, pro-self), than among people who are oriented toward maximizing joint or collective outcomes (that is, pro-social). Charismatic leaders, therefore, seem to be particularly useful in motivating people who are more selfish to be less selfish and more willing to serve the group.

Overall, research on leadership and social dilemmas shows that leaders are very effective at resolving social dilemmas under certain circumstances. People with a generally pro-social orientation are relatively open to being led when their group is faced with a social dilemma, particularly if they identify strongly with the group. Typically, leader charisma is not critical, but it is important that the leader can be viewed as a representative member of the group. People with a generally pro-self orientation are less open to leadership unless they identify strongly with the group and view the leader's behaviors and qualities as serving the group and representative of the group. Charismatic leaders are particularly good at helping pro-self members behave in pro-social and group-serving ways.

WIDER IMPLICATIONS OF RESEARCH ON LEADERSHIP IN SOCIAL DILEMMAS

One implication of this research on leadership in social dilemmas is that leaders who are not seen to represent the group or who do not behave in ways that are considered self-sacrificial and group-serving will not be able to build sufficient trust and a strong enough sense of common identity to transform self-interest into collective interest. They are not very effective in transforming selfish motives into pro-social motives. Such leaders will lack legitimacy and will have only limited success; their authority will rest mainly on legislation and punishment that shapes merely compliant behavior. However, compliance is a relatively inefficient solution to a social dilemma, because people's behavior requires constant and diligent policing.

This idea touches on broader issues relating to civil society. Society requires people to sacrifice a degree of individual freedom for the good of the collective (taxation is an excellent example)—the very idea of a society is a social dilemma. Societal leadership is therefore, in some senses, a structural solution to a social dilemma, a structural solution that integrates leadership with societal identity. One could hazard the suggestion that leadership will be more effective, in the long run, in solving the social dilemma through the transformation of human

motives if leadership is located within a participative and perhaps democratic social order than residing in an oligarchic social order based on power.

FUTURE OUTLOOK

The idea that leadership may help resolve social dilemmas is a relatively old one. However, the contemporary analysis of leadership as a structural solution, which conceptualizes leadership in the context of group identification processes, is relatively new and provides a more textured analysis of the contexts and types of leadership that are effective. This approach certainly holds great promise, and it has wide and socially relevant implications that may even contribute to an understanding of effective socio-political structures.

SOCIAL IDENTITY THEORY

Social identity theory, more accurately the social identity perspective or approach, is a social psychological theory of the self-concept, group membership, group behavior, and intergroup relations. Originating in the work of Henri Tajfel in the late 1960s and collaboration with John Turner in the early to mid-1970s, social identity theory mainly focused on intergroup issues such as conflict and discrimination. However, during the past ten years, it has developed to encompass the entire range of group and intergroup phenomena and has become a dominant theoretical perspective in social psychology on people in groups. This development has, during the past five or six years, generated a social identity model of leadership.

The significance of the social identity model of leadership is threefold. It is a new model (1) that integrates what is known in social psychology about social cognition, self-conception, and group

and intergroup processes; (2) that approaches leadership as a group phenomenon; and (3) that marks a renewed interest in mainstream social psychology in the study of leadership (since the mid-1970s, social psychology has paid little research attention to leadership).

THE SOCIAL IDENTITY APPROACH

Personal and Social Identity

People can conceive of themselves in many different ways, among which the most important distinction is between one's personal identity and one's social identity. Personal identity is a definition and evaluation of oneself in terms of idiosyncratic personal attributes (e.g., generous, honest) and/or one's personal relationships (e.g., X's friend, Y's lover). Social identity is a definition and evaluation of oneself in terms of the shared defining attributes of specific groups to which one belongs (e.g., being male, a nurse, African-American, Hindu). Personal identity is tied to the personal self, whereas social identity is tied to the collective self.

Salience

People have many social and personal identities that vary in how generally important they are and how frequently they are used—how chronically accessible they are to one's self-concept. The interplay of chronic self-conceptual accessibility, situational cues, and deliberate personal or group goals primes particular personal or social identities as a way to categorize oneself and other people. These social categorizations are then automatically used to make sense of the situation. If the social categorization seems to fit the ways that people differ in the context and to make sense of why people are behaving in the way they are, then that particular social categorization becomes psychologically salient. When a social categorization, self-conception, or identity is psychologically salient, it becomes real in the sense that it is one's subjective reality in that context. It is how one sees oneself and others, and it governs the way one perceives, thinks, feels, and behaves.

Prototypes

Social identity theory focuses on social identity. It argues that social identity is associated with group and intergroup behaviors (e.g., conformity, stereotyping, normative behavior, cohesion, intergroup discrimination) that are quite different from the interpersonal and personal behaviors associated with personal identity. People cognitively represent groups in terms of prototypes—these are complex (fuzzy) sets of interrelated attributes that simultaneously capture similarities within each group and differences between two groups. If one says “Norwegian,” then what comes immediately to mind is a prototype of that national group. Prototypes are mental constructs that maximize entitativity; that is, they enhance perceived similarity within each group and differences between each group in order to make the groups seem to be entities that are as clear and distinct as possible. The prototype of a group to which one belongs, an in-group, can therefore change as a function of which out-group one is comparing one’s group with. In this way prototypes are context-specific rather than transcendentally invariant.

SELF-CATEGORIZATION

Self-Categorization

When one categorizes another person, rather than seeing that person as an idiosyncratic individual, one sees them through the lens of the prototype—they become *depersonalized*. Prototype-based perception of out-group members is more commonly called “stereotyping”—one views “them” as being similar to one another and all having out-group attributes. When one categorizes oneself, exactly the same depersonalization process applies to self—one views oneself in terms of the attributes of the in-group (self-stereotyping), and, because prototypes also describe group-appropriate ways to feel and behave, one feels and behaves normatively. In this way self-categorization also produces, within a group, conformity and patterns of in-group liking, trust, and solidarity.

Motivation

Social identity and self-categorization processes are psychologically motivated by uncertainty reduction and self-enhancement. People strive for a sense of relative certainty about the social world they live in and about their place within it—they like to know who they are and how to behave and who others are and how they might behave. Social categorization ties self-definition, behavior, and perception to prescriptive and descriptive prototypes—and thus satisfies uncertainty reduction. People also strive to feel good about themselves. Prototypes are evaluative—they evaluate groups and thus those people who belong to those groups. Therefore, people strive to belong to groups that have favorable prototypes and thus have relatively higher status.

SOCIAL IDENTITY AND LEADERSHIP

From a social identity perspective, leadership is a relational process that largely plays out in the context of group membership. Just as other group processes are affected by the degree to which group membership is psychologically salient, so, too, is leadership.

Prototypicality and Influence

The starting point for the social identity analysis of leadership is the fact that salient groups are internally structured, with some members being more prototypical than others—there is a degree of consensus about who is most prototypical and who is least prototypical. In addition, where group membership is salient, group members pay close attention to prototypicality because it is the prototype that defines one’s identity—prototypical members stand out against the background of the rest of the group. In salient groups, people conform to the prototype, and thus those members who happen to be most prototypical are consensually perceived to be the focus of normative conduct and thus to have disproportionate influence over the group as a whole. Merely being prototypical lends one the appearance of having influence—occupying a leadership role.

Social Attraction, Popularity, and Status

In salient groups, evaluations of and feelings for fellow members are more positive than for less prototypical members. One way to look at this is that in salient groups, one's liking for other people is governed by how prototypical they are rather than by personal preferences, friendships, and enmities—liking becomes depersonalized social attraction. Furthermore, because in salient groups there is usually agreement over prototypicality, prototypical members are liked by all—they are consensually liked (popular).

Social attraction has a clear consequence. Social psychology research has shown that liking increases compliance with suggestions and requests—if someone likes a person, that person is more likely to be able to persuade the other person or simply have the other person assent to suggestions or ideas. In a salient group, then, prototypical members are more likely than non-prototypical members to be able to persuade the group or to have the group assent to their suggestions or ideas. Put another way, the same innovative idea proposed by a prototypical member and by a marginal member will be met with nods and general assent in the former case but with resistance and perhaps ridicule in the latter case. Prototypical members are thus able to be actively influential and innovative.

Prototype-based social attraction is associated with an intragroup status hierarchy in which one member is consensually more highly valued, better liked, more influential, and more innovative than the rest of the group. One member occupies a leadership role.

Attribution and Charisma

Research in social psychology has shown that people need to gain an understanding of the causes of events around them and in particular the causes of people's behavior. People gain this understanding through a process of causal attribution in which they have a tendency to overlook situational factors that might cause someone to behave in a particular way and instead emphasize invariant properties of the person. This fundamental attribution error (or correspondence bias) is accentuated where the person stands

out against the background of other people or the situation. Where the person stands out, people have a strong tendency to map the person's behavior onto his or her underlying personality.

In salient groups, highly prototypical members are figural (stand out) in precisely this way, and therefore people are likely to consider their behavior to reflect an underlying disposition or personality rather than situational constraints. For highly prototypical members in these situations, the behavior that is being attributed includes being influential, persuasive, innovative, consensually liked, and having higher status. These are all components of charisma. Thus, prototypicality and social attraction processes work in conjunction to ensure that attribution processes construct a charismatic personality for highly prototypical members. Charisma is often an important component of leadership, and indeed theories of charismatic leadership are currently popular in the organizational and management literature on leadership. In contrast to these literatures, which treat charisma as a personality correlate of effective leadership, social identity theory treats charisma as an emergent property of social identity processes in salient groups.

Leader Behavior

Generally speaking, the more prototypical of a group a person is, the more central and important the group is to that person's self-concept and the more strongly that person identifies with the group. More prototypical members actually do have a greater investment in the group and thus are more likely to behave in group-serving ways. They embody group norms more precisely, and they are more likely to favor the in-group over out-groups, to treat in-group members fairly, and generally to act in ways that promote the in-group. These behaviors confirm their prototypicality and membership credentials and cause group members to trust them to act in the best interest of the group even when they may not appear to do so.

Herein lies a paradox. As long as high prototypicality and core membership are not in question, people are allowed a greater latitude of behaviors. Under these conditions prototypical members can, paradoxically, behave in ways that do not conform tightly to

the group prototype. Thus, they can experiment with new directions for the group to go in—they can be innovative and transformational. This analysis based on social identity processes may help explain what Edwin Hollander, in the 1950s, called “idiosyncrasy credit”—the way in which organizational leaders who had climbed up the organizational hierarchy by conforming tightly to organizational norms could accumulate credits to be more idiosyncratic when they reached the top.

Leaders who are highly prototypical members with trusted membership credentials are in a strong position to guide the destiny of the group and to maintain their leadership position. They can persuade the group that they are more prototypical than they really are, and they can redefine what the group stands for, its prototype, in order to make themselves appear a better match to the prototype. Prototype management strategies can include direct rhetoric, identification and marginalization of in-group deviants, or invocation of different out-group comparison groups. All these strategies directly influence perceptions of prototypicality.

Low-Salience Groups

Social identity processes impact leadership as a function of increasing salience of group membership. Where salience is low, the group is more of a loose aggregate of people who don't consider the group important to their self-concept and who don't gain much of a sense of who they are from the group. Under these circumstances prototypicality is an overall less important consideration—being prototypical is unlikely to contribute to leadership effectiveness. Other factors, such as having good leadership skills (matching general or task-specific leader schema [mental codifications of experience]), will be more impactful.

Canny leaders might be expected to have an intuitive understanding of how salience may influence leadership effectiveness and may adapt their behavior accordingly. If the group were cohesive and self-conceptually important, a person would enhance leadership effectiveness by behaving in ways that make one appear prototypical. If the group were a

loose aggregate, a person would more effectively be seen to match general or task-specific leadership schema. Correspondingly, if one were already highly prototypical, then one would more usefully make the group more cohesive and self-conceptually important, whereas if one were not very prototypical, then one would more usefully undermine the group's cohesiveness and self-conceptual importance.

SOCIAL IDENTITY RESEARCH ON LEADERSHIP

The social psychology literature abounds in anecdotal evidence for the social identity model of leadership. For example, research on gangs in the 1950s by Muzafer and Carolyn Sherif showed that gang leaders whose membership credentials were unquestioned were allowed greater latitude of behavior than were followers or more marginal leaders.

Direct social identity research on leadership has, according to recent reviews by Michael Hogg and Daan van Knippenberg, also supported much of the theory. A number of laboratory experiments have set up conditions in which high-salience or low-salience small groups anticipate a group discussion under the leadership of one group member who is randomly appointed by the experimenters. Participants are given information about the leader that makes him or her appear highly prototypical or not and a good match to general leadership schema or not. This research shows that schema-congruent leaders are anticipated to be effective but that under high salience prototypicality becomes important—highly prototypical leaders are much more effective than less prototypical leaders. This general finding has also been obtained in more natural settings, for example, with “outward bound” groups.

Other variants produce the same effect, for example, when prototypicality is manipulated by having the group leader as an in-group member (high prototypical) or an out-group member (low prototypical), or when the leader is appointed from within the group (high prototypical) or imposed from outside (low prototypical).

Other studies provide evidence that leaders who are seen to be highly committed to the group or who

appear to treat group members fairly are more effective and that this effect is much more pronounced in groups with which members identify strongly. Other studies show the same effect on leadership for leaders who show group-oriented behaviors such as self-sacrifice for the group and discrimination against out-groups. Overall, when group membership is salient, leaders are more effective if they are prototypical and if they behave in ways that are group oriented and confirm their group commitment.

A final set of studies has confirmed a qualification to the preceding, namely that in salient groups, group-oriented behavior has less influence on leadership for leaders who are well-established, highly prototypical members than for leaders who are more marginal. The latter leaders need to behave in a group-oriented manner to be effective.

Links to Other Leadership Approaches

The social identity model of leadership has implications for other models of leadership. To date, three of these links have been explored.

Leadership Categorization Theory

Since the early 1980s, Robert Lord and his colleagues have developed leader categorization theory. In its original form, this theory of leadership states that people have schemas of effective leaders that vary from being very general to being very specific to a particular task. The relevant schema is activated when a person is categorized as a leader. The schema then generates assumptions about the leader's attributes and behaviors, and if there is a good fit of the person to the schema, then the person is considered an effective leader.

In contrast, the social identity model states, and provides evidence, that although leadership categorization processes do influence leadership effectiveness, their influence diminishes relative to group prototypes when social identity is salient and people identify strongly with a group.

Charismatic and Transformational Leadership

By the mid-1980s, probably the most popular focus of leadership theories in organizational and manage-

ment science was on how charismatic leaders are able to motivate followers to work for collective goals that transcend self-interest and transform organizations. Social identity leadership researchers were troubled that this focus was underemphasizing the group quality of leadership and was leaning too far toward a personality disposition explanation: Regardless of group processes, some people simply are charismatic and thus able to lead effectively. The social identity model recognizes that effective leaders are often viewed as being charismatic and transformational but provides a different analysis of the origins and role of charisma. The social identity model views charisma as an emergent property of social cognitive and social interactive processes that occur in salient groups.

Leader-Member Exchange (LMX) Theory

Another popular leadership theory is the LMX (leader-member exchange) approach. It states that effective leaders need to establish high-quality personalized relationships with individual group members and that such relationships need to be catered to idiosyncrasies of the particular group members. High-quality personalized relationships provide followers with valued resources and thus ensure reciprocation in the form of support for and endorsement of the leader. Social identity leadership researchers argue, and provide evidence, that although personalized leader-member relationships may work in this way in low-salience groups, they are not so effective in high-salience groups. In high-salience groups, depersonalized leader-member relationships in which followers are treated as prototypical group members are more strongly associated with effective leadership.

THE FUTURE

Although the social identity model of leadership rests on a well-established theory of groups—the social identity theory—it is relatively new. As such, it is still evolving conceptually and empirically, and its implications for other models of leadership are still being explored. This is an active research area in contemporary social psychology.

SOCIAL PSYCHOLOGY

Social psychology is the study of how the thoughts, feelings, and behaviors of individuals are influenced by the actual, imagined, or implied presence of others. When applied to leaders and leadership, the idea that social interactions influence people is used to understand (1) how certain individuals emerge as leaders and influence others' thoughts, feelings, and behaviors in a positive way to achieve group goals and (2) how these social interactions influence people's perceptions of certain group members as leaders or as followers.

SOCIAL PSYCHOLOGY'S DEFINITION OF LEADERSHIP

Social psychologists consider leadership to be a special case of social influence involving a complex interaction between the leader, the followers, and the group to which they belong. The social influence process in the domain of leadership is thought to be reciprocal and cooperative such that leaders and followers influence one another and exchange resources with the purpose of attaining collective and personal goals. The resource exchanges between the leader and the members of the group can be transactional in nature, involving expenditure of time, energy, knowledge, and social support, or they can be transformational in nature, resulting in beneficial changes to the group members' motivation, values, beliefs, and needs.

Many social psychologists view leaders and followers as enjoying an exchange relationship. From this view, leaders and followers give each other things of value, both material and psychological. Leaders provide followers with a vision for the

group, security and protection, a means for achieving group goals and a sense of effectiveness, feelings of inclusion, and a sense of self-respect and pride in the group. In return, followers give the leader focus and direction, gratitude and loyalty, commitment and effort toward achieving group goals, cooperation and sacrifice, and respect and obedience. When this relationship becomes imbalanced, either efforts are made by leaders and followers to restore the balance or the leader leaves (or is removed).

Leadership is conceptualized as a positive social process in which all people in the group, whether leaders or followers, benefit from the outcomes of their interactions. Thus, leadership is *not* considered a negative social interaction in which leaders use their influence as a means of coercing, manipulating, or controlling their followers to achieve the leaders' goals with no or little regard to the outcomes that would benefit all members of the group. People often think of dictators as leaders; however, a leader's behaviors and intentions should attempt to reflect the best interests of all members of the group. For example, the German dictator Adolf Hitler is not defined by social psychology as a leader, nor were his actions defined as leadership because he used his power to dominate others, his actions did not reflect concern with the best interest of his people, and he did not equally distribute resources to all segments of German society (e.g., Jews, Gypsies, homosexuals).

SOCIAL PSYCHOLOGICAL APPROACHES TO LEADERSHIP

The modern study of leadership considers two main themes in order to understand how leaders emerge and influence others. The first theme is the social interactions between leaders, followers, and the situation; the second theme is the personality traits of each individual. However, the study of leadership has not always considered these two main themes together. Early social psychological theories of leadership identified a certain set of personality and physical characteristics that set leaders apart from non-leaders. These person or trait theories suggested that the probability of emerging as a group leader is associated with the possession of certain distinguishable

characteristics regardless of the situation. Although this perspective has lost favor over the last fifty years (primarily due to inconsistent findings across research studies), a number of characteristics have indeed been found to slightly or even moderately distinguish leaders from non-leaders. In general leaders tend to be taller, more talkative, older, more intelligent, male—although gender is becoming less a distinguishing characteristic—extroverted, friendly, conscientious, and stable. More recent work has found that leaders also tend to score higher on what many psychologists call “social intelligence”—the ability to empathize and adjust to the needs of a group and to make changes that lead to higher overall group satisfaction.

Later situational theories proposed that the situation in which a particular group finds itself determines the leader. Situational theories argue that the power of circumstance (i.e., the right time, the right place) rather than personality traits creates leaders and followers. For example, many presidential historians have made the argument that Lyndon B. Johnson might have been remembered as one of the best presidents of the twentieth century if not for the social and political turmoil surrounding United States involvement in the Vietnam War. Situational theorists might argue that the power of the situation (i.e., the Vietnam War) ultimately determined Johnson's public perception as an ineffectual leader. On the other hand, the power of the situation can lead to positive perceptions of certain individuals. For example, President George W. Bush's high rating on leadership quality after the terrorist attacks of 11 September 2001 might reflect to a greater extent the situation in which President Bush found himself rather than any personality traits he possessed.

Although one-dimensional approaches such as trait theories or situational theories hold a great deal of intuitive appeal, most modern social scientists ascribe to the U.S. social psychologist Kurt Lewin's two-dimensional conceptualization of behavior as a function of both the person and the environment. An early proponent of such a conceptualization was the psychologist Fred Fiedler. Fiedler developed a contingency theory of leadership in which he argued that there is no ideal leader nor one perfect situation in

which a leader will emerge. Instead, the emergence of a leader depends on an interaction between a person's leadership style and the degree of situational control. Fiedler defined leadership style as a set of observable behaviors that describes how a leader interacts with the other members of the group when pursuing goals. Leadership styles can be either task focused, which describes leaders who minimize socioemotional goals and emphasize goals related to task completion, or relationship focused, which describes leaders who focus on maintaining a positive, supportive environment in which the emotional needs of group members are emphasized. Fiedler defined situational control as the degree to which leaders can direct the group's actions, and he argued that the direction is largely determined by the quality of the relationship between leader and followers, by the quality of understanding with regard to task structure, and by the degree to which the leader has power over positive or negative group outcomes (e.g., rewards or punishments). The result of high control of these factors is a favorable situation. The result of low control of these factors is an unfavorable situation. Fiedler's contingency model predicts that task-focused leaders are most effective in situations that are either highly favorable or highly unfavorable and that relationship-focused leaders will be most effective in situations that fall between these two extremes. Currently, social psychology emphasizes the complex interaction between personality traits and environment in understanding leadership.

SOCIAL COGNITION OF LEADERSHIP

The most recent approach to leadership within social psychology focuses on how individuals conceptualize leaders and on leader prototypes. The underlying assumptions of this social-cognitive approach are that people have intuitive beliefs about what characteristics and behaviors leaders possess and that people will use these beliefs to categorize others as either a leader or a non-leader. Such a categorization process is based on the degree to which an individual's behavior matches these predetermined beliefs or prototypes. For example, if people believe that a leader should be highly extroverted,

friendly, conscientious, and stable, then an individual who possesses these characteristics is more likely to be categorized as a leader than an individual who does not possess, the characteristics or possesses them to a lesser extent. Leader prototypes are thought to be so powerful that the members of a group might even ignore behaviors from the leader that do not match their prototype.

Social psychological researchers argue that such categorization is just the first step in a much more complex interpersonal process. The social identity theory of leadership proposes that leadership is primarily a group process in which members of a group are attracted to, and therefore elect as leader, the group member who most closely matches the perceived characteristics of the group. The process starts with the categorization of oneself and others as in-group or out-group members, then the process continues with one's identification with the characteristics of his or her own group and with the selection of the leader, who is the member who most closely fits group members' perceptions of the group's defining features. This prototypical member is judged to be the most respected, to have high status within the group, and to be the best leader for the group.

Leaders are those who influence others' thoughts, feelings, and behaviors in a positive way to achieve group goals. Some people appear to possess personality traits of an effective leader, but the social psychological approach to leadership focuses more on situational or contextual factors that evoke effective leadership behaviors. A classic example is former New York City Mayor Rudolph Giuliani, who received mixed reviews of his performance as mayor until he masterfully guided the city through the aftermath of the attacks of 11 September 2001. The extreme context (i.e., the terrorist attacks and the chaos that ensued) provided him the context for showcasing his leadership qualities. It is clear that context alone does not create a leader; today most social scientists believe that contextual factors must also be weighed with the individual's social and emotional intelligence, the characteristics of followers, and the leader-follower exchange relationship. The current state of leadership in social psychology reflects a more collaborative approach in which

ideas from diverse areas—ranging from basic experimental social psychology to political science to sociology to applied military research, with different methods and distinct foci (e.g., specific application, basic theory)—are considered with the goal of exchanging ideas that facilitate a better understanding of what leadership is and how it emerges.

SOCIOBIOLOGY OF LEADERSHIP

Are leaders predetermined at birth? Do traits and charisma arise from genes and provide the foundation for leaders? These questions and others indicate a rudimentary understanding of sociobiology—the attempt to connect social behaviors to an underlying biology.

The idea of sociobiology was founded in 1975 by Edward O. Wilson (b. 1929) (Wilson 2000). Sociobiology as Wilson envisioned it began as an extension of his research into the organization of social insects. Sociobiology is defined as “the systematic study of the biological basis of all social behavior” (Wilson 2000, 4). Therefore, the underlying nexus for the basis of social behavior is biologically determined. Genes are enablers (or disenablers). So what is the nature of these genes?

GENETICS

Gregor Mendel (1822–1884) first stated the gene concept as “each organism contains two factors for each trait and that the factors segregate during the formation of gametes so that each gamete contains only one factor from each pair of factors” (Mader 1987, 152)

A gene is a segment of deoxyribonucleic acid, or DNA, the foundational blueprint for the structure and function of an organism. Genes located within longer strands of DNA known as chromosomes are passed from parents to offspring. It is this genetic link of “tens of thousands of genes we inherit from our mothers and fathers” that “constitute our genome” (Campbell & Reece 2002, 234–235). Genes code for the proteins that build all of the anatomical structures. It is these structures, designed by the genes, that provide the physical basis for the behaviors one sees in a sociological setting—the structures do not determine whether the individual will choose to behave in a particular manner; they only enable the action should the individual choose to exercise a behavior. Therefore, social behaviors are only *enabled* by genes.

This enablement does not mean that behaviors are predetermined or that they will be expressed. Enablement, or lack thereof, for the expression of a behavior occurs because of the absence or presence of a gene that creates an anatomical structure that can (or not) produce a given behavior. For example, the tongue is a critical structure for the creation of verbal speech but it is not necessary for language. One can lack a tongue but be quite capable of language through signing or writing. The structures necessary

for the creation of speech include a number of other structures too, including the muscles of the lips, throat, and so on. The structures are collectively created through the activation (or not) of genes. The control of these structures lies in the brain, specifically Broca's area (Marieb 2001, 437). Even Broca's area is determined through the activation of genes. The choice to use all of these structures for the production of speech remains with the individual. The genes do not tell one to speak or what to say; they only enable the production of speech. Most individuals retain control over the choice to speak and what is to be spoken. The genes only enable the production of the speech functionality through the creation of anatomical structures.

A GENETIC BASIS FOR LEADERSHIP

In the sociobiology of leadership there may be the enablement for leadership through genes. The genes of an individual may be arranged in such a way as to offer leadership traits. Whether or not the ability to lead is exercised remains with the individual, undoubtedly influenced heavily through environmental factors. It may be environmental factors that motivate individuals to lead or rule because "they are socially and biologically driven" to do so because "the rewards that come with ultimate power" also "serve as powerful motivators for would-be rulers to do Nature's bidding" (Ludwig 2002, 1). One of the motivating rewards is breeding access. Primate alpha males have "far greater access to females in estrus than any subordinate male" (Ludwig 2002, 10).

Structures like the limbic system and the hypothalamus are "the most ancient parts of the brain, all of which deal with such instinctive responses as fight-or-flight, territoriality, aggression, sex, and survival" (Ludwig 2002, 5) and as a result may offer some insights into the nature of behaviors they enable.

Of course, Wilson's thoughts did not arise in a vacuum. The movement of genes is the basis for natural selection. The most influential idea, natural selection, was proposed by Charles Darwin (1809-1882). Natural selection is the process whereby certain genes gain representation in the following generations superior to that of other genes located at the

same chromosome positions. When new sex cells are manufactured in each generation, the winning genes are pulled apart and reassembled to manufacture new organisms that, on the average, contain a higher proportion of the same genes (Wilson 2000, 3).

Wilson claims the "individual organism counts for almost nothing" (2000, 3). What is important is that "in a Darwinist sense the organism does not live for itself" and "its primary function is not even to reproduce other organisms; it reproduces genes, and it serves as their temporary carrier" (2000, 3).

EXPLAINING SOCIAL BEHAVIOR

The sociologist Émile Durkheim (1858-1917) drew inspiration for evaluating societies in the Darwinist perspective of sociobiology. Society, or the collection of individuals interacting socially, "was the functioning of the social structure" (Garbarino 1977, 40).

One of the behaviors that may be seen in social settings is altruism, a condition of selflessness. Altruism would appear to reduce individual fitness. So why does altruism exist if it reduces fitness in a Darwinian natural selection model? For example, altruism is seen in the selflessness displayed by stinging bees that die upon the execution of a sting, or the selflessness of ants that defend the nest to their death. We occasionally see selflessness among humans that results in the death of the altruistic individual. It would appear that kinship is the deciding factor. Any social individual has genetically determined predisposition for altruistic behavior because

if the genes causing the altruism are shared by two organisms because of common descent, and if the altruistic act by one organism increases the joint contribution of these genes to the next generation, the propensity to altruism will spread through the gene pool. This occurs even though the altruist makes less of a solitary contribution to the gene pool as the price of its altruistic act. (Wilson 2000, 3-4)

This is not the first attempt to compare social interactions similarly to biological interactions. Just as Durkheim founded the sociological tradition of functionalism upon the idea of evaluating society as an analog of an organism, similarly Karl Marx

(1818–1883) embraced the biological analogy for explaining and evaluating society. At Marx's point in time, "the body, as an organic whole" was "easier of study than are the cells of that body" (Feuer 1959, 134). So Marx took to analyzing economic forms at a macro level because "in bourgeois society the commodity form of the product of labor—or the value form of the commodity—is the economic cell form" (Feuer 1959, 134).

Future investigations of sociobiology with a leadership focus are promising. Evaluating and explaining leadership in sociobiological terms will require further investigations. One field that could enrich the sociobiology of leadership is primatology.

At the structural level, "laboratories around the world have over the last decade demonstrated chimpanzees to be genetically closer to us than they are even to gorillas, despite the close physical resemblance between chimpanzees and gorillas" (Wrangham & Peterson 1996, 23). Studies that include DNA hybridization and protein chains in amino acids have revealed that the human-chimp relationship is indeed very close—close enough to perhaps warrant a "revision in the taxonomic scheme" by placing humans and chimpanzees into the family Hominidae, displacing chimps from the family Pongidae (Poirier 1990, 56).

Due to the research of notable scientists such as Jane Goodall (b. 1934) and Frans De Waal (b. 1948), an ethogram, or behavioral repertoire, of chimpanzee behavior exists that includes behaviors such as tool use and conducting warfare. By studying the analogous behaviors demonstrated by non-primates, one may be able to gain more knowledge of human behaviors, specifically leadership. As De Waal stated, "sociobiology represents a giant stride forward; it has forever changed the way biologists think about animal behavior" (1996, 13). Just as a gene that encourages selfish behavior (Dawkins 1989) may exist, a gene that enables leadership may also exist.

Wilson proposed that "sociobiology can eventually be derived from the first principles of population and behavioral biology and developed into a single, mature science" (2000, v–vi). With the maturing of other science fields, such as primatol-

ogy and sociobiology, a synthesis of discovery awaits students of leadership.

SOCIO-EMOTIONAL LEADERSHIP

The construct of the socio-emotional leader is used for conceptualizing and studying leadership behavior in the context of small groups. The underlying interest behind the research is in learning the ways in which leaders gain influence over other group members—in other words, how leaders emerge from previously leaderless groups. The starting point is the assumption that a situation consists of two parts: One part is the task that the group must perform; the other part is the needs and desires of the group members themselves. Within this context, group members themselves help to determine who their leader is. This concept is a significant advance over earlier approaches to the study of leadership, which focused on traits of leaders and styles of leadership, because this concept recognizes that even leaders with strong claims to power must receive their groups' approval in order to be effective.

INTERACTION PROCESS ANALYSIS

In the 1950s, the sociologist Robert F. Bales was one of the first researchers who systematically observed two different forms of leadership in the context of groups through his interaction process analysis (IPA), which became a classic tool for analyzing group interaction. Bales investigated measures of problem-solving and decision-making capability in face-to-face groups. In doing so, he distinguished between

what he called instrumental orientation and socio-emotional orientation. Instrumental, or task, orientation focuses on purpose-oriented actions, while socio-emotional orientation comprises more passive, expressive-integrative statements or evaluations.

Within socio-emotional orientation, reactions to problems are classified as either positive or negative; within a task orientation, reactions to problems are classified as either answering (that is, seeking to provide answers) or asking (that is, requesting help). Among the positive reactions of leaders with a socio-emotional orientation are positive reinforcement, praise for good ideas, acknowledgment of individual concerns, recognition of others' contributions, and intervention to settle disagreements or to maintain or reintroduce a positive atmosphere. Examples of negative socio-emotional reactions include setting rules for mutual respect when necessary, chastising those who violate the rules of respect, defining and enforcing limits on group and individual behavior, and defining and enforcing standards for group tolerance of differences among group members. For task-oriented team leaders, attempted answers include giving information, explaining, summarizing, and making suggestions, while questions include asking for information or for details, or bringing up hypothetical, what-if situations to elicit clarification.

DIVERGENCE THEORY OF LEADERSHIP

In 1955, Robert Bales and socio-psychologist Philip E. Slater concluded on the basis of interaction process analysis that small groups perform different functions. One person takes the role of task leader (i.e., the idea and guidance specialist), and another takes over as the maintenance socio-emotional leader (i.e., the best-liked team member). The task leader employs instrumental leadership to move the group toward its goal while the socio-emotional leader turns his supportive, people-oriented nature toward promoting group cohesion. The task leader's actions cause tensions that can only be relieved by the actions of the socio-emotional leader, who interjects humor, is friendly, complimentary, lowers friction, and generally creates to a positive group climate.

However, too much focus on the socio-emotional side of the balance may hinder the accomplishment of the group's tasks and jeopardize its very existence. One-sided socio-emotional orientation often comes at the expense of corrective action, in that the socio-emotional leader is likely to withhold criticism, fail to point out errors, or fail to attribute blame or responsibility for poor group performance to employees or group members. Therefore, the continuance and efficiency of a group depends on both forms of leadership being present and in equilibrium; too much of either sort causes problems for the other. However, Bales believed that because the task and socio-emotional functions in a group are opposed, it is difficult to accommodate both: There is always some friction between the task leader's role—who urges completion or criticizes achievement efforts—and the socio-emotional leader's role of maintenance and integration.

The dichotomy posited between task leadership and socio-emotional leadership has been criticized for its inability to account for the multidimensional relational qualities and for its rigid categorization of any response into only one category. In 1984, the psychologist Joseph E. McGrath suggested that a statement or response could carry both task and socio-emotional information at once. One methodological problem with Bales's study is the fact that, regarding team members' ratings of one another, neither the actual communication that occurred in the groups nor individual characteristics of group members were examined. It can be assumed that the emergence of either or both kinds of leadership depends on task-related communications as well as on the characteristics of individual group members and specific conditions within the group's organization. Additional limitations of interaction process analysis include questions of "face validity" as a fuzzy procedure for validating because of inherent subjectivity and the need to train observers, which requires a great deal of practice. Additionally, frequent retraining is also necessary.

SYMLOG: SYSTEM OF MULTIPLE-LEVEL OBSERVATION OF GROUPS

Bales expanded his original model to include additional structural dimensions, status (dominant or sub-

missive), and attraction (friendly or unfriendly). In the process he developed a multidimensional checklist that researchers can use to structure their observations of groups, SYMLOG. The acronym SYMLOG stands for "systematic multiple-level observation of groups." Beyond serving as a checklist that gives researchers a set of practical methods for measuring behavior, SYMLOG also claims to be a theory of personality and group dynamics for changing behavior and values in democratic ways. The goal has been to understand the group better in order to improve productivity and satisfaction, thereby increasing the probability of effective change. As an integrative approach, the SYMLOG method tries to consider multiple-level observation of groups systematically, offering a new field theory of the multiple contexts in which people live. People's mental processes, their social interactions, and group dynamics are seen as taking place in systematic, structured contexts that can be measured, permitting explanation and prediction of behavior in a more exact way than was possible with earlier models.

SYMLOG has proved to have considerable longevity and impact on studies of groups. Field diagrams based on SYMLOG ratings have been used to illustrate aspects of group leadership and to understand more clearly what comprises undesirable and desirable leadership, with the basic process being to observe initiation, maintenance, or termination of a process of either unification or polarization in the group space. Additionally, SYMLOG provides suggestions for desirable types of leadership in situations of group polarization (e.g., optimum kinds of behavior, imagery, or value content of superordinate group goals for mediation). That fact leads to problems of "social desirability bias" (Hare & Hare 1996)—that is, the presence of an interviewer leads respondents to distort their answers in order to be rated socially desirable or respectable. The interviewer can also bias the results by using terms which appear socially desirable for him or her. Like interaction process analysis, SYMLOG is time-consuming and expensive, involving costly training programs for interviewers, data gathering, and interpretation. On the other hand, SYMLOG makes possible comparative examinations of multiple indi-

Jingshen is the Mandarin word for spirit and vivacity. It is an important word for those who would lead, because above all things, spirit and vivacity set effective organizations apart from those that will decline and die.

—James L. Hayes

viduals and group dimensions in a structured manner. Various groups' solutions to the same problems can be compared to determine the most effective solution and to find out what conditions favor or hinder arriving at that solution. Bales summarized SYMLOG's advantages as follows (Bales 1999, 344):

- It provides a data gathering procedure which permits a thorough assessment of teamwork.
- It enables leaders and members to visualize and talk about the group in an effective way.
- It provides a theoretical framework by which they can better understand their group and particular member relationships.
- It gives many clues and suggestions as to what changes could improve teamwork.
- It gives a way to monitor and maintain progress by periodic repetitions of the procedures.

In a 1999 publication, Bales attempted to establish an integrative framework for all social psychology, based on interaction process analysis and augmented by value content analysis. He observed that in all systems of social interaction, irrespective of size, values are major foci for organizational cooperation and conflict. They are also sources of dynamic processes and change.

LINKS TO OTHER APPROACHES

The differentiation between task orientation and socio-emotional orientation represents a basic pattern that resembles patterns in other research approaches. One evident connection is with the Ohio State Leadership studies of the 1950s (see for overview Stogdill & Coons, 1957), in which similar orientations were identified, but termed "initiating

structure" and "consideration." This approach differed from the dichotomist approach taken by Bales in that both dimensions could exist simultaneously and individuals could display varying amounts of both sorts of behavior.

Other research approaches following the same pattern include "contingent concepts" like that of Fred Fiedler and that of Paul Hersey and Kenneth Blanchard, both of which also assume a continuum of style from more task oriented to more relationship oriented, adding that effectiveness of any given orientation depends upon the circumstances prevailing. Hersey and Blanchard see that satisfying the group's needs to set goals and organize work requires not only task orientation but also high levels of socio-emotional support. With this supplementary approach, high task control on the part of the manager is being made more acceptable by employees because there is a complementing high level of supportive, caring behavior.

A similar pattern can also be discerned in the more normative approaches of Robert Blake and Jane Mouton. In *The Managerial Grid* (1964), they outline a model that contrasts a concern for results with a concern for people. They clearly advocate an approach that integrates both, thus recognizing the interdependence of the two.

Finally, there is the distinction James MacGregor Burns and Bernard Bass make between transactional and transformational leadership. Transactional leadership focuses on tasks and reflects more traditional "management by objectives" and reward systems, while transformational leadership, with its components of idealized influence, inspirational motivation, intellectual stimulation, and individualized consideration, is more emotion oriented and involves heightened levels of emotional awareness.

On a meta level, the difference between task orientation and socio-emotional orientation can be seen as the difference between leadership and management. If management has a relatively strong emphasis on the task, leadership appears to be about the choice of direction and the generation of enthusiasm for the task and facilitating further socio-emotional dimensions. For Warren Bennis and Burt Nanus, the problem with many organizations is that they tend to

be overmanaged and underled. They may excel in the ability to handle the daily routine, but never question whether the routine should be done at all. “To manage” means “to bring about, to accomplish, to have charge for conduct” (task-orientation), while “leading” is “influencing, guiding in direction, course, action, opinion” (socio-emotional orientation). While task-oriented managers are people who do things right (for example, they are good at mastering routines and promoting efficiency), the more socio-emotionally oriented leaders are people who do the right thing (they are the ones with vision and judgment). However, it would be misleading to suggest that socio-emotional leadership is needed only at the top of an organization: It is required at virtually all levels, even among lower-level managerial, professional, and technical employees.

All in all, it is evident that both task-oriented and socio-emotional leadership are possible and necessary. Organizations appear to function best when the two orientations are integrated. Accordingly, an integral leadership (Beck & Cowan, 1996; Wilber, 2000) contributes to overcoming the reductionism of being either task or socio-emotional.

IMPLICATION AND PERSPECTIVES

Practicing socio-emotional leadership supports the development and maintenance of high-quality and trustful relationships with and among members of groups. Socio-emotional leadership is especially important in today’s complex, uncertain, and dynamic business environments, rocked by cultural value shifts and continuous change. Unfortunately, the need for socio-emotional competencies contrasts with their neglect in traditional education systems, particularly in leadership education. Training programs and management development programs that build socio-emotional competencies would help leaders learn the required interpersonal, communication, and emotional skills. Correspondingly, the increasingly considered competencies of an “emotional intelligence” (Goleman 1995; Bar-On & Parker, 2000) and emotionally intelligent workplace (Cherniss & Goleman, 2001) manifest the recent integration of socio-emotional aspects in organiza-

tions. However, formally learned socio-emotional competencies are of little value unless they can be put to work in actual organizations. Learning and practicing socio-emotional competencies on the job can lead to the appropriate use and further development of them. Furthermore, to evaluate and consider the implications of a socio-emotional leadership practice and increased use of multi-source or “360 degree” feedback assessment, appraisal workshops and reports might be helpful.

Socio-emotional leadership also requires authentic emotion management, which means that leaders must develop the ability to acknowledge, express, and be sincere about their feelings and the feelings of others. Authentic socio-emotional leaders encourage organization members to express their full range of emotions without fear of reprisal. To do so, a leader must project a sense of honesty, fairness, justice, and respect for those with whom he or she is dealing. A leader who is skilled in emotion management also recognizes the impact of the timing, pacing, and sequencing of various actions, is aware of different emotional styles, and is adaptable, lively, and flexible. Emotion management keeps socio-emotional relations open and prevents a gradual bottling-up of negative feelings, which unchecked can hamper organizational functioning.

From the perspective of scholarship, a focus on socio-emotionally competent leadership should contribute to future interdisciplinary research on the relationship between leaders and followers.

It can be expected that the transforming and positive, evaluatively rich and insightful role of socio-emotional dimensions will become even more important for an effective (George 2000) and ethical leadership (Ciulla 1998) process in the future. Therefore, the socio-emotional dimension of leadership is not merely a category or a methodological construct: It is a decisive capability and a mode of integration that leaders must cultivate in order to create successful organizations in the present for a sustainable future.

 **SOCIOLOGY**

Sociology is the study of how external, social factors influence human behavior. Unlike psychologists, who investigate internal processes such as thought or emotion, sociologists investigate social behavior, especially the coordinated social behavior of groups. Sociology's contributions to leadership studies have focused on the emergence of leaders, the basis of leader authority, and leadership styles. The application of leadership studies to sociology makes important contributions to better understanding of a number of sociological phenomena, including social and political movements, community organizations, bureaucracies, and religious behavior.

RESEARCH METHODS

Sociological research on leadership uses a variety of methods. In experimental methods, laboratory-based investigations permit tight control of situational variables. Unfortunately, the laboratory setting limits the extent that findings may generalize to the broader social world. Much of the laboratory research on leadership uses college students in leader-follower simulations. Although researchers would like to assume that findings on college students generalize to larger populations, this assumption does not always hold true. Questionnaires are often used by sociologists. In most questionnaires, sociologists assign numerical values to participants' responses and then look for statistically significant relationships between different questions or sets of questions. Sociological studies of leadership also use case studies. In a case

study of leadership, a researcher might collect a great deal of information about one particular leader or a small assortment of leaders. Ideally, insights gathered from the case study of one or a few leaders would generalize to a larger group of leaders. In ethnographies, a researcher joins a group in its day-to-day activities and systematically but unobtrusively keeps detailed field notes. Although rich in detail, with potentially important insights into social processes, the ethnographic method may be criticized for lacking objectivity.

THEORIES OF LEADERSHIP

Sociologists have studied the emergence of leaders and devised theories of leadership. Traditional theories of leadership, especially those derived from psychological orientations, are embedded in a logical positivist framework. As such, they emphasize the relationship between leader and follower as unidirectional, with power centered in the leader's role. One early theory is the "great person" theory. According to this theory, great leaders are born, not made. The great person theory of leadership assumes that leaders possess a special cluster of traits that sets them apart from followers. Using the trait-oriented focus popular with psychologists, researchers have shown that leaders tend to possess high cognitive ability, inner drive, the desire to take on a leadership role, self-confidence, integrity, and sufficient flexibility to develop novel approaches to problem solving. An individual with these traits would be more likely to emerge as a leader. More recent scholars have argued that effective leadership emerges from situations or crises that invoke leadership skills rather than from innate personality traits.

Postmodern perspectives in sociology deny the existence of an objective reality and, instead, focus on how individuals actively construct their own social reality. In light of postmodernism, other sociological theories focus on outward behaviors associated with becoming a leader. Individuals become leaders when they are perceived as representing the values of members of a group. As such, the leader-follower relationship can be construed as emerging from a consensual agreement among participants.

Talkative individuals tend to emerge as leaders. Expressing self-confidence and determination is often taken as an outward sign of the potential to assume a leadership role. One troubling aspect of research on the emergence of leaders is the extent to which factors irrelevant to success can determine a leader. In almost all U.S. presidential elections in the twentieth century, the winner was the tallest candidate. Evidence indicates that physically attractive individuals are more likely to emerge as leaders. Even one's position at a table can influence leadership emergence. People who sit at the head of a table are more likely to become leaders.

The emergence of leaders is especially important for sociologists involved in the study of social movements and the development of community and volunteer organizations. A social movement is geared toward creating social change. Examples of social movements during the second half of the twentieth century include the civil rights movement and the feminist movement. U.S. civil rights leader Martin Luther King Jr. emerged as an important and influential leader for racial equality. With the publication of her book *The Feminine Mystique*, Betty Friedan emerged as a leader in what has been termed the "second wave" of feminism.

LEADERSHIP STYLES

Sociological research has identified different ways to classify leaders. One classification is based on a leader's problem-solving orientation. Instrumental (task-oriented) leaders focus on solving problems at hand. In practical terms, a task-oriented leader focuses on meeting quotas and reaching measurable goals. In contrast, expressive (socio-emotional) leaders focus on the interpersonal dynamics involved in coordinating the behavior of multiple followers. Expressive leaders work to ensure that followers feel valued.

Leaders can be classified as either transactional or transformational. A transactional leader is more conventional in orientation and obtains compliance by setting clear goals, offering or withholding rewards as a function of performance, and providing assistance to complete tasks. In contrast, a transformational leader is inspirational. Examples of transfor-

mational leaders include Martin Luther King Jr., U.S. President John F. Kennedy, and South African leader Nelson Mandela. Steven Jobs, the cofounder of Apple Computers, is viewed as a transformational leader. When Jobs tried to persuade John Scully, then president of Pepsi-Cola, to accept a position with Apple, Jobs said, "Are you going to keep selling sugar water to children when you could be changing the world?" (Sheff 1985, 50). Scully accepted the position. Jobs's question identifies him as a transformational leader who motivates followers to transcend their personal needs and inspires commitment to a common cause. One should distinguish between a true transformational leader, who is morally uplifting and inspirational, and what is termed a "pseudo-transformational leader," whose appeal to emotion is meant to manipulate his or her followers. The German Nazi leader Adolf Hitler is an example of a pseudo-transformational leader.

The sociologist Max Weber identified different types of authority that leaders can exert over their followers. Leaders exercise different kinds of control over their followers. Authoritarian leaders tend to provide direct orders to followers regarding how to behave. Authoritarian leaders often create dependence in their followers. Democratic leaders, in contrast, discuss problem-solving strategies with their followers, provide guidelines, and present feedback in objective terms. Democratic leadership inspires a group-centered focus and more attempts at consensus building and can promote relatively high levels of achievement. Finally, laissez-faire (non-interfering) leaders adopt a highly permissive structure, offer little advice or performance feedback. Under laissez-faire styles of leadership, followers tend to be less productive relative to other leadership styles. The finding that democratic styles of leadership are more effective than autocratic has been criticized as reflecting the underlying political ideology of researchers. One important aspect of sociological research is that individuals working in the field often hope that their research will promote a certain agenda for policymakers. Because human beings are the research subjects in sociological research, one would have difficulty thinking of a topic that lacks potentially important consequences for at least cer-

tain groups of people. Thus, at least some sociologists greatly value the applied aspects of their work.

Sociologists have also considered leadership in terms of different styles of authority. Traditional authority is derived from custom or precedent. Rational-legal authority is derived from written rules that define an individual's power. Charismatic authority is derived from charismatic leadership, that is, from a leader who possesses a special trait or ability. Someone with "stage presence," to use a term derived from the theater, is thought to be charismatic. The French national heroine Joan of Arc was an influential leader because people believed that God had given her a higher purpose.

The source of a leader's authority is especially relevant in terms of the potential uncertainty created by the transfer of authority from one person to another. Transfers of authority occur more readily in traditional and rational-legal systems in contrast to systems under charismatic leadership. Under traditional and rational-legal systems, power structures facilitate transfers of authority. In contrast, a charismatic leader's transfer of authority is more difficult because the leader himself or herself is the source of power. Without the guidance of their leader, followers may have difficulty identifying and empowering a new leader. Because the orderly transfer of authority contributes to social stability, forward-thinking, charismatic leaders may choose to build an organization around themselves to facilitate the transfer of authority, a process that is termed the "routinization of charisma." Whereas some approaches to leadership focus on either leader traits or a leader's environment, a major contribution of the sociological approach has been to develop contingency models of leadership effectiveness. Contingency approaches stress that a leader's style interacts with a specific context and that the two operate as joint determinants of a leader's effectiveness. A leader's effectiveness is contingent on both his or her style and the context in which he or she operates. Favorable contexts exist when leaders have good relations with their staff, face few external threats (e.g., a looming recession), and have adequate resources to complete necessary tasks. Unfavorable contexts exist when leaders have poor leader-follower relations, face

outside threats to success, and have limited resources. Task-oriented leaders, who focus on getting the job done, are most effective in either highly favorable or highly unfavorable situations. In contrast, socio-emotional leaders are most effective in moderately favorable situations. In a mixed situation, a leader's focusing on followers' motivational levels by providing an open, participative style gives followers an incentive to problem solve in creative ways. According to contingency approaches, a socio-emotional leader in an unfavorable situation will not be effective.

APPLICATIONS OF SOCIOLOGICAL THEORY

One of the more important contributions of a sociological approach to leadership is an understanding of groupthink, a concept developed by a psychologist. *Groupthink* refers to how consensus pressures in cohesive groups sometimes promote poor group decision making. One classic example of groupthink is John F. Kennedy's decision to invade Cuba at the Bay of Pigs. The groupthink interpretation is that Kennedy's advisors kept their reservations about the invasion's possible effectiveness to themselves to avoid creating dissension in the group. One of the more important applications of groupthink is to identify what leaders need to do to avoid creating groupthink. A leader should avoid stating his or her position too early to prevent premature closure of a problem, and the leader should appoint individuals to play the role of devil's advocate during group discussions.

One of the most dramatic examples of the power of charismatic leaders took place in March 1997, when thirty-nine members of the Heaven's Gate cult took their own lives by ingesting poison. Their goal was to meet a UFO waiting behind the Hale-Bopp comet. The leader of the cult, Marshall Applewhite (who called himself "Bo"), apparently believed he was leading members to a higher level of consciousness. His body was found among the suicide victims.

Leadership also plays an important role in jury deliberation. Research has found that the foreperson in a jury often is an individual with higher occupa-

tional status or prior jury experience. Evidence also indicates that men tend to be forepersons more than women. In some cases, the emergence of a foreperson occurs for seemingly irrelevant reasons. For example, the first person who speaks often ends up being the foreperson. Given the sometimes life-and-death importance of juries, it is surprising that so little research has been devoted to the emergence of leaders in juries.

Sociological perspectives could influence leadership studies in diversity issues. Evidence suggests that men and women differ in their leadership styles, with women tending to engage in more democratic styles. One recent illustration of this difference was displayed on television in the program *Star Trek: Voyager*, which featured a woman, Kathryn Janeway, as captain of a starship. Janeway displayed a "feminine" orientation toward conflict resolution. For example, she was more inclined to touch members of the crew, relative to previous male captains such as James T. Kirk and Jean Luc Picard. Despite the best efforts of the feminist movement to eliminate double standards, stereotypes about women continue to place an emphasis on women's roles as caretakers of children. As a result, women in leadership roles also experience more conflict between demands of work and family. Further research on the leadership styles of women, as well as of persons of diverse ethnicities, should be conducted.

SPIRITUALITY

Both participants and observers describe the exercise of leadership as exhibiting spiritual purpose beyond the material realm. This increasing use of the language of spirituality deserves respectful scrutiny by scholars.

A REVIVAL OF INTEREST IN SPIRITUALITY

Scholars have studied spirituality for centuries, and not just in theology. Recently, there has been a revival of interest in spirituality in management, organizational behavior, and leadership studies. The Academy of Management, for instance, created a special interest group on Management, Spirituality, and Religion. Numerous colleges and universities have started organizing conferences on this theme. In 2001, the *Leadership Quarterly* devoted its book review section to the many publications appearing on the topic. Stephen Robbins added a segment on workplace spirituality to the tenth edition of his popular textbook, *Organizational Behavior*.

The attention is overdue, according to Jerry Harvey, who reminded colleagues that leaders themselves have frequently claimed the importance of spirituality, and not just to their personal lives, but to their leadership specifically. It is, in his opinion, irresponsible to bar such evidence at the gate, as it were, and neglect what leaders report. Many managers are reported to “say their relationship with God influences their work lives more than any other factor” (McCormick 1994, 5).

A person can be skeptical about particular claims of spirituality, yet remain open to the possibilities that scholars have begun to examine. At the very least, in an explicitly pluralistic forum, claims of spirituality deserve as much respect as other diverse claims.

A substantial amount of research considers the instrumental value of spirituality. One publishing executive believes “there is a creative energy in work that is somehow tied to God’s creative energy. If we can understand that connection, perhaps we can use it to transform the workplace into something remarkable” (Gunther 2001). Corinne McLaughlin, who assembled many of these findings into one article, concluded that “[s]pirituality could be the ultimate competitive advantage” (McLaughlin 2002). Nonetheless, “spirituality in no way guarantees material success” (Gunther 2001).

Spirituality promises to anchor morality, where the search for an immanent morality has failed. Spirituality implies morality, contributing to the formation of a moral framework and informing ethical deliberation for many leaders. As the interest in ethics and moral leadership increases, so will an interest in spiritual authority and the language of spirituality.

In short, spirituality is empirically important to existing leaders, helpful with morals and the bottom line, so the question arises: what is spirituality?

WHAT IS MEANT BY SPIRITUALITY?

The word “spirituality” is hard to define. The Department of Education in Britain is reported to have found it necessary to define spirituality: “The valuing of the non-material aspects of life, and intimations of an enduring reality” (Handy 1998, 102). Such a definition fails to convey its full meaning. A number of writers explain what it is by showing what it is not.

Spirit Is Not Soul

In the literature on leadership, the terms *spirit* and *soul* are used interchangeably, and they do bear a family resemblance to each other. Both refer to the immaterial realm, beyond or behind the phenomena of ordinary experience, but they are not necessarily the same. Archetypal psychologist James Hillman has illustrated the differences. Spirit is isolated, roving, gaining distance from experience to consider its context or meaning. Soul, on the other hand, abides in the immediate, the intimate, in darkness, where it

receives or suffers, in passivity associated with the feminine. Spirit is masculine, active, creating, sparking as light, closely tied to purpose.

Spirituality Is Not Religion

Many writers emphasize that spirituality is not the same as religion. Again, there is a family resemblance, and the terms are closely related, but religion reflects the original meaning of the word, which is to bind, whereas spirituality connotes liberation. These writers argue that spirituality pertains to something too deeply private or too large and vast for any organized religion to monitor or control. Religion occupies an alienated middle ground between these two extremes. If anything, they assert, religion obstructs spirituality.

Spirit Is Not Here

The language of spirituality frequently uses spatial metaphors. It has to do with something higher, something larger, something deeper, something somewhere else. It can be characterized as moving, restless, or it can be at a distance, so that one must go in search or quest. In all cases, spirit is not something here, now, permanently fixed. Instead, it hides or roves elsewhere, with the hope that at some point a person attunes oneself with it.

Spirituality proves to be elusive, like the breath from which we get the word. This elusiveness has been imagined in two different ways. One way is the transcendence of spirit, which means simply its tendency to cross boundaries, like wind at the border, as it comes and goes. This image portrays spirit as a force or power that crosses over the boundaries of my individuality, reaching a part of me that I closed off, and then drawing me out of myself, into the wider world. This image corresponds to the notion of vocation as calling, being summoned toward a task or purpose, without respecting boundaries.

Spirit Is Not a Thing

The other way to imagine the elusiveness of spirit is to say that spirit is not a thing at all. Rather, it is rela-

tionship. One does not grasp or possess relationships; one participates in them. Spirit connects individuals together, sewing or knitting them, as it were, into a larger fabric of community. Spirit is a process of integration. The resulting relationship gives a context for one's efforts, fixing the coordinates for making decisions and establishing an identity.

For Christians, spirit is not a thing but a person, the third member of the Trinity, a divine being referred to as the Holy Spirit, who reveals God historically as an inward presence and life-renewing power, both giver and gift.

Usage

Other words and phrases allude to spirituality and implicate its importance to leadership. Stephen Covey, to cite one example, urges leaders to become pathfinders. "Pathfinding deals with the larger sense of the future. It gets the culture imbued and excited about a tremendous, transcendent purpose" (Shriberg et al. 1997, 180). Among their "ten most important lessons," James Kouzes and Barry Posner use comparable language:

[L]eaders must envision an uplifting and ennobling future. . . . We expect leaders to take us to places we have never been before—to have clearly in mind an attractive destination that will make the journey worthwhile. (Shriberg et al. 1997, 186)

Kouzes and Posner conclude by urging leaders "to seize the opportunities for greatness" (Shriberg et al. 1997, 189). James MacGregor Burns describes transforming leadership as raising leader and follower "to higher levels of motivation and morality [because followers] can be lifted into their better selves" (quoted in Shriberg et al. 1997, 213). Peter Vaill "equates visionary leadership with a spiritual process through which people seek ways to bring out the best in themselves and, consequently, the best in others" (Shriberg et al. 1997, 35). Charles Handy insists that "life is about more than surviving—there could be something glorious about it, it could contribute to a better world. That leaves one with a personal challenge, to do something glorious with one's life. It is also, I believe, a challenge for

every organization and every business” (Handy 1998, 118).

Despite these multiple synonyms and images, Deborah Bloch (2003, para. 2) made a valiant effort to summarize the meaning of spirituality:

Spirituality is the experience of connection to something that transcends our ordinary lives. We may envision this as a connection to something larger than ourselves or deeper within our selves, but we know that it is beyond the material. For some people, there is a sense of connection to a higher spirit, and that connection may or may not be associated with a particular religion. For others, it is a connection to a set of ideals or ethics, for some a connection to all humankind. Of course, these are not mutually exclusive categories. Indeed, the essence of spirituality is a sense of unity or the oneness of it all. It is through this sense of oneness that people experience meaning in their work.

THE CONNECTION OF SPIRITUALITY TO LEADERSHIP

Research investigates the effects of spirituality on individuals and organizations. There is evidence to suggest that people believe spirituality has utility for leaders. The connection to leadership appears to be stronger than this, however. Spirituality is more than the latest workplace technique. Many persons agree with Pierre Teilhard de Chardin, who wrote last century that “[w]e are not human beings having a spiritual experience. We are spiritual beings having a human experience” (quoted in Bowling 2001, 369). Because we are spiritual beings, anything we do has a spiritual dimension.

The specific connection to leadership is stronger than this. Leadership *implies* spirituality. Leadership, like spirituality, is a relationship grounded in a purpose, and that purpose reflects the aspirational character of its participants. Participants experience and respond to the tension of existence. Leadership originates in a desire to change the present, to improve something about one’s existence and bring it into alignment with an ideal, no matter how slight. Leadership embodies those aspirations, representing a level of faith we have as humans that together we can

participate in approximating those ideals. Aspiration justifies leadership.

Max Scheler, writing extensively on spirit, regarded it completely as “guidance and direction” (1961, 68). Spirit sublimates drives or instinct by detaching a person momentarily from the immediate press of events to contemplate another way, another possible condition, which it then pursues by channeling energy. Spirit inspires leaders to realize a vision and permits them to inspire followers to do the same. In this way, leaders experience spirit within themselves and evoke spirit in others.

SPIRITUAL DISEASES

If spirituality turns out to be a meaningful construct, then it would be important to consider the possibility of spiritual disease or pneumapathology, as it pertains to leadership. This section describes seven such diseases, for purposes of illustration.

Man the Measure

A prospective leader who refuses to acknowledge an authority “anterior, exterior, and superior” to humankind will be tempted to ground leadership in cunning and coercion and seek aggrandizement. Many theorists since Plato contrast such an imperialistic tyrant with the spiritual leader, whose deference to something higher or larger than herself makes her worthy. The driving force in contradistinction to spirit is appetite, the will to power, or what was known as the *libido dominandi*. The cure for this disease is wisdom and humility.

Despair

The word itself indicates the nature of this disease: to have lost spirit, to have given up on its power, to proceed into the future without hope, dispirited. In the Roman Catholic tradition, despair is a mortal sin, because it expresses the profoundest doubt about the sovereignty of God. It certainly nullifies the possibility of spiritual leadership, by preventing a person from seeing any reason to participate. The opposite of despair is hope.

Private Spirituality

People live in a single, common world, and they are drawn by spirit together. “Through the life of the spirit, which is common to all, the existence of man becomes existence in community. In the openness of the common spirit there develops the public life of society” (Voegelin 1990, 7, citing Heraclitus) By way of contrast, a person who lives in a private world of passion and imagination, even if he or she acknowledges the promptings of the spirit, rejects the unifying imperative of spirit and gradually builds a fantasy in isolation, ruining prospects for community and collective action. The opposite of this disease is community.

Denying the Spirit in Followers

Participants come together at the prompting of the spirit. Each one responds to a vocation or calling, a calling that gives their participation meaning. Thus, followers should be seen as spiritual beings with a spiritual mission, and not as human resources to deploy in some impersonal manner. It dishonors the spirit to squash or neglect the spirit in others. They are partners on a journey or, as Charles Handy put it, “instruments of the sublime” (1998, 118). If for no other reason, they deserve empathy and respect, if not servant leadership. The remedy for this disease is justice.

Identifying Oneself with the Spirit

Leaders are at risk of believing they embody the spirit, that in fact their leadership bears a transcendent and permanent authority, as though their leadership were conclusively ordained by a higher power to which others must defer. It is not uncommon for participants to justify leadership on these grounds, and this is actually the basis for charisma. It qualifies as a disease when such a transcendent authority comes to be fused in the imagination with a particular person. This is hubris or pride. Such arrogance, aided by an uncritical view of the leader, produces cults and implicates psychiatry. It is in this sense that one can speak meaningfully of demonic leadership. The cure for this disease is piety.

Hypocrisy

Given the elusiveness of spirituality, people can pretend to be spiritual when they are not. It is one thing to be mistaken, but the spiritual disease lies in active deceit. Niccolò Machiavelli endorsed hypocrisy as a tactic. Yet for more than one reason, a false spirituality can be more harmful than none at all. Its uncovering bruises trust and builds cynicism in followers, yet even if undetected, such leadership rests on a lie. Accordingly, the opposite of hypocrisy would be authenticity grounded in truth.

“Swallowing the Spirit, Feathers and All”

This phrase comes from Martin Luther and represents a state of mind that believes the only resource one requires is spiritual. A leader suffering from this condition refuses to rely on other resources, such as practical wisdom, tradition, or science. The organization he or she leads would neglect such basic tools as forecasts, budgets, policies, and engineering. Actually, such a utopian organization would not qualify as an organization at all, as its operations become turbulent and disordered. This is a disease because spirit does not presume to replace mundane managerial tools. The opposite of this disease is prudence.

By implication, healthy spirituality aligns with wisdom, humility, hope, community, justice, piety, authenticity, truth, prudence, and presumably all of the virtues.

OBJECTIONS TO STUDYING SPIRITUALITY WITH LEADERSHIP

The attempt to connect spirituality with leadership has met with resistance. Several objections are raised. Foremost among them is that spirituality is superstition, beyond the reach of science to observe or measure, in the same class as magic, miracles, mystery, and mythology. If one can explain leadership adequately as an immanent phenomenon, entirely within the reach of science, then spirituality adds nothing but mystification. Appeals to spiritual-

Pillar Edict VII: Asoka's Measures for the Propagation of the Law of Piety in the Maurya Empire

Asoka was the ruler of the Maurya empire in India from 269 to 232 BCE. During his rule, he became a Buddhist and encouraged the spread of Buddhism in India, although he also preached toleration of other religions. The following edict indicates that as a ruler he stressed religious belief and practice across India.

Thus saith His Sacred and Gracious Majesty the King:—"The kings who lived in times past desired that men might grow with the growth of the Law of Piety. Men, however, did not grow with the growth of the Law of Piety in due proportion."

Concerning this thus saith His Sacred and Gracious Majesty the King:—

"This [thought] occurred to me:—In times past kings desired that men might grow with the growth of the Law of Piety in due proportion; men, however, did not in due proportion grow with the growth of the Law.

"By what this means, then, can men be induced to conform? By what means can men grow with the growth of the Law of Piety in due proportion? By what means can I lift up at least some of them through the growth of that Law?"

Concerning this thus saith His Sacred and Gracious Majesty the King:—

"This [thought] occurred to me:—

"Proclamation of the Law of Piety will I proclaim; with instruction in that Law will I instruct; so that men hearkening thereto may conform, lift themselves up, and mightily grow with the growth of the Law of Piety."

"For this my purpose proclamations of the Law of Piety have been proclaimed; instructions in that Law of many kinds have been disseminated; my missionaries, likewise my Agents set over the multitude, will expound and expand my teaching.

"The Governors, also, set over many hundred thousands of souls have received instructions—'In such and such a manner expound my teaching to the body of subordinate officials of the Law.'"

Thus saith His Sacred and Gracious Majesty:—

"Considering further the same purpose, I have set up pillars of the Law, appointed Censors (High Officers) of the Law, and made a proclamation of the Law."

Thus saith His Sacred and Gracious Majesty the King:—

"On the roads, too, I have had banyan-trees planted to give shade to man and beast; groves (or 'gardens') of mango-trees I have had planted; at every half-*kos* I have had walls dug; rest-houses, too, have been erected; and numerous watering-places have been provided by me here and there for the enjoyment of man and beast.

"A small matter, however, is that so-called enjoyment.

"With various blessings has mankind been blessed by former kings, as by me also; by me, however, with the intent that men may conform to the Law of Piety, has it been done even as I thought."

Thus saith His Sacred and Gracious Majesty:—

"My Censors (or 'High Officers') of the Law of Piety, too, are employed on manifold objects of the royal favour affecting both ascetics and householders, and are likewise employed among all denominations. On the business of the Church, too, they are employed, as well as among the Brahmans and Jains are they employed. Similarly, they are employed among the Jains; among miscellaneous sects, too, are they employed.

"The High Officers of various kinds shall severally superintend their respective charges, whereas the High Officers of the Law of Piety (Censors) are employed both on such things and also among other denominations."

Thus saith His Sacred and Gracious Majesty the King:—

"Both these and many other officers, heads of departments, are employed in the distribution of alms, both my own and those of the Queens; and in all my female establishments both here [i.e. 'at the capital'] and in the provinces they indicate in diverse ways sundry places where satisfaction may be given.

"Those same officers are also employed in the distribution

Source: Smith, Vincent Arthur (Ed. & Trans.). (1920). *Asoka, The Buddhist Emperor of India*. Oxford: Clarendon Press. Reprinted in McNeill, William H. and Seldar, Jean W. (Eds.). (1969). *Classical India*. New York: Oxford University Press, pp. 109–112.

ity are an attempt to re-enchant the world, contrary to the Enlightenment project.

Conversations about spirituality open the door to controversies about ghosts, demons, and the occult—controversies unsettling even to discuss, let alone to study as part of an academic discipline. One

recent book on leadership, to make a larger point, contemplated the efficacy of tarot cards. There is no consensus on which of these are legitimate issues for leadership studies.

Even if spirituality helps to encapsulate legitimate issues, such as loyalty, trust, morale, and

of the alms of my sons, and likewise of the other Princes, sons of the Queens, in order to promote the practice of the Law of Piety and conformity to that Law.

"The practice of the Law of Piety and the conformity referred to are those whereby compassion, liberality, truth, purity, gentleness, and saintliness will thus grow among mankind."

Thus saith His Sacred and Gracious Majesty the King:—

"Whatsoever meritorious deeds have been done by me, those deeds mankind will conform to and imitate, whence follows that they have grown and will grow in the virtues of hearkening to father and mother, hearkening to teachers (or 'elders'), reverence to the aged, and seemly treatment of Brahmans and ascetics, of the poor and wretched; yea, even of slaves and servants."

Thus saith His Sacred and Gracious Majesty the King:—

"Among men, however, when the aforesaid growth of piety has grown, it has been effected by twofold means, to wit, by regulations of the Law of Piety and by reflection. Of these two, however, regulations of the Law are of small account, whereas reflection is superior.

"Nevertheless, regulations of the Law of Piety have been made by me to the effect that such and such species are exempt from slaughter, not to speak of numerous other regulations of the Law of Piety which have been made to me.

"Yet the superiority of reflection is shown by the growth of piety among men and the more complete abstention from killing animate beings and from the sacrificial slaughter of living creatures.

"So for this purpose has this been recorded, in order that my sons and descendants (lit. 'great grandsons') may conform thereto, and by thus conforming may win both this world and the next.

"When I had been consecrated twenty-seven years I had this scripture of the Law written."

Concerning this His Sacred Majesty saith:—

"This scripture of the Law of Piety, wheresoever pillars of stone or tables of stone exist, must there be recorded so that it may long endure."

meaning, we are possibly better served choosing a term with less sectarian baggage. Spirituality has historically meant more than this, so that in effect we would be cheapening the term by restricting it to such mundane concerns. On this point, those who take spirituality seriously can agree: The term does

incorporate some understanding of a divine or transcendent realm. Using it to mean anything less is a distortion.

By the same token, spirituality can easily merge with anything a person prefers, so that spirituality becomes confused with political ideologies, pet ethical theories, and in one notorious instance: on-site massage therapy. If the concept is so elastic that it serves as a placeholder for things I like, then it really serves no purpose for serious study.

Even if scholars in the field of leadership were to agree that spirituality in the full sense is an important and specific topic for study, there is considerable disagreement how to proceed. Spirituality is understood to be elusive and insubstantial. No one knows how to prove many of its claims; the scientific method has its limits. That alone creates difficulties. One writer described the risk of confusion "as a football game in which half the players are invisible" (Marsden 1997, 95, citing Lovelace 1979). More broadly, the existing literature ranges over many traditions and for many purposes, so that imposing a sense of discipline will prove daunting.

Because of the close relationship between spirituality and religion, there is always the risk of sectarian conflict. A number of Christian publishing houses, for example, issue works on leadership and spirituality citing Christian authorities, yet spirituality is a topic of interest in other traditions, such as Zen and Hinduism, that cannot accept the Christian framework. As a result, even among those with an interest in spirituality, there is widespread disagreement based on technical disputes over dogma and sacred texts, which quickly overwhelms students who are without sufficient training.

Given the risk of confusion and abuse, there is reason to wonder whether spirituality belongs in the workplace or other public places. Maybe it is specifically to avoid these difficulties that so many people prefer to regard spirituality as strictly private.

Finally, educators have reason to be uncertain how to teach spirituality, especially in hostile forums, as well as how to assess learning, so that a teacher can assign a grade based on a student's demonstrated proficiency.

SPIRITUALITY AND CONTEMPORARY MANAGEMENT THINKING

Leadership studies has witnessed an explosion of interest in spirituality, not only for its instrumental value but also for its close connection to the inner work of leaders. Despite its imprecision and mystique, spirituality has tremendous meaning to participants, as well as to observers seeking a conceptual framework for the immaterial aspects of leadership. Marc Gunther (2001, para. 78) captures this belief:

Faith works. . . . [T]he core principles of spirituality—the belief that all individuals have dignity, that we are all interconnected, and that a transcendent being or force defines purpose in human affairs—dovetail with contemporary management thinking.

—Nathan Harter

SPORTS

In essence, leadership in sports is like leadership in other areas. But because sports have some unique qualities, there are some important aspects to sports leadership that may not be as evident in other fields. The eminent baseball coach and manager Yogi Berra (b. 1925), when asked what it took to be a good manager, replied, “Good players.” In other words, leadership is all about the quality of those being led.

In talking about sports leadership, one must decide what level of leadership one will examine. This entry examines leadership in sports from the perspective of the coach, manager, or other person most closely involved with the players’ performance in the game or sporting event, rather than, for example, considering a team owner to be the leader. The team owner’s leadership, while important, is more business oriented than sports oriented.

SPORTS INTELLIGENCE

Certain traits of leadership are common to all fields. The central ingredient in all leadership is intelligence. In all human endeavors, the leader must possess sufficient intelligence to be able to identify

objectives and formulate strategy, to create a plan and design methods for executing that plan, and to adjust course as events unfold and circumstances dictate. Although the most highly intelligent are not always or even frequently the best leaders, there is nevertheless a level of intelligence, suitable to the activity, that any leader must have to be successful. Yogi Berra (1925–) and Ted Williams (1918–2002) are two players whose baseball intelligence made them leaders among players. Although Berra is not highly educated in the conventional sense, his baseball intelligence is superior. As a catcher, he was able to remember the strengths and weaknesses of each batter and guide his pitchers accordingly. Years after his retirement, the legendary Ted Williams, perhaps the finest hitter of his generation, could recite at length the tendencies of pitchers he faced to throw certain pitches at certain stages in the count. Nor are those two alone: There is a long list of successful coaches and managers whose obvious intelligence surely contributed to remarkable performance.

In professional football, the genius of Paul Brown (1908–1991) is legendary. A successful coach at Massillon High School in Ohio, he coached at Ohio State and during World War II at the Great Lakes Naval Training Station, where his team became dominant largely because Brown ignored the segregationist policies of the military and played a large number of future Hall of Famers who happened to be black. Among them was the fullback Marion Motley, who later became the model for all fullbacks because he was able to use his remarkable size (he was 185 centimeters tall and weighed about 96 kilograms) to his advantage as a ball carrier and blocker. Indeed the draw play, a staple of football since his time, was designed by Paul Brown to take full advantage of Motley's unique physical attributes. In the draw play, the quarterback "draws" the defense toward him, and then suddenly hands the ball off to his fullback. Motley, big and fast, was a terror in this play. Along with Motley, Paul Brown had such black players as Bill Willis, who had played for Brown at Ohio State, and Horace Gillam and Led Ford. All three later starred for the Cleveland Browns, the first integrated team in professional football.

Paul Brown invented professional football as we

know it. He was the first to give players intelligence tests, to use play books, to teach technique in the classroom, and to send in plays via messenger players on each down. He clearly saw himself as a teacher, and he maintained strict control over his player-students. And when his Cleveland Browns came to dominate the National Football League, others quickly took note and copied his methods. A stern, somewhat humorless leader, Paul Brown represents the epitome of successful coaching. It is therefore no surprise that a large number of the most successful coaches in later generations either played for Brown or coached alongside him as assistants. Don Shula of the Miami Dolphins, Chuck Noll of the Pittsburgh Steelers, Weeb Ewbank of the New York Jets, and Bill Walsh of the San Francisco 49ers are but some examples. Paul Brown redefined leadership in football by applying his intelligence and organizational skills to a game that had never previously been exposed to that kind of systematic direction.

WINNING: THE BUILT-IN GOAL

In some sense, leaders in sports face a rather easier strategic challenge than leaders in some fields. In most sports, winning is just about everything. Despite the fact that one regularly hears that "it isn't who wins but how you play the game that counts," one rarely aims for the middle of the pack or the top half of the standings or merely to do well. As another popular saying goes, "It's all about winning, stupid." And so it is. For leaders in sports, the strategic objective is to win. One must turn to tactics to figure out how to make the win. John Wooden (b. 1910), the most successful basketball coach in intercollegiate history, had an unusual approach: He never mentioned winning at any time to any of his teams. He said, "If you do as you were taught, the results will take care of themselves."

INNOVATIVE THINKING: BOB KIPHUTH AND SWIMMING

If in all sports the objective is winning, the tactics become the occasion for differentiation. Take the case of the most successful swimming coach in his-

tory, the man who, like Paul Brown in football, redefined the sport of swimming, the Yale University coach, Bob Kiphuth (1890–1967). In more than forty years at Yale, his teams won 528 dual meets and lost only 12. He had two long consecutive win streaks, one of more than 260 meets, and he became internationally recognized as the most powerful figure in his sport, coaching the U.S. Olympic team in many Olympics and for many years serving as the athletic director at Yale.

Bob Kiphuth is now largely ignored except by those who swam at Yale for him or who have a special interest in sports. But Bob Kiphuth applied his superior intellect to the sport of swimming in a way never previously imagined. Raised on a farm in rural upstate New York, Kiphuth had a minimal education. It is unlikely he finished high school. Arriving at Yale during World War I, he found a menial job in the gym and began to apply his intense interest in bodybuilding and gymnastics to a new interest: swimming. Although he had no background in physics, he redefined swimming as the simple exercise of moving a body through water by applying the strength of that body against the resistance of the water. As he saw it, the more one could build up one's strength, the faster one could overcome the water's resistance.

Although that idea may sound simple and even obvious today, before Bob Kiphuth no one had thought to build up the bodies of swimmers with specific exercises designed to create strength in the arms, chest, and legs so as to force the body through the water at a faster rate. Kiphuth put his young swimmers on a rigorous exercise program so that they would be capable of peak performance when competitors were becoming weaker and more tired. He did not have his students lift heavy weights. Rather, he designed a program in which students would lift light weights hundreds of times over long periods of time. The results were astonishing, and Yale became the epicenter of a revolution in the sport. All over the world, Kiphuth's training methods were copied, especially in Australia and Japan, also swimming powerhouses, and soon international swimmers were coming to Yale to work under Kiphuth. In the early 1950s, John Marshall,

an Australian national hero because of his Olympic victories, enrolled at Yale and prospered under Kiphuth. Wayne Moore and Johnny McLane were other swimmers who helped Kiphuth maintain an undefeated streak that ran from 1941 to 1959. His success prompted more and more great swimmers to come to Yale. Don Schoellander won six gold medals at the 1964 Olympics and swam for Yale. There were many others. And it all began with this little man who, it was said, could not swim the length of the pool.

It is also notable that Bob Kiphuth put his energy into redefining his personal skills. With his limited education, he felt insecure around the Yale faculty and teaching Yale students. So early on, he decided to read the entire Modern Library series of great works. That way, he believed, he would at least be able to discuss the classic books his associates would have read. His efforts made Kiphuth not only a legendary swim coach but a full-blown legend at Yale itself.

MENTAL FLEXIBILITY: MAKING INSTANT DECISIONS

In business, government, and on the battlefield, time pressures require leaders to perform under the stress of the clock. So too in sports the suppleness of the leader's mind is tested, as he or she is required to change or modify tactics in the midst of the game to deal with the tactics of the opposition. Then, having modified the tactic, the leader must be able to direct or motivate his or her followers to adapt the new course. What makes sports different from business or government is that in sports, the leader's decisions must be made without consultation in many cases, and often almost instantaneously. Even crucial decisions in business or government may be made over a longer period of time than most games permit. In sum, sports makes leadership into a compact exercise. There is very little time, there are very few people with whom to consult, and there is much riding on each decision. Only war, perhaps, duplicates the intensity of sports; perhaps that is why the Duke of Wellington claimed that the Battle of Waterloo was won on the playing fields of Eton and Douglas

Sports, Prison, and Democracy in South Africa

Although the playing field has often been a training ground for leaders, the quotes below indicate that prison football leagues provided unique leadership opportunities for the leaders who would emerge in post-apartheid South Africa.

"My strictness on procedures at meetings which, sometimes, might have been distasteful to some delegates, has resulted in all meetings being successes. . . . What we are doing today we are doing so as to be creatively better armed mentally and morally for the society to which we belong in the free world. So, let's all be prepared to learn by accepting authority in its *justice* [italics added] and accepting criticism. . . . My advice to the next executive is that the sovereignty of our constitution should be upheld. Only by using the constitution can we amicably solve issues."

—D. Malepe, Chairman
Matyeni Football Association, 1968

"An uninformed delegate to a General Meeting can hardly make head or tail of the multiple problems of the Association. The General Meeting is the guide, curb, spur of the executive, with any [meeting] the executive is bound to leap its bounds or err, also clubs become detached from the executive, treating it as some kind of repressive foreign organization. . . . To any Executive my advice is that never should executive issues be decided by vote. Matters should be discussed thoroughly until all opinions are synthesized into one sound common decision. Votes encourage division, disintegration and block formation which tend to crystallize with time into factionalism."

—D. Moseneke, Chairman,
Makana Football Association, 1971

"People are not conversant with the Constitution and this has resulted in a series of procedural problems . . . everyone should know the Constitution . . . and arrangements should be made for it to be typed and distributed to all Clubs."

—D. Moseneke, Chairman,
Makana Football Association, 1972

"In order that we should have leave to these high principles we had to fulfill one basic condition. We had to exist and nothing of our strength and courage had to be spared to strike this basic condition."

"Our approach on several matters was correct and commendable. I have in mind the approach we adopted towards those who sought to leave the Club."

—Stephen Tshwete, Chairman,
Dynaspurs Football Club, 1971

"Let us not allow disagreements on the field to become causes of more frustration, tension, and discomfort than we are already experiencing. Our sports has played no small role in bringing us together . . . a social cement, if I may say so. Let it not become a point of conflict and misunderstanding. Some might say, noble ideas and big talk which has no bearing on the real situation. My reply to those people is in the form of a question: If we had no noble ideals, would we have been here today?"

—Marcus Solomon, Acting Chairman,
Dynaspurs Football Club, 1971

The "here" to which Mr. Solomon referred was Robben Island Prison, the place to which the apartheid regime in South Africa consigned the political opponents who posed a threat to the maintenance of the system. So many of the prisoners (all of whom were male and, in the South African classification system, "non-white") believed in the British idea that sports can be used to build character, a sense of community, and create leadership skills. Nelson Mandela, the most famous of the prisoners on the Island, called Robben Island, "The University of the struggle." It was the place where prisoners taught themselves the discipline and the skills they thought were necessary to continue the fight against a tyrannical government and then to create a free, democratic South Africa. If it was a "university," sports was a required part of the curriculum. One of the first demands made by the prisoners to the authorities was the right to create an organized scheme of sports leagues and to run them without any interference.

Many of the prisoners who were involved in the sports activities went on to hold important positions in a democratic South Africa. These include Jacob Zuma, Deputy President, M. G. P. Lekota, Minister of Defense, D. Moseneke, prominent industrialist and judge, and Stephen Tshwete, Minister of Sport and later, Minister of Safety and Security. Others like Marcus Solomon created self-help and social service agencies that have helped to ameliorate some of the worst caused by more than fifty years of government imposed discrimination and repression.

—Charles Korr

Vince Lombardi, coach of the Green Bay Packers and other football teams, is considered by many commentators to have been the greatest football coach of all time. Here, on 17 December 1960, his players carry him off the field after a key victory over the Los Angeles Rams. Source: Bettmann/Corbis; used with permission.

MacArthur spoke of learning skills useful in battle during West Point football. What is often most admirable about sports leaders is not so much their conclusions as the speed at which they operate.

COMMUNICATION

Leadership in sports also places emphasis on another skill that is required of all leaders in all fields—the ability to communicate. A successful coach or manager in sports must be able to motivate his or her followers, and that motivation is often grounded in the spoken word. We are still reminded of a halftime talk delivered in 1928 at Notre Dame by Knute Rockne (1888–1932), who challenged his losing warriors to “win one for the Gipper,” stirring them to action with the memory of the star George Gipp, who had died eight years earlier. In what other field is the motivational talk so long and favorably recalled? A team leader with powerful verbal skills is often able to provide intense motivation, but the ability to communicate is actually quite subtle.

The sports leader has to be able to sort out what to say and when. But because sports involve contests, the leader is always directing his attention toward the event. He is leading up to something.

Without the ability to speak clearly, the sports leader suffers and risks diminishment of his message. Sometimes sports leaders such as Vince Lombardi, the Green Bay Packers coach, use vitriol and abuse to motivate. Others even use physical abuse. “Bear” Bryant was known to have kicked and otherwise abused his football players at Texas A&M in the 1950s. In contrast, Joe Torre of the Yankees and Red Auerbach of the Celtics use a gentler approach. Both are much more subtle in their guidance. Furthermore, as mentioned earlier, in sports, the leader is seeking not merely to motivate the players to a great performance, but to great performance on a very specific day at a very defined time. In most other areas of endeavor, the leader has more leeway.

LEADING THE YOUNG AND FIT

Because sports is generally dominated by the young and the physically fit, a sports leader, unlike a leader in business or politics, is dealing with a collection of young people. That fact defines the kind of leadership that is successful in sports. Moreover, because sports demand physical activity, a sports leader is dealing not only with the mind but also with the body. The leader is trying to energize the entire being of the player; it is not enough to win the mind of the player. Having persuaded the player of the tactic to say nothing of the strategy, the coach or manager must then get the player’s body to react. Emotional distractions, fatigue, and injury can limit the performance of even the most highly motivated in a way that is not so true in other fields.

SPORTS LEADERSHIP AND ETHICS

Sports leadership is also unlike other forms of leadership in that it sports is almost totally morally neutral. Coaching a baseball team does not have the same moral implications as manufacturing weapons

systems or cigarettes—or lifesaving vaccines. A good game does not have any moral connotation, so leadership in sports carries very little moral baggage. But that is not to say that a sports leader cannot be unethical: Pete Rose bet on baseball while managing and leading the Cincinnati Reds baseball team—an unethical act. It also takes integrity to resist certain temptations: Coaches must decide how they will deal with such issues as illegal bodybuilding steroids or star players who commit crimes. But those issues are external to the act of directing the game itself. Sporting events themselves are a form of entertainment; it is not immoral to win or to lose.

THE MYSTERY OF LEADERSHIP

In the end, some elements of leadership remain a mystery unable to be analyzed. It is possible to draw concentric circles of knowledge around the concept of leadership. We can describe certain qualities of fine leaders. We can account for failures of leadership by describing flaws in our leaders. But at the center of the concept of leadership is that certain ineffable, mysterious quality that leaders possess and followers relate to. And because leaders arise from all sorts of backgrounds and have widely different education and personal qualities, it is virtually impossible to predict which of our youth will become our future leaders. If we begin by acknowledging the mystery of leadership, we may be able to approach our topic with appropriate humility.

STALIN, JOSEF (1879–1953)

Soviet dictator

Josef Vissarionovich Stalin, the “Man of Steel” as his name means in Russian, was one of the most important leaders of the twentieth century. He participated in the Russian revolutionary movement that overthrew the three-hundred-year-old Romanov dynasty in 1917; in the 1920s he emerged as ruler of the Soviet Union (USSR), history’s first socialist state; and his leadership in the 1930s transformed the country into an industrialized superpower that played a major role in the defeat of Nazi Germany in World War II. However, the achievements of the USSR during Stalin’s long reign, which ended with his death in 1953, came at a tremendous price: millions were exiled, arrested, and/or executed; millions more starved due to policies pursued by Stalin, who was clearly one of history’s worst tyrants. His role and legacy would remain an issue of debate and controversy for decades after his death.

STALIN’S EARLY YEARS

Stalin was born Josef Vissarionovich Dzhugashvili, 21 December 1879, in Gori, Georgia, at that time part of the Russian Empire. His father Vissarion was an impoverished shoe cobbler who drank a lot and beat his wife and son. Stalin’s mother Ekaterina cleaned homes to pay for her son’s education. She was a deeply religious woman and wanted Josef to become a priest, so after he finished elementary school in 1894 she sent him to a seminary in Tiflis.

While at seminary, Stalin became acquainted with Marxist literature. In 1898, he joined a socialist organization and was expelled from the seminary for propagating Marxist ideas. Known as “Koba” after a revolutionary hero in Georgian literature, he organized railway workers in Tiflis. In 1902, Stalin was

arrested for organizing a strike and spent the next two years in exile in Siberia.

The Russian Socialist Democratic Labor Party (RSDLP) split in 1903 in a dispute over the party's structure, and Stalin joined the Bolshevik faction headed by Vladimir Ilyich Lenin (1870–1924), who called for a closed, secretive party of professional revolutionaries. At the outbreak of the 1905 Revolution in Russia, Stalin was in Tiflis organizing workers' strikes. Still known as "Koba," he contributed regularly to socialist publications, and in 1907 he began editing "The Baku Proletarian," an underground Bolshevik newspaper. The Tsarist police arrested Stalin in March 1908 because of his revolutionary activities, deporting him to Siberia for two years. He escaped in June 1909 and returned to Baku, but was arrested and exiled again in March 1910. Released in June 1911, Stalin moved to St. Petersburg, the Russian capital, to become directly involved in the revolutionary movement. However, the Tsarist police arrested him again in September 1911.

Stalin escaped in February 1912, returning to St. Petersburg to help edit the first issue of the Bolshevik Party newspaper *Pravda* (Truth), only to be arrested and deported again in April. He escaped in September, returning to St. Petersburg to resume his editing duties for *Pravda*, but was arrested and exiled yet again in February 1913. This time the Tsarist authorities observed Stalin closely and he was not able to escape. He was in exile when World War I began in August 1914, and was still exiled when, in March 1917, bread riots in St. Petersburg turned into a revolution, forcing Tsar Nicholas II to abdicate. Stalin, released from exile because of the fall of the Tsarist government, made his way to St. Petersburg, where he again began working on the editorial staff of *Pravda* in March 1917.

STALIN EMERGES AS LEADER OF THE USSR

Lenin and the Bolsheviks assumed power in November 1917, and, following Lenin's death in January 1924, Stalin gradually emerged as ruler of the USSR. One factor contributing to Stalin's rise to power was that the Central Committee appointed him as general secretary of the party in April 1922.

This proved to be a vitally important post because the general secretary appointed people to positions throughout the party apparatus, which allowed Stalin to gradually build up a support base of loyal followers in the party.

Stalin was a very capable politician. Unlike Leon Trotsky (1879–1940), the main rival for political power following Lenin's death, Stalin was neither a great orator nor a charismatic individual. He was, however, a flexible politician who adapted his opinions to fit different situations. For example, following Lenin's death Stalin adopted the platform of his political ally at the time, Nikolai Bukharin (1888–1938), promoting "socialism in one country," which meant concentrating on constructing socialism in the USSR alone. Trotsky, on the other hand, argued that socialism could not survive unless it spread to the West. The "socialism in one country" platform of Stalin and Bukharin appealed to people on nationalistic grounds, and was also a realistic appraisal of the international situation of the mid-1920s since successful revolutions had not materialized elsewhere in Europe.

Another factor contributing to Stalin's rise to power was his deceitful, backstabbing nature. Throughout the power struggle of the 1920s, Stalin made alliances with key figures, including Grigori Zinoviev (1883–1936) and Lev Kamenev (1883–1936), two of Lenin's closest lieutenants, only to turn against them later when their assistance was no longer needed. Between 1924 and 1928, Stalin was closely allied with Bukharin in support of the New Economic Policy (NEP), a market-based economic policy introduced by Lenin in 1921. In 1928, however, Stalin rejected NEP and turned against Bukharin, gradually pushing him out of the party leadership. Most of his allies in the 1920s, including Zinoviev, Kamenev, and Bukharin, were victimized by Stalin's show trials and purges in the 1930s. Trotsky was exiled in 1928 and assassinated in 1940 in Mexico City by one of Stalin's agents.

STALIN IN POWER IN THE 1930S

By 1928, Stalin was the country's sole leader, and he ruled with an iron hand. He ended NEP and

Stalin on the Elimination of the Wealthier Peasant Class (Kulaks)

Until recently the party adhered to the policy of *restricting* the exploiting proclivities of the kulaks. As you know, this policy was proclaimed as far back as the Eighth Party Congress. This policy was again announced at the time of the introduction of the New Economic Policy and at the Eleventh Congress of our Party. We all remember Lenin's well-known letter to Preobrazhensky (1922), in which he again urged the necessity of pursuing this policy. Finally, this policy was confirmed by the Fifteenth Congress of our Party. And it is this policy that we have pursued until recently.

Was this policy correct? Yes, it was absolutely correct. Could we have undertaken such an offensive against the kulaks five years or three years ago? Could we then have counted on success in such an offensive? No, we could not.

[. . .]

But today? What is the position? Today, we have an adequate material base which enables us to strike at the kulaks, to break their resistance, to eliminate them as a class, and to substitute for their output the output of the collective farms and state farms. You know that in 1929 the grain produced on the collective farms and state farms amounted to no less than 400,000,000 poods (200,000,000 poods less than the gross output of the kulak farms in 1927). You also know that in 1929 the collective farms and state farms supplied more than 130,000,000 poods of grain for the market (i.e. more than the kulaks in 1927). And, finally, you know that in 1930 the gross output of the collective farms and state farms will amount to no less than 900,000,000 poods.

[. . .]

That is why we have recently passed from the policy of

restricting the exploiting proclivities of the kulaks to the policy of *eliminating the kulaks as a class*.

Well, what about the policy of expropriating the kulaks? Can we permit the expropriation of kulaks in the regions of solid collectivization? This question is asked in various quarters. A ridiculous question! We could not permit the expropriation of the kulaks as long as we were pursuing the policy of restricting the exploiting proclivities of the kulaks, as long as we were unable to launch a determined offensive against the kulaks, as long as we were unable to substitute for kulak output the output of the collective farms and state farms. At that time the policy of not permitting the expropriation of the kulaks was necessary and correct. But now? Now the situation is different. Now we are able to carry on a determined offensive against the kulaks, to break their resistance, to eliminate them as a class and substitute for their output the output of the collective farms and state farms. Now the kulaks are being expropriated by the masses of poor and middle peasants themselves, by the masses who are putting solid collectivization into practice. Now the expropriation of the kulaks in the regions of solid collectivization is no longer just an administrative measure. Now, the expropriation of the kulaks is an integral part of the formation and development of the collective farms. That is why it is ridiculous and fatuous to expatiate today on the expropriation of the kulaks. You do not lament the loss of the hair of one who has been beheaded.

There is another question which seems no less ridiculous: whether the kulak should be permitted to join the collective farms. Of course not, for he is a sworn enemy of the collective farm movement. Clear, one would think.

embarked on the “Stalin Revolution,” enacting the First Five-Year Plan (1928–1932), which comprised two policies that would define the early part of his reign: collectivization and industrialization. Collectivization of agriculture meant peasants had to give up the plots of land allotted to them after the 1917 Revolution and work on state-managed collective farms. There was significant opposition to this policy, with peasants slaughtering their livestock rather than relinquishing them to the collective farms. Those labeled *kulaks* (“rich peasants”) were severely repressed, with millions deported to Siberia, sentenced to forced

labor, or executed. As a consequence of collectivization in 1932 to 1933, famine ravaged Ukraine, the best agricultural region of the USSR and an area of strong resistance to Stalin's policies.

Collectivization of agriculture was intended to give the state the resources needed to fund rapid industrialization, the other part of the “Stalin Revolution.” The goal of this policy was to make the Soviet Union self-sufficient in the shortest amount of time, and the plan emphasized heavy industry at the expense of consumer products. As a result, living standards declined and rationing began for most food

items and consumer goods for the first time since the inception of NEP.

Meanwhile, Stalin consolidated his dictatorial control in the 1930s by eliminating potential rivals. This process began with the infamous show trials of the mid-1930s, during which many of Stalin's former allies and others were accused of conspiring with foreign powers and/or Trotsky to overthrow the Soviet government. The show trials were a warm-up for Stalin's worst crime: the purges between 1936 and 1939 that killed hundreds of thousands—if not millions—of people. The vast majority of the victims were party members, many of whom were “Old Bolsheviks,” meaning that they were in the party before 1917. Many were leaders at the local level and within the Soviet military, and thus as a result of their removal a new generation of leaders emerged who were loyal to Stalin.

STALIN THE GENERALISSIMO

The purges ended as the threat of war loomed in Europe. In August 1939, Stalin shocked the world by signing a non-aggression treaty with Adolph Hitler (1889–1945), leader of Nazi Germany. The treaty specified that neither country would become involved in a broader war involving a “third party,” which cleared the way for Hitler's invasion of Poland in September 1939, thereby sparking World War II in Europe. However, Nazi Germany did not hold to the pact, and on 22 June 1941, invaded the Soviet Union, thereby bringing the country into the war on the side of the anti-Hitler alliance.

Stalin had trusted Hitler and was shocked by the German invasion. He ignored several warnings that an invasion was imminent, including a communication from British leader Winston Churchill (1874–1965), and as a result the USSR was not well prepared for the war when it began. The war was devastating for the USSR, with much of the country occupied by Nazi forces. The fighting took a far heavier toll in casualties for the Soviet Union than for any other combatant nation.

Nonetheless, the USSR and its allies prevailed in the conflict, and the turning point in the war was the battle for the city bearing the Soviet dictator's

name—Stalingrad. Between the autumn of 1942 and February 1943, Nazi forces fought a bloody battle with the Soviet Red Army for control of this city on the Volga River, the city Soviet military planners had designated as the place to make their stand. After the surrender of German troops at Stalingrad, the Red Army gradually began pushing Nazi forces toward the West, eventually taking Berlin itself to end the war in May 1945.

STALIN'S FINAL YEARS

The final years of Stalin's rule were characterized by the rise of the Cold War on the international scene and by economic reconstruction and political repression at home. The split with the USSR's Western allies, mainly the United States and Great Britain, began toward the end of World War II, with Stalin refusing to withdraw Soviet troops from the countries of Eastern Europe that they had liberated from German occupation.

Meanwhile, Stalin continued to impose his political will in the USSR through repression, although there was never a return to the mass-scale purges of the 1930s. Many Soviet soldiers returning from POW camps in Germany were exiled to Siberia, their loyalty questioned because they had not died for their country. Intellectuals and others fell victim to the *Zhdanovshchina* (1946–1948), a repressive campaign named for one of Stalin's closest aides, Andrei Zhdanov (1896–1948). Thousands were arrested and many executed in a purge of the Leningrad branch of the party during the “Leningrad Affair” (1948–1949).

Near the end of his reign, Stalin was particularly prone to paranoia. In January 1953, *Pravda* announced that a group of Kremlin doctors had been arrested in the so-called Doctor's Plot for allegedly conspiring to poison the country's leaders, including Stalin himself. Stalin may have intended the announcement as the first step toward another purge of the party's ranks, but before he could unleash such a plan he died of a brain hemorrhage on 5 March 1953, partly because his personal doctor of many years was under arrest and thus not on hand to treat him.

CONTROVERSIES

Josef Stalin, who had emerged from Russia's revolutionary movement to become one of history's most brutal dictators, remained a dominant figure in Soviet politics for decades after his death. His significance for the country's history was underscored when his successor, Nikita Khrushchev (1894–1971), attacked Stalin as a despot at the Twentieth Congress of the Communist Party of the Soviet Union in February 1956. Khrushchev's rule depended to a large degree on a policy of de-Stalinization—his attempt to limit the repressive aspects of the Stalinist system.

Khrushchev failed, however, and was replaced in 1964 by Leonid Brezhnev (1906–1982), who looked more favorably on Stalin's legacy. It was not until the rise of reformist Soviet leader Mikhail Gorbachev (1931–) in 1985 that Stalin's legacy was again criticized. Even after the collapse of the USSR in 1991 and now more than fifty years after the death of Stalin, his legacy and impact on world history remain a matter of controversy.

STONEWALL REBELLION

The Stonewall rebellion was a three-day period of rioting and protest that followed a 1969 police raid on New York City's Stonewall Inn, a bottle club (a bar without a liquor license where the patrons are expected to bring their own liquor) frequented by a gay clientele. A product and shaper of the 1960s counterculture, the rebellion marked a decisive moment in the unification, leadership, and self-determination of the gay rights movement.

THE RAID AND ITS AFTERMATH: THREE DAYS OF VIOLENT PROTEST

On the night that spanned 27–28 June 1969, eight representatives of New York City's Alcoholic Beverage Control Board raided a mafia-run bottle club at 51–53 Christopher Street in Greenwich Village. The club, part of the Stonewall Inn, was a seedy watering hole frequented by a young, gay, male clientele largely comprising street hustlers (prostitutes) and, to

a lesser degree, transvestites. As such, it was a frequent target of urban police for raids, extortion, and bribery. On that particular evening, much of the clientele was in mourning for the actress and gay icon Judy Garland, who had died a few days earlier; that fact made the raid and ensuing abuse seem all the more intolerable. The undercover officers claimed to be investigating violations of the Alcohol Control Laws. They may also have been enforcing a Prohibition-era dancing ban that, by the late 1960s, was invoked almost exclusively at gay bars. As police began rounding up the staff and demanding identification from patrons, the patrons initially reacted with saucy but cavalier defiance. Many of the nearly two hundred patrons flippantly sashayed their way outside to have their IDs checked. In doing so, they taunted the police with exhibitionist posturing then recognized as stereotypically gay, while a growing crowd of onlookers cheered. The mood of the crowd, then nearing four hundred, changed dramatically when a drag queen named Tammy Novak resisted being shoved into the paddy wagon and struck the arresting officer. Posturing and flippancy turned to tense expectation after that first blow. When a policeman struck Stormé Delarverie, a cross-dressed lesbian charged with violating a New York statute prohibiting “wearing clothing inappropriate to one’s gender” (Duberman 1993, 196), the enraged crowd began throwing cans and bottles.

Someone barricaded the inn door with a parking meter, locking many of the officers inside. The bar was nearly destroyed in their attempt to flee as fires were set ablaze. When backup police forces arrived, a full-scale riot engulfed Christopher Street and the adjacent Sheridan Square. At least twelve people were arrested, including a local folk singer, David Van Ronk. Like Van Ronk, many of the people arrested were local residents who, although not in the tavern during the raid, joined the fray when it spilled out into the streets. The next night, and again two nights later, crowds of angry protestors gathered amidst the rubble of the inn and confronted fresh waves of riot control officers. Rocks were thrown at cars and at police, fires were lit, protesters were assaulted and arrested, and anger smoldering for years blazed through the long-oppressed local gay community.

The media reaction to the Stonewall Rebellion was sadly indicative of the indifference that engendered its inception. While local papers such as the *Village Voice* publicized the riots, the mainstream media largely ignored them. This lack of coverage, particularly conspicuous amidst the 1960s culture of pervasive and well-publicized activism, was symptomatic of the marginalization of the gay and lesbian community.

Many of the left-wing radicals who were engaging in or writing about other battles against oppression ignored the plight of the gay and lesbian community, which made clear the community’s need to develop an autonomous, aggressive, visible voice and mission. The three days of violence and tension known as the Stonewall rebellion answered that need.

KEY PARTICIPANTS

Among the leaders of the Stonewall rebellion were Sylvia Rivera, Tammy Novak, Stormé Delarverie, Craig Rodwell, and Jim Fouratt.

Sylvia Rivera

Born Ray José Christian Rivera on 2 July 1951, Sylvia Rivera was a Puerto Rican-Venezuelan drag queen and street hustler. Raised by his grandmother in the Bronx, Rivera matured on the streets of Times Square and endured a long history of police brutality—reputed to include an attempted rape during incarceration. An unofficial leader of village street queens, Rivera was also involved in both the peace movement and the black liberation movement. However, as a male who dressed partially or completely in women’s clothing, he represented a particularly isolated strain of the oppressed minority. In the late 1960s, drag (when a man sometimes dresses as a woman) and transvestitism (when someone of either sex dresses as the opposite sex as part of his or her lifestyle) had yet to be associated with gender as performance (that is, a person “performing” a gender rather than being born as that gender). Therefore, men wearing clothing common to the other sex was often viewed by feminists as a trivialization of the gender constructs at the heart of the women’s libera-

tion movement (i.e., feminists felt that drag and transvestitism trivialized women's roles in society by suggesting that women were about nothing more than vanity and superficial trappings.) Even among gay rights activists, the drag queen persona was not recognized as political. Thus, it is not surprising that Rivera did not see himself as a champion of gay rights until after the Stonewall rebellion. Prior to Stonewall, rather than seeing his public identity as political, Rivera simply saw himself as a man who liked to dress up in women's clothing. Thus, as opposed to promoting Rivera as a leader within the rebellion, as some historians have done, one might propose that the rebellion's aftermath made a leader of Rivera. Rivera's shift from submission on the sidelines to active gay rights leadership epitomizes the scholar Bernard Bass's 1989 great events theory of leadership, which posits that an extraordinary event can bring to the surface an ordinary person's hidden potential for leadership.

Rivera was seventeen years of age and, he claims, visiting the Stonewall Inn for the first time when the rebellion broke out. Rivera claims that, rather than leading a charge against the police, as some historians have suggested, he watched most of the rioting from the sidelines. It wasn't until the following year that Rivera became truly active in the gay rights movement.

Previously against the idea of joining an organized front against gay oppression, Rivera was inspired by the new assertiveness of the post-Stonewall gay community. He joined the Gay Activists Alliance, a group that had formed in 1970 as a more radical, visible, autonomous successor of the Gay Liberation Front. He and other members of the GAA were arrested in February 1970 for petitioning on Forty-Second Street for a gay rights bill for New York City. Forced to testify before a judge, Rivera decided to do so in full drag, knowing he was forcing on the court a subculture that was shunned even within the wider gay community. His act of confrontation marked the onset of a lifelong fight against the harassment and obscurity of the transvestite community.

A few months later, his leadership stance reached another milestone. Rivera and an African-American

drag queen called Marsha Johnson attended a four-day NYU sit-in in order to protest the university's decision not to sponsor a gay dance. On the fourth day, when the police arrived to make arrests, the remaining protestors were primarily street queens who had no home life to prioritize. It was an ironic contrast to the invisibility transvestites typically experienced within the larger gay community. Recognizing the unique plight of the street queen, Rivera and Johnson founded STAR (Street Transvestite Action Revolutionaries), an organization designed to supporting transvestites and street hustlers financially and socially. As a founder and leader of this group, Rivera brought hope to and became the icon of a community that the Black Panther Huey Newton described as one of the United States' most oppressed.

Not only does Rivera's story provide a detailed account of the often highly romanticized Stonewall rebellion, it reveals the monumental impact the rebellion had on leadership models within the gay community. Active in support of the civil liberties of many other communities, Rivera only came to see the irony of her own invisibility as a drag queen when the rebellion led the gay rights movement to the streets in search of greater visibility. When Rivera died of cancer of the liver on 19 February 2002, the world mourned him as the individual who forced the gay community and the world to acknowledge the transvestite and homeless heroes and heroines in its midst.

Tammy Novak

Born in 1951, Tammy Novak, a friend of Sylvia Rivera, was a full-time transvestite and local performer who was selected for arrest during the first night of the Stonewall riots. When the arresting officer attempted to push him into the paddy wagon, Novak decided that his long history of submission to police brutality was at an end. Before a cheering crowd, Novak fought back. During the attempted arrest of Stormé Delarverie, in one of the more intense moments of the riots, Novak and a few other queens escaped the paddy wagon and were engulfed by the angry crowd.

In the aftermath of the riots, the blows Novak directed toward the arresting officer came to be seen as a metaphor for the end of passive submission to police brutality and the beginning of a newly radicalized quest for gay rights. It is often suggested that Novak was under the influence of narcotics when she confronted the arresting officer. If such suggestions are valid, this act of physical resistance may have been impulsive rather than calculated, and the fact that it inspired the crowd and changed the course of history may only have been coincidental. Nevertheless, the response was seen as the right action for the situation in question, which validates it as an excellent example of situational leadership.

Stormé Delarverie

Stormé Delarverie, a cross-dressing African-American lesbian, was born 24 December 1920 in New Orleans, Louisiana. In the 1950s and 1960s, he toured the country with the Jewel Box Revue, an infamous drag performance cabaret in which he was the sole male impersonator. On the night of the first Stonewall riot, Delarverie had just returned from a tour of New York City clubs when he saw a friend being herded into the paddy wagon by police. Delarverie pulled her friend away from the arresting officer, and when the officer tried to push her aside, struck what is reputed to be the blow that signaled the violent turning point of the protest. Long an outspoken and intelligent voice against oppression, Delarverie is likely to have joined the fray with full understanding both of the consequences for her own person and for the transvestite, African-American, and lesbian communities.

Two weeks later, Delarverie helped to form the Stonewall Veteran's Association, an organization initially composed of Stonewall rioters and focused on promoting the needs and visibility of the gay, lesbian, transgender, and bisexual communities and maintaining a strong public voice on their behalf. Known for her brash, direct, and plain manner of speaking, Delarverie later served as the SVA's chief of security, ambassador, and, from 1998 to 2000, vice president. In 2000, she received a gay lifetime achievement award from Senior Action in a Gay

Environment (SAGE). Like Sylvia Rivera, Delarverie is recognized for reconciling the needs of the transvestite community and those of the wider gay community. Like that of Tammy Novak, her act of physical resistance is often described as a deathblow to the passivity of the pre-Stonewall gay liberation movement. Because her actions in the rebellion marked neither the beginning nor the conclusion of her lifelong fight against oppression, and because her actions are likely to have been both calculated and thoughtful, Stormé Delarverie's leadership supports Bernard Bass's trait theory, which suggests that personality characteristics prepare a natural leader to master a moment of intense crisis.

Craig Rodwell

Gay rights activist Craig Rodwell was born in Chicago, Illinois, in 1940. In his late teens, he moved to New York City, where he became involved with the Mattachine Society (a group named for a traveling band of masked medieval players who performed ballads and skits featuring social causes), the East Coast Homophile Organizations (ECHO) consortium, and the North American Conference of Homophile Organizations (NACHO). In November 1967, he opened the Oscar Wilde Memorial Bookshop, New York City's first gay bookstore. Rodwell intended his shop to serve as "a clearinghouse for individuals and organizations supporting homosexual reform in New York State" (Duberman 1993, 164). It also served as a gathering place for an organization Rodwell soon founded—the Homophile Youth Movement in Neighborhoods (HYMN). Despite the varied leadership roles Rodwell played within the gay liberation movement, he was frustrated with the mild tactics and slow progress of the Mattachines and other gay rights organizations. Rodwell strove to take the movement in a more radical and more visible direction. Within the Mattachines, he achieved this goal by developing Mattachine Young Adults, a splinter group that infused the Mattachine Society with new members and young militant vigor. Within the gay rights movement as a whole, it took the Stonewall rebellion to inspire him to become a new sort of leader. Thus, Rodwell's

On the Streets during the Stonewall Rebellion

*In conjunction with the twenty-fifth anniversary of the Stonewall Rebellion in 1994, the Columbia University Libraries mounted an exhibition titled "Stonewall and Beyond: Lesbian and Gay Culture." (The online edition of the exhibit can be accessed at <http://www.columbia.edu/cu/lweb/eresources/exhibitions/sw25>.) The exhibit includes a transcription of the front-page story (excerpted below) by writer Lucian Truscott IV that appeared after Stonewall in *The Village Voice*, a weekly newspaper based in Greenwich Village.*

Sunday night was a time for watching and rapping. Gone were the "gay power" chants of Saturday, but not the new and open brand of exhibitionism. Steps, curbs, and the park provided props for what amounted to the Sunday fag follies as returning stars from the previous night's performances stopped by to close the show for the weekend.

It was slow going. Around 1 a.m. a non-helmeted version of the TPF [Tactical Police Force] arrived and made a controlled and very cool sweep of the area, getting everyone moving and out of the park. That put a damper on posing and primping, and as the last buses were leaving Jerseyward, the crowd grew thin. Allen Ginsberg and Taylor Mead walked by to see what was happening and were filled in on the previous evenings' activities by some of the gay activists. "Gay power! Isn't that great!" Allen said. "We're one of the largest minorities in the country—10 percent, you know. It's about time we did something to assert ourselves."

Ginsberg expressed a desire to visit the Stonewall—You know, I've never been in there—and ambled on down the

street, flashing peace signs and hailing the TPF. It was a relief and a kind of joy to see him on the street. He lent an extra umbrella of serenity to the scene with his laughter and quiet commentary on consciousness, "gay power" as a new movement, and the various implications of what had happened. I followed him into the Stonewall, where rock music blared from speakers all around a room that might have come right from a Hollywood set of a gay bar. He was immediately bouncing and dancing wherever he moved.

He left, and I walked east with him. Along the way he described how things used to be. "You know, the guys there were so beautiful—they've lost that wounded look that fags all had 10 years ago." It was the first time I had heard that crowd described as beautiful.

We reached Cooper Square, and as Ginsberg turned to head toward home, he waved and yelled, "Defend the fairies!" and bounced on across the square. He enjoyed the prospect of "gay power" and is probably working on a manifesto for the movement right now. Watch out. The liberation is under way.

leadership epitomizes both the trait model and the transformational model of leadership, which describes leaders who inspire their followers on a deeper level and to a greater degree than ordinary leaders. A natural and seasoned leader, Rodwell was prompted by a period of crisis and rigorous self-examination to become a great one.

Rodwell happened to be passing the Stonewall Inn when the first evening's riot broke out. In response, he circulated through the village community, attempting to entice media coverage and lead supporters of other leftist movements to the streets in support of gay rights. The indifference with which his call was answered led him to see that greater visibility was absolutely necessary to secure rights for the gay and lesbian community. Long a critic of mafia and police collusion, he used his own money

to print and distribute pamphlets exhorting the gay community to stop supporting exploitative businesses such as the Stonewall Inn and aggressively demanding political, financial, and social visibility.

Rodwell's break with previous forms of resistance was cemented by his public support of a lesbian couple's decision to hold hands during a July 4th march on Independence Hall. First held in 1964, the Independence Hall march was an annual tradition designed to remind the general population that homosexuals had yet to enjoy the freedoms due every American.

Rodwell is credited with leading the marches from 1964 to 1969. The previous marches had been characterized by careful avoidance of any behavior that would alienate critics of the gay rights movement. However, Stonewall had altered Rodwell's

perception of his role as founder and leader of the marches. He no longer believed that grace and decorum would win acceptance from the heterosexual population; on the contrary, he saw them as ineffective means of thwarting oppression that preserved the status quo. The march developed into the Christopher Street Liberation Day March, and Rodwell became its organizer. The first was a commemoration of the Stonewall rebellion; it took place on 28 June 1970. In 1984, the Heritage of Pride Committee replaced the Christopher Street Liberation Day Committee, and Christopher Street Liberation Day became known as Gay Pride Day. Although Craig Rodwell died of stomach cancer in 1993, his development as a leader and subsequent attack on gay invisibility gave birth to the gay community's premier spectacle and metaphor for pride, emergence, resistance, and acceptance.

Jim Fouratt

Born in 1950, Jim Fouratt was a New York advertising agent who supported various civil rights causes and underground news publications. Like Rodwell, he was not a patron of the Stonewall Inn, but he attempted to generate support for the Stonewall rioters by appealing to media sources and leftist friends and colleagues. The Stonewall rebellion taught Fouratt that the success of the gay rights movement would be contingent upon more radical forms of protest and less traditional forms of leadership than those employed at the time. Also like Rodwell, he recognized greater visibility was a necessary first step toward equality. However, Fouratt's focus was on gaining visibility by simultaneously connecting gay rights to, and maintaining autonomy within, the larger civil rights movement. As the scholar Martin Duberman suggests, Fouratt hoped to "incorporate ideas about gender parity and 'rotating leadership' from the burgeoning feminist movement" and tie them to "the long-standing struggle of the black movement against racism" (Duberman 1993, 206–207). Thus, it is not surprising that Fouratt led a small band of radical followers out of a 4 July 1969 meeting of the Mattachines to form the Gay Liberation Front. A radical organization designed to cham-

pion the rights of all oppressed cultures, the GLF spoke out for gay rights and wider cultural consciousness. In the process, it also alienated some gay activists by reportedly trivializing pre-Stonewall acts of resistance.

In the 1990s, Fouratt was severely criticized by the gay community that once embraced him as a leader and champion. For speaking out against the use of body and hormone manipulation as a means of gaining acceptance, as he saw it, from the heterosexual majority, Fouratt has been accused of directing derogatory remarks toward members of the transgender community. Despite his sometimes controversial and always strident views, Fouratt (now a writer and editor) can be credited with serving as a mediator between various civil rights groups and linking gay liberation to their values and mission. In his ability to inspire others and lead them to radical change, in his tendency perhaps to gauge such change as product rather than process, Jim Fouratt epitomizes charismatic and transformational models of leadership.

SIGNIFICANCE

Social historians frequently debate the Stonewall rebellion's relationship to a pre-1969 gay rights movement that was already gaining momentum, to avant-garde New York theater culture, and to the American hippie movement. Many critics view the Stonewall rebellion as the product and sustainer, rather than the shaper, of burgeoning gay visibility. Those critics remind us that 1961 heralded the first openly gay candidate's bid for public office, when José Sarria ran for city supervisor of San Francisco, as well as the first state's (Illinois) decriminalization of sodomy. We are reminded that gay rights organizations had been holding public demonstrations since 1965 and doing so with increasing frequency. Other historians champion the Stonewall rebellion as a singular point of self-definition and self-determination for the gay community. They maintain that the Stonewall riots marked the point at which gay and lesbian activists, most of whom were involved with other civil liberties movements, simultaneously achieved visibility and autonomy

within the ranks of other marginalized communities.

Whether as a shaping or sustaining event in the history of the gay rights movement, the Stonewall rebellion assuredly marked a turning point in the movement's visibility, autonomy, and self-definition. The Stonewall riots challenged the mainstream media's neglect of set gay lifestyles, culture, and institutions amid current dialogues and reevaluations of race, class, and gender. It was only natural that the Black Panthers' mantra, "Black power!" would morph into the gay rights mantra "Gay power!" but it took three days of unfettered rage to spark the shift from dignified and often passive resistance to visible, aggressive, radical engagement.

By the end of the summer of 1969, gay liberation organizations had become active in New York City and in Berkeley, Los Angeles, San Francisco, and San José (all in California). Within ten years, there were over three hundred gay rights organizations in operation, including organizations in Europe and Latin America. In spite of continuing progress, the fight for equality for gay, lesbian, bisexual, and transgender individuals is far from over. However, thanks to the Stonewall rebellion, today's leaders and activists engage in the struggle publicly and aggressively in the forefront of political, media, and academic arenas.

STRATEGIC LEADERSHIP

In 1975, Henry Mintzberg, a scholar in the field of management studies, conducted a study of what managers actually do. He concluded that managers performed ten different roles. These roles can be grouped into three categories. In the first of these categories

are the interpersonal roles of figurehead, leader, and liaison. In the second category are the informational roles of monitor, disseminator, and spokesman. Lastly are the roles associated with decision making—entrepreneur, disturbance handler, resource allocator, and negotiator. According to Mintzberg, it is in the role of the leader that the influence of the manager is most clearly seen. But what is leadership? In his 1998 book, *Leadership in Organizations*, the management scholar Gary Yukl provides eight different definitions. All eight agreed that leaders influence others above mere mechanical compliance with organizational directives, direct activities toward a shared goal, and give purpose and meaning to collective effort. Jerry Hunt, the editor of *Leadership Quarterly*, says that leadership of organizations—that is, strategic leadership—should be conceptualized differently from leadership in organizations, that is, lower-level, direct leadership. Likewise, the historian James MacGregor Burns, in his Pulitzer Prize-winning book *Leadership* (1978), suggests that it is important to distinguish between transactional theories of leadership (those that ultimately involve an exchange of promises of rewards for performance and focus on the task at hand) and transformational theories of leadership (which address the process of building commitment to the organization's mission, objectives, and strategies).

The organizational scholars Kim Boal and Robert Hooijberg refer to theories of leadership in organizations as supervisory theories of leadership, and to theories of leadership of organizations as strategic theories of leadership. According to Boal and Hooijberg, supervisory theories focus on person-oriented and task-oriented behaviors of leaders that provide guidance, support, and feedback to subordinates. Among the most popular and researched supervisory theories of leadership are Robert House's path-goal theory of leadership, Fred Fiedler's contingency theory of leadership, George Graen's leader-member exchange (LMX) theory of leadership, and the decision-making model of leadership developed by Victor Vroom and Phillip Yetton.

In contrast to transactional or supervisory theories of leadership are transformational or strategic leadership theories. Strategic leaders are people who

have overall responsibility for the organization. These include not only titular heads of the organization, like the chief executive officer (CEO), but also members of the top management team or dominant coalition. Strategic leaders are in a position to change or reinforce existing patterns of behavior in the organization as a whole. Philip Selznick says that strategic leadership is "marked by a concern for the evolution of organizations as a whole, including its changing aims and capabilities" (Selznick 1984, 5). Boal and Hooijberg suggest that activities associated with "strategic leadership include making strategic decisions; creating and communicating a vision of the future; developing organizational structures, processes, and controls; managing multiple constituencies; selecting and developing the next generation of leaders; sustaining an effective organizational culture; and infusing ethical value systems into an organization's culture" (Boal and Hooijberg 2000, 516).

LEADERSHIP TRAITS AND CAPACITIES

While early studies of leadership focused on selection started during World War I, the serious study of leadership behavior and the development of theories of leadership occurred after World War II. After reviewing studies conducted between 1949 and 1970, the psychologist Ralph Stogdill concluded:

The leader is characterized by a strong drive for responsibility and task completion, vigor and persistence in pursuit of goals, venturiveness and originality in problem solving, drive to exercise initiative in social situation, self-confidence and sense of personal identity, willingness to accept consequences of decision and action, readiness to absorb interpersonal stress, willingness to tolerate frustration and delay, ability to influence other persons' behavior, and capacity to structure social interaction systems to the purpose at hand. (Stogdill 1974, 81)

Most of the studies Stogdill reviewed were of leaders in organizations and not of leaders of organizations. Furthermore, the environment in which leadership occurred was relatively stable. Kathleen Eisenhardt, a professor of strategy at Stanford Uni-

versity, argues that the today's organizational environment is increasingly hyperturbulent. The new, hypercompetitive environment is characterized by increasing strategic discontinuities and disequilibrium conditions and by an increasing focus on innovation and continuous learning, a situation that has led Boal and Hooijberg to suggest that today's strategic leaders need the ability to learn, the ability to change, and managerial wisdom.

The Ability to Learn

The ability to learn is referred to as absorptive capacity. It involves the capacity to recognize new information, assimilate it, and apply it toward new ends. It is a continuous process in which new logical structures are added or deleted from memory. Learning can occur through studying, through doing, and through using. In 2003, the management scholar Jonathan Doh interviewed six major leadership and management scholars, asking them two simple questions: Can leadership be learned? and Can leadership be taught? They all agreed that leadership could be learned, and they agreed that leadership could be taught, though there were disagreements about the best way to do it. One scholar, Kim Cameron, said, "I would cite David Whetten who advocates a learning model consisting of five distinctive (although sometimes overlapping and integrated) learning activities: (1) skill preassessment, (2) skill learning (concepts and best practices), (3) skill analysis, (4) skill practice (with feedback), and (5) skill application" (quoted in Doh 2003, 62).

Other management scholars have suggested that absorptive capacity is enhanced when organizations encourage constant experimentation, a willingness to tolerate small failures, active listening, trust and support, and information exchange.

A person's degree of cognitive complexity describes how he or she constructs meaning or organizes information. Cognitively complex individuals use more categories and dimensions to discriminate among stimuli and see more commonalities among these categories or dimensions. They search for more information, and spend more time interpreting the information. Cognitive complexity,

therefore, is a key individual difference underlying absorptive capacity.

The Ability to Change

Adaptive capacity is the ability to change. Organizational success depends upon strategic flexibility, and an organization's strategic flexibility derives from the leaders at the top. Adaptive capacity requires that strategic leaders are cognitively and behaviorally complex.

Cognitively, strategic leaders may understand and see differences in their environment, yet this does not mean the leader possesses the broad repertoire of behaviors needed as situations change. Strategic leaders need not only the ability to perceive the needs and goals of a constituency, but also the ability to adjust their approach to action accordingly. Research supports the idea that leaders with a large behavioral repertoire are more effective, as is their organization.

Along with a flexible behavioral repertoire, strategic leaders need an understanding of their social environment, or what some have referred to as social intelligence—"ability to monitor one's own and other's feelings and emotions, to discriminate among them and to use this information to guide one's thinking and actions" (Salovey and Mayer 1990, 189). Social intelligence is not to be confused with IQ. Social intelligence is a key component of effective leadership because decision making, implementation of planned solutions, handling of emerging problems and organizational change are rarely emotion free. Effective social intelligence allows the strategic leader to develop and use social capital—the potential influence or increased understanding that is available to a leader solely as a function of the structure and characteristics of the social setting.

Managerial Wisdom

Managerial wisdom combines the properties of discernment and kairos time. Discernment, in this context, is the ability to perceive variation in the environment. Discernment has both a social and a nonsocial component. Social intelligence is a key factor underlying discernment in the interpersonal

The significant problems we face cannot be solved at the same level of thinking we were at when we created them.

—Albert Einstein

arena. In the nonsocial dimension of discernment, experience is a key dimension of discernment, as is cognitive capacity.

The concept of *kairos* time draws on the ancient Greek word *kairos*, “critical time” or “opportunity.” In a business context, use of *kairos* time involves the capacity to take the right action at a critical movement. The management scholar Robert Burgelman and Andy Grove, the president of Intel, suggest that there are important strategic inflection points in the life cycle of any organization. These strategic inflection points are caused by fundamental changes in industry dynamics and technologies, and they create an opportunity for strategic leaders to develop new visions of the future, craft new strategies, and move their organizations in new directions. “It is action, taken at the appropriate time and in the appropriate manner, along with discernment, that defines managerial wisdom” (Boal and Hooijberg 2000, 532).

STRATEGIC LEADERSHIP THEORY

The scholars Donald Hambrick and Paula Mason first suggested in 1984 that organizations are reflections of their top managers’ cognitions and values. This is so, they hypothesized, because the specific knowledge, experience, values, and preferences of top managers influence their assessment of the environment and thus the strategic choices they make. In 1996, Sidney Finkelstein and Hambrick expanded this earlier work into their strategic leadership theory (SLT). Strategic leadership theory examines how the psychological make-up of the top manager and the top management team influences information processing and strategic decision making. Hambrick and Finkelstein suggest that the amount of discretion enjoyed by top managers will moderate the relationship between their strategic choices and organizational outcomes. The greater the discretion, the more

impact the leader’s choices will have on organizational outcomes. In situations of high discretion, wide latitude in choices and actions exists. Thus, individual differences play a determining role in the course of action chosen.

Most of the research to date on SLT has focused on the demographic characteristics of the top management team and the relationship between those characteristics and such organizational outcomes and behaviors as return on equity, return on investment, return on assets, strategic reorientation or change, strategic persistence, affective and cognitive conflict, and even corporate illegal behavior. The focus on demographic characteristics as surrogates for underlying psychological processes has been highly criticized, however.

CHARISMATIC THEORIES

The German sociologist Max Weber is credited with introducing the term *charisma*, which is a Greek word that means “divinely inspired gift.” This charisma typically was evident to others and recognizable by them as God-inspired. Charisma, thus, is not inherent in the office of a leader, CEO, or anyone else on the organizational chart. Weber suggested that charisma is born when there is a social crisis, a leader with exceptional qualities emerges with a radical vision that provides a solution to the crisis, and that leader attracts followers who believe in the vision and perceive the leader to be extraordinary.

In 1977, Robert House became the first leadership scholar to present a fully developed theory of charismatic leadership. House suggested that charismatic leaders have profound and unusual effects on followers. Perceiving the leader’s beliefs as correct, followers accept and obey the leader willingly, feel affection toward the leader, are emotionally involved in the mission of the group, believe they can contribute to the success of the mission, and have high performance goals.

Since House’s original work, other leadership scholars have made important contributions to understanding charisma. Jay Conger and Rabin Kanungo focused on the conditions that would lead followers to attribute charisma to a leader. In their

“Attack by Stratagem” from *The Art of War* by Sun Tzu

Sun Tzu said: In the practical art of war, the best thing of all is to take the enemy's country whole and intact; to shatter and destroy it is not so good. So, too, it is better to capture an army entire than to destroy it, to capture a regiment, a detachment or a company entire than to destroy them.

Hence to fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting.

Thus the highest form of generalship is to baulk the enemy's plans; the next best is to prevent the junction of the enemy's forces; the next in order is to attack the enemy's army in the field; and the worst policy of all is to besiege walled cities.

The rule is, not to besiege walled cities if it can possibly be avoided.

The preparation of mantlets, movable shelters, and various implements of war, will take up three whole months; and the piling up of mounds over against the walls will take three months more.

The general, unable to control his irritation, will launch his men to the assault like swarming ants, with the result that one-third of his men are slain, while the town still remains untaken. Such are the disastrous effects of a siege.

Therefore the skilful leader subdues the enemy's troops without any fighting; he captures their cities without laying siege to them; he overthrows their kingdom without lengthy operations in the field.

With his forces intact he will dispute the mastery of the Empire, and thus, without losing a man, his triumph will be complete.

This is the method of attacking by stratagem.

It is the rule in war, if our forces are ten to the enemy's one, to surround him; if five to one, to attack him; if twice as numerous, to divide our army into two.

If equally matched, we can offer battle; if slightly inferior in numbers, we can avoid the enemy; if quite unequal in every way, we can flee from him.

Hence, though an obstinate fight may be made by a small force, in the end it must be captured by the larger force.

Now the general is the bulwark of the State: if the bulwark is complete at all points, the State will be strong; if the bulwark is defective, the State will be weak.

There are three ways in which a ruler can bring misfortune upon his army:—

(1) By commanding the army to advance or to retreat, being ignorant of the fact that it cannot obey. This is called hobbling the army.

(2) By attempting to govern an army in the same way as he administers a kingdom, being ignorant of the conditions which obtain in an army. This causes restlessness in the soldiers' minds.

(3) By employing the officers of his army without discrimination, through ignorance of the military principal of adaptation to circumstances. This shakes the confidence of the soldiers.

But when the army is restless and distrustful, trouble is sure to come from the other feudal princes. This is simply bringing anarchy into the army, and flinging victory away.

Thus we may know that there are five essentials for victory: (1) He will win who knows when to fight and when not to fight. (2) He will win who knows how to handle both superior and inferior forces. (3) He will win whose army is animated by the same spirit throughout all its ranks. (4) He will win who, prepared himself, waits to take the enemy unprepared. (5) He will win who has military capacity and is not interfered with by the sovereign. Victory lies in the knowledge of these five points.

Hence the saying: If you know the enemy and know yourself, you need not fear the result of a hundred battles. If you know yourself but not the enemy, for every victory gained you will also suffer a defeat. If you know neither the enemy nor yourself, you will succumb in every battle.

view, the leader must (1) possess a vision that is highly discrepant with the status quo; (2) act in unconventional ways to achieve the vision; (3) make self-sacrifices, take personal risks, and incur high cost to achieve the vision; (4) appear confident about their vision; and (5) use persuasive appeals. If those conditions are met, followers identify with the

leader, feel a desire to please, and internalize new values and beliefs.

In 1993, Boas Shamir, Robert House, and Michael Arthur extensively revised House's earlier work, focusing on explaining why leaders are able to influence followers profoundly and motivate them to transcend their personal interests for the sake of group.

They identified four conditions: personal identification with the leader, personal identification with the group, the embracement of new values, and enhanced self-esteem, self-efficacy, and group-efficacy resulting from the leader's expectations of high performance and expression of confidence in the ability of the followers to meet those expectations.

It is worth noting that while for Weber the emergence of charisma required a crisis, this is not the case for leadership scholars, who find that a crisis merely facilitates the emergence of charisma. In 1988, Kim Boal and John Bryson suggested there are two forms of charisma: visionary and crisis-responsive. Visionary charisma results from the leader creating a world that is intrinsically valid for the follower. In such a world, behaviors are linked to important core values, purposes, and meanings through the articulation of a vision and goals. On the other hand, the crisis-responsive form of charisma results when a leader creates a world that is extrinsically valid. Boal and Bryson suggest that during crises, the connections between behavior and outcomes become severed, and it is the role of the leader to reestablish them. Boal and Bryson believe that visionary charismatic leaders have longer-lived effects on followers than do crisis-responsive charismatic leaders. Recent experimental evidence supports this distinction.

TRANSFORMATIONAL THEORIES

While many scholars treat charismatic and transformational theories of leadership as if they were interchangeable, differences exist in terms of the level of analysis and choice of dependent variables. Charismatic theories tend to focus on individual-level outcomes such as affect, loyalty, identity, commitment, motivation, and performance, whereas transformational theories affect cognitive and causal maps, values, and strategies. Transformational theories do not require that leaders be charismatic to bring about dramatic change; rather, they focus on the process of building commitment to the organization's goals and empowering followers to accomplish these goals.

In 1985, the leadership scholar Bernard Bass (joined in subsequent works by Bruce Avolio) first

proposed a theory of transformational leadership that built on the earlier work of Burns. According to Bass, transactional theories of leadership are good, charismatic theories of leadership are better, but transformational theories of leadership are best. Transformational behaviors are aroused by idealized influence, which is to say charisma, individual consideration, inspirational motivation, and intellectual stimulation. During the 1980s and 1990s, many other leadership scholars contributed to the literature on transformational leadership. Summing up their contributions, it appears that transformational leaders change the culture and strategies of an organization by formulating a vision; developing commitment to it among people both inside and outside the organization who have a stake in the decisions, activities, and outcomes produced by the organization; implementing strategies in line with the vision; and, finally, embedding new values and assumptions in the culture and structure of the organization.

VISION

Vision plays a crucial role in both charismatic and transformational theories. The scholars Dennis Gioia and James Thomas (1996) say that it is in the leader's vision and in his or her articulation for change that the past, the present, and the potential future of the organization come together. Visions have a cognitive component that influences what information is sought and used. Visions also have an affective component, which underlies the motivation and commitment to subsequent implementation. The scholars Paul Nutt and Bob Backoff suggest that effective visions have innovative features, are future oriented enough to reveal opportunities with important consequences, connect future opportunities and outcomes to an organization's values and culture, and are achievable. Visions point to activities that people can undertake to move the organization toward a desirable future.

FUTURE RESEARCH

This entry has suggested that strategic leadership is embedded in an environment that is hypertextual,

characterized by discontinuities, disequilibrium, ambiguity, complexity, and information overload. Yet none of the theories relating to strategic leadership adequately take into account the role of the context in which leadership occurs. While there have been a few tentative suggestions, research has lagged on this crucial issue. If learning and change can take place during kairotic movements, is it possible to achieve charismatic and transformational effects during periods of stability? The theories mentioned have focused more on the traits of the followers than on the characteristics of the organization within which leadership behaviors take place. There have been few attempts to link these disparate theories or even to actually define strategic leadership. Toward that end, this chapter ends on a new definition of strategic leadership that attempts to reconcile the different theories and stimulate research.

Strategic leadership is a series of decisions and activities, both process-oriented and substantive in nature, through which, over time, the past, the present, and the future of the organization coalesce. Strategic leadership forges a bridge between the past, the present, and the future, by reaffirming core values and identity to ensure continuity and integrity as the organization struggles with known and unknown realities and possibilities. Strategic leadership develops, focuses, and enables an organization's structural, human, and social capital and capabilities to meet real-time opportunities and threats. Finally, strategic leadership makes sense of and gives meaning to environmental turbulence and ambiguity, and provides a vision and road map that allow an organization to evolve and innovate.

SUBSTITUTES FOR LEADERSHIP

Substitutes for leadership are an important extension of contingency theories of leadership. Contingency theories specify that effective leadership depends on matching specific leader behavior patterns with certain organizational situations. A specific leader behavior may result in high performance among followers or positive attitudes in one situation but not another. The effectiveness of a leader's behavior depends on such factors as the amount of power the leader possesses, the amount of training or experience followers have, the type of work they are facing, the work group they belong to, and other organizational and environmental factors. Much of the research on contingency theories has addressed two leader behavior patterns that emerged from early studies during the 1950s at Ohio State University. These patterns were called initiating structure (later termed directive leadership behavior) and consideration (later called supportive leadership behavior). Directive leadership behavior includes providing followers with task guidance and performance expectations; supportive leadership behavior involves showing personal concern and consideration for followers' feelings and welfare. Early theory building and research on substitutes for leadership addressed primarily these two behavior patterns.

LEADERSHIP NEUTRALIZERS

In 1977 and 1978, articles by leadership expert Steve Kerr and management scholar John Jermier extended the idea of contingency theories by suggesting that certain situational factors may completely neutralize and at times replace (substitute for) the impact of a leader's behavior on followers' performance and attitudes. Leadership neutralizers are those characteristics of followers, their work tasks, or their organization that decrease or eliminate the

effectiveness of the leaders' influence on followers. Followers who are extremely independent may resist a leader's influence, causing certain leader behaviors to have little or no effect. A high degree of spatial or geographic distance between a leader and followers can also decrease the leader's effectiveness. In 1990, scholars Jon Howell, David Bowen, Peter Dorfman, Steve Kerr, and Philip Podsakoff published "Substitutes for Leadership: Effective Alternatives to Ineffective Leadership," which included the example of Kinko's, a company that provides photocopying services at widely dispersed locations, to show how the neutralizing effect of geographic distance caused major leadership problems for regional managers. These regional managers were not able to provide new store managers with enough personal guidance, direction, and support through occasional visits, phone calls, and e-mail. The new store managers needed more continuous personal interaction, but that was not possible given the company's organizational structure.

In 2001, Howell and the management scholar Dan Costley described other examples of leadership neutralizers, including organizational reward systems based on union contracts or civil service policies that do not allow leaders to reward the best performers, or senior managers who habitually countermand or change effective directions by a lower-level manager and prevent that manager from having the influence he or she needs. Although neutralizers are often dysfunctional, and most leaders probably try to avoid or eliminate them, they can be useful in blocking the influence of an incompetent manager. If politics or seniority make it impossible to replace a problem manager, a neutralizer such as the removal of monetary rewards from the leader's discretion may be created to minimize the problems the problem manager causes.

LEADERSHIP SUBSTITUTES

Leadership substitutes include those characteristics of followers, their work, or their organization that make specific leader behaviors unnecessary by replacing the effects of that leader behavior on followers with effects of their own. Examples of this are

The Laws of Hammurabi on Substitutes for Military Service

- 26 A runner or a fisher who is commanded to go on a mission of the king has not gone or has hired a hireling and sends (him as) his substitute, that runner or fisher shall be put to death; his hired (substitute) shall take and keep his house.
- 32 If either a runner or a fisher, who is taken captive on a mission of the king (and) a merchant has ransomed him and so has enabled him to regain his city, has the means for ransoming (himself) in his house, he shall himself ransom himself; if there are not the means of ransoming him to his house, he shall be ransomed out of (the resources of) the temple of his city; if there are not the means of ransoming him in the temple of his city; the palace shall ransom him. His field, his plantation, and his house shall not be given for his ransom.
- 33 If a recruiting officer or adjutant levies men exempt from service or has accepted and dispatches a hired man as a substitute for a mission of the king, that recruiting officer or adjutant shall be put to death.

found today in many organizations that emphasize self-managed work teams. In a team-based organization, much of the guidance and task clarity inexperienced employees require is provided by other team members rather than by the formal hierarchical leader. Many self-managed teams develop the task expertise and knowledge through team dynamics and are able to operate with little task-related input from their formally designated leader. Air traffic controllers who help land jet fighters on nuclear aircraft carriers and at major airports rely on the work experience, continuous training, and close working relationships with their coworkers rather than on orders from their managers to redirect operations when necessary. The closely knit, cohesive community of air traffic controllers can respond more quickly to emergencies without interference from above and may actually ignore directives from a manager who is removed from the front line of action. Organiza-

tions often recognize this and change the name of the hierarchical leader to “facilitator” or “coach” to reflect the team’s task competence and the leader’s new duties as a trainer, team consultant, and boundary spanner.

A similar leadership substitute can be found in organizations that employ highly trained professionals doing technical work, such as software development or management consulting. These professionals’ tasks often require extensive knowledge and expertise that is only obtainable from long periods of specialized education and training. Such employees frequently know much more about the specifics of their work than their hierarchical leader does. Consequently they learn to rely not on their hierarchical leader but on their own judgment (or that of other professional colleagues) in making task-related decisions.

A final type of leadership substitute is the satisfaction felt by people whose work is intrinsically fulfilling, as is the case with many human service jobs such as counseling or social work or with highly creative jobs such as scriptwriting. In these fields, the satisfaction that comes from performing the job may lessen the need for supportive behaviors from the hierarchical leader.

IMPORTANCE OF LEADERSHIP SUBSTITUTES AND NEUTRALIZERS

Some leaders may view leadership substitutes as a threat to their position and status as a leader. But strong leaders understand that effective results can be attained when guidance and good feelings come from sources other than themselves. These leaders often create leadership substitutes to ensure that their followers will receive the task guidance, incentives, and interpersonal support they need without having to depend entirely on the leader. When strong substitutes are present, the hierarchical leader may have less opportunity and less need to display certain leader behaviors. This has several important implications for organizations that employ leadership substitutes.

When leaders create important substitutes for leadership, their followers are less dependent on the leader, which can free up the leader to focus on other

important activities, such as developing innovative reward systems, providing participation opportunities for followers, or designing training experiences to increase followers’ job competence. Leadership substitutes also give leaders more options for influencing followers. Rather than directly affecting followers’ behavior by giving instructions for task performance, leaders can create self-managed teams in which experienced coworkers provide advice and guidance to one another. This may be more acceptable in a team-based organization structure. Alternatively, the leader may provide developmental experiences that increase individual followers’ task capabilities and alleviate their need for guidance. This approach will likely be appealing to followers who are highly individualistic.

Substitutes also provide stable influences on employee performance and attitudes when leaders are absent or are transferred, which often occurs in the military or in organizations with geographically dispersed operations. With important leadership substitutes in effect, leaders can often increase their span of control; they can be absent and still be assured that followers have adequate sources of guidance, and satisfaction available when needed. Despite the important benefits of leadership substitutes, it must be emphasized that they do not abolish the entire leadership function. Consider the following analogy:

Just as the conductor of a symphony orchestra should not and cannot be eliminated, he or she need not worry about directing individual symphony members on instrumental techniques or musical structure. The musical score and the high level of training and commitment of professional musicians obviate the need for the conductor to spend time on these matters; instead, the conductor creates a unique expression of the music from an ensemble of competent individuals. (Howell et al. 1990, 37)

In their classic article, Kerr and Jermier noted that “In most organizations . . . substitutes exist for some leader activities but not for others” (Kerr and Jermier 1978, 400). It is a misperception that leadership substitutes make all leadership insignificant. In fact, creating substitutes is an act of leadership. When organizations experience leadership problems, creating

substitutes can be a valuable alternative to retraining or replacing the leader. In 2002, the leadership scholar Gary Yukl suggested that changing the situation to make leadership more effective by removing neutralizers or creating substitutes may be the best long-term solution to many leadership problems.

RECENT DEVELOPMENTS

In 1986, Howell, Dorfman, and Kerr added another concept to the theory of leadership substitutes and neutralizers. They defined leadership enhancers, which are attributes of employees, tasks, and organizations that amplify a leader's effects on employees. An organization can enhance a leader's influence by making additional resources available to the leader or by giving the leader more discretion over the distribution of existing resources. Giving a leader access to key information and prestigious people at high levels may also enhance the leader's effects on followers, as followers will connect the leader with important sources of power and information and will perceive the leader as having considerable influence with those at the top. Giving a leader important organizational responsibilities or building the leader's image through in-house publications may also amplify a leader's perceived expertise and consequent influence with followers. Creating leadership enhancers can be a valuable strategy for new leaders or in situations where followers are slow to respond to influence attempts. Research on leadership substitutes has also been extended to participative, rewarding, and charismatic leadership. Substitutes and enhancers have been found for all leader behavior patterns.

A controversy exists among leadership researchers about the importance of leadership substitutes in comparison to traditional leader influence processes. However, studies in the early 1990s showed that leadership substitutes often predict more variance in follower attitudes and role perceptions than a combination of frequently studied leader behaviors. This finding shows the importance of leadership substitutes. Much of the controversy is attributable to the varying statistical procedures used by different researchers. In 2003, researchers addressed this statistical issue and showed that much research on lead-

ership substitutes has most likely been underestimating the prevalence of leadership substitutes.

Many current management programs emphasize non-leader sources of influence on followers by creating several types of leadership substitutes. Self-management programs and self-directed work teams incorporate substitutes by increasing workers' ability, training, and knowledge, and by providing non-leader sources of performance feedback within closely knit cohesive work teams. Total quality management programs use continuous training to increase workers' knowledge and ability to act on their own; these programs also incorporate regular performance feedback from customers and the work task. Telecommuting and computerized workplaces utilize groupware and computer networks to place multiple non-leader sources of information and job guidance at the fingertips of workers. These management programs effectively empower workers to address job issues and problems without relying directly on their formal leader.

Other organizational characteristics and trends have been described as substitutes, neutralizers, or enhancers. The MacDonaldization of society, a trend toward complete specification of processes and procedures, can act as a substitute for a leader's direction. In some organizations, the organizational culture and shared values can alleviate the need for much direction from the leader. Subordinate cynicism can act as a neutralizer by creating suspicion and distrust among followers to the extent that they are less responsive to the leader's requests. And the leader's rank and expertise can enhance the leader's impact on followers.

Leadership is clearly a potent and robust social process that exercises strong influence on followers' attitudes, behavior, and performance. An understanding of leadership substitutes, neutralizers, and enhancers can be critical for correctly diagnosing the type of leader behavior needed in a particular situation. If neutralizers are ignored, they can interfere with leaders' attempts to influence followers. If substitutes are created, leaders will have more time to devote to other important activities. Because enhancers result in greater leadership influence, they help leaders be more effective and more efficient with

their time. Strategies for creating and modifying substitutes, neutralizers, and enhancers should be part of all leaders' repertoire as they create direct and indirect strategies for eliciting the best possible performance from their followers and their organizations.

SUEZ CRISIS OF 1956

The leadership issues raised by the 2003 U.S.-led war on Iraq are strikingly similar to those raised by the Suez War in 1956. In both cases, government leaders misled their countries about the reality of the situation in order to obtain support for a unilateral military intervention in a sovereign Arab state. By exaggerating the threat posed by the Arab state and ignoring the values and concerns of the public, of other government officials, and of the United Nations, these leaders brought their countries into war. For Britain, the Suez War marked an abrupt decline in its influence throughout the Middle East and made party leaders aware that the state could no longer act on a global scale. As Charles Johnston, governor in Aden in 1961, wrote: "One of the worst things that has happened to us since the war, and most particularly since Suez, is that in the Middle East we have lost confidence in our own ability to deal with situations. . . . Our Suez fiasco seems, in effect, to have left a far deeper mark on ourselves than on the Arabs" (Ashton 1997). Warning Britain against joining the U.S.-led invasion of Iraq, British Liberal Democrat Charles Kennedy told *The Guardian*: "God forbid we go down unilateral routes. Look at the history books and it is called Suez" (10 January 2003).

THE SUEZ WAR

During the summer of 1956, Egyptian President Gamal Abdel Nasser transferred the operation and assets of the Suez Canal from nonresident corporate owners to local state control; many of the dispossessed, who were then living in Britain and France, pressured their elected leaders to protect their finan-

cial interests. A few weeks later, on 29 October, Israeli forces under Minister of Defense David Ben-Gurion invaded the Sinai Peninsula and headed for the Canal Zone, complaining of cross-border skirmishes. Two days after the Israeli invasion, planes from the British and French air forces bombed Egyptian airfields and British and French troops landed in Port Said, so that by the beginning of November, Britain and France occupied a third of the Canal Zone.

British and French political leaders justified these actions as necessary to impose demilitarized zones on both sides of the canal. British Prime Minister Anthony Eden explained that British and French troops had entered Egypt as peacemakers to separate Israel's aggressive military from Egypt's defensive forces. Eden told the House of Commons on 20 December 1956: "There were no plans got together (with Israel) to attack Egypt" (Noorani 2001). This assertion was revealed to have been a falsehood when the British Public Records Office opened its files on the Suez crisis on 2 January 1987. It was also revealed after the war that Israeli aggression against Egypt was as much a response to the fear of Egypt joining forces with other Arab states as to the uncoordinated border skirmishes it had originally cited.

THE UNILATERAL ROUTE

What the British Public Records Office revealed when it opened its files on the Suez crisis was that British, French, and Israeli representatives had attended secret meetings in Sèvres near Paris during which a protocol binding to military action against Egypt was signed. While all British copies of the protocol were secretly burned, a protest note from Sir Gladwyn Jebb, British Ambassador in Paris to the Foreign Secretary, survived. Excluded from the discussions, Jebb wrote: "I do not complain, but it is, I believe, a novel arrangement for diplomatic business of the highest importance to be conducted by the Principals without any official being present, even to take a note." Sir Donald Logan was the only person from the British side to have attended the Sèvres discussions.

Eden's unilateral leadership style reached beyond the House of Commons—to the public and to the

This photo taken on 19 November 1965 shows sunken ships blocking the Suez Canal at Port Said.

British Civil Service—with consequences that ultimately harmed both him and his country. British Labour MP George Galloway, recalling the demonstration against the Suez invasion on London's Trafalgar Square, said the square was "overflowing with people (*Palestine Chronicle*, Noorani, op. cit). And an editorial in the *Belfast Telegraph* credits this crowd with swinging "Labour leadership away from a national unity stance and [undermining] Anthony Eden's leadership" (2003, July 27). This crowd's disappointment in Eden's leadership was expressed worldwide. U.S. presidential candidate Eisenhower told voters on the campaign trail: "We cannot subscribe to one law for the weak, another for the strong; one law for those opposing us, another for those allied with us. There can only be one law, or there shall be no peace" (Macek 2001, para. 10).

Even during such public discussions of the invasion, the professional honor of British civil servants prohibited them from sharing doubts about national policy with print journalists and broadcast media. According to Peter Hennessey: "Suez was the greatest professional trauma experienced by the British Civil Service before or since 1956. Yet discipline held. Nobody flouted the rules or spilled the beans. In its way it was a remarkable tribute to the ethos of the profession. Would it be the same today in identical

circumstances? I doubt it. Most would bite their lips and think of England but not all—and it only takes one mouth to blow a whistle” (Kelly and Gorst 1990). However, one civil servant later explained, “In those days civil servants were not expected to betray their Ministers and I certainly did not feel this, no . . . I think the idea that a civil servant should get up and say ‘the Minister is not telling the truth’ any time that this is likely to happen is a recipe for chaos and certainly for disloyalty” (<http://www.whitehouse.gov/news/releases/2003/01/20030923-4.html>).

This silence extended to leaders’ private fallibilities, which researchers include as a factor that escalated the crisis to military conflict. For example, Eden responded so strongly to the Egyptian president that his subordinates confidentially noted their concern for his balanced judgment. Eden asked BBC viewers: “Who will chain the ‘mad dog’ of Cairo?” and his assistant, Evelyn Shuckborough, noted Eden’s intense response to Nasser, seeking not the Egyptian leader’s confinement but his assassination (Shuckborough 1987). Researchers suggest medical origins for such intense mood swings. After a botched operation to remove his gall bladder in 1953, Eden was plagued by liver malfunction and suffered from symptoms including fever, headache, jaundice, irritability, and general malaise (Thorpe 2003); he was said to have needed amphetamines to work during the Suez crisis of 1956.

THE UNITED NATIONS PATH

Eden’s misrepresentations to the House of Commons show how far he had taken Britain from its commitment to the infant United Nations. The collusion between Britain, France, and Israel was in total defiance of the United Nations Charter, which all three nations had signed in 1947. The charter banned the first use of force in Article 2: “All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any State.”

However, the United Nations was ultimately successful in halting the conflict; the new nations in the General Assembly were able to block the former colonial powers represented on the Security Council. The United States and the Soviet Union sponsored a

cease-fire resolution in the Security Council, but Great Britain and France successfully vetoed this call to halt military activity against Egypt. Resolution 377 provides that if there is a “threat to peace, breach of the peace, or act of aggression” and the permanent members of the Security Council cannot agree on a single course of action, the General Assembly can meet immediately and recommend collective measures to “maintain or restore international peace and security.” A General Assembly resolution under this uniting-for-peace procedure was successful in requiring an immediate cease-fire and the full withdrawal of the invading forces in the name of the United Nations.

U.S. President Dwight D. Eisenhower reinforced deliberations within the United Nations with administrative procedures in other multilateral institutions. Immediately following Britain’s veto in the U.N. Security Council, the U.S. representative to the International Monetary Fund likewise vetoed a routine loan to Britain to support the pound sterling’s value on international markets. Judging devaluation graver than the threat to Suez Canal shareholders’ investments, Britain accepted the General Assembly’s call for a cease-fire. United Nations Secretary General Dag Hammarskjöld then formed a multinational Emergency Force (UNEF) to monitor the cease-fire between the Egyptian and Israeli armies (Kunz 1991).

PARALLELS WITH IRAQ

Like the Suez War, which stemmed in part from the perception that a sovereign Arab state had the potential to invade its neighbors, the war on Iraq started with the perception that a particular state possessed military potential not available to its neighbors. Just as civil servants’ pacifist and universalist values were compromised by British military intervention during Suez, British and U.S. civil servants’ appeals to procedures of verification were compromised by some national leaders’ sense of political expediency. And, just as national leaders’ statements misled the public before the Suez War, the statements of national leaders concerning Iraq’s violations of international agreements were not independently verified or substantiated.

The U.S.-led war on Iraq in 2003 was justified by the allegation that Iraqi President Saddam Hussein sponsored programs to develop weapons of mass destruction. These allegations began with U.S. President George Bush's address to the United Nations on 12 September 2002 in which he asserted that "Iraq is expanding and improving facilities that were used for the production of biological weapons" and were repeated in the State of the Union address of 28 January 2003 in which he revealed "our intelligence officials estimate that Saddam Hussein had the materials to produce as much as 5000 tons of Sarin, Mustard, and VX nerve agents" (<http://www.whitehouse.gov/news/releases/2003/01/20030128-19.html>).

However, while some of Eden's subordinates mourned the Suez invasion as compromising international ideals, Bush's subordinates have been even more explicit than their head of state in asserting that the United States must invade Iraq because it possesses weapons of mass destruction. On 9 January 2003, Bush's press secretary told reporters, "We know for a fact that there are weapons there," and Secretary of Defense Donald Rumsfeld identified weapons of mass destruction "in the area around Tikrit and Baghdad" during an interview on ABC TV on 30 March 2003. The invasion of Iraq by the United States and Great Britain resulted in a military occupation which after several months failed to yield the alleged chemical or biological weapons or weapons of mass destruction.

Journalists disseminate suggestions that leaders on both sides of the North Atlantic have misled the public. *New York Times* columnist Paul Krugman wrote that if the claim that Iraq's former president posed an imminent threat "was fraudulent, the selling of the war is arguably the worst political scandal in American political history" (3 June 2003). Iain Duncan Smith, Conservative leader in Britain's Parliament, accused Prime Minister Tony Blair and his communications chief Alistair Campbell of "creating a culture of deceit and spin at the heart of government" (17 July 2003).

During the Suez crisis, two leading institutions of the post-World War II order (the United Nations Security Council and General Assembly) initiated steps to stop the aggressors, but before the 2003 war

on Iraq, the UN proved itself unable to maintain international peace and security. Two informal factors hindered the Security Council's exercise of the authority granted in its charter. The first was the conubial collusion between the United States and Britain and the second was the sibling dissonance between Britain and the continental members of the European Union. Together, these meant that France vetoed any attempts to use force against Iraq, and the United States and Britain vetoed all attempts to prohibit the use of force against Iraq.

Britain's entrance into the Suez hostilities, ostensibly to protect Egypt from Israeli aggression, appeared to compromise global postwar visions for political and military administration. The feeling of betrayal on the part of many Britons was grounded in their hope for a new postwar order under the United Nations and its charter. Many who had lived through the World War II expected postwar international relations to be governed by a collective appeal to law rather than by the initiative of individual heads of state. This hope was ultimately realized when the United Nations General Assembly called for an end to the Suez invasion. Although the General Assembly did not serve this function for the war on Iraq, many people in the world still hope for an end to unilateral leadership.

SÜLEYMAN THE MAGNIFICENT (1494–1566)

Sultan Süleyman I of the Ottoman Empire

In Europe, which trembled at the appearance of his armies more than once, Sultan Süleyman I was known as “the Magnificent.” Throughout the Islamic world, he was better known as *Kanuni*, “the Law-giver,” and was believed to embody the highest principles of justice and harmony in a ruler. No model of leadership to be emulated today, Süleyman dealt harshly with those who opposed him and was obsessed with his ambition to become “Lord of the Age.” By force of will and his many accomplishments, Süleyman nevertheless deserves consideration as one of the great leaders of history.

As sultan of the Ottoman Empire, Süleyman pursued a policy of militant Islam and imperialism. Süleyman’s deep faith in God and upbringing in the warrior traditions of the Ottoman Turks required that he should someday lead armies in battle, defeat infidels in the *dar al-harb* (“abode of war”), and give law and provide order for the faithful in the *dar al-Islam* (“abode of Islam”) (Goffman, p. 46). Christian rulers like Francis I (1515–1547) or Charles V (1516–1556) were similarly inspired by dynastic, crusading agendas, escalating the level of violence along the fault lines of Christian and Islamic civilizations.

As a young man, Süleyman spent little time with his father, Selim the Grim (1470–1520), but his father’s driving energy must have influenced the young man. Selim had advanced the Ottoman Empire past the frontiers of Kurdish and Turkmen potentates into what is now northern Iraq. He had crushed the Mamlukes in Egypt, and that country, along with Syria and the Hijaz part of the Arabian Peninsula that included the holy cities of Mecca and Medina, fell under the sway of the Ottomans. Selim the Grim was a man who “enjoyed nothing more than homicide,” and indeed a callous regard for

human life would permeate the rule of Süleyman as well. (Bridge, p. 27) In his father’s blood-drenched shadow, Süleyman spent most of his youth in the care of his remarkable mother. Hafiza Khatoun, a woman of “great charm and intelligence,” brought up her son, teaching him the manners of sultan and man. Known for her pride and aloofness as much as her elegance and wit, Süleyman would later exhibit these same traits (Bridge, p. 28).

ASCENSION OF SÜLEYMAN

The Ottoman Empire was not a hereditary monarchy like most in Christendom, and it was not elective. Ottoman sultans maintained celibate marriages with their wives in order to prevent outside challenges to dynastic succession. They chose their procreative partners instead from the many concubines that lived in the imperial harem. Sexual relations were restricted to one male offspring per concubine, and fratricide, the practice in which a newly enthroned monarch killed his brothers and their descendants, was institutionalized. It was not certain that Süleyman would follow in his father’s footsteps, until his father chose him to the succession. Selim the Grim would not leave such a matter to chance; he had secured his own power by murdering his oldest brothers and their five children: the latter, strangled to death by deaf and mute assassins, were within earshot of Selim who heard their cries for mercy and their gasps from an adjoining room. The youngest to die was five years old. When Selim died of cancer at fifty-four in September 1520, he had cleared the way for the ascension of Süleyman.

The young sultan appeared to have been confident, proud, and forceful. He was described as “tall but wiry and of delicate complexion,” and “his neck is a little too long, his face thin, and his nose aquiline.” With “a light moustache and small beard and a pleasant expression,” according to the ambassador from Venice, Süleyman rewarded his supporters by showering them with gifts (Bridge, p. 29). He punished those who had not shown loyalty during his ascension. He gave clemency to those rotting away in prisons for alleged crimes against his father, and most important, he rewarded his bodyguards,

called the janissaries, with liberal cash disbursements. The young sultan soon demonstrated other talents aside from political acumen: He wrote poetry that is considered among the best in Islam, and he commissioned the architect Sinan to beautify the Ottoman capital of Istanbul, constructing the magnificent Süleymaniye mosque in Istanbul behind which the bodies of Roxelanna and Süleyman were later entombed. In life, the two lived in the magnificent Topkapi palace that housed the imperial harem and the Ottoman government.

Slaves staffed the entire machine of Sultan Süleyman's government. The most powerful slave official was the grand vizier, the former falconer named Ibrahim Pasha. "Handsome" and "highly intelligent," he spoke Turkish, Greek, Persian, and Italian. Sultan and vizier became extremely close, and some suggest they even had a homosexual affair. Regardless, Ibrahim served as Süleyman's closest advisor, his alter ego, until he was caught signing orders as Sultan instead of using the less prestigious title of *Serasker* or commander-in-chief (Bridge, p. 127). Süleyman summoned Ibrahim to dine at the Topkapi palace, and there he was strangled to death in the spring of 1536 on Süleyman's orders.

None of the Sultan's other court slaves became as powerful as Ibrahim, although the sultan's favorite concubine, Roxelanna, would replace the grand vizier in influence after his death. Süleyman even broke with tradition and married his beloved Roxelanna, who bore him several sons. Süleyman established a dangerous precedent, involving the imperial harem in politics, and later sultans, less willful than Süleyman, would fall victim to palace intrigue. Yet despite indulging in favorites and breaking with tradition, Süleyman himself never brooked any challenge to his own authority.

Slaves also filled the ranks of the sultan's household troops—the dreaded janissaries. These men, supplied by *devshirme*, or a levy upon the children of Christians, were brutally gathered each year in the Balkans, and marched off to Constantinople where they were raised as Muslims. The best among these Christian slaves, such as the sultan's Grand Vizier Ibrahim, became court officials. The less capable became janissaries. Experts with the deadly composite

bow and firearms, fierce and ill disciplined, the janissaries needed constant employment in war lest they turn on the sultan's subjects from sheer boredom.

HOLY WARS

War in the name of religion was at the heart of Süleyman's view of the world and his understanding of what it meant to be leader of the Ottoman state and its people. *Gaza* or holy war would not only content the janissaries, but also win the favor of God. Süleyman's subjects shared in the belief that God would approve of such warfare and reward the devout with prosperity. Janissaries and other soldiers, such as the *siphais*, free, land-owning cavalry, looked forward to rich plunder, and, if death befell them, a shortcut to paradise. Imperialist wars backed by God's favor were expected of Süleyman, and he did not disappoint (Bridge, p. 48).

The first major test for Süleyman as leader of the faithful was provided by the constant bloodshed of small-scale raids and reprisals that raged back and forth on the border between the Ottoman Empire and the Christian kingdom of Hungary. On 16 February 1521, Süleyman marched out of Constantinople at the head of an army that numbered over 100,000 men. Forty Turkish galleons plied up the Danube River in support, and 10,000 wagons brought powder and shot. War parties of *akinji*, Turkish light cavalry, fanned out into the countryside, visiting death and destruction upon it. At Saba, in Serbia, the Christian defenders fought to the last man. Seeing himself in his diary as an instrument of God, Süleyman recorded events in the third person, referring to himself as the "sultan" or simply as "Süleyman":

On July 7 came news of the capture of Saba?; a hundred heads of the soldiers of the garrison, who had been unable to escape across the Save, were brought to the camp. The next day these heads were stuck on pikes alongside the road to the camp. (Bridge, p. 48)

Süleyman probably intended these grisly human signposts, rotting in the heat of July, to stiffen the ranks of his own troops, and the sultan's troops performed well, as he exhorted them. They captured the Serbian capital of Belgrade. When the defenders of

The Ambassador to Constantinople's Impression of Süleyman I

You will probably wish me to describe the impression which Soleiman [Suleyman] made upon me. He is beginning to feel the weight of years, but his dignity of demeanour and his general physical appearance are worthy of the ruler of so vast an empire. He has always been frugal and temperate, and was so even in his youth, when he might have erred without incurring blame in the eyes of the Turks. Even in his earlier years he did not indulge in wine or in those unnatural vices to which the Turks are often addicted. Even his bitterest critics can find nothing more serious to allege against him than his undue submission to his wife and its result in his somewhat precipitate action in putting Mustapha to death, which is generally imputed to her employment of love-potions and incantations. It is generally agreed that, ever since he promoted her to the rank of his lawful wife, he has possessed no concubines, although there is no law to prevent his doing so. He is a strict guardian of his religion and its ceremonies, being not less desirous of upholding his faith than of extending his dominions. For his age—he has almost reached his sixtieth year—he enjoys quite good health, though his bad complexion may be due to some hidden malady; and indeed it is generally believed that he has an incurable ulcer or gangrene on his leg. This defect of complexion he remedies by painting his face with a coating of red powder, when he wishes departing ambassadors to take with them a strong impression of his good health; for he fancies that it contributes to inspire greater fear in foreign potentates if they think that he is well and strong. I noticed a clear indication of this practice on the present occasion; for his appearance when he received me in the final audience was very different from that which he presented when he gave me an interview on my arrival.

this town surrendered, they were massacred. It is not known if Süleyman approved of this atrocity or not. On 18 August 1521, the cathedral of Belgrade was consecrated as a mosque. Even as the great victory was celebrated at home, and the residents of Istanbul praised him, Süleyman planned yet further conquests.

More often than not, over the next forty-five years, the sultan would be found at the head of his armies, doing what his followers expected by conquering the lands of infidels and heretics. In 1522, after five months of siege, Süleyman subdued Rhodes, the Christian base of piracy in the Mediterranean. Four years later, Süleyman led a major invasion of the kingdom of Hungary, fighting the decisive battle of Mohács on 29 August in which

the Hungarian king Louis II (1516–1526) was slain and his countrymen utterly defeated. Between 1528 and 1529, Süleyman led his victorious armies into the heart of the Christian defenses of central Europe and lay siege to the Habsburg capital of Vienna. Far from their depots of supplies, and confronted by unexpectedly stiff resistance, this marked the furthest extent of Süleyman's advance into Christendom. The siege of Vienna failed, but in 1529 when Süleyman withdrew his forces to Istanbul, he was undeterred in his dream to become "Lord of the Age." Over three more decades of violence would follow, but not always against Christians.

The Ottoman Empire's other great rival in the world was the Safavid Empire of Persia, ruled by Shah Tahmasp I (1524–1576). The Safavids had adopted Shi'ism Islam as the state religion of Iran, and their messianic mission clashed with the orthodox Sunni Islam of the Ottoman Empire. Süleyman invaded Safavid territory, and in 1534 captured Baghdad and most of Iraq. Southern Yemen fell in 1539, and in 1546 the sultan's armies captured Basra, in southern Iraq. Yet, the Shi'ite tribes in the south of Iraq stubbornly resisted the Ottomans, and the region was never completely subdued. Meanwhile, renewed war with the Habsburgs continued to preoccupy Süleyman to the end of his reign. In 1565, Süleyman unleashed his forces on the Christian stronghold of Malta, the ensuing siege failed disastrously at the cost of between 20,000 and 30,000 men. The next year, Süleyman died obstinately leading an Ottoman army in yet another campaign against the Habsburgs in Hungary.

The most famous and lasting achievement of the reign of Sultan Süleyman, the creation of a single law code for the entire Ottoman Empire that recon-

ciled divine law with the law of sultans, was actually not the work of Sultan Süleyman himself, but rather a legal expert named Ebu's-Su'ud Efendi.

In the decades that followed the fall of Constantinople in 1454, and throughout the early sixteenth century, Islamic legal experts slowly codified the laws of sultans. By the time of Süleyman, this work was nearly completed under the direction of the Albanian Grand Vizier Lutfi Pasha (1540–1541), and sultanic laws had been mostly regularized and replaced the many local laws and customs of the Ottoman Empire (Goffman, p. 76). The great problem though was how to reconcile divine law with the law code of the sultan. Ebu's-Su'ud Efendi, who deserved real credit as “the Law-Giver,” finally accomplished this. As *seyhülislam* or superior judge, Ebu's-Su'ud used his authority to bring “the laws of mankind into harmony with divine law.” Ebu's-Su'ud integrated Islamic law and sultanic law by using the power of the *fetva*, “a proclamation issued by a qualified religious authority in response to questions of law and usage” (Goffman, p. 76). Ebu's-Su'ud also added the title of *caliph*, meaning leader of the entire Islamic community, to the many titles of Süleyman, making the sultan the ultimate religious authority for all Muslims.

In Islamic tradition, Süleyman or *Kanuni* will always be remembered as the “second Solomon,” a monarch who embodied a perfect concept of justice, *'adale*, according to the Qur'an, and his reign marked a period of almost perfect justice and harmony for those of the Islamic faith. Yet, in fairness, bloodshed and suffering also marked his reign, the result of Süleyman's narcissistic ambitions and the faith-based desires of his supporters.

SYSTEMS THEORY

Systems theory attempts to explain the behavior of all systems, whether in the natural world, such as weather systems, or created by humans, such as computer systems. Systems theory also applies to social systems. Social systems include the most complex social structures, such as bureaucracies or nation-states, as well as simple relationships between two people. From this perspective, leadership takes place within systems, whether businesses, public agencies, or communities, which means that systems theory promises to explain the context for leadership. Leadership itself can be thought of as a system created among the participants. In other words, leadership can be viewed both as a system itself and as a phenomenon that is present within systems. Accordingly, a general understanding of systems should improve a person's understanding of leadership at two levels.

EMERGENCE OF SYSTEMS THEORY

Systems theory coalesced around the time of World War II (1939–1945), when scholars from different areas of study came together to devise a General Systems Theory (or GST). The GST, widely credited to the biologist Ludwig von Bertalanffy (1901–1972), was intended to describe every conceivable system, from the simplest and smallest to the most complex and largest. Social scientists such as Talcott Parsons and Kenneth Boulding worked on the GST as it pertained to social systems.

Today, more sophisticated versions of the GST have taken its place. Mastery of systems theory today requires advanced mathematics and a technical vocabulary, yet for social systems it begins simply, with the definition of a social system as a grouping of people who work together interdependently for a common purpose. A team leader at a factory forms a system with his or her teammates, and their system exists within the factory (which is another system),

It is important that an aim never be defined in terms of activity or methods. It must always relate directly to how life is better for everyone . . . The aim of the system must be clear to everyone in the system. The aim must include plans for the future. The aim is a value judgment.

—W. Edwards Deming

which exists within the larger system of the corporation, and so forth.

SYSTEMS AS STRUCTURES, PROCESSES, AND PATTERNS

Systems theory offers three interrelated approaches to the study of leadership. None of these approaches standing alone will suffice. First is the static, or structural, approach, which, like a freeze-frame, shows who belongs to the system and how they relate to one another. The second approach shows the sequence of events they experience. This is the dynamic approach. The third approach reveals patterns of organization over time in the configuration of relationships. The three approaches are not in competition; systems theory, like leadership studies, includes all of them. Nonetheless, it is helpful to keep them conceptually distinct.

Structures

For every social system, there is a structure comprising people in some kind of relationship with one another. The system's environment comprises those variables that may affect its state. What distinguishes the system from its environment is that in the system interdependent elements share a common purpose. The most important facets of a system's structure are the elements (the participants), their relationships, and the system's environment. In the past, structural analysis tended to isolate parts for study and intervention, to the exclusion of the whole, but systems theory looks at the whole system, not just the component parts. In the words of the physicist and systems analyst Fritjof Capra, "the nature of the whole

is always different from the mere sum of its parts" (Capra 1996, 29). If the participants in a social system share this holistic orientation, they are more likely to cooperate with one another and to avoid wasteful competition, as they will think of themselves as part of a web or network rather than as elements in a production line or chain of command.

Processes

It would be misleading to analyze the structure of a system without acknowledging the fact that systems change. Rarely, if ever, do they approach equilibrium. That is why Jay Forrester, one of the first scientists to analyze how systems behave, has emphasized system dynamics as a critical approach to management education. Social systems are now understood to be autopoietic, which means they constantly recreate themselves and vary their structures accordingly. What matters from this point of view is the structure of change, frequently depicted in a flow diagram. The most important facets of a system's dynamics are input, throughput, output, and feedback. Input describes the conditions at any given moment in time. Throughput describes the action that take place, based on the apparent input. Output describes the future results of those actions. Finally, feedback returns information to the system about its performance. By this means, the system regulates itself.

Patterns

The processes of organization establish an identity for the system, giving it a degree of permanence despite the presence of change. A social system maintains a relatively stable pattern through which processes flow, like water through a river bed. These patterns among the processes include cyclical patterns that represent stability and developmental patterns that represent evolution. Of particular interest to cybernetics are the patterns of communication flow.

An Illustration

It may be helpful at this point to illustrate how these approaches apply to leadership as a system. Leader-

ship includes people, both leader and the led, who work together for the sake of some common purpose, such as producing widgets. Thus, leadership fits the definition of a system. The input for leadership would be such things as the traits of individual participants (including their knowledge, skills, and abilities), the nature of the relationships among the participants, the nature of the purpose they share, and the context within which leadership will have to take place. Throughput would be the interaction among the participants, primarily their communication and the actions they take in response to that communication. If the common purpose, as given above, is the production of widgets, then widgets are the system's output. Feedback would include data on the quantity and quality of widgets produced, as well as such metrics as elapsed time to make them and customer satisfaction.

SYSTEMS DIAGNOSIS

Participants in a system share a purpose, otherwise it would not be a system. Participants take actions intended to fulfill that purpose, however vain or ambiguous it may be. Later, as they acquire feedback about the results of their actions, they may detect a gap or discrepancy if, for some reason, those actions did not achieve their intended results. This discrepancy calls for an investigation, which systems theory can aid. Leaders in particular must measure progress, detect discrepancies, devise strategies to close the gaps, and scan the environment for new ideas and information—always with the end in mind.

It is important to recognize that throughput can be based on inaccurate information about present conditions as well as inaccurate information about the likely consequences of a course of action. If a manager were operating under a mistaken perception that market demand for labor had increased, he or she might award employees large raises in order to retain them in the perceived competitive market. That would be a mistake about present conditions. But a manager might also award large raises because he or she believed that the raises would motivate employees to work harder in the next quarter. If that belief were mistaken, then it would be a mistake about the

likely consequences of a course of action. In fact, it is often the case that when firms think they are appraising employees, they are actually appraising the effect of the system on the employees, which is completely different. W. Edwards Deming (1900–1993), a champion of quality control and an important advocate for systems theory in management education, once estimated that 94 percent of the problems management encounters turn out to be problems with the system and not with individual participants. Making matters worse, feedback may only be returned to the system weeks, months, or even years later—assuming that the manager has not overlooked or ignored available feedback, which also happens. Even when feedback is timely and accurate, the manager can draw mistaken conclusions from it. For example, a manager might infer from increased sales (feedback) that a new marketing campaign was successful, when in fact what really happened was that products sold earlier had simply reached their obsolescence, requiring their owners to replace them. Systems theory would prepare leaders for these potential problems.

When they encounter problems, leaders often search for direct causes. They want to know why something happened so they can fix it. Systems theory reveals that approach to be inadequate for a number of reasons. Alleviating one problem may have unintended consequences that systems theory would have been able to anticipate. Without a systems perspective, leaders may intervene at suboptimal points, wasting resources and increasing frustration. Sometimes, the cure is worse than the disease—a correction at one point in the system may create worse problems elsewhere in the system, or short-term solutions may lead to long-term degradation. Most troubling of all, in many instances the solution turns out to be the cause of the problem in the first place, leading to a vicious cycle, as when declines in productivity lead to worker layoffs, which in turn result in greater productivity declines and the perceived need for more layoffs.

A diagnosis from the systems perspective tries to look behind symptoms for their root causes. In one famous example, an oil leak on the shop floor was found to drip from new (and faulty) machinery that

had been purchased from the lowest bidder because the purchasing agent was rewarded as a matter of policy for reducing the initial cost of purchase. An effort had been made to optimize a part of the system at the expense of the whole. Systems theory enables a leader to interpret feedback and trace its significance back through the system. This requires perpetual learning: An autopoietic system has to learn in order to survive, let alone thrive, in a changing environment. Clearly, then, it is important for leaders to be learning continually. Peter Senge, the author of *The Learning Organization* (1990), teaches social systems how to become learning organizations, precisely for this reason. A system has to monitor itself and its circumstances routinely and draw lessons about how to respond. Leaders need the right input.

THREE SYSTEMS TASKS FOR LEADERS

There are three tasks for a leader. A leader can work within a system to get things done, work to alter a system for the sake of its purpose, or alter the purpose of the system altogether.

Leaders operating a system take action within the constraints of that system in order to achieve the system's purpose. They use and manage processes already in place. An understanding of systems theory would presumably help them perform. Just because some writers claim that systems can be self-organizing, that does not eliminate the need for leadership. As Deming insisted, complex systems require leadership of some kind. Leaders function best to the extent they work with the dynamics inherent in the system. Periodically, for the sake of homeostasis, a leader will have to counterbalance the system's tendencies. Even that action presupposes acceptance of the purpose and the basic design of the system.

Sometimes the system itself must change. When leaders bring about this change, they are said to be designing a new system. Leaders designing a system alter the existing processes in order to increase the likelihood of achieving the system's purpose. Most importantly, a system designer seeks to optimize the system as a whole rather than trying to optimize its parts separately. The output at any stage in the system is supposed to match the input requirements of

the next. Toward this end, a leader has to bring participants into alignment. At this level, therefore, a leader accepts the purpose but not the existing design of the system.

Systems theory had little to say about the third leadership task until the introduction of the concept of "soft systems," which are systems at risk of losing their purpose. When problems arise and the system's purpose has been thrown into doubt, the system becomes especially vulnerable and "soft." For autopoietic systems, that is a good thing, since uncertainty stimulates innovation. This is why system designers no longer seek to create ideal systems. Instead, they seek to create systems that are effective at ideal seeking. This is an important distinction. When people are no longer sure what to think or why they should even bother to participate, they seek a purpose. They reach what is known as a bifurcation point. The hero in this crisis, the leader who performs the third leadership task, has to free himself or herself from the existing system to do this. The leader has to be capable of occupying a place conceptually outside of a system; he or she must bring the organization and the environment into alignment, whether that means changing the organization, the environment, or both. At this level, a leader accepts neither the preexisting purpose nor the design of the current system.

CONTROVERSIES SURROUNDING SYSTEMS THEORY

Systems theory is not without its detractors. Some critics notice that systems theory tends to omit references to ethics. The philosopher and sociologist Jürgen Habermas has worried, for example, that social systems offer no point of critique from outside of the system. Habermas described systems thinking as a "methodological antihumanism" because it avoids looking at human beings as unique subjects engaging in private or intersubjective activities. Instead, they are defined exclusively by the system. His debates with the sociologist Niklas Luhmann on these and other issues greatly influenced the development of systems theory.

Forrester concedes that systems thinking can appear to deny free will, because a certain situation

is seen as ineluctably eliciting a certain response from participants. What he actually claimed, however, was merely that in making free choices people are largely responsive to their experiences of the world in predictable ways. Rather than deny free will, systems theory, properly understood, promises to remove systemic shackles on individual freedom by enabling participants to see the ways in which a system constrains their efforts, as well as how a different system could enhance their efforts to achieve a goal. For example, suppose a worker walks twenty feet to retrieve a part every three minutes. By closing that distance to three feet—assuming that is feasible—the worker saves time and effort. This increases the rate at which things get done, which in turn improves the chances of institutional reward for the worker (such as raises, profits, or simply getting to finish the job sooner and go home early).

Fritjof Capra has explained that unlike bodily organs, which are elements of bodily systems, human elements in social systems are autonomous. They are also frequently the beneficiaries of their own systems, which also require a degree of creativity from their participants. Thus, there is reason to dispute the argument that systems theory denies free will or diminishes the individual human being.

One of the strengths of systems thinking is its focus on the whole as well as its parts. For critics, this is also a weakness, because it diminishes the importance of each individual and risks turning leaders away from being attentive to their followers. Supporters of systems thinking argue in rejoinder that a thorough understanding of systems incorporates both perspectives in what is known as the hermeneutic circle: The parts are known by the whole and the whole is known by the parts.

Systems theory had to become abstract to include social systems in the same category with physical systems—a controversial move in itself—and at such a level of abstraction leaders have to remember their actual predicaments, the real people and stubborn facts of a situation. Concepts detached from experience encourage what the mathematician and philosopher Alfred North Whitehead (1861–1947) called the Fallacy of Misplaced Concreteness—the attribution of concrete reality to abstract concepts.

Some fear that systems theory implies social engineering, by which a technical elite determines the organization of communities. From a systems perspective, the ideal of democratic governance and follower participation seems inefficient and even counterproductive—although not all systems theorists agree with that assessment. Some theorists, such as Margaret Wheatley, argue that systems theory encourages leaders to trust and involve their followers more, not less. They argue the principle of equifinality, which states that there can be different ways to achieve the same end, so that once participants accept the purpose and values of the system and hold themselves accountable to it, they should be turned loose to find their own best way to perform.

There is a tension between participants' desire to have a say in the organization of their lives and the necessity for technical expertise when it comes to making good decisions about complex systems. Even Habermas agrees that social systems have become so complex that they require steering mechanisms to regulate them. He believes that leadership is a weak steering mechanism, but others disagree. The engineer John Warfield believes that leadership is one of the seven critical factors for design success.

Adherents and critics of systems theory have noticed points of conflict with politics, morality, religion, and aesthetics. To the extent leadership can be understood from each of these perspectives, systems theory poses a challenge, because it aspires to comprehend all human behavior in one grand image. To the extent that politics, morality, religion, and aesthetics (or other realms of understanding) claim exclusive understanding of leadership, the emerging discipline of leadership studies will be divided.

System theorists have tried to unlock the laws of nature despite protests that systems have no concrete reality, being mere conceptualizations of the real world. Those conceptualizations rely heavily on metaphors, which in turn come with their own baggage. Thinking about social groupings as systems might be helpful, critics concede, but there is no reason to make the assumption that systems theory alone is true.

Systems theory can be difficult to master and has generated a large and complicated set of terms and

principles, but its difficulty should not be held against it, since the merit of a theory lies not in how easy it is to learn, but rather in how easy it makes the task of understanding experience. Understanding how systems work improves one's ability to predict the consequences of proposed change. Despite numerous objections, therefore, systems theory remains a vivid and powerful tool both for leaders and for those studying leadership.

TACIT KNOWLEDGE

How is it that Bill Gates, a college dropout, could become the leader of the most successful software company in the world? What events enabled George Patton, who did so poorly at West Point that he had to repeat a year, to become a four-star general and a combat hero of World War II? Why is it that newly graduated M.B.A. students or newly commissioned military officers have such difficulty influencing others, despite years of formal education and leadership training?

As most successful adults know, the knowledge required to accomplish their goals in life is not limited to the information presented in course readings and passed on by lecturers. Such information provides a foundation for technical skills and shared academic or professional vocabulary, but it does not capture the action-oriented, “tacit” knowledge that guides the way an individual frames and solves everyday problems. Because leadership success is a function of the effective solution of countless everyday problems, an understanding of tacit knowledge and how it is acquired is critical to understanding good leadership. Such an understanding would also inform how better leadership can be developed.

WHAT IS TACIT KNOWLEDGE?

Tacit knowledge is often difficult to verbalize by those who possess it and so typically is not discussed

in textbooks or procedural manuals. Yet, tacit knowledge provides those who possess it with a complex set of links between problem situations having particular characteristics and the actions that should be taken given these characteristics. Consider, for example, an army lieutenant who must take charge of a platoon that has undergone several recent personnel changes and whose previous lieutenant was ineffective. Establishing himself or herself as the leader of the platoon requires not only that the lieutenant have read army leadership doctrine and passed leadership courses, but also that the lieutenant know how to establish and implement quickly a standard operating procedure for the platoon. The lieutenant must also determine how to maintain discipline where previous efforts have failed and when to ask others for advice.

Tacit knowledge informs the ways in which a person deals with everyday interpersonal interactions so that constructive relationships with others can be formed and maintained. Tacit knowledge also informs the ways in which a person must deal with the everyday tasks he or she must manage in order to be a successful student, employee, or citizen. Achieving the self-understanding and personal discipline used to manage one’s own emotional and psychological reactions also requires tacit knowledge. Tacit knowledge, as it relates to tasks, others, and the self, can be applied to accomplishing both short-term and long-term goals.

Tacit knowledge is acquired through the interac-

tion of three cognitive processes that occur when a person encounters a new situation: selective encoding, selective combination, and selective comparison. In every new situation, a person is faced with countless pieces of information, from both the environment and memories of previous experiences. Selective encoding involves sifting through these pieces of information in order to determine which among them is important for solving a particular problem or handling a particular situation. Selective combination involves the integration of this information into meaningful patterns that allow the individual to recognize sets of information that co-occur with successful actions. Selective comparison involves the comparison of new information to previously acquired information in order to continuously update one's knowledge structure. The coordination of these processes allows for the application of tacit knowledge to everyday problem solving in many diverse domains, including leadership.

For example, after a subordinate unsuccessfully heads up a particular type of business unit, a business executive might use selective encoding to identify the personal characteristics associated with the subordinate's failure. This executive might then use selective combination to determine that certain types of characteristics, such as innovative thinking, should be matched not just to certain types of business units (e.g., research and development) but also to units of a particular size (e.g., six to ten people). For the next promotion situation, the executive would use selective comparison to evaluate the characteristics of the current business unit and the traits of the job candidate relative to those of past successful situations in order to make an informed decision.

HOW IS TACIT KNOWLEDGE LINKED TO LEADERSHIP SUCCESS?

In order to link tacit knowledge to leadership success, one must first capture it from expert leaders and then transform it into an assessment. The relation between performance on the assessment and indicators of leadership success (e.g., leadership effectiveness ratings, management simulations) can then be examined. To capture tacit knowledge, experts are

asked to recall events through which they learned something valuable, something they had not been taught in their formal education. The experts describe the problem situation they faced, the action they took, and the lesson they learned from the experience. The tacit knowledge assessments based on the experts' stories can have one of two formats: a situational judgment test or a case study.

For a situational judgment test, the experts' problem situation descriptions are condensed into a brief paragraph accompanied by a series of possible solution strategies. The examinee is asked to rate each of the solution strategies for its expected effectiveness in handling the problem. A series of problem situations and their possible solutions is assembled into what is called a "tacit knowledge inventory." Tacit knowledge inventories have been created to examine management performance, executive leadership, and military leadership, as well as performance in other non-leadership domains (e.g., sales, academic psychology, college life).

For a case study, the experts' problem situation descriptions are expanded into in-depth accounts of a complex problem situation. Possible solution strategies are not provided. Instead, examinees are asked to provide a strategy for handling the problem situation. They are also asked to provide their interpretation of the problem situation, to state their goal in handling the problem, and to identify any obstacles they foresee to getting the problem solved. Case studies recently have been created to examine management performance and military leadership.

Performance on tacit knowledge inventories and case studies can be determined using several methods, but each method results in a score that represents the degree to which an individual's responses conform to those provided by a group of nominated experts. Through the use of assessments such as those described in the previous two paragraphs, tacit knowledge has demonstrated a substantial relation to ratings of leadership effectiveness, to salary, to the quality of company in which a manager is employed, and to performance on management simulations. Although management and leadership are considered separate functions in the leadership literature, it is generally acknowledged that these functions are

interrelated. Both leaders and managers serve both functions throughout their careers.

Tacit knowledge case studies have also provided a tool for investigating the process of acquiring tacit knowledge and how it can be improved. Research on this process and its enhancement is currently ongoing and is a promising approach to understanding how leaders learn from their experiences. A better understanding of this process has implications for improving formal leadership education. Informed by research findings, coursework could be modified such that students are taught not only facts and ideas relevant to leadership but also ways to continue learning once outside of the classroom.

TACIT KNOWLEDGE AND THEORIES OF LEADERSHIP

Decades of interest in accounting for individual differences in leadership success have led to the identification of numerous traits and behaviors characteristic of successful leaders. Tacit knowledge fits in well with several of the personal characteristics of successful leaders identified in the literature, such as social skill, emotional intelligence, complex thinking, and wisdom. The acquisition of tacit knowledge in social and emotional domains gives rise to the interpersonal skills and self-management skills that stem from social and emotional intelligence. As tacit knowledge accumulates, the complexity of an individual's knowledge structure grows, allowing for the finer discriminations among problem characteristics and more flexible behavioral repertoires. Tacit knowledge also serves as a foundation for wise thinking, in which the multiple stakeholders (people with an interest in an outcome) in a problem situation must be taken into consideration in order to arrive at problem solutions that achieve a common good. A noteworthy link between the constructs listed earlier is that all represent an attempt to account for leadership performance beyond the account that can already be made by intelligence and personality as traditionally defined. Accounting for leadership success apart from conventional intelligence becomes especially important in making hiring and promotion decisions in which most candidates have similar high levels of intelligence.

Because the construct (theoretical entity) of tacit knowledge represents a knowledge-based approach to understanding leadership success, it provides an important bridge between behavior-based accounts of leadership success and actual leadership performance. Current theories that describe the behaviors of successful leaders provide useful insights into what one must do in order to communicate vision and influence others. However, these theories do not provide an explanation for how these behaviors are enacted in the workplace to achieve success. When is a leader's behavior effectively empowering his or her followers, as opposed to appeasing them? How does a leader provide individualized consideration in competitive group settings without invoking feelings of jealousy? Tacit knowledge allows the leader to make fine distinctions between situational conditions in which the same behaviors can have strikingly different outcomes.

LOOKING AHEAD

The recent shift away from conceptualizing leadership solely as something passed down from the top of an organization has opened the door to exploring the acquisition and spread of tacit knowledge in organizations. When lower-ranking members of an organization are described as "contributors to organizational vision and success," more informal forms of knowledge become recognized as critical to performance at all levels. One promising avenue of research in this area involves developing an understanding of how tacit knowledge can be made explicit and shared in informal ways, such as online communities of practice. A second avenue involves discovering methods through which one's ability to acquire tacit knowledge directly from on-the-job leadership experiences can be enhanced. Due to advancements in simulation technology and mathematical models of human performance, future methods for creating tacit knowledge assessments could be developed in which procuring tacit knowledge from experts does not require verbalization and the resulting assessments present problem situations that unfold in real time.

The continued exploration of tacit knowledge, its acquisition, and its use in everyday problem solving

will further the understanding and development of successful leadership already accomplished by other means. The construct of tacit knowledge has important overlaps with several other concepts in the leadership literature, and it links accounts of successful leader behaviors with actual leadership performance. As such, tacit knowledge will remain an important aspect of scholarly leadership research.

TASK LEADERSHIP

When between one-third and one-half of recent scholarly leadership articles are devoted to transformational leadership (where followers' goals are broadened and elevated and confidence is gained to go beyond expectations) or charismatic leadership (where leaders by force of their personal abilities are capable of having a profound and extraordinary effect on followers), one wonders whatever happened to plain, unadorned leadership directed toward task completion. The answer is that such leadership, here called "task leadership," is alive and well and still serves as an irreplaceable leadership component.

The notion of task leadership, first hinted at by social psychologists Kurt Lewin, Ronald Lippitt, and R. K. White (1939), gained dramatic impetus shortly after World War II. A new breed of leadership researchers began to break away from earlier "great man" (a leader as a person endowed with unique qualities that capture the imagination of the masses) and trait approaches (what traits make certain leaders "better" or more effective than others, or what traits make one person, rather than another, emerge as a leader?). Disappointed in their ability to clearly answer the trait questions, researchers decided to look at leadership behaviors in the hope that such behaviors would show clearer results.

Almost concurrently, research teams at The University of Michigan, Ohio State University, and the University of Southern California (USC) converged on similar kinds of leadership dimensions. At Michigan, these dimensions were called "production ("job") centered" and "employee centered" (Likert 1961, Ch. 2). At Ohio State, they were called "initiating structure" and "consideration" (Bass 1990, Ch. 24). At USC, the dimensions comprised such task

aspects as advanced planning, job competence, and lack of pressure for production and consideration-oriented dimensions such as job helpfulness, lack of arbitrariness, sympathy, and the like.

These studies were based on survey questionnaires. However, at roughly the same time, some laboratory experiments were conducted at Harvard, and a research program ultimately using a variety of research methods was started in Japan (Misumi and Peterson, 1985). The Harvard work used small groups comprised students to identify emergent leaders (those arising from the situation) and identified “task-centered” and “socio-emotional” leadership dimensions. The Japanese mixed research methods studies identified performance behaviors (forming and reaching group goals [P]) and (group) maintenance behaviors (preserving group social stability [M]), summarized as the “PM” approach.

Essentially, all of this work tapped dimensions related, in one way or another, to those concerned with group and individual goals and means to achieve the goals (task leadership) and those concerned with maintaining friendly, supportive relations with followers (relationship leadership).

REFINING TASK LEADERSHIP AND RELATIONSHIP LEADERSHIP DIMENSIONS

Much of the literature covering aspects of task leadership and relationship leadership has tended to treat them broadly or at a relatively high level of abstraction. That is, researchers have emphasized overall task leadership and overall relationship leadership. The problem is that the components making up each of these dimensions have tended not to be emphasized much, and therefore dimensions with the same or similar labels have often differed from study to study. Thus, it has been difficult to compare the results of one study with another in terms of follower satisfaction, performance, and so forth.

Business school professors Gary Yukl, Angela Gordon, and Tom Taber (2002) consider this issue in what they call a “hierarchical taxonomy” (system of classification) with three meta-categories (general, broadly defined), two of which focus on task leadership and relationship leadership aspects. After con-

siderable conceptual and empirical work, the authors split task behavior into three more specific behaviors or components tapping short-term planning, clarification of task objectives, and role expectations, and split relations into five specific behaviors ranging from support and encouragement to empowerment. The authors conclude from their conceptual and empirical work that different components are likely to be important in different situations and, in most cases, should be emphasized in lieu of the broader-gauge, more abstract task leadership and relationship dimensions.

Business school and public administration professors Robert Quinn and his associates (Quinn, 1988; Quinn, Faerman, Thompson, and McGrath, 2003) developed a model with eight dimensions, which they call “roles.” Four of these roles can be readily classified as task functions and two as relationship functions as outlined here:

Task

Producer: Seeks closure and motivates behaviors that will lead to completion of a unit’s task

Director: Emphasizes vision, setting and clarifying goals, and establishes clear expectations

Coordinator: Maintains structure, schedules, coordinates, and problem solves, and sees that rules and standards are met

Monitor: Collects and distributes information, does performance checks, and provides a sense of stability and continuity

Relationship

Facilitator: Builds teams, encourages expression of ideas, seeks consensus, and negotiates compromise

Mentor: Is aware of individual needs, listens actively, is fair, and attempts to encourage individual development

These roles, in a manner similar to the work of Yukl and associates (2002), can be considered as more specific aspects of higher-level task leadership and relationship leadership. In turn, Quinn and associates break these roles down still more specifically with what they term “competencies”—three per role.

COMBINATIONS OF TASK LEADERSHIP AND RELATIONSHIP LEADERSHIP

From their inception and regardless of their level of specificity, task leadership and relationship leadership have been considered in combination, as in the Michigan, Ohio State, and other early research. The conceptual and empirical separateness of the Ohio State consideration and initiating structure research dimensions and social psychologist Robert Bales's task-centered and socio-emotional dimensions led to work arguing that the "best" leaders need to be high, or at least above the mean, on both dimensions.

Illustratively, psychologists Robert Blake and Jane Mouton (1964) designed a nine-point grid with concern for production (task behaviors) on the horizontal axis and concern for people (relationship behaviors) on the vertical axis. These grid combinations ranged from a 1/1 "impoverished" style (low concern for production and people) to a 9/9 "team management" style (high on both dimensions). Similarly, a number of studies used the Ohio State consideration and initiating structures research dimensions, Bales's dimensions, or Japanese research psychologist Jyuji Misumi's dimensions to conclude that a high/high combination of the two dimensions was better than other combinations.

A key question in all this is how the relationship between the two dimensions operates. In the "additive" model, the assumption is that task and relationship aspects have independent additive effects on followers. For example, task leadership would be relevant only for accomplishing a task, or relationship leadership would be relevant only for supportive aspects. However, these behaviors would not be relevant for both aspects simultaneously—both would need to be added together to enhance effectiveness.

Alternatively, there is a "multiplicative" model. In this model, task and relationship behaviors or components interact, and each facilitates the other in its impact with followers. For example, the impact of task behavior is more positive when relationship leadership is high than when it is low and vice versa, and if either one is zero, there is no impact.

Most of the studies examining high-high results have been based on questionnaire surveys on which

people are asked to describe leadership at one point in time and to think back on how the leader typically behaved. Bales's experimental work was an exception, and the PM leadership work sometimes was experimental and sometimes used surveys. The survey work has tended to emphasize an additive model with far less work done using a multiplicative model, and, not surprisingly, relatively more support has been found for the additive than the multiplicative model (Larson, Hunt, & Osborn, 1976). Similar results have been found with the PM model (Misumi, 1985).

However, two recent studies extend the thinking on the high/high question. The first of these studies is Quinn and associates' work mentioned earlier. In an interesting twist, they paired each task dimension with a corresponding relationship dimension (e.g., producer-facilitator, director-mentor, etc.) such that the dimensions are considered opposites or competing with each other. A good leader attempts to balance each of these opposites. The authors have emphasized using competing dimensions virtually simultaneously. This emphasis is similar to the multiplicative model, where one dimension facilitates the other in impacting followers. Robert Quinn, Gretchen Spreitzer, and Stewart Hart (1991) have called this notion "interpenetration" (the simultaneous operation of opposites). A second study by business school professor Gian Casimir (Casimir, 2001) examines combining task and relationship aspects of leadership across time in terms of their linkage to follower satisfaction. In other words, how do the leadership aspects combine? Casimir examines the different combinations of task and relationship: order, temporality, and constancy. Order considers whether relationship leadership immediately precedes or follows task leadership. Temporality considers the time interval between task leaders and relationship leaders (e.g., support immediately after task or after, say, a thirty-minute delay). Constancy considers whether the two kinds of leadership are always combined in the same or different ways.

In a fixed form of constancy, there is only one type of paired combination (e.g., relationship is always provided immediately after pressure). In a variable form of constancy, more than one type of

paired combination is used (e.g., support is sometimes provided immediately before task and other times after task).

One series of studies emphasized task orientation as pressures, whereas other work emphasized task orientation as job instructions. High points of Casimir's previously mentioned studies of male and female and blue-collar and white-collar workers, showed that task-oriented leadership (either pressure or instructions) should not be provided without relationship-oriented leadership and that relationship-oriented leadership generally should be provided immediately before task-oriented leadership.

Clearly a leader must be concerned not only about exhibiting both task leadership and relationship leadership but also about the way in which these leaderships should be displayed over time in terms of order, temporality, and consistency. Yukl (1998) also points out that one can exhibit too much of a behavior (too much directiveness may cause resentment and inhibit initiative, and too much support may make a follower overly dependent). Furthermore, as business school professor Mark Peterson (1985) argues, different specific behaviors may be called for in different settings even though the leader is attempting to emphasize both task leadership and relationship leadership—in other words, task and relationship functions are reflected in different ways. The interactions between these dimensions, implied earlier, are complex indeed, and most studies have done little more than pay lip service to this complexity.

SITUATIONAL ASPECTS OF TASK LEADERSHIP AND RELATIONSHIP LEADERSHIP

This discussion has hinted at the importance of the leadership situation for task leadership and relationship leadership. A few approaches recognize the interaction of situation and leadership. The first of these is the situational leadership approach (Hersey, Blanchard, and Johnson, 2001), which posits that there is no best way to lead. This approach focuses on follower maturity or readiness in terms of ability and willingness to accomplish a specific task. Leaders adjust their focus on task behaviors, such as guid-

ance, and on direction and relationship behaviors, such as socio-emotional support according to follower readiness (from low to high) to perform their task. Leaders are expected to develop the capability to diagnose demands of each of these readiness situations and then to choose and implement the appropriate leadership style in terms of the relative emphasis on task leadership and relationship leadership.

More specifically, the approach matches four task leadership and relationship leadership styles (S1–S4) with four follower readiness conditions (R1–R4) as follows:

- R1: Low readiness, unable and unwilling to take responsibility or insecure. S1 high-task, low- to moderate-relationship leadership, defines roles, eliminates insecurity about what must be done
- R2: Low to moderate readiness, unable but willing to take responsibility or confident. S2 high-task, high-relationship leadership, combines directiveness with supportiveness to maintain confidence
- R3: Moderate to high readiness, able but unwilling or insecure. S3 low task, high relationship, combines sharing in decision making with support to enhance security
- R4: High readiness, able, willing, and confident. S4 low task, low relationship, allows willing and confident followers to assume responsibility

The approach is intuitively appealing. It also has been incorporated into training programs by a large number of firms (Hersey et al., 2001) but does not have much systematic research evidence. Regardless, it illustrates well one way of bringing in explicit situational aspects in dealing with task leadership and relationship leadership.

A second situational approach is management professor Robert House's "path-goal leadership theory" (House, 1971; House and Mitchell, 1974). The term *path-goal* is used because the approach emphasizes how a leader influences follower perceptions of work and personal goals and the paths found between these two goal sets. The approach assumes that a leader's key function is to adjust his or her behaviors to complement work-setting situational aspects. When the leader can compensate for aspects lacking in the setting, followers are likely to be satisfied with

the leader and/or be more motivated. For example, the leader could help remove job ambiguity or show how good performance could lead to more pay. Performance should improve with clarification of the paths by which (1) effort leads to performance and (2) performance leads to valued rewards.

Although the approach includes more than task leadership and relationship leadership dimensions, these dimensions, labeled in the approach as “directive” leadership and “supportive” leadership, are two key aspects and form the basis for the following two predictions:

- Directive leadership will have a positive follower impact when the task is ambiguous and the opposite effect when the task is clear. Also, with highly authoritarian and close-minded followers, even more directive leadership is called for.
- Supportive leadership will increase follower satisfaction for those who work on highly repetitive tasks or on unpleasant or stressful tasks. For example, traditional assembly-line autoworker jobs are often considered highly repetitive and perhaps even unpleasant. A supportive leader could make these jobs more satisfying.

Although there is more to the path-goal approach than just described, the discussion suggests its relevance in terms of better understanding the interaction of task leadership and relationship leadership with various situational aspects. The approach has more supportive research than does the situational leadership approach and has recently been revised in an expanded version that includes a number of additional aspects in addition to task leadership and relationship leadership (House, 1996). Again, however, it provides an increased feel for the role of situational aspects in understanding task leadership and relationship leadership.

A final situational illustration worth touching on is the “substitutes for leadership theory” (Kerr & Jermier, 1978), which argues that sometimes hierarchical leadership makes essentially no difference. Certain individual, job, and organizational variables can either serve as leadership substitutes or neutralize a leader’s impact on followers. These substitutes make a leader’s task leadership or relationship leadership unnecessary

or redundant in that they replace the leader’s influence. For example, it may be unnecessary or not even possible to provide the kind of task-oriented direction already available from experienced, talented, and well-trained followers. Sometimes, also, a leader has little authority or is physically separated so that his or her leadership may be nullified even though task supportiveness may still be needed.

Still other approaches exist, but those discussed are among the most widely known. They capture situational aspects of task leadership and relationship leadership well.

FUTURE IMPLICATIONS

As mentioned, there is a trend for task leadership or the two-factor task leadership and relationship leadership to be displaced by such approaches as charismatic and transformational leadership. However, refinements—such as considering more specific task and relationship components, along with an emphasis on combining the two kinds of components, especially across time—appear to offer opportunities for rejuvenation. When the smoke clears for most approaches, task leadership and relationship leadership or something akin to them seem to appear, in one form or another, as important leadership aspects.

TEAM LEADERSHIP

Effective team leadership enables members of a team to perform collectively to achieve objectives. A team usually has a designated leader, who can be a member of the team or a manager from outside the team. Within a team, the leadership role can be rotated—filled by different members at different times. The leadership role can also be shared by several members of a team simultaneously without the designa-

tion of a formal leader role; shared leadership is more common in teams than in less-interdependent work groups. Team leadership can even change from being the responsibility of a formal leader to being the shared responsibility of several team members as the team gains experience.

Clearly the sources of leadership can vary from team to team, and within a team the sources of leadership can vary over time. Some scholars, including Stewart and Manz (1997) and Zaccaro, Rittman, and Marks (2001), have conceptualized team leadership primarily as a designated role. Other scholars, such as Hackman (2002) and Yukl (2002), have suggested that it is more useful to think about team leadership in terms of a process that facilitates team performance.

However, regardless of whether team leadership is described as a role or process, there appears to be consensus that leadership is necessary for effective team performance. Further, most scholars would probably agree with the premise that leaders can facilitate team effectiveness by ensuring (1) efficient, goal-directed effort; (2) adequate resources; (3) a productive, supportive climate; (4) competent, motivated member performance; and (5) commitment to the team's continuous improvement and adaptation.

LEADERSHIP CONTRIBUTIONS TO TEAM PERFORMANCE

Regardless of its source, leadership's primary contribution to team performance is to create and maintain the conditions necessary for team effectiveness: (1) efficient, goal-directed effort; (2) adequate resources; (3) a productive, supportive climate; (4) competent, motivated member performance; and (5) commitment to the team's continuous improvement and adaptation.

Efficient, Goal-Directed Effort

Teams require coordinated, goal-directed effort for efficient performance. A lack of common goals and coordination among members can lead to a cycle of inefficiency, frustration, and lower collective output that can be difficult to reverse. Team leaders, there-

fore, can facilitate productive team performance by clarifying goals, roles, and task strategies.

Goal clarification requires communication across at least three levels in the organization. The team's mission and goals should be aligned with the needs and expectations of the larger organization in which the team operates. Often the larger organization defines the initial direction of the team when it is created, and determines how to select appropriate team membership. In some cases, however, the team may contribute to or create its own charter and vision for its future. In all cases, team leadership can communicate with the larger organization to clarify expectations when the team is formed and as conditions change during the team's life.

Team leadership can inspire commitment to a shared vision and use this vision as a guide to establish meaningful, shorter-term performance goals for the team. A shared vision and commitment to valued, feasible shared goals are first steps toward developing a collective identity for the team and establishing a basis for coordination.

Team leadership can then facilitate the development of task strategies across team members to coordinate individual actions into collective accomplishment. An important part of this activity is translating group goals into interdependent individual goals and assigning roles to team members. This coordination is especially important when there is a complex team task and each team member needs to understand his or her part clearly for efficient collective effort.

If the team has interdependent relationships with other teams or organizations, leadership may coordinate mutual goals and relationships with these teams to facilitate performance overall.

Adequate Resources

Teams need adequate resources to achieve their goals and rely on leadership to obtain those resources. Teams may require specific equipment or supplies, or they may require just adequate information and time. Effective team leadership can also maintain positive relationships with resource providers to create favorable impressions about the team and influence providers' decisions about

resource allocation. If adequate resources are not available to support the team's achievement of goals, team leaders can negotiate an agreement (e.g., with superiors or clients) that reflects more realistic goals or deadlines.

A Productive, Supportive Climate

Effective team performance requires high levels of cooperation, cohesiveness, and mutual trust among team members, especially in complex task situations. These factors are important aspects of the team's interpersonal climate, a dimension that can be as important to effective team performance as the team's goals, task strategies, and resources. Team leadership can play an important role in establishing this climate by describing and modeling appropriate interpersonal behavior and by supporting relationships that build mutual trust, respect, and cooperation. Team leadership can discourage unproductive conflict among team members and use task-related conflict to enhance interaction, understanding, and mutual problem solving.

Team leaders can also facilitate the development of positive shared beliefs among members about their collective identity as a team and their collective capability to achieve their shared objectives. Identification with the team can cause members to look beyond their individual roles and assume a sense of shared responsibility for the team's overall performance. Team leadership can enhance this identity and build pride among members as a unit by promoting a favorable image of the team to the larger organization. Having confidence in their collective capabilities can inspire members to take on different challenges and persist in difficult tasks despite setbacks and obstacles.

Competent, Motivated Performance

Goals, task strategies, resources, and climate lay the foundation for efficient and effective team effort. The social, emotional, and task-related aspects of team performance, however, can also be affected by member and team competence. Team members need the appropriate skills, knowledge, and motivation to per-

External Control and Team Leadership: Hunting Practice of the Ojibwa

The following description of changes in the indigenous hunting practices of the Ojibwa of Canada due to the emergence of a money economy shows how the notion of teamwork weakened as did the influence of the team leaders.

Until the last two decades, the largest effective economic unit was the hunting (co-residential) unit (cf. Dunning 1959a:55–58), averaging from 20 to 30 individuals at Osnaburgh. Each co-residential unit is composed of several households or commensal units which form the winter bush settlements. In winter, hunting group members occupy a bush settlement in the centre of a communally owned trapping territory. Several males usually form trapping partnerships. Although members of the hunting group cooperate and share food, furs belong to the individual who caught them. In summer, co-residential units form tent clusters at fishing camps. Within the past decade the amount of time spent in the bush has decreased with the consequent decline of the hunting unit in social and economic importance. The weakening of bonds of solidarity can be correlated with a money economy and the relegation of control in many spheres of life to external agencies. As Dunning has noted for Pekangikum, these non-indigenous agencies exercise "considerable control in matters of trapping, fur trade, and credit; illness and hospitalization; schooling, and thus family allowance benefits; and less directly but equally influentially, religion and com-

munal gathering for that purpose" (1959a:185).

Concomitant with these changes has been the decline in authority of the hunting group leader. Where in the past the efficacy of leadership was grounded in magico-religious power attained through the vision quest; missionary influence, improved medical treatment, and education have undermined this basis. Leaders could control the animals necessary for survival and trade, and apply sanctions through the fear of magical power upon wrongdoers. Today, the money economy and subsidies have lessened the importance of subsistence techniques with regard to survival, and the retributive sanctions are no longer feared. In a compact acephalous community composed of formerly dispersed hunting groups, many of whose functions have been taken over by outside sources, social control within such a community is largely restricted to gossip groups (cf. Dunning 1959a:184), and the household tends to emerge as a self-sufficient unit (cf. Rogers 1962:B81). Despite these recent changes, however, there is still the need for economic assistance beyond the household related to bush life at the fish camps and the spring trapping camps.

form collective tasks effectively. Leaders can increase member skills and motivation in several ways, including member selection, development, and rewards.

During the team's formation, team leaders can influence member selection to include an appropriate mix of complementary skills and dispositions. Although team members will still need time to learn how to work together to accomplish their interdependent tasks, individual competence and good dispositional fit among members will accelerate this process. Selection is especially important for short-term project teams because they have little time for formal skill development and a greater need for immediate productivity.

After the team is formed, leaders can develop the skills, knowledge, and confidence of team members. Leaders can help members identify skills that need to be learned and the best way to learn them. Leaders

may, for example, provide training or coaching or enlist the assistance of other experts to provide development for the team. More experienced team members may serve as coach or mentor for newer team members. If skills are developed through formal training, team leaders can encourage, facilitate, and reward the application of newly learned skills.

Even highly competent individuals, however, need to learn how to work together as a team. Leaders can facilitate the development of these skills among team members to increase coordination of related tasks. Leaders also can facilitate team learning by having members collectively reflect about their performance, what they did effectively, and what improvements they need to make. Team leaders can arrange for shared learning experiences, which can include realistic practice sessions, feedback, and supportive coaching. Opportunities to practice com-

plex tasks under realistic conditions and to experience success can foster members' confidence in their collective ability to achieve difficult, shared goals.

Developmental activities can help build confidence and motivated behavior, but extrinsic rewards can be another source of motivation for the team if they are aligned with the team's goals. Although each member can be rewarded for his or her individual contributions, the team should be rewarded as a unit for collective accomplishments. Leadership can enhance the positive effect of rewards by clearly linking them to desired performances, including collective task work, teamwork, learning, and improvement.

Commitment to Continuous Improvement and Adaptation

To remain effective, teams must adapt to changing conditions. Team leadership can support this adaptation by monitoring the team's performance against its goals, recognizing its accomplishments, and providing constructive feedback to help the team improve. Effective team leadership also is involved with external constituencies to gather information and influence decisions that can have implications for team performance.

Effective leaders recognize that team performance can be systematically monitored and adjusted to yield desired results. They also recognize that although team leaders may initiate these activities, the team itself needs to be committed to continuous improvement and collective learning. Team leaders can encourage innovation, model appropriate behavior, and provide the appropriate incentives to foster a culture of continuous improvement and adaptation.

IMPLICATIONS

As the use of teams has increased in organizations, both scholars and practitioners have examined the contributions that leadership can make to team effectiveness. Team leaders create the conditions that enable high performance. Leadership may be provided by a designated individual or by several persons from inside or outside the team. Regardless of the source of team leadership, it should ensure

(1) efficient, goal-directed effort; (2) adequate resources; (3) a productive, supportive climate; (4) competent, motivated member performance; and (5) commitment to continuous improvement and adaptation. Effective team leadership manages these outcomes systematically to increase the likelihood of team success.

TEAMWORK

In today's fast-paced organizational environment, the use of teamwork has led to innovative problem solving and high levels of performance in organizations. Moreover, teamwork is one of the most critical

components necessary to place a company on *Fortune* magazine's list of the "100 Best Companies to Work for in America." According to leadership scholars R. N. Lussier and C. F. Achua, "everyone talks about teams, but it takes more than an ad hoc group of people to make up a winning team" (Lussier & Achua 2001, 249). Business consultant J. Kouzes and leadership scholar B. Posner's research in *The Leadership Challenge* shows that leadership (and success) is "not a solo act, but a total team effort with winning strategies based on the 'We, not I' philosophies" (Kouzes & Posner 2002, 242).

Important teamwork issues include key definitions; reasons for teams, including advantages and disadvantages; stages of team development; types of teams; team leadership; team dynamics; teamwork and change; and rewarding teams.

KEY DEFINITIONS

Fundamental to the concept of "team" is the concept of "group." People have often noted that a team is a group but that a group is not necessarily a team. Therefore, one must distinguish between teams and groups.

Psychology scholar Marvin Shaw defined a group as "two or more persons who are interacting with one another in such a manner that each person influences and is influenced by each other person" (Shaw in Hughes, Ginnett, & Curphy 2002, 288). The two key components of this definition are the concepts of reciprocal influence and mutual interaction between members.

Business executives Jon Katzenbach and Douglas Smith defined a team as "a unit of two or more people with complementary skills who are committed to a common purpose, set of performance goals and expectations, for which they hold themselves accountable" (Katzenbach & Smith 2003, 45). The two key components of this definition are the concepts of common purpose and shared goals.

One primary difference between groups and teams is that groups designate a leader, whereas teams have shared leadership in which an individual may take a leadership role, or individuals may take leadership roles, depending on the task and on the

individuals' areas of expertise. Members of a group have individual accountability for completing group tasks, whereas team members have shared accountability for setting and meeting the outcomes for the team. In fact, for groups the purposes of the specific work group reflect the purposes of the organization wherein the groups operate. Members of teams develop their own vision and/or purpose and are not constrained by organizational boundaries. Moreover, team members have a shared sense of mission and collective responsibility for carrying out that mission.

WHY TEAMS?

According to leadership scholar and consultant Warren Bennis (1997),

. . . the more I look at the history of business, government, the arts, and the sciences, the clearer it is that few great accomplishments are ever the work of a single individual, [moreover] . . . the problems we face are too complex to be solved by any one person or any one discipline. Our only chance is to bring people together from a variety of backgrounds and disciplines who can refract a problem through the prism of complementary minds allied in common purpose. (Bennis 1997, 3)

This reflects the very notion that teams serve organizations much more effectively than a mere collection of individuals.

In that regard, teams have the advantage of bringing synergy (combined action or operation) to a task. That is, the output of the team exceeds the sum of the output of each individual on the team. Team members, working collaboratively, bring an energy to the team that causes individuals to produce more in the team environment than they would individually. In addition, team members provide mutual support for one another and contribute to continuous improvement and innovation. In fact, one significant advantage to the organization is that teams can be assembled quickly and refocused with greater flexibility than can traditional organizational models. Moreover, teams promote organizational learning and creativity through spending time together (Kazenbach and Smith, 1997) and from the synergy that happens therein.

Romans 12 (King James Version)

- 1: I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service.
- 2: And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God.
- 3: For I say, through the grace given unto me, to every man that is among you, not to think of himself more highly than he ought to think; but to think soberly, according as God hath dealt to every man the measure of faith.
- 4: For as we have many members in one body, and all members have not the same office:
- 5: So we, being many, are one body in Christ, and every one members one of another.
- 6: Having then gifts differing according to the grace that is given to us, whether prophecy, let us prophesy according to the proportion of faith;
- 7: Or ministry, let us wait on our ministering: or he that teacheth, on teaching;
- 8: Or he that exhorteth, on exhortation: he that giveth, let him do it with simplicity; he that ruleth, with diligence; he that sheweth mercy, with cheerfulness.
- 9: Let love be without dissimulation. Abhor that which is evil; cleave to that which is good.
- 10: Be kindly affectioned one to another with brotherly love; in honour preferring one another;
- 11: Not slothful in business; fervent in spirit; serving the Lord;
- 12: Rejoicing in hope; patient in tribulation; continuing instant in prayer;
- 13: Distributing to the necessity of saints; given to hospitality.
- 14: Bless them which persecute you: bless, and curse not.
- 15: Rejoice with them that do rejoice, and weep with them that weep.
- 16: Be of the same mind one toward another. Mind not high things, but condescend to men of low estate. Be not wise in your own conceits.
- 17: Recompense to no man evil for evil. Provide things honest in the sight of all men.
- 18: If it be possible, as much as lieth in you, live peaceably with all men.
- 19: Dearly beloved, avenge not yourselves, but rather give place unto wrath: for it is written, Vengeance is mine; I will repay, saith the Lord.
- 20: Therefore if thine enemy hunger, feed him; if he thirst, give him drink: for in so doing thou shalt heap coals of fire on his head.
- 21: Be not overcome of evil, but overcome evil with good.

However, teams can also have disadvantages, the first of which is social loafing. Social loafers do not contribute to the team process because they feel that they will not reap individual rewards, nor will they have to suffer individual blame. Another significant disadvantage is groupthink, by which members of the team feel pressured to conform with decision-making and fail to present a dissenting opinion because of fear of rejection. Groupthink can result in selective data gathering and failure to consider all alternatives. Groupthink is “extreme consensus building” (Dubrin 2001, 244).

For a team to be effective, individuals must sublimate their individual goals, needs, and desires for the good of the team. Moreover, individuals must learn to synthesize their “knowledge, skills, and efforts toward accomplishment of a common goal so they become a team” (Daft 1999, 355).

STAGES OF TEAM DEVELOPMENT

As a team develops, it goes through predictable stages, progressing from a group of individuals to a cohesive group whose members work together for a common cause. In 1965, educational psychologist Bruce Tuckman published his model of group development, which also applies to team development. Tuckman’s model identifies four stages within a team’s developmental life—forming, storming, norming, and performing. Subsequently Tuckman and psychology scholar Mary Ann Jensen (1977) added a fifth stage: adjourning.

Forming: During this stage team building begins, and team members and team leaders get to know one another. Much of the direction and focus of this stage is on the team leader, with team members displaying caution and observation as they learn each other’s

personalities and roles. This stage is *typically* characterized by courtesy and conservatism.

Storming: Conflict is displayed among team members as disagreement surfaces. This disagreement can be healthy if channeled into productive discussion, but it may cause strife and resentment. Not all teams experience this stage, but those that do are more likely to reach high performance levels because members do not fear challenging one another. Personal relationships begin to develop.

Norming: Norming is characterized by team members resolving differences, modifying behaviors to be productive, and moving beyond disagreements. Unfortunately, groupthink can set in, whereby team members wishing to avoid a backslide into the storming stage may avoid disagreements that are perceived as dissention and dysfunction. This avoidance of disagreements can harm the team's performance by stifling healthy discussion and potentially useful disagreements.

Performing: Healthy team behavior is the modus operandi. This stage is characterized by resolving conflicts as they occur and sharing productive work practices, camaraderie, creative problem solving, and constructive team spirit. Teams at the performing stage reach the point where the whole is greater than the sum of the parts.

Adjourning: When many high-performing teams disband (e.g., at team project completion), members may experience pain at terminating the working relationship on a close-knit team of individuals who perform well together. That sense of loss must be dealt with to lessen the impact that the pain has on the organization and on team members. A successful adjourning stage can include special celebrations, an open sharing of feelings, and a web-based chat room to allow team members to remain in contact.

TYPES OF TEAMS

The primary types of teams are functional, cross-functional, self-directed (or self-managed), virtual, and high performing. Each type has its own purpose and appropriate time to be used.

Functional teams generally include managers and

their subordinates. These teams typically operate within traditional organizational hierarchies and are structured across departmental lines. Leadership styles within these teams vary according to organizational and team needs. An example of a functional team is the accounting managers of the Kroger Company's southwest Ohio region. Their functional team made up of accounting managers, yet their organizational team is the Kroger Company.

Cross-functional teams are composed of members from different departments, with each member selected to represent a particular department or to use his or her expertise. This type of team structure allows organizations to assemble teams that are quickly able to respond to problems. Moreover, with such diverse organizational representation, members get a broader view of problems and their potential solutions. An example of a cross-functional team is a team composed of members from the following departments: accounting, marketing, research and development, engineering, and production.

Self-directed (or self-managed) teams, which are similar to cross-functional teams, are composed of members from across department types within the organization. The primary difference is that self-directed team members take responsibility for the quality of the work process, sharing of management and leadership function, and involvement in the training, hiring, and disciplining of team members. Leaders should teach followers to lead themselves. Self-management usually leads to high levels of performance and satisfaction.

Transition [to self-managing teams] is inevitably accompanied by a reduction in the leaders' power, and constitutes a leadership substitute. The idea of traditional top down leadership is dysfunction in current organizations. The notion of self-management teams is embodied in the theory of leadership substitutes, which maintains that under certain situation variables, leadership might be redundant. (Yagil 2002, 384).

Virtual teams, those whose members are geographically dispersed and come together via technology, have emerged as a result of today's mobile, global, and technological society. The use of virtual teams poses significant challenges for organizations.

Although many of these challenges are present in traditional teams, they may be even more pronounced in virtual settings. Electronically integrated virtual organizations and virtual teams are the results of efforts to look for novel ways to manage the new frameworks of rapid change and global reach, coupled with market forces demanding improved quality, service responsiveness, and tailored production.

High-performing teams are those that display extraordinary effort and productivity. As the name implies, these results-focused teams perform well beyond average teams. "Optimal productivity and morale are most important to be a high performing team. The group must have a strong ability to produce results and a high degree of satisfaction in working with one another" (Blanchard & Carew 1996, 33).

"High performance teams don't just happen—they are developed and nurtured. They take the combined efforts of a visionary leader, willing and competent team members, and a facilitator with expertise in team building" (Blinn 1996, 56).

TEAM LEADERSHIP

To lead any type of team, the team's leaders must have unique skills. Leadership scholars Daniel Denison, Robert Hooijberg, and Robert Quinn's findings suggest that effective team leaders demonstrate the capability to deal with contradiction by performing multiple leadership roles simultaneously. Effective team leaders act in a mentoring role and exhibit a high degree of understanding toward other team members.

One challenge for team leaders is to develop relationships among team members. "These linkages may be hindered by the team leader's ineffective behaviors and poor team leadership skills, which may negatively affect such outcomes as creativity, morale, and decision-making quality" (Warkentin, Sayeed, & Hightower 1997, 975).

Team leadership must accommodate creative team members by establishing procedures that allow for exchanges of creative ideas. Effective team leaders reward joint effort as often as individ-

ual effort. Moreover, they encourage teamwork through tailored team building and team training, which impact team dynamics.

TEAM DYNAMICS

Team dynamics is the process by which team members work together.

Teams of women are not more collaborative than teams of men; men are not better leaders than women simply because they are men; there is not an ideal team size; there is nothing wrong with being a team member on more than three teams at one time; people do like being assigned to teams; team members are usually not of one mind about what is going well or poorly; and, teams are usually in touch with how their performance is viewed by outsiders. (Krug 1998, 14).

These guidelines from Mary-Lane Kamberg enhance team dynamics:

- (1) focus on the goal (sometimes shortened to FOG),
- (2) constantly strive for consensus, (3) speak up freely and be open and honest when doing so, (4) use conflict constructively (particularly as one transitions from the Storming to the Norming phase of team development, (5) respect all types of diversity (race, experience, gender, age, etc.), (6) evaluate ideas and give all ideas merit and attention, and (7) display team spirit. (Kamberg 2001, 430).

Some behaviors to avoid when attempting to improve team dynamics include

- (1) talking too much, (2) allowing too much time and energy to be brought to bear on the same discussion over a long period of time, (3) not being clear, (4) changing the subject without coming to consensus or making a decision, (5) attacking the person and not the issue/problem, and (6) taking criticism personally when it was meant as an attack of the issue/problem. (Kamberg 2001, 45).

TEAMWORK AND CHANGE

Successful organizational change requires effective teamwork. The goal of using teamwork is to achieve more results than individuals could. Business execu-

tive David Nadler and leadership author Michael Tushman (1998) suggested that successful change efforts require the following four steps (Nadler & Tushman 1998, 12):

1. Prepare people for change by creating dissatisfaction with the current state.
2. Motivate behaviors through widespread participation in planning and implementing change.
3. Visibly reward desired behaviors during both the transition state and the future state.
4. Provide people with adequate time and opportunity to disengage emotionally from the current state.

REWARDING TEAMS

Leaders should reward teams to make members feel empowered and energized. Leaders can reward teams in many ways, such as personal thank-you's, handwritten thank-you notes, public praise, time with the manager, a reference in company newsletters, a photo on the Wall of Fame, a designated parking space, time off with pay, a pass-around trophy, a car wash by an executive, a certificate of appreciation, a celebration or lunch, a computer banner and balloons, special awards, and an appreciation day.

IMPLICATIONS FOR ORGANIZATIONS

Teamwork in recent years has gained much attention, in part because of an increased complexity of the workplace with globalization, diversity, and technology enhancements made at a rapid pace. With such high competition at home and abroad for products and services, the competitive edge goes, many times, to those who best learn how to leverage teamwork to accomplish tasks, deal with change, and be as productive as possible by networking and building relationships that can extend beyond the charter of the team. Successful organizations recognize the importance of well-trained—and consequently well-developed—teams and the cultivation of true teamwork.

In fact, in pondering the future of teams, Jon Katzenbach and Douglas Smith (2000, xxx) wrote,

Just as teams have weathered the storms of overuse, misuse, and lack of discipline, so will their unique flexibility and versatility enable them to adapt to the future changes being brought about by speed, technology, and globalization. They will remain the basic unit of both performance and change because of their proven capacity to accomplish what other units cannot.

—Mindy S. McNutt and T. Scott Graham

THEORIES X, Y, AND Z

Drawing upon the conventions of the scientific community, the management theorist Douglas McGregor (1906–1964) postulated two theories that he designated with alphabetic characters: Theory X and Theory Y. These theories represent pure archetypes of managerial beliefs about the nature of people that, in turn, influence their managerial and leadership behavior.

THEORY X

Theory X is the belief that people are passive, dislike work, avoid responsibility, and need to be closely supervised and told what to do. Theory X holds that people are self-centered, prone to resist change, and not very intelligent.

According to psychologists, people have a natural tendency to become congruent; that is, we attempt to behave in ways consistent with our beliefs. Thus, managers who believe in Theory X behave accordingly and tend to supervise their subordinates closely, doubt their subordinates' capabilities, refuse to delegate significant tasks, and insist that very detailed records be kept of their time and productivity. Theory X managers are suspicious of initiative and creativity on the part of employees. Typically, a Theory X manager has a harsh, authoritarian approach to working with others that is characterized by frequent threats, references to transactional rewards or punishments, and disregard for employees' welfare. An atmosphere of distrust, fear, intimidation, and disrespect are everyday aspects of work for people who have a supervisor who believes Theory X.

THEORY Y

Conversely, Theory Y is the belief that people find work natural and life affirming. People seek out responsibility, are trustworthy, and want to perform their best, take initiative, and be creative. A Theory Y manager delegates work, tries to build consensus, encourages innovation and creativity among subordinates, and minimizes hierarchical differences, acting more as a colleague than as a supervisor. Indeed, in Theory Y, supervision is not an important practice as such. The relationship that develops between a Theory Y manager and subordinates is usually comfortable and focused on accepting mutual responsibility for the achievement of their collective objectives. Subordinates and manager share a mutual interest in one another as people; they willingly contribute their best efforts to the tasks at hand, using all of their combined abilities. The workplace is characterized by trust, respect for each person, high integrity, the free flow of communications, and shared decision-making.

EXEMPLARS OF THEORY X AND Y

Historical figures such as Adolph Hitler, Joseph Stalin, and Mao Zedong are examples of Theory X leaders, while Franklin and Eleanor Roosevelt, Mohandas Gandhi, and Nelson Mandela are exam-

ples of Theory Y leaders. The former counted on fear to influence others and destroyed much of what they ruled, while the latter raised the hopes and aspirations of people throughout the world.

Theory X Leaders

Stalin, Hitler, and Mao were larger-than-life individuals of a sort that are fortunately rare on the world stage. In the contemporary business world, they are complemented by equally destructive corporate leaders. Albert J. Dunlap, the CEO who orchestrated the financial collapse of Sunbeam Corporation in the late 1990s, a company once proudly associated with quality household products, is reviled for his slash-and-burn techniques for bringing companies out of stagnation and back to profitability. His approach to turning companies around was to institute massive layoffs and to dismember corporate assets to raise cash and quickly remove liabilities. Despite the often huge human cost of his turnarounds, he was financially successful, which won him the respect of the shareholders of the stagnant companies he was hired to lead.

Prior to joining Sunbeam, he was CEO of Scott Paper, where he reconfirmed his fearsome reputation as “chainsaw Al.” When he merged Scott Paper with Kimberly-Clark, another paper products manufacturer, he got rid of 11,200 jobs, or 35 percent of the Scott payroll. In addition, he sold off pieces of the company that included another 6,000 jobs. He justified this by saying that once “the bloodletting had ended. . . . 20,000 people had secure jobs once again” (Dunlap 1996). For his twenty-month effort, he received a package of rewards totaling \$100 million.

When he moved on to Sunbeam, Dunlap ultimately faced his dénouement. As part of the settlement with the U.S. Securities and Exchange Commission, which charged Dunlap with defrauding investors, he agreed to pay a fine of \$500,000 and was barred from ever again being an executive in a public company. In addition, Dunlap paid \$15 million to settle a class-action suit brought by investors for questionable accounting practices and misleading claims. While behaving in a manner consistent with Theory X isn’t necessarily criminal, doing so usually involves abuse of people.

For that reason, observers of Dunlap’s fall from power were pleased to see his career put to an end.

Theory Y Leaders

There are two popular Theory Y exemplars in business, though not of the stature of a Roosevelt or a Mandela. One is Herb Kelleher (b. 1931), founder and CEO of Southwest Airlines (he retired as CEO in 2001), and the other is Ricardo Semler (b. 1959) of Semco, a Brazilian manufacturer of industrial mixers and other products.

What makes these two men exemplars of Theory Y is their fierce commitment to the belief that the workplace should be respectful of people and encourage them to do their best. Kelleher expresses his belief thus:

You have to treat your employees like your customers. When you treat them right, then they will treat your outside customers right. . . . You’ve got to take the time to listen to people’s ideas. If you just tell somebody no, that’s an act of power and, in my opinion, an abuse of power. You don’t want to constrain people in their thinking. (Brooker 2001).

Southwest under Kelleher never had a layoff and was the only airline to be profitable throughout the last thirty years (its entire existence)—even after the airline terrorist attacks of September 11, 2001, and the subsequent slowdown in air travel. Southwest has a reputation as a fun place to work, where everyone pitches in to get planes ready to fly safely and efficiently. It is not unusual to see captains helping flight attendants or customer service personnel helping baggage handlers. For Southwest Airlines, consistently applying Theory Y beliefs proved to be successful.

According to Ricardo Semler, at Semco,

We simply do not believe our employees have an interest in coming in late, leaving early, and doing as little as possible. . . . After all, these same people raise children, join the PTA, elect mayors, governors, senators and presidents. They are adults. At Semco, we treat them like adults. We trust them. We don’t make our employees ask permission to go to the bathroom, or have security guards search them as they leave for the day. We get out of their way and let them do their job. (Semler 1993, 59).

BELIEVING IS SEEING

Adhering to Theory X or Theory Y belief systems is the self-fulfilling prophecy insofar as you see what you believe. Thus, Theory X believers will expect and find people who demonstrate irresponsible behavior, confirming their beliefs, while Theory Y believers will tend to find people who confirm their beliefs in people's trustworthiness and responsibility.

Writing in *Leadership: Theory Application and Skill Development*, Robert Lussier and Christopher Agha, both professors of management, report that

a study of over 12,000 managers explored the relationship between managerial achievement and attitudes toward subordinates. The managers with Theory Y attitudes were better at accomplishing organizational objectives and better at tapping the potential of subordinates. The managers with strong Theory X attitudes were far more likely to be in the low achieving group. (Lussier and Agha 2001, 49).

Adhering to Theory X or Theory Y belief systems reflects the self-fulfilling prophecy because you see what you believe. Thus, Theory X believers will find people who demonstrate irresponsible behavior, confirming their beliefs, while Theory Y believers will tend to find people who confirm their beliefs in people's trustworthiness and responsibility. Since the world consists of both Theory X people and Theory Y people, an organization will be most adaptive if it consists of, and learns to deal with, both kinds of employees. Unfortunately, Theory X leaders will tend to be unable to accommodate Theory Y subordinates, since they are incapable of the trust required to unleash subordinates' potential. Theory Y leaders, on the other hand, are likely to be adaptive to Theory X subordinates and able to provide the necessary controls and supervision.

THEORY Z

After McGregor's theories became well established in the business lexicon, various authors used the title *Theory Z* to designate their own theoretical contribution to the management literature. There are two

important versions. The first and most relevant to the continuum established by McGregor is the Theory Z put forward by the psychologist Abraham Maslow. The other important version, which is more popular but is unrelated to McGregor's work, is put forward by William Ouchi, a professor of management. Ouchi's Theory Z represents a hybrid of Japanese and U.S. management styles, and it is Ouchi's Theory Z that has been accepted into the management canon.

Maslow's Theory Z

Maslow is remembered in psychology for his hierarchy of human needs: He believed that people could only express their fullest potential if their more basic physiological and psychological needs had already been met. Once those were met, a person could meet higher needs, eventually becoming, in Maslow's terminology, self-actualized. After a study of the management literature, Maslow posited a transcendent Theory Y leader who epitomized what Maslow called "Being Values," or B-values. These include "truth, beauty, wholeness, dichotomy-transcendence, aliveness-process, uniqueness, perfection, necessity, completion, justice, order, simplicity, richness, effortlessness, playfulness, and self-sufficiency" (Maslow 1971, 106). At this level, the leader seems to occupy a special status, and those he or she leads are not unlike devoted acolytes who feel honored to be of service.

This sort of leader appears only very rarely. In historical terms, Mohandas Gandhi, who led India to independence with a policy of nonviolent resistance, may best fit the model of a fully self-actualized transcendent leader. Perhaps Albert Schweitzer, the doctor who won the 1952 Nobel Peace Prize for his philanthropic medical work in Africa, does as well. Unfortunately, transcendents are not common. Perhaps the consumer and environmental advocate Ralph Nader or John Gardner, the founder of the grassroots people's advocacy group Common Cause, come close. They can and do see people's full potential and understand how simple and practical it could be to create a better world, but they are frustrated by the mediocre, the shortsighted, the fearful, and the unimaginative.

Ouchi's Theory Z

When Japan became the second largest economy in the world in the 1980s and began to win vast markets in the United States, industry after industry fell victim to its competitive strength, notably the automobile, consumer electronics, photography, steel, and toy industries. Many in the U.S. business world feared that a new era of second-class economic status was settling in on the United States. As expected, interest in the Japanese management style grew dramatically. Ouchi's *Theory Z: How American Business Can Meet the Japanese Challenge* (1981) was an immediate bestseller. Ouchi described U.S. and Japanese management styles and suggested a hybrid: Theory Z. In Theory Z organizations, employment is long term, layoffs are a last resort, and workers are multitalented, share responsibility for the whole, and are willing to learn new skills. Theory Z organizations are flat (that is, there are not many levels of management), so promotions take longer and there are fewer promotions in a career. Consensual decision-making is routine, with individuals encouraged to suggest new ideas and innovations in work processes, and workers are judged on objective performance, not obedience.

Ouchi's Theory Z cannot be considered an extension of McGregor's Theories X and Y because it is not based on underlying assumptions about the nature of people. It is a model that attempts to incorporate the best from both Japanese and U.S. management practices to improve the performance of organizations in both countries (Theory Z was also a best-seller in Japan). Both managers espousing Theories Y and Z expect the best from people; but it is during an economic downturn—when the pressure for results is greatest and managers' behavior most closely challenges their fundamental belief system—that the moment of truth arrives for employees. And it is precisely then that the application of these theories is most important.

TIANANMEN SQUARE

On 15 April 1989, the former reform-minded General Secretary of the Chinese Communist Party (CCP), Hu Yaobang (1915–89), died of a massive heart attack. Several hundred people gathered in Tiananmen Square to lay wreaths and flowers, and about five thousand students began a sit-in. Some of the students were beaten by police on April 20, and the next day more than 200,000 students and citizens marched to the Square to protest the incident. Student representatives demanded the posthumous rehabilitation of Hu in a petition that was presented at the Great Hall of the People just west of the Square. When their request to meet with Premier Li Peng was ignored, thousands of students at thirty-seven universities in Beijing boycotted classes, and the protest escalated into a pro-democracy movement.

On 25 April, Li Peng and other officials went to the home of the PRC's (People's Republic of China) paramount leader, Deng Xiaoping, to report on the situation. Deng's response formed the basis of an editorial that appeared in *People's Daily* the follow-

U.S. Embassy Account of Tiananmen Square

Below is a selection from the telegram sent on 22 June 1989 by the U.S. Embassy in Beijing to the U.S. Department of State in Washington, D.C., describing an eyewitness account of events in Tiananmen Square.

A number of other demonstrators had seen what he had seen on June 3–4, the student declared, but most were too frightened for themselves and their families to tell the truth now. He continued that after the tanks went by, he went over to count the flattened corpses of his colleagues so that we could bear reliable witness later in hopes of ultimate justice and retribution for the killings.

The student said that on June 4 around 2 a.m. he was positioned in Changanjie, the avenue of lasting peace, just north of the east of the great wall of the people. His younger brother was elsewhere in the square; they had both been there for many days. On the night of June 1, the students believed that when troops came in to take the square, they would fire rubber bullets. Consequently, many of the students in the first line of barricades on the East and West sides of Changanjie held up padded coats to protect themselves from the projectiles. However, the first lines of students fell after the troops opened fire. The student said he had also been convinced that rubber bullets would be used. He had a sick feeling when he noticed the bullets striking sparks off the pavement near his feet. He said that he saw many students fall during the ensuing hour. He became enraged at the deaths of his colleagues, he said, and threw bricks at the oncoming troops out of a desire for revenge and a hatred for what they were doing, even though he knew there was no match. "In battle, you stop thinking and just fight," he said.

When there were a number of casualties, the student said he and another student used a make-shift stretcher to carry the dead and wounded to the nearest Red Cross area, which was located in the square's northwest corner. He said that he himself made no fewer than a dozen trips, and he reckoned from the state of the wounded that only two of those he carried would survive. He cited one local resident who had been exceptionally brave. Even as the troops continued to fire between approximately 2 and 3 a.m., the resident made 21 journeys on his three-wheeled cart ferrying wounded from a fire zone to the Red Cross area.

ing day. The article accused a "handful of plotters" of being "unpatriotic," and of creating turmoil with the aim of overthrowing the Party leadership and the socialist system.

The next day, students from over forty universities marched to Tiananmen Square to protest the editorial. On 4 May, about 200,000 people celebrated the seventieth anniversary of the 1919 pro-democracy May Fourth Movement, demanding accelerated political

and economic reform. Zhao Ziyang, who had replaced Hu Yaobang in 1987 as Party General Secretary, spoke sympathetically of the students to directors of the Asian Development Bank, essentially contradicting the editorial. The government and Party leadership were split on how to handle the crisis. Meanwhile, about two thousand students staged a hunger strike at the Square beginning on 13 May. When Soviet President Mikhail Gorbachev arrived in Beijing for a summit meeting with Deng Xiaoping on 15 May, the government was forced to redirect the welcoming ceremony away from the Square. On 20 May, martial law was declared in Beijing, but for two weeks over a million students, workers, army personnel, civil servants, and others blocked the advance of 150,000 to 200,000 troops towards the city. Zhao Ziyang was stripped of his power on 21 May and ten days later replaced by Jiang Zemin, the Shanghai Party chief. On June 3 and 4, People's Liberation Army (PLA) tanks and armored carriers rolled in, clearing the Square and killing scores of people.

This entry deals with the role of the central leadership in the decision making that led up to June 3 (and not with the student organizers

or the protest movement). Although the central leadership was divided during the course of the crisis, it made three major decisions: (1) to remove Zhao Ziyang as Party General Secretary, (2) to declare martial law, and (3) to send in troops to clear the Square. Since these leadership decisions ultimately led to the bloodshed of June 1989, the character of the decision-makers and the process by which they arrived at their decisions need to be explained.

LEADERSHIP DIVIDED: FROM FORMAL TO INFORMAL DECISION MAKING

China's top leaders debated what to do about the Tiananmen protestors at Zhongnanhai, a secluded compound of the country's highest political elite. Located northwest of Tiananmen Square at the center of Beijing, Zhongnanhai houses three central organizations—the Party Central, the State Council, and the Central Military Commission (CMC). From Zhongnanhai, the government and Party leaders closely monitored the crisis situation in Tiananmen Square, in Beijing, and all major cities. They received a constant flow of intelligence reports from Party, military, and government agencies, embassies abroad, and foreign media.

Zhongnanhai is, in short, the collective word for the central Party and government leadership in China. Within Zhongnanhai, the highest body of *formal* political power is the five-person Politburo Standing Committee (or PSC, the Communist Party's Political Bureau). In 1989 the five members were Zhao Ziyang (also Party General Secretary), Li Peng (also Premier), Qiao Shi, Hu Qili, and Yao Yilin. When the government was first confronted with student petitions, sit-ins, boycotts, and protests, decision-making authority was concentrated in the hands of the PSC. However, the crisis quickly caused an internal rift between the “moderates” associated with Zhao Ziyang, who favored a sympathetic approach toward the students, and the “hard-liners” associated with Li Peng. While factional splits have been characteristic of Chinese politics at the national level, the split in this case resulted twice in an impasse.

When members of the PSC were not able to reach a common decision about how to solve the crisis in Tiananmen Square, they deferred to an informal group of eight elders; at this point, the decision-making process shifted from the formal organ (PSC) to the informal body of elders. This group, which consisted of Deng Xiaoping, Chen Yun, Li Xiannian, Peng Zhen, Deng Yingchao, Yang Shangkun, Bo Yibo, and Wang Zhen, was extraconstitutional in that its authority was not provided by the Chinese constitution. Although they

had long been retired from official posts, these senior statesmen and veteran Party members represented supreme authority in Chinese government and politics. Among the eight, Deng Xiaoping was the most influential. Deng lived outside Zhongnanhai in a private mansion, but it was at this house that the most crucial meetings took place during the Tiananmen crisis. It was these elders, in consultation with the PSC, who made the three key decisions: to remove Zhao, to declare martial law, and to clear Tiananmen Square.

INFORMAL DECISION-MAKING: MANIPULATING DENG XIAOPING'S VIEWS

Once decision-making had shifted to the informal phase, the entire process hinged on the opinion of Deng Xiaoping. This meant that from then on, each of the two factions would try to sway Deng to its preferred approach to dealing with the protestors. During the crisis, this shift from the formal to the informal occurred twice; each time it corresponded to a personal mistake committed by Zhao Ziyang. The shifts took place because decision making had reached a stalemate in the PSC. Once the first shift had occurred, both Zhao Ziyang and Li Peng wanted to manipulate Deng into adopting, their own approach to the protestors. It was essentially a struggle between Zhao and Li to gain the favor of Deng. In short, when the Tiananmen leadership decision-making became less formal, personal influence became dominant in charting the course of the leadership's decision.

Zhao Ziyang committed the first mistake when the 26 April article condemning the student protests as “unpatriotic” was published in the Party newspaper, *People's Daily*. Zhao was away on a state visit to North Korea at the time; he had received the text by telegraph and wired back his agreement. However, when he returned to Beijing and found that it had strengthened the students' resolve to protest, he attacked the article, saying at a 16 May PSC meeting that the editorial should be revised. This about-face infuriated the hard-liners within the PSC. In addition, the publication of Zhao's speech to the Asian Development Bank unintentionally confused others by

equating the reforms that the students were calling for with democracy, which made the reforms the students wanted seem more fundamental than they really were. Zhao's words had the effect of causing divisions in the Party ranks and confusion among the students and the public. Political opponents like Li were able to capitalize on these effects to persuade Deng and other leaders to act in accordance with the hard-liners' approach.

When the matter was referred to the group of elders, Zhao Ziyang and Li Peng had different strategies. Zhao's strategy was to use the occasion to advance the cause of reform. For him, it was an opportunity to introduce "democratic and legal means," by which he meant guarantees of freedom of speech and "multiparty cooperation." He tried to convince the other leaders that "democracy is a worldwide trend," and that they should be accepting of the view of wide sections of society represented by the protestors.

By contrast, Li Peng's strategy was to exaggerate the threat posed by the protest movement and to turn the movement on Deng's person, thereby convincing the superno of the need for a hard-liner approach. It was Li who said at a 16 May PSC meeting that the "tiny minority" wanted to "begin a political struggle against the Communist Party and the socialist system and to expand this struggle from Beijing to the whole country and create national turmoil." He said this knowing full well that Deng had no way of independently verifying this interpretation without taking the trouble to look at the intelligence evidence himself, and Deng seemed to take Li's rendition of the events on good faith. By saying that the marchers were "anti-Party and anti-socialist," Li was clearly playing on Deng's fears of a general disorder on the scale of the Cultural Revolution. In addition, Li wanted Deng and the elders to think that they were being denounced personally. "The spear is now pointed directly at you and the others of the elder generation of proletarian revolutionaries. . . . There are open calls for 'open investigations into and discussions of the question of China's governance and power'" (Nathan 2001, 10). Li wanted to incite Deng into thinking that people were calling him to account for his extralegal exercise of power, pre-

cisely the kind of informal power that resulted in June 3 and 4.

The polarizing views of Zhao and Li and the eventual triumph of the latter in obtaining the backing of Deng Xiaoping made confrontation the likely outcome, not least because both the hard-liners and the student organizers were determined to stick to their own positions. If Zhao wanted to turn the movement into a major reform movement, Li wanted to use Deng's extraconstitutional authority as a shield. Li wanted the 26 April editorial to be published so as to "get the word out on what Comrade Xiaoping has said" (Nathan 2001, 11). Li succeeded in using Deng's comments to advance the hard-line approach and sealed the outcome of the crisis. His maneuvers might have caused Deng to take a more hard-line stance than he did initially, since Deng was not in principle opposed to reform, although he believed that reform must come incrementally, or to dialogue with the student representatives. Nevertheless, once Deng gave the verdict, the rest of the leaders fell in line. Everyone looked to Deng as the final arbiter of decisions, and once he had made the statement, they rallied behind him. Within the central leadership, Zhao lost favor. The decision to dismiss him was finalized by a vote of the elders at Deng's residence on May 27.

GERONTOCRATIC LEADERSHIP AND GENERATIONAL POLITICS

The world media converged in Beijing on the occasion of Soviet leader Mikhail Gorbachev's visit to China on May 15 and 16. Chinese leaders had ascribed great importance to the Deng-Gorbachev summit, for which they had been planning for years; they saw it as the final normalization of relations between the PRC and the USSR. The presence of large contingents of foreign media was to have a major impact on the decisions of the leaders about how to handle the protests and thus contributed significantly to the outcome of June 3 and 4. It was on this occasion that Zhao Ziyang made his second personal mistake.

Two summit sessions were held—the first was at the Great Hall of the People, where Deng met with

Gorbachev, and the second was at a state guest house called Diaoyutai, because of the large number of demonstrators at Tiananmen Square. For the government, this was a matter of losing face on the international stage, and President Yang Shangkun later gave this as one of the reasons for ordering the troops. It was at Diaoyutai that Zhao Ziyang implied to the Soviet leader that while Deng had officially retired from his Party posts in 1987, he still made the most important party decisions. Zhao's comment gave others within the central leadership the opportunity to move against him.

Four hours later, Zhao was denounced in a PSC meeting at Deng's house. Li Peng faulted Zhao for giving the May 4 speech to the Asian Development Bank "without clearing it with anyone else." His speech, Li said, had raised the students' expectations, fueled their impatience, hardened their resistance, and worsened the crisis. Meanwhile, Yao Yilin noted Zhao's second mistake, his "whispers" to Gorbachev. Their aim, it seems, was to shift the burden of responsibility for the crisis to Zhao. What they wanted was a scapegoat for the way that things had gotten out of control, and it was not going to be Deng. Zhao defended himself by saying that his May 4 speech was intended to "pacify the student movement and to strengthen foreign investors' confidence" in China. As for his words to Gorbachev, Zhao said he wanted all communist leaders of the world to know that Deng remained, legally, the Chinese Communist Party's "primary decision-maker" (Nathan 2001, 20).

It all depended on Deng's response. Would he take the side of Li or would he find Zhao's defense reasonable? First of all, it would not be in Deng's interest to exonerate Zhao, for that would mean, to Gorbachev and others, that he himself was responsible for the handling of the crisis. Second, Deng was not in principle opposed to reform; he just did not want Western-style democracy and multiparty elections, which he equated with chaos, the type that conjured up the fury of the Cultural Revolution, the red herring in recent Chinese political history. Third, he had been willing to talk to the students, provided that they cleared the Square and made way for Gorbachev, which they had refused to do. Fourth, he

wanted the matter to be resolved quickly after almost a month. The question for Deng was not whether the leaders should stick to the April 26 editorial, which stated the government's position, and which Zhao's May 4 speech contradicted: If the students saw that there was no unity in the leadership, they would be more adamant in their demands. It was therefore crucial for the leadership to demonstrate a unity of purpose. Since Zhao's speech had the opposite effect, Deng had all the reason he needed to "fire" Zhao from his post. Finally, thanks in part to Li, Deng feared for his own person. "If things continue like this, we could even end up under house arrest." In the end, Deng saw the need to dismiss Zhao, declare martial law, and call in troops to end the "turmoil" (Nathan 2001, 16–21).

Despite Deng's verdict, on the following day (17 May), the PSC met again at Zhongnanhai and reached a second stalemate. The result of a vote was that Li Peng and Yao Yilin voted in favor of martial law, Zhao Ziyang and Hu Qili against, and Qiao Shi abstained. The matter was once again returned to the elders; as before, the informal decision-making process took over. Li convinced the elders that Zhao's May 4 speech violated the central norm of collective leadership because it had not been cleared by the PSC. Again, each of the two factions tried to persuade Deng to adopt its point of view. On 18 May, the elders met with PSC members (Zhao Ziyang was absent) and with members of the Military Affairs Commission, General Hong Xuezhi, Liu Huaqing, and General Qin Jiwei. Together, the collective leadership agreed to declare martial law.

The critical decisions leading up to the incident of June 3 and 4 were therefore not made by any one individual, but by a group of central leaders. Within this collective leadership, Deng Xiaoping was the final arbiter of central decision-making, although this did not mean that Deng was necessarily able to impose his will on the other leaders. Rather, these top leaders sought to defer to Deng. It was hence a combination of Deng's individual decision and the collective leadership's deference to his person that resulted in the critical decisions. Nor does this mean that the collective leadership's decision was unanimous or unchallenged. There was dissent, principally

from Zhao Ziyang, and it was in part how Deng's position overrode the dissenting views and how some members and factions of the collective leadership maneuvered to persuade Deng to adopt the hard-line approach that brought about the final outcome of the Tiananmen episode.

Generational politics characterized Chinese leadership style. The elders were distinguished by their age; in general, the older they were, the greater the unwritten authority they held vis-à-vis the younger leaders. The septuagenarian and octogenarian leaders were entitled to additional measures of authority for having participated directly in the Communist revolution. This rule remains unwritten because it goes to the depths of Chinese political culture, according to which respect for elderly authority traditionally stemmed from a hierarchical sociopolitical structure. It was not just their age and experience, but their personal contributions to laying the foundations of the PRC that afforded them this legitimacy, which was extraconstitutional but conformed to the age-old paternalistic tradition that held that elders know best. The weakness of China's constitutional system, the lack of a legal culture and institutions of checks and balances, and a long-standing political tradition that emphasized personal and informal relationships combined to allow the revolutionary elders to claim supreme authority during the crisis.

The Chinese constitution did not provide the elders with the authority to remove Zhao, which belonged to the Politburo and the State Council. Yet during the crisis of 1989, the elders essentially reshuffled the PSC leadership. The younger leader, Jiang Zemin, who demonstrated a commitment to their conservative view of China's political order, was promoted to Party General Secretary, replacing Zhao. This outcome had to do with generational politics. Deng saw himself as "the core of the second generation," and Jiang Zemin as "the core of the third generation" of Party leadership. When Li Peng told Deng that "the spear is now pointed directly at you and the others of the elder generation of proletarian revolutionaries," he was essentially trying to drive a wedge between the older and younger generations, the elders and the students. The reason he did

so was to maximize his influence over Deng so that Deng would choose his hard-line position. On the morning of 2 June, the elders met with PSC members and decided to clear the Square.

INTO THE FUTURE: THE CHINESE AUTHORITARIAN TRADITION

Leading sinologists argue that Tiananmen leadership decision-making symbolizes the triumph of Chinese authoritarianism. One scholar maintains that it played out "the unaltered instincts of authoritarianism in the leadership" (Pye 1990, 331). Another contends that for post-Tiananmen leaders "authoritarianism is the best path for China, even for reform" (Waldron 2002, 398–9). "The emperors may be dead, but 'imperial Beijing' is alive" (Terrill 1994, 139). The Leninist system would not just "wither away" nor would authoritarianism be replaced by some form of Chinese democracy via economic development. In short, China's political traditions and its Leninist political structure support authoritarianism. The rule of authoritarianism seems strengthened; since 1989 people calling for reforms have become far more cautious, owing to the "lesson of Tiananmen." The view is that incremental change is better than revolutionary upheavals, a view that is actually shared by the generations that experienced the Cultural Revolution and the Tiananmen Square event.

TOKUGAWA IEYASU (1543–1616)

Japanese military leader and statesman

Tokugawa Ieyasu was the founder of the Edo shogunate (1603–1867), Japan's last. Born Matsudaira Takechiyo in Okazaki, of the Matsudaira military clan, Ieyasu grew up in a period of warfare, kidnapping, and shifting alliances. He not only survived this turbulent era, he used his skills in battle tactics, judgment of others' characters, and land acquisition to unify Japan under one government, organize new laws to regulate the court and the military clans, and lay the foundation for more than 250 years of peace under Tokugawa rule.

In 1547, at four years of age, Ieyasu was sent as a hostage to seal an alliance with the Imagawa clan, but was captured en route by the Oda clan. Held until his father's death in 1549, Ieyasu returned home briefly and assumed leadership of his clan before going back to the Imagawa as a hostage. Their defeat by Oda Nobunaga (1534–1582) in 1560 freed Ieyasu to regain leadership of the Matsudaira, and he immediately allied with Nobunaga, changing his name to Tokugawa Ieyasu and seizing Imagawa land.

Ieyasu gradually rose to prominence, steadily expanding his territorial holdings by joining forces with Nobunaga, who sought to bring the country under unified rule. An example of the battle tactics and quick thinking that made Ieyasu a great leader occurred in 1575, when he found out that Takeda Katsuyori had surrounded Nagashino Castle in Mikawa. Ieyasu called on Nobunaga for help. When Nobunaga did not respond immediately, Ieyasu threatened to join the Takeda and spearhead an attack on Owari and Mino. Nobunaga respected Ieyasu's move and led an army into Mikawa. The combined Oda-Tokugawa army of approximately thirty-eight thousand pushed back the Takeda forces, but did not conquer them.

The Takeda and Tokugawa clans would continue to raid one another's lands frequently.

SURVIVAL

Ieyasu's leadership, decisiveness, and ability to form alliances were often put to the test, perhaps most evidently when he was betrayed—even by those he may have trusted the most. In 1579, Ieyasu's wife and eldest son, Hideyasu, were accused of conspiring against him with Takeda Katsuyori. Due in part to pressure from Nobunaga, Ieyasu ordered his son to perform *seppuku* (commit suicide) and had his wife executed. Tokugawa could be utterly merciless when the overall fortunes of his clan were at stake.

A few years later, Ieyasu was an assassin's target while staying in Settsu province. When Nobunaga was assassinated by Akechi Mitushide in June 1582, Ieyasu narrowly escaped with his own life back to Mikawa. After the assassination, Ieyasu watched the development of events closely as one of Nobunaga's top generals, Toyotomi Hideyoshi, carried out his former lord's goal of national unification. In 1584, Ieyasu allied with Hideyoshi, further solidifying their alliance by marrying his sister.

Ieyasu's ability to organize and develop new organizations was proven when long-time Tokugawa retainer Ishikawa Kazumasa abandoned him for Hideyoshi in 1585. Because Kazumasa had been privy to all of the Tokugawa military secrets and knew its organization, Ieyasu completely overhauled the Tokugawa military structure. Scholars believe he carried out this restructuring by following a system devised by Takeda Shingen.

KEEPING AN EYE ON IEYASU

Following a joint victory at Odawara in 1590 that secured control of eastern Japan, Hideyoshi rewarded Ieyasu by trading his old lands for new lands in the east. This move also was designed to undercut Ieyasu's independence and to keep him isolated in the east. Ieyasu began building an imposing new headquarters at a small fishing port called Edo, which would later become Tokyo.

During the Korean Expeditions (1592–1593,

1597–1598), Ieyasu served in Hideyoshi's Kyushu headquarters, but was not required to provide troops for the campaign. Hideyoshi was able to keep an eye on Ieyasu, while Ieyasu's band of retainers, which contained a number of skilled administrators, continued the work of consolidating the new Tokugawa domain while he was away.

SEKIGAHARA

While Hideyoshi pursued his invasions of Korea, Ieyasu made alliances and gained influence and, shortly before Hideyoshi's death in 1598, became the foremost member of the five-person committee set up to protect Hideyoshi's infant son, Hideyori. Promptly breaking this oath after Hideyoshi's death, Ieyasu began allying with other leaders and in 1600 crushed his principal opponents at the Battle of Sekigahara. Ieyasu's victory in this battle is often referred to as the beginning of the Edo period, because he established a central government in Edo shortly after the conclusion of the battle.

With the defeat of his western rival, Ieyasu was the undisputed master of Japan. He used his power to redistribute lands to those who had served him and to reduce the lands of those who had not. To an extent, he made his decisions keeping in mind that Hideyori was still alive in Osaka Castle.

SHOGUN

In 1603, the Imperial court granted him the title shogun (military governor). Ieyasu established his capital in Edo and devised a system for ruling his kingdom, issuing policies on external relations, economics, and trade. He ordered the regional lords to destroy all their castles except those in which they actually lived and encouraged the warrior class to pursue not only military arts but also scholarly learning. Ieyasu adopted many measures to secure the lords' allegiance to the new government, such as establishing norms of conduct for them and their military retainers.

In 1605, he passed his title to his son, Hidetada, and retired to Sumpu. As a natural leader, Ieyasu still retained much of his power and influence. In some

ways, relieving himself of his shogunate duties allowed him to further his influence by consorting with wealthy merchants, monks, scholars, and foreigners, always manipulating everything he did to his family's advantage.

In May 1611, Ieyasu entered Kyoto leading fifty thousand warriors, ostensibly to attend the retirement of Emperor Goyōzei and the succession of Go-Mizonoō. During his stay in the capital, he ordered the expansion of the Imperial court's buildings and grounds and asked the western daimyo (feudal barons) to sign a three-part document vowing their fealty to the rule of Edo. Perhaps based on his experiences on this trip, Ieyasu returned to Edo and composed the *Kuge Shohatto* in 1613, which placed restrictions on the activities of the nobility, essentially limiting that class to ceremonial and aesthetic pursuits.

He continued to promote foreign trade, establishing relations with the English and the Dutch. At the same time, he enforced the suppression and persecution of Christianity. In 1587 Toyotomi Hideyoshi had issued an edict expelling all Christian missionaries, but it was not obeyed or enforced. Japanese civil rulers throughout Japan began to see that the Catholic Church was not only a religion, but a political power intimately connected with the imperialistic expansion of Catholic countries like Portugal, Spain, and other Western nations into Asia. They worried about loyalty of the Japanese who converted and then pledged loyalty to the Pope, and the presence of Catholicism also caused strife between Christians and Buddhists. To secure the stability of the Tokugawa regime, he issued the Christian Expulsion Edict in 1614. In 1615, drawing on previous "house codes," which were meant to serve as ethical and behavioral guidelines for the sons or heirs of the writers (the head of the house, usually of military families) and often reflected concerns regarding the prosperity and the continuity of the clan and earlier ideas, he formalized what was essentially a house code for the nation's daimyo by ordering the preparation of the *Buke Shohatto* ("Laws for Warrior Houses").

LAST THREAT

The final threat to Tokugawa domination was Hideyori. It is not surprising that Hideyori seemed not to

want to face Ieyasu, given his stature and reputation by this stage of his life. But Ieyasu was unwilling to take any chances, especially given his advanced age, so he devised a pretext for war in 1614 over a convoluted and supposed slight. During 1614 and 1615, he organized two attacks against Osaka Castle that ended in the obliteration of the Toyotomi line.

An example of Ieyasu's cunning and ruthlessness is how he got Hideyori to negotiate in one battle. Guessing that the matron of the castle, Hideyori's mother Yodo-gimi, was a weak link that could be exploited, Ieyasu ordered that her location be determined and that cannon fire be directed in that area. To the shock of the defending generals, Hideyori's mother was able to persuade him to negotiate. Ieyasu promised the defenders that he would honor a peaceful solution to the crisis and that Hideyori would be allowed to retain his holdings in the Settsu-Kwatchi region. Hideyori agreed to the offer and ordered his followers to stand down. Ieyasu made a show of arranging for his army to withdraw, then promptly arranged for Osaka's outer moat to be filled in. Hideyori protested, and Ieyasu revoked his peace offer. In June 1615, during the climactic Battle of Tennōji, Hideyori and his mother committed suicide. In the aftermath, Ieyasu ordered that Hideyori's infant son be executed and Osaka Castle largely dismantled.

NEW REGULATIONS

Ieyasu brought the whole country under tight control. He redistributed that which he had gained in battle among the daimyo: the more loyal the vassal, the more strategically important domains they received. Every daimyo was also required to spend every second year in Edo, which was a huge financial burden that moderated their power at home.

Ieyasu's reign left Japan more socially rigid than it had ever been, and the common man and woman had little control over their own lives. The most important philosophy of Tokugawa Japan was neo-Confucianism, stressing the importance of morals, education, and hierarchical order in the government and society. A strict five-class system existed during the Edo period. At the top of the social hierarchy

stood the samurai (warriors), followed by the peasants, artisans, and merchants. At the bottom of the hierarchy were the outcasts, who were people with professions that were considered impure. The members of the classes were not allowed to change their social status.

LEGACY

In 1616, Ieyasu fell ill and died in bed at the age of seventy-five. He was enshrined at Nikko, which is now a World Heritage Site, as *Tosho Daigongen*, an aspect of the Buddha. Unlike Hideyoshi, the future of the Tokugawa house was secure because of the social and legal systems Ieyasu had established. Additionally, the daimyo were weary of war and content to enjoy the fruits of their labors. While minor disputes and grievances occurred, Japan would mostly enjoy peace for more than two hundred years, with the exception of the short and bloody Shimabara Rebellion (1637–1638). This rebellion of peasants supported by *ronin* (masterless samurai) was in protest of heavy taxation. After initial success, the rebellion was crushed, and an estimated thirty-seven thousand rebels were killed. Because many of the peasants were converts to Christianity, their rebellion strengthened Tokugawa determination to isolate Japan from foreign influence and to vigorously enforce the outlawing of all Christian beliefs and activities.

Few leaders in Japanese history are as difficult to understand as Tokugawa Ieyasu. He was a veteran of countless battles and of a life fraught with viciousness, including the forced suicide of his eldest son and the execution of his first wife. He was moved to express compassion for his defeated enemy Takeda Katsuyori, on the other hand, and protected many former Takeda retainers from Nobunaga's wrath. While he rarely forgot a grudge—he once, as an adult, executed a prisoner who had insulted him in childhood—he never forgot a friend either, and rarely left a loyal retainer unrewarded. He was at heart a rustic Mikawa samurai and had little time for poetry or theater, spending most of his free time hawking or swimming, two of his favorite hobbies.

Ieyasu was a calculating political gambler who

won the battles that counted, both on the battlefield and off. More than anything else, though, Tokugawa Ieyasu was a man with a sweeping vision that would continue to lead the Japanese for two centuries after his death.

TOTAL QUALITY MANAGEMENT

Total quality management (TQM) is an influential philosophy of management, but it is also a hodgepodge of ideas and practices meant to help organizations function more effectively. While there is reasonable agreement about what TQM includes—customer satisfaction, quality as a strategic concern, systematic measurement, continuous improvement, and team-based organization—there is no single TQM school. The ideas that make up TQM were developed and popularized by a number of scholars, practitioners, and consultants, most prominently W. Edwards Deming (1900–1993), a professor of statistics and quality control at New York University whose “fourteen points” are akin to the Ten Commandments of the quality approach. The term TQM itself took hold in the 1980s, the best-known in a series of labels (among them statistical process control, company-wide quality control, total quality control, Six Sigma, and the Baldrige model) going back to the 1930s in the United States and the 1950s in Japan. Different

thinkers and organizations emphasize different aspects of the TQM amalgam—from those who stress precise and systematic measurement (with its image of top-down control) to those who stress motivation and empowerment (with its image of workplace democracy). These different perspectives have sharply contrasting implications for leadership. But the many flavors of TQM share a simple premise: In a market economy, organizations must satisfy their customers or lose them to competitors.

HISTORY

TQM was born in the 1930s, with the application of statistical methods to the measurement of work tasks. The rigorous study of work calls to mind the inventor and engineer Frederick Taylor's notions of scientific management in the first decades of the twentieth century, but in the 1930s statisticians like Walter Shewhart developed more sophisticated ways of measuring work, using statistical control to measure the variation in any task or output (for instance, the number of errors in fabricating a thousand telephone receivers). Shewhart devised techniques to calculate acceptable numerical limits for any given task, allowing researchers and managers to pinpoint problem areas and explore possible causes in poor work design, materials, training, or other factors. During the 1940s, Deming began to apply Shewhart's methods (for instance, in the design of the 1940 federal census), but the United States' unrivalled postwar dominance meant that few U.S. business leaders felt any impetus to adopt or even learn such seemingly arcane statistical techniques.

Deming's ideas, however (and those of like-minded thinkers such as Joseph Juran) found fertile ground in Japan, which had been devastated by the war. In 1950, the Union of Japanese Scientists and Engineers established the Deming Prize, and the phrase "made in Japan" began its remarkable thirty-year transformation from signifying shoddiness to quality. By the early 1980s, Japanese firms and their products posed a serious competitive threat to U.S. businesses. An increasingly nervous United States seized on Deming and his ideas as the secret behind the Japanese miracle, and the potential salvation of

U.S. business. In the 1980s and 1990s, many U.S. organizations embraced TQM. In Europe, TQM efforts were driven less by the need for postwar rebuilding, as in Japan, or by a sense of crisis, as in the United States, as by ongoing efforts to modernize European business culture. The European Foundation for Quality Management, founded in 1988, has played a leading role in encouraging businesses across Europe to embrace TQM ideas, in part by awarding the prestigious European Quality Awards.

After so much initial enthusiasm, especially in the United States, a backlash against TQM followed, as many organizations found that TQM was no panacea for their ills (by some estimates up to 70 percent of TQM efforts fail). Today TQM's reputation is equal parts managerial gospel and snake oil.

ELEMENTS IN TQM

Among the many TQM variants jostling for attention, a few themes may be identified. The first two themes are customer satisfaction and, related to this, quality as a strategic concern. TQM proponents see a great economic transformation in the last decades of the twentieth century, from competitive advantage centered on quantity (economies of scale, mass production, cost leadership) to competitive advantage centered on quality (efficiencies of learning and flexibility, mass customization, differentiation). "The consumer," Deming insisted, "is the most important part of the production line" (quoted in Walton, 1986, p. 30).

And since consumers demand high quality no less than low cost, quality becomes a strategic concern. While quality was traditionally seen as something that raised a product's cost, a host of TQM advocates have echoed the businessman and quality consultant Philip Crosby's provocative statement, "Quality is free." Quality is "free" because designing quality into a firm's processes dramatically lowers its direct and indirect costs (such as waste, rework, employee turnover, repairs under warranty, and lost customers).

A third TQM theme is systematic measurement, especially sophisticated statistical analysis along the lines of Shewhart's pioneering statistical control. This idea remains at the heart of TQM efforts—Motorola's Six Sigma program, for instance, aims to

reduce the incidence of errors to one per million (that is, six standard deviations, or sigmas, away from the mean in a normal distribution). TQM proponents seek to make data acquisition and analysis an ongoing part of an organization's work design, while criticizing traditional quality control—the mass inspection of finished products or activities—as too costly and of little help in improving the design of work. The third of Deming's fourteen points challenges organizations to cease trying to achieve quality by dependence on mass inspection, urging them to build quality into the product in the first place.

Systematic measurement is at the heart of a fourth TQM theme: continuous improvement (often denoted by the Japanese term *kaizen*). TQM premises a never-ending effort to optimize work outputs (sometimes formalized in a Shewhart or Deming PDCA cycle—"plan, do, check, act"). But there is a tension inherent in this eternal hectoring to improve: In his fourteen points, for instance, Deming exhorted organizations to improve constantly, but he also insisted on the need to eliminate numerical targets and quotas, for fear that these would become ends in themselves. In practice, calls for continuous improvement are meant to motivate workers and to turn TQM from a one-time fix into an ongoing discipline, but over time continuous improvement often degenerates into the quotas and targets Deming decried, ceasing to be a useful motivator.

The final core idea of TQM is team-based organization, an approach that shows the strong influence of Japanese culture as well as dissatisfaction with traditional Western management, which TQM proponents see as the root cause of low quality. One prominent TQM popularizer and practitioner, Bill Creech, argues that traditional U.S. management is characterized by a high degree of centralization, a sharp division between managers and workers, and a rigid functional separation within the organization. Teams, Creech and others argue, bring together workers from different departments, decentralize power, increase accountability, and cut across the usual bureaucratic lines. Teams empower workers to see themselves as owners of their work and outputs and encourage them to seek the data and feedback they need to do their work better. But because teams

represent so great a challenge to the usual ways of organizing work and allocating power, many if not most TQM efforts fail to make teams a central part of change efforts.

TQM AND LEADERSHIP

For leadership, TQM's implications are fraught with contradiction. TQM is often portrayed as a way for an organization's leaders to share power with workers—but the systems approach of much TQM thinking often encourages a rigid, all-encompassing approach to planning, measurement, and control that can actually reduce followers' autonomy. TQM is intended to provide a solid empirical foundation for decision-making, but its implementation depends on active charismatic leadership and motivated, engaged workers. Indeed TQM could be said, from one perspective, to be a more extreme form of workplace control than even traditional Taylor-style scientific management: Taylorites sought to control workers' bodies; some TQM enthusiasts try to control their hearts and minds, as well.

The rise and decline of quality circles, a common element of many TQM programs, is revealing. Quality circles—small groups of workers convened to identify work problems and explore solutions—became popular in the 1980s as a way for firms to harness the power and knowledge of workers, but lost favor in the 1990s as managers found they could not easily control the directions quality circles went in. In recent years quality circles have given way to "alignment," a buzzword more compatible with coordinated planning and top-down control. Still, many TQM proponents continue to insist that empowerment remains the critical feature of lasting TQM efforts.

Not surprisingly, TQM has generated a good deal of criticism. Much of it takes aim at superficial or insincere TQM efforts: The searingly satirical *Rivthead*, for instance, describes GM's efforts to introduce quality into its automotive assembly plants in the late 1970s as pure nonsense—the same old quotas and processes, overlaid with cheery but empty slogans about quality and the appearances of "Howie Makem," a giant costumed "Quality Cat" who peri-

odically visited the factory floor. More serious critiques of TQM, such as *The Working Life: The Promise and Betrayal of Modern Work* (2000, chapters 8–9), by the leadership scholar Joanne Ciulla, emphasize that there is far more talk about empowerment than actual power-sharing: While a commitment to quality undoubtedly can improve a company's financial health, workers have no assurance that their lot will be better. In this regard, TQM's more extreme claims to reinvent the workplace fail to confront what some would see as an innate structural conflict between labor on the one hand and capital (and the managers who represent capital) on the other.

TQM's luster has faded since the concept's heyday in the 1980s and early 1990s, when the newly instituted Malcolm Baldrige National Quality Award (established in 1987) was part of a fevered national effort to improve the competitiveness of U.S. business. The decline of TQM, though, is due partly to its very success. Many TQM ideas—attention to customer satisfaction, designing quality in, careful measurement and data analysis, feedback, and continuous improvement—have become business commonplaces, and quality has become a generic business concept. But TQM's fortunes have also declined as Japan's economy, a onetime global juggernaut that seemed to be built on the TQM miracle, foundered in recession throughout the 1990s and into the 2000s. Still, TQM has had a lasting impact. The Baldrige Award has now been bestowed on almost fifty organizations, and in recent years winners from the fields of health care and education have been added to the list, reflecting the degree to which the ideas of TQM have penetrated.

In the end, beyond the hype and the denunciations, TQM deserves to be taken seriously. At its core, it represents an effort to move beyond Frederick Taylor's mechanical image of the organization to an organic or cognitive image. TQM compels an organization's leaders to engage in critical thinking, to ask the simple questions which are hard to answer—Who are we? What do we do? How well do we do it? Who is our customer? What does he or she want? At its best, TQM helps remind leaders that an organization's work is always a collabora-

tion, not merely a division of labor. In that regard, an understanding of TQM is a vital element of contemporary leadership.

—Michael Harvey

TRADITIONAL SOCIETIES

The study of leadership in what have been variously labeled traditional, indigenous, nonliterate, preliterate, simple, kin-based, or primitive societies has been the intellectual responsibility of cultural anthropology. The ethnographic literature is rich with descriptions, discussions, and occasionally comparisons of leadership in indigenous societies around the world. There are numerous accounts of religious leaders, such as the shamans of Siberia and Aztec high priests; of family leaders (women in Iroquois society, men in Ashanti society); and of community leaders, such as the headmen of New Guinea and Arab tribal confederacy chiefs. There is also much information

about the basis of leadership, whether that basis be skill at hunting, bravery in war, personal charm, honesty, delicacy in negotiations, generosity in gift giving, the ability to communicate and influence the supernatural world, or ties of kinship and friendship. And there is much information about leadership in times and places of cultural contact; particularly regarding the changes in indigenous patterns of leadership in reaction to colonization by Westerners.

But despite this wealth of information produced by anthropology over the past 150 years, there is relatively little interest in leadership as a topic in anthropology, nor is there much theory to explain similarities and diversity in leadership across cultures. The theoretical orientation has been mainly within the “trait theory” tradition, which focuses on the traits of leaders—older, male, aggressive, capable, tall, and charismatic. There is some evidence that leaders of indigenous societies are less competitive and more generous than leaders in Western societies.

Perhaps an explicit focus on leadership is missing because ethnographers (anthropologists who conduct field research) have traditionally adhered to a holistic paradigm in which description and analysis considers all structures and functions of societies as integrated and interrelated. In addition, the focus of anthropology has been on the local community, although from the 1980s onward there has been considerably more interest in the local community and people’s lives in national and world contexts. The implication of this approach for the study of leadership in these societies is that leadership has typically been studied within the context of the community in relationship to or as a component of other elements of culture such as power, gender roles, political organization, religion, kin relations, age grades, patronage, social movements, succession, authority, or conflict and conflict resolution, among others.

Despite the paucity of theory, the rich ethnographic record on leadership in indigenous societies played a major role in correcting the early view that indigenous societies had no leadership. Until the middle of the nineteenth century, scholars in the West generally assumed that only Western societies had leaders and true leadership. Indigenous societies, which were known in the West primarily

through the reports of colonists, travelers, soldiers, and missionaries, were often described as living in a state of anarchy with leadership centered in the kin group (the family or clan). This view was completely contrary to reality, as proved by such examples as military leaders among Plains Indian societies in North America, hereditary leaders of African states, Big Men in the Pacific Islands, and shaman leaders in Siberia and South America. The oversight was perhaps intentional, as it allowed colonists to ignore traditional patterns of leadership and political organization and install or support as leaders those individuals or families who would be most friendly to the colonists’ own economic interests.

BAND-TRIBE-CHIEFDOM-STATE

For several generations, anthropologists have classified the 2,500 or so known traditional non-Western societies of the world into four general categories: band, tribe, chiefdom, and state. Despite considerable criticism of this scheme and its very limited applicability in the contemporary world, it continues to be widely used, especially for discussion of political organization and leadership.

For several million years, up to about ten thousand years ago, all human beings lived in bands or perhaps smaller family groups. Since then, the number of people living in bands has declined, and in 2003 very few band societies remain. Those that do are found in Africa, South America, and Australia and live a lifestyle quite different from that of band societies in the past. Bands are small, nomadic groups (usually comprising less than one hundred people) who live by hunting and gathering wild foods. The people in the band are typically kin, and a band is made up of several families. The Inuit of Alaska, !Kung of southern Africa, Mbuti of central Africa, and Tiwi of Australia are among several dozen band societies well described by ethnographers. All bands have leadership, although in smaller bands the leadership role is temporary (for example, there may be a leader for a hunt) and leaders are best described as those whose opinion carries more weight than others regarding the decision to be made. Leaders are those who have good interper-

sonal and speaking skills, are able hunters, are generous, and have a large kinship network that supports their decisions. Ruth Landes describes this type of leader among the Ojibwa of southern Canada:

The leader of a prospective war-party is one who has had a series of dreams envisioning for him all the precise conditions of the future campaign. Legend has an account of a ten-year-old war-leader. In actuality, a leader is one who already has shown his martial mettle. To develop his war power, "he talks and talks to his manido. He examines himself to see if he has strength. He dreams about the path they will take, where they will stop and sleep, where they will see lots of strawberries. He even knows when he will meet a bear or porcupine to eat. If it is a clear dream, then he will go and return safely. If the dream is smoky (i.e., vague), then he will lose some men. He dreams how they will kill the Sioux, and how many of them they will kill. In those days they were helped by the things they dreamed, and they were powerful." (Landes 1937, 118)

In larger band societies such as the Tiwi, leaders are classified by anthropologists as Big Men, a label that identifies them as permanent, general leaders who have much authority in economic and religious matters and who head large families. Big Men typically maintain power through kin-based alliances created by marrying off their daughters to other families.

The so-called tribe or tribal society is the most controversial of these four types of societies. The term *tribe* has largely fallen into disuse because of racist and political uses of the label in modern political—but not anthropological—discourse. As a societal type, a tribe is a society that subsists by horticulture, herding, or both and that is composed of several communities linked by ties of kinship, reciprocity, or both. The population typically numbers in the hundreds (although some such societies may be more populous) with low population density. Leadership in tribes is at the local level and tends to be informal and impermanent. Leaders often act as spokesmen for their communities, and traits such as aggressiveness with outsiders, generosity in the community, eloquence, and knowledge are valued. In herding societies, it is often elders who occupy the leadership positions. Leaders in tribes have more symbolic than

material power, as indicated by the Tonga of south-east Africa:

One of the reasons for the nominal status of the headman is that he is not in a privileged position to exploit economic resources, such as natural resources or manpower. The main resources which are required for the Tonga subsistence economy, such as garden land, water, firewood and building materials, are all in relatively plentiful supply and their distribution is not controlled by headmen. As for control over manpower, there are at present no activities in Tongaland which require the large-scale exploitation of manpower in which the person who has manpower at his disposal has an advantage over a person who has not. (van Velsen 1964, 292)

Chiefdoms are societies that, like tribes, are composed of multiple communities but have larger populations, larger and more permanent communities, subsist by farming or herding (or both), and have centralized leadership and often leaders at the local level as well. Most chiefdoms are led by a chief whose position is usually permanent, sacred, high status, and hereditary. There may also be a council or local councils, and in a few chiefdoms there is no chief, just a council. Chiefs and their families are typically very wealthy, control material and symbolic resources, and are viewed by their followers as being divine or having a special relationship with the gods. Chiefdoms in the South Pacific and sub-Saharan Africa have drawn the most attention. In the South Pacific, chiefs have enormous religious power and live apart from commoners. In Africa, the chief's power rests to some extent on his unique ability to communicate with the ancestors who influence the lives of the living. Although some chiefs may be dictators, there is great variation in how much power chiefs have and how they exercise it across cultures and over time in single cultures.

True state societies are the most recent form of human political organization. They emerged in Mesopotamia and Egypt about 4,500 years ago and have evolved over the millennia to the modern nation-states of today. Nation-states have populations of more than 5,000; cities; subsistence based on intensive agriculture; a defined territory; strong, centralized government supported by an extensive

bureaucracy; and a control force such as the police that enforces the laws of the state. Early states and even some in the twenty-first century were and are theocracies, with the leaders seen as divine or their rule divinely inspired. Larger states also have other leaders in such areas as commerce and finance, the military, and religion. Throughout history, priests (a general term for full-time religious specialists) have played a major sacred and secular leadership role in states, often being involved in military, judicial, political, economic, and ritual matters. Ties based on kinship and alliances created through marriage have often been the means of maintaining power and the means of leadership succession in state societies, although less so in modern states.

The band-tribe-chieftdom-state scheme has led some anthropologists to suggest an evolutionary theory of political leadership. The most common view is that over time and across cultures leadership has moved from informal, shared, and local to formal, autocratic, and centralized.

GENERAL FINDING ABOUT LEADERSHIP ACROSS CULTURES

Beyond the description of leadership in different types of societies, the anthropological record does allow for some other generalizations about leadership.

1. Leadership is a cultural universal. All societies known to anthropology have a social role that fits the general definition of leader, although not all societies have permanent leaders or leaders with general authority.
2. In most societies, leaders are always men. Martin King Whyte's 1978 survey of world societies reported that in 88 percent of societies only men were leaders. War leaders are almost always men in nearly all societies in which that role is present, and women are almost never warriors, evidently because being a warrior conflicts with being a parent. Women are more likely to be leaders in band-level societies and modern state societies than in tribes or chiefdoms.
3. Across cultures, people labeled as leaders play a wide range of roles, including those of spokesman, resource allocator, work organizer, cultural interpreter or broker, economic middle-

man, government official, mediator, translator, representative, decision maker, adjudicator, manager of relations, diplomat, repository of knowledge, link to the past, divine force, and communicator with the supernatural world.

4. Across cultures, power is based on control of both material and symbolic resources. While in all cultures people seek power when given an opportunity to do so, it is also common for people to seek freedom.
5. Who the leaders in indigenous societies are, how they are chosen, and the nature of their roles and power have all been influenced greatly over the past five hundred or so years by contact with Western societies.

LEADERSHIP IN THE COLONIAL AND POSTCOLONIAL CONTEXT

Much of the anthropological research pertaining to leadership has examined indigenous political and to a lesser extent religious and business leadership within the context of colonialism, independence movements, and postcolonial nation building.

The effects of colonization by England, Spain, France and other Western nations on indigenous patterns of leadership cannot be overemphasized, and the nature of precolonial indigenous leadership in many societies is unclear or unknown because of this pervasive influence. Under colonial rule, indigenous political leaders, who were often selected by the colonial officials, were expected to serve the colonial power, provide material resources, and maintain order. Business leaders, often a new category of leader created by the colonists, served as middlemen in the market for goods and people. Religious leaders were often exiled and killed and replaced by Christian missionaries, who served as agents of social change. Although there was much variation, after colonization, new attributes were expected of leaders, including Western education, fluency in the colonial language, adherence to Christianity, Western dress, deference to colonial leaders, and negotiation skills. An example of this new pattern leadership is indicated by this description of families among the Warao of Venezuela:

There are some groups that do relatively well. These are tightly integrated household compounds with a

fairly strong leader. Typically, such a man has just sufficient working knowledge of our economic system to be able to manipulate it, and is clear-sighted enough to maintain the traditional economic structure. He has several sons or sons-in-law who have been to school and cannot be taken in by fast operators. Such a group sends part of its work force out to earn cash, but keeps enough manpower to assure the necessary food supply for the compound, without being forced to spend the hard earned cash on staples and other basics.

They thus avoid the typical dilemma of the Indian: he either sticks to his traditional values and thus continues without the essential know-how to defend his interests in the framework of the inevitable mechanisms that characterize our present global economic system, or he accepts the way of life of the criollo and lets the social structure of his community disintegrate without ever gaining therefore full acceptance in the criollo world. In this way Indians lose the backing their community could give them and fall prey one by one to unscrupulous operators. (Heinen 1975, 43)

But the colonial experience also bred a new type of leader: the revolutionary leader who sought to overthrow the colonial powers and restore indigenous rule. Well-known examples of this type include Che Guevara in Cuba and Shaka Zulu in southern Africa. Especially important were prophet leaders of millennial movements, such as the Paiute religious leader Wovoka (1859–1932), who initiated the Ghost Dance in the United States in 1889. The Ghost Dance sought to end white rule and return to the better times of the past.

It was not unusual for colonial rule to replace the indigenous leadership system with an entirely new one. The best-documented example of this is the patronage system that developed in Latin America with nonindigenous patrons holding considerable economic and political power and control over the lives of poor peasants. Finally, we should note the massive migration from rural, agricultural areas to urban centers that has taken place in the postcolonial period. This, too, has led to the emergence of new forms of leadership and conflict between indigenous and new patterns in new places.

TRANSFORMATIONAL AND TRANSACTIONAL LEADERSHIP

Leadership researcher James MacGregor Burns in 1978 wrote a book entitled simply *Leadership*. In this Pulitzer Prize-winning book, Burns made an important distinction between two types of leadership orientations: transformational and transactional. On the surface the distinction appeared to be simple enough. Some leaders “transact” with followers to get things done, setting expectations and goals and providing recognition and rewards when a task is completed. Burns linked transactional leadership to what he observed through the years in many politicians’ behavior in terms of how they “got things done.” Transactions were typically based on satisfying both the leader’s self-interest and the self-interest of his or her followers.

Burns observed transformational leadership in leaders who did the opposite of transactional leaders, initially defining transformational leadership as the opposite of transactional leadership. According to Burns, transformational leaders engage followers not only to get them to achieve something of significance, as he described them as visionary change agents, but also to “morally uplift” them to be leaders themselves. Central to Burns’s theoretical distinction was the fact that he described such leaders as being morally uplifting and being more concerned with the collective interests of the group, organization, and society as opposed to their own self-interests. Although political scientist James Downton (1973) had referred to transformational leadership in an earlier paper on rebel leadership, Burns solidified the distinction between these two leadership orientations. His work significantly marked the course of leadership research for the next twenty-five years, resulting in transactional leadership and transformational leadership being the most widely researched constructs in the leadership literature throughout the 1990s and into the next millennium.

Industrial psychologist Bernard Bass (1985) picked up on Burns’s work and expanded the distinction that Burns made between transactional and transformational leadership, defining each of them

as higher-order (more encompassing, containing individual constructs) constructs comprised of specific lower-order (more specific or individual level) component constructs. Bass set out to define the component constructs of transactional and transformational leadership while also identifying the behavioral indicators associated with each leadership construct.

Downton referred to transactional leadership as “a process of exchange that is analogous to contractual relations in economic life [and] contingent on the good faith of the participants” (Downton 1973, 75). Downton also described transactional leadership as representing the fulfillment of contractual obligations, which over time creates trust and establishes a stable relationship where mutual benefits can be exchanged between leaders and followers. He referred to positive and negative transactions that are either reward based or coercion based, with the latter representing some form of punishment for noncompliance or the corrective transactional leadership described by Bass as “management-by-exception.”

Building his model based in transactional leadership, Bass first focused on previous literature in psychology pertaining to the use of “contingent rewards” as the basis for describing how leaders set up contractual exchanges with their followers. Specifically, transactional leadership is based on the assumption that “if you produce the desired behavior” then you will receive the “contracted award.” The quid pro quo (something for something) relationship represents a psychological exchange in the sense that the leader clarifies the expectations, and the follower delivers, receiving the contingent reward. On the negative side, if the follower does not deliver, and if the leader spells out the penalty for not delivering in advance, then contingent reward becomes contingent punishment.

Based on the literature in psychology on behavioral reinforcement theory, Bass was able to clarify in more concrete terms the construct of transactional leadership and its component constructs, which he labeled “contingent reward” and “management-by-exception,” the latter being more associated with “if you don’t stay on target,” here’s what you won’t get.

A TIPPING POINT IN THE FIELD OF LEADERSHIP

The latter part of the 1980s in the field of leadership studies was what journalist Malcolm Gladwell called a “tipping point.” Part of that dramatic tipping involved moving away from focusing only on transactional models of leadership, such as the path-goal theory (focused on the direction and the target) of management professors Robert House and Terry Mitchell (1975) and the components of consideration and initiating of structure. Instead, there was a move toward more “colorful” and less observable aspects of leadership such as charismatic leadership.

Turning to transformational leadership, Bass identified from interviews with managers and the literature in psychology, sociology and management the components comprising transformational leadership. The initial components included individualized consideration, intellectual stimulation, and charismatic/inspiring leadership. Bass challenged the early work on charismatic leadership produced by sociologist Max Weber (1949) and others suggesting that it is a construct that can be defined and measured. He argued that charisma is a component of the “higher-order” construct of transformational leadership.

Bass added to his definition of transformational leadership the fact that to be transformational, the leader has to learn the needs, abilities, and aspirations of followers. By doing so, the leader can develop followers into leaders. Some authors have argued that there is little if any distinction between consideration and individualized consideration, which Bass (1985) introduced in his theory of transactional and transformational leadership. They draw this conclusion from research that has shown these two constructs to be highly correlated. This conclusion is false. Leaders who are considerate of their followers are probably more attuned to people, to people’s needs, to individual concerns, and to addressing of those concerns. One can certainly make a clear distinction between being considerate to others in a general sense and being focused on individual needs, challenging those needs, and elevating them to higher levels.

Individualized consideration is a critical facet in

the transformational process discussed by Burns (1978) and Bass (1985), regardless of how it is measured. How? A leader must get to know followers’ needs, capabilities, aspirations, and desires to challenge the followers and to develop them into leaders. To systematically and reliably transform followers into leaders, a leader needs an understanding of followers to grow their needs and capabilities to full potential. Thus, part of the transforming that occurs is in the individual as he or she reshapes and reprioritizes his or her needs, as Bass originally discussed from lower-maintenance (from survival to higher levels of personal development) to higher-level self-actualization needs (hierarchy from basic psychological and safety needs to higher order personal development) in line with the psychologist Abraham Maslow’s hierarchy.

Bass described the second main component of transformational leadership as intellectual stimulation, in which the leader challenges followers’ basic thinking, assumptions, and models upon which such stimulation is based to get followers to think about new ways to perform their work. The component construct of intellectual stimulation arose in this literature around the same time that discussions were emerging about the knowledge worker (employee who works with his or her head and not hands) and the change from theory X-type authoritarian management—which assumes all workers should be controlled to comply with work rather than being motivated from the inside—to leadership embedded in a more inclusive, flat, and knowledge-driven organization.

In combination, individualized consideration and intellectual stimulation were defined by Bass as the basic elements that can drive the transformational process in followers in that the leader has to know something about the followers to figure out how to get the followers to think differently. By adding the inspiring and charismatic component, Bass, management professor Bruce Avolio, and their colleagues were able to provide the “energy,” “reasoning,” and “sense of urgency” that promoted great transformations in organizations, communities, and entire societies.

Why do followers change? Followers change because they come to believe in what the leader’s

James MacGregor Burns on Change versus Transformation

We must distinguish here between the verbs “change” and “transform” using exacting definitions. To change is to substitute one thing for another, to give and take, to exchange places, to pass from one place to another. These are the kinds of changes I attribute to transactional leadership. But to transform something cuts much more profoundly. It is to cause a metamorphosis in form or structure, a change in the very condition or nature of a thing, a change into another substance, a radical change in outward form or inner character, as when a frog is transformed into a prince or a carriage maker into an auto factory. It is change of this breadth and depth that is fostered by transforming leadership.

In broad social and political terms, transformation means basic alterations in entire systems—revolutions that replace one structure of power with another, or the constitutional changes America achieved in the late eighteenth century. Bernard Bass of the Binghamton group has distinguished between the “first order of change” or changes of degree, and a “higher order of change,” constituting alterations in “attitudes, beliefs, values, and needs.” Quantitative changes are not enough; they must be qualitative too. All this does not mean total change, which is impossible in human life. It does mean alterations so comprehensive and pervasive, and perhaps accelerated, that new cultures and value systems take the places of the old.

Is transforming leadership measured simply by the number of alterations achieved? The more transactions, in short, the more transformational change? No, the issue is the nature of change and not merely the degree, as when the temperature in a pot of water is gradually raised to produce a transformation, boiling. Time—timing—can be crucial. Continual transactions over a long period can produce transformation. If such incremental changes take lifetimes, how long should people wait?

cause represents. They change because they see the leader change and make sacrifices for the change. They change because the leader paints a picture on “life’s canvas” that promotes and compels change in line with a vision that seems more appealing, more exciting, and for many the right solution. Followers come to identify in themselves with the vision articulated by the leader, which then motivates them or in the extreme compels them to pursue the desired change.

ADDING THE MORAL COMPONENT

Unfortunately, in his original work (1985), Bass did not make a clear distinction between good and bad

charismatic leaders, missing the distinction that Burns had made with the key term he associated with transformational leadership, which he called “morally uplifting.” The blurring of this distinction led to a long and to some extent unnecessary debate in the literature concerning the distinction between transformational leadership and charismatic leadership.

Avolio, organizational development expert Tracy Gibbons, and later Bass (1990) refined Bass’s message, arguing that the charismatic component of transformational leadership is what management professor Jane Howell (1992) and others had called “socialized” versus “personalized” charisma. The socialized charismatic cares about his or her people’s collective interest. If he or she were going to transform them, they would be transforming them up to a higher purpose, not down. So the German Nazi leader Adolf Hitler, the Cambodian leader Pol Pot, the Soviet leader Joseph Stalin, and all of the other psychopaths throughout history were *not* transformational leaders because to build up one group,

they had to tear down another. Certainly they were charismatic, and in the eyes of many followers they were inspiring. Yet, such leaders rarely left behind more qualified followers to lead because they had either killed most of their independent-minded followers, or these followers died along the way to support “the cause.”

This distinction between good and bad charismatic leaders has led to a line of research during the last decade and a half (management professors Robert House, William Spangler, and James Woycke, 1991; O’Connor, Mumford, Clifton, Gessner, and Connelly, 1995). For example, using a content coding (identification of key themes or content throughout a text) of leaders’ biographies, psychologist

Jennifer O'Connor and associates (1995) reported that social and personalized charismatic leaders generally had a larger impact on society. However, the more socialized charismatic leaders had a positive impact, whereas the personalized charismatic leaders had a negative impact. This is the clearest distinction that one can make between the use of charisma for the good of society and the use of charisma for personal aggrandizement.

By the late 1980s, Bass had defined essentially six components of what constitutes transactional leadership and transformational leadership, adding the last component, which he labeled "laissez-faire" (non-interfering) leadership. Although many other authors argued that laissez-faire leadership is not a leadership style, if one has worked for such a leader, one might well disagree. Not making a choice, not taking a decision, and not rewarding others certainly represent leadership in its most passive and sometimes most debilitating form.

Bass, Avolio, and their colleagues have used laissez-faire leadership as a reference point to compare styles of leadership that are more active, constructive, and, at the higher end of leadership, proactive (acting in anticipation of problems), visionary, and transforming. Determining whether laissez-faire leadership is or is not a leadership style is not as important as being able to use it as the anchor for what Avolio and Bass (1990) have called a "full range of leadership" and its development.

In the latter part of the 1980s, people in the field of management became more interested in what constitutes transformational leadership and its development. In part, this interest came about because of the organizational transformations caused by advances in information technology, globalization of markets, and emergence of "dot.com" industries while brick-and-mortar industries struggled for survival, going overseas or dying. At the same time, management professors Warren Bennis and Burt Nanus (1985) and management professors Noel Tichy and Mary Anne Devanna (1986), following on the breakthrough work of Tom Peters and Robert Waterman in the book *In Search of Excellence*, were also attempting to explain the type of leadership that goes along with excellent

organizations. Each of these authors described transformational as the more effective style.

Bennis and Nanus, as well as Tichy and Devanna, primarily talked about transformational leaders as occurring at the tops of organizations, in contrast to Avolio and Bass (1987), who clearly argued that such leaders occur at all levels. Avolio and Bass also argued that transformational leaders can emerge in both formal and informal roles of leadership.

DEVELOPMENT OF THE MULTIFACTOR LEADERSHIP QUESTIONNAIRE

In 1985, Bass put forth an early version of a questionnaire to measure the component factors of transactional and transformational leadership described earlier. Shortly after publication of Bass's 1985 book, Bass and Avolio published the Multifactor Leadership Questionnaire (MLQ), which has gone through several revisions to refine its assessment of each of the component factors of transactional and transformational leadership. The importance of the MLQ to energizing the emergence of literature was substantial. Many researchers around the globe had greater access to assessing constructs with an easily administered and well-validated questionnaire. Indeed, during the next fifteen years literally hundreds of dissertations, theses, and research articles emerged using the MLQ in research on leadership. These research projects ranged from work in Canadian prisons to nuns in the Catholic church.

The MLQ, now in its fifth version (MLQ 5X), has been used in every conceivable organization, at every level, and on almost every continent. The MLQ has become the de facto leadership questionnaire of choice for the research community but not without criticism of its measurement properties. Since its introduction the MLQ was criticized on a variety of grounds, including the following:

- Any questionnaire of leadership is fundamentally biased by the rater's recall, interpretation, and implicit theory of leadership.
- Items in the questionnaire mixed behaviors, attributions, and impact items (impact referring to how leaders affect performance).

- Evidence conflicted about support of the discriminant validity (how one scale is differentiated from another) between the factors measured by the questionnaire. For example, contingent reward leadership correlated quite highly with individualized consideration, suggesting these were not unique constructs.
- Early exploratory tests of the factor structure underlying the MLQ did not reproduce the factors that Bass had argued were present.
- Some researchers had difficulty separating charismatic from inspiring, and complaints arose about the factorial purity of the survey.

In response to these criticisms, Bass and Avolio (1993) provided their own extensive critique of their work. They challenged colleagues to engage in exploring the criticisms to determine if the criticisms could be resolved or if the questionnaire was fatally flawed.

During the next ten years, the literature on Bass and Avolio's work exploded in numerous studies across a broad range of populations, organizations, and performance criteria. The full-range model of leadership put forth by Avolio and Bass (1991) received considerable support for its main propositions and hypotheses, and in two comprehensive papers the authors established that the component factors comprising transactional and transformational leadership could be validly measured using the MLQ (Avolio, Bass, and Jung, 1999; Antonakis, Avolio, and Sivasubramaniam, 2003).

Since Bass's book appeared in the literature, researchers have conducted four quantitative reviews of his original model and the expanded full-range model (Gaspar, 1992; Lowe, Kroeck, and Sivasubramaniam, 1996; DeGroot, Kiker, and Cross, 2000). Gaspar's review focused primarily on educational settings in which he aggregated a number of study variables later shown to be important moderators of leadership style and effectiveness. Management professors Kevin Lowe, Galen Kroeck, and Nagaresh Sivasubramaniam (1996) focused on an earlier five-factor model of leadership as measured by the Multifactor Leadership Questionnaire to guide their meta-analysis (a quantitative analysis of literature used to average data reported in articles to come to a

summary evaluation). Lowe and associates examined the relationship between transformational leadership and transactional leadership with individual and organizational-level measures of effectiveness. Lowe and associates (1996) also included three moderators of the transformational leadership-to-effectiveness relationship: type of criterion, level of leader, and type of organization, demonstrating how each moderated the relationship between leadership and performance. Both meta-analyses provided support for the full-range model, with transformational demonstrating the highest, positive relationship with performance.

Management professors Timothy DeGroot, Scott Kiker, and Thomas Cross (2000) completed a third meta-analysis of the transformational and transactional leadership literature, producing a positive relationship between ratings of charismatic or what Avolio and Bass (1991) later called "idealized leadership and performance." DeGroot and associates (2000) reported that the relationship between charismatic leadership and performance varied when leadership and performance were examined at an *individual* versus *group* level, concluding that "results show an effect size at the group level of analysis that is double in magnitude relative to the effect size at the individual level" (DeGroot, Kiker, and Cross 2000, 363).

A fourth meta-analysis extended the work of Lowe and associates (1996) by examining twelve scales comprising the MLQ versus the five reported in the earlier meta-analysis study. The twelve scales included the nine leadership constructs (idealized, inspiring, intellectually stimulating, individually considerate, contingent reward, management-by-exception active (passive), passive-avoidant, or *laissez-faire*) as well as three outcome measures: satisfaction, extra effort, and effectiveness. This most recent meta-analysis reported by management professors Rex Dum Dum, Kevin Lowe, and Bruce Avolio (2003) included an examination of the relationship between leadership style and satisfaction, which was also not included in the earlier Lowe and associates (1996) meta-analysis. The focus on satisfaction included measures of personal satisfaction versus satisfaction with one's job.

Results of this latest meta-analysis and subsequent examination of moderators confirmed what was reported in a broad range of earlier individual studies and meta-analyses. The hierarchical pattern proposed by the full-range model of leadership received consistent support linking transformational, transactional, and non-transactional leadership to performance in that order in terms of positive to negative relationships. This consistent pattern of results is encouraging in that it suggests that these relationships are enduring and not tied to one period, a particular version of the MLQ, or other artifacts such as the cohort of raters or the outcomes evaluated.

The research projects that were completed during the last decade on the full-range model produced these general conclusions:

- Transformational leadership augmented transactional leadership in predicting performance.
- Transformational leadership appeared to be observed at all levels of organizations.
- The MLQ could produce a highly stable factor structure of nine component factors, especially given a larger sample of raters/leaders.
- The pattern of results noted earlier generalized across cultures.
- Women leaders as compared to men leaders tended to be rated as more transformational.
- Transformational leadership developed followers into more critical and independent thinkers, providing the basis for transforming them into leaders.
- Transformational leadership positively predicted extra effort and performance beyond expectations, along with higher levels of commitment, cohesion, potency, identification, trust, and satisfaction.
- Transformational leadership could be developed with demonstrated impact on both follower performance and group/unit performance.
- When mediated through information technology, e-transformational leadership (leadership done by e-mail, teleconferencing, and/or through other technological means) in most cases produced patterns similar to patterns of face-to-face transformational leadership.

A summary of additional findings can be found in Bass (1998), Avolio (1999), and Avolio and Yam-

marino (2003). By and large the accumulated literature on the measurement properties of the primary survey instrument used to assess transactional leadership and transformational leadership and the core predictions of the model were borne out and continue to provide a basis for continued research into the higher ends of leadership influence and development.

BEYOND THE BASE: NEW AREAS EMERGING

The editor of *The Leadership Quarterly*, Jerry Hunt, pointed out in the journal's 2000 annual review that most theories start out being widely entertained and positively received. Through time, a theory is more closely evaluated and critiqued, and, if inadequate, it tends to die in the literature. If a theory survives the critical phase, it usually becomes more refined and focused and eventually becomes a stable part of the institutionalized literature.

Although the full-range model put forth by Avolio and Bass is still undergoing further validation work, authors such as management professors John Antonakis and Robert House (2003) have suggested that it is established enough that improved models of leadership can be built upon it. Further refinements to the component constructs comprising the full-range model are also in the offing, as occurred going from the six-component-factor model identified by Bass (1985) to the eight component factors now constituting the full range of leadership: idealized or socialized charisma, inspirational, intellectually stimulating, individualized consideration, contingent reward, active management-by-exception, passive management-by-exception, and laissez-faire leadership.

Apart from identifying these constructs, a number of authors have begun to explore the "black box" (what happens between what a leader does and what a follower consequently thinks and does) associated with the transformational leadership process. For example, management professors Boas Shamir, Robert House, and Michael Arthur (1993) built their self-concept theory of motivation to help explain how followers come to personally identify with their leader's vision and mission and how through that identification process followers' concepts of themselves change, in part explaining the transformation process.

Management professors Taly Dvir, Dov Eden, Bruce Avolio, and Boas Shamir (2003) experimentally manipulated transformational leadership through a comprehensive training program, observing that leaders who were more transformational enhanced followers' identification with their organization's core values and were more critical thinkers. Recent evidence reported by management professors Nick Turner, Julian Barling, Olga Epitropaki, Vicky Butcher, and Caroline Milner (2002) and students showed that leaders who were rated higher on transformational leadership also scored higher on moral reasoning. This, coupled with earlier results, showed why such leaders could be seen as "idealized," according to Avolio and Bass. These leaders will do the right thing, oftentimes at their own expense, because it benefits the larger community. They care that their legacy will be one by which their followers will be capable of leading beyond their time and thus set out to transform followers into leaders. Psychologists Karl Kuhner and Phil Lewis (1987) discussed how having a higher level of moral reasoning is a prerequisite for being able to consider the needs of others above one's own needs, working toward transforming followers into leaders. By the late 1990s, the work on transformational leadership had come back to its early roots and the distinction raised by Burns about how it is associated with morally uplifting followers.

In sum, Avolio and Bass set three goals in 1990 when launching the full-range model of leadership constituting transactional leadership and transformational leadership:

1. To provide a heuristic (aid to learning) for development that can be used to guide leaders in examining their leadership style from the most inactive avoidant (*laissez-faire*) to the most active and proactive forms of leadership
2. To challenge themselves and the field of leadership to move away from simplistic conceptualizations of leadership that form neatly into two or three factors and to ask the question, "What's missing?" to make the full range of leadership even more complete over time
3. To challenge the field of leadership to assess a broader and more comprehensive range of leadership

These goals have by and large been achieved as the field of leadership deepens its inquiry into expanding the full range of leadership to encompass a broader and more complete range of leadership. The main propositions comprising this model have been generally supported.

RECENT EXTENSIONS FROM INDIVIDUAL LEADERSHIP TO TEAM LEADERSHIP

Avolio and Bass (1995) argued that transformational leadership can be examined at either an individual level or a group level. For example, team members can collectively exhibit individualized concern for each member's needs and development. In this example, the concern for individuals can be shared by all members of the team versus any single individual within the team.

Experts define *team leadership* in terms of how members of the team evaluate the influence of the team on each member, as opposed to one individual within or external to the team. The definition of *team leadership* integrates the perspective taken by the team member in assessing leadership as well as the level at which the phenomenon of leadership is examined, which is defined here as the team.

Burns (1997) extended his original thinking on individual transformational leadership to include a focus on collective or shared leadership. Burns wrote in a paper entitled "Empowerment for Change" about "the existence of webs of potential collective leadership" (Burns 1996, 1). He went on to suggest, "the initiator may continue as a single dominating 'leader' a la Castro, but more typically he or she will merge with others in a series of participant interactions that will constitute collective leadership. . . . I see crucial leadership acts in the collective process" (Burns 1996, 2–3).

During the past five years, the full-range model has been extended in work on collective or shared leadership. Avolio and Bass have escalated the constructs defined at the individual level to a team level of analysis in what they have called the "Team Multi-Factor Leadership Questionnaire." Evidence provided by Avolio, Sivasubramaniam, management professors Bill Murry, Don Jung, and John Garger

(2002) demonstrates that the transformational and transactional components operate in similar ways when measuring team-level leadership as compared to individual-level leadership. Avolio, Jung, Murry, and Sivasubramaniam (1996) have also shown that transformational team leadership can be predictive of group performance in ways paralleling what has been found with individual-level transformational leadership. Sivasubramaniam, Jung, Avolio, and Murry (2002) have shown that transformational team leadership predicted group potency, collective efficacy, and group performance over a period of three months.

In sum, beginning with the distinction made by Burns between transactional leadership and transformational leadership, the field of leadership now is exploring a broader and more inclusive range of leadership styles at both an individual level and a team level. The accumulated results provide strong support for Bass's (1985) original propositions and research questions and extend his work to the team level in assessing shared transformational leadership. Experts expect the next ten years of research will involve a much closer examination of the "black box" constituting the transformational leadership process, greater attention to the effects of the followers' characteristics on the leader, and a more concentrated effort in the area of developing transformational leadership for impact on individual and collective performance.

TRANSFORMATIONAL AND VISIONARY LEADERSHIP

In his seminal book *Leadership* (1978), the scholar James MacGregor Burns concluded that there were two types of leaders: transformational leaders and transactional leaders. This taxonomy was built around the notion of an exchange between the leader and the followers. For Burns, both the leader and the follower had something to offer one another. It was in the nature of what was exchanged, however, that Burns's model came into play. On his analysis, transformational leaders offered a transcendent purpose as their mission—a purpose that addressed the higher-order needs of their followers and themselves. In the process of achieving this mission, both the leaders and the led were literally transformed as individuals—hence the term *transformational*. Burns explained: “The result of transforming leadership is a relationship of mutual stimulation and elevation that converts followers into leaders and may convert leaders into moral agents” (Burns 1978, 4). At the other end of the spectrum was the transactional leader. The more prevalent of the two types, transactional leaders established a relationship with followers that consisted of more mundane and instrumental exchanges: “The relations of most leaders and followers are transactional—leaders approach followers with an eye to exchanging one thing for another: jobs for votes, or subsidies for campaign contributions. Such [instrumental] transactions comprise the bulk of the relationships” (4).

The underlying idea, that leadership is an exchange, has been around at least since the early 1970s. The thesis is that the relationship between a leader and followers depends upon a series of trades or bargains that are mutually beneficial and are maintained so long as the benefits to both parties exceed the costs. Burns would characterize these types of exchanges as transactional rather than transformational because they do not satisfy higher-order needs and they do not result in the elevation of both the leader and the led to a more evolved state of being. Burns's delineation of a more transcendent type of leadership that would satisfy those higher-order needs was his critical contribution to leader-

ship theory. What Burns added, then, is not so much the notion of leadership as an exchange but the idea that certain forms of leadership create a cycle of rising aspirations that ultimately transform both leaders and their followers.

Burns's conceptualization of these two leadership forms has profoundly influenced the thinking of many scholars in the leadership field. For example, in the 1980s—a period of great competitive unrest in the global business world—Burns's ideas appealed to management theorists grappling with the twin issues of organizational change and empowerment. The transformational leader appeared to speak to both those issues, because transformational leaders were concerned both with transforming the existing order of things and with directly addressing followers' needs for meaning and personal growth.

BEHAVIORAL COMPONENTS OF A TRANSFORMATIONAL LEADER

Following the publication of *Leadership*, the scholar Bernard Bass dedicated a significant portion of his career to elaborating upon the Burns model. Whereas Burns defined the transactional and transformational dimensions of leadership as two ends of a spectrum, Bass and his colleague Bruce Avolio conceptualized them as separate dimensions. For Bass, therefore, a leader could be both transformational and transactional. Burns had provided an overview of the two types of leader, but Bass was determined to identify more precisely the behaviors that these leaders demonstrated. At the heart of the Bass and Avolio model of transformational leadership was the notion that transformational leaders are able to motivate subordinates to exceed both their leader's expectations and their own.

Bass and Avolio's model described four behavioral components of the leader: charisma, the ability to inspire, individualized consideration, and the ability to provide intellectual stimulation. They defined charisma in terms of both the leader's behavior (such as in articulating a mission) and followers' reactions (such as trust in the leader's ability), emphasizing charisma's role in enabling the leader to influence followers by arousing strong emotions and identifi-

cation with the leader. When followers identify with the leader, they are less resistant to change, and when a leader can arouse strong emotions, there is a sense of excitement about the mission. Bass argues, however, that charisma alone is insufficient for transformational leadership.

While Bass originally treated the ability to inspire as part of charisma, his more recent writings describe it as a separate component designed to motivate. Much of this particular dimension centers on communications, in that the transformational leader "communicates high expectations, uses symbols to focus efforts, and expresses important purposes in simple ways" (Bass 1985, 22).

The dimension of individualized consideration resembles the notion of consideration developed in early leadership studies at Ohio State University. Individualized consideration is the act of providing encouragement and support to followers, assisting their development by making possible opportunities for growth, and showing trust and respect for them as individuals. Individualized consideration binds leader and followers together more closely and helps build followers' self-confidence.

Intellectual stimulation, the final dimension, is a process whereby the leader increases followers' awareness of problems by challenging them with new ideas and perspectives and by spurring them to rethink their habitual ways of doing things.

COMPARING TRANSFORMATIONAL AND CHARISMATIC LEADERSHIP

Some may wonder what distinguishes theories of transformational leadership from theories of charismatic leadership. In a nutshell, some researchers feel that charisma is a component of transformational leadership, while others feel that charismatic leadership is the ultimate form of transformational leadership. The perspective from which leadership is viewed also differs depending on the model. The charismatic theories and research have measured leadership from the standpoint of perceived leader behavior, whereas the transformational theories have largely concerned themselves with follower outcomes. In the case of the transformational theories,

this was the natural outcome of Burns's original conceptualization, which moved followers' needs and motives to the forefront of the leadership discussion. On the other hand, the earlier formulations of charismatic leadership emerging from the fields of sociology and political science were primarily concerned with what contexts and what behaviors on the part of the leader induced people to become followers. In essence, the formulations of charismatic and transformational leadership are highly complementary, examining the same phenomenon from different vantage points.

The two formulations also describe the leadership process in similar ways. Both suggest that the type of leader they describe uses empowerment rather than control strategies to gain influence over followers. For example, charismatic-leadership models would see such actions as role modeling or persuading others to action or consensus-seeking as examples of empowerment strategies. Followers respond to those actions by becoming more committed to the cause and more effective in their own actions.

Similarly, Bass and Avolio describe how behaviors such as promoting self-development among followers (for example, by urging them to seek out learning opportunities in assignments or getting more training), persuading followers that they can perform at a high level, creating readiness for changes in thinking (for instance, by exposing them to new trends or unconventional approaches to problem-solving), and modeling self-sacrifice all have the effect of empowering followers. Both the transformational model of leadership and the charismatic model of leadership also state that the main goal is to change followers' core attitudes, beliefs, and values rather than merely to induce compliant behavior. Attitude changes among followers are characterized by identification with the leader and internalization of the values embedded in the leader's vision.

VISIONARY LEADERSHIP

Defined by the Oxford English dictionary as the "ability to plan or form policy in a far-sighted way," *vision* was rarely used in the literature on leadership until the 1980s. In the late twentieth century, how-

ever, intense global competition and shortened development cycles for technology disrupted the typical life span of corporate strategies. Business leaders were called upon to pay far greater attention to the future direction of their organizations as their products and strategies became outdated ever more rapidly. At the same time, efforts to adapt to the increasingly competitive environment often resulted in downsizing—the laying off of large numbers of employees. In many cases, those layoffs shattered decades-old psychological contracts that ensured employees of job security, and managers needed to know how to enlist and motivate employees under such difficult circumstances. Academics were searching for terminology that adequately described how leaders met the challenge of simultaneously ensuring organizational adaptation and empowering employees. With its connotations of foresight and positive goals, *vision* seemed appropriate.

The leadership field generally defines vision in terms of future-oriented goals that are highly meaningful to followers. For example, the scholars Noel Tichy and Mary Anne Devanna describe vision as "a conceptual roadmap or set of blueprints for what the organization will look like in the future" (Tichy and Devanna 1986, 128). Jay Conger and Rabindra Kanungo define vision as a set of idealized goals established by the leader that represent a perspective shared by followers. Similarly, Warren Bennis and Burt Nanus declare that vision "articulates a view of a realistic, credible, attractive future for the organization, a condition that is better in some important ways than what now exists," concluding that it "may be as vague as a dream or as precise as a goal or mission statement" (Bennis and Nanus 1985, 89). To James Kouzes and Barry Posner, the term implies an image of the future that provides a sense of direction, a set of ideals, and feelings of uniqueness for the organization. For Robert House, vision reflects "cherished end values shared by the leader and their followers. It is a vision of a better future to which followers have a moral right; thus, it embraces a set of ideological values" (House 1995, 416). These definitions tend to have in common the notion that vision is distinguished by future goals, which are seen as attractive for followers.

Where the definitions begin to differ is in the precise nature of the goals—whether they can include strategic and tactical goals or whether they must incorporate a higher social purpose and ideology to be classified as a vision. For instance, some scholars consider the goal of achieving the top market share in one's industry to be just as valid a vision as (for example) revolutionizing the way children learn through the company's innovative products. Clearly the latter has more affective and inspirational content than the former. Yet the former has been the historical vision of one of the business world's most visible charismatic leaders, Jack Welch, the former CEO of General Electric.

A second area of divergence is the degree to which the definition focuses on an individual's special capacity to be visionary. It is commonplace in the popular press to speak of the capacity for vision as a rare, personal gift, but doing so plays to highly romanticized notions of leadership. In reality, leaders' visions are rarely the product of a single individual. Numerous people help formulate them over an extended period of time. Moreover, visions evolve as new challenges or opportunities emerge. Therefore, it is best to define vision around future-oriented goals and communications that are meaningful and challenging to followers rather than to reinforce popular conceptions of an individual with exceptional gifts of vision.

There are many roles for vision. Vision is useful for helping to define the organization's strategic direction. Vision has an overarching quality that is important because it leaves room for more specific, tactical goals to be worked out as opportunities arise and barriers appear. In contrast, detailed strategic and business plans, which are the more traditional means of defining the organization's strategic direction, are often not well understood outside the senior-management levels of an organization. A well-articulated vision, by contrast, provides organizational members at all levels with a simple statement that will help them align their values, actions, and decisions with the organization's strategic objectives. Its simplicity also promotes clarity of focus. By minimizing the number of goals, organizational resources are more likely to be appropriately focused on their achieve-

Not everything that is faced can be changed. But nothing can be changed until it is faced.

—James Baldwin

ment rather than diluted across many goals of varying priorities.

Studies from both the field and the lab consistently show that when a manager sets specific, clear, and challenging goals, rather than vague or no goals, the performance of subordinates is higher. When goals are specific, subordinates are able to focus their efforts; when goals are challenging, subordinates are energized—and in both cases the outcome is better performance. As a rule, goals are more influential than needs, values, or tasks in motivating an employee to work long and hard.

The goals associated with vision have the added characteristic of being portrayed as unique, which heightens followers' sense that their endeavor is a special one. The leader's vision creates for followers the perception that they are at an active center in the social system—one of those rare and remarkable arenas in society in which change and innovation take place.

In theories of charismatic leadership, vision highlights the charismatic leader's uniqueness and thereby makes him or her more admirable in the eyes of followers. To the degree that the leader presents goals whose ideals diverge markedly from surrounding realities, the leader provides a force for change: research has shown that a maximum discrepant position within the latitude of acceptance puts the greatest pressure on followers to change their attitudes. When the idealized goals of the leader's vision represent a perspective shared by followers that promises to meet their aspirations, it tends to be within this latitude of acceptance despite its often extreme discrepancy. Martin Luther King Jr. promised his followers a world of *complete* equality in American society. At the time, that vision was a far cry from the reality they faced in their everyday lives—a world built around discrimination. As a result, members of the organization throw their support behind the vision to achieve its objectives.

Finally, vision also reinforces followers' sense of

collective identity. By stressing the vision as the basis for the group's identity and by highlighting the necessity of collective effort to realize its goals, the leader reinforces the notion that individuals must subordinate their own needs for the sake of the larger group. James Meindl and Melvin Lerner have proposed that a shared identity can heighten the sense of a collective "heroic motive" and increase the likelihood that self-interested pursuits will be voluntarily abandoned for more self-sacrificing and collective behavior—all of which may be necessary to achieve the idealistic goals of the vision.

VISIONARY LEADERS IN THE TWENTY-FIRST CENTURY

Given the pace of change in society today, there will be a strong demand for visionary leadership. Few organizations will survive for the long term without a cadre of leaders who understand the fundamental threats and opportunities awaiting their organizations. As importantly, they must be able to craft credible and compelling visions which inspire their people to let go of old ways of acting and thinking and to embrace new actions and worldviews.

—Jay A. Conger

TRANSFORMISTIC THEORY

Transformistic theory emerged in the 1970s in an effort to predict the kinds of organizations that would

be most successful in uncertain or highly turbulent environments. This theory posits that in uncertain environments, organizations must generate transformation on multiple levels—individual, organizational, and societal—if they are to change in ways that will ensure both their own viability and the overall well-being of society. At the same time, transformistic organizations must maintain focus and stability by remaining true to their core values and ethics. The theory later incorporated many of the ideas associated with transforming leadership and fundamentally realigned the roles, missions, and functioning of organizations in volatile environmental contexts.

Many of the concepts about uncertain or turbulent environments had their origins in the early writings of the scholars Warren Bennis and Philip Slater (1968), Donald Schon (1971), and Fred Emery and Eric Trist (1973). Dynamic processes emerge and thrive in environments fraught with change. These changes in the environment are self-perpetuating and complex. Emery and Trist use an ecological example from the fishing and lumber industries. In those industries, competitive business strategies that are based on the assumption of a static environment, may (through overfishing and overcutting) lead to disastrous repercussions in the fish and plant population, ultimately causing the destruction of all the competing systems. In human populations, momentous events, such as the fall of the Berlin Wall, the reconfiguration of the former Soviet Union, worldwide terrorist attacks, and the rise of struggling democracies, trigger complex and unpredictable dynamic processes, both positive and negative.

CONTRASTING BUREAUCRATIC, ORGANIC, AND TRANSFORMISTIC ORGANIZATIONS

Transformistic organizations differ in significant ways from bureaucratic and organic entities. Bureaucratic organizations are compatible with stable environments and authoritarian leadership. They function in a world of explicitly formulated goals, rules, and procedures that define and regulate the place of their members. In the traditional bureaucratic world of specialization and expertise, individuals' roles are minutely specified and differentiated.

Organic organizations flourish in changing environments and utilize transactional leadership to compete with numerous similar organizations. In this environmental context, organizations face unique and unfamiliar problems that cannot be broken down and distributed among specialists in the hierarchy. Broad operational procedures, rules, and practices guide the work of functional units. Workers possess an overall knowledge of their organization's purpose and circumstances. Lateral and vertical consultation typifies the communications in such organizations, in contrast to the vertical chain of command present in bureaucratic organizations.

Transformistic organizations flourish in turbulent, uncertain environments. There is interconnectedness to promote mutually beneficial interactions between and within organizations, and frameworks and ethics are used to align organizations. The leadership is transforming; that is, leaders seek to inspire organization members to achieve an ennobling vision. Shifting goals, priorities, and methods of operation characterize transformistic organizations. Organization members with multiple capabilities and skills carry out work in fluid, temporary units; the organization encourages their continuous development and the application of their skills in new and varied situations.

Transformistic theory also links organizational form, leadership, and behavior to the environment. Among the assumptions underlying transformistic theory are that advancements in science and technology have greatly improved access to information and resources and that the increased access has, in turn, expanded the capacity of individuals, governments, and businesses to act. In addition, transformistic theory assumes that individuals, groups, and organizations use information and resources to generate collective, individual, and diverse actions—intentionally or randomly, advantageously or adversely, sequentially or concurrently. Further, these actions increase complexity and uncertainty in social and natural environments.

IMPLICATIONS OF AN UNCERTAIN ENVIRONMENT

According to many scholars, unpredictable environments require a fundamental shift in societal thought

and behavior characterized by intense global concern and competition; intra-organizational relationships and collaboration; a focus on democracy, substantive justice, civic virtues, and the common good; a values orientation; empowerment and trust; consensus-oriented policy-making processes; diversity and pluralism in organizational structure and participation; critical dialogue and qualitative language and methodologies; collectivized rewards; and market alignments. Linking the assumptions mentioned earlier with these characteristics, transformistic theory proposes ways in which organizations and leadership function and thrive in uncertain environments.

Core values and ethics serve to center and regulate the organization and help members assess the purpose, actions, decisions, partnerships, and outcomes of the organization. Transforming leadership engages organizational members in collective purpose linked to social change, with the ultimate objective of enhancing human existence. Although the political scientist James MacGregor Burns, the first to articulate the notion of the transformational leader (1978), did not believe transformational leadership was possible in organizations because of bureaucracy and economic self-interest, later theorists have disagreed; transformistic theory contends that the well-being of organizations and of society in uncertain environments rests on their interconnectivity and reciprocal support.

DEVELOPING HUMAN AND LEADERSHIP CAPACITY

Central to transformistic theory is the notion that organizations have a responsibility to expand human and leadership capacity. Expanding organizational members' capacity entails developing their ability to think critically and systemically; to act with knowledge and authority; to learn, create, and experiment; to develop abilities and expertise; and to apply new capabilities to new circumstances. Expanding leadership in organizations requires recognizing and developing it as an organizational capacity. The scholar James O'Toole discovered that companies in which key leadership tasks and responsibilities are institutionalized in the systems, processes, and cul-

ture are not dependent on the presence of a high-profile leader. In these companies, people at all levels engage in leadership practices. They

- act more like owners and entrepreneurs than employees or hired hands (that is, they assume owner-like responsibility for financial performance and risk management);
- take the initiative to solve problems and to act, in general, with a sense of urgency;
- willingly accept accountability for meeting commitments and for living the values of the organization;
- share a common philosophy and language of leadership that paradoxically includes tolerance for contrary views and a willingness to experiment;
- create, maintain, and adhere to systems and procedures designed to measure and reward these distributed leadership behaviors. (O'Toole 2001, 160–161).

O'Toole identified two factors that contributed to the long-term success of these companies: coherence and agility. Coherence refers to common behaviors found throughout an organization. Agility represents a company's institutional ability to anticipate and respond to change. Institutional agility allows organizations to generate and transform structures, functions, and capabilities to meet the conditions of an uncertain environment.

THE BANK OF MADURA: AN EXAMPLE

An illustration of transformistic theory in action is the Bank of Madura's microlending program for women in rural India. The president of the Bank of Madura recruited managers who were willing to leave their traditional office facilities to work directly with women in rural communities, teaching the women skills ranging from basic literacy to business and accounting. Multilevel transformations occurred as poor, uneducated, and socially isolated women became economically viable entrepreneurs who were able to support their families and form close-knit communities of caring, learning, and support. At the same time, bank managers created innovative banking structures, turned dying rural bank

branches into thriving and prosperous enterprises, and developed increased capabilities by using existing expertise in new ways—all while experiencing a greater sense of purpose and meaning in their own lives, work, and communities.

Transforming and distributed leadership accomplishes multiple missions that link organizational viability to the well-being of society and nature. Established concepts in organization theory maintain that the mission of an organization identifies its basic purpose or reason for existence and establishes its unique identity in relation to others. In transformistic theory multiple missions, often referred to as the double or triple bottom lines, promote transformation among interconnected human, organizational, and ecological systems. Organizations that recognize their symbiotic connection to society and nature and that reflect this connection in their implementation of multiple missions increase their chances for long-term sustainability in uncertain environments.

TRUST

The Federalist Papers, the classic series of essays explaining and defending the proposed United States Constitution, was authored by Alexander Hamilton (1755–1804), James Madison (1751–1836), and John Jay (1745–1829). In “Federalist Paper 64,” Jay presents a perfect illustration of the problem of trust and leadership. His topic concerns the treaty-making process under the new Constitution, which stipulates that while the Senate would have final approval of any treaty submitted by the president, the president and his assigned negotiators would have some latitude along the way to engage in secret and candid negotiations and reach agreement with international partners. The people could not themselves sit around the bargaining table; rather, their representatives would have to act on their behalf. On what grounds could the new government, which owed its very existence to a fear and mistrust of previous leaders, justify such discretion in their new leaders?

Jay argues that leaders have to be trusted. The founders designed the Constitution, Jay notes, so that it would recruit to political office individuals of wisdom and keen judgment with no interest other than the well-being of those they represented. If the system worked according to plan, the government would consist of the most able, the most virtuous, and the most trustworthy individuals. Towards the

All of the great leaders have had one characteristic in common: it was the willingness to confront unequivocally the major anxiety of their people in their time. This, and not much else, is the essence of leadership.

—John Kenneth Galbraith

end of his analysis, however, Jay makes an abrupt shift: If citizens are worried about the discretion granted to leaders, he calmly points out, they should be reassured by another provision in the Constitution, namely, that of impeachment of a president who abuses his power.

We trust our leaders in modern life—whether corporate, political, or social life—but only so far. Trust is conditional, bound by the principle of accountability and the limited power and discretion granted to leaders of any stripe. John Locke (1632–1704), the British philosopher, wrote in 1690 about “prerogative,” the necessity for leaders to act with wide latitude when the laws are silent or even when the laws prevent leaders from acting in the best interest of the citizens. The authority of leaders to act in such circumstances is legitimate only if a leader’s acts ultimately benefit the public. That zone of discretion—the amount of trust given to leaders—expands or contracts depending upon the degree to which citizens believe leaders are fulfilling their obligations to those they serve rather than attending to their own self-interests.

Trust is an extremely complex subject, made all the more confusing by the elasticity of the term. Trustworthiness, a personal characteristic that engenders trust, arises from a complicated set of factors. In a leadership context it may include, as Locke implied, a conviction that the leader is acting in the interest of followers rather than personal self-interest. Or it may come from a set of skills and talents that convince others the leader is competent and able. Followers may trust leaders because they perceive in them certain personal virtues, and because they believe their leaders share their own values or are at least mindful and respectful of their values. Or followers may base their trust on the belief that a leader

can get the job done. Modern discussions often confuse these distinctly different meanings of trust.

Violations of trust by leaders in recent times have generated at least a few positive outcomes: an increasing recognition of the many factors that determine trust, a better understanding of the importance of context, and an awareness that trust matters not only in the relationships between leaders and followers but also throughout society. The levels of trust affect how people go about their daily lives and have a profound impact on the kinds of relationships formed between leaders and followers.

THE BENEFITS OF TRUST

Why should trust matter? It is not a necessary condition for cooperation with other people. In everyday life, many transactions occur in which trust plays no role. Car dealers are seldom trusted, but they sell thousands of cars each day because competitive economic relationships fulfill both the dealer’s and the consumer’s self-interest. Of course, when consumers buy cars from dealers, they have some assurance that if the contract is breached, a series of regulations and laws will provide a basis for redress and a secure safety net. A generalized trust in the system, therefore, reduces or eliminates the need for trust in individuals. At times, individuals cooperate with others, even with leaders, who are motivated purely by their own self-interest. When this happens, it is not the result of a trusting relationship; rather, it occurs because the parties’ self-interests are inextricably linked and because a set of institutions and processes binds both parties.

Such protections can be costly, however. Regulations—often disparaged as “red tape”—mean more time, more hassle, and (in terms used by economists) greater transaction costs. In societies with greater levels of trust, such transaction costs are lower. From an instrumental point of view, it is simpler to live in societies where one’s word can be taken on faith, where the need for elaborate procedures and safeguards is significantly less because of a presumption that individuals will not renege on their promises. High-trust societies have the potential to be more productive. They devote fewer resources to monitor-

ing and regulation and more to their core functions. Presumably the same logic applies to high levels of trust among followers and leaders.

Besides this instrumental benefit of trust, there is also the sense that trusting, cooperative societies are more congenial places to live than mistrusting, competitive societies. Higher levels of trust are associated with higher levels of satisfaction and commitment to others. It is difficult to identify the causal direction of the variables: Does trust lead to greater contentment, or is it the reverse? Whatever the direction, however, it is cause for concern when trust levels in society seem to be falling—as most surveys of public opinion in Western democracies indicate. General levels of trust and, in particular, levels of trust in leaders are prime indicators of overall civic health. Trust does matter—for instrumental reasons as well as for reasons of civic well-being.

WHAT GENERATES TRUSTWORTHINESS?

Granting a leader discretion is one type of trust. The person granting the trust assumes a risk. The leader's judgment could prove faulty or the leader may take advantage of the trust placed in him to act in ways harmful to the follower. Why would a follower take such a risk?

Two sets of factors come into play. One is the leader's personal qualities. Those who study the dynamics of personal trust disagree on which factors belong on this list of qualities, their relative importance, and the ways in which they interact. But any list would have to include at least the following: the degree to which the leader understands the interests of others and does not pursue self-interest to the exclusion of the interests of those being led; the apparent consistency between the leader's own actions and public positions or policies (for example, a leader known for a hawkish stance who had himself dodged the draft or avoided military service is less likely to be trusted on military matters); the leader's record of public explanations unblemished by lies or misleading statements; and the leader's consistency and predictability in action—or ability to explain seemingly inconsistent acts.

Second, a set of “macro” factors beyond the

leader's personal characteristics is also instrumental in the bestowing of trust. In modern life, leaders and followers form purposeful relationships in particular areas: business, politics, social change, and so forth. Leaders operate in particular contexts, usually ones in which the authority of the leader resides in the office, not in the person, and in which the discretion to act is bound by agreed-upon procedures, institutional practices, and limited power. Leaders therefore demonstrate their trustworthiness not only by their personal qualities but also by operating appropriately within a system that is itself trusted to some degree. People grant trust based not only on a judgment about the individual, but also on a confidence that institutions are durable and can respond to a violation of trust by any single individual. Conversely, both a mistrust of individuals and a declining faith in the system's ability to find and eliminate an abuse of trust can result in diminished levels of trust overall. Institutional complexity arising from a need for sharper lines of accountability may actually pave the way for greater levels of trust. With some degree of confidence that violators will be caught and purged from the system, citizens and consumers become more willing to assume the risk that goes with a grant of trust.

For example, corporate governance depends upon a level of trust in chief executive officers and chief financial officers. It is impossible to imagine, however, a system of corporate governance unchecked by standards of auditing and disclosure or unregulated by a board, such as the U. S. Securities and Exchange Commission. When a trust is violated, an individual leader as well as the system comes under scrutiny. In modern corporate and political life, trust in leaders is a function, in part, of trust in the institutional context in which they operate.

RATIONAL CHOICE, RISK, AND CALCULATIVE TRUST

Rational choice theory, which explains social relationships by starting with the assumption that individuals are intentional and purposeful in all their actions, offers one explanation for understanding trust. Individuals act only after calculating whether

In order to be a leader a man must have followers. And to have followers, a man must have their confidence. Hence, the supreme quality for a leader is unquestionably integrity. Without it, no real success is possible, no matter whether it is on a section gang, a football field, in an army, or in an office. If a man's associates find him guilty of being phony, if they find that he lacks forthright integrity, he will fail. His teachings and actions must square with each other. The first great need, therefore is integrity and high purpose.

—Dwight D. Eisenhower

the benefits of a particular alternative outweigh the costs. Trust becomes nothing more than a gamble—a rational one to be sure, but nevertheless just a simple variation on the ordinary, everyday balancing of the expected returns from any given decision. Viewed in this manner, trust in leaders would be, in terms of leadership theory, transactional. Trust is granted with the expectation that the leader will offer something in return. According to James Coleman (1990, 99), the elements of trust “are nothing more or less than the considerations a rational actor applies in deciding whether to place a bet.” For Russell Hardin (2002, 3), trust is completely rational and nothing more or less than “encapsulated interest.”

Other scholars challenge that perspective, reserving the term “trust” for those special circumstances where calculation of interest is suspended. The economist Oliver E. Williamson argues that genuine “non-calculative” trust occurs in personal and private relationships but rarely enters our economic or political relationships, which, in his view, are indeed rational and purposeful. Political scientists James G. March and Johan P. Olsen believe that trust plays a larger role in our social lives. They question the rational choice perspective on grounds that the “core idea of trust is that it is not based on an expectation of justification. When trust is justified by expectations of positive reciprocal consequences, it is simply another version of economic exchange” (March and Olsen 1989, 27). From this perspective, trust is a

normative concept, one of those significant social phenomena, like love and friendship, which loses its meaning when framed in terms of rational costs and benefits.

These competing views provide one of the major points of contention among those who study trust. Is it a normative concept based on values and principles of duty, obligation, and responsibility, or is it a construct based on rational and self-interested calculations?

SOCIAL CAPITAL

Another area of scholarship important for an understanding of trust and leadership is *social capital theory*.

In 1835, Alexis de Tocqueville (1805–1859) observed that democracies, particularly the American version he had studied, were vulnerable to excessive individualism. Individualism was not bad in and of itself, he pointed out, but if it caused a weakening of social bonds and a decline in civic participation, it would eventually become pernicious and erode any sense of community. In mid-nineteenth-century America, high levels of association softened the harsh edges of individualism. American citizens, Tocqueville observed, were “joiners.” They belonged to an extensive array of voluntary civic groups. Mutually beneficial interactions with other people routinely occurred in these groups, and individuals would come to recognize their common interests as a result. They would develop “habits of the heart” and learn to trust each other. Broad, intricate, and dense networks of trust would provide a strong foundation for any community, or in modern terminology, a high stock of “social capital.”

Robert Putnam is a contemporary scholar whose studies have identified a decline in civic participation and associated declines in levels of trust throughout American society—trust in fellow citizens as well as trust in leaders and institutions. In his view and the view of many others, the stock of social capital—the resource that citizens and leaders can draw upon in times of civic, economic, and political stress—has reached dangerously low levels. Again, causality is difficult to determine. Has trust declined because of

decreased civic participation, or has decreased civic participation led to a decline in trust? Despite the problems of measurement and conceptualization that complicate an understanding of trust, participation, and civic health, and despite the controversy over some of the conclusions about social capital in modern society, there is widespread agreement that trust in U. S. society has diminished along with civic engagement. The particulars of the relationships remain somewhat in doubt, but the consensus is that the “habits of the heart” identified by Tocqueville are less of a force in complex modern democracies.

Social capital theory highlights at least three important leadership issues. First, as general levels of trust in society decline, leaders find it more difficult to gain followers’ trust. Second, as levels of trust decline, leaders struggle to restore social capital either through their own actions or through policies. Third, some scholars contend, trust and social capital are difficult to generate in pluralistic and heterogeneous societies. Can individuals with vastly differing values trust each other and form dense networks of mutual support? If pluralism makes it difficult to generate trust, most modern societies, particularly those in developed democracies in which tolerance and individual rights are justifiably and unavoidably prominent features, will find the creation and preservation of social capital highly problematic. Leaders will need to develop trust while embracing the benefits of tolerance and the inevitability of pluralism in free and diverse societies.

THE BENEFITS OF MISTRUST

Trust in leaders is obviously beneficial. All things being equal, citizens would prefer to have leaders they can trust. And some level of discretion—“pre-rogative” in Locke’s phrasing—is necessary when circumstances call for urgency, secrecy, or plain judgment in cases where the laws are silent or the public speaks with too many conflicting voices. But as Locke and many others have also observed, a degree of mistrust has its benefits as well. It is empowering to individuals in a democratic society to place their trust in leaders, but only if they do so conditionally. As active citizens, not passive inhabitants, engaged in

Whoever is careless with the truth in small matters cannot be trusted with the important matters.

—Albert Einstein

shaping the nature of their communities, they have their own obligations to participate in civic life, to provide leaders with direction, and to hold them accountable for what they do and how they do it.

A pathology of democratic life occurs when trust shades too far into unquestioned acceptance of a leader’s dictates. Blind or unconditional trust in political, economic, or social life is unhealthy in a society built upon individual autonomy, individual rights, and limited power in any form. By the same token, another type of pathology occurs when mistrust and healthy skepticism shade too far into cynicism and become a reflexive disbelief in any and all leaders in any and all established institutions. The challenge for understanding trust and leadership in modern times is recognizing that trust has its dark side and that mistrust also plays an integral part in leadership theory.

—Kenneth P. Ruscio

TRUST BUSTING

A new kind of giant industrial corporation—commonly known as the trust—dominated American political and economic life at the turn of the twentieth century. Corporations of their magnitude and power, some controlling as much as 90 percent of their markets, were unprecedented in U.S. history before the Civil War, but by 1900 they had spread to several major industries. For millions of Americans, the trusts posed a fundamental threat to business competition, to the independence of government, to individualism, and even to liberty itself. At the same time, the trusts offered some clear benefits, most notably their ability to mass produce commodities efficiently and sell them more cheaply than their smaller competitors.

What, if anything, should the government do in response to the rise of the trusts? The question dominated American political life for at least a generation. It especially engaged three presidents during the so-called Progressive era of the early twentieth century: Theodore Roosevelt, William Howard Taft, and Woodrow Wilson. Each president held very different views about the trusts, and each took distinct actions toward them. Thus, the three presidents who served from 1901 to 1921 exhibited markedly different leadership styles as they confronted one of the most pressing issues of their day. Their actions left an enduring legacy on American political economy—by strengthening the power of the executive branch and, in the process, redefining the balance of power in the American system of governance. Much about this critical era remains widely misunderstood—especially the central role of Theodore Roosevelt, whose reputation as the greatest “trustbuster”

in American history lives on, in spite of his strong support of corporate trusts relative to the antitrust stances of Presidents Taft and Wilson.

THE TRUST PROBLEM

Large corporations were nothing new to the U.S. economy in the late nineteenth century. Early in the century, families and groups of New England capitalists built large textile mills with hundreds of workers in towns such as Lowell, Massachusetts. Canal companies in the Northeast, Middle Atlantic, and Midwest (then the West) consumed millions of dollars of public and private investment capital. And railroads boosted the scale and scope of corporate business by an order of magnitude. Growing from local lines to interstate systems in the mid 1800s, railroads merged to form vast regional systems in the 1870s and 1880s. By that time the Pennsylvania Railroad—with thousands of miles of track and some 5,000 employees—was the largest business enterprise in the world.

The scale and scope of the railroads disconcerted a growing number of Americans. Midwestern farmers and shippers were especially vocal in their criticisms of the major railroad lines, and they lobbied successfully for passage of a series of “Granger” laws in the 1870s (passed in response to the farmers’ Grange movement) that regulated railroad rate-setting and operations. At the same time, it was clear that the railroads—as a fast, efficient, reliable, and high-capacity mode of transportation—held many benefits for society.

Not surprisingly, the first *federal* regulation of corporations was directed at the railroads. Several states had developed a commission form of regulation, in which a board of experts was appointed to collect information about railroad operations and rates and make it available to the public. But the commission did not have direct power of enforcement or rate-setting. For this reason, some astute observers called them “sunshine” commissions: They would cast light on railroad operations with the expectation that those that competed unfairly would draw the attention of the press and, ultimately, the wrath of the public and its legislators, who might revoke a corporation’s char-

ter or take other punitive actions. In 1887, the federal government emulated the actions of some of the more progressive state commissions by passing the Interstate Commerce Act, the first federal corporate regulation in American history. The legislation created the Interstate Commerce Commission, a board of independent experts.

After the Civil War, several manufacturing industries went through a process of consolidation reminiscent of the mergers that swept through the railroad industry a decade or two earlier—and for essentially the same reasons. These industries, too—oil refining, iron and steel manufacturing, brewing and distilling, tobacco, and sugar refining, to name a few—were heavily capitalized and plagued with overcapacity. Rather than compete, most companies chose to merge. It was then illegal for one corporation to own another in a different state, but ingenious corporate attorneys found ways around the obstacle. In the late 1880s, an attorney for Standard Oil created a new kind of legal entity called a “trust” that exchanged trust shares for shares of stock in Standard Oil companies in various states. (There were thus two definitions of the trust: the narrow definition that referred to the kind of arrangement devised by Standard Oil and copied by others, and a vernacular use of the term to refer to any large corporation with a dominant position in its industry.) New Jersey also passed a holding company law to attract industry

The regulatory response to these consolidations also paralleled the railroad experience, but with important differences. In 1890, Congress passed the Sherman Anti-Trust Act, which outlawed all combinations “in restraint of trade.” The phrasing of this and other critical passages was vague, however, leaving wide latitude for interpretation by the courts. Over the next decade, in several dozen suits, the courts ruled in favor of large corporate defendants in the overwhelming majority of cases. Most of the findings against companies penalized medium-sized firms or trade associations, and the Sherman Act was even used against labor unions. Unlike the Interstate Commerce Commission, the Sherman Act created no commission or other oversight body; it was left to the Justice Department to bring actions against alleged violators on behalf of the American people.

This ink drawing by Clifford Berryman was published in the *Evening Star* on 11 October 1907. It shows President Theodore Roosevelt trust busting and uses a hunting motif, drawing humor from Roosevelt's penchant for hunting.

Source: Corbis; used with permission.

Ironically, when it came to the largest and most heavily capitalized manufacturing industries, the Sherman Act soon proved to have largely the opposite effect from what was intended—that is, it *encouraged* consolidation. This came about in the 1890s as a growing number of firms—fearful that they could be prosecuted under the terms of the Sherman Act for making formal and informal agreements with competitors to regulate wages, prices, and output—decided that outright merger was a legally safer strategy. The severe depression of 1893 gave further impetus to a massive merger movement that, by the time it was over, gobbled up more than 1,200 manufacturing firms.

The public hue and cry about the trust problem reached a fevered pitch. In political cartoons, magazine and newspaper articles, and books, “muckrakers” vividly portrayed the Machiavellian maneuverings of several of the nation’s captains of industry, colorfully dubbing them “robber barons.” Millions of

readers were outraged and intrigued by the likes of Frank Norris's *The Octopus* (1901), a scathing indictment of railroads in California, and Ida Tarbell's expose, *History of the Standard Oil Company* (1904).

PRESIDENT THEODORE ROOSEVELT'S LEADERSHIP ON ANTITRUST

Such was the industrial and political landscape in 1901, when Vice President Theodore Roosevelt received the shocking news that President William McKinley had been assassinated. A massive merger wave was under way; the Sherman Act had proven to be unpredictable at best and ineffectual at worse in reining in the trusts; and large segments of the population, especially those outside of the "monied" classes, were deeply concerned about the burgeoning size and influence of the trusts, though not quite sure what to do about it. And there were significant obstacles to strong federal action, from the polity's persistent wariness about the expansion of federal power, to Constitutional arguments that actions against corporate assets denied those entities (which held legal standing much like a person) due protection of their property rights.

Roosevelt's national leadership on the antitrust issue was both potent and evolutionary. It was potent because he brought to the debate a sophisticated and in many ways advanced understanding of the salient issues, and because his leadership style proved to be among the most rhetorically powerful in the history of the United States presidency. It was evolutionary because Roosevelt's position was more muted and mainstream during his early years in the White House compared with how he later articulated his antitrust position, especially when he ran (unsuccessfully) for reelection in 1912.

A Republican, Roosevelt attained the presidency largely in spite of the wishes of his party's leaders. As a boy, he had been a severe asthmatic, sickly throughout his childhood yet determined to refashion himself into a paragon of rugged masculinity. He graduated from Harvard College, won a seat in the New York State assembly, served as president of the New York City Board of Police Commissioners, and became secretary of the navy. During the Spanish-

American War, he led the Rough Rider regiment. He loved to hunt big game, ranch in the West, and read and write voraciously. Roosevelt spurned the help of the Republican Party machine, which saw him as a loose (albeit colorful) cannon and helped channel him into the vice presidency as a way of containing his influence. All of that changed with McKinley's assassination, which made Roosevelt, at 42, the youngest president in American history.

As president, Roosevelt held complex views about the trust issue. To begin with, he saw the nation's behemoth industrial combines as both a great resource and a potential threat. They were a resource because most were enormously efficient compared with their smaller rivals. By producing on a large scale—Rockefeller's refineries, for instance, were much larger than those of any of his competitors, even before he bought out 90 percent of his competitors—the trusts captured enormous economies of scale that allowed them to lower their production costs dramatically. Contrary to widespread fears—and emerging theories of monopoly—near-monopolists like Rockefeller slashed their prices rather than extorting "monopolistic rents." Operating costs were so much lower at the giant producers that they could afford to lower prices *and* still earn enormous profits for their owners. (With nearly a billion dollars of accumulated wealth, Rockefeller was the richest man in the world.) The president understood the internal economics of such industries, and also saw their benefit for consumers and for the larger economy. He saw them as the culmination of a long and successful process of industrial evolution.

Roosevelt was first and foremost a militant nationalist. In his view, giant industry was a vital source of American strength. Roosevelt and others of his generation had witnessed the transformation first-hand. On the eve of the Civil War, the United States had been a third- or fourth-rate economic power. By 1900, it led the world in the production of iron, steel, oil, and several other key industrial commodities, and featured more miles of railroad track than all of Europe and Russia combined.

At the same time, Roosevelt recognized that trusts also held the power to dissipate the nation's economic vitality. They could seek comfort in merger

rather than striving to develop competitive products and services; they could run smaller rivals out of business by pricing below costs until their competitors folded; they could forge secret deals with ostensible competitors to hold prices artificially high or hold output artificially low; they could demand secret kickbacks from key customers; and so on. The trusts needed to be controlled, but—in Roosevelt’s firm opinion—the Sherman Act was not the way to do it. As applied by the courts during its first decade, the federal antitrust law had proven to be inconsistent at best, and ineffective at worst. At the same time, President Roosevelt highly valued the rule of law, which prevented him from dismissing the Sherman Act or its enforcement lightly.

His preferred solution to the quandary—of how to preserve the strengths and benefits of corporate efficiency for national strength, how to safeguard against their potential abuses of power, and how to uphold the rule of law—was administrative government. The federal government needed to expand its powers and administrative capacity in order to act as a countervailing regulatory force against the asymmetrical power of the trusts. Drawing inspiration from the recent history of state and federal regulation of the railroads, the U.S. government needed to create an agency or commission to oversee industrial combinations that was akin to the state railroad commissions and the Interstate Commerce Commission.

During his first term, the ever-resourceful Roosevelt pursued a combination of strategies and tactics to achieve his antitrust aims. Seeing the presidency as a power venue for moral suasion—a “bully pulpit,” as he memorably called it—he loudly called for responsible corporate behavior and an expanded oversight role for the executive branch. He also successfully urged Congress to create a Bureau of Corporations within the Department of Commerce and Labor, which (like the state commissions) gathered information about corporate operations and reported it to the president, who then decided whether to publicize potential wrong-doing and urge government prosecution. Finally, Roosevelt wielded the antitrust club during his administration by directing the Justice Department to bring suit against scores of cor-

porations—a total of forty-three by the time he completed his second term in the White House.

His first target (in 1902) was the Northern Securities Company, a gigantic railroad holding company put together by financier J. Pierpont Morgan to control all of the long-distance railroad lines west of Chicago. With great fanfare, the case (*Northern Securities v. U.S.*) reached the Supreme Court, which ruled the stock transactions an illegal restraint of trade. Roosevelt also initiated actions against the beef, oil, and tobacco trusts. All of this earned him a reputation as a great “trust-buster.” Although Roosevelt indeed held the interests of the “little man” in high regard, his preferred method, as noted, was to build a strong nation and protect its citizens through administrative activism. Roosevelt’s activism outran even his own party’s sense of propriety after his reelection in 1904. In the realm of antitrust, as well as several other areas of social and economic reform, he proposed an ambitious program of reforms, including a national incorporation law, which he dubbed the “New Nationalism.” Although several of his key measures were enacted into law, his more ambitious proposals, including the national incorporation law, were defeated by a combination of Democrats and “old guard” Republicans.

After his reelection, Roosevelt pledged not to run for a third term, a decision he later regretted. In 1908, his chosen successor, Secretary of War William Howard Taft, entered the White House. During his four years in office, Taft and his aggressive attorney general, George Wickersham, initiated sixty-five antitrust actions—far more than Roosevelt and in a much shorter time—although Taft was motivated more by his desire to enforce the law rather than expand administrative government. Roosevelt watched from the sidelines with growing distaste. At the same time, his antitrust views evolved. In 1911, the Justice Department, concluding antitrust actions it launched years earlier at Roosevelt’s institution, ordered the break-up of the American Tobacco Company and the Standard Oil Company. In its rulings, the court articulated what became known as the “rule of reason”—essentially, that trusts had to possess not only the power but also the intent to impede competition to have violated the Sherman Act. The principle

resonated with Roosevelt, who increasingly thought and spoke in terms of “good” and “bad” trusts.

WILSON VERSUS ROOSEVELT ON ANTITRUST: THE ELECTION OF 1912

Roosevelt decided to make another bid for the presidency in 1912, when the trust question was one of the burning issues of the day. The contest pitted Roosevelt—running as the nominee of his own, newly formed Progressive Party—against Democratic nominee Woodrow Wilson, Taft (as the Republican nominee), and socialist Eugene V. Debs. Wilson—the son of a minister and an academic most of his professional life—had served as president of Princeton University and governor of New Jersey.

Wilson’s antitrust philosophy contrasted starkly with Roosevelt’s. He saw powerful industrial combinations as growing out of the failure of the market rather than (as Roosevelt saw it) the market’s natural progression. The ideal state of political economy was not, as Roosevelt believed, firms of all sizes with a strong administrative state policing the large in defense of the medium and small, but rather a nation without the giant combines altogether. In this way, Wilson called for the return of an earlier stage of economic development, one closer to the world of Adam Smith, when no company held the power to influence prices. Simply put, whereas Roosevelt saw “good” and “bad” trusts, Wilson viewed bigness itself to be inherently bad. He promised a “New Freedom” if elected.

Roosevelt’s third-party candidacy split the vote and threw the election to Wilson. (The total votes cast for Roosevelt and Taft together far exceeded those garnered by Wilson.) Once in office, however, Wilson proved to be a much more activist president than his campaign rhetoric had suggested. He ushered through a roster of major legislative reforms that secured his reputation as (along with Roosevelt) one of history’s two great Progressive presidents. Among the key measures was Clayton Antitrust Act of 1914, which exempted unions from antitrust prosecution and created the Federal Trade Commission. The FTC monitored competitive practices and possessed the power to issue “cease and desist”

orders against corporations. Wilson’s administration thus gave the nation the kind of administrative oversight of corporate behavior long envisioned by Roosevelt. Thereafter, antitrust enforcement resided chiefly in the hands of the executive branch rather than the courts.

Wilson’s style of leadership—generally and when it came to antitrust—contrasted starkly with Roosevelt’s. He was cerebral, moralistic, at times even preachy, and thus much less effective than Roosevelt at mobilizing public opinion. His fundamental position on the trusts was backward looking rather than forward looking. Nevertheless, he held a deep suspicion toward economic concentration that persists to the present, when Americans continue to hold ambiguous attitudes toward trusts that echoed Roosevelt’s ruminations a century ago. And in action, Wilson became one of the chief architects of both the modern antitrust tradition and the modern administrative state.

TRUTH AND RECONCILIATION COMMISSIONS

Truth and reconciliation commissions (TRCs) are established to research human-rights abuses that have taken place during a specific time period in a

country or area or during a particular conflict. TRCs exist for a designated length of time, have a specific mandate, and varied organizational arrangements, processes, and procedures. These commissions allow victims, their relatives, and perpetrators to give evidence of human rights abuses and provide an official record of their accounts. Commission members have authority to access information from all institutions and to provide legal protection to witnesses. TRCs are most helpful when they are headed and created by strong leaders who have a peaceful vision for their country's future.

In most cases, one goal of truth and reconciliation commissions is to produce and disseminate a final report that includes both conclusions about the abuses that occurred and recommendations for preventing a recurrence of these abuses. Ultimately, the goals of such commissions are to contribute to ending and accounting for past abuses of authority, to promote national reconciliation, and to bolster a new political order or legitimize new policies.

More than twenty truth and reconciliation commissions have been established around the world since the first was created in Uganda in 1974. The majority of TRCs were established by the national governments of the countries in question, some by international organizations such as the United Nations, and a few by nongovernmental organizations. When national governments form commissions, those governments are usually transitional governments, because newly emerging democracies often want to or are sometimes forced to give a formal accounting of the violence, crimes, and civil and human rights abuses of the previous regimes.

JUSTICE

Much has been written about truth and reconciliation commissions, but in all the literature no theme has been as prevalent as justice. TRCs are often seen as controversial because of the tension between the two extreme positions that can form between those who want to exact vengeance for horrible acts committed against innocents and those who feel the need to offer forgiveness for those horrific acts.

Many believe that the perpetrators of human rights

abuses, violence, ethnic cleansing, or genocide must be subjected to criminal proceedings by a tribunal or a court of law that can establish the facts of the abuses, render verdicts, and, if needed, mete out punishment. This is often called retributive justice. But truth and reconciliation commissions are not designed to be courts of justice.

Truth and reconciliation commissions are designed to establish what is often called restorative justice. This approach to dealing with the past seeks reconciliation instead of retribution. Believers in restorative justice hold that when a perpetrator confesses his crimes, the victim is empowered through forgiving the tormenter. They believe that the healing can be even more pronounced if the TRC has the power to order and enforce reparations or restitution. The society at large can be helped by the public airing of crimes or grievances, which is sometimes accompanied by confessions. TRCs typically involve a greater degree of public participation than criminal trials do.

Because TRCs are not punitive, they can result in situations where, following the public airing of grievances, victims watch perpetrators continue to enjoy their freedom despite their acts of violence. One way to avoid this problem is for TRCs to serve as a first step to the prosecution of selected individuals who are deemed responsible for especially heinous crimes. A country may begin with one process and bring about closure with the other, or run both processes simultaneously, perhaps putting the leaders and planners of atrocities on trial while using a TRC mechanism for other players in the crimes or events being addressed.

TRUTH

Although the word *truth* has a defining place in the commissions' titles, a definition of the word cannot be agreed upon. Any event has almost as many versions of what happened as it has witnesses. In their writing about the Truth and Reconciliation Commission of South Africa, Charles Villa-Vicencio and Wilhelm Verwoerd proposed using different types of truth to satisfy the different demands made on the word. These types included historical truth, moral truth, factual or forensic truth, personal or narrative truth, social or dialogue truth, and healing and

Truth and Reconciliation Commissions

As part of its Jeanette Rankin Library Program, the United States Institute of Peace maintains a digital collection of information on truth and reconciliation commissions. Below are excerpts from the collection.

Argentina

The 16-member National Commission on the Disappeared was created on December 16, 1983, by then-President Raul Alfonsín. The commission's report on 9,000 disappearances during the 1976-1983 military rule, issued on September 20, 1984, was commercially published under the title *Nunca Mas: Informe de la Comisión Nacional sobre la Desaparición de Personas*.

Chile

The eight-member National Commission for Truth and Reconciliation, which was established in 1990 by then-President Patricio Aylwin, released their *Report of the Chilean National Commission on Truth and Reconciliation* in February 1991. The report is commonly known as the *Rettig Report* after former Senator Raul Rettig, who was president of the commission. The commission's mandate encompassed human rights abuses resulting in death or disappearance during years of military rule from September 11, 1973, to March 11, 1990.

East Timor

A regulation issued on July 13, 2001, by the U.N. Transitional Administration in East Timor established a Commission for Reception, Truth and Reconciliation with a three part mandate: 1) to investigate human rights violations committed between April 1974 and October 1999, which resulted in the death of an estimated 200,000 East Timorese. To establish a truth-telling mechanism for victims and perpetrators to describe, acknowledge, and record human rights abuses of the past; 2) to facilitate community reconciliation by dealing with past cases of lesser crimes such as looting, burning and minor assault. Panels comprised of a Regional Commissioner and local community leaders will mediate between victims and perpetrators to reach agreements on acts of reconcilia-

tion to be carried out by the perpetrator; and 3) to report on its findings and make recommendations to the government for further action on reconciliation and the promotion of human rights. After a months-long public nomination and selection process, seven national commissioners were sworn in on January 21, 2002, in Dilli.

El Salvador

The Commission on the Truth for El Salvador was mandated by the January 16, 1992, U.N.-brokered peace agreements ending the Salvadoran civil war. It was established in July and released its report on March 15, 1993. The report on "serious acts of violence" since 1980 was titled *From Madness to Hope: The 12-Year War in El Salvador: Report of the Commission on the Truth for El Salvador*.

Germany

The Enquet Kommission Aufarbeitung von Geschichte und Folgen der SED-Diktator in Deutschland, or Study Commission for the Assessment of History and Consequences of the SED Dictatorship in Germany, was established by members of the German Parliament in March 1992 to investigate human rights violations under communist rule in East Germany from 1949 to 1989. Its mission was primarily investigative rather than judicial. The commission results were published in eighteen volumes in 1995. The authorities established procedures to make available to the public the personal dossiers and surveillance files of the Communist secret police.

Guatemala

The Historical Clarification Commission (CEH) was established on June 23, 1994, as part of peace agreements between the Guatemalan government and the National

restorative truth. These different sorts of truth play different roles: Forensic truth, for example, aspires to uncover overwhelming material evidence and present it in such a compelling and scientific manner that no one can argue that the various atrocities or crimes under investigation didn't happen. Narrative or personal truths, which primarily refer to the victims' and perpetrators' public testimony, also seek to ensure that individual acts of oppression and oppressed individuals cannot be forgotten.

But while attempts are made to ensure that the facts are established, a society-wide consensus on what they mean cannot be forced. In the case of human rights abuses committed in South Africa and Latin America, for example, although the victims of violence were often innocent of any crime, South African security forces and Latin American generals and colonels often believed that they were fighting subversion that threatened national security. They may still believe that they did the right thing and can

Guatemalan Revolutionary Unit (URNG), to investigate human rights violations in the country's 36-year armed conflict. The commission's final report, entitled *Guatemala: Memory of Silence*, was released on February 25, 1999.

Peru

In December 2000, the Valentin Paniagua government approved the establishment of a truth commission to investigate human rights abuses committed between 1980 and 2000. The commission was inaugurated on July 13, 2001, and began its work after President-elect Alejandro Toledo took office later that month. In early September 2001, upon the request of the Catholic Church, the commission was renamed the Truth and Reconciliation Commission, and its membership was expanded from six to twelve.

The commission investigated human rights abuses by the Shining Path and the Tupac Amaru rebel groups and the military during the administrations of former Presidents Fernando Belaunde (1980–1985), Alan Garcia (1985–1990), and Alberto Fujimori (1990–2000). It was estimated that such abuses resulted in 30,000 deaths and 6,000 disappearances in Peru over the last two decades, but the commission's report, which was released on August 29, 2003, stated that 69,000 people were victims of political violence during this period.

Philippines

On March 18, 1986, then-President Corazon Aquino gave broad power to the seven-member Presidential Committee on Human Rights to investigate human rights violations attributed to the military during the 1972–1986 rule of President Ferdinand Marcos. The committee never issued a final report.

South Africa

The Commission of Truth and Reconciliation was established in 1995 by the South African parliament to investigate human rights violations during the apartheid-era of 1960 through

1994. Anglican Archbishop Desmond Tutu chaired the 17-member body. The commission held public hearings throughout South Africa at which former victims of human rights abuses told their stories. The commission's amnesty committee received 7,124 applications by perpetrators of such violations by December 9, 1998. A reparation and rehabilitation committee was established to recommend appropriate forms of compensation for human rights victims. The commission's report was presented to President Mandela in October 1998.

Sri Lanka

In November 1994, President Chandrika Bandaranaike Kumaratunga appointed three different Commissions of Inquiry into the Involuntary Removal or Disappearance of Persons, and each was assigned to cover a different geographic part of Sri Lanka. The three independent commissions had the identical mandate of investigating whether individuals had "disappeared" from their homes since January 1, 1988; determining the fate of the disappeared; and bringing charges against those responsible for the abductions. Together they investigated more than 16,700 cases of disappearances, submitting a single final report to the president in September 1997. Eventually, the final report was made public, compensation paid to the relatives of some of the victims, and more than 400 members of the country's security forces were duly charged with human rights violations.

Uganda

The six-member Commission of Inquiry into Violations of Human Rights was established in May 1986 by President Yoweri Museveni, and was mandated to investigate the human rights violations committed under the governments of Milton Obote and Idi Amin between October 9, 1962, and January 25, 1986 and make recommendations of ways to prevent the recurrence of such events. The commission's reports were published in 1994.

continue to believe this despite the collective belief that their actions were criminal upon hearing the commission's evidence.

RECONCILIATION

Reconciliation is the first step towards mending a broken society so the people can have dignity and justice. In South Africa, it was Nelson Mandela (b. 1918), himself a political victim of apartheid and a great

leader, who suggested forming that nation's truth and reconciliation commission. (South Africa's Truth and Reconciliation Commission began its work in April 1996.) In South Africa, where the granting of blanket amnesty by the commission has been one of the most controversial aspects of its work, Bishop Desmond Tutu (b. 1931), one of the leaders of the commission, argued that freedom was offered to perpetrators in exchange for their truthful confessions.

Tutu solves the problem of justice by distinguish-

ing between retributive from restorative forms. In fact, Tutu says that restorative justice reflects a fundamental and venerable African value of healing and nurturing social relationships at the expense of exacting vengeance. In the Zulu language, this quality of humane sociality is called *ubuntu*.

Joseph Montville, a senior associate at the Center for Strategic and International Studies, a nonpartisan think tank based in Washington, D.C., is a leader in the field of truth and reconciliation commissions. He breaks down the process of reconciliation into a formula of acknowledgment and contrition from the perpetrators and forgiveness from the victims. This process can occur in specially designed workshops wherein, under the guidance of trained third parties, contestants take “walks through history.” The goal is to effect a healing process, which cannot begin until there has been some public acknowledgment of what has happened. Montville says that justice itself is a form of healing.

In fact, proponents of reconciliation often turn the discussion of justice into the language of therapy and healing, or into a moral and religious discourse of forgiveness. Along with ideas of punishment or retribution, what is also lost in this transformation, to many critics, is the notion of equity. One argument against the usefulness of reconciliation is that while the process may be useful on the individual level, when it is brought to the collective level reconciliation often seems to become more ambiguous as an approach to building peace.

In an analysis of the South African TRC and its results, the social anthropologist Richard Wilson emphasizes the value of recognizing individual suffering and collectivizing it, as the South African TRC did through its televised hearings. A new political identity was constructed, the “national victim.” In this way, individual suffering was brought into a public space to be shared by all; in Wilson’s estimation it was made sacred as a precursor to building a new national collective conscience. In contrast, Tom Winslow, who has worked with victims of torture in South Africa, argues that while the South African TRC has worked in some ways to effect reconciliation at the collective level, this may have occurred at the expense of individual, psychological healing.

Healing at the individual level, in his estimation, is independent of collective reconciliation.

AMNESTY

Granting perpetrators amnesty in exchange for full disclosure of their human-rights abuses is a controversial practice of many TRCs. But some form of amnesty provision is often essential to ending what is often a protracted, bloody war: Without amnesty the killing, torture, rapes, and disappearances would continue.

A few possible ways to gain amnesty exist. After an armed conflict, all parties involved may be given amnesty. This solution is also referred to in the Geneva Protocols, which are the laws that govern during armed conflict. By granting this kind of amnesty, a government can absolve the military or police of crimes committed on its own orders. Another means of gaining amnesty is by being discharged from further prosecution because of mitigating circumstances, such as the fact that one was carrying out orders or because the statute of limitations on the crime has expired. Last, individuals may escape prosecution because their crimes are not considered proven, or because there is not a judge who is willing to prosecute the case.

Three primary outlooks on the granting of amnesty are most prevalent. José Zalaquett, a member of the Chilean Truth and Reconciliation Commission and leader in the field of TRCs, has stated that amnesty may not be granted if this endangers finding the truth. He has also stated that some crimes, including genocide and crimes against humanity, are of such a serious nature that they should not be included in the provisions pertaining to full amnesty. The South African Truth and Reconciliation Commission has taken the viewpoint that individual amnesty can only be granted for crimes that were “in proportion” within a “political context.” And finally, Amnesty International’s position is that “impunity negates the values of truth and justice and leads to further human rights violations” (Amnesty International 1996). The organization states that any pardons should be granted only after perpetrators of serious human rights violations are

brought to justice and that those who are convicted must be prohibited from holding future positions of authority over prisoners or from having responsibility for decisions on the use of force.

Perpetrators can be pursued by their crimes, however, even if they are granted amnesty. For example, the former president of Chile, Augusto Pinochet, was given amnesty for his crimes in 1990 when he stepped down from power, but he was arrested in 1998 in the United Kingdom after Spain requested his extradition. He was judged too ill to stand trial in Spain, however, and was returned to Chile, where charges were brought against him, dropped, reinstated, and dropped again.

PERSONAL RISK

Whether a committee leans more toward reconciliation or retribution, there will always be risk involved. Parties involved with TRCs have received threats and been killed. In Uganda, for example, members of the TRC were chased, killed, or exiled overseas. In Chile, at least three political killings, including that of a prominent senator, occurred in the weeks after the TRC announced its findings. These political killings create a culture of fear in the community. The aim of the violence and threats is to stop people from talking about the TRC process and findings.

Some threaten those who are attempting to gather evidence for the commission in hopes that there will be nothing to talk about because people will be too intimidated to compile a report. For instance, the Guatemalan Forensic Anthropology Team (EAFG), a nongovernmental organization formed in 1992 to carry out exhumations of cemeteries where massacre victims had been buried, has often been the subject of threats and intimidation. Those who, like TRC members, their staff, and investigators, face risks and threats but nevertheless carry out their mission, are leaders in the truest sense. They will lead their countries to reconciliation and a new future through their determination to have the truth told and recorded. It will be up to history to decide what the truth means, but at least the tools will be available because of these strong, committed people.

TUTU, DESMOND (b. 1931)

*South African priest and
Nobel Peace Prize laureate*

Desmond Mpilo Tutu was born in 1931 in Klerksdorp to Methodist parents. He was educated to become a teacher but resigned over the Bantu Education Act, which took control of schools away from churches. After leaving the teaching profession, he received training at St. Peter's Theological College in Johannesburg and was ordained a priest in 1961. Tutu held several positions within the Anglican Church, including archbishop of Cape Town, and headed the South African Council of Churches (SACC). He received the Nobel Peace Prize in 1984. After the election of Nelson Mandela in 1994, he was chosen to chair the Truth and Reconciliation Commission (TRC).

THE PRIESTHOOD

Tutu believed that religion could not be sealed off in a watertight compartment apart from the hurly-burly business of ordinary daily living. His early acquaintance with Father Trevor Huddleston, an activist white priest, made an impression on Tutu. Here was a man whose "speaking up for the oppressed showed me what a man of the Church can do" (Hope & Young 1981, 112). His friendship with Huddleston was an early reminder that not all whites were irre-

deemable. Tutu also credited his time in England, where he was a student at King's College from 1962 to 1966, with forestalling bitterness against whites. Tutu returned from England in 1967 to take a position at his alma mater, St. Peter's, which had become part of the Federal Theological Seminary. He arrived on campus at the time that black theology was popular. During this time, he was also the chaplain at the government-controlled black university, Fort Hare, where black consciousness was surfacing. He was in total sympathy with the young students' aims, but his nonracial attitude was too firmly entrenched after four years in England for him to support them totally, for he was at odds with their racially exclusive approach and militant tone. From 1972 to 1975, he served as assistant director for the World Council of Churches, where he was exposed to the ideas of liberation theology, which held that God favored the oppressed. By the time of the Soweto Uprising in 1976, when school children protesting the use of Afrikaans in the schools were fired upon by police, Tutu as the dean of St. Mary's Cathedral in Johannesburg was thrust into politics, comforting the parents in Soweto whose children had been killed.

SOUTH AFRICAN COUNCIL OF CHURCHES

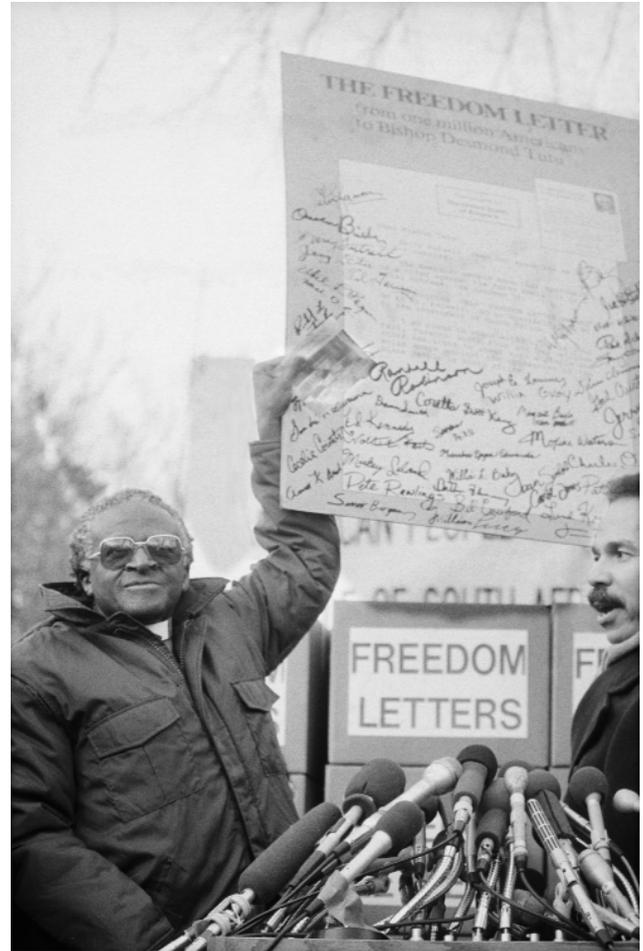

Following his tenure as dean, Tutu held the position of bishop of Lesotho, but it is for his work as the general secretary of the South African Council of Churches, the umbrella group of churches critical of the government's race policies, that Tutu has become especially renowned. Under Tutu's tenure from 1978 to 1985, the SACC became both more Africanized, with Africans taking over positions of responsibility, and more radicalized, often being accused of being a black power base. Under Tutu's leadership, the SACC appropriated funds to defend political prisoners, supported their families and provided education for their children, aided hard-pressed trade unionists, and assisted political figures fleeing to neighboring countries. Perhaps his most important accomplishment was strengthening SACC's contacts with the exiled liberation groups, including the African National Congress (ANC), which the government termed a terrorist organization.

Underpinning the efforts of the SACC was Tutu's theology of opposition to apartheid. His disavowal of apartheid rested on twin doctrines: humanity as the image of God, and reconciliation through Christ's redemption. Tutu regarded man's creation in the image of God as his most important attribute; the Bible makes no reference to racial, ethnic, or biological characteristics. But apartheid accepted that some are more like God than others. In short, apartheid "can make a child of God doubt that he is a child of God" (Tutu 1983, 45–46).

Second, apartheid denied the central act of reconciliation, which the New Testament declares was achieved by God in his Son, Jesus Christ. For Tutu, the heart of the Christian message was that Christ's work on the cross restored human brotherhood, which sin had destroyed. Whereas the Bible says that God's intention for humankind is harmony, peace, justice, wholeness, and fellowship, "apartheid says that human beings fundamentally are created for separation, disunity, and alienation" (Tutu 1983, 41–42).

In response to criticism that he was "politicizing" religion, Tutu wrote, "If we are to say that religion cannot be concerned with politics then we are really saying that there is a substantial part of human life in which God's writ does not run" (Tutu 1984, 170). For Tutu liberation was inevitable because the cause was just and apartheid was against God's law. His sense of being held up and buoyed by prayers of Christians throughout the world also encouraged him. Receiving the Nobel Peace Prize in 1984 was a source of hope, a boost to morale. "Hey, we're winning!" Tutu exclaimed (Du Boulay 1988, 201).

While some black theology proponents believed blacks were morally superior to whites, Tutu was quick to denounce this notion. He wrote that God is on the side of the oppressed not because they are better or more deserving than their oppressors, but simply because they are oppressed. We say that God is on our side, wrote Tutu, "not as some jingoistic nationalist deity who says 'my people right or wrong' but as one who saves and yet ultimately judges those whom he saves" (Tutu 1979, 166). Tutu warned that a black majority government could become as oppressive as a white minority regime:

Desmond Tutu holds up a copy of the Freedom Letter at a demonstration in front of the South African embassy in Washington D.C. on 8 January 1986.

Source: Bettmann/Corbis; used by permission.

[We] have too much evidence that the removal of one oppressor means the replacement by another; yesterday's victim quite rapidly becomes today's dictator. [We] know only too well the recalcitrance of human nature and so accept the traditional doctrines of the fall and original sin. (Tutu 1979, 167).

THE UNITED DEMOCRATIC FRONT

In 1983, President P. W. Botha introduced to Parliament a new constitution bill, which extended the franchise to Indians and Coloureds. The government stated that blacks were not given a chamber because they already had their own constitutional path to follow in the homelands and in black local government

The Desmond Tutu Peace Organizations: The Triumph of the Human Spirit

To continue the work begun by Desmond Tutu, there now exists a Desmond Tutu Peace Centre, supported by the Desmond Tutu Peace Trust and the Desmond Tutu Peace Foundation USA. Below is background information on the development of these organizations, as it appears on the Peace Foundation's website:

After Archbishop Desmond Tutu retired as head of the Anglican Communion in 1996, it was decided that a long cherished ideal be established—a Peace Centre that would honor the quality of the contribution and leadership the Archbishop and others had made to peaceful change in South Africa.

In October 1998 Archbishop Desmond Tutu and Mrs Leah Tutu co-founded The Desmond Tutu Peace Trust—a legal registered South African Trust, which would act as the legal vehicle through which The Desmond Tutu Peace Centre could be formally researched and established.

In the words of its mission statement: “The Desmond Tutu Peace Centre is a place, born out of the South African experience, inspired by the spirit of Desmond Tutu, where the visitor and scholar encounters a vision of hope for Africa, and is empowered to participate in the creation of that vision.”

The Desmond Tutu Peace Foundation USA was created in 2000 to support the Trust in fundraising and programmatic activities. The Foundation is currently headquartered in New York, New York.

structures. Tutu was vociferous in his rejection of the proposal. He saw it as a refinement rather than a refutation of apartheid and accused it of co-opting a segment of the oppressed as junior partners in order to add their numbers to the white oppressors. He urged SACC's member churches to reject the new constitution and to urge their parishioners to boycott the upcoming elections to the two new chambers. Despite Tutu's plea, white voters approved the new constitution, which excluded 77 percent of the population from voting. Tutu readily became a patron of the United Democratic Front (UDF), an umbrella group

of student, community, religious, professional, and trade union organizations, which campaigned against the tricameral parliament. The UDF's boycott of the elections was wildly successful, with few Coloureds and Indians voting in the first election. Although actively involved in this campaign, Tutu pointed out that he was involved only because the experienced political leadership of the ANC were in exile or in prison. With the mass bannings in the late 1970s, the government effectively had decimated political leadership, and churchmen stepped in to fill the void.

NONVIOLENCE

Tutu advocated nonviolent methods. Because our cause is just, he wrote, “we cannot afford to use methods of which we will be ashamed when we look back” (N. Tutu 1989, 48). He supported the aims of the exiled leaders of the ANC but condemned their methods: “We as a Council deplore all forms of violence, and have said so times without number. We deplore structural and legalized violence that maintains an unjust socio-political dispensation, and the violence of those who would overthrow the State” (Tutu 1984, 181). However, he knew that many ANC members, such as Nelson Mandela, took up arms when peaceful methods had failed.

Tutu was convinced that the gospel could change the hearts of white Christians, and that black South Africans must continually try to persuade whites. Du Boulay explains that his instincts were to negotiate rather than to confront, to reconcile rather than to attack. Although aware that militant blacks would see him as politically naive, Tutu persisted in this view and attempted to meet with President P. W. Botha, and later F. W. de Klerk, time and time again. Tutu explained, “Whether I like it or not, Mr. P. W. Botha and I are brothers, members of the same family. I cannot write him off. I cannot give up on him because God, our common Father, does not give up on anyone” (N. Tutu 1989, 163). Of President F. W. de Klerk, Tutu witnessed a change of heart: “Give him credit, man. Do give him credit. I do” (Villa-Vicencio 1990, 31). He hoped that sanctions would prove effective and that a violent revolution could be avoided. He criticized black-on-black violence as

well. Predictably, one of the first to speak out against necklacing—placing gasoline-soaked tires around the necks and shoulders of alleged collaborators—was Tutu, who on at least two occasions threw himself across a suspected informer, telling the mob he would have to be killed first. In recognition of his leadership in promoting a nonviolent solution in South Africa, he was awarded the Nobel Peace Prize in 1984.

TRUTH AND RECONCILIATION COMMISSION

When Mandela was released in 1990 after twenty-seven years of imprisonment, he chose to spend his first night of freedom with Tutu at Bishopscourt, the official residence of the archbishop of Cape Town, the position to which Tutu had ascended in 1986. The next morning Tutu told reporters: “I can now get on with the work of the Church” (Villa-Vicencio 1996, 276). Although he hoped to retire, he was chosen by President Mandela in 1995 to head the Truth and Reconciliation Commission (TRC), which held hearings about the human rights abuses committed during the apartheid era.

Tutu’s leadership in the TRC was crucial to its success. According to Tutu, “Very few people objected to the heavy spiritual and indeed Christian emphasis of the commission. When I was challenged on it by journalists, I told them I was a religious leader and had been chosen as who I was. I could not pretend I was someone else. . . . It meant that theological and religious insights and perspectives would inform much of what we did and how we did it” (Tutu 1999, 82). Bishop Peter Storey has written: “He has wept with the victims and marked every moment of repentance and forgiveness with awe. Where a jurist would have been legal, he has not hesitated to be theological. He has sensed when to lead an audience in a hymn to help a victim recover composure, and when to call them all to prayer” (Storey 1997, 793).

As chairman of the TRC, Tutu endeavored to get victims to welcome perpetrators back into the fold. Not an irredeemable devil but a fellow brother in the family of God, the white man needed to be restored back into the community. Forgiveness is at the heart of what God expects of his children, Tutu believed.

In the South African context, that means that mainly black victims were urged to “turn the other cheek” to mainly white perpetrators. For Tutu, the Christian injunction to forgive was compatible with the African traditional notion of *ubuntu*, which emphasized restoring evildoers back into the community rather than punishing them. *Ubuntu* stressed the priority of “restorative” as opposed to “retributive” justice. To that end, victims were encouraged to forgive perpetrators who by confessing their deeds would receive amnesty from prosecution.

Following the conclusion of the TRC hearings in 1998, Tutu completed a book on the process, *No Future without Forgiveness*, in which he argued that South Africa’s model of reconciliation was preferable to those that stressed retribution, and he urged other divided nations to learn from South Africa’s experiment.

TYRANNICAL LEADERSHIP

Tyrants, as the Greek philosopher Plato defined them in *The Republic*, are rulers who look to their own advantage rather than the well-being of their subjects and in the process are apt to employ extreme and cruel tactics. The history of tyrants, moreover, is a product of their character and situation. Acting on base impulses, the tyrant is seduced by

all the pleasure of a dissolute life . . . At last this lord of the soul, having Madness for the captain of his guard, breaks out into a frenzy; and if he finds in himself any good opinions or appetites . . . and there is in him any sense of shame remaining . . . to these better principles, he puts an end . . . until he has purged away temperance and brought in madness to the full. (Plato, Book 9).

Tyrannical leadership flourishes in certain kinds of situations. The creator of a new state, as the Italian political philosopher Niccolo Machiavelli argues in *The Prince*, or even the ruler in an established state who comes to power outside the usual selection methods, must at least act like a tyrant. Contemporary experience with German Nazi leader Adolf Hitler and Soviet leader Joseph Stalin suggests that the new prince, with the capacity to act like a tyrant, is most apt to come to power in unstable or changing political and social conditions, where the populace harbors deep-seated resentments or grievances based on historical or social events. The likelihood is increased in situations where people are accustomed to authoritarian rule and rigid social hierarchies. The rise and dominance of Ida Amin of Uganda, Jean-Betel Bokassa of the Central African Republic, and other African leaders suggest a related but somewhat different possibility. Transitions from colonial to local rule, in which the local populace is

poorly educated with little experience in democracy, offer a fertile breeding ground for the tyrant. The dynamics of survival and ascendancy in periods of struggle between competing groups give an advantage to the daring, the ruthless, and the corrupt.

Whatever the situation, a special kind of person is required to secure and turn power into near-absolute rule. Often such persons make grandiose claims for themselves and their missions. In antiquity, as the Greek historian Herodotus noted, the Persian Kings Cyrus and Xerxes saw themselves as having godlike qualities. In contemporary times, both Stalin and Hitler projected themselves as creators of wholly new social orders. Hitler, for example, after the surrender of Czechoslovakia in 1939, predicted that he would be known as “the greatest German in history.” His escapes from attempts on his life were interpreted as signs of his chosen role. He claimed to have a superior knowledge of history, music, and practically every field of endeavor. Shortly before his suicide, he exclaimed, “What an artist dies in me!” Former Iraqi leader Saddam Hussein, too, in the various monuments he built in Iraq has suggested that he was the successor of Hammurabi, the great lawmaker; Nebuchadnezzar, the king of Babylon; Sargon the Great, as well as Ali, a companion of the Prophet Muhammad, revered by the Shiite sect as its founder.

Would-be tyrants claim to possess not only godlike powers but also the ability to do whatever it takes to achieve and consolidate their position. Extensive, overlapping spy networks are constructed to control the populations over which they seek dominance. Alliances are formed and changed as new opportunities arise. Potential rivals are eliminated from their ruling circle.

These tactics are evident in the actions of several contemporary tyrants. As Stalin neared his pinnacle of power, for example, he shifted alliances to eliminate would-be competitors. First he was nominally allied with the Communist Party leaders on the left. He then eliminated those on the left by joining with those on the right. With the left destroyed, he turned on the right, thereby effectively eliminating his competition. By 1929 he had few remaining rivals. Eventually, all of his major competitors were murdered.

After Hitler had gained office, he, too, rid himself

of all possible competitors. During the “Night of the Long Knives” in 1934, he oversaw the killing of hundreds of associates and followers. Murdered on his orders were SA (*sturmabteilung*, stormtrooper) leader Ernst Rohm, General von Schleicher, Hitler’s predecessor as chancellor, and Gregor Strasser, who had broken with Hitler at the end of 1932. As for former leader Hussein, the moment he had secured the presidency in Iraq, he overtly marked for elimination, on trumped-up charges at a party conference, all potential competitors. Later, military heroes who might challenge his preeminence as a military strategist were fired or killed. In 1982, for example, he executed approximately three hundred high-ranking officers—along with a small number of party officials

ELIMINATION

After they have attained supreme power, tyrants typically employ all the resources at their disposal to cover up any embarrassments from their past. In antiquity, the Roman Emperor Maximin put to death many who had supported him in his climb to power because they knew of his barbarian origin. Stalin eradicated almost everyone who had known him during his days in Georgia. He ordered the elimination from written histories and documents of the names of top party officials who had run afoul of him. Hitler went so far as to order the destruction in 1930 of Dollersheim, the small town in Austria where his father, Alois, had been born. No father had been named on Alois’s birth certificate, making Alois an illegitimate offspring.

Not everyone, of course, is psychologically inclined to kill, deceive, and cheat to secure power. Tyrants’ ability to easily do whatever they see as necessary in their reach for absolute power is in part a reflection of a particular character structure. The cultural values they inherit are to be used to gain power, not to curtail any of their activities. Their ties to other people are fragile, subject to being cut as tyrants see political necessity.

Stalin’s ability to outmaneuver the other old Bolsheviks in the mid-1920s was due, in part, to his lack of a commitment to any one idea of what communism might achieve. Lacking genuine ideological

grounding, he could tack to the right or the left as it met his needs. Lacking genuine emotional ties to others, he could destroy even close associates in his pursuit. His first targets in the great purges of the 1930s—Nikolai Bukharin, Sergei Kirov, Serge Ordzhonikidze—were “friends” who had joined his family on picnics and cruises.

Hitler, too, was unanchored to any sort of conventional morality. In his book *Mein Kampf*, he states that existence of a conscience is a Jewish trait. Deception, as he saw it, is a sign of strength. The closer he got to someone, he bragged on one occasion, “the more he lied.” Indeed, he found it funny when he heard that a casket had been presented to his foreign minister, Joachim von Ribbentrop, in 1943, filled with all the treaties that Ribbentrop had negotiated (which were then ignored by Hitler). Hitler laughed until tears came to his eyes. Hitler’s personal relationships, too, were shallow. Needing people around him, he could always command an audience. However, he had no real friends. Although Albert Speer, Hitler’s minister of armaments, spent “endless time” with the Führer, Speer testified that Hitler never really opened up to him. In the autumn of 1943 Hitler remarked to Speer, “One of these days I’ll have only two friends left, Fraulein Braun and my dog” (Speer 1970). Somewhat paradoxically, the character structure that gives would-be tyrants many advantages in the struggle for power can later become a source of personal and political vulnerabilities. Their grandiosity and their self-idealization mask an underlying sense of inferiority. Lacking genuine self-confidence, they are sensitive to competition, cannot tolerate criticism, and have difficulties in dealing with political reversals.

Thus, Dionysius I (430–367 BCE), the tyrant of Syracuse, turned with rage on Plato when the latter noted that tyrants lack justice and are miserable. According to the Greek biographer Plutarch, Dionysius tried to have Plato killed on his return voyage to Greece, or at least sold into slavery. The Persian king Cambyses sent his brother Smerdis home from the field of battle in Egypt after Smerdis had shown that Smerdis was the only one who could draw a bow. Soon thereafter, Cambyses had Smerdis murdered.

As for Stalin, when he heard of anyone opposing

him or saying negative things about him, he would undergo a psychological transformation. According to his daughter Svetlana, Stalin would feel completely betrayed and count that individual as his enemy, no matter how long or deep his relationship with that person might have been. Stalin also was jealous of any friendship that might develop among members of his entourage or in the politburo (the chief policy-making and executive committee of a Communist party). To avoid such friendships, he would either provoke a quarrel or separate the individuals involved through transfers to new postings.

Hitler, too, found any sort of criticism, competition, or defeat intolerable. As was Stalin, Hitler was threatened by superior people. Except for Speer, Hitler's inner circle was composed mostly of people to whom he could feel superior: He routinely made fun of intellectuals. Even his ability to sway crowds did not lead to genuine self-confidence. While rehearsing a speech, for example, he would ask his valet if he "really looked like the Fuhrer." Even opposition from would-be victims enraged him. When Sir Horace Wilson, a British government official, read Hitler a letter relaying the Czech-Slovak rejection of his latest demands on that country, Hitler leaped up, shouted that the negotiations were pointless, and rushed to the door. When he suffered military reversals in Moscow, in his offensive in the Caucuses, or at Stalingrad, Hitler placed the blame on his generals. During the final days of the war Hitler was enraged that the Luftwaffe (air force) could not operate because of weather factors. He blamed the setbacks on the western front on treachery by military commanders.

When a leader with near-absolute power has these three qualities—grandiosity, ruthlessness, and insecurity—he or she can become dangerous to others. Massive cruelties that serve no obvious political end are apt to ensue. In antiquity, Antonius Caracalla, the son of the Roman Emperor Severus, destroyed Alexandria and executed so many people in Rome that its population was significantly reduced. Commodus, the son and heir of the Roman Emperor Marcus Aurelius, allowed his soldiers to plunder the populace without restraint. On the contemporary scene, Stalin caused the deaths of mil-

lions of Soviet citizens—whether through the agricultural collectivization drive in the late 1920s or the purges of party and military leadership in the 1930s. Hitler's mass exterminations included 100,000 Germans who had been deemed "unworthy," 6 million Jews, and 9 or 10 million others who were gassed or shot or beaten to death or died through starvation or overwork. Saddam Hussein in 1987 and 1988 killed thousands of Kurds with chemical weapons. They were mainly noncombatant civilians who included women and children.

These cruelties, moreover, may be less based on political necessity than on the malice of tyrants—even their twisted pleasure in seeing others suffer. Stalin personally ordered and signed tens of thousands of death sentences, instructed operatives on how to torture his victims, and watched the show trials of the mid-1930s from a darkened room with evident enjoyment. As for Hitler, one of his favorite pastimes was to pretend that he had discovered some malfeasance by a member of his entourage only to announce, as his target sweated in fear, that he was only joking. Later, one of his favorite entertainments was to watch movies showing the death agonies of the men who had participated in the assassination attempt against him in July 1944 as they swung from piano-wire nooses strung from meat hooks overhead. Albert Speer claimed that Hitler wanted to see the films over and over again. Saddam Hussein even permitted the taping of his performance at the infamous Baath Party meeting on 22 July 1979, where he personally called off the names of the purported traitors from a list. Each man marked was escorted out of the room to face his demise, while Hussein puffed on a cigar. In one instance, he announced the first name of one person and then changed his mind, moving on to the next man on the list.

NEW ENEMIES

By engaging in these cruelties, tyrants create new enemies for themselves, heightening the need for future defensive actions. Saddam Hussein was quite explicit about this dynamic. Shortly after assuming the presidency he told a guest that he was sure many people were plotting to kill him, noting

that he had assumed power with his own plots against his predecessors.

The acquisition of near-absolute power not only enables tyrants to put into play their more malevolent promptings, but also tempts them to strive for the grandiose fantasies of which they had heretofore only dreamed. Constrained in their rise to power by the need to pay homage to conventional values and attend to the interests and needs of others, tyrants find that the consolidation of their position gives them more freedom to act as they please. Indeed, their early successes are apt to reinforce their feeling of omnipotence, convincing them that they no longer need to operate with care.

This fact is clear in Hitler's operations. By the late 1930s Hitler controlled every aspect of German life, and his subsequent conquests of Austria, Czechoslovakia, Poland, France, Denmark, Norway, and Belgium seemed to offer the proof that in Europe he could create the empire of his imagination.

However, Hitler dreamed of even greater conquests. In *Mein Kampf*, he argued that the Aryan race would create the greatest empire known in the modern world. The British, as a Teutonic people, he mused, were potential collaborators in this enterprise. After the quick victory over France, Hitler's self-confidence swelled. In February 1941 he ordered preparations for the conquest of India, with his armies going through Russia and Iran and north Africa. In the summer of 1942 he ordered the invasion of the Soviet Union, a three-pronged drive toward Leningrad, Moscow, and Stalingrad, as well as a move through the Caucasus to secure oil wells to the south.

In these latter operations, he had gone too far. The decision to divide his troops on the southern front and the Russian winter contributed to the encirclement and surrender of German troops at Stalingrad. When the United States joined the British and the Soviet Union, Hitler's fate was all but sealed.

Reversals of a major magnitude, moreover, may contribute to a certain amount of psychological fragmentation. After the German attack on the Soviet Union, Stalin was clearly incapacitated for days, leaving it to others to make crucial military decisions. As Hitler's enemies combined against him, he protected

himself with increasingly wild fantasies. At times, he thought the U.S. President Franklin D. Roosevelt and British leader Winston Churchill would join Germany to fight Russia or that British prisoners of war would voluntarily join the Nazis to fight Russia. In April 1945, as Germany was being closed in from the west and the east, Hitler fantasized that the Allied coalition would disintegrate and that a disenchanted Stalin would open negotiations with Germany. At the end Hitler was still making plans for massive military action, with large numbers of nonexistent fully-equipped troops reinforcing the frontlines.

CAPRICIOUS BEHAVIOR

Reversals are likely to lead to the increasingly capricious behavior of tyrants, further contributing to a diminution of their capacity for rational decision making. Stalin would issue orders at any time of day or night; agendas switched in accord with his whims. During Stalin's latter years in office, Soviet leader Nikita Khrushchev would later recall, "the government virtually ceased to function" for months at a time.

Hitler showed similar behavior during the waning days of World War II. He delivered endless monologues at the dinner table on subjects, such as his early days in Vienna, permitting no discussion of current events and the military situation. Erratic behavior would alternate with a frenzied dedication to detail; fear of failure would be followed by convictions that he would win the day. Even a month before his suicide, Hitler remained firmly convinced of his destiny, giving the impression that he was oblivious to events around him. At one point he even ordered the German politician Heinrich Himmler to kill all prisoners of war, an order that Himmler did not obey.

Early in their careers tyrants often purchase some relief from inner turmoil and ambiguity by dividing the world into friends and enemies, good and evil—projecting a rejected side of the self onto an exterior foe. For Stalin the progress and the good of the people were identified with the Communist Party, of which he became the final authority. Evil was laid at the door of the external enemy—the capitalist

classes, the states they controlled, and the agents they had in his own Soviet camp.

However, Stalin ended up making poor judgments about whom he might trust and whom he should suspect. In signing a nonaggression pact with Germany, he ignored all the evidence in *Mein Kampf* that Hitler saw the Soviet Union as his major enemy. When the United States, the British, and even the German ambassador in Moscow tried to warn Stalin in the summer of 1941 of the coming German attack, Stalin simply treated these warnings as enemy propaganda. Later he decided, quite incorrectly, that Foreign Minister Vyacheslav Molotov was a U.S. agent. However, he trusted Lavrenty Beria, the head of his secret police—the one man who could hardly conceal his glee as Stalin lay dying.

As for Hitler, his image of the Jews provided him with a model for his own aspirations for a conquest of the world, an explanation of some of his own failures, as well as a target on which he could project his own disassociated fantasies. The goal of the Jews, as he wrote in a 1924 pamphlet, was to “master the world and then destroy it.” Turning their policies inside out, he would create an empire in which the Aryan race controlled all institutions in society, with the ultimate goal of destroying the Jews in their base—the Soviet Union, as he saw it.

Hitler’s failures as a painter, he hinted, could be attributed to what he saw as the Jewish control of the art world. Perhaps, too, a Jewish doctor could be blamed for the death and suffering of Hitler’s mother from cancer. Certainly Hitler projected onto the Jews his own proclivities for lying, slander, and his own sexual fantasies. Foppish fashions, he insisted in *Mein Kampf* (Vol. 2, Chap. 2), had enabled “bow-legged, disgusting Jewish bastards” to seduce “hundreds of thousands of girls.” As Hitler faced the demolition of his dreams of the Third Reich, his ability to separate the good Aryan Germans from the bad Jews and other so-called inferior peoples collapsed. The entire German nation was insufficiently loyal. In his final days, it is said that he concluded, “Germany is not worthy of me; let her perish!” Indeed, the sacrifices he demanded from the German people as the war ended represented his vengeance against them for failing him.

When the Allies closed in on Germany during the latter phases of the war, Hitler ordered the destruction of churches, schools, hospitals, livestock, marriage records, and almost anything else that he could think of. As Albert Speer said about Hitler’s obsession with architecture, “Long before the end I knew that Hitler was not destroying to build, he was building to destroy” (Speer 1970).

Tyranny, as this analysis suggests, is the noxious result of the compounding of a malignant narcissistic personality structure and absolute power. To avoid such an outcome, it is best to prevent a person with the proclivities noted here from ever coming to power. However, after tyrants have attained high position, their threat to the rest of the world outside of their immediate domain will depend on their command over resources as well as the ability of others to mobilize against the tyrants. Compromises with tyrants will not work; compromises will only whet their appetite for acting out their grandiose fantasies. Confrontations that humiliate or threaten tyrants with a complete loss of position, however, are apt to result in destructive responses that harm all parties involved. Short of a final effort to bring down tyrants, the establishment of clear and firm boundaries around them may provide a check on their most extravagant actions.

U.S. containment doctrines since World War II are instructive along these lines. Stalin was kept from acting on his most extreme expansionistic tendencies. Libyan leader Moammar Qaddafi has been relatively quiet since the U.S. bombing of his base in the mid-1980s. One wonders what would have happened in 1980 if U.S. Ambassador April Glaspie had made it clear to Saddam Hussein, when he told her of his contemplated attack on Kuwait, that any such action would bring about a tough U.S. response.

U

UNITED STATES CONSTITUTION

A written constitution of government such as the U.S. Constitution presents a characteristic set of problems for leadership: meeting the demands of the people for the functions government can provide while protecting the rights of the people, not only from private, natural, or external threats, but also from government itself and from tyrannical majorities.

A written constitution, unlike an unwritten parliamentary system of government, is a supreme law that supersedes later laws that conflict with it unless they are adopted as amendments according to the procedures prescribed in the original constitution. It derives its primary legitimacy not from current assent but rather from an original historical constituent act of ratification, and no official act, however popular, can be considered legitimate unless it is logically derived from an authorization contained in the written constitution as amended and as originally understood.

The political theory on which the U.S. Constitution is based is that a society is created by a social contract or compact. The main proponent of this theory was the English philosopher John Locke, who developed it in his *Second Treatise on Government*, published in 1690. Although a new society can be created by adults coming together and explicitly agreeing to form a new society, people are initially inducted into an existing

society by their parents or guardians, beginning with a filial contract between parent and child, which is gradually transformed into a social contract between the child and the other members of the society through a process of socialization, through which the child makes the transition from being a good child to being a good citizen. The essential terms of the social contract are that its members will mutually defend the exercise of one another's rights, from whatever might impair such exercise.

Every constitutional right is a claim against an affirmative action of government and is complementary to the exercise of a delegation of power to that government. A constitutional provision that protects a right restricts powers, and a delegation of a power restricts rights. A challenge for leadership is to define the line separating the two spheres of action and to separate and confine the actions of civilians and officials within their proper spheres.

The written constitution ratified in 1789, and the subsequent Bill of Rights, the first ten amendments, declared various rights, with the Ninth Amendment providing for unenumerated rights that complement delegated powers, but the Founders did not have confidence in the effectiveness of such declaratory provisions, which might be easily subverted by interpretation. Rather, they relied on structural and procedural provisions that divided the powers of government, allowed the divisions to check the

actions of one another, and defined procedures by which departures from constitutional compliance might be corrected. Some procedures were permissive, allowing for the exercise of discretion, and others were mandatory, constrained by defined duties.

In the U.S. model, there are actually two separate constitutions: an unwritten constitution of the society and a written constitution of the government. The terms of the social constitution are that decisions be made by conventions, or deliberative assemblies, called by proper notice, and conducted by established rules of procedure that comprise due process. A convention may consist of such elements as a general election or referendum, in which the voting members of the society function as a convention of the whole; a constitutional convention, which may draft or ratify a written constitution of government; a legislature called under the terms of a written constitution; a town hall meeting; a judicial court; a grand jury to conduct an investigation and make a report of its findings; a trial jury to render a verdict; or a militia called to conduct defensive operations.

The U.S. model was a reaction to the British parliamentary model, which had no written constitution of government except statutes adopted by majority vote of the House of Commons, royal decrees, or key court decisions—precedents that might be sustained by tradition but that can be overturned at any time by the House of Commons, sitting as a kind of ongoing constitutional convention—one that can make its own rules for who may be elected to it and how. The result is the consolidation of power within a single legislative body and a bureaucratic civil service that can easily interfere with public rights and leave abused persons without the means to seek adequate redress.

DISTRIBUTED POWERS

The problem for leadership is further complicated by the fact that the powers of government are not delegated to a single unitary hierarchy, but rather are distributed or separated. A key design objective of constitutional government is to avoid excessive or unbalanced concentrations of power, mainly by dividing power among many branches and individuals, so that abuses by any can be blocked or corrected

by the combined action of others. The main separation of powers was between the central government and the several states, a system called “federalism.” Within the central government, powers were divided between the executive, judicial, and legislative branches; the Congress—the legislative branch—was divided into two houses, the Senate and House of Representatives. By legislation, the executive branch was further divided and subdivided into departments: the judicial branch into a system of general and specialized trial and appellate courts with various geographic and subject jurisdictions, and the houses of Congress into committees and subcommittees, each with their own staff agencies. The constitutions of each of the states followed a similar design, with the exception of Nebraska, which has a unicameral, or one-house, legislature. Similar separations of powers were executed in the territorial governments set up for incorporated territories destined to become states.

In a constitutional republic such as the United States, the people, acting collectively through election, referendum, or convention, rather than a monarch or dictator, are the sovereign, or supreme authority, and thus all officials must be accountable to the people by a chain of command that leads back either to officials elected by the people or to bodies, such as juries, selected by lot, a process called “sortition,” from among the people. The appointment, supervision, promotion, discipline, and removal of every official are supposed to be based on how well he or she performs his or her duties under the authority of the Constitution, more than on how well such performance might please the policy preferences of transient majorities.

Although a constitutional republic is democratic in being accountable to the people, it is not usually a majoritarian democracy, in that decision making is moderated by procedures and structures designed to require deliberation and sometimes by rules requiring approval not just by simple majorities, but by supermajorities, or by majorities in a majority or supermajority of levels or branches to which power is distributed. Thus, amendments to the Constitution require either proposal by a two-thirds vote in each house of Congress or application by majorities of

two-thirds of the state legislatures for a convention to draft amendments, followed by ratification by the majorities of the legislatures of, or of conventions in, three-fourths of the states.

Such procedures and structures confer on certain officials or groups the power to veto, or block, action of various kinds so that to get action, someone must convince all of the elements whose approval is required. Thus, the president can veto any act of Congress, although that veto can be overridden by a two-thirds vote of both houses. However, the president can also refuse to enforce an act of Congress, or sequester the funds for its implementation, a controversial move that can be overcome only by impeachment and removal of the president from office or by the withholding of other legislation that the president might want passed or appointments the president might want approved.

Any federal court can declare a statute or other official act unconstitutional and refuse to give it effect by not sustaining it. If the decision is made by an appellate court, the practice is to treat that decision as a precedent that effectively nullifies that act not only for that particular case but also for similar cases in that court's jurisdiction. If the declaration is sustained on appeal to the highest court, the Supreme Court, the act is effectively nullified for similar cases nationwide. Although such a decision does not remove an act from the records, by the doctrine of stare decisis judges feel bound to follow the precedent, making further enforcement of that act infeasible.

Veto groups can also operate in the legislative branch. The Senate can block appointments by the president by such procedures as refusing to hold committee hearings on nominations. Committees can refuse to pass nominees to the full Senate, and in

Selection from the Constitution of the People's Republic of China

Almost three times the size of the original U.S. Constitution, the Constitution of the People's Republic of China—adopted on 4 December 1982—specifies in great detail the governmental organization of the country, along with the rights that its citizens enjoy. Along with the freedom of the press, speech, and religion, working people have a constitutionally mandated “right to rest.” Below are the first three articles from the constitution.

Article 1. The People's Republic of China is a socialist state under the people's democratic dictatorship led by the working class and based on the alliance of workers and peasants. The socialist system is the basic system of the People's Republic of China. Sabotage of the socialist system by any organization or individual is prohibited.

Article 2. All power in the People's Republic of China belongs to the people. The organs through which the people exercise state power are the National People's Congress and the local people's congresses at different levels. The people administer state affairs and manage economic, cultural and social affairs through various channels and in various ways in accordance with the law.

Article 3. The state organs of the People's Republic of China apply the principle of democratic centralism. The National People's Congress and the local people's congresses at different levels are instituted through democratic election. They are responsible to the people and subject to their supervision. All administrative, judicial and procuratorial organs of the state are created by the people's congresses to which they are responsible and under whose supervision they operate. The division of functions and powers between the central and local state organs is guided by the principle of giving full play to the initiative and enthusiasm of the local authorities under the unified leadership of the central authorities.

the full Senate members may block action by use of a filibuster, or extended debate intended to prevent business from proceeding, which requires a 60 percent supermajority to terminate.

A winner-take-all system of electing legislators by majority votes from states or single-member districts, together with a nationwide presidential election in which each presidential candidate seeks to also win the election of members of his or her party to Congress tends to result in a two-party system, as each main party adjusts its messages to win enough swing voters to exceed 50 percent. One effect of this, however, is that dedicated single-issue constituency groups can become “veto blocks” that may not be

able to gather enough support to get their legislation passed but that can block legislation they don't like and defeat candidates who don't at least keep their causes alive. They can also often negotiate the appointment of their partisans to key positions.

The proliferation of single-issue groups means that assembling governing coalitions and placing people in key positions to achieve needed action can be difficult, but this was intended by the framers of the Constitution. They expected that most of the situations requiring rapid response could be handled through general legislation and appointees with a certain amount of legislated discretion and that most new situations that such general legislation did not anticipate would allow enough time to build the kind of consensus needed to adopt new legislation. This has led to some tension between advocates of immediate response to "emergencies" and advocates of deliberation within constitutional structures and procedures, and some of that tension has resulted in departures from constitutional compliance.

Some of those departures have become entrenched and supported by politically powerful constituencies, who often attempt to conceal the noncompliance with assertions that the established practices amount to "informal amendments" to the "living" Constitution, even though they are not formal amendments to the text. The problem with this elevation of practices to constitutional status, of course, is that once begun there is no end to it and that if allowed to continue it would render the written Constitution a dead letter and reduce all law to politics or force.

This displacement of the written Constitution with practice is sometimes discussed as the doctrine of "legal realism," which defines "law" as "what judges do" or can be expected to do, even if what they do is inconsistent with the written Constitution as originally understood. Although we accept that everyone has the duty to resolve conflicts of law, including conflicts with the Constitution, in any enforcement of law, and that everyone has the duty to help enforce the law and not just to obey it, the fact that judges get cases last puts them in a position that is sometimes attacked as judicial supremacy by those who think that judicial practice is inconsistent with or unautho-

ized by the written Constitution. This has been an ongoing tension since the country was founded.

PERSUASION

In any political or legal system, leadership ultimately comes down to either educating and persuading decision makers to adopt one's proposals or replacing them with other decision makers who will. In a constitutional system such as that of the United States, with powers and duties distributed among multiple officials, that means persuading or replacing multiple officials, which may require persuading or replacing the constituencies of those decision makers, the networks of lower-level decision makers whose own decisions persuade or replace higher-level decision makers. Ultimately, that may come down to the level of the individual voter.

Although persuading a few higher-level decision makers may be done through personal communications, one may not have access except through chains of lower-level decision makers, many of whom may have agendas of their own that conflict with the program of the reformer. Persuading many individual voters, however, may not be feasible through direct communications and may require marketing methods with high costs and limited effectiveness, competing as they must with demands from work and family and tastes for entertainment.

When the country was founded, a person could get elected to office without having to raise or spend much money to market his candidacy. Demand for political information was sufficient that it was profitable for newspapers to publish entire speeches of candidates, with the expectation that this would sell more copies. However, the political culture has changed so that too many people now resist political information, compelling candidates to resort to expensive marketing campaigns that can break through the barriers and at least achieve name recognition and a positive image.

The framers designed the Constitution with the expectation that officials would be essentially independent of one another, not unduly influenced, if at all, mainly by things such as salaries and prospects for reappointment or reelection. They perhaps failed

Selection from the Constitution of Qatar

The following articles from the Constitution of Qatar, which was adopted by national referendum on 29 April 2003, illustrate the sharp differences in the designation of power that come with hereditary rule.

Article 8

The Rule of the State shall be hereditary within the Al Thani family and by the male successors of Hamad bin Khalifa bin Hamad bin Abdullah bin Jassim. The inheritance of the Rule shall go to the son to be named by the Emir as Heir Apparent. If there is no male offspring, the Rule shall be transferred to the one from the family whom the Emir names as Heir Apparent and, in this case, the Rule would then be inherited by his male successors. A special law shall organise all provisions related to the ruling of the State and its inheritance, to be issued within one year of the date of this Constitution coming into force, and should have a Constitutional validity.

Article 9

The Emir shall appoint the Heir Apparent with an Emiri Order after consulting the ruling family and other notables in the country. The Heir Apparent shall be a Muslim and from a Qatari Muslim mother.

Article 10

The Heir Apparent, when appointed, shall take the following oath before the Emir: "I swear by Almighty Allah to respect the Islamic Shariah, the Constitution and the law, and to protect the independence of the country, and preserve the sanctity of its territory, and protect the people's freedom and interests, and shall be loyal to the Emir and the nation.

Article 11

The Heir Apparent shall directly handle the Emir's authority and power on his behalf during his absence from the country, or if there is any temporary obstacle preventing the Emir from doing his duties.

Article 12

The Emir may assign some of his powers and authority to the Heir Apparent with an Emiri Order. The Heir Apparent shall chair those sessions of the Cabinet which he may attend.

Article 13

With consideration to the two previous Articles, if the Heir Apparent is unable to deputise for the Emir, the Emir may appoint a deputy from the ruling family with an Emiri order, to carry out some of his duties and functions. If the one who is appointed by the Emir occupies a post or has a job with any organisation, he should cease this employment during the period of deputation on behalf of the Emir. The Deputy Emir, immediately after being appointed by the Emir, shall take before the Emir the same oath as taken by the Heir Apparent.

Article 14

A council, to be named the "Ruling Family Council" shall be established by an Emiri Decision, its members shall be appointed by the Emir from within the ruling family.

to fully anticipate that, to achieve any result in a divided governmental system, people have to put together prevailing coalitions, which tend to persist from one issue to another and emerge into parties or, as the Founders feared, factions that would come to exert continuing control over offices and officials in ways that would defeat the separation of powers. The Founders feared too much power being gathered into the same hands, but the same hands can be a faction as well as an individual, and a single faction can dominate all of the levels and branches of government to the exclusion of the others.

The problem that the framers confronted, and perhaps inadequately solved, was what came to be stud-

ied in the twentieth century as the public choice problem, beginning with the work of James M. Buchanan and Gordon Tullock, set out in *The Calculus of Consent: Logical Foundations of Constitutional Democracy*. They approached politics through game theory (the mathematical theory of decisions that deals with actions in a conflict situation as if it were a game in which each player aims to maximize the opponent's losses) and showed how people in a society tend, during time, to involve themselves in the public decision-making process in such ways, and to such degrees, as seem likely to them to pay off, less in the satisfaction that comes from exercising civic duty than in the material benefits of the

public decisions that they can expect to gain for themselves or their friends. Persons tend not to invest their time and money in the political process unless they expect to profit from that investment. Decisions that have large benefits or costs for some persons cause those persons to become involved in influencing those decisions, whereas those persons for whom the benefits or costs are small do not have a sufficient incentive to invest their influence in ways that affect such decisions. Therefore, a small faction can gain a large benefit by contriving decisions that do so by imposing only small costs on the general population, at a level below the threshold that triggers their involvement. This makes the political process a channel for what is called “rent-seeking behavior,” which is the diversion of wealth from producers to persons who invest not in production but rather in the processes of politics and government.

In seeking to avoid excessive or unbalanced concentrations of power in the public sector, the Founders neglected to provide for the emergence in the private sector of giant corporate entities that can accrue power that can challenge that of governments and come to exercise undue influence over government. This sector has emerged in many forms: banks and financial institutions, especially those that lend money to government to support its operations; contractors, especially in the defense industry; labor unions; trade associations; eleemosynary (supported by charity) institutions; political party organizations; lobbying groups; and large media organizations. These tend to seek to exercise control by either getting their people appointed or elected to key positions at all levels of key departments or having handlers for every key position who may assume a position of influence in which their official cannot or will not make a decision contrary to the handlers’ wishes. Thus the handlers come to function as the real decision makers, in a kind of shadow government that is parallel to the legal government.

This pattern can be more clearly seen in a parliamentary system such as that of Britain, where the majority party appoints the official ministers of government but where the party out of power designates shadow ministers for every department, who may exercise more real influence than the official minis-

ters over the lower-level civil servants of the ministry, who may have been appointed by that party out of power and might expect to be promoted if it regains power. Thus, a party that has appointed most of the bureaucrats might expect to continue in real power even if it loses an election. The same applies to special interests that function as parties unto themselves.

Since the adoption of a civil service system, the United States has had a similar problem with shadow governance because, although the reform was intended to replace political appointees lacking merit with nonpartisan professionals, what has actually happened is only to make it more difficult for a party that wins elections after a period of dominance by another party to actually govern and implement its policies. The civil service protections have also allowed bureaucracies to become power centers themselves, a constituency often uniquely situated to protect its own interests. The internal politics of organizations is just as contentious as the external politics that we see in elections and referenda, and much more difficult to expose and hold accountable.

The problem for leadership in a constitutional republic is to assemble and sustain a winning coalition on an issue while avoiding opposition from veto blocks.

UPWARD INFLUENCE

Leadership is a process that is usually based on a person's influence over followers to achieve mutual goals. However, an important part is played by followers who can exert influence, especially through information, on a leader. Influence and power are not the same, though the terms are sometimes used as if synonymous. Psychologists Timothy Hinkin and Chester Schriesheim (1990) found behaviors associated with them to be distinct from one another, but in given circumstances they may be intertwined. Influence is usually more dependent upon persuasion than upon explicit or implicit coercion. Two-way

influence helps to provide a balance and more rounded approach to addressing the needs and tasks of the organization. In the organizational world, the formal leadership that a leader exerts is seen to be legitimate authority, with little comparable legitimacy granted to followers in their exercise of such an authority. However, the reality remains that leadership and followership are related in an interdependent system. Much depends, however, on culture and its shared expectations. In that vein, management expert Geert Hofstede (1980) used the concept of power distance to refer to the degree to which a more powerful person will be distant from those of lesser power in an organizational hierarchy. In relationships with greater power distance, the subordinate is more likely to accept the direction and autocratic behavior of a superior. As with other dimensions he studied, Hofstede's cross-national research among managers showed considerable variation across cultures, in this case with limitations to follower upward influence.

A common example of upward influence is the technique of ingratiation, which is calculated to bring benefits to those in less-powerful positions. Psychologist Edward Jones (1964) identified several means used to accomplish ingratiation: compliments, signs of agreement, and a generally favorable presentation of one's self, as the sociologist Erving Goffman put it. In short this technique is strategic interaction using impression management to gain benefits from a person in power.

In 1961, sociologist George Homans stated that a leader who wants to be influential will find it helpful to be willing to be influenced. Therefore, reciprocal influence produces a benefit to the leader in maintaining followership. Also, psychologists Daniel Katz and Robert Kahn asserted that organizational leadership is "the influential increment over and above mechanical compliance with the routine directives of the organization. Such an influential increment derives from the fact that human beings rather than computers are in positions of authority and power" (Katz & Kahn 1966, 302). Accordingly, influence can flow both ways as part of strengthening organizational functioning. An important component of the leader-follower relationship is the per-

ceived competence of the leader. Indeed, the amount of leader incompetence has been estimated by David DeVries (1992) to be at least 50 percent. Robert Hogan and his colleagues (1990) found that organizational climate studies from the mid-1950s onward showed 60 percent to 70 percent of organizational respondents reported that their immediate supervisor was the worst or most stressful aspect of their job. Apart from incompetence, there is the basic tension that social psychologist Michael Argyle and psychiatrist Monica Henderson have identified:

... the superior-subordinate relationship at work is seen by most people as full of conflict and as providing little satisfaction. On the other hand, supervisors can have a considerable effect on health and satisfaction, if the right skills are used. (Argyle & Henderson 1985, 262)

The tendency to emphasize power over others has obscured the place of two other kinds of power: power to, as well as power from, which are important to greater participation and influence of followers (Hollander & Offermann, 1990). Resistance to such follower input is nonetheless seen, and needs to be recognized as an impediment to successful leadership.

Two classic studies on the influence of subordinate performance on leader behavior are those by psychologists Aaron Lowin and James Craig (1968) and psychologists George Farris and Francis Lim (1969). Both studies showed the possibility of influence of subordinates on leader behavior using laboratory procedures. The former studied subjects who were hired for a supervisory position in an office. The subjects were observed to respond to workers who were directed to behave either as conscientious-competent or as unconscientious-incompetent. Similarly, in the latter study, "leaders" were found to be influenced by whether they were told that their groups were either among the ten best performing groups or the ten worst performing groups in the company. One finding, for example, was that this information made the leader behave in a more considerate way toward the high-, versus the low-, performing groups. Other experiments by psychologist William Haythorn and associates (1956) and psychologist B. J. Crowe and associates (1972) found

that such designated leaders behaved more consistently in line with the preferred leadership style of subordinates, whether autocratic or democratic.

GUIDELINES

Drawing from several sources, especially the work of psychologist David Kipnis (1976) and his colleagues, psychologist Gary Yukl (2002) summarizes guidelines on how to influence leaders. These guidelines deal with how to improve the relationship, resist improper influence, provide advice and coaching, and challenge flawed plans and policies. Yukl highlights maintaining credibility and trust, taking responsibility for one's own life, and remaining true to one's own values and convictions.

A comparison of influence effects from a leader's source of authority was undertaken in a series of laboratory experiments using problem-solving tasks (Hollander & Julian, 1970). The researchers found that elected leaders had more influence on the group rankings than did appointed leaders. Furthermore, in a different feedback condition the group was told they had done poorly. With this "failure feedback" group, there first was an increase of the influence of elected leaders but not appointed leaders. This effect was interpreted as the group initially "rallying around" the elected leader. In the group given positive feedback, with no crisis, group members acted out of a greater security in their own judgments, and the leader did not gain that benefit. When the group was studied for still another phase, however, the elected leader in the "failure feedback" condition showed a distinct loss of status. Clearly a leader's source of legitimacy was found to matter in the way that followers reacted to that leader. This conclusion was further confirmed in research on follower reactions to an appointed leader's or elected leader's responsiveness to follower needs, interest in the group task, and competence (Ben-Yoav, Hollander, & Carnevale, 1983).

To look further at the way leaders react to followers under appointment of election conditions, psychologists Donna Elgie, Edwin Hollander, and Robert Rice (1988) did an experiment on leader evaluations of followers displaying each of four

types of behavior. These four types were the combinations of either positive or negative subordinate feedback with either high or low task activity. Subjects, twenty female and twenty-six male, were randomly placed in the appointed or elected conditions of leader legitimacy and told they were leading four same-sex followers in a group problem-solving task. The dependent measure was a composite score of leader attributes made up of ten ratings from each follower. The interaction of the variables supported the prediction that elected leaders and appointed leaders would respond differently to high- and low-activity followers, especially under the negative feedback condition. In general, elected leaders were more positive than appointed leaders in judgments of their followers in the manner predicted.

The main thread running through these results is the difference between support and involvement that was manifest in the two leader legitimacy conditions of appointment or election. Both conditions may involve a give and take process, which may be more evident in leader-follower relations when the leader is elected. However, it also is present with appointed leaders, as seen in the work of psychologist George Graen and others (Graen, 1975; Dienesch & Liden, 1986).

In a broader vein, Graen and psychologist Terri Scandura (1987) dealt with the importance of the leader-member exchange model (LMX), which focuses on the development of norms regarding the behavior in a given situation encompassing the leader and particular followers. In this model, leaders are considered to have followers who are either in close or more distant circles, with a recognition that there may be added costs associated with such closeness. Because a leader is usually considered responsible for the acts of followers given authority by that leader, if that person fails the leader may be seen to have failed as well. Psychologists Richard Dienesch and Robert Liden (1986) have extended this and other points in their critique and elaboration of the LMX model.

STRATEGIES

Another important line of thinking is represented in the work on strategies of upward influence by Kip-

nis and his colleagues (Kipnis, Schmidt, & Wilkinson, 1980). They identify influence strategies used by subordinates. Among the factors that seem to determine which strategies are used include the person's level in the organization and qualities of the person to whom the influence is directed. For instance, the gender of the person may be relevant to whether reasoning is used, as psychologists Lynn Offermann and Celeste Kearney (1988) have found. The strategies used may also be affected by the target person's apprehension about power (Offermann & Schrier, 1985), his or her need for power and years of experience (Mowday, 1979), and his or her perceived power (Kipnis, Schmidt, Swaffin-Smith, & Wilkinson, 1984). Psychologist Mahfooz Ansari and Alka Kapoor (1987) found that those people desiring personal benefits tended to use ingratiation, whereas those people seeking organizational goals tended to use persuasion and upward influence. Psychologists Gary Yukl and Bruce Tracey (1992) did a questionnaire study of how 128 managers used nine influence tactics on each of their subordinates, peers, and boss. Results regarding criteria of task commitment and manager effectiveness showed rational persuasion, inspirational appeal, and consultation to be most effective. Ingratiation and exchange were not as effective with superiors, as with subordinates and peers.

A further contribution to understanding upward influence is the model proposed by psychologists Victor Vroom and Phillip Yetton (1973) and elaborated by Vroom and Arthur Jago (1988). It deals with leader decision making and the extent to which a leader consults followers and allows participation in the decision-making process. Consultation varies considerably as a function of such factors as the favorability of leader-member relations, the pressure of a deadline, and the degree to which information is readily shared with followers. All of these factors contribute to the manner in which the leader invites follower participation and therefore is subject to their influence. A major feature of this model is the emphasis on leader flexibility in behaving differently as a function of these contingencies. Psychologists Fred Fiedler, Martin Chemers, and Linda Mahar (1974) present a similar point regarding the need for

leaders to adjust their behavior to the favorableness of the situation for them.

With these factors in mind, it becomes evident that upward influence depends upon many considerations regarding qualities of leaders and followers and the situation and its demands. For instance, to rely on a simple notion of "leader style" omits the range of behaviors that the situation may demand and how variability of style is shaped by them. Although a characteristic style usually fits a leader's relationship with followers, as noted here, it may be dependent upon which followers are involved, with what needs, and within which situational demands and constraints. The success of upward influence is therefore a function of many variables, which need to be identified.

UTOPIAN LEADERS

Theories about ideal communities (also known as utopias, after Utopia, the name of the land created by the sixteenth-century British statesman and author Thomas More in his book of the same name) and actual experiments in utopian communities inevitably consider the leadership necessary to produce or maintain an ideal social order. Both utopian literature and the history of utopianism provide examples of diverse forms of utopian leadership. In the literature, these forms range from democratic self-rule to charismatic dictatorship; in practice, they can range from anarchy to tyranny. Utopian leadership is often charismatic, that is, assumed by an individual with conspicuous ability, although sometimes it is institutional, assumed according to the community's organizing principles.

ANCIENT CONCEPTS OF UTOPIAN LEADERSHIP

Western notions of an ideal social order and of the qualities of leadership necessary to maintain that order occur in Classical literature and in the sacred texts of the People of the Book (that is, Jews, Christians, and Muslims). In *The Republic* of Plato (c. 428–348 BCE), Socrates posited the utopian leadership of philosopher kings, guardians of the state who are neither democratic nor tyrannical. They rule over soldiers and workers, although all three classes

demonstrate temperance and restraint. Philosopher kings are concerned not simply with practical applications of justice but with an intimate knowledge of the essence of justice—its philosophy. Plato saw society is a macrocosm of the human individual and viewed philosopher kings as the rational faculty of human community, comparing them to captains guiding a ship or charioteers reining horses.

While the People of the Book imagined an ideal society at the beginning of human history (the Garden of Eden) and an ideal condition at its end (Paradise or heaven), their scriptures also described the conditions of a godly human society and its leadership during the interim. Over the past two and a half millennia, followers of the three faiths have attempted to institute utopian theocracies (governments based on religious laws). For example, the Jewish concept of kingship differed from that of its Middle Eastern neighbors in that the Hebrew king was not considered a divine being (although he was seen as divinely anointed or ordained). Instead, he was a human expected to live within the laws of holiness; he was to serve as the exemplar. God, rather than the king, was understood as the source of law, and even the king was subject to the law. More important, as savior of his people, the Hebrew king was to be a special advocate for the poor, aliens, widows, and orphans.

According to their national mythos, after the death of Joshua, the Hebrew people initially resisted kingly leadership in favor of judges who would guide the people by interpreting its covenant with the one God, Yahweh. Eventually instituting kingly rule, the Hebrew people viewed the king as a paragon of holiness and justice; according to Deuteronomy 17: 14–20, the king was not to possess great wealth or military might; he was to be guided by the covenant's code of law rather than being above the law.

The earliest Christians were Jews who followed Jesus of Nazareth, an itinerant rabbi who established a new model of leadership based on the servant prophecies of Isaiah 40–55. If Jesus taught the imminent reign of God, the early Christians began to teach that Jesus was the messianic fulfillment of prophecy and to view themselves as an ideal community, characterized by common property and the erasure of

Jewish and Hellenistic cultic and social divisions. The Acts of the Apostles and the apostolic epistles of the Christian scriptures describe exemplary leadership and specific qualities of leadership, particularly holiness, orthodoxy, wisdom, and love. According to the New Testament, the Christian community was to view itself as one body with diverse members, each equally important; its leaders were to be metaphoric shepherds, irreproachable, good managers of their own households, and respected by non-Christians.

Islam similarly imagined a new social order in which holiness and justice were held as the preeminent virtues of all believers, leaders included. For Muslims, righteousness consists in piety and in social and economic justice (particularly to the poor, to orphans, to captives, and to exiles). Riches and power are no sign of righteousness, indeed, are often signs of the opposite; believers and their leaders are to care for the lowly.

Likewise in Asia, an important wisdom tradition emerged around the figure of Confucius (551–499 BCE), whose collection of teachings about the right order of society, in which the ruler's virtue and the

people's common values ensure stability and prosperity, was a template for harmonious society for centuries before its rejection by Mao Zedong (1893–1976) and the other creators of the People's Republic of China in the twentieth century. The teachings of Confucius were collected and amplified by his followers, eventually taking written form by the second century BCE. A perfect society, according to Confucianism, could only be achieved when both the ruler and the people are virtuous, virtue consisting of respect for elders, moderation, and truth (both honesty and fidelity to one's word).

MEDIEVAL AND RENAISSANCE UTOPIAN LEADERSHIP

The rapid Christianization of the Roman empire beginning in the late fourth century resulted in the suspension of utopian idealism and the establishment of Christendom, Byzantine Catholic in the East and Roman Catholic in the West. The Church assimilated the administrative structures of the failing empire and established itself throughout Europe, North Africa, and the Middle East. However, many Christians still sought communities of shared property and common life, which found expression in monasticism. Typically presided over by an abbot (in communities of men) or an abbess (in communities of women) or either in the rare cases of communities of both men and women (such as Fontevault in France), monasteries developed rules for the leadership of the men and women who had retreated from the world in order to live in poverty (foreswearing the ownership of property or possessions), chastity (foreswearing marriage and particular friendships), and obedience (foreswearing autonomy).

The most influential monastic rule was that devised by St. Benedict of Nursia (480?–547?), whose followers, the Benedictine order, proliferated throughout medieval Europe by establishing a network of monasteries devoted to *ora et labora* (prayer and work). If the New Testament lays out the principles of monastic life, monastic rules such as the *Rule of St. Benedict* is its legislation, the practical application of Gospel principles. According to the *Rule of St. Benedict*, the abbot is to be a father (*abbas*) and a

shepherd who will be held accountable on Judgment Day for the condition of his family and flock. His rule is to be characterized by holy words and holy deeds. He is to show no favoritism, either personal or social; that is, he will not advance those whom he personally likes or those who come from a higher social station in the secular world. In important matters, the abbot is to convene the entire monastery to listen to their advice; on less important matters, he is to consult the senior members. The abbot is to be elected from among the community; his leadership should be characterized by love rather than fear, by moderation and discernment rather than perfectionism. While monasticism had begun as a utopian reform movement intended to restore Christian communitarianism, it eventually produced a clerical culture that excluded the laity and was itself susceptible to the corruption of the secular world. Throughout the Middle Ages, reform movements renewed the monastic ideal until the Protestant Reformation and later secular revolutions curtailed or dissolved the monasteries.

One theme of the Protestant Reformation was its insistence upon the leadership role of the laity and, in some instances, the development of millennialist utopian communities among those who believed that they lived in the end times prior to the Second Coming of Christ. Particularly in Germany, England, and the British colonies of North America, a variety of utopian theocracies blossomed, each with its own style of utopian leadership, which was usually charismatic rather than institutional.

The radical German Protestant Thomas Müntzer (1489?–1525) founded the revolutionary League of the Elect and supported the German peasants in their war against the aristocrats by preaching a militant millenarianism. Using his pulpit (both by preaching and by writing tracts) as the platform for a revolutionary agenda, which included the Elect's violent eradication of sinners (including aristocratic tyrants) and the establishment of an agrarian common society (restoring the original commonwealth in Eden), Müntzer capitalized on social discontent among the peasants. His legacy was to be found in communal experiments among the Anabaptists (many of whose sects emigrated to North America) and in the

hagiography of Marxists, starting with Friedrich Engels (1820–1895).

The English Revolution (or, as it is more commonly known, the English Civil War, 1642–1648) witnessed not only the overthrow of the monarchy and the establishment of a Puritan Commonwealth (England's first and only republic) under Oliver Cromwell (1599–1658), but in its aftermath the establishment of many utopian communities, some anarchistic (such as the Levelers and Ranters) and others communistic (such as the Diggers).

Among these were the Society of Friends. George Fox (1624–1691) became associated with the Seekers, a religious community that eschewed religious ritual, church, and clergy, as well as holding to the equality of all persons regardless of social station. Fox's organizational knack and his ability to compromise by choosing practical solutions made it possible for his Society of Friends (derisively called the Quakers) to flourish, eventually settling in large numbers in Pennsylvania, a refuge for religious non-conformists. Despite the Society of Friends' repudiation of clergy and sacraments, Fox developed a record-keeping system whereby Meetings (Sunday gatherings for introspective worship) could record births and marriages. To this day, Quakers are known for their democratic self-governance as well as for their utopian values of pacifism and social reform.

MODERN UTOPIAN LEADERSHIP

Reformation utopianism led to a variety of experimental communities in the eighteenth and nineteenth centuries, whose leaders were guided either by religious or secular principles.

Mother Ann Lee (1736–1784) began her spiritual leadership in England among a particularly fervent community of Quakers (known by the apparent tautology "Shaking Quakers"), who observed sexual abstinence and practiced ecstatic worship. Although she was married, Lee retained her maiden name, and she began preaching the imminent Second Coming, her followers eventually believing Lee herself to be the second incarnation of Christ. Harassed in England (including by imprisonment), she led a small band of disciples to New York, where she established

a community in Watervliet, officially known as the United Society of Believers in Christ's Second Appearing, but more commonly as the Shakers. Lee's vision of communal life, gender equality, and sexual abstinence, as well as her legendary tenderness and compassion, began to attract adherents. Eventually, Shaker communities were established throughout the eastern United States. They were notable for their technical innovations (such as the washing machine, the flat broom, and the clothes pin) as well as their elegantly simple furnishings. After Lee's death, leadership passed to James Whitaker and then to Joseph Meacham, who established the sect's organizational structure (called "gatherings") and who passed leadership on to Lucy Wright, as the Shakers believed that one could be leader regardless of one's sex.

In varying degrees, the U.S. and French revolutions of the late eighteenth century disrupted the old social, economic, and political orders and proposed a *novus ordo saeculorum* (a "new order of the ages," as the U.S. one-dollar bill proclaims) with new forms of leadership.

While it is true that the primary goal of the American Revolution (1775–1783) was political independence from Great Britain, its revolutionary leaders and later constitutional founders imagined new forms of social and economic relations, based in part on principles spelled out by the philosophers John Locke (1632–1704) and Jean-Jacques Rousseau (1712–1778). Many of the revolutionaries, including Thomas Jefferson (1743–1826), adopted the agrarian ideal of previous utopian movements. Property ownership had been a principle of Puritan religious and political freedom in New England (how can one be spiritually and socially free if one works another man's land?), although Southern plantation owners enjoyed a monopolistic ownership of land. Many of the early republic's leaders, including George Washington (1732–1799), James Madison (1751–1836), and Jefferson, were gentlemen farmers who disdained urban life. These founders were sufficiently pragmatic, however, to understand the need to balance competing interests by establishing constitutional (rather than aristocratic, charismatic, or anarchical) leadership with separate executive, legislative,

and judicial branches, a bicameral legislature balancing the competing claims of large and small states, and a balance of power between federal and state interests. Washington's greatest contribution as a leader was his declining a lifelong presidency. It was perhaps these leaders' refusal of federal executive power that accounted for the moderate success of many of their utopian goals.

The leadership of the French Revolution (1789–1799) attempted even more sweeping changes in their pursuit of a utopian vision. Initially the effort of new classes of industrial workers and an independent bourgeoisie, the revolution resulted in King Louis XVI's recognition of the Constituent Assembly, which issued a Declaration of the Rights of Man that established a constitutional monarchy, disestablished the Roman Catholic Church and nationalized its properties, restructured the calendar, reorganized the nation's administrative districts, and rationalized weights and measures. Ensuing conflicts with other European monarchies resulted in the rise of more radical elements within the assembly. With France at war with virtually every other European country, the radicals dissolved the monarchy (and executed the monarchs), did away with feudal property, and established the Committee of Public Safety, led by Maximilien de Robespierre (1758–1794), who established what was essentially a dictatorship. The excesses of this leadership earned its period the designation "The Reign of Terror" and eventually led to its leader's execution and the establishment of the Directory, whose incompetence produced the dictatorship of Napoleon Bonaparte (1769–1821). Given France's history of centralized royal power, it is not surprising that the revolution's leaders took the same prerogatives upon themselves, at the expense of the utopian goals of human rights and freedoms, while effectively modernizing the nation's organization.

Although nineteenth-century utopian leaders continued to rely either on charismatic or institutional legitimacy and to follow programs attributed to revelation or rationalism, the most influential theorists for modern utopian leadership were Karl Marx (1818–1883) and Friedrich Engels. Their *Communist Manifesto* (1848) was published in a revolution-

ary period, and it announced the historical inevitability of the rising up of the workers (the proletariat) against the business and industrial owners (the bourgeoisie). This manifesto acknowledged the role of the bourgeoisie in demystifying the concepts of social class and professions by demonstrating that social mobility was a product of economics rather than aristocratic pedigree and in making material advances through industrialization. In so doing, however, the bourgeoisie had armed the class that it created, the workers, who were now poised to exert their power as they transformed their class into a political party. Marx and Engels proposed the Communist as the proletarian par excellence, dedicated to the overthrow of the bourgeoisie, the abolition of private property, the establishment of social education, and the eradication of national identities. In order to effect this revolution, they postulated, the proletarians would have to become—temporarily—despotic, oppressive rulers, a stage that was supposed to lead ultimately to a classless society.

The actual application of Marxism, however, produced more despotic states than classless utopias. For example, in Russia Vladimir Lenin (1870–1924) identified the Communist Party as the vanguard of the proletarians and asserted the long-term necessity of a strong central government led by the party. His successor, Joseph Stalin (1879–1953), infamously refined this centralized power of the Communist Party and its tyranny over the proletarians. In China, Mao Zedong adapted Leninism, centralizing political and military leadership under the Communist Party, and asserted the necessity of rectification movements, such as the Cultural Revolution (1966–1976), to rid the party and society of creeping bourgeois tendencies.

Fascism, an ideological alternative to Marxism, was equally utopian in its claims. The Third Reich of Adolf Hitler (1889–1945) was a mirror of Marx's third stage in the development of history. Combining Romantic nationalism with rationalist race theories, European fascists aspired to an ordered society maintained by authoritarian rule. Unlike Marxist leadership, however, in which charismatic but ruthless leaders like Lenin, Stalin, or Mao were followed by institutional successors, fascism's charismatic author-

itarians seemed unable to effect their own succession so that their military defeats (in the case of Hitler and Italy's Benito Mussolini in 1945) or death (in the case of Spain's Francisco Franco in 1975) brought about the end of fascist rule.

FUTURE PROSPECTS

During the late nineteenth and the twentieth centuries, most intellectuals dismissed the notion that religious utopianism would ever again evince itself on a mass scale and endorsed the belief that secular ideologies (Communism, fascism, or liberal democracy) would prevail. Ironically, fascism and Communism were largely repudiated within the same century that saw their rise, and liberal democracy imagines itself, in the formulation of Francis Fukuyama, as the end of history. But classical liberal utopian leadership has its competitors.

Charismatic Islamic leaders (ayatollahs and imams) in the Middle East and Asia have been conspicuous in advocating theocratic utopias. A long-standing Islamic tradition anticipates the need for a *mujaddid* ("renewer") to reform Moslem society every century. The dismantling of the Ottoman Empire in the early twentieth century and the establishment of a Jewish state in Palestine at its midpoint intensified the desire for this charismatic leader. The 1979 Iranian revolution led by the *mujaddid* Ayatollah Khomeini (1900–1989) was prompted by the corruption of the Iranian monarchy and by the desire to establish an Islamic theocracy free of Western influences. The concept of jihad (religious struggle; often translated as holy war) popularized by the terrorist leader Osama bin Laden (b. 1957) has as one of its goals the establishment of Islamic utopias. What remains to be seen is whether or not the charismatic leadership of the first generation can be succeeded by institutional leadership in subsequent generations. Iranian politics at the start of the twenty-first century, for example, reveals rifts between religious and political leaders, with Khomeini's successors insisting on a strict conformity to the principles of theocracy while reformist politicians and student demonstrators seek liberalization and détente with the West.

In place of the grand theories espoused by Marx-

ists and other ideologues, local and provisional utopian communities are likely to flourish in the future. Western consumer civilization and its discontents are likely to produce disenchanting people who seek alternatives to voracious materialism and the homogenization of the world's cultures caused by global commerce and multinational corporations. Leaders resisting world trade have ranged from anarchists to tribalists, many of whom share the use of information technologies (such as cell phones and the Internet) as a means of creating virtual communities in cyberspace and provisional communities through local direct action.

VISIONARY LEADERSHIP THEORY

How do some leaders attract followers and inspire them to pursue a shared goal, achieving beyond ordinary expectations? Visionary leadership theory seeks to answer this question by studying leaders who inspire extraordinary levels of achievement in their followers through an inspiring vision and through other behaviors.

Visionary leaders can be found in every facet of society, whether business, government, social change movements, religious organizations, community groups, or sports teams. Visionary leadership exists in all cultures, across gender lines, and at all organizational levels. However, the phenomenon of leadership has been studied for thousands of years, it was not until the late 1970s that formal visionary leadership theories were developed.

WHAT IS A VISION?

In the business world, a vision is a leader's ideological statement of a desired, long-term future for an organi-

zation. A vision describes the ideal future that the leader wants to create; it is articulated in what is referred to as a vision statement. Most vision statements are not intended to be fully achievable on a planned-out timetable; rather, they are intended to be pursued or worked toward on a daily basis over the long term. The vision often is communicated through concrete examples, stories, or analogies that vividly describe the desired long-term state. For example, one flower shop's vision statement is "We don't sell flowers, we sell beauty" (Peters 1987). To take another example, Giro Sport Design, a manufacturer of bicycle helmets, includes the following as part of its longer vision statement (from Collins & Porras, 1991):

The best riders in the world will be using our products in world-class competition. Winners of the Tour de France, the World Championships, and the Olympic Gold Medal will win while wearing Giro helmets. We will receive unsolicited phone calls and letters from customers who say, "Thank you for being in business; one of your helmets saved my life." Our employees will feel that this is the best place they've ever worked. When you ask people to name the top company in the cycling business, the vast majority will say, "Giro."

A vision is sometimes confused with a mission statement, a strategy, a philosophy, or general goals—related, but distinct, concepts. A mission statement is a description of what the organization does. In the case of the flower shop mentioned above, the mission

statement might be “We will sell flowers and provide value to our customers in the form of low prices and reliable delivery.” A strategy typically is considered to be a statement of how the organization will achieve its mission. The flower shop might articulate its strategy in a statement such as “We will sell flowers to customers in the eastern United States through Internet and telephone sales.” Finally, a philosophy states the organization’s principles and values. Part of an organization’s philosophy might be, for example, to treat customers fairly. However, a philosophy does not focus specifically on the organization’s long-term goal. Finally, goals are specific statements of what the organization wishes to achieve, such as “Our goal is to have \$5 million in sales in 2003.”

VISIONARY LEADERSHIP THEORIES

Visionary leadership theory is part of a genre of leadership theory that includes leader visioning behavior as a key leadership behavior. Early ideas on visionary leadership were developed via the sociologist Max Weber’s notions of charisma and the transformational and charismatic leadership theories of the historian James MacGregor Burns and the management scholar Robert House. Other theorists, such as Bernard Bass, Ben Avolio, Warren Bennis, Burt Nanus, Jay Conger, and Rabindra Kanungo also developed theories with vision communication components.

Visionary leadership behaviors beyond vision development and communication vary across leadership theories. Visionary leadership is said to have positive effects on follower outcomes, resulting in high trust in the leader, high commitment to the leader, high levels of performance among followers, and high overall organizational performance.

Developing and Communicating a Vision

Visionary leaders are said to have insight into followers’ needs or values and to develop a vision statement reflecting those needs or values. In addressing why a leader’s visionary behavior improves followers’ outcomes, Robert House and the psychologist Boas Shamir theorize that this happens because

the vision has positive effects on followers’ self-concepts; followers become motivated to achieve the vision because they find it meaningful, identify with it, and believe in the vision and their ability to achieve it.

Although the ideological goals that visionary leaders provide can never fully be achieved in practice, followers can pursue or can act in accordance with the vision statement on a daily basis. For example, a pharmaceutical company’s vision statement might make ideological references to improving health care and saving lives. Other aspects of the vision include statements of confidence in followers’ ability to carry out the vision, especially by working together; vision statements may also make references to the organization’s unique history. The organization’s early principles or experiences, difficulties that have been overcome, or specific markets that it serves often appear in vision statements.

The scholar Marshall Sashkin proposed that to formulate a vision, a leader must have certain personality attributes and cognitive skills. Specifically, the leader must have the ability to think in long time spans. This ability allows the leader to develop a long-range vision of what his or her organization should become in ten, twenty, or more years into the future. The leader also must possess excellent communication skills, as he or she must communicate the vision continually, in new ways, and must tailor the vision to the specific audience.

Another attribute thought to contribute to the ability to develop and communicate a vision is charisma. Charismatic leaders engage in several rhetorical techniques that serve to increase their persuasiveness. These techniques include using metaphors, analogies, stories, and repetition. Charismatic leaders also typically have an animated, confident, and dramatic communication style. Although some leaders may possess rhetorical gifts or a self-confident and dramatic manner of presentation naturally, leaders who do not may be able to develop them through training.

Implementing the Vision

In addition to discussing how visions are formulated and communicated, visionary leadership theories

specify how leaders implement the vision. Below are some of the key implementation behaviors various theorists have discussed.

Role modeling. Visionary leaders model the desired actions required for working toward the vision. They are visible symbols of what they want their followers to be. They set an example through their actions.

Empowerment. The leader's optimism and confidence in followers' abilities empowers them to work toward the vision. Visionary leaders are confident that followers will work toward the common vision rather than their own personal agendas. The leader's high expectations have been found to elicit high performance from followers.

Image building. Visionary leaders consciously build a positive image of themselves for followers. Visionary leaders reflect the vision in their work lives, personal lives, attire, and demeanor. Also, they often rehearse their speeches in order to present the desired image in a dramatic fashion.

Risk taking. Visionary leaders engage in unconventional behavior and may make what the followers perceive to be sacrifices. (From the leader's perspective, a sacrifice may not exist; instead, the leader may be entirely focused on pursuing the vision.) These are not blind risks, however; they are calculated. Visionary leaders carefully evaluate options. Risk-taking behavior serves to promote change and innovation and to challenge existing assumptions.

Supporting. Effective leaders support followers by providing them with individualized consideration. Leaders provide emotional support during difficult times or when followers become frustrated. Support can be provided to groups of followers as well as to specific followers on an individual basis. Further, leaders coach and mentor followers to facilitate their development.

Adapting. Responsiveness to a changing environment is another visionary leadership behavior. Visionary leaders display flexible or versatile problem-solving styles. They are effective at gathering, processing, and distributing information to their organizations so that appropriate responses can be carried out.

Intellectually stimulating. Visionary leaders are said to stimulate followers to challenge assumptions, to see the world in new ways, and to question existing stereotypes or generalizations. The leader's ideas may be different from followers' existing beliefs but a visionary leader can persuade followers of his or her

Never mistake knowledge for wisdom. One helps you make a living; the other helps you make a life.

—Sandra Carey

ideas because of the high trust and commitment that followers of visionary leaders demonstrate.

Developing the organization. Visionary leaders are said to create organizational conditions that allow followers to pursue the vision. They structure the organization so that followers can function efficiently and without unnecessary bureaucracy. They select, train, and acculturate followers who are willing and able to work toward the vision. They also develop reward and punishment systems to motivate followers toward vision pursuit.

RESEARCH

Research on visionary leadership has focused on establishing the relationship between the vision and outcomes such as organizational performance, follower performance, and follower attitudes. At least thirty-five studies have supported the theoretical relationships between leader behavior and follower outcomes. These studies have been conducted across a variety of samples, including students and managers who served as laboratory study participants, military combat and noncombat leaders, middle- and lower-level managers at their place of employment, educational leaders, national leaders, political leaders, and corporate leaders. A variety of research methods were employed, including case studies, longitudinal studies, field studies, interviews, laboratory experiments, and historical analysis of archival information. Taken together, there is strong evidence that a relationship exists between the general set of visionary leadership behaviors and follower and organizational outcomes.

Studies also have supported the importance of communicating the vision through both verbal and written methods and of focusing on the content of the message, regardless of whether a charismatic communication style is used. In a well-controlled experimental study (1989), Jane Howell and Peter John

Where there is no vision, the people perish.

—Proverbs 29:18

Frost observed that charismatic leadership affected followers' performance and attitudes more positively than a structuring or considerate style of leadership.

Despite broad empirical support for visionary leadership theory, the vision formulation process is regarded as somewhat of an art form. A leader's intuition and insight into his or her followers' values and the organization's unique culture and environment affect the vision the leader develops and how effective it is. A 2002 study conducted by Shelley Kirkpatrick, Jerry Wofford, and J. Robert Baum found that an effective vision statement for a public-sector service organization may be very different from an effective vision statement for private-sector manufacturing companies.

APPLICATIONS

Visionary leadership theory applications can be found in skills training programs for managers or leaders. Leaders can attend training that includes hands-on exercises to assist them in thinking about what the future might look like. Exercises may include preparing one's own obituary, writing a magazine article for twenty years in the future describing the accomplishments of one's company, or writing an inspirational speech to be delivered to new employees. One training approach emphasizes communicating the vision in a storytelling style as a way of concretely and descriptively explaining to followers the desired future action. This approach is intended to ensure that the vision provides a sense of meaning and motivation to organization members; it also differentiates the vision from the related concepts discussed earlier.

Another training approach employs a series of systematic steps to identify the organization's products or services and its markets. A series of diagnostic questions and exercises relating to the organization's external environment (for example, questions on the demand for its products or services,

or about its competitors) and internal environment (for example, its culture, values) help identify effective future directions for the organization. Several possible vision statements are developed, and the optimal one is chosen.

CURRENT STATUS OF THE THEORY

There are several areas in which research and theorizing on the topic of visionary leadership theory can continue. First, the process of formulating a vision is not well understood. Some leaders develop a vision statement with no input, while others involve followers from all levels of the organization. Additional research on vision formulation would help improve leader training techniques. Second, many vision statements that generally are regarded as effective do not contain all the characteristics of effective vision statements. Identification of which components are necessary for effective vision statements or of the trade-offs among the components would help leaders create inspiring vision statements. Similarly, investigation of how various vision implementation behaviors interrelate would help researchers identify which behaviors are necessary in given conditions. Finally, empirical testing of House and Shamir's self-concept-based theory would help to refine and advance current theory.

W

WAR ON TERRORISM

A war on terrorism was what President George W. Bush launched following the terrorist attacks of 11 September 2001 that sent airplanes into the twin towers of New York City's World Trade Center, the Pentagon, and a field in rural Pennsylvania. Having come to power after a hotly contested election the previous year, Bush initially shied away from any issues that would weaken his limited support among voters, and foreign policy was secondary to domestic policy in his agenda. The public did not perceive him as a particularly strong leader. The terrorist attacks changed all that. In guiding the nation after the attacks and in launching the war on terrorism, Bush rose in the national esteem to unprecedented heights and was commended for his leadership. When the war on terrorism was carried to Iraq, and as the U.S. economy continued to falter, the U.S. public's support for Bush's leadership became less strong.

REPRESENTING THE NATION IN MOURNING

Following the September 11 attacks, President Bush ordered the nation's flags at half-staff, went on television to address the nation, and led a national prayer service at the Washington Cathedral. Only days later, he went to New York City to see the rubble of the World Trade Center and met with many of the police

and firefighters who had worked to save the victims of the attack. He also went to the Pentagon to view the destruction created there by the terrorist attack and to meet with survivors.

The U.S. public began to view George W. Bush differently during those first few days after the attacks. He had moved quickly to become the center of national attention in responding to the terrorist attacks and consoling the families of the victims. He promised federal monies to compensate them for the loss of their loved ones and promised federal funds to help rebuild the World Trade Center. The leaders of Congress offered support for the president's statements rather than seeking to capture any leadership role themselves. The president was the nation's leader, the nation's representative in time of grief to the families of the victims, and the nation's representative to the world. He represented the nation in mourning as it sought to console itself in grief. The president emerged as a leader by exercising his role as head of state, leading the nation in its time of mourning.

REPRESENTING THE NATION IN ITS RESPONSE TO THE TERRORIST ATTACKS

The role of commander in chief gives presidents special opportunities to exercise leadership. While the role of commander in chief is delineated quite clearly

The War on Terrorism was precipitated by the September 2001 terrorist attacks on the World Trade Center in New York City and the Pentagon in northern Virginia. Here a man drapes himself with a modified American flag at the 11 September 2002 tribute to the victims of the attacks.

in the Constitution, how presidents exercise their leadership in that capacity varies widely from administration to administration. Prior to the terrorist attacks, President Bush delegated most decisions regarding military operations to his secretary of defense, Donald Rumsfeld, who had served in the administration of Gerald Ford as secretary of defense, 1975–1977.

Following the terrorist attacks, President Bush became more actively involved in security and defense policy issues. Modeling his creation of a decision team on the war cabinet his father had used during the Persian Gulf War in 1991, he called on his vice president (Richard Cheney), his secretary of state (Colin Powell), his secretary of defense (Donald Rumsfeld), the director of the Central Intelligence Agency (George Tenet), and his national security adviser (Condoleezza Rice).

By creating a team composed of people with whom he had strong relationships, Bush was able to move quickly and with confidence. Nearly every member of the response team had a long relationship with the president or with his father. Vice President Cheney had served as chief of staff during the Ford administration at the same time that the senior Bush had served as director of the Central Intelligence Agency. When the senior Bush became president in 1989, he brought in Cheney as his secretary of

defense. Similarly, Powell had worked in the Reagan administration as national security adviser while the senior Bush had served as vice president, and had also been chairman of the Joint Chiefs of Staff during the Persian Gulf War. Tenet had become director of the CIA during the administration of Bill Clinton, but had been serving there since the mid-1980s, when the senior Bush was vice president. Condoleezza Rice, a key foreign policy strategist during the 2000 election for George W. Bush, had served on his father's national security council.

Because the decision team consisted of political loyalists and political insiders, Bush knew that he would receive analyses of the situation that were in line with his general worldview. On 12 September, Bush ordered each of the principals of his decision team to prepare a response proposal for him in three days. Had Bush wavered on whom to include in the response team, or wavered in which member of the team was to provide information to him, or when to reconvene, his leadership would have been questioned. His decisiveness was the key to his leadership at this moment.

On 15 September, Bush's decision team reconvened to present their proposals for a response to the terrorist attacks. George Tenet argued that the CIA should be given large sums of money to pay Afghanistan's rebel Northern Alliance and other tribal groups to find and destroy the terrorists, who were linked to Osama bin Laden, leader of the al-Qaeda terrorist network, who was then resident in Afghanistan. Tenet had learned that most of al-Qaeda's members were living and training in Afghanistan.

General Richard Shelton, chairman of the Joint Chiefs of Staff, presented military options from the Department of Defense. These options included sending in cruise missiles to bomb known locations of al-Qaeda, sending in bombers to broadly bomb known and possible locations for al-Qaeda, or sending in troops and air power. Secretary of State Powell warned against military action in a sovereign nation unless the United States had multilateral support. By the end of the day, President Bush had decided on the third option presented by General Shelton and on seeking international support for these actions.

The president's decisive response allowed the

Selection from President George W. Bush's Address to a Joint Session of Congress and the American People, 20 September 2001

Our war on terror begins with al Qaeda, but it does not end there. It will not end until every terrorist group of global reach has been found, stopped and defeated.

Americans are asking, why do they hate us? They hate what we see right here in this chamber—a democratically elected government. Their leaders are self-appointed. They hate our freedoms—our freedom of religion, our freedom of speech, our freedom to vote and assemble and disagree with each other.

They want to overthrow existing governments in many Muslim countries, such as Egypt, Saudi Arabia, and Jordan. They want to drive Israel out of the Middle East. They want to drive Christians and Jews out of vast regions of Asia and Africa.

These terrorists kill not merely to end lives, but to disrupt and end a way of life. With every atrocity, they hope that America grows fearful, retreating from the world and forsaking our friends. They stand against us, because we stand in their way.

We are not deceived by their pretenses to piety. We have seen their kind before. They are the heirs of all the murderous ideologies of the 20th century. By sacrificing human life to serve their radical visions—by abandoning every value except the will to power—they follow in the path of fascism, and Nazism, and totalitarianism. And they will follow that path all the way, to where it ends: in history's unmarked grave of discarded lies.

Americans are asking: How will we fight and win this war? We will direct every resource at our command—every means of diplomacy, every tool of intelligence, every instrument of law enforcement, every financial influence, and every necessary weapon of war—to the disruption and to the defeat of the global terror network.

This war will not be like the war against Iraq a decade ago, with a decisive liberation of territory and a swift conclusion. It will not look like the air war above Kosovo two years ago, where no ground troops were used and not a single American was lost in combat.

Our response involves far more than instant retaliation and isolated strikes. Americans should not expect one battle, but a lengthy campaign, unlike any other we have ever seen. It may include dramatic strikes, visible on TV, and covert operations, secret even in success. We will starve terrorists of funding, turn them one against another, drive them from place to place, until there is no

refuge or no rest. And we will pursue nations that provide aid or safe haven to terrorism. Every nation, in every region, now has a decision to make. Either you are with us, or you are with the terrorists. (Applause.) From this day forward, any nation that continues to harbor or support terrorism will be regarded by the United States as a hostile regime.

Our nation has been put on notice: We are not immune from attack. We will take defensive measures against terrorism to protect Americans. Today, dozens of federal departments and agencies, as well as state and local governments, have responsibilities affecting homeland security. These efforts must be coordinated at the highest level. So tonight I announce the creation of a Cabinet-level position reporting directly to me—the Office of Homeland Security.

This is not, however, just America's fight. And what is at stake is not just America's freedom. This is the world's fight. This is civilization's fight. This is the fight of all who believe in progress and pluralism, tolerance and freedom.

We ask every nation to join us. We will ask, and we will need, the help of police forces, intelligence services, and banking systems around the world. The United States is grateful that many nations and many international organizations have already responded—with sympathy and with support. Nations from Latin America, to Asia, to Africa, to Europe, to the Islamic world. Perhaps the NATO Charter reflects best the attitude of the world: An attack on one is an attack on all.

The civilized world is rallying to America's side. They understand that if this terror goes unpunished, their own cities, their own citizens may be next. Terror, unanswered, can not only bring down buildings, it can threaten the stability of legitimate governments. And you know what—we're not going to allow it.

Americans are asking: What is expected of us? I ask you to live your lives, and hug your children. I know many citizens have fears tonight, and I ask you to be calm and resolute, even in the face of a continuing threat.

I ask you to uphold the values of America, and remember why so many have come here. We are in a fight for our principles, and our first responsibility is to live by them. No one should be singled out for unfair treatment or unkind words because of their ethnic background or religious faith.

military to move forces into Afghanistan quickly. Although some al-Qaeda members, including Osama bin Laden, escaped, U.S. forces overwhelmed both the terrorist organization and the repressive Taliban government that had nurtured it in Afghanistan.

During the next three months, President Bush exercised his role as commander in chief to reduce the power of the al-Qaeda terrorist network significantly. He never wavered in his support of his decision team. He always provided clear and direct instructions and supported his subordinates once options were presented to him.

THE PRESIDENT AS LEADER

The success that President Bush had as commander in chief empowered him to expand the war on terrorism beyond Afghanistan. During 2002, he made plans to topple the government of Iraq, ruled by Saddam Hussein, whom his father had defeated in the Persian Gulf War, but who had remained in power in Iraq. Bush argued that Iraq harbored terrorists and had chemical, biological, and nuclear weapons of mass destruction that could be used against the United States. This argument drew a mixed response in the United States and a decidedly negative response in the rest of the world. Bush's leadership was questioned as he seemed to ignore pleas from both within and outside the United States to allow the United Nations to take the lead on disarming Iraq.

The weakness of the U.S. economy also led to questions regarding the president's leadership. Unemployment rose, the stock market fell, and business and industry reported record losses. In his budget for the 2004 fiscal year, President Bush outlined record deficits—a stark contrast to the surpluses of the previous administration.

In summary, President Bush has been given mixed reviews for his exercise of leadership. He has shown great leadership in his role as head of state, comforting a nation dismayed by the terrorist attacks by demanding a quick response. He was also successful in his role as commander in chief. It should be noted, however, that Afghanistan proved to be a weak adversary for the U.S. military. This allowed

for a short incursion into Afghanistan with few casualties. Had this not been the case, President Bush may have been scrutinized more thoroughly for his leadership. President Bush has not been as successful in his leadership roles in managing the nation's economy or in managing the nation's international relations. Whether history will judge him a leader remains to be seen.

Publisher's Update

Following the success in Afghanistan, the Bush administration changed its focus to Iraq, which with Iran and North Korea is the "axis of evil" identified by Bush in his 2002 State of the Union address. Several arguments were made in support of an attack on Iraq: It harbored weapons of mass destruction, it was in violation of UN resolutions, it supported terrorism, and Saddam Hussein was a disruptive force and a barrier to peace in the Middle East. The administration also set forth a new foreign policy agenda that emphasized preemptive military strikes to disarm enemy nations that might harm the United States. Critics of the decision to attack Iraq argued that an unprovoked war was a violation of international law, that Iraq did not pose an imminent threat to the United States, and that the evidence suggested that Iraq no longer possessed weapons of mass destruction. Critics also noted that there was little credible evidence linking Saddam Hussein to al-Qaeda and

that the two were more likely to be antagonists than allies.

Bush made it clear that while the United States sought the United Nations' support for an assault on Iraq, it would go alone if need be. Of the major powers, only Great Britain supported the United States, while France, Germany, and Russia objected to an invasion of Iraq. Their resistance and that of other nations resulted in the Bush administration abandoning its efforts for a UN resolution. On 19 March 2003, the United States and Great Britain, with support from several dozen small nations, attacked Iraq. On 1 May, President Bush announced that the military phase of the operation had been accomplished and the rebuilding phase was about to begin.

Although the military campaign went smoothly in general, the rebuilding operation was fraught with difficulties. Most significant was guerrilla resistance to the U.S. occupation by a mix of Iraqi forces and Muslims from other nations. Daily attacks on U.S. forces took a mounting toll, and by September, more soldiers had died since the declaration that the mission was accomplished than during the war. In addition, many basic services continued to be unavailable, Iraqis who supported the U.S. presence were attacked by anti-U.S. forces, and it took longer than anticipated to form a provisional government. Additionally, no weapons of mass destruction were found, nor was there any evidence of prewar al-Qaeda activity in Iraq. The International Institute of Strategic Studies concluded that the al-Qaeda was more dangerous after the war than before it.

In autumn 2003, polls in the United States continued to show support for Bush's handling of the war on terrorism, but an erosion of support for his presidency in general. Among concerns were the cost of the Iraq occupation (Bush requested an \$87 billion appropriation for the rebuilding of Iraq), the continuing loss of U.S. lives, lack of support from other nations, and the restrictions on civil liberties contained in the president's Patriot Act, part of the home front initiative in the war on terrorism. The continuing sluggish economy and loss of over 3 million jobs in two years also took their toll. The administration reacted in October 2003 by sticking to its economic plan and the Patriot Act and by opening a public rela-

tions campaign to build support for its plans for Iraq. It also continued to claim, despite the arguments of many critics, that the war on Iraq was a key element in the war on terrorism.

—David Levinson

WASHINGTON, GEORGE (1732–1799)

First U.S. president

Even with all the layers of legend that have accumulated around George Washington both during his lifetime and during the two hundred-plus years since his death, it would be difficult to overestimate his leadership and importance to the United States. As the general responsible for winning independence on the Revolutionary War battlefield and as the first president of the United States under the new Constitution, Washington was called on as few people in history have been to provide two distinctive kinds of leadership. Providing either kind would have been enough to cement his place in history. In fact, his achievements in the Revolutionary War earned him the title “father of his country” long before the job of president was even designed. Later, when he was the first president, Washington's leadership ensured that the nation would survive its first tumultuous decade, and he set official precedents followed by all subsequent holders of the office.

HISTORY

George Washington was born to a relatively prosperous Virginia planter named Augustine Washington and his second wife. Growing up, George received a small amount of formal schooling consisting mainly of reading, writing, mathematics, and geometry. He spent much time outdoors, learning to ride horses, hunting and fishing in the woods, and swimming and sailing in the Rappahannock River, which flowed between his father's farm and the little town of Fredericksburg. In 1740, his older half-brother Lawrence joined the British army during what was known in the U.S. colonies as “King George's War.” George was ten when Lawrence returned and was fascinated

The Washington Monument and the Reflecting Pool at sunrise on The Mall in Washington, D.C., in April 2002.

Source: Stephen G. Donaldson; used with permission.

by him and his adventures. Later, like many young men, Washington joined the Virginia militia. His love of the outdoors also led him to become a skilled surveyor. As such, he spent a great deal of time in the unmapped regions of western Virginia.

Through family connections, Washington got to know the governor of Virginia, Robert Dinwiddie, who was impressed with the young man. When in the early 1750s England and France became increasingly heated rivals over the Ohio River valley, Dinwiddie selected the twenty-one-year-old to lead a small expedition to order the French out of the territory once and for all. The expedition was rough and punctuated by cold, driving rains, snow, ice-clogged rivers, and scheming French officers and their Native American allies. In less than two months, Washington trekked from Williamsburg, Virginia, to Lake Erie and back. Soon his account of the expedition appeared in newspapers throughout the colonies and even in London. In 1754, Washington was back out on the frontier, leading a small company of militia and Native Americans in an attack on what he believed to be a scouting party of French soldiers. When ten of the enemy, including their commander, lay dead at the end of the exchange, Washington hastily constructed a fort and prepared for a counterattack. “Fort Necessity,” as he named it, was quickly overrun by French reinforcements, and Washington was forced to surrender and return in defeat to Virginia. His actions precipitated the French and Indian War.

Somehow—and not for the last time in his military career—the defeat did not attach its stigma to Washington. The following year the Crown decided to send a major expedition to the forks of the Ohio River—the site of modern-day Pittsburgh—to drive out the French. In command was sixty-year-old General Edward Braddock, who, happy to have along someone who had twice ventured far out into the wilds of North America, accepted Washington’s request to take part in the expedition. In July 1755, in dense forest just a day from the French positions, Braddock’s force was attacked by French soldiers and their Native American allies and cut to pieces. Braddock and Washington rode frantically about, shouting, waving their sabers, and trying to restore order to the panicked soldiers. Washington had two horses shot from underneath him, and his coat was repeatedly torn by bullets. Eventually Braddock was hit and fell from his horse, mortally wounded. Washington helped maintain enough order to gather many of the casualties and pull back across a river. Five hundred British troops were dead, but, despite being in the heat of the fight, Washington was one of a few not wounded. He and some of the other officers quickly buried Braddock, and the remnant of the force made its way back to Virginia. In the weeks that followed, many of the expedition’s survivors spoke publicly of Washington’s valor and bravery under fire. His second battlefield defeat had not tarnished his reputation as a solid soldier.

After the war ended in 1763, Washington married and lived the life of a Virginia planter. In 1774, however, with tensions increasing between the colonies and the British government, Washington’s reputation and standing in the colony resulted in his being chosen to represent Virginia in the Continental Congress meeting in Philadelphia. He was one of few prominent men who had seen battle firsthand and whose character and leadership were already highly regarded. His career as a revolutionary leader had begun.

REVOLUTIONARY GENERAL

After fighting between the colonies and the British broke out at Lexington and Concord in Massachusetts in April 1775, and New England militia units

surrounded Boston, the Continental Congress began discussing what steps it should take to ensure that events in Massachusetts did not remain a local uprising. Congress believed that it should adopt the militia encircling the city as the Continental Army. This Congress quickly did and proceeded on to a tougher decision: Who should be commander in chief? They selected George Washington. On the surface, he was an inspired choice for political reasons. Placing a Virginian in command of an army comprised exclusively of New Englanders immediately made the entire affair less regional in appearance.

Perhaps more important, however, were Washington's undeniable assets as a leader. Most visibly to those who did not already know his history, his physical stature came into play. At six-foot-three, Washington towered above most of his contemporaries and possessed tremendous composure, control, and dignity. Many people at the time also remarked on his fine horsemanship and how dignified he looked on horseback. Such attributes may seem far removed from a modern assessment of leadership, but Washington's looking the part of a leader in the uncertain days of revolution inspired men to follow. That he could still get into his Virginia militia officer's uniform and wore it to the meetings of the Congress indicated without words his readiness to serve and to fight.

He had retained his fame from the days of the French and Indian War and was remembered as someone who had led men into battle and who understood British military operations. In accepting command of the Continental Army, Washington the general became the unifying symbol for the entire colonial effort and was soon regarded as the personification of the revolution itself.

Under his leadership, the Continental Army drove the British from Boston. Knowing that this was only the beginning, Washington moved his army south to New York in anticipation of a subsequent attack. Although his army suffered a string of defeats, he kept his men together and his army in the field. Standard military practice of the day assumed that a major battlefield defeat was the prelude to capitulation, and British forces believed that after his army was defeated, Washington would surrender and the

rebellion would collapse. Surely the fall of first New York and then Philadelphia would lead to capitulation. However, Washington understood that the "center of gravity" of the colonial revolutionary effort was neither the colonial cities nor the fields on which the armies fought. Rather, he himself and the army under his command were the symbols and the center of the revolution. As long as he kept the army together, he kept the revolution together.

Keeping the army together was Washington's most important feat and, given the circumstances, his biggest challenge. The losses of major cities were demoralizing. That his army could count only two minor engagements as victories among many more defeats could also have dissolved the effort. Due to supply difficulties, his constant and usually ignored pleadings for material support from Congress could have caused the army to bleed away to nothing. He overcame all of these difficulties. Potential mutinies could have sidetracked the war and later even changed the political makeup of the United States. None of these pitfalls came to pass, however, and that they did not was due almost solely to Washington's leadership. He kept the army together by his own strength of will and determination until ultimate victory in 1781.

POLITICAL LEADER

With the revolution won and independence achieved, Washington retired to his Mount Vernon plantation. Within a few years, however, he found himself again embroiled in the biggest issue of the day. The weaknesses of the Articles of Confederation had become apparent, and the nation was in danger of splitting apart. Several prominent men had called for a meeting to revise the Articles with an eye toward creating a more powerful government, and in December 1786 the Virginia legislature selected Washington as one of Virginia's delegates to just such a meeting scheduled for the summer of 1787. Sentiment for change, however, was far from unanimous. Many people had no desire to erect in the United States a potential tyranny like the one they had just thrown off, and some feared that such tyranny would be the inevitable result. Washington himself even suspected

that a meeting of this type might well be illegal. Nevertheless, he felt that change was absolutely necessary or else independence might be lost.

When a quorum of delegates had arrived in Philadelphia that summer, delegates promptly elected Washington president of the constitutional convention, an act that had tremendous symbolic importance. "Having conducted these states to independence and peace," Georgia delegate William Pierce said of Washington, "he now appears to assist in framing a Government to make the People happy" (Brookhiser 1996, 59). Delegates felt that people should see the convention as having Washington's approval. Whereas the often esoteric debates about balanced government and federal division of power were lost on many citizens, Washington's presence was not. Many were willing to accept whatever changes came along simply because of his involvement. Furthermore, when people heard that the new Constitution had a provision for a single executive, few doubted who that man should be.

PRESIDENT

George Washington took the oath of office as the nation's first president on 30 April 1789. Every elector voted for him. His professed reluctance to assume the job and his doubts that he was up to the job made him appear only more qualified. His public persona had little trace of ambition, something that could not be said for many of his contemporaries. For a people who distrusted the accumulation of power, having at the head of the government a man who showed no inclination to want such power was a great mark in Washington's favor. He, and perhaps he alone, could be trusted with power. Soon he was faced with grave challenges to the unity of his government. His leadership would help the nation weather the storms of its first decade.

Within two years of his inauguration, Washington began to see disunity among his closest advisors. The poisonous spirit of "faction," as political parties were known, was making inroads. Secretary of the Treasury Alexander Hamilton and Secretary of State Thomas Jefferson had two different visions for the nation and quickly became the leaders of the fac-

tions. Hamilton envisioned a commercial nation of economic growth with a dynamic and powerful central government. Jefferson, on the other hand, distrusted centralized government—at least one in which Hamilton was going to play a major role—and wanted a nation whose future would remain one of small farmers, craftspeople, and limited government authority. Washington was distraught to see his two closest lieutenants embroiled in a public feud and did his best to keep them at peace while they remained in his cabinet. Nevertheless, he put his influence behind those policies he thought were best for the future.

The outbreak of the French Revolution likewise held danger for the young nation, as many in the nation cheered the French action and hoped that the United States would come to the aid of French revolutionaries in the same way the French had helped the United States against the British. Nevertheless, Washington realized that to plunge the new nation into an increasingly bitter war between revolutionary France and Great Britain would inevitably harm the United States. He insisted on neutrality, even though it was an unpopular position with many U.S. citizens.

George Washington was held in such high regard that respect for him translated into respect for the government of which he was the leader. One would have difficulty imagining any other person holding the nation together in its early years. The Articles of Confederation government had fallen apart; who was to say that this new government could not be cast aside as well? Without Washington at the helm, such a breakdown could have been a possibility. When Washington considered resigning after his first term in office, James Madison of Virginia pleaded with him to remain for another crucial term. The nation was not yet on firm enough ground to endure without Washington.

As the first president, Washington set many precedents for the behavior of those who would later hold the office. Most important, perhaps, was his decision to step aside after a second term and return to private life. Until the twentieth century, no one exceeded Washington's precedent of a two-term limit. In the 1950s, Congress enshrined this limit as a constitutional amendment. What made Washington

most famous among many other world leaders was this willingness to surrender power. He had done so following the successful completion of the revolution. He did so again as president.

LEGACY

George Washington's character above all gave him the authority that made him a true leader. His abilities, his bravery, his determination, and even his image all furthered his achievements. Whether he was leading the Continental Army during the revolution, presiding over a controversial movement to reform the U.S. government, or setting a standard for—and defining—the presidency, Washington inspired people to follow him. His leadership made him, as one historian recently put it, the “indispensable man” of the American Revolution and of the early United States.

WATSON, THOMAS, JR. (1914–1993)

U.S. business leader

Thomas J. Watson Jr. took over his father's company, International Business Machines (IBM), running it from 1952 to 1971. In that span, he transformed an already strong business into a global monolith. The younger Watson realized the potential of the computer and, against his father's wishes, redirected IBM's efforts toward the new technology. The gamble paid off and the name IBM became synonymous with computers worldwide.

Thomas Watson Sr. was considered one of the world's great entrepreneurs in the first half of the twentieth century. He single-mindedly focused on the success of IBM, ruled his employees with an iron fist, and established a cult-like corporate culture at the company. However, Watson's behavior—though often maniacal—translated into focused action, and success followed, making believers out of his critics. A sales genius, the older Watson recognized the importance of the punch card accounting machine,

Thomas J. Watson Jr. receiving congratulations from his father, Thomas J. Watson, Sr. on being elected CEO of IBM, with the senior Watson staying on as the Chairman of the Board.

and then convinced the world's corporations that the new technology would revolutionize their book-keeping procedures.

As the eldest son, Watson Jr. grew up in his father's shadow. Not helping relations between the two fiery personalities was the poor academic performance of the younger man, who took six years to graduate from high school and barely graduated from Brown University. He gained a reputation as a prankster, and was nicknamed "Terrible Tommy"—fonder of partying and women than studying. However, the young man's carefree attitude masked bouts of self-doubt about someday taking over IBM and frustrations derived from the pressure of being Watson Sr.'s oldest son. Reportedly, the youngster even broke into tears when discussing the possibility of joining his father at the company.

Given the time period and the eldest son's responsibilities to his family, entering the business was vir-

tually inevitable. In 1937, after graduating from college, Watson Jr. joined IBM as a salesman. The younger Watson, however, put most of his energy into enjoying the Manhattan nightlife. He also indulged another obsession—flying airplanes. As the founder's son, Watson had to live up to public expectations, so his managers floated him easy deals to ensure the young man met his yearly quota.

WORLD WAR II

Like so many other men of his generation, Watson's personal turning point came when the United States entered World War II. He parlayed his interest in airplanes to promoting the use of flight simulators in training American airmen. His work attracted the attention of Major General Follett Bradley, the inspector general of the army's air force. Watson served as Bradley's personal pilot, flying him around Asia, Africa, and the Pacific region.

Under Bradley's tutelage, Watson proved to be not only an outstanding pilot, but also a valuable member of his strategic staff. After the war, Watson had little interest in returning to IBM. He planned to become a pilot at United Air Lines. Perhaps more importantly, the war matured Watson and he gave up his playboy ways.

One day when Watson discussed his career choice with the general, Bradley questioned his decision. He told the young man that he assumed that Watson would return to New York to take over IBM. In amazement, Watson asked Bradley if he felt that he had the ability to run the company. Bradley said that he believed the younger Watson could run IBM, which bolstered his confidence and turned his life around.

IBM ENTERS THE COMPUTER AGE

Watson Jr. returned to IBM a new, more confident man. After his experiences during World War II, the younger Watson was not willing to defer automatically to his father. Now Watson Jr., a more strategic and analytical thinker, realized that new computer technology would make IBM's tabulating products obsolete. His iron-willed father, however, thought

only a handful of computers would be needed in the entire country. The battle between the two men about the future of computers signified a changing of the guard. After years of being needled about electronics, the older man finally relented. Watson Jr. quickly doubled the research and development budget and hired hundreds of engineers to build IBM's first computers. The two Watsons spent a decade working together. The father passed along his sales secrets, while the son took on more leadership tasks. Both men shared a quick, explosive temper. The legendary shouting matches between the two became part of company folklore.

WATSON'S LEADERSHIP

Watson Jr. became president of IBM in 1952 and CEO in 1956, just six weeks before Watson Sr. passed away. Becoming more like his father, the son instituted a highly competitive corporate culture among the highest-ranking executives. Watson pushed his managers and scientists to constantly be at the cutting edge of technological innovation.

IBM developed into more than just another powerful blue-chip company. Under both Watsons' rule, IBM defined American corporate culture in the 1950s and 1960s. Men had to be clean-shaven and wore crisp white dress shirts with dark suits—no one deviated from the norm. The notion of the hard-charging, highly stressed “organization man,” made famous by William H. Whyte in the *Exploding Metropolis*, epitomized IBM executives. Sloan Wilson's novel *Man in the Gray Flannel Suit* (1955) about aggressive corporate climbers is another work that captured the mood of the 1950s, when IBM dominated the business world.

Watson Jr. was an instinctive leader and demanded quick decisions. His leadership style set the tone for the relentless innovation required in the computer industry. He drove his employees to be decisive and to take risks. Watson purposely hired and promoted outspoken, competitive managers, against the grain of corporate “yes men” who surrounded many executives.

Despite the ultra-competitive environment that he fostered among managers and executives, Watson

treated rank-and-file workers paternally. IBM offered outstanding compensation and benefits and basically guaranteed lifetime employment. The company doled out generous stock options and many employees who bought stock became “IBM millionaires,” long before the term would become trendy again during the dot.com boom of the 1990s.

A GAMBLE LEADS TO DOMINATION

By the early 1960s, IBM clearly dominated the burgeoning computer industry, but this position did not satisfy Watson. Rather than resting on his laurels, Watson authorized \$5 billion to be spent developing a new line of computers that would make all others obsolete—including IBM's own. The staggering sum was almost three times IBM's revenues and an audacious gamble. Watson directed company researchers to work on a family of small computers rather than large, outmoded machines. Since the computers would be designed to solve a company's every need, it was dubbed the System/360, after the circumference of a circle. The risk Watson took with the System/360 turned IBM into a pressure cooker. When the project, run by Watson's younger brother Dick, slid off schedule, Watson Jr. demoted his brother, which essentially ended his career. The move shamed Watson Jr., but he was determined that IBM would thrive.

Ultimately, the System/360 was a hit around the globe—the gamble paid off for IBM. The company ruled the computer industry, controlling about 70 percent of the world's computer sales. IBM had 35,000 installed computers in 1970, a significant increase from 11,000 of 1964. The System/360 doubled revenues, reaching \$7.5 billion in 1970, while the company's market value jumped from \$14 billion to \$36 billion.

IBM's early domination of the computer market enabled the company to develop other systems that would soon define the computer age. In 1981, IBM introduced the first personal computer (PC), which was a turning point in computer technology. IBM's new PC required a software operating system so that users could experience the full power of the computer. Microsoft, led by Bill Gates and Paul Allen,

developed the programming language and the operating system, thus beginning the next phase of the technology revolution.

AFTER IBM

In 1971, Watson retired from active management of IBM after suffering a heart attack. He was only fifty-seven years old at the time. Despite his illness, Watson stayed incredibly active after leaving IBM, mixing a kind of swashbuckling life with a great deal of public service. During his retirement, Watson continued to fly jets and other planes. One of Watson's major adventures was retracing a flight he took across Siberia during the war. He also yachted around Antarctica and other dangerous areas.

President Jimmy Carter tapped the executive to serve as ambassador to Moscow, a position he filled for two years from 1979 to 1981. The ambassadorship was controversial as Watson was a large Democratic contributor. These years encompassed the heated exchanges over the Soviet Union's invasion of Afghanistan. In addition, Watson took an active interest in nuclear weapons disarmament and chaired a U.S. arms-control commission. Watson enjoyed two decades of public life and adventure after retiring from IBM. Watson shared his management strategy and detailed his combative relationship with his father in the memoir, *Father, Son & Co: My Life at IBM and Beyond* (1990), which became a *New York Times* bestseller. Watson died in Connecticut in 1993.

Under Watson's reign, IBM was the greatest corporate success story of the post-World War II era and created incredible wealth for shareholders, among the best in business history. As a result of Watson's decision to push IBM into computers and the resulting achievement, *Fortune* magazine called Watson "arguably the greatest capitalist who ever lived." By concentrating on computers, IBM paved the way for the information age.

WELCH, JACK (b. 1935)

Chief executive officer of
General Electric Company

Jack Welch was the seventh CEO of General Electric Company (GE) and, in terms of shareholder wealth created (over \$300 billion), its greatest. Welch was born in Peabody, Massachusetts, the only child of a railroad conductor who did not finish high school and a very religious mother with a strong sense of justice. According to Welch, his mother was the most important influence in his life. She saw reality in clear terms and communicated honestly. She had unlimited confidence in her son, but she was quick to punish him if he misbehaved. Welch was self-conscious about a speech impediment (stuttering), but she persuaded him that the reason he stuttered was that his brain worked too fast—thereby turning an apparent handicap into a sign of talent.

Welch was an enthusiastic participant in competitive sports, especially baseball, basketball, and hockey, for which he was team captain in high school. During high school, he worked at several part-time jobs, including caddying and delivering newspapers. A high school literary magazine reported his desire "to make a million." He was a good student, especially in mathematics and chemistry, and his mother urged him to go to college. Failing to get an ROTC scholarship that could have sent him to MIT, he entered the University of Massachusetts, where he majored in chemical engineering. Despite being active in a sports-oriented fraternity, he achieved high grades every year and graduated in 1957 near the top of his class. He went on to receive a master's degree in chemical engineering in 1958 and a doctorate in 1960, both from the University of Illinois. The most important thing he learned from his doctoral research was tenacity; he learned not to give up when his experiments did not go as planned. Welch married in 1959, had four

children, and was divorced in 1987. He remarried in 1989; in 2002, his second wife filed for divorce amid press reports linking him with the editor of a prestigious business magazine.

WELCH AT GENERAL ELECTRIC: THE EARLY YEARS

After receiving his doctorate, Welch was hired by the plastics division of GE in Pittsfield, Massachusetts. He almost quit a year later when he received an insufficient raise, but a prescient GE executive flew in and convinced him to stay, with the promise of better rewards to come. Welch rose quickly within the plastics division, developing methods of decision making—focus on the facts, not emotion; no holds barred debate—that he would use throughout his career at GE.

Through brilliant and aggressive marketing of the new plastics that the division developed, Welch grew sales by over 30 percent year after year, a rate of growth that far exceeded growth in other GE divisions. In 1968, at age thirty-three, he became the youngest general manager for chemical development at GE. Further promotions quickly followed: general manager of the chemical and metallurgical division (1971), vice president (1972), vice president and group executive of components and materials group (1973). The GE corporate office did not know what to make of him so they basically left him alone, free from the huge GE bureaucracy. He did not approve of GE's staid and cautious hierarchy; he wanted to be free to make his own decisions and take risks. Finally, in 1977 CEO Reginald Jones transferred Welch to the head office at Fairfield, Connecticut, mainly to ensure that he would be in the running for the job as successor to Jones. At Fairfield, Welch built up the medical division and GE's credit division, both destined to become critical components of the new GE. Welch was seen as a kind of wild maverick by the GE bureaucrats, but Jones loved his energy, intellect, and entrepreneurial spirit. Initially there were nineteen finalists to succeed Jones as CEO, but after a long search process, Welch won the job in 1981. At age forty-five, he was the youngest CEO in GE's history.

WELCH'S FIRST DECADE AS CEO

During his first several years at the helm, Welch focused mainly on deciding what businesses GE should be in and what businesses it should sell off. He was not thinking of the present, where GE was making a reasonable profit, but rather in terms of what would be growth businesses in the future.

He chose to keep only those businesses that were number one or number two in their industries or those that could readily become so. Realizing that GE was grossly overstaffed, Welch reduced GE's workforce from 400,000 to 230,000 employees. (In later years new employees were added.) At the same time, he removed layers of hierarchy from the organization, reducing the number of levels from twenty-nine to six. He had seen only too clearly in his earlier years how hierarchy could stifle creativity and change. He pushed heavily for cost cutting through downsizing and productivity improvement in every business. He came to be called "Neutron Jack"—a label he disliked—because, just as a neutron bomb can eliminate people but leave buildings standing, he was able to eliminate employees but leave the company intact.

Welch decided that GE would consist of three sectors. First was the core, comprising lighting, major appliances, motors, transportation, and turbines; second was the technology sector, comprising industrial electronics, medical systems, materials, and aircraft engines; and third was the services sector, comprising financial, consulting, nuclear, and information services. He caused a huge outcry by selling consumer electronics (housewares), but he saw it as a commodity business in which GE could not compete effectively. His selling of the consumer electronics business and building up of the medical systems business was part of his push towards globalization. In 1985, he bought RCA, mainly to acquire the broadcasting network NBC, which he liked because it was free from foreign competition. By 1997, NBC was seven times more profitable than its nearest rival network.

Welch's successes include GE's credit division, which provided the biggest source of GE's profits for most of his tenure. He also pushed GE further into the services business (for example, manufacturing

airplane engines and power plants), which had higher profit margins than manufacturing.

During his first ten years as CEO, GE revenues increased 24 percent a year, with net income increasing by 29 percent a year. But more was yet to come. In 1989, he started pushing a series of companywide initiatives that continued through the 1990s. The first was known as the Work-Out program. Work-Out sessions, which were guided by outside consultants, were designed to help improve communication between organizational levels and to get subordinates more involved in decision making. During the session, subordinates would make suggestions for improvements, which managers would have to approve or veto on the spot—or ask for more information with a thirty-day follow-up deadline. The program led to many valuable suggestions that saved the company millions of dollars and helped the culture to become less bureaucratic and less hierarchical. Another initiative was the Corporate Excellence Council. The council held quarterly meetings at which leaders of all the GE businesses shared discoveries, ideas, and information. This led to important synergies between business units (for example, the medical systems division's innovations in remote monitoring and repair were utilized by the aircraft engines, locomotives, and power systems divisions).

BEST PRACTICES, SIX SIGMA, AND GLOBALIZATION

About the same time as the Work-Out program started, Welch had his staff examine the best practices of leading companies throughout the world. The findings from this study (which stressed such practices as process focus, benchmarking, constant improvement, customer satisfaction, quality, and suppliers as partners) were communicated at “GE University” at Crotonville, New York, which had been founded by a previous CEO, Ralph Cordiner, in 1956, as a place where future GE managers could be trained and developed. Welch revitalized Crotonville and appeared there regularly to talk about the company and his principles of leadership. Welch looked for four core qualities in GE leaders: energy; the ability to energize and excite others; edge (competi-

tiveness, speed, confidence, competence); and execution (getting results). He also wanted integrity, curiosity, teamwork, and continual learning. Like Work-Out, the best practices ideas saved the company many millions of dollars.

Another major companywide initiative that Welch pushed was Six Sigma, a quality measurement standard pioneered in the U.S. by Motorola. The decision to adopt Six Sigma at GE was spurred in part by subordinates and customers who had seen GE quality slipping and partly by former GE executive Larry Bossidy, who was CEO of Allied Signal and who decided to adopt it there. GE adopted Six Sigma in 1995; the goal was to reduce defects to 3.4 parts per million and to cut costs. GE hired three thousand new people to do the training, and Welch made 40 percent of his vice presidents' bonuses based on progress in training people to use Six Sigma principles. Results were measured quantitatively (there had to be measurable improvements in customer satisfaction and supplier quality, for example, and measurable declines in the defect rate). Within three years, there were eleven thousand Six Sigma programs under way, and the company already had reaped \$1.5 billion from a \$450,000 investment. By 1998, Six Sigma was regularly used to design new products.

Welch brought the same focus on quality to the development of personnel. He spent a substantial portion of his time evaluating his top several hundred managers. His goal was to have as many “A” players as possible, to develop “B” players into “A” players, and to continuously rid the company of “C” players. Welch made constant use of stretch goals. People were evaluated, however, not only on making the profit numbers but also on embracing company initiatives and GE's core values, which included integrity, excellence, openness to new ideas, high quality and low cost, self-confidence, clear vision, energy, and the ability to energize others, seeking change and global focus.

As noted earlier, Welch also stressed globalization during his tenure as CEO. In 1997, 40 percent of the company's revenues came from foreign sales. GE now does business in close to a hundred different countries. In 1999, Welch began pushing

e-business, with every GE business having a website at which customers could place orders. Progress on this was slow but steady. In 2000, Welch pressed for digitization (computerization) of all processes. Like other initiatives Welch championed, globalization was designed to save the company money and gain it sales.

DEALING WITH ADVERSITY

GE did face difficult situations under Welch, though some would argue that there were not many, given the size of the company. In 1983, two hundred miles along the Hudson River were designated a federal toxic Superfund site due to contamination with polychlorinated biphenyls (PCBs); the federal government deemed GE financially responsible for the cleanup. In 1999, the company agreed to pay for the cleanup of the Housatonic River in Pittsfield, which had also been contaminated with PCBs. Welch argued that the scientific evidence showed that dragging the river bottoms to remove PCBs would be more harmful, due to releasing them into the water, than leaving the PCBs where they were, although the courts disagreed. GE's 1986 purchase of Kidder Peabody, an investment house, seemed like a disaster a few months later, when an executive from Kidder was arrested for insider trading, and even more so in 1994, when a bond dealer was discovered to have hidden huge losses behind paper profits. At that point, Welch sold Kidder's assets to PaineWebber, taking a loss but gaining a stake in PaineWebber that eventually bore financial fruit in 2000, when PaineWebber was sold to the financial services company USB.

WELCH'S PHILOSOPHY

Welch's philosophy certainly played an important role in his success as a CEO. Its key tenets are: Face reality as it is, not as you would like to be; control your own destiny rather than let someone else control it; change before you have to; and compete to win. Equally important were Welch's personal traits, which include honesty and integrity (especially with respect to giving people just rewards); dynamism (energy and his passionate love of his job); willingness to tolerate

confrontation and disagreement; insatiable curiosity; unwillingness to tolerate incompetence (never putting personal friendship or feelings ahead of what was best for the business); the ability to size up a business rapidly and to discriminate between businesses that were going to be able to grow and those that were not; and an ability to take complexity and simplify it—that is, to look at the facts and extract a few core principles that will be clear to followers and will make the business operate successfully.

Welch's twenty-year legacy at GE was that of a wealth creator without peer. Under his leadership, the company's revenue grew from \$27 billion in 1981 to well over \$100 billion by 2001. Earnings went from \$1.6 billion to over \$10 billion; GE's market value increased by \$15 billion a year; return on investment grew by over 20 percent a year; and GE doubled the rate of return of the S&P 500. This feat was especially remarkable because GE was already a very large organization when Welch became CEO, and growing a large company is more difficult than growing a small one.

It may be a long time before a business achievement the size of Welch's is repeated. One can study and emulate his personal traits and his principles, but this will not make everyone a Welch.

—Edwin A. Locke

 **WELLS-BARNETT, IDA B.**
 (1862–1931)
U.S. journalist and activist

Journalist and speaker Ida B. Wells-Barnett is best known for leading the fight against the lynching of African-Americans in the late nineteenth and early twentieth centuries. The “mother of clubwomen,”

she also helped form the first national organization of black women in the United States.

Born to former slaves, Ida Bell Wells began life on July 16, 1862, in Holly Springs, Mississippi. Both parents succumbed to a yellow fever epidemic in 1878, forcing Wells to drop out of Shaw University (later Rust College) to support her five younger siblings. She taught in a rural school until she accepted an aunt's invitation in 1881 to move the family to Memphis, Tennessee. She eventually secured a teaching position in the Memphis public schools.

RESISTANCE TO RACISM

A fiery woman unafraid to challenge authority, Wells began her activist career by defying the segregationist conventions of her day. On September 15, 1883, she refused to move to the segregated section of a railroad car. Dragged off the Chesapeake, Ohio, and Southwestern Railway after biting the conductor who tried to evict her, Wells won a lawsuit against the railroad in the lower courts only to see the Tennessee Supreme Court overturn the verdict in 1887. A request to write about this episode for a local Baptist weekly, the *Living Way*, launched her journalism career.

Using the pen name "Iola," Wells wrote articles on politics and race for black newspapers across the nation. She also became a co-owner of the Memphis militant weekly *Free Speech and Headlight* in 1889. Two years later, Wells lost her teaching position—her main source of income—for criticizing the local school system for its inadequate facilities and its tolerance of instances of exploitative sexual relations between black female teachers and white board members.

THE FIRST ANTI-LYNCHING LEADER

Already established as a respected voice in the African-American community in Memphis, Wells risked everything when a close friend died, along with two other black men, at the hands of a lynch mob in 1892. Much more than a murder, a lynching was an organized attack by a mob of whites upon an individual or group of African-Americans, often

with the complicity of local and state law enforcement agencies. As Wells grasped, the true purpose of a lynching was to intimidate an entire African-American community. Faced with white support for lynching and a dearth of black male leadership on the matter, Wells publicly counseled grassroots resistance in Memphis. She advised blacks to arm themselves for self-defense and used her newspaper to strongly encourage African-Americans to abandon Memphis for the newly opened territory of Oklahoma.

This episode transformed Wells into one of the nation's earliest investigative reporters. Conventional wisdom held that lynchings came in response to assaults by black men upon white women. Determined to end these brutal killings, Wells combed through newspaper accounts, visited death sites, and interviewed witnesses to determine that most lynchings were motivated by economic competition and racial control rather than a defense of southern white womanhood. In 1892, she published an editorial that revealed that most "rapes" were in fact consensual liaisons between black men and white women, writing "White men lynch the offending Afro-American, not because he is a despoiler of virtue, but because he succumbs to the smiles of white women." In response to the article, an angry mob of whites demolished Wells's newspaper office. Anticipating possible trouble, Wells had left Memphis before the offending editorial appeared in print. Warned of the probability that she would be lynched if she returned, she settled in New York City.

In the North, Wells continued her anti-lynching activism. Besides writing articles for the *New York Age*, she penned *Southern Horrors* (1892). The pamphlet's title mocks Southern honor as the commonly cited justification for lynching while documenting that only a third of the 728 lynching victims between 1884 and 1892 were even accused of rape. To spread her message, Wells took to the podium to denounce lynching.

A PUBLIC WOMAN

In the late Victorian era, women rarely ventured into the male public sphere. Wells changed this by spear-

Excerpt from *Southern Horrors*

In this excerpt from her pamphlet Southern Horrors: Lynch Law in All Its Phases (1892), Ida B. Wells-Barnett describes how and why a lynching occurs in Memphis, Tennessee.

On March 9th, 1882, there were lynched in this same city [Memphis] three of the best specimens of young since-the-war Afro-American manhood. They were peaceful, law-abiding citizens and energetic businessmen.

They believed the problem was to be solved by eschewing politics and putting money in the purse. They owned a flourishing grocery business in a thickly populated suburb of Memphis, and a white man named Barrett had one on the opposite corner. After a personal difficulty which Barrett sought by going into the "People's Grocery" drawing a pistol and was thrashed by Calvin McDowell, he [Barrett] threatened to "clean them out." These men were a mile beyond the city limits and police protection; hearing that Barrett's crowd was coming to attack them Saturday night, they mustered forces and prepared to defend themselves against the attack.

When Barrett came he led a *posse* of officers, twelve in number, who afterward claimed to be hunting a man for whom they had a warrant. That twelve men in citizen's clothes should think it necessary to go in the night to hunt one man who had never before been arrested, or made any record as a criminal has never been explained. When they entered the back door the young men thought the threatened attack was on, and fired into them. Three of the officers were wounded, and when the *defending* party found it was officers of the law upon whom they had fired,

they ceased and got away.

Thirty-one men were arrested and thrown in jail as "conspirators," although they all declared more than once they did not know they were firing on officers. Excitement was at fever heat until the morning papers, two days after, announced that the wounded deputy sheriffs were out of danger. This hindered rather than helped the plans of the whites. There was no law on the statute books which would execute an Afro-American for wounding a white man, but the "unwritten law" did. Three of these men, the president, the manager and clerk of the grocery—"the leaders of the conspiracy"—were secretly taken from jail and lynched in a shockingly brutal manner. "The Negroes are getting too independent," they say, "we must teach them a lesson."

What lesson? The lesson of subordination. "Kill the leaders and it will cow the Negro who dares to shoot a white man, even in self defense."

Although the race was wild over the outrage, the mockery of law and justice which alarmed men and locked them up in jails where they could be easily and safely reached by the mob—the Afro-American ministers, newspapers and leaders counselled obedience to the law which did not protect them.

Their counsel was heeded and not a hand was uplifted to resent the outrage; following the advice of the "Free Speech," people left the city in great numbers.

Wells, 1892-1900*. Boston: Bedford Books, 1997. Retrieved October 16, 2003, from <http://womhist.binghamton.edu/aswpl/doc3.htm>

heading the black women's club movement. To publish *Southern Horrors*, African-American women in New York, Boston, and Philadelphia held fundraising testimonials on Wells's behalf, thereby laying the groundwork for further organization. Meanwhile, in an attempt to apply international pressure upon the United States, Wells gave speeches in Europe about lynching. In response, a white editor in Little Rock, Arkansas, warned that no one should believe an African-American woman, since all black women were liars and prostitutes. In 1896, a furious Wells prompted the formation of the first nationwide black women's organization, the National Association of

Colored Women (NACW), with a speech that challenged the women of the race to fight the widely reported claims of this bigoted editor. Later, in 1913, Wells would help organize the Alpha Suffrage Club, Illinois's first black woman's suffrage organization, to agitate for tangible political power for women.

Wells married prominent Chicago attorney Ferdinand L. Barnett in 1895 and made the unusual choice to maintain her strenuous schedule. Although the births of her four children necessitated periodic withdrawals from public life, Wells-Barnett became one of the very few working mother activists of her time.

While she made lynching a political issue and

established the groundwork for the eventual abolition of the practice in the mid-twentieth century, Wells-Barnett could not maintain effective leadership within the black community. Accustomed to battling for attention, she forged ahead with her own agenda and methods at the expense of relationships with her peers. In 1899, she left the NACW when she lost an election for president of the group. In 1909, she helped found the National Association for the Advancement of Colored People but ended her stormy relationship with the organization in the following year. By the 1920s, Wells-Barnett found herself and her vision of agitation out of favor among African-American reformers. She died of a kidney ailment on March 25, 1931, in Chicago.

During Wells-Barnett's lifetime, lynchings did not stop, but they did become a national source of shame as the result of her reporting. By exposing the white lies fabricated to justify murder and by organizing black resistance to racism, Wells served as a herald of the coming U.S. civil rights movement. The radical and outspoken qualities that made Wells into a successful crusading journalist did not make her a successful leader. Unable to compromise with others who shared her ultimate goal of a just nation, she is remembered chiefly for exposing the horrors of black life in the United States.

WHITEFIELD, GEORGE

(1714–1770)

English evangelist

Known as the “Grand Itinerant,” George Whitefield was the most renowned preacher and revivalist of his age. His voice was reported to carry for a mile, and his sermons were marked by an unprecedented emotional intensity. Throughout his professional life, he maintained a rigorous speaking schedule, often preaching twice a day to audiences that would sometimes exceed thirty thousand people, and traveled frequently between England, Scotland, and the U.S. colonies. Whitefield possessed strong organizational skills and fundamentally changed the way in which revivals were conducted. Previously, they had been communal events, restricted to their own localities. Through his own preaching and his use of print media to advertise his efforts and to establish cooperation between sympathetic clergymen throughout the English-speaking world, Whitefield made the revival a sustained, international event. The system he built and maintained established revivalism as a permanent fixture of religious life.

BACKGROUND AND EDUCATION

George Whitefield was born in Gloucester, England, the youngest of seven children in a family of declining fortune. His great-grandfather was the rector of Rockhampton and a graduate of Oxford University, and his grandfather an independent gentleman. Whitefield's father, however, owned and operated an inn, and, after his early death, the family was forced to continue in reduced circumstances.

From an early age, Whitefield manifested a pronounced talent for acting and mimicry and was reportedly able to perfectly imitate pulpit stories and dramatic performances he had heard. Whitefield's mother, Elizabeth, was determined that George would achieve social standing and enrolled him in the St. Mary de Crypt parish school in preparation for a college education and an eventual place in the Church. Whitefield excelled at elocution and declamation but had difficulty with Greek and Latin. At one point, he withdrew from school altogether, poor

grades and continued family financial pressures convincing him that attending college would be impossible. However, a growing sense of religious mission, coupled with his mother's discovery that he would be able to attend Oxford as a "servitor"—excused from tuition in exchange for serving other students and teachers—encouraged him to continue his preparation. With a renewed sense of purpose, he completed his schooling and also commenced upon a series of spiritual exercises, including regular prayer, fasting, and devotional readings.

Whitefield entered Pembroke College in 1732 and came in contact with John and Charles Wesley, and a group of Methodist students known as the "Holy Club." Methodism at that time was an evangelical and pietistic movement within the Church of England. It was not intended to challenge the authority of the Anglican Church but rather to provide religious instruction for the poor and laboring classes who were no longer being served by the parish system. Methodism stressed the individual's spiritual growth in the context of small groups, who would meet regularly for prayer and Bible study. These groups saw themselves as opposed to the worldliness of Oxford and devoted themselves to prayer, devotional reading, spiritual meditation, and good works. Methodists during this period also tended to shun classical learning as unnecessary to the life of piety. Whitefield became so enmeshed in these religious and charitable duties that his health declined, and he neglected his studies altogether. He was compelled to take a temporary leave of absence, and he returned to Gloucester. During the time away from university, however, he experienced an inward conviction of God's grace—the "New Birth"—which relieved many of his spiritual anxieties. He also began to preach publicly at the Gloucester County Jail. This preaching provided him with an emotional outlet that aided his physical and psychological recovery. Restored, he returned to Oxford and completed his degree in 1736.

EARLY PREACHING AND THE ANGLICAN ESTABLISHMENT

After being ordained as a deacon in 1736, Whitefield was approached by English religious leader John

Wesley to participate in a mission to Georgia. Although he was eager to accept, his departure was delayed for a year. He spent that time preaching in London and there developed the distinctive characteristics that marked his ministry. His first sermons were distinguished by an unprecedented emotional intensity. He typically concentrated on the theme of the New Birth. However, rather than emphasize theological aspects of this event, as was usual at the time, Whitefield would dramatize it as a personal experience: He would act it out, using pathos, tears, consolation, and example to convey the affective component of his discourse and lead his audience to inner transformation. By using his dramatic talents to make the audience imagine and feel the weight of sin, Christ's sacrifice, and God's redemption, Whitefield was able to transform the pulpit into a kind of theater for the promulgation of religion. As he became more confident in his delivery Whitefield abandoned notes altogether and spoke extemporaneously, freeing him to establish a more profound emotional connection with his audience.

At this time, Whitefield also became adept at using the press to promote his preaching. He published many of his sermons and also circulated accounts of his past performances and the effects that they had on congregations. When he came into dispute with the Anglican church over his self-promotion and his incursions into the parishes of other ministers, he used this occasion to portray himself as a youthful victim, persecuted by an envious and uncaring religious establishment. This in turn increased interest in his ministry and attendance at his services.

Whitefield arrived in Georgia in 1738 to find that the Methodist initiatives in that area had largely failed. Georgia at this time was a new settlement, lacking the concentrated urban centers that Whitefield had used to advantage previously. The population of the region was also heterodox. However, Whitefield made strong efforts to win support. He began visiting houses, gathering worshipers together, and dispensing food, clothing, and devotional literature. Unlike the Wesleys, who had visited the colony earlier, Whitefield also adapted to the local customs, supporting demands for the legalization of slavery in the state and also recognizing the legitimacy of

Selection from George Whitefield's Sermon "Christians, Temples of the Living God"

Isaiah, speaking of the glory of gospel days, said, "Men have not heard nor perceived by the ear, neither hath the eye seen, O God, besides thee, what he hath prepared for him that waiteth for him." Chap. 64.4 Could a world lying in the wicked one, be really convinced of this, they would need no other motive to induce them to renounce themselves, take up their cross, and follow Jesus Christ. And had believers this truth always deeply impressed upon their souls, they could not but abstain from every evil, be continually aspiring after every good; and in a word, use all diligence to walk worthy of Him who hath called them to his kingdom and glory. If I mistake not, that is the end purposed by the apostle Paul, in the words of the text, "Ye are the temple of the living God." Words originally directed to the church of Corinth, but which equally belong to us, and to our children, and to as many as the Lord our God shall call. To give you the true meaning of, and then practically to improve them, shall be my endeavor in the following discourse.

It is thus that Christians are "the temple of the living God," of Father, Son, and Holy Ghost; they who once held a consultation to create, are all equally concerned in making preparations for, and effectually bringing about the redemption of man. The Father creates, the Son redeems, and the Holy Ghost sanctifies all the elect people of God. Being loved from eternity, they are effectually called in time, they are chosen out of the world, and not only by an external formal dedication at baptism, or at the Lord's supper, but by a free, voluntary, unconstrained oblation, they devote themselves, spirit, soul, and body, to the entire service of Him, who hath loved and given himself for them.

This is true and undefiled religion before God our heavenly Father: This is the real Christian's reasonable service, or, as some think the word imports, this is the service required of us in the word of God. It implies no less than a total renunciation of the world; in short, turns the Christian's whole life into one continued sacrifice of love to God; so that, "whether he eats or drinks, he does all to his glory." Not that I would hereby insinuate, that to be Christians, or to keep to the words of our text, in order to be temples of the living God, we must become hermits, or shut ourselves up in nunneries or cloysters; this be far from me! No. The religion, which this bible in my hand prescribes, is a social religion, a religion equally practicable by high and low, rich and poor, and which absolutely requires a due discharge of all relative duties, in whatsoever state of life God shall be pleased to place and continue us.

non-Anglican liturgical (relating to the rites prescribed for public worship) forms. He also began to organize the building of churches and schools and became involved with plans for the construction of a large orphanage in Bethesda, Georgia, which was intended to serve the needs of both England and the United States. He proposed this orphanage to the Georgia trustees, assuming responsibility for its

financial operation, and received their endorsement.

Whitefield returned to England in December 1738 and was ordained an Anglican priest on 14 January 1739. He requested and was granted an assignment to Georgia, being responsible for the orphanage and the surrounding parish. This assignment was fortuitous because it provided him with a larger purpose for his revival work. The need to raise funds for the orphanage provided Whitefield a rationale for requesting entrance into London churches. When such entrance was denied, he could then hold meetings in open fields, where he again was able to command large audiences. As before, he would often deliberately use such opposition to publicize his evangelical efforts and position himself as the champion of the working people against an uncaring Anglican establishment.

Whitefield charted a six-week campaign of evangelical preaching, beginning in Kingswood, an impoverished mining district noted for its violence. After being refused permission to preach in the church, he held a service in a field, and, although the attendance was small, the event was considered successful. Whitefield's effective performance, combined with published accounts of the services, the controversy surrounding his disputes with

the Anglican establishment, and spreading word of mouth, soon generated unprecedentedly large crowds. By the time he reached London, he would address gatherings he estimated to be more than thirty thousand. He also raised more than one thousand pounds for the Georgia mission—roughly the equivalent of the yearly salary of a London priest.

During this period, Whitefield exhibited the

energy that characterized his ministry. Within six weeks he delivered forty sermons and published twenty of them. He also wrote hundreds of letters to friends and colleges in Scotland and the United States, promoting the revivals by establishing connections between like-minded individuals.

WHITEFIELD AND THE GREAT AWAKENING

Whitefield returned to the United States in October 1739. His success in England led him to embark on a much larger and more ambitious project: a transatlantic and, although Calvinist, transdenominational revival throughout England, Scotland, and the United States. He landed in Philadelphia; news of his successes in London had preceded him, and he was greeted enthusiastically by record crowds. In many ways, the United States constituted an ideal venue for Whitefield's ministry: It had periodically experienced local revivals or "awakenings" throughout its history; furthermore, like Whitefield himself, U.S. citizens were suspicious of English authority. From Philadelphia, he embarked on a popular speaking campaign, taking him to New York City and back to Philadelphia. He next traveled overland to Georgia to oversee construction of the orphanage, returning to Philadelphia in April 1740. In June, he commenced a successful preaching tour of Charleston, South Carolina, and in September began a series of speaking engagements in New England, beginning in Newport and working his way up to Boston before moving on to western Massachusetts and the Connecticut River Valley. Again, he achieved unprecedented attendance, which often exceeded the populations of the towns he was visiting; he also raised three thousand pounds of Massachusetts currency and six hundred pounds Sterling for his orphanage, exceeding the totals from London and Philadelphia. Throughout the tour, he maintained his usual grueling pace, routinely delivering two sermons a day while constantly traveling.

During these tours, Whitefield made a number of key alliances with influential supporters throughout the United States who were pledged to the success of the Great Awakening (a religious movement among U.S. colonial Protestants in the 1730s). Most prominent among these were Josiah Smith in Charleston;

William and Gilbert Tennant in Philadelphia; Thomas Noble in New York; Benjamin Coleman, the senior pastor in Boston; and Jonathan Edwards, the author of *A Narrative of Surprising Conversions* (1734) and the most prominent and able theologian connected with the revival movements. Whitefield's method of promoting his revivals through quarrels with the religious establishment, however, had unfortunate consequences that were beginning to become apparent. In the South, he attacked both the Anglican clergy for their opposition to his revivals and Southern slave owners for their physical and spiritual neglect of African-Americans. He continued this practice in New England, criticizing ministers whom he considered to be unconverted, and attacking the curriculum at Harvard College as not providing true spiritual instruction. Many of the preachers who followed Whitefield on the revival trail repeated and in some cases greatly exaggerated his accusations, worsening tensions. Although these confrontations added to the popularity of the revivals, churches became divided over the question of the validity of the Great Awakening: The Presbyterians split into "New Side" and "Old Side" factions, and the Congregationalists into the "New Lights" and "Old Lights." In both cases, moreover, these splits persisted into the nineteenth century.

THE EXPANSION AND NORMALIZATION OF REVIVALISM

After concluding his New England tour, Whitefield undertook a tour of Scotland, seeking to extend his revivalist base. This tour was also successful: Whitefield again preached to record crowds, forged alliances with local pastors such as John Erskine and John Gillies, and raised more funds for his Georgia orphanage. He also built a tabernacle at Moorfields to serve as his base in England. In addition, Whitefield began to make more systematic use of print media to promote his revivals. In April 1741, he took over *The Weekly History*, and it was soon joined by other publications, including *The Glasgow Weekly History* and *The Monthly Weekly History*, both in Scotland, and *Christian History* in the United States. All published news of revivals and

accounts from participants, further cementing relationships between distant communities.

As Whitefield's ministry grew, however, so did opposition to it. Violent mobs would often attack revivalist services in England, in some instances killing ministers and participants. In the United States, the excesses of the Great Awakening caused many individuals who were initially supportive to question its validity. Whitefield made strong efforts to surmount these difficulties. In England, he won a pivotal court case against the ringleaders of a mob who had attacked one of his services and initiated a pamphlet campaign to establish the legitimacy of outdoor services. Later in the United States, he made efforts to heal breaches with the churches, distancing himself from the more outrageous revivalist incidents and apologizing for earlier intemperate remarks. Although he was not able to win full acceptance for his activities, he nonetheless reassured his earlier supporters and established a network of churches and individuals upon whom he could depend.

Through these efforts, Whitefield normalized the interdenominational revival movement as an established religious institution in its own right. In later life, he settled into a regular pattern, preaching in England in the winter and summer and in Scotland in the spring and autumn, returning to the United States periodically. Although his later tours did not arouse the raw enthusiasm of his first tours, they were consistently well attended. He died in Newburyport, Massachusetts, during his seventh trip to the United States and in the midst of a preaching tour of New England. In accordance with his wishes, he was buried before the pulpit of the Old South Presbyterian Church in that city.

WILSON, WOODROW (1856–1924)

U.S. president

Woodrow Wilson, president of the United States and world statesman, illustrated how presidential leadership could remake U.S. politics and launch a vision of a world organization—the League of Nations—to keep the peace. Then, Wilson's personality defects and his limits as a leader combined to frustrate his dream and make the League of Nations only a shadow of what he had proposed.

Woodrow Wilson pursued careers in academics and politics. Born in Virginia, he was educated at Princeton University and then studied law at the University of Virginia. Deciding on an academic life, he received a Ph.D. from Johns Hopkins University and wrote a well-received book on congressional government. He taught at Wesleyan and Bryn Mawr before joining the Princeton faculty in 1890. A dozen years later, he became the president of Princeton. He launched exciting programs to revive teaching and make the university a national leader in education. As time passed, however, opposition to his ideas grew among the alumni, especially when he attacked the exclusive eating clubs at Princeton, and by 1910 his position as president had deteriorated.

Long interested in politics, Wilson had thought about seeking the presidency in 1908. Two years later, Democrats in New Jersey asked him to run for governor. With the state's Republicans divided internally, Wilson won the nomination and then the election. He proved to be a reformer in office, pushing through some legislation to curb the power of corporations. Wilson was soon being mentioned as a possible Democratic presidential candidate in 1912. With a southern background and a northern base, he had the potential to unite the often-fractured Democrats.

Winning the nomination was not easy. Wilson won a number of primaries but trailed in the dele-

gate count when the Democratic National Convention was held in Baltimore in late June 1912. Wilson was the most reformist or “progressive” candidate in the race, and he was the second choice of most of the delegates who were not already committed to him. As a result, he won the nomination on the forty-sixth ballot. The Republicans had split between Theodore Roosevelt and William Howard Taft, and so a Democratic victory seemed assured.

During the campaign, Wilson articulated a reform program that he called “the New Freedom” to distinguish it from Theodore Roosevelt’s agenda of activism that Roosevelt called “the New Nationalism.” Drawn up in consultation with attorney Louis Brandeis, the New Freedom sought to break up monopolistic corporations through enforcement of antitrust laws and to restore business enterprise. At this stage of his career, Wilson did not favor using the government as a way to achieve social justice through national legislation on child labor, woman suffrage, or agricultural problems. The united Democrats rolled to a decisive victory behind Wilson, who did not win a majority of the popular vote but won a landslide in the electoral college.

Once in office, Wilson demonstrated that a Democratic president could unite his party and use the executive power to push through an ambitious legislative program. He made a crucial innovation in presidential-congressional relations when he delivered his message on behalf of tariff revision to Congress in person. Not since Thomas Jefferson had abandoned the practice in 1801 had a president appeared in person in Congress to make his views known.

NEW FREEDOM AGENDA

Wilson’s firm command of national power enabled the Democrats to enact the Underwood Tariff, which lowered customs duties on products imported into the United States and imposed an income tax. Wilson followed up that achievement by addressing the pressing need for reform in the nation’s banking system. To function as a modern, industrial economy the United States needed an effective central bank. Wilson and the Democrats in 1913 enacted the Federal Reserve Law, which

established a central bank and a number of regional banks to conduct the nation’s monetary policy. Finally, Wilson fulfilled another campaign promise when he persuaded Congress to enact the Clayton Antitrust Act and the Federal Trade Commission Act to give the government a means of regulating the behavior of large corporations. The New Freedom agenda had been implemented.

Despite these accomplishments, the Democrats faced the prospect of losses in the 1914 congressional elections. The outbreak of World War I changed the political landscape and confronted Wilson with another major test of his skill as a leader. As Europe divided into warring camps, Wilson asked the U.S. people to remain neutral between Great Britain, France, and Russia, known as “the Allies,” and Germany, Austria-Hungary, and eventually Turkey, known as “the Central Powers.” Wilson felt more sympathy for the Allies, but he kept the United States on a course that was fair to both sides. Meanwhile, the Democrats used the argument that the president was preserving the peace as a keynote for the 1914 congressional elections. The Republicans picked up many House seats, but the Democrats added five seats in the Senate. Perhaps, the Democrats felt, they could do well in 1916 on the basis of neutrality and additional progressive change.

During the next two years, Wilson crafted a platform of peace, prosperity, and reform as the basis for his reelection campaign in 1916. In domestic policy, Wilson lost his earlier suspicion of government activism and pushed for regulation of child labor, a program of farm credits for agriculture, and support for organized labor. The appointment of reformer Louis D. Brandeis to the Supreme Court provided another powerful symbol of Wilson’s progressive credentials. As Theodore Roosevelt’s Progressive Party broke up, many of its members came out in support of Wilson’s second term.

The war brought orders for munitions and food from the Allies, and the stimulus that these orders supplied to the economy brought good times to key sectors. As U.S. citizens grew more prosperous, confidence in Wilson’s leadership mounted. Economic ties to the anti-German nations increased

Woodrow Wilson's Fourteen Points Speech to Congress on 8 January 1918

We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secure once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us. The programme of the world's peace, therefore, is our programme; and that programme, the only possible programme, as we see it, is this:

I. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.

II. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

III. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

IV. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

V. A free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have

equal weight with the equitable claims of the government whose title is to be determined.

VI. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

VII. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

VIII. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interest of all.

IX. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

X. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be

sympathy for that side in the fighting, even as German-Americans and Irish-Americans remained cool to any alliance with the British.

Wilson had the most difficulty in maintaining neutrality because both sides tested his resolve. The British, with their command of the seas, imposed restrictions on trade that often irritated Washington. The Germans, on the other hand, facing a blockade directed from London, turned to a new weapon, the submarine, to break the stranglehold that the British

Navy had imposed. Submarine warfare, which required stealth and a lack of concern for passengers on torpedoed ships, seemed barbaric and cruel to a generation not yet accustomed to the terrors that the twentieth century would bring to war. Wilson grappled with the problem of how to curb the submarine weapon and yet remain neutral.

The sinking of the British liner *Lusitania* on 7 May 1915, off the coast of Ireland, dramatized the challenge that confronted Wilson. Because 128 U.S.

accorded the freest opportunity to autonomous development.

XI. Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

XII. The Turkish portion of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

XIII. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

XIV. A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right we feel ourselves to be intimate partners of all the governments and peoples associated together against the Imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

citizens had died among the more than 1,000 killed in the sinking, many people in the United States clamored for war. Wilson resisted this clamor and sought negotiations with the Germans. During the next nineteen months, Wilson sought through pressure and diplomacy to preserve U.S. rights without triggering a war with Germany. Although many Republicans in the East, such as Roosevelt, labeled Wilson's policy cowardly, the broad mass of the U.S. people preferred peace to war.

REELECTION

Wilson's stance paid off for him in the 1916 election. At the Democratic National Convention, the theme that Wilson had kept the nation out of the war dominated the proceedings. The Republicans nominated Charles Evans Hughes, a Supreme Court justice, but he was never able to dent Wilson's campaign appeal. Wilson told the voters that electing Hughes would mean an early entrance into the war. That claim was barely enough to win Wilson a second term. Wilson eked out a narrow victory over his challenger.

Keeping the peace proved impossible, however, when the Germans announced a policy of all-out submarine warfare in late January 1917. Until then, Wilson had hoped that he might mediate a settlement among the warring powers and create a league of nations that could preserve international order. The two warring coalitions rejected Wilson's mediation efforts, and then the new German policy pushed the United States along the road to war. In April 1917, the United States became an active belligerent on the Allied side. Wilson put forward a proposal he called his "Fourteen Points" as the basis of an equitable conclusion to the war.

The United States, behind Wilson's leadership, made a crucial contribution to Allied victory in November 1918. U.S. troops in France forced the Germans to seek an armistice on the basis of the Fourteen Points. At home, however, Wilson saw his political base erode as the war continued. He failed to give Republicans a meaningful role in the government; persecution of antiwar dissenters alienated liberals; and the growth of government power caused an anti-Democratic backlash. By the autumn of 1918, the Democrats were in trouble as the congressional elections neared. Wilson issued an appeal on 15 October 1918, for the election of Democrats to help him win the peace. Instead, voters gave the Republicans control of the House and a narrow working majority in the Senate.

Wilson's dream had been to establish a world organization that could prevent future wars. He decided that he would have to attend the peace conference in Paris—a break with the tradition that kept presidents in the United States during their term in

office. In shaping the delegation that went with him overseas, Wilson did not include any prominent Republicans. The Senate, led by Republican Henry Cabot Lodge of Massachusetts, who hated Wilson, eyed Wilson's actions with suspicion. Because Wilson would need Republican votes to get the two-thirds vote needed to approve any peace treaty, conciliation of the opposition was necessary but, for Wilson, improbable.

The negotiations at Paris eventually produced a peace treaty that included the League of Nations. One provision, Article X, bound each nation to take action if a member state were the victim of aggression. The league aroused resentment in the U.S. Senate, where opponents, some of whom styled themselves "Irreconcilables," pressed Wilson for changes to ensure that U.S. sovereignty would be preserved. Wilson did not want any substantive changes in the treaty he had framed.

When opposition seemed too strong to be overcome by normal negotiations, Wilson decided to appeal to the U.S. people. He made a speaking tour of the West in September 1919 in which he pleaded for approval of the treaty. Wilson's concept of leadership now included appealing over the heads of senators directly to their constituents. Before a test of Wilson's bold campaign could occur, his health broke, and he had to return to Washington. Early in October he suffered a crippling stroke that left him an invalid. In the months that followed, a reclusive, feeble Wilson stood against any changes in the peace treaty or the League of Nations. Voting in November 1919 and again in March 1920, the Senate failed to approve the Treaty of Versailles, and the League of Nations, as far as the United States was concerned, was a dead issue.

Whether a more conciliatory Wilson might have achieved U.S. entry into the League remains a controversial question. Wilson himself briefly toyed with the improbable idea of running for a third term, but Democratic leaders told him that his health made such an idea impossible. Wilson served out the remainder of his presidency as a sick, broken man. He left office in March 1921 discredited and unpopular. His administration had ended in apparent failure, and his leadership had been repudiated.

The League of Nations failed to prevent World

War II. Wilson himself was responsible for the sad outcome. Able to lead with skill and courage in the early years of his presidency, he lost his flexibility and political insight during his second term. Error after error proved that a man who had once been a brilliant statesman in a democratic society had become obsessed with a vision of world peace. In pursuit of that vision Wilson let rigidity and stubbornness take over, and his crusade ended in disaster. Woodrow Wilson thus sums up in a single tumultuous career how leadership can lift a society and how a failure to master the art of commanding a democratic nation can lead to political defeat and personal tragedy.

WINFREY, OPRAH (b. 1954)

U.S. talk show host and television producer

Born to unwed parents in Kosciusko, Mississippi, in 1954, Oprah Winfrey was raised by her maternal

grandmother, who taught her how to read and nourished her lifelong love of public speaking." She still lives by the philosophy she learned growing up in a small farming community in a house without electricity or running water: "You're good, but you could be better." As a *Biography* documentary on Winfrey noted, "Oprah's growing-up years were stormy, difficult, and marked by abuse. Yet she somehow managed not just to survive but to excel" ("Oprah Winfrey" 2002).

It is hard to overstate the importance of Oprah Winfrey as a business and cultural force over the past ten years. Perhaps better than any other American, Oprah Winfrey symbolizes a brand celebrity whose opinions shape which authors make the best-seller list and which products come to be seen as "must buys" by the public. One magazine article stated that Winfrey has "more influence on the culture than any university president, politician, political, or religious leader except the pope" (*Vanity Fair*).

The fact that her talk show is watched by more than 22 million people every week, that she is the first African-American woman (the second person of African-American origin after Robert Johnson, the founder of Black Entertainment Television) to make it to *Forbes* magazine's list of billionaires, and that *Time* magazine named her one of the hundred most influential people of the twentieth century overshadows the important impact of her multifaceted leadership style on the American private and public landscape. While no one disputes her status as a talk show host or as an entertainment business executive, it is arguably her leadership that will be the lens through which history books examine her life. She may be the only self-made billionaire who "happily admits that she cannot read a balance sheet" and has declined invitations to serve on the corporate boards of AT&T, Ralph Lauren, and Intel because she was not sure what she would be doing as a board member (Sellers 2002).

MAKING A CULTURAL AND BUSINESS ICON

Oprah Winfrey began her broadcasting career in Nashville, Tennessee, while she was still in high school. At the age of nineteen, she became the

youngest person and the first African-American woman to anchor television news in Nashville. As a host of television talk shows, Winfrey moved in 1976 to Baltimore and relocated to Chicago eight years later. By 1986, the Oprah Winfrey Show was launched as a nationally syndicated show with an annual revenue of \$125 million and an initial viewing audience of 10 million people. Her show is watched by an estimated 22 million viewers a week in the U.S. and is broadcast in 105 countries. It is the highest-rated talk show in television history and has remained the number-one talk show for sixteen years. The power of her talk show is reflected not only in numbers like these, but also in the prestige of those who feel compelled to appear on her talk show. During the 2000 presidential elections, then-governor George W. Bush appeared on her program and planted a big, surprising kiss on her cheek.

Her impact has been felt far beyond the television medium. Her acting debut in 1985 as Sofia in Steven Spielberg's *The Color Purple* garnered her Academy Award and Golden Globe nominations. The Oprah Book Club, which began in 1996, is an on-air reading club designed to get the country excited about reading books. Each of the books selected for her book club, including the works of Toni Morrison, Joyce Carol Oates, Andre Dubus, and others, has become a national bestseller. An unrivaled star on television, Winfrey also received the National Book Foundation's fiftieth anniversary Gold Medal for her contributions to reading and books. She is only the third American woman to own her own production company (her company name, Harpo, is Oprah spelled backward); she was preceded by the silent movie star Mary Pickford and the comedy queen Lucille Ball.

She has a unique ability to understand and connect with the tens of million people that make up her viewing public. She has managed over the years to remain a deeply revered public figure amidst her struggles to lose weight, her admission of childhood abuse, and her entrance into the Marine Corps Marathon under the scrutiny of the often-unforgiving public. A 1998 article in *Time* magazine by a popular psychologist attempted to explain Winfrey's popularity by arguing that "women, especially, listen to

Winfrey because they feel as if she's a friend. Girls' and women's friendships are often built on trading secrets. Winfrey's power is that she tells her own, divulging that she once ate a package of hot-dog buns drenched in maple syrup, that she smoked cocaine, even that she had been raped as a child. She turned the focus (of talk shows) from experts to ordinary people talking about personal issues" (Tannen 1998, 198).

THE LEADERSHIP MOSAIC: PRINCIPLED, REFLECTIVE, AND TRANSFORMATIVE

Examining the importance of leadership is not new to Oprah Winfrey. She was appointed an adjunct professor of management and strategy at Northwestern University's Kellogg Graduate School of Management and co-taught a course called "The Dynamics of Leadership" in the fall semesters of 1999 and 2000. With the goal of positioning students "as leaders in charge of their own destinies, empowering them to more effectively lead others," the leadership course had a guest speaker list that would be the envy of any business course, including Amazon.com founder Jeff Bezos, ABC/Disney President Bob Iger, Henry Kissinger, and by satellite, Coretta Scott King.

While almost everyone would agree that Winfrey has remarkable insights into leadership, describing and analyzing her leadership style is a challenging task. Her leadership style can be best described as a mosaic, an overlapping blend of principled, reflective, and transforming leadership qualities. The first quality can be described as principled because Winfrey's leadership emphasizes the important impact individuals can make to improve the society at large. For example, launched in 1997, Oprah's Angel Network has raised over \$12 million, \$5.1 million from viewer donations and an additional \$7 million from sponsors and celebrity contributions. Although many wealthy public figures establish charitable organizations, the focus of many of these groups tends to be on the disbursement of money. But Winfrey does much more than give money. She broadcasts the work of individuals who, through their charitable organizations, are actively working to improve the lives of the less for-

unate. It is not a coincidence that one of her charitable programs under the Angel Network umbrella is called the "Use Your Life Awards" (rather than, say, "win a million dollars for a good cause").

The second quality is the way Winfrey expresses her leadership. While taking action is not discouraged, there is a premium placed on taking stock and reflecting on one's life before embarking on any plan of action. In this context, leadership is not necessarily about establishing or meeting goals, but rather about taking time to know who you are. Leadership is less about doing something out there and more about understanding who you are and your ability to grow as an individual. As Cashman (1998) suggests in his book, "We will not analyze the external act of leadership into a formula of 'ten easy to follow' quick tips. Rather, we will take a reflective journey to foster the personal awakening needed to enhance our leadership effectiveness" (15). In an interview with *Fortune* magazine (Sellers 2002), Winfrey underscored the importance of knowing oneself in the way she expresses her leadership when she noted that "my message is, 'you are responsible for your own life.'" After all, it is difficult to lead or be expected to be a leader when you are not sure who you are or want to be as a person.

The third leadership quality that can be seen in Winfrey is what James MacGregor Burns calls "transforming." "Transforming leadership" differs from the more common "transactional leadership," by emphasizing radical if not revolutionary change. Winfrey seems to have a visceral and instinctive way of predicting what actions are likely to lead to revolutionary positive change in society. For example, the Oprah Winfrey Leadership Academy for Girls South Africa, which she opened in the winter of 2002, has a radical goal. With an initial investment of \$10 million, the leadership academy aims to educate female students who are academically talented and exhibit leadership skills in their community, but whose families cannot support their educations.

Winfrey, who has donated at least 10 percent of her vast annual income to charity, goes beyond just exhorting people to become leaders and is herself willing to spend the necessary time, energy, and

Oprah Winfrey on Creating a Vision for Life

In 1997, Oprah Winfrey addressed the graduating class of Wellesley College, imparting the key life lessons she had learned. Toward the end of the address, she relayed one final lesson summed up as follows: "Hold the highest vision possible for your life and it can come true." Below are excerpts from the address.

Create the highest, grandest vision possible for your life because you become what you believe. When I was a little girl in Mississippi, growing up on the farm, only Buckwheat as a role model, watching my grandmother boil clothes in a big iron pot through the screen door, because we didn't have a washing machine and made everything we had. I watched her and realized somehow inside myself, in the spirit of myself, that although this was segregated Mississippi and I was "colored" and female, that my life could be bigger, greater than what I saw. I remember being four or five years old, I certainly couldn't articulate it, but it was a feeling and a feeling that I allowed myself to follow. I allowed myself to follow it because if you were to ask me what is the secret to my success, it is because I understand that there is a power greater than myself, that rules my life and in life if you can be still long enough in all of your endeavors, the good times, the hard times, to connect yourself to the source, I call it God, you can call it whatever you want to, the force, nature, Allah, the power. If you can connect yourself to the source and allow the energy that is your personality, your life force to be connected to the greater force, anything is possible for you. I am proof of that. I think that my life, the fact that I was born where I was born, and the time that I was and have been able to do what I have done speaks to the possibility. Not that I am special, but that it could be done. Hold the highest, grandest vision for yourself.

Just recently we followed Tina Turner around the country because I wanted to be Tina. So I had me a nice little wig made and I followed Tina Turner because that is what I can do and one of the reasons I wanted to do that is Tina Turner is one of those women who have overcome great obstacles, was battered in her life, and like a phoenix rose out of that to have great legs and a great sense of herself. I wanted to honor other women who had over-

come obstacles and to say that Tina's life, although she is this great stage performer, Tina's life is a mirror of your life because it proves that you can overcome.

Every life speaks to the power of what can be done. So I wanted to honor women all over the country and celebrate their dreams and Tina's tour was called the Wildest Dreams Tour. I asked women to write me their wildest dreams and tell me what their wildest dreams were. Our intention was to fulfill their wildest dreams. We got 77,000 letters, 77,000. To our disappointment we found that the deeper the wound the smaller the dreams. So many women had such small visions, such small dreams for their lives that we had a difficult time coming up with dreams to fulfill. So we did fulfill some. We paid off all the college debt, hmmm, for a young woman whose mother had died and she put her sisters and brothers through school. We paid off all the bills for a woman who had been battered and managed to put herself through college and her daughter through college. We sent a woman to Egypt who was dying of cancer and her lifetime dream was to sit on a camel and use a cell phone. We bought a house for another woman whose dream had always been to have her own home but because she was battered and had to flee with her children one night, had to leave the home seventeen years ago. And then we brought the other women who said we just wanted to see you, Oprah, and meet Tina. That was their dream! Imagine when we paid off the debt, gave the house, gave the trip to Egypt, the attitudes we got from the women who said, "I just want to see you." And some of them afterwards were crying to me saying that "we didn't know, we didn't know, and this is unfair," and I said, that is the lesson: you needed to dream a bigger dream for yourself. That is the lesson. Hold the highest vision possible for your life and it can come true.

Source: Winfrey, Oprah. (1997, May 30). *Commencement Address at Wellesley College* Retrieved August 28, 2003, from <http://www.wellesley.edu/PublicAffairs/PAhomepage/winfrey.html>

financial resources to invest in leadership in society at large. She does this most notably by focusing on the three causes she cares most deeply about: women, children, and education. As she herself put it in a 2002 article in *Fortune* magazine, "When you educate a woman, you set her free. . . . Had I not had

books and education in Mississippi, I would have believed that's all there was." As the author of the *Fortune* article noted, "She can obviously bring a lot of personal perspective to these issues since she spent her early years in a house in Mississippi without electricity or running water" (Sellers 2002).

TRANSFORMING TELEVISION INTO A PERSONAL LEADERSHIP TOOL

Winfrey's rise from her humble beginnings in Mississippi to her current status as a global cultural and business icon can be seen as a powerful reminder of the rags-to-riches metaphor that remains so powerful in American society. What gets overlooked is her drive and determination to reawaken the latent personal leadership that exists in all of us to understand, to act, and perhaps most importantly, to help improve society. Television, her instrument of leadership instruction, has been known mainly as the source of several negative side effects including sedentary lifestyle and obesity in children. But when it is in the hands of a dynamic and charismatic magician like Winfrey, the medium becomes much more than an impersonal electronic box that invites passivity.

While some people have accused the talk show of being too preachy in recent years, Winfrey fundamentally understands that her 22 million viewers want not only to be entertained but also to be informed if not transformed into better people. The key to Winfrey's success is her ability to instill leadership skills without labeling the process leadership training. Anyone who watches her television talk show cannot help but be impressed at how the audience members appear to view Winfrey as a friend and a mentor they can enjoy at least one hour a day by watching her talk show. The true genius of Winfrey is recognizing television's true power: to blend the public and private toward personal empowerment. As noted in a *Time* magazine profile of Winfrey (Tannen 1998, 198):

While it links strangers and conveys information over public airwaves, TV is often viewed in the privacy of our homes. Grasping this paradox, Oprah exhorts viewers to improve their lives and the world. She makes people care because she cares. That is Winfrey's genius, and will be her legacy, as the changes she has wrought in the talk show continue to permeate our culture and shape our lives.

WOMEN AND BUSINESS LEADERSHIP

When asked to name a successful business leader, most people think of Jack Welch (General Electric), Bill Gates (Microsoft), or Michael Eisner (Disney). Often the first image one has of a business leader is a man. Over the past thirty years, many women have become successful business leaders. Leaders like Meg Whitman (CEO of eBay), Betsy Holden (CEO of Kraft Foods), and Carly Fiorina (CEO of Hewlett Packard) are also successful business leaders and have made a significant impact on the U.S. economy.

At the same time that women have progressed in business leadership and entrepreneurship, a debate has risen in research and the popular press as to whether gender matters in leadership.

- Are women less assertive?
- Are men more decisive?
- Are men better at numbers and women better at managing people?
- Can women make the "tough" decisions?

Answers to these questions are varied, depending on one's perspective: whether one believes that men and women are more similar in their leadership, or that women lead differently. Following a general definition of leadership as an ability to inspire and influence beliefs, attitudes, and behavior of others,

(Kotter 1990) this entry explores these two perspectives about women in business leadership.

WOMEN IN BUSINESS LEADERSHIP—THE PHENOMENON

According to the Bureau of Labor Statistics, since 1960, the percentage of women in the workforce rose from 38 percent to 60 percent in 2000. As increasing numbers of women have entered the workforce, many have moved into executive positions across all industry sectors, either by founding their own growing venture or by rising through the ranks. Approximately 25 percent of women working in U.S. corporations serve in middle-management positions of Fortune 1000 companies. The percentage of women working in executive, administrative, or management positions rose from 4.6 percent of the total in 1972 to 14.2 percent in 1999, compared to 11.5 percent and 15.0 percent for men. Similarly, in 1980, 52 percent of women participated in the labor force, and by 2000, this number rose to 60 percent.

For the first time, more than half of Fortune 500 companies have one or more female corporate officers (377), which is a 20 percent increase since 1997, reports Catalyst, an organization that advances the role of women in business. Between 1993 and 1998, the percentage of corporate board seats on Fortune 500 companies held by women rose from 8.3 percent to 11.1 percent (to 671 of 6,064), while 86 percent of Fortune 500 companies (429) have one or more women directors, up 69 percent since 1993. By 2002, there were 986 women serving on corporate boards of Fortune 1000 companies (986).

Similar trends are apparent for women entrepreneurs. Between 1987 and 1999, the number of women-owned firms in the United States increased by 103 percent—more than the 48 percent of the total posted by all businesses. The number of women-owned sole proprietorships increased from 5.6 million in 1990 (33.5 percent of the total) to 7.1 million (36.8 percent of the total) in 1998. Even more striking, the growth of larger businesses led by women (more than 100 employees) rose by 18 percent. Until 2000, data showed that women own 9.1 million firms, which is 38 percent of all

businesses, these firms employing 27.5 million people and generating more than \$3.6 trillion in sales annually.

In fact, in 2001, the U.S. Census changed the methodology by which it classified women-owned businesses. Figures recently released by the U.S. Census report lower numbers for 1997 that reflect the adoption of new qualifying criteria. To be considered “women-owned” under the new definition requires 51% ownership, \$1,000 minimum annual revenues (up from the previous criterion of \$500), and that the business be privately held. The new criteria exclude many high-growth ventures that are publicly held and at the upper end of the revenue continuum. The change in definition results in depressing the reported contribution of women-owned businesses. Whichever data are used, the growth and contribution of women-owned business is indisputable.

FACTORS INFLUENCING WOMEN'S RISE IN BUSINESS LEADERSHIP

What accounts for the tremendous growth in participation of women in business leadership positions? There is no single answer, but at a broad level, the environment for women's participation in business management is more acceptable today than twenty years ago because of regulatory changes, educational progress and shifting roles of women in family and society.

Legislative Changes

Legislative changes such as the Civil Rights Act of 1964 and the Affirmative Action Act of 1978 were pioneering efforts to address some of the challenges that women faced in rising to the top of corporations. Title VII of the Civil Rights Act prohibited discrimination against women based on sex, and, in 1978, this act was amended to make it clear that discrimination based on pregnancy is prohibited as well. This act also provides for a process by which complaints may be filed with the Equal Opportunity Commission (EEOC). Under Title VII, an employer cannot intentionally deprive women of any of the benefits of

Martha Stewart, one of the most successful and prominent businesswomen of the twentieth century, with Joanne Lipman at the Matrix Awards, sponsored by New York Women in Communication on 23 April 2001.

Source: Gregory Pace/Corbis; used with permission.

employment because of their gender, including promotions, health coverage, perks, or other benefits. This includes women's participation in competitive sports at the college level where schools must provide equal opportunity for women's sports teams. The Equal Pay Act of 1963 prohibits employers from discriminating on the basis of sex by paying wages to employees that are lower than those it pays to someone of the opposite sex for the same work, requiring the same skills and responsibility and carried out under the same working conditions. In addition, the Family Medical Leave Act (FMLA) of 1993 required that workers be allowed to take time off for bearing or adopting children or taking care of seri-

ously ill family members. The combined effect of these legislative changes helped remove barriers that inhibited women's progress by giving them an equal chance at all occupations that they might be qualified for, and making it possible for them to have both a family and career should they so choose.

For women entrepreneurs, the Equal Credit Opportunity Act of 1975 was a landmark because it permitted them to acquire loans and credit in their own name. Likewise, baseline data on their participation as business owners were first made available in *The Bottom Line* (1979). Ten years later, passage of the Women's Business Ownership Act provided set-asides for women business owners, created the National Women's Business Council, called for additional data collection, and established new federal capacities to guarantee loans to women-owned businesses. The Small Business Administration (SBA)'s preferential procurement program (known as section 8[a]), which provides government contracts and other assistance to small businesses owned by socially and economically disadvantaged persons, makes it easier for women to obtain government contracts. In addition, the SBA's microloan program (the "7 M" program) and the Women's Pre-Qualification Loan Program make it easier for qualified women entrepreneurs to access start-up capital. These programs and initiatives have greatly encouraged and facilitated women's ability to start and grow their own businesses.

Educational Progress

Today, more women have a business education than in the past, which better qualifies them for leadership roles. The AACSB reports that approximately 48 percent of all undergraduate business degrees are awarded to women, and nearly 40 percent of all MBA students are female. Similarly, the percentage of women receiving MBAs is now 35 percent.

When it comes to entrepreneurship, many options for entrepreneurial training exist as more than 700 schools offer entrepreneurship courses at the MBA and undergraduate levels. More than 35 percent of the students taking these classes are women. In addition, the U.S. Small Business Administration offers

specialized resources that target women, for instance, W.NET, the Women's Network for Entrepreneurial Training.

SHIFTING ROLES OF WOMEN IN THE FAMILY AND SOCIETY

In the years following World War II, the woman's role was to care for house and family, while the man was the major income provider. As educational and legislative changes created opportunities for women to develop business expertise, family and social norms similarly shifted.

The rise of dual-career couples and the subsequent greater participation of working fathers in child care has made it easier and more acceptable for women to assume the role of CEO or president. Trade networks, social clubs, and business after-hours meetings once primarily held for men slowly accepted women. Likewise, new women's organizations such as the Committee of 200, the National Association for Women's Business Owners (NAWBO), National Association of Female Executives (NAFE), and a multitude of other groups provide business and networking support. Publications providing specialized information for women such as *Working Woman*—as well as an increase by major business publications such as *Entrepreneur*, the *Wall Street Journal*, or *Fortune* of feature stories about companies led by women—increase visibility of successful women and provides role models.

ARE THERE GENDER DIFFERENCES IN BUSINESS LEADERSHIP?

When the number of women in leadership positions increased, debates followed. Do men and women lead differently? Almost everyone has an opinion on this, depending on where they have worked, attended school, or learned from experience. Yet, the degree to which women business leaders are similar or different on these dimensions has an historical overlay that is based on explicit assumptions about men and women (Maier 1992). In the early 1950s and 1960s, "masculinism" (sexism) assumed that women were essentially different from men, made different con-

tributions to society, and were excluded from management. The 1970s brought "feminism," some theories of which assumed that women and men were essentially the "same," and therefore should or could assimilate in to a masculine role. Women could contribute in the same way as their male counterparts. A "feminine-ism" view rising in the 1980s assumed that men and women were essentially different, sought sex-based inclusion, and celebrated the differences and unique contributions of women. More recently, "transformative feminism" moves toward role-based inclusion, and moves towards androgyny and diversity. All these views still exist in management thinking, and the assumptions provide the basis for debates about gender similarities and differences. The two most prevalent views are that "women lead like men" (there are no differences) and "women lead differently." To explore these perspectives, we will consider the theoretical roots of these views, and discuss them across general leadership dimensions. Although there are volumes written about the traits, behaviors, and the types of leaders, there is some consensus that leadership is generally characterized by vision, interpersonal communication, style, power, task orientation, and decision making (Bennis & Nanus 1985).

Women Lead Like Men

Liberal feminism seeks to eliminate explicit legal and institutional barriers to women's participation in society and the economy. The view assumes that men and women are equal, autonomous individuals. When women achieve less, the solution is to remove barriers (legal regulations, laws and policies) so that men and women as free individuals can move forward based on their own skills, talents and willingness to work. The passage of the Civil Rights Act of 1964, Affirmative Action Act of 1978, and Equal Credit Opportunity Act of 1975 removed significant legal barriers for women's progress to the executive suite and as entrepreneurial leaders. These acts were intended to ensure that leaders of any sort would be successful based on their accomplishments and individual differences not based on their sex.

Research shows that as women move up the corpo-

World Summit for Women Entrepreneurs

NEW YORK (ANS)—If a convention on technology, the global economy and emerging markets conjures up images of men in sober three-piece suits, rerun the frame. The World Summit of Young Entrepreneurs held here recently was a sea of women in dresses, saris and chadors.

Those attending the World Trade Center conference, and thousands more participating online through Internet portals and Web site hookups in their homelands, were networking and acquiring the skills needed to compete in the emerging national and global markets.

The summit, sponsored by the U.N. Development Fund for Women, the Institute for Leadership Development and the U.N. Conference on Trade and Development, was staged for young business owners in the developing world, and especially for women.

Among those gaining exposure to new ideas and new markets was Assilah Al-Harthy, the 30 year-old chief executive of Oman's only female-headed real estate firm. When Al-Harthy joined her father's real estate business nine years ago, she was the first woman in Oman to take on such a role. Today, she says, it is more routine for Omani businessmen to allow their daughters to work alongside them.

Still, women in business have a ways to go.

"Being a woman in the business world in Oman is best described as a double-edged sword," said Al-Harthy. "If you are successful, you are a star, and if you do a bad job, you are a loser. There is no third option."

After nearly a decade in the business, Al-Harthy is using her hard-earned expertise to diversify her company, a move she thinks is vital to remaining competitive in the changing global economy.

"Information technology is where the future for Oman's economic growth lies," she explained as she described her next business plan: opening computer software training institutes in Oman, Egypt and Jordan, a service for which she

believes many women will gladly pay and that will, in turn, make them more marketable.

And because of the difficulties she has encountered—problems obtaining seed money, gaining the expertise needed to run a company and a general lack of confidence in women's abilities—she is also busy organizing the Business Woman Forum, which she plans to hold in Oman. She's bringing in businesswomen from around the world to meet with Omani women to encourage them to consider a career in business.

Another summit attendee was Sherazade Saadi, who traveled from Algeria. At age 29 she is the successful manager of Frigo Nord, a fishing and ice-manufacturing company that she founded in Annaba last year. A hands-on manager, Saadi meets with her employees at least once a month to discuss activities and problems as they arise. She is often the only businesswoman walking among the piers and docks that litter the crowded industrial port of Annaba.

Saadi's business is situated on Algeria's eastern Mediterranean coast—Italy is her most important export market—and one of her biggest challenges is maintaining international quality standards that will attract global buyers. Saadi hopes to meet this challenge by investing in larger ice storage facilities and increasing the size of her fishing vessels.

But she also knows there are other things she must do to be viewed as a successful businesswoman—and a role model for other women. While she is pleased to be contributing to the growth of Algeria's fishing industry, she also hopes to do more for women in business, and to inspire other women to enter the fishing industry.

"I hope that Frigo Nord will be a very important fishing enterprise and that I will help other businesswomen get employment in my country and in the Mediterranean region," she said.

The two women's commitment, not only to making their

rate ladder, they identify with a male model of success that is described as command and control style and task oriented (Grant 1988). Other research shows few interpersonal communication differences between male and female managers (Eagly & Johnson 1990). Other studies show few sex differences in task approach, along with findings that men and women did not differ significantly in their effectiveness as leaders, and that neither group was more effective overall.

This perspective asserts that the critical factors affecting leadership effectiveness have more to do

with organizational setting and leader role. It is argued that effective leadership requires a combination of traditionally masculine (transactional, highly logical, or authoritarian) behaviors and traditionally feminine (nurturing, democratic, and relational) behaviors, as well as sex-neutral dimensions (inspirational, motivational, charismatic) (Powell & Graves, 2003). For example: Some leader roles require more interpersonal communications, visibility, and external interactions (e.g., a publicly traded company selling consumer goods); other leader roles

own businesses successful but to improve the lot of other women, is a common one, said Noeleen Heyzer, executive director of the U.N. Development Fund for Women.

"We have long recognized the major role women play as agents of change, both as business and as social entrepreneurs," Heyzer said.

For instance, these new players in the world of business are organizing to improve their economic condition by pressuring governments and international financial institutions to expand the benefits of microfinance programs. Rather than simply asking for loans, Heyzer said, women entrepreneurs are pressing for training and technical assistance, as well as woman-controlled sales outlets, greater participation in international trade shows and fair market regulations that benefit small woman-owned businesses.

"More people will benefit from globalization if women are active in setting agendas and reshaping global economic rules," Heyzer explained.

To help young businesswomen like Saadi and Al-Harthy, the summit offered training and business education at the World Trade Center, as well as the opportunity for real and virtual participants to formulate joint ventures and business deals on the spot through a program called "Let's Make A Deal."

At the conclusion of the conference, 15 women were honored for their success in running small businesses, helping other women expand their businesses and engaging and benefiting other members of their communities and villages. Among those receiving achievement awards were Al-Harthy, recognized for applying principles of gender equity in business, such as employing women and providing decent work and benefits, and Saadi, who was honored for her perseverance in sustaining her business despite difficult personal circumstances and for inspiring other women.

may require more contingent reward or decision-making capabilities (e.g., a private technology company that is downsizing).

Women Lead Differently

Social feminism argues that men and women have different experiential backgrounds that influences their way of perceiving and thinking. From birth, they encounter a variety of social experiences that shape quite differently beliefs that men and women

come to have. While sex is the biological difference, gender is socially constructed. The impact of work experience, family, and economic roles shapes the perspectives women and men have leading to differences in their approach to leadership. In contrast to liberal feminism, which seeks equality and androgyny, social feminism seeks to acquire proper recognition and appreciation for women's achievements and values, where the genders are equal but different (Carter & Williams 2003).

Significant research investigates possible differences in male and female leaders. Early research was done by Margaret Henning and Anne Jardim in their landmark book *The Managerial Woman* (1977). For the first time, questions about the leadership and management skills of businesswomen were studied relative to their socialization. The women in their study tended to be flexible, eager learners, and cooperative within the context of male-dominated hierarchical organizations. Other studies soon emerged. Sally Helgesen (1990) replicated a study done on men, by Henry Mintzberg in 1973, by examining the "work" of women leaders. In contrast to Mintzberg's study that showed executives working at an unrelenting pace, controlling information, and being task oriented, Helgesen found that women were intuitive in decision making, shared information, emphasized inclusion and cooperation, and had a networking rather than authoritarian style. Building on this work, Judith Rosener posited that men and women tend toward different styles. She described women as being more transformational, in that they were more inspirationally motivating, shared information, and were holistic in approach, while men tended toward a more transactional style described as task oriented and contingent.

Other research shows that men are more associated with autocratic leadership stereotypes with a greater tendency toward dominance and control, while a democratic style emphasizing involvement and cooperation is more associated with the feminine stereotype. Research on gender stereotypes shows that women tend to be higher on interpersonal styles than men, although this difference is significant only in laboratory experiments and does not appear in samples of managers. A study about motivation

showing that men tend to manage by punishment and women by rewards concluded this was a result of women being socialized to manage people and relationships in the home and transferring this approach to the workplace. Similarly, women are less likely to manage by exception, and more often temper criticism with positive feedback. Women are observed to be more sensitive to emotional and verbal responses of their subordinates, and to respond to feelings of a group, while men focus on disseminating information and demonstrating competence. Finally, a study of vision of women entrepreneurs and executives found that women entrepreneurs and executives tended to be more similar to than different from men in the length of time the vision was held, the degree to which it was shared, or the length of time it extended into the future. But, compared to a similar study of men executives and entrepreneurs, women scored lower on vision formulation (analysis, planning) and higher on innovative realism (Bird and Brush, 2002).

Studies of women entrepreneurs show that they practice shared control and participation in decision making, develop policies that encourage learning and employee well-being, seek cooperation and participation in strategy, and facilitate development of policies that helped everyone to balance family and work (Bird & Brush 2002). On the other hand, another study of women entrepreneurs showed that women used controlling behavior more than men, and were more likely to engage in human resource management and internal communication (Envick 1998).

THE FUTURE

Women continue to rise in their roles as business leaders. Despite the debates about similarities and differences of leadership, the environments of organizations and institutions tend to be more “masculinized,” a characteristic that creates obstacles for women. Although these obstacles have decreased since the 1980s, those that remain reflect the way that leaders are recruited and selected (through personal networks), and evaluated (using policies rooted in male norms such as task accomplishment, authoritarian control). These obstacles in effect man-

ifest a subtle “glass ceiling,” which is reflected by the comparatively small number and slow progress of women reaching the corporate boardroom and executive suite of Fortune 500 companies. As noted at the beginning of this entry, only 11 percent of corporate board seats (671 out of more than 6,000) are held by women. This glass ceiling, which is defined as preconceptions, stereotypes, or assumptions held by those in power about women and their abilities and/or commitment to careers (Smith 2000), inhibits progress. This is an invisible barrier, not tangible in the sense that it is a written law or policy, but a closely held belief that influences how women are viewed by others. For instance, men are frequently the power brokers and decision makers who determine whether women are considered for promotion in a company. If it is perceived that a fast-track young woman is likely to become pregnant, she may be passed over for a promotion. On the other hand, a woman who leads a fast-growth, high-technology company may be perceived as an individual less capable of making tough hiring decisions, and therefore not receive needed equity financing to grow her venture. To date, less than 5 percent of all the investments in U.S. businesses were women-led ventures, and, in part, this is a result of perceptions about women’s leadership capabilities.

Thus for progress to continue, these perceptions, stereotypes, and views must be eliminated. The number and strength of women business leaders and entrepreneurs is expected to increase in the twenty-first century and the aggregate impact of women on business and society will continue to grow.

WOMEN AND MEN AS LEADERS

In 2003, the elections in Finland received worldwide attention when Anneli Jäätteenmäki became prime minister. She was the first woman to attain this office in Finland, whose citizens had elected another woman, Tarja Halonen, as president in 2000. With women occupying over one-third of parliamentary seats and being well respected in the cabinet, Finland is notable for the prominence of its female political leaders. The extended news coverage of these Finnish elections shows that in most nations women remain a rarity in elite leadership roles, despite the entry of large numbers of women into lower and middle managerial positions in many countries. In the United States, for instance, women now make up 47 percent of executives, managers, and administrators, and Hungary, Italy, New Zealand, Poland, Portugal, Slovakia, and Sweden report 50 percent or more women in this occupational category. However, with lower percentages in much of western Europe (e.g., 10 percent in France, 9 percent in Germany) as well as in Japan (9 percent), gains for women as managers are uneven across industrialized nations.

In all nations, women remain underrepresented in the highest ranks of management. In recognition of this situation, the metaphor of the glass ceiling has become popular to suggest subtle prejudicial barriers that prevent women from rising above a certain level in organizations. The dearth of women is especially dramatic for high-level positions in large corporations. For example, in the companies of the Fortune 500, women constitute only 5 percent of top corporate officers and 1 percent of chief executive officers.

Women's inroads into political leadership are somewhat greater, with a growing number of women holding parliamentary seats in most industrialized nations and occupying ministerial, nonelective positions. Nonetheless, even in sectors of the economy where more women than men are employed, such as health care and education, men have outnumbered women in top leadership roles, giving rise to the metaphor of a glass escalator that speeds men's rise to high positions.

In view of women's uneven progress toward equal representation as leaders, one of the debates that has captured the interest of social scientists and the general public is whether women's ways of leading differ from those of men.

DIFFERENCES IN THE LEADERSHIP STYLES OF WOMEN AND MEN

One possible explanation of the gender gap in leadership is that women are deficient in the characteristics and behaviors that are crucial to effective leadership. However, contrary to the idea that women are less suited to leadership than men, trade book authors such as Judith Rosener have described female leaders as having cooperative, interactive, and facilitative leadership styles that are more attuned to the needs of modern organizations than are the leadership styles that are typical of men. Empirical research has examined such claims about the typical leadership styles of men and women.

To determine whether men and women differ in leadership styles, social psychologists Alice Eagly and Blair Johnson carried out a meta-analysis of 162 studies that were conducted between 1961 and 1987. (A meta-analysis is a research review that represents studies in terms of a standard metric of effect sizes and then quantitatively integrates and aggregates the effect sizes across the available studies.) Most of these studies distinguished between task-oriented leadership, a style that emphasizes inducing subordinates to follow rules and procedures, maintaining high standards of performance, and making roles explicit, and interpersonally oriented leadership, a style that emphasizes helping subordinates, looking out for their welfare, explaining procedures, and

being friendly and available. In addition, some studies distinguished between leaders who behave democratically and invite subordinates to participate in decision making, termed "participative" or "democratic" leadership, and leaders who behave autocratically and discourage subordinates from participating in decision making, termed "directive" or "autocratic" leadership.

Eagly and Johnson's meta-analysis found that the leadership styles of women and men were somewhat stereotypical on the basis of gender in laboratory experiments using student participants and in assessment studies using participants not selected for occupancy of leadership roles (e.g., samples of employees or students in business programs in universities). In these laboratory and assessment studies, women, more than men, tended to manifest relatively interpersonally oriented styles, and men, more than women, tended to display relatively task-oriented styles. In contrast, gender differences in task and interpersonal style were negligible among leaders occupying managerial roles in organizations. These findings were consistent with the principle that gender differences are diminished among managers because male and female managers are selected by similar criteria and subjected to similar organizational socialization. However, in all three types of studies, one difference did consistently appear: Women displayed a somewhat more democratic or participative style and a less autocratic or directive style than men did. In the available twenty-three studies comparing men and women on the democratic versus autocratic dimension, 92 percent went in the direction of a more democratic and participative style among women. Yet, because the effectiveness of autocratic and democratic leadership styles depends on the context, this gender difference would not in general constitute an advantage or disadvantage for either gender.

In the 1980s and 1990s, a substantial number of researchers shifted their attention to studying leadership styles that, according to many organizational experts, are especially attuned to the conditions faced by contemporary organizations. Researchers delineated a type of leadership style that is commonly known as "transformational leadership,"

which is similar to contemporary models of leadership known as “visionary,” “charismatic,” “inspirational,” and “postheroic.” The emphasis of these models is on the ability of leaders to inspire, stimulate, and motivate followers and to nurture their ability to contribute creatively to organizational goals. Transformational leadership differs from transactional leadership, which is a more conventional style that stresses clarifying subordinate responsibilities and using rewards and punishments to induce subordinates to meet objectives. Also identified by some researchers is a *laissez-faire* style that is characterized by a general failure to take responsibility for managing.

To determine whether male and female leaders differ when evaluated in terms of these new distinctions about ways of leading, Eagly, along with social psychologists Mary Johannesen-Schmidt and Marloes van Engen, carried out a meta-analysis of forty-five studies that compared male and female managers on measures of transformational, transactional, and *laissez-faire* leadership. These studies assessed organizational leaders, mainly from business and educational organizations. The meta-analysis revealed that female leaders were more transformational than male leaders and also exceeded male leaders on one component of transactional leadership—namely, contingent reward behaviors, which consist of rewarding subordinates for doing a good job. Women particularly exceeded men on the transformational dimension of individualized consideration, which pertains to developing and mentoring followers. In contrast, men were more likely than women to display two other aspects of transactional leadership: active management by exception, which is attending to followers’ mistakes and failures to meet standards, and passive management by exception, which is waiting until problems become severe before attending to them. Men, more than women, also displayed *laissez-faire* leadership, which entails being absent and uninvolved during critical junctures.

These differences between male and female leaders were small, showing that gender is only a weak predictor of the behavior of individual leaders. Nonetheless, the differences obtained were consistent across various ways of analyzing the data. In

fact, in 82 percent of the available comparisons, women proved to be more transformational than men. The favorable implications of these findings for female leaders are shown by an earlier meta-analysis conducted by organizational behavior experts Kevin Lowe, Galen Kroeck, and Nagaraj Sivasubramaniam examining the effectiveness of these leadership styles. The styles that were positively related to effectiveness (transformational leadership and the contingent reward aspect of transactional leadership) were found by Eagly, Johannesen-Schmidt, and van Engen to be manifested relatively more by female leaders than male leaders, whereas the styles that were unrelated or negatively related to effectiveness (active and passive management-by-exception and *laissez-faire* leadership) were found to be manifested relatively more by male leaders than female leaders.

In summary, research has established some small gender differences in the behavior of male and female leaders. Specifically, women tend to be more democratic and less autocratic than men, a difference that probably does not yield an overall advantage for either gender. More consequential for effectiveness are women’s tendencies to engage in more behaviors deemed transformational and to deliver more rewards for followers’ good performance. These behaviors have been associated with enhanced effectiveness across a wide variety of settings. Consequently, empirical research does not support the idea that the leadership styles of women account for their lesser success in rising into higher-level leadership positions.

Also potentially relevant to women’s lesser occupancy of elite leadership roles are gender differences in human capital investments, such as education, training, and work experience. Traditionally social scientists argued that women’s lesser human capital in terms of lower levels of education, training, and work experience produced their lesser access to workplace authority and higher wages. However, sharp increases in women’s human capital investments in industrialized nations, especially in education, have lessened these differences, although not eliminated them. In any event, human capital differences are insufficient to explain women’s lesser ascendance in view of findings showing that women receive substantially smaller gains in workplace

Hopkins v. Price Waterhouse (490 U.S. 228)

A court case showed that a woman of unquestioned task competence was denied partnership in an accounting firm essentially on the basis of her non-conformity to the female gender role. In 1982, Ann Hopkins was proposed for promotion to the rank of partner at Price Waterhouse, one of the largest accounting firms in the United States, along with eighty-eight male candidates. As indicated by Susan Fiske, Donald Bersoff, Eugene Borgida, Kay Deaux, and Madeline Heilman in their article on the case, "She had more billable hours than any other person proposed for partner that year, she had brought in business worth \$25 million, her clients praised her, and her supporters recommended her as driven, hard working, and exacting." Instead of being promoted for her accomplishments, she was denied partnership because "she had interpersonal skills problems," "overcompensated for being a woman," and needed a "course at charm school." Although Hopkins may have shown all of the behaviors that are required of a successful partner in this firm, exactly these behaviors caused trouble because they violated gender-role prescriptions of feminine niceness and passivity. The amicus curiae (friend of the court) brief submitted by Fiske and the others helped Hopkins to win her *Hopkins v. Price Waterhouse* court case.

authority than men do for similar human capital investments, as established in a review by sociologist Ryan Smith.

PREJUDICE AGAINST FEMALE LEADERS

Prejudice against women as leaders is at least partially responsible for the lack of women in higher-level leadership positions. Prejudice arises because people's general ideas about what a manager or a leader is like do not fit their ideas about women as well as they fit their ideas about men. This inconsistency can be analyzed in terms of social roles of women, men, and leaders, when *roles* are defined as "socially shared expectations regarding the typical

behaviors of members of social class or group. These role expectations are called "descriptive" because they indicate what behaviors members of a particular social category might exhibit. Role expectations are also called "injunctive" because they incorporate consensual expectations about what group members ideally should do.

Gender roles are socially shared beliefs about the typical attributes of women and men. According to social role theory (as presented by Eagly and social psychologists Wendy Wood and Amanda Diekmann), these roles emerge from the societal division of labor between the genders—that is, from the typical social roles of the genders. The underlying principle is that perceivers infer that people's actions tend to correspond to their inner dispositions, a cognitive process that has been labeled "correspondent inference" or "correspondence bias." Specifically, the communal, nurturing behaviors required by women's domestic and child-care roles and by many female-dominated occupational roles favor inferences that women do possess and should possess communal traits. Similarly, the assertive, task-oriented activities required by many male-dominated occupations and the breadwinner family role produce expectations that men do possess and should possess agentic traits, such as unselfishness, concern for others, and expressiveness, as well as traits such as masterfulness, self-assuredness, and instrumental competency.

In general, prejudice in the workplace may arise from the inconsistencies people perceive between particular workplace roles and the attributes ascribed to individuals based on their group membership. Most leadership roles are characterized primarily by agentic attributes and are therefore incongruent with the predominantly communal characteristics ascribed to women. Although it might seem that gender should be irrelevant in the workplace, it spills over to affect perceptions of employees. The resulting incongruity of the female gender role and leadership roles leads not only to decreased expectations that women can be successful leaders, as shown in management expert Virginia Schein's research, but also to less favorable evaluations of leadership when it is enacted by a woman compared with a man, as

shown in many studies that were summarized by Eagly and social psychologist Steven Karau in 2002.

Several types of research have shown that women have lesser access to leadership roles than do men. For example, economist Joyce Jacobsen's review showed that most studies of actual wages and promotion supported the claim of discrimination against women in general and female managers in particular, albeit on a decreasing basis over the years. As shown in a meta-analysis by industrial/organizational psychologists Heather Davison and Michael Burke, experiments in which participants evaluated female and male job applicants who were experimentally equated supported the narrower claim of prejudice as a disadvantage for women in relation to male gender-typed positions, which would include most leadership roles. Other studies, such as those by sociologist Martha Foschi, showed that women usually have to meet a higher standard to be judged as being competent and possessing leadership ability and that agentic behavior tends not to produce as much liking or influence for women as for men, without special circumstances (e.g., adding communal behavior to an agentic repertoire, as shown by social psychologist Linda Carli). In addition, Eagly and Karau's 1991 meta-analysis demonstrated that it is generally less likely that women emerge as leaders in groups, especially if the group's task is not particularly demanding of interpersonal skill or is otherwise relatively masculine.

Research also has substantiated the prediction that women have more obstacles to overcome in becoming successful in leadership roles. Specifically, as demonstrated in a meta-analysis by Alice Eagly, Steven Karau, and social psychologist Mona Makhijani, studies of leaders' effectiveness showed that leaders performed less effectively when the leader role that they occupied was incongruent with their gender role. Women suffered diminished outcomes in roles given especially masculine definitions, and men suffered somewhat diminished outcomes in roles given more feminine definitions. As shown in a meta-analysis by Alice Eagly, Mona Makhijani, and social psychologist Bruce Klonsky, more definitive support emerged in an experimental research paradigm that removed possible differences in the lead-

ership behavior of women and men by equating this behavior. More definitive support emerged in an experimental research framework that removed possible differences in the leadership behavior of women and men by equating this behavior. These studies can make a stronger case that prejudice—not other factors—produces disadvantages for women in leadership roles. In these studies women fared slightly less well than men did. More important, just as in studies on leaders' effectiveness, women fared less well than men did when leader roles were male dominated or given especially masculine definitions and when men served as evaluators. Also lending plausibility to the role-incongruity theory of prejudice are the particulars of sex discrimination cases that have been brought to trial.

In summary, threats to female leaders come from two directions: Conforming closely to their gender role would produce a failure to meet the requirements of their leader role, and conforming closely to their leader role would produce a failure to meet the requirements of their gender role. The latter threat can result in the prejudicial outcome of receiving lesser rewards for appropriate leader behavior than an equivalent man would receive. In this sense female leaders face challenges not encountered by male leaders, especially in leadership roles that are defined in relatively masculine terms.

PROSPECTS FOR WOMEN IN LEADERSHIP

Despite prejudice, women are rising into elite leadership roles around the world. Although the pace of the rise has been slow, there is discernible acceleration. For example, as management expert Nancy Adler documented, the majority of the women who have ever served as presidents or prime ministers of nations came into office since 1990, and women are leading some large corporations such as Hewlett-Packard in the United States and Pearson in the United Kingdom. Thus, unmistakably women are rising, not merely into lower and midlevel managerial roles but also into leadership roles at the tops of organizations and governments.

What changes have enabled some women to rise into leadership roles that women have rarely occupied

Maria Liberia-Peters, Netherlands Antilles Prime Minister, 1984–1986, 1988–1993		Mireya Elisa Moscoso de Arias, Panama President, 1999–
		Vaira Vike-Freiberga, Latvia President, 1999–

during other historical periods? Consistent with the idea that prejudice arises from incongruity between the female gender role and leader roles, three reasons are proposed for women's increasing presence in leadership roles at the highest levels. First, evidence indicates that gender differences in a number of psy-

chological variables relevant to workplace roles have declined together with the rise of female labor participation. More specifically, as women have shifted a large portion of their domestic labor to paid labor, they assume characteristics required to succeed in these new roles. As summarized by Eagly and Linda

Carli, research conducted primarily in the United States has documented the erosion of gender differences in, for example, career aspirations, assertiveness, risky behavior, the tendency to merge as leaders, and values placed on job attributes. Second, leadership roles have become defined somewhat more in terms of stereotypical feminine characteristics than was the case some decades ago. Leadership roles have been feminized in the sense that managerial experts emphasize employee empowerment, participatory decision making, and team-based leadership skills that are consistent with the communal attributes typically ascribed to women. This new emphasis reflects organizational environments that are increasingly confronted with rapid technological changes, diversity in the workforce, and weakening of geopolitical boundaries. Third, women leaders have found ways to lead that finesse the remaining incongruity between leader roles and the female gender role. Consistent with reasoning presented by social psychologist Janice Yoder, transformational leadership—a style that is neither particularly feminine nor particularly masculine, yet highly appropriate for leaders—may be especially advantageous for female leaders because it does not elicit the resistance that women tend to encounter when they proceed with behavior more typical of men.

In conclusion, the outlook for women's participation in leadership in the twenty-first century is promising as more women enter leadership roles in industrialized nations and thereby reduce the mismatch between people's beliefs about women and about leaders. Furthermore, organizations gain from giving women equal access to leader roles, not only because evidence shows that women are at least as effective as men, but also because gender fairness increases the pool of potential candidates from which leaders are chosen.

WOMEN AND POLITICAL LEADERSHIP

“If particular care and attention is not paid to the ladies, we are determined to foment a rebellion and will not hold ourselves bound by any laws in which we have no voice, or representation,” wrote Abigail Adams (1744–1818) to her husband, John (1735–1826), when he was attending the Second Continental Congress in 1776. Her admonition went unheeded, however, and women today still lack equal representation in most local, state, or national governments. This absence of women in political leadership roles also extends around the world.

DEFINING WOMEN’S POLITICAL LEADERSHIP

Perhaps the most prevalent definition of political leadership is offered by James MacGregor Burns. In Burns’s opinion, political leadership is defined by the power a leader exercises through his or her relationships. The people with whom the political leader interacts, and how he or she interacts with those people, become essential in defining the strengths and weaknesses of any political leader.

Admittedly, Burns’s definition is a nebulous one, but political leaders play an identifiable role in society. They include elected officials from mayors to senators, and non-elected officials such as interest group officers and party activists; they are often stereotyped as out-of-touch, middle-aged, white men. Until recently, cultural mores perpetuated this stereotype by holding women subservient to men. Women were unwelcome in the boardroom and the legislature alike, and were thus unable to build the necessary relationships to accrue the power to lead in American society. Only since the 1960s have women political leaders been able to create social change from within American governmental institutions.

FIRST EFFORTS AT POLITICAL LEADERSHIP

The first women political leaders got their start during the antislavery movement. In spite of traditional ideologies that frowned on women holding public

office, let alone speaking in public, the Grimké sisters in the South and Northern Quakers including Lucretia Mott (1793–1880), publicly denounced the evils of slavery. In fact, when Mott and Elizabeth Cady Stanton (1815–1902) traveled to England with their husbands in 1840 to attend a meeting of the World Anti-Slavery Society, they were shocked when they could not participate as delegates. Instead, banished to the balcony, they reflected on their status vis-à-vis the slaves they were trying to free and vowed to hold a convention to address women’s unequal treatment in all spheres of life.

When this meeting was finally held in 1848 in Stanton’s hometown of Seneca Falls, New York, over 240 women responded to their call. This convention, which has come to be known as the Seneca Falls Convention, yielded a Declaration of Sentiments modeled after the Declaration of Independence and a series of resolutions demanding greater social, religious, and civil rights for women. One of the rights the delegates to the Seneca Falls Convention viewed as most important was the franchise. Without the right to vote, the delegates realized, women’s voices would never be heard in the halls of government.

The meeting at Seneca Falls and the subsequent formation of groups such as the National American Woman Suffrage Association and the American Woman Suffrage Association, which ultimately joined forces to become the National American Woman Suffrage Association (NAWSA) in 1890, immensely broadened opportunities for women’s political leadership. These events also led to the creation of a new cadre of women political leaders, including Stanton and Susan B. Anthony (1820–1906), who led the women’s movement through the rest of the nineteenth century.

BATTLE FOR SUFFRAGE

By the early 1900s, women on both sides of the Atlantic began to press for the right to vote in earnest. In Great Britain, the move for suffrage was led by Emmeline Pankhurst (1858–1928) and her daughters Sylvia (1882–1960) and Christabel (1880–1958). Because of Britain’s unitary system of

government, the British suffrage movement was able to target a single source of political power, the Parliament, in seeking the franchise.

In the United States, with its federal system, however, at least until around 1915, the drive for woman suffrage was focused largely on winning the right to vote in each of the individual states. Because the suffragettes were better organized on the national level, they found the state-by-state battle to be a challenge; in the United States, well-organized, visible interests such as the Roman Catholic Church were mobilized to try to stop the efforts of women's rights activists.

Around 1915, leaders of the American suffrage movement shifted their focus. Spurred on by Alice Paul (1885–1977), who had recently returned from a stint working in the nationally focused British movement, the NAWSA began to demand a federal constitutional amendment to enfranchise women. Around the same time, the General Federation of Women's Clubs endorsed woman suffrage, recognizing that the widespread reforms inspired by the progressive movement would be far easier to attain if women had the political clout of the franchise. These women, however, rarely spoke of the need for women political leaders, and instead wanted suffrage more to do good for society than to increase opportunities for women.

AFTER SUFFRAGE

The ratification of the Nineteenth or Susan B. Anthony Amendment, which gave women the right to vote in the 1920 state and national elections, was a hard-won victory for a generation of women political leaders. Following this victory, however, the

President Barbie

(ANS)—The two major political parties may not have taken her bid for the nomination seriously, but that hasn't dissuaded promoters of Barbie for President from thinking their cause isn't good or just. Introduced a few months ago by the toy manufacturer Mattel, Barbie President 2000 aims to teach girls that anything is possible—it just may take a little while longer.

"Although a woman is not on the GOP's presidential ticket, more female leaders than ever before were part of the conversation on potential vice-presidential candidates," said Marie Wilson, president of the White House Project, a nonpartisan group working to promote women as leaders.

The group partnered with Mattel to develop and publicize the new doll. It's an odd marriage between those advocating for women's rights and a company that has made a fortune manufacturing what many feminists have come to view as the most sexually stereotypical doll ever to grace a toy counter. But project members say their action is simply pragmatic in light of the dolls' historic popularity.

"Girls nationwide own an average of eight Barbies," Wilson pointed out. "Since Barbie is such a large part of girls' lives, we want to be there with a message that encourages them to become tomorrow's leaders."

Since her inception in 1959, Barbie has had 75 careers, including World Cup soccer player, surgeon, diplomat, racecar driver and astronaut—all complete with matching outfits, of course.

President Barbie comes dressed in a blue suit but also has a red evening dress and matching shoes to wear to those White House state dinners. Also included in the package is a Girls' Action Agenda, with ideas for parents on supporting their daughter's leadership development, and a copy of the Girls' Bill of Rights.

The doll is part of the group's Pipeline to the Presidency initiative, which also involves a women's history curriculum, "Welcome to the White House, Ms. President!" and research into the barriers and opportunities confronting female political leaders.

"With the presidential election on the front pages, the timing couldn't be better to start a dialogue between girls and their parents about women's leadership," said Wilson.

leaders of NAWSA were left with no cause to advocate. In an attempt to broaden the political power of women in America, many of NAWSA's leaders founded the League of Women Voters, a nonpartisan, good-government organization. A major task of the league was to encourage voter turnout and provide the electorate with the information they needed to make informed electoral choices.

Despite the league's encouragement, few women rushed to become active participants in American democracy. This is likely because women, who had been denied political power for more than three

hundred years, simply were not socialized to vote or run for public office. Interviews with women non-voters in 1923 prove this theory, as many women stated that it was not their civic duty to vote. More than 10 percent of those surveyed believed women should not vote at all.

Moreover, once public opinion polling became common in the 1930s, it was clear that the road for women seeking political power would be a difficult one. At a time when only a handful of women held elective office, 60 percent of those polled rejected the notion that “we need more women in politics” (McGlen and O’Connor 1983, 84). More than half were opposed to the idea of a woman governor or senator. And, when asked in 1937 if they would vote for a qualified woman for president, only 27 percent of men and 40 percent of women answered affirmatively.

The public was not opposed to all forms of women’s political leadership. Nearly half of those polled during the 1930s, 1940s, and 1950s said a woman would be preferred to a man as the head of the local Red Cross chapter or Parent Teacher Association. The public supported women in these positions because they were extensions of women’s primary roles as mother and homemaker.

Still, some women held elective office during the 1930s, 1940s, and 1950s. The most common route to these positions was a practice known as “over his dead body,” where widows were appointed to serve the remainder of their husband’s terms, usually in state or federal legislatures. However, a small num-

ber of women, including actresses Helen Gahagan Douglas (1900–1980) and Clare Booth Luce (1903–1987) won seats in the U.S. House of Representatives. Their actions paved the way for other women to run in their own right.

THE WOMEN’S MOVEMENT

Just as a generation of women became politically active during the antislavery movement, the U.S. civil rights movement of the 1960s created a new generation of women political leaders. Although these women still were not regarded as equal participants in American life, the women of the 1960s had greater liberties than their predecessors. For example, access to more reliable contraceptives, including birth control pills, freed these women from the fear and consequences of unplanned pregnancies as well as many of the childcare responsibilities that women growing up in earlier eras had experienced.

Spurred on by their greater freedom, as well as other events, including the publication of Betty Friedan’s *Feminine Mystique*, the release of President John F. Kennedy’s Commission on the Status of Women’s report *American Women*, and the passage of the Equal Pay Act in 1963, women began to become politically active. Society, too, became aware of the pervasive discrimination women faced in all walks of life, and the women’s movement of the 1960s officially began with the founding of the National Organization for Women (NOW) in 1966.

Newly liberated women who were interested in politics also began to become involved in political party activities. Although these women largely performed mundane tasks such as coordinating political mailings, their support during an era of declining political machines allowed women to create the relationships necessary to run for local, state, and national office.

The increase in politically active women becomes evident when we examine the growth in the number of women legislators. In 1969, only 4 percent of all elected legislators were women. However, a change in attitudes about women in political leadership roles, especially among the educated elite, occurred

between 1967 and 1975. By 1985, 15 percent of all legislators were women.

WOMEN FORM POLITICAL ORGANIZATIONS

Some of the dramatic change in the attitudes toward women in political leadership roles can also be attributed to the growth of organizations dedicated to increasing the number of women in elected and appointive positions of political leadership. For example, one of the first African-American women to serve in Congress, Shirley Chisholm (1924–), joined forces with Gloria Steinem (1934–), Betty Friedan (1921–), and Representative Bella Abzug (1920–1988), to form the nonpartisan National Women's Political Caucus (NWPC) in 1971. The caucus's major goals included increasing support for women running for positions of political leadership, reforming political party structures to ensure equitable representation of women, publicizing women's issues at stake in local, state, and national elections, and monitoring the selection of women as delegates to presidential nominating conventions. Although nonpartisan, the caucus immediately created Democratic and Republican Task Forces to press the parties for better treatment of women in the political process. Later, the NWPC also joined an ad hoc coalition of women's groups to press President Jimmy Carter (and subsequent presidents) to appoint more women to leadership positions.

WOMEN BEGIN TO RUN FOR OFFICE

The women elected to the House of Representatives in the late 1960s and early 1970s were among the first to run as women. They "did not derive their public authority through the instrumentality of a man. Neither were they social mothers, as public women of the early twentieth century had (largely) been" (Witt, Paget, and Matthews 1994, 48). Although there were only fourteen women in the House in 1973, many of these women, including Patricia Schroeder (1940–), Elizabeth Holtzman (1941–), and Margaret Heckler (1931–), quickly took the lead in advancing women's issues. In fact, shortly after the election of President Carter, in 1977, women in the U.S. House of Representatives, bowing to pressure from

If you just set out to be liked, you would be prepared to compromise on anything at any time, and you would achieve nothing.

—Margaret Thatcher

women's groups including NOW and the NWPC, formed the bipartisan Congressional Women's Caucus. Fearing that some of the older women in the House might be reluctant to join, its founders agreed that the caucus would take no positions on any issues for which there was not unanimous agreement.

Women in several state legislatures also began to organize into bipartisan caucuses. This cadre of women, along with the newly elected women in the House during the 1970s and 1980s, provided young women with new role models. The creation of caucuses also helped bridge the gap between descriptive (simply being a woman) and substantive (representing women's interests) representation. These women not only became political leaders but also took the lead in advancing women's issues in state and the national legislatures.

CHANGES IN PUBLIC PERCEPTIONS

It was not until 1992, however, that women made significant inroads into national positions of political leadership. In what became known as the Year of the Woman, the number of women members of the U.S. Congress increased from 29 in 1991 to 48 in 1993. Since then, the number of women serving in the U.S. Congress has continued to increase each year.

In addition to a continuing revolution in public attitudes toward women in political office, the gains of the Year of the Woman were prompted by several events. First, the end of the Cold War led to a shift in national attention from foreign to domestic concerns, such as education and health, which long had been considered the domains of women. In addition, a congressional banking scandal forced many male members of Congress to retire, resulting in elections without incumbents, which are often easier for women candidates to win. Perhaps most importantly, the confirmation hearings in the early 1990s

Female Power in Ancient Okinawa

The following extract of text from a study of religion on Okinawa indicates that, in the past, women on this island may have had more power than women in almost any other society in history.

The political significance of the female religious specialist in Okinawan culture shows an interesting parallel to that in early Japan. Until Haneji's tenure as prime minister (1666–1696), when he reduced the chief priestesses to a rank below that of the queen, the ruler and chief priestess were at least coequal in rank. There are indications, however, from early history, religious songs, and accounts of Chinese and Japanese visitors that the female religious specialist may once have ranked above her male counterpart. Sakima, who investigated a number of these early sources, expresses the belief that the ultimate authority regarding control of the state rested with the chief priestess and that the male ruler merely exercised control in her behalf. He notes that a Chinese visitor to Okinawa in 1606 stated that in ancient Okinawa the chief priestess stood above the king in rank. Apparently, troops were sent to battle in the name of the chief priestess, not that of the king. There is evidence also that matters of justice were often entrusted to these women. A Buddhist monk from Satsuma who stayed on Okinawa for six years sometime during the period 1573–1592 observed that the power to decide and punish crimes was held by priestesses and related that on one occasion they employed a poisonous snake to dispatch a robber whom they had convicted. It was apparently this state of affairs that led a Chinese traveler in 1683 to assume that there were no courts of law, since he observed no male judges. Sakima recalls that, until recent years, in the more isolated areas of Okinawa the *nuru* was asked to

determine a man's guilt by lifting the *bijuru* stone; if it felt heavy, he was declared guilty, if light, not guilty. Taich also stated that the priestesses were the guardians against crime and that they meted out justice with a vengeance. Some feeling that the *nuru* held a sacro-temporal power still persists; several aged informants likened her role to that of a policeman and stated that it was the practice of gentry officials to confer with her whenever there was crime or disorder in the village. Sakima sees the priestesses of early Okinawa as possessed of an unlimited spirit power (*reiriki*, the same characters which

The history of Okinawa, particularly from the sixteenth or seventeenth century, reveals a steady reduction of the powers once held by these women. Undoubtedly, contact with China, which became regular from the late fourteenth or early fifteenth century, brought the influence of Confucianism and its stress on the superiority of males, and the penetration of Japanese Buddhism (dating from the late sixteenth and early seventeenth centuries), emphasizing the ancestral cult through the male line, contributed significantly toward establishing a political climate favorable to curbing the power of the priestesses. Thus, in 1650 Haneji wrote in the *Chuzan Seikan* that a government based on a religious belief which left its direction to females would be in disorder; when he subsequently became prime minister, a number of measures were instituted toward curtailing their powers and disassociating them from active participation in political affairs.

for Supreme Court Associate Justice Clarence Thomas (1948–) reminded Americans of the discrimination women faced in society. When law professor Anita Hill (1956–), a former employee, charged that Thomas had sexually harassed her, the entire nation watched a very hostile, all-male Senate Judiciary Committee grill Hill. Women were especially outraged, and many began to work toward electing more women to positions of political leadership. EMILY's List, a prochoice Democratic women's political action committee, which was founded in 1986 after Geraldine Ferraro's unsuccessful bid for the vice presidency, experienced an

extraordinary increase in contributions. This new money allowed EMILY's List to train more potential candidates and campaign workers in 1992.

The efforts of EMILY's List and other candidate training programs have increased the number of women in positions of legislative leadership in the United States. However, the disparity between men and women in other sectors of government is more severe. This problem is especially significant within the executive branch of state governments, since four of the last five presidents were elected after serving as governor.

One group working to increase the number of

women in executive leadership positions is The White House Project. This non-partisan group was first conceived at a 1997 dinner party hosted by Boston philanthropist Barbara Lee. At the time of this party, which was themed “Why Not a Woman,” many other democracies, including Britain, India, and Israel, already had elected women prime ministers or presidents. America’s failure to elect a woman president struck Lee, who joined forces with Marie Wilson, head of the Ms. Foundation for Women, and Laura Liswood (1950–), founder of the Council of Women World Leaders, to formally launch the Project in June 1998.

The White House Project began to promote the idea of a woman president almost immediately. The most visible example of the project’s work occurred in concert with the 2000 presidential election. The White House Project worked with national media outlets including *Parade* and *Glamour* to allow Americans to vote for potential woman presidential candidates from a list of twenty qualified women. Although this election was not real, it helped to socialize women to the idea of running for positions of political leadership. And, at least in the short run, the project’s efforts seem to be achieving positive results. Record numbers of women ran for governorships in the 2002 elections and more were elected than ever before.

The White House Project and EMILY’s List are also urging scholars and politicians to explore the effect of electoral structures on the representation of women in elected leadership positions. Proportional representation and system-wide quotas, such as France’s 50-percent law and Argentina’s requirement that at least 30 percent of all party candidates be women, are being explored as solutions to the underrepresentation of American women in the most visible political leadership roles.

The need for more women in positions of political leadership has also been noted by the United Nations. At the Fourth World Conference on Women, held in Beijing in 1995, 189 governments agreed to take measures to ensure women’s full access “to power structures and decision making to increase women’s capacity for decision making and leadership” (The White House Project 2003, 27).

CONSEQUENCES OF WOMEN IN POLITICAL LEADERSHIP

Beyond the simple question of gender equality, we must ask what women political leaders bring to governance that their male counterparts cannot. Though this answer is controversial at best, political science research has shown that having women in positions of power improves the substantive representation of women and women’s issues. And, while some may disagree with the assertion that women speak “in a different voice,” this view is strongly supported by researchers, who have found that women are more likely to use power for a desired end as opposed to gaining power for power’s sake.

WOMEN AS POLITICAL LEADERS IN STATE AND NATIONAL LEGISLATURES: A CASE STUDY

Significant research by political scientists indicates that the presence of women political leaders in legislatures makes a significant difference not only in what gets discussed, but also in what kinds of legislation are advanced. These findings make a powerful case for the difference women could make in other branches of government.

Generally speaking, women in legislatures are more willing than their male counterparts to work in a bipartisan fashion. Women in leadership roles also utilize a more integrative leadership style, characterized by a tendency to reach out to others, make collaborative decisions, and educate colleagues. For example, when women chair committees, they generally attempt to facilitate interaction between committee members, witnesses, and others in attendance. In contrast, men are more likely to be aggregative leaders, who have a strong belief in majority rule and a self-interested citizenry. When a male member chairs a committee, he is often the dominant and controlling force in the room.

Integrative leadership also tends to translate into greater success for women legislators. For example, bills sponsored by women or indicated to be a priority among women tend to have a slightly higher pass rate than other legislation. Women also conceptual-

ize problems differently than men, making them more likely to offer solutions their predecessors have not considered.

PROSPECTS FOR THE FUTURE

If our society wants to continue increasing the number of women in positions of political leadership, we must socialize young women to become active participants in society and government. Moreover, existing women leaders must work to change the pervasive perception that political leaders are exclusively old, white men.

The recent election of Representative Nancy Pelosi (D-CA, 1940–) to the position of House Minority Leader is an encouraging step toward reducing the barriers that have prevented women from becoming political leaders. However, this success should not disguise the amount of work that remains before all women are able to build the relationships essential to the exercise of power and effective leadership.

WOMEN AND SOCIAL CHANGE LEADERSHIP

Women have often been in the vanguard of peace and social justice movements. Across cultures and throughout history, women have experienced ongoing systemic oppression; and they have responded with progressive movements of protest and creative alternatives: Harriet Tubman in the fight against slavery; Fannie Lou Hamer for voting rights; Ella Baker and Mary White Ovington in the civil rights movement; Rosa Luxemburg in the German socialist movement; Winnie Mandela in the anti-apartheid movement; Puerto Rican independence leader and poet Lolita Lebron; and American Indian movement activists Anna Mae Aquash, Ingrid Washinawatok, and Winona LaDuke. Women have pioneered in movements for labor rights, prison reform, reproductive rights and health, education, affordable housing, affirmative action and equal rights, human rights, and environmental safety: Mother Jones, Angela Davis, Vandana Shiva, Jane Addams, Dolores Huerta, Bella Abzug, Emma Goldman, Eleanor Roosevelt, Rachel Carson, Leslie Cagan, Wilma Mankiller, and Helen Rodriguez Trias, among others. These women's leadership styles span a range from soft to harsh, from wielding individual, hierarchical power to possessing a commitment to collectivism, and from identifying as "woman as caretaker of life" to woman as requiring and utilizing equal power to man. There is no one characteristic that applies to all women as social change leaders.

In the United States and the majority of other countries, a woman has never been president; men still dominate the economy. These factual sociological, economic and political conditions have a direct impact on what projects women organize and lead.

WOMEN'S ISSUES

Women have often organized as women, pushing to the forefront issues commonly identified as women's issues or feminist issues, always encased by the realities of class, race, and individual identity. For example, access to water, an issue for women in one part of the world, is not always considered as such among a different class group where the defining question for women might be identified as equal pay/equal rights, affirmative action, or reproductive choice.

There are those who are known publicly, who have written, spoken, been written about, named here and elsewhere, but it is always the unnamed many who make leadership and change real: the women working day in and day out, in the midnight hours after the children have been fed, or not fed, put to bed, the laundry done, as writer Tillie Olsen spoke of—writing at the ironing board. Most are never heard of publicly, yet they take unimaginable risks and redefine the world, just doing what they feel they must, breaking down walls, walking through dangerous fires, overcoming mighty physical, economic, social, and emotional obstacles to "fix the world," as a child described the globe she carried that needed patching, at the 15 February 2003 peace demonstration in New York City.

Ultimately, any obstacle to the fair treatment of women and girls—access to water, health, and safety—is a woman's issue and a human rights issue. Increasingly, any challenges to social and economic justice are understood as connected by the women's movements for peace and human rights. Some movements focus exclusively on issues directly affecting women. Since gender comes first in their analysis, they are primarily feminist or "womanist" in their actions and priorities. Women who have led in the arena of women's issues first include Gloria Steinem, Flo Kennedy, Margaret Sanger, and Nawal Sadawi of Egypt. These issues include reproductive rights, equal rights (ERA/U.S.), and domestic and gender violence.

There has always been the challenge of developing a truly race- and class-inclusive movement of women, which would by definition address gender *and* race *and* class, and pay full attention to the different realities faced by women from different

ethnic, cultural and economic backgrounds. It is the leadership of women of color and some “white” women that has consistently broadened the understanding of women’s struggles to embrace pragmatically and in spirit the challenges faced by women who have lived racism and poverty.

In many places around the world, where people are struggling for national liberation from brutal dictatorships and occupations, there is continuous debate about the level of priority of gender, or women’s rights, in the context of the national struggle for freedom, human rights, and equality. Putting aside the debate on the priority of gender rights in these struggles, the key fact in the discussion is that women and girls, who make up more than half the world population, continue to be threatened by systemic forms of violence and oppression every day, in every part of the world.

NEW PARADIGMS FOR LEADERSHIP

There are women who have worked for equal rights. Their struggle was based not on a quest for a different set of values and approaches, but on access to what had historically been denied women. Then, women who question the status quo male power in the dominant culture, and the way that power works believe that women must redefine power and create new paradigms for leadership toward different outcomes. These questions run through any historical discussion about women’s leadership and movements:

- What is a women’s movement?
- What is “feminist” or “womanist,” and does feminism speak to the needs of all women?
- What role does a women’s movement play in a national progressive movement for economic justice, equality, peace, and human rights?
- What are the characteristics of women’s leadership that contribute to a more whole perspective on social change?

At the United Nations, women have successfully campaigned for the principle that women’s rights are human rights, as are civil rights. This is not a new

post–Cold War effort. Fannie Lou Hamer, who led a campaign for voting rights for African-Americans in the 1950s and 1960s, is remembered as saying: “I don’t want no equal rights. I want HUMAN rights!” Thus, women have historically insisted on the unity of civil rights, human rights, women’s rights, and the struggle for economic justice has been defined by women’s influence and leadership.

Phrases like “the personal is the political” and “everything is connected” emerged from the women’s movement of the 1970s, when women leaders insisted that the needs and wants of the whole person in society be reflected in public policy and introduced the concept of wholeness and the common good. The ongoing contribution of women to global, national, and community politics and the embrace of connectedness as a worldview represent one of the most significant victories in the transformation of the struggle for human rights worldwide. Women have created new language for social justice movements and public conversation.

As we contemplate the twenty-first century, we are emboldened by a powerful international movement of nongovernmental organizations confronting governments and established ruling classes. The recognition of women’s rights as human rights effectively gained credibility at the international level at the UN World Conference on Human Rights in Vienna, 1993, due largely to the work led by Charlotte Bunch of the Center For Women’s Global Leadership at Rutgers University in the United States, and including the leadership of Betty Murungi of Kenya; Magalys Arocha, Cuba; Myrna Cunningham, Nicaragua; Tarcila Rivera, Peru; Viviana Figueroa, Argentina; Lepa Miedjenovic, Serbia; Loune Viaud, Haiti; Vivian Stromberg of MADRE, United States; Lucy Mullenkei, Kenya; Gladys Acosta, Peru; Pam Spees, United States; Rhonda Copelon of the City University of New York Law Center; and the late Bella Abzug. These advocates, attorneys, and scholars have successfully campaigned on many issues, for example, that rape and violence against women be recognized as war crimes.

Throughout history, movements of women or led by women have sprung up organically and urgently in response to crises. Lois Gibbs, a working-class

housewife and mother, led the struggle to clean up Love Canal because of the danger to her children's health. Karen Silkwood, a worker at a nuclear facility, brought the danger of low-level radiation to a dramatically new level of consciousness. She was killed as she drove to meet a reporter with information she dared to release. It was Crystal Lee Sutton who led the union struggle at J. P. Stevens, outraged by her own experience of inequality and abusive working conditions. It was Rosa Parks who sat in the front of a bus, sparking a new phase in the freedom movement in the United States in the early 1960s.

In the beginning of the twenty-first century, in New York City, it is predominantly young women who work to end sweatshop labor in lower Manhattan, nearly a century after the Triangle Shirtwaist Fire, because they are still subjected to brutal working conditions.

In Argentina, El Salvador, South Africa, Israel, Palestine, and throughout the world, mothers have often been the most powerful advocates for peace and human rights driven by a basic, poignant demand for their children who have "disappeared," or been tortured or killed, appealing to the moral conscience of the world. During the Vietnam War, it was Women Strike for Peace, Women's International League for Peace and Freedom, and the Gold Star Mothers who pierced the propaganda and spoke to Americans about the horror of the war.

In the United States, slave revolts were led by family members and especially by mothers and daughters. Sojourner Truth and Harriet Tubman were the most famous but not the only heroes of slave resistance. Today, the mothers of "disappeared" chil-

Take the Lead! Summit

SOUTH HADLEY, Mass. (ANS)—When 33 teen-age girls from high schools around the country meet this weekend to work on solutions to social issues, they won't be shrinking from some hard challenges. On the agenda are problems including police brutality in New York City, low voter turnout, homophobia, racial segregation in the New Orleans public school system, recycling on the Hawaiian island of Maui and streetlight pollution in the Rocky Mountains.

And that's only a partial list.

The 33 young women meeting Oct. 12 through 15 at Mount Holyoke College were chosen to participate in the Take the Lead! Summit from a pool of 600 nominees and 300 applicants from around the country.

They were selected on the basis of their potential for leadership as demonstrated by their academic, extracurricular and community involvement, as well as their insight and motivation, said Patricia Vandenberg, director of the summit. "These are women who are interested in being agents of change in our society," said Vandenberg.

Teen-agers attending the Take the Lead! Summit will work on creating an action plan to solve a community problem of their choice. "We want to teach and inspire them," Vandenberg said. "They will have mentors and will feel part of a network of women who are making a difference in the world."

The three-day workshop aims to build leadership skills among these junior high school women and help them develop a plan to bring home that will help them tackle a social problem. Workshops and exercises, ranging from negotiating skills to publicity, public speaking and fund raising, are designed to give students the skills they need to make their project a reality.

Each student will have a mentor, a college-age woman who has received training from Mount Holyoke's Weismann Center for Leadership, and remain in touch with her mentor throughout the duration of the project, which could last six months or more. The college will award \$500 to three completed action projects.

The importance of the workshop, Vandenberg pointed out, is catching young women with an inclination to leadership before they lose confidence in themselves, a common phenomenon among junior high and high school young women. "We hope to make this an annual event so we can hone these women's abilities and concepts of themselves as being powerful agents of change in the world," she said.

dren and mothers against police violence and state tyranny lead the way to new movements for justice.

It would be a serious mistake to characterize the contribution and leadership of women in social change movements as based solely on the "moral power of mothers." Historically, women leaders for progressive social change have combined scholarship, analytic depth, and strategic and creative power with

Let us labor to acquire knowledge, to break down the barriers of prejudice and oppression, believing, that if not for us, for another generation, there is a brighter day in store. . . .

—Charlotte Forten

the willingness and ability to recognize and connect with moral and emotional vision and choices.

One profound characterization of women's leadership is illuminated by the words of poet Alexis De Veaux (SUNY, Buffalo), who said when speaking of the women's human rights organization MADRE: "Being a mother is not simply the organic process of giving birth to a child. It is a way of looking at the world."

It is important to recognize that sexism is still prevalent within male-dominated movements for peace, justice, and human rights. When women are critical to efforts that are not strictly identified as "women's issues," we still have to struggle with male counterparts for our place and recognition of our leadership.

In her essay "Life After Lebanon" (Jordan 2002, 193), the African-American writer and activist June Jordan wrote about what she described as "the new woman," which, in some sense, was her description of the "new" woman leader.

Here and in South Africa and in Nicaragua and in Amsterdam and in England I see a new Woman: She frequently wears a uniform. She often carries a gun. She puts down her body to block missiles and bullets alike. She grieves for the dead but she fights back, to honor the dead. She learns self-defense. She runs for public office. She earns positions of enormous political power. And she is not calm. She is very excited and very busy making over this place into a safe place for us all, including white men.

The American Jewish pacifist writer Grace Paley gave an address in which she discussed the responsibility of the writer to society:

It is the responsibility of society to let the poet be a poet. . . . It is the responsibility of the poet to be a woman. . . . It is the responsibility of the male poet to be a woman. . . . It is the responsibility to say many

times there is no freedom without justice and this means economic justice and love justice. . . . It is the responsibility to learn the truth from the powerless. . . . It is the responsibility of the poet to be a woman to keep an eye on this world and cry out like Cassandra, but be listened to this time. (American Poetry Review Conference on Poetry and the Writer's Responsibility to Society, Spring, 1984).

In her poem titled "Kathe Kollwitz," the American Jewish writer Muriel Rukeyser said: "What would happen if one woman told the truth about her life? The world would split open."

Above all, women have learned "the truth from the powerless" (Paley 1984). Women have been powerless and are not afraid of the powerless. Having always had to struggle for power, we question its very meaning and character, and ask what kind of power we want. As we work for the "brighter day" Charlotte Forten described, we "keep an eye on the world"—as mother to the world—and cry out, imagine, demand, create change, tell the stories of our lives, driven by the courage to dream and the faith that we have the power to make dreams real.

—Kathy Engel

WOMEN'S MOVEMENT

The women's movement has strongly influenced ideas about leadership throughout its history. The women's movement spans from approximately the early 1800s to the present time. The first wave of the women's movement began in the 1800s and tapered off during the 1940s as industrialized countries granted women the vote, which was one of the early goals of the movement. A revival of the women's movement termed the "second wave" began during the mid to late 1960s, focusing on the status of women in society. As this struggle continued and positive changes occurred, a younger generation of women emerged during the 1990s with a different perspective and their generation is considered the "third wave" of the women's movement. This wave coexists with the organizations and goals of second-wave feminists. During the first wave, the fact that women took leadership roles to fight for women's suffrage and other rights was significant, because it meant that women became leaders in the public sphere. While this continued to be true to some extent during the second wave, it is also true that during the second wave women challenged traditional notions of leadership. Currently, in the third wave, some organizations within the women's movement are offering feminist leadership training.

THE FIRST WAVE: WOMEN'S SUFFRAGE

Women first became leaders in the women's movement during the battle for women's suffrage. New Zealand was the first country to grant women suffrage, doing so in 1893. Kate Sheppard (1847–1934) of New Zealand's Women's Christian Temperance Union was instrumental in the fight for suffrage, as were Harriet Morison (c. 1862–1925), Marion Hutton (1835–1905), and Helen Nicol (1854–1932),

who organized the first Women's Franchise League. Meri Te Tai Mangakahia (1868–1920) successfully fought for the inclusion of Maori women. (The Maori are New Zealand's indigenous population.) New Zealand women's early victory in gaining the vote inspired leaders of the women's suffrage movement all over the world.

The fight for suffrage and other women's rights was international. The International Council of Women (ICW) was founded in 1887, with Ishbel Aberdeen (1857–1939), from the United Kingdom, as its first president. The International Women's Suffrage Alliance (IWSA) was formed in 1904, with Carrie Chapman Catt (1859–1947), from the United States, as its president. Many women were influential in their own countries as well as in the international struggle for suffrage. In Japan, Ichikawa Fusae (1893–1981) was one of the founders of Fusen Kakutoku Domei (Women's Suffrage League). She led the women's suffrage movement in Japan, which granted suffrage for women, the right to be a candidate and to attend political meetings in 1945. Subsequent to these victories, Fusae was elected to Parliament five separate times between the years of 1953 and 1980. Huda Shaarawi (1879–1947) founded the Egyptian Feminist Union in 1923 and was its president for twenty-four years. The EFU fought for women's suffrage, advances in education, and legal reforms for women. Shaarawi was the Vice President of the International Alliance of Women for Suffrage and Equal Citizenship in 1935.

Connections with Other Movements

The women's movement in the first wave not only was international but also addressed issues of race and class oppression. Feminist leaders were strengthened by their ties to other movements, even when controversy and disagreement arose between leaders of these movements. Many U.S. women had been brought to an understanding of women's position in society during their fight for the abolition of slavery. In the United States, Elizabeth Cady Stanton (1815–1902) met Lucretia Mott (1793–1880) at an antislavery convention in 1840. As a result of this meeting, they organized the Women's Rights

Convention in Seneca Falls, New York, in 1848. Susan B. Anthony (1820–1906) met Elizabeth Cady Stanton at an abolitionist meeting in 1851 and they began a partnership of shared leadership. Together they formed the National Woman Suffrage Association (NWSA) in 1869. Sojourner Truth (1797–1883), a former slave, became a leader in both the antislavery movement and the feminist movement and is best known for her speech “Ain’t I a Woman,” given at the Women’s Rights Convention in Akron, Ohio, in 1851. Many women were involved in the struggle for women’s rights and the right of labor to organize and were leaders in both of these areas. Kate Mullany (1845–1906) is an example of a woman who was both a feminist and a labor leader. She worked with Susan B. Anthony and others suffragists on the needs of women workers, and in 1864 formed the Collar Laundry Union, the first female union in the United States.

Leadership Differences

Splits in leadership during the first wave of feminism occurred over whether to embrace a liberal, single-issue agenda or a more far-reaching, multi-issue agenda. In the United States this split is evident in the fact that there were two suffrage organizations, the National Woman Suffrage Association (NWSA), fighting for a wide range of women’s rights, and the American Woman Suffrage Association (AWSA), founded the same year as the NWSA, 1869, by Lucy Stone (1818–1893), who felt that suffrage for women should be the only priority. In 1890 these two organizations resolved their differences and merged to become the National American Woman Suffrage Association (NAWSA).

Leadership styles differed not only over philosophical ideas but also over whether to use moderate or militant tactics. For instance, although not all women and men in the suffrage movement in Britain embraced militancy, British suffragists were known for their militant leadership. While the president of Britain’s National Union of Women’s Suffrage Societies (NUWSS), Millicent Garrett Fawcett (1847–1929), favored a means of change through legal reform within the existing political system.

Emmeline and Christabel Pankhurst (1858–1928; 1880–1958), mother and daughter suffragists who were prominent leaders of the more militant branch of suffragists, favored direct action by way of lawful and unlawful protests. Their organization, the Women’s Social and Political Union (WSPU), began utilizing destruction of property as a more militant tactic beginning in 1908, including breaking windows of government buildings and forcing entrance into the House of Commons. Once arrested for these tactics, the women initiated hunger strikes in further protest. Some members left the WSPU when leaders decided on arson as a tactic; more arrests ensued after some buildings were destroyed. The same split between moderates and militants emerged in the U.S. women’s suffrage movement as well, when Alice Paul (1885–1977), a young radical American woman influenced by the British suffragists, left the NWSA and founded the Congressional Union for Woman Suffrage in 1914. The latter utilized such direct action tactics as strikes, demonstrations, and parades. Paul later founded the National Woman’s Party in 1916 and is credited with helping pass the Nineteenth Amendment (granting women the vote) to the U.S. Constitution in 1920. She subsequently turned her leadership skills toward passage of the Equal Rights Amendment, which was introduced to Congress in 1923.

THE SECOND WAVE

As in the first wave of the women’s movement, the second wave was divided between those with a reform orientation and those favoring more radical approaches. Reform organizations tended to be more bureaucratically structured, with designated leaders holding appointed offices. The goals of these organizations were usually various political reforms. The leaders were generally expected to be spokespersons and to oversee the direction of the organization. The more radical branches of the movement utilized collective leadership, rotated leadership, or rejected the idea of leadership altogether. The goals of the radical branches included the creation of an alternative women’s culture through the development of independent women’s presses, recording companies,

bookstores, music festivals, and coffeehouses. Women involved in forming a viable alternative women's culture tended to use terms such as *organizer* or *cultural worker* rather than *leader*. Many of the organizations, both moderate and radical, created during the second wave still exist, and some aspects of the women's alternative culture have even been adopted by the mainstream culture.

Nonhierarchical Leadership

One distinct form of leadership that emerged from the second wave of the women's movement was non-hierarchical leadership, which was embraced to varying extents by both moderate and radical groups. At least ideologically, this leadership style existed in the leftist organizations of the 1960s, in which many women had been involved before becoming involved in the women's movement. Nonhierarchical leadership runs counter to many common ideas and theories concerning leaders: The usual definition is that a nonhierarchical leader persuades others to become followers based on the leader's personal characteristics, such as a charismatic personality. The followers agree to give the leader authority and adopt the leader's vision.

The women's movement redefined leadership because of the feminist conception of power. For women fighting male domination, the concept of having power over another person was unacceptable. Therefore, rather than seeking power over others, the leaders of the women's movement wanted to empower one another to share leadership. Consciousness-raising (CR) groups of the 1960s and 1970s fostered this type of collective sharing of leadership. Because the purpose of CR groups was to share personal feelings, no woman was felt to be able to speak for another woman. The CR groups became a model of shared leadership. The absence of formal leadership was not without its detractors, however, who argued that the lack of structure made it possible for women who were more outgoing or more opinionated to dominate, despite the ideal of power sharing.

The nonhierarchical, shared leadership style of the women's movement has influenced other organ-

izations, including those in the business world, which have begun to move away from the idea of a single, charismatic leader who issues top-down directives and toward a less hierarchical model, as exemplified by concepts such as team leadership.

Media Representation of the Second Wave

Few women would claim to be leaders of a group within the women's movement, let alone the entire women's movement. But this lack of a single leader have been hard for those outside the women's movement to accept. The mainstream media in particular have pressured organizations within the movement to produce a leader; when they don't, the media will designate someone as leader. In the United States, several women have been dubbed the leaders of the women's movement by the media, and the media has relied on them to speak for the movement. This was useful for furthering the movement's causes, but it also distorted the idea of leadership in the movement.

Gloria Steinem (b. 1934) is one the most prominent media spokespersons for the women's movement in the United States. She is the cofounder and first editor of *Ms.*, a national feminist magazine that began publication in 1972. Throughout the 1970s, Steinem joined the lawyer Florynce (Flo) Kennedy (1916–2000) on the lecture circuit. Flo Kennedy was a feminist and civil rights activist known for her outspoken style and coalition building. In 1971, she founded the Feminist Party, which nominated the first African-American congresswoman, Shirley Chisholm (b. 1924), for president. In 1973, Kennedy cofounded the National Black Feminist Organization. Other visible spokespersons for the women's movement include Betty Friedan (b. 1921), who wrote *The Feminine Mystique* (1963), a book that described the dilemma of the middle-class housewife. Friedan was one of the founders and the first president of the National Organization for Women (NOW), an organization of feminist activists founded in 1966. Bella Abzug (1920–1998) was a feminist congresswoman who cofounded the Women's Environment and Development Organization (WEDO) in 1990. Eleanor Smeal (b. 1939) became president of NOW during the second-wave

fight for the slightly reworded Equal Rights Amendment of 1923; Smeal remains a spokesperson and lobbyist for NOW and cofounded the Feminist Majority Foundation in 1987.

Divisions and Challenges in Leadership of the Women's Movement in the United States

The development of “media stars” created a rift in viewpoints about feminist leadership. Prominent feminists were highly criticized by others in the movement for taking on such leadership roles, which were seen as self-serving “power trips.” That strong criticism led some women to withhold their skills and abilities and to downplay any charismatic tendencies so as not to appear to be taking on leadership roles. It also resulted in a counter critique, as some designated leaders felt that “trashing”—the slang term used for criticizing women for taking leadership roles—was creating weakness within the movement.

The fact that most of the well-known feminists in the United States were white and middle-class led to a sometimes divisive and misinformed view of the leadership, goals, and demography of the women's movement. Actual racism and classism encountered within the women's movement was also problematic. However, women of color such as Gloria Anzaldúa (b. 1942) and Cherríe Moraga (b. 1952), both Chicana feminists, and Barbara Smith (b. 1946), an African-American feminist, challenged the women's movement to expand its analysis to include the intersection of race, class, and gender. Because of the ongoing work of these and other women of color, awareness was raised, resulting in more diverse theory and practice within the women's movement.

Another divisive leadership issue that occurred early in the second wave was reaction to the increasing visibility of lesbians as leaders within the women's movement. Afraid that the visible presence of lesbians would discredit the movement, during the early 1970s, the National Organization for Women disavowed lesbians within the organization and the movement, labeling them “The Lavender Menace.” This in turn mobilized lesbian feminist leaders to organize for lesbian rights within the

women's movement and the larger culture. This challenge in the long run encouraged the leaders of NOW to become more inclusive of women regardless of their sexual orientation.

International Scope

During the second wave, the women's movement grew internationally. Several important forums and organizations served as a way for feminists to create worldwide coalitions. Perhaps the most visible forums for women worldwide have been the official UN world conferences and the parallel conferences for nongovernmental organizations. The first UN conference for women was the World Conference of the International Women's Year, held in Mexico City in 1975. Following this in 1980, the World Conference of the UN Decade for Women was held in Copenhagen, Denmark. The World Conference to Review and Appraise the Achievements of the UN Decade of Women was held in Nairobi, Kenya, in 1985. Some of the early international issues concerning women were equal rights, property gains, gains in political and economic power, violence against women, recognition of the importance of unpaid work, and improvements in paid work for women. The Fourth World Conference on Women was held in Beijing, China in 1995. More than 30,000 women from more than 180 countries took part in the Beijing conference, and women leaders developed the Platform for Action, arrived at by consensus over twelve days of negotiations, that addressed concerns of women worldwide. Women leaders from nongovernmental organizations (NGOs) organized independent conferences to be held simultaneously. The NGO forums were important because they were more inclusive than the delegations sent by nations to the official UN conference. The Beijing conference was the largest gathering of women in history thus far.

At present, women from around the world who are fighting for human rights, environmental concerns, land use, and sovereignty rights have become influential leaders in the international women's movement and in their own nations. These women are pressing the international women's movement to

adopt priorities that go beyond individual rights and the agendas of developed countries. In much of the world, women are involved in agriculture or are low-paid factory workers and therefore directly affected by development efforts and globalization. At Beijing, Vandana Shiva, scientist, author, ecofeminist, and founder of the Research Foundation for Science, Technology and Ecology, spoke on gender justice and development issues. Winona LaDuke, co-chair and one of the founders of the Indigenous Women's Network, presented concerns over land stewardship and sovereignty rights. Human rights, land, and the environment have become important issues for the women's movement.

THE THIRD WAVE AND THE FUTURE OF FEMINISM

As the second wave continued to organize, the daughters of second-wave feminists and a generation of younger women emerged to form a new perspective of feminism that they describe as the "third wave" of the women's movement. In the United States, most third-wave feminist leaders have grown up with the gains achieved by members of the second wave and have been exposed to feminist ideas, organizations, and culture growing up. The establishment of women's studies departments on university campuses during the second wave has meant that there is now a cohort of young women and men who have been taught the theories of the women's movement in the classroom. Curricula at the primary and secondary level have changed as well, with today's young students being exposed to women leaders throughout history. Within the third wave of feminism, there is a shift in attitude about leadership that is evident in the development of formal leadership

"Ain't I a Woman?": Sojourner Truth's Speech Delivered at the Women's Rights Convention in Akron, Ohio in December 1851

Well, children, where there is so much racket there must be something out of kilter. I think that 'twixt the negroes of the South and the women at the North, all talking about rights, the white men will be in a fix pretty soon. But what's all this here talking about?

That man over there says that women need to be helped into carriages, and lifted over ditches, and to have the best place everywhere. Nobody ever helps me into carriages, or over mud-puddles, or gives me any best place! And ain't I a woman? Look at me! Look at my arm! I have ploughed and planted, and gathered into barns, and no man could head me! And ain't I a woman? I could work as much and eat as much as a man—when I could get it—and bear the lash as well! And ain't I a woman? I have borne thirteen children, and seen most all sold off to slavery, and when I cried out with my mother's grief, none but Jesus heard me! And ain't I a woman?

Then they talk about this thing in the head; what's this they call it? [member of audience whispers, "intellect!"] That's it, honey. What's that got to do with women's rights or negroes' rights? If my cup won't hold but a pint, and yours holds a quart, wouldn't you be mean not to let me have my little half measure full?

Then that little man in black there, he says women can't have as much rights as men, 'cause Christ wasn't a woman! Where did your Christ come from? Where did your Christ come from? From God and a woman! Man had nothing to do with Him.

If the first woman God ever made was strong enough to turn the world upside down all alone, these women together ought to be able to turn it back, and get it right side up again! And now they is asking to do it, the men better let them.

Obliged to you for hearing me, and now old Sojourner ain't got nothing more to say.

training. The Feminist Majority Foundation began offering a feminist leader campus program in 1994. Currently the Feminist Majority Leadership Alliances are student-run campus groups that focus on issues as diverse as body image and international feminism. They receive guidance from campus organizers, information online regarding starting and maintaining a group, and specific leadership skills such as public speaking and dealing with the press. In turn, one of their programs of outreach to the community is to mentor high school girls. The Third Wave Foundation is an organization that is run by girls and women from ages fifteen to thirty and offers support and grants for young women organizers. The foundation emphasizes coalition building, as

evidenced in their program Reaching Out Across Movements (ROAM). This organization was cofounded in 1995 by Rebecca Walker, Amy Richards, Catherine Gund, and Dawn Lundy Martin.

Besides the benefit of formal training in leadership and early exposure to feminist ideas, third-wave feminists also have access to new forms of communication, such as the Internet, which they can use for organizing. Third-wave feminists have distributed their messages through music, events, and publications including independent magazines online and in print usually referred to as “zines.” While they forge a twenty-first-century vision of feminism, with new theories and methods of action, they are also involved in protecting some of the rights that they grew up with, such as reproductive freedom. The leaders of the third wave of the women’s movement are currently shaping the future through their words and actions and continuing the fight for women’s rights.

WOMEN'S OLYMPICS

Ralph Waldo Emerson asserted that every institution is the lengthened shadow of a great man. If one substitutes “woman” for “man,” Emerson’s assertion holds true for Alice Million Milliat (1884–1957) and the Fédération Sportive Féminine Internationale

(FSFI), the organization that staged four successive Olympiques Féminins in the years 1922 through 1934.

The platform from which Milliat launched her remarkable career as a sports administrator was Fémina Sport, a Parisian club founded in 1911 to encourage sports among upper-class women. (Her own favorite sport was rowing.) In 1917, Fémina Sport joined a number of other clubs to form the Fédération des Sociétés Féminines Sportives de France (FSFSF). Although all of the clubs in the FSFSF were led by men, Milliat was named the federation's treasurer. Early married, early widowed, and childless, Milliat had the time, the energy, and the material resources to dedicate herself wholeheartedly to women's sports. In 1918, she became the FSFSF secretary-general. A year later, she was elected president by a unanimous vote. A year after that, all the officers of the FSFSF were female.

After the FSFSF staged France's first track-and-field championships for women in 1917, Milliat worked hard to organize additional national championships in soccer, basketball, field hockey, and swimming. It is likely, although not certain, that it was also Milliat who arranged, in 1918, for two Fémina Sport teams to play a game of soccer as a curtain-raiser to a match between the French and Belgian national teams. In 1920, a women's team formed from nine French sports clubs crossed the Channel to Lancashire to play a series of four matches against Dick, Kerr's Ladies, a soccer team formed by employees of the engineering firm Dick, Kerr & Co. The expedition was arranged by Alice Milliat.

It was, however, women's track-and-field sports, not soccer, that became the focus of Milliat's efforts. Although a number of historians have asserted that Milliat was the organizer of the Olympiade Féminine that was staged in Monte Carlo in the summer of 1921, that honor belonged to Camille Blanc, mayor of Beaulieu and president of the socially exclusive International Sporting Club of Monaco. On 31 October 1921, only five months after the games at Monte Carlo proved the viability of international competitions for women, Milliat was among the seven delegates who met in Paris, at 14 Boulevard des Italiens, to create the Fédération Sportive Féminine Internationale (FSFI). By all rights, Milliat should have

been named president of the organization, but Émile Antoine insisted that women lacked the aura of authority necessary to assume leadership of an international organization. A year later, it was obvious that Milliat had the necessary aura as well as a full measure of administrative talent. She became and remained president of the FSFI.

The success of the first Jeux Internationaux Féminins testified to Milliat's ability to lead. These games, which some contemporary journalists referred to as the Jeux Olympiques Féminins, were held in Paris on 10 August 1922. Over 20,000 spectators crowded Le Stade-Pershing to watch athletes from five nations compete in the eleven-event program, which included a 1,000-meter race, a distance then considered to be an enormous challenge for a young woman.

OPPOSITION AND SUCCESS

Although the French press was generally enthusiastic about these women's games, there was some adverse commentary from conservatives scandalized by the sight of young women running races in shorts and T-shirts. Milliat was not deterred. Responding to critics in *Le Miroir des Sports* (March 1925), she described female athletes as *une caste* that had to stand firm against opposition. While Milliat acknowledged the appeals of traditional femininity, she argued that a woman's strength, endurance, and speed were as socially desirable as charm, poise, and grace. Unlike more conventional advocates of women's sports, she seems to have had no qualms about muscular development. (As a fully committed feminist, she also fought for the right of women to vote.)

The most serious opposition to the Jeux Olympiques Féminins came from the International Olympic Committee (IOC) and the International Amateur Athletic Federation (IAAF). To appease the IOC, Milliat agreed to renounce all use of the word "Olympique." Although the Swedish president of the IAAF, Sigfrid Edström, was extremely unhappy about Milliat's challenge, he eventually opted for compromise and persuaded her, in 1926, to accept IAAF rules and regulations (revised for women when necessary). The IAAF then persuaded the

International Olympic Committee to include women's track and field in the program for the 1928 games in Amsterdam.

As the *Jeux Féminins Mondiaux*, the second FSFI-sponsored games took place in Göteborg, Sweden, in 1926. They were another resounding success. France's Marguerite Radieau ran 100 yards in 11.8 seconds, but the sensation of the games was nineteen-year-old Kinue Hitomi, the first Japanese woman to represent her people in an international sports competition. She won gold medals in the standing and the running long jump, a silver medal in the discus, and a bronze medal in the 100-yard dash. (Göteborg was also the site for an international conference on women's sports, one of nine over which Milliat presided.)

The compromise with the IAAF left Milliat unsatisfied. At the Amsterdam games, women's track and field was limited to a mere five events: the 100-meter and 800-meter races, the high jump, the discus, and the 4 x 100-meter relay. The future of women's participation was endangered by the IOC's hysterical reaction to the sight of women who were exhausted by the 800-meter race. The panicky members voted in 1929 to eliminate women's track and field. At the Olympic Congress convened in Berlin in 1930, Milliat asked the IOC to reverse itself. Thanks in part to assistance from Avery Brundage and Gustavus T. Kirby of the United States, both major figures in the IAAF, she did manage to persuade the IOC to change its collective mind and keep women's track and field on the program for the 1932 games in Los Angeles. The vote was seventeen to one.

The third Women's International Games took place in Prague in 1930. The program was expanded to include not only track-and-field contests but also four team-sport tournaments—in soccer, basketball, barette (similar to rugby), and hazena (similar to team handball). Two hundred fourteen athletes from seventeen countries gathered for the three-day event in Letna Stadium. The brightest star was Poland's Stanislava Walaciewicz, subsequently known in the United States as Stella Walsh. She won three gold medals for races over 60, 100, and 200 meters.

The fourth Women's World Games took place in

London in 1934. Nineteen teams competed, but the German women were so overwhelmingly superior that they garnered more points than the next three countries combined.

JOINING THE OLYMPICS AT LAST

Meeting during the Berlin Olympics of 1936, the IAAF voted (fifteen to four with five abstentions) to sponsor rather than simply to recognize women's events, to accept the FSFI's records as official, and to recommend the expansion of women's Olympic track and field from six to nine events. These were among Milliat's goals, but the price she paid was the end of the FSFI as an independent organization. The last of the FSFI's quadrennial sports festivals, held in Vienna in 1938, was officially sponsored by the IAAF, but it was downgraded to the level of a European championship. Milliat, now over fifty, retired from the international stage and lived the rest of her life in undeserved obscurity.

In a 1974 interview, Germaine Gagneux-Bisson, FSFI secretary-treasurer, described Milliat as a willful person who sometimes antagonized her male colleagues—who were not accustomed to forceful women. Avery Brundage, who served with Milliat on many IAAF committees, was among those antagonized by her perseverance: "She was active for years and she demanded more and more. She made quite a nuisance of herself" (Guttman 2003, 171). Another way to explain her achievements and to assess her personality and style of leadership is to say that she was canny enough to understand that nice girls finish last.

—Allen Guttman

WOMEN'S SUFFRAGE

Women in the United States, beginning in 1848, fought for three-quarters of a century to gain the right to vote. Women's suffrage, along with abolition of slavery and reform of labor, was one of the three greatest reforms in U.S. society. The suffrage movement was born from female activism led by women such as Elizabeth Cady Stanton and Susan B. Anthony, who brought women across the nation into the movement and helped pave the road to equality for future generations of women. Anthony, Stanton, and others proved to be inspirational to women interested in the vote and equal rights for women. The outstanding leadership of early suffragists like Anthony and Stanton sparked the interest of future generations who joined the national crusade as leaders and participants in the women's suffrage movement.

Women historically have proven to be model leaders and have engaged in a wide array of reform movements. As it turns out, many of the reform movements of the nineteenth century occurred simultaneously and were led by women who counted among their primary goals the vote for women. The women's suffrage movement was not an isolated event; rather, it stemmed from the abolition movement and other reform movements that came about through the moral reforms proposed by evangelical Protestantism during the 1830s. Acting on moral principles and church dogma, men and women alike sought to reform an ailing society riddled with social injustices that included slavery and intemperance. Some women participated in the public sphere as abolition agents and as public speakers for emancipation of slaves. Others worked for a temperate society under the leadership of moral reform groups such as the Women's Christian Temperance Society. Temperance societies believed that curtailing alcohol consumption would help alleviate violence in society, control domestic strife, and eradicate child abuse

and neglect. Women often worked harmoniously among male reformers, and many women accepted their gendered space within the hierarchy of a male-dominated society. However, as more women became exposed to public activism and public speaking, many began to reject the restrictions placed on them by church leaders, male officials, and dominating husbands and fathers. Conflicting views regarding women's roles in public activism led to heated debates and splits within various churches.

WOMEN'S SUFFRAGE DURING THE PRE-CIVIL WAR ERA

Churches in the United States during the eighteenth and nineteenth centuries promoted clearly defined roles for men and women in society. Most of the United States exercised a system of separate spheres in which women were expected to be keepers of the home and morality. As a result, women had relatively little activity in the public sphere, thus making the private sphere of motherhood and housewifery their lot in life. Women were to be of pure heart, chaste, pious, and, above all else, submissive to their husbands and God. Men, on the other hand, were allowed to exercise their authority in both the home and in public. Masculine privilege during the colonial period until the late nineteenth century included controlling property in marriage, having sole custody of children if divorce occurred, and having the right to serve in public office and the right to vote. Religious ideology brought from England and other countries kept the notion of separate spheres in place. However, church rhetoric was occasionally redefined by progressive religions in a way that afforded women the opportunity for greater autonomy and equality in the United States. For example, religious sects such as the Quakers held strong egalitarian principles, and because of conflicts over slavery and other issues that denied basic human morality, splits in the sect occurred. One progressive Quaker group, the Hicksites, believed that slavery was morally wrong on all levels. Likewise, the Hicksites allowed women a fuller range of activism, including public speaking. It is no coincidence that many of the most outspoken leaders for women's suffrage were

A women's suffrage poster.

Quaker women such as Lucretia Mott and Susan B. Anthony. However, other churches did not allow female leadership in church or public life. Many churches supported slavery and restricted the lives of women. These churches exercised a hierarchy based on traditional patriarchy and embellishments or misinterpretations of the Bible in order to support gender oppression and racial superiority.

In spite of restrictions on their lives, many women refused to be silent and passive in a male-dominated society. By the 1840s, many reform movements outgrew their religious origins and became increasingly secularized. The secularization of reform movements created conflict between church leaders and

women of the movements. Women such as the sisters Angelina and Sarah Grimké took to task clergymen who sought to contain the outspoken leadership of women. Men such as William Lloyd Garrison added to the anticlerical agitation with their secularized views, which gained a stronghold during the 1840s. Garrison proposed the immediate release of slaves in bondage and argued for the common humanity of both blacks and whites. Paramount to Garrison's rhetoric was the belief that a revolution in people's ideas must precede and underlie institutional and legal reform. Garrison put many clergy in an uproar over his notions of equality. Prior to Garrison's declarations, the clergy controlled women's moral energy, thus containing the public activism of zealous female leaders. The abolition movement during the 1840s was the catalyst for women leaders such as the Grimke sisters, Lucretia Mott, Elizabeth Cady Stanton, Lucy Stone, and later Susan B. Anthony in advocating a society that supported equal rights for women. Societies emerging from the Northeast to Indiana and Ohio all had a common goal—equal rights for women, with suffrage as the main goal.

SENECA FALLS AND THE WOMEN QUESTION

As reform movements became secularized, women such as Susan B. Anthony and Elizabeth Cady Stanton emerged as some of the most tenacious leaders. Garrisonian rhetoric of immediatism, which proposed the complete emancipation of slaves, was utilized within the suffrage movement and called for the swift and complete enfranchisement of women, thus the demand for total equality became fundamental to the women's rights movement. Initially, women leaders sought to reform property laws for married women, divorce laws, and child custody laws. Some historians have suggested that women's suffrage stemmed from Garrison's abolition rhetoric; however, given the overall upheaval in U.S. society, advocating suffrage may have been a natural inclination for disgruntled and disenfranchised women. In 1848, Elizabeth Cady Stanton and Lucretia Mott organized the first women's rights convention, which was held in Seneca Falls, New York, with more than five hun-

dred women attending. Stanton modeled the convention's Declaration of Sentiments after the preamble of the Declaration of Independence, and at the top of the list of grievances was the lack of the vote for women. Stanton, Mott, and other participants realized that the vote would give women access to the public arena and help them fight inequalities protected by unfair laws. Although the Seneca Falls convention captured national attention, and women swelled the ranks of suffragists, equal voting rights for women would not be gained until 1920. Nonetheless, the seeds of discontent had been sown.

EARLY LEADERS

The women's suffrage movement did not emerge as a monolithic event during the nineteenth century. As education for women improved and religious mores became less restrictive, women emerged as determined advocates of suffrage. Elizabeth Cady Stanton and Susan B. Anthony deserve their accolades; however, the women's suffrage movement was led by many women. Like Stanton and Anthony, these women found their motivation for suffrage activism in other arenas of social reform. The early feminists, beginning before the Civil War, gradually moved into the public sphere of activism. The notion of separate spheres for men and women continued to exist in the United States in the mid-nineteenth century, and misogynistic rhetoric continued through social and family customs, church teachings, and restrictive genders laws.

Among the early suffrage leaders were Angelina and Sarah Grimké. At first glance the Grimké sisters would not have appeared to be likely social reformers. They were born in South Carolina, the daughters of a prominent slaveholder. Their emergence, as southern women, into the public sphere of social reform during the 1830s was unusual. Both sisters, after experiencing the horrors of slavery first hand, worked for the abolition of slavery. Their personal convictions came at great personal cost: They were cut off from family wealth and severed their southern ties permanently. By 1836 the Grimké sisters had become outspoken members of the Garrisonian society, speaking out against slavery and for

women's rights. Although their public speaking earned them much scorn, they refused to be cowed by ministers who spoke out against women's public activism and advocated slavery. Women such as the Grimké sisters began to absorb the anticlerical message of Garrison and emerged as leaders for women's rights and suffrage. Sarah argued that men and women were created equal in God's eyes and that virtue is not a particular attribute of one gender over the other. Some male abolitionists sought to contain the outspoken sisters, but their message had already been heard and their leadership established. As a result, the Grimké sisters were followed by other women who took an anticlerical stance and applied those principles to their lives and used them in the fight for equality.

SUSAN B. ANTHONY

Of all the prewar activists, Susan B. Anthony was likely the most committed in her leadership. Anthony simply would not settle for less than the complete dedication of her peers to enfranchisement of women. Between the years of 1854 and 1860, Anthony canvassed New York seeking new members for the women's suffrage movement. Her efforts for "the cause" led many small-town suffragettes to lead small groups of feminists to fight for the vote. Likewise, Lucy Stone and many others, including men, continued to encourage disgruntled women to take a stance against the inequalities of their male-dominated society. Elizabeth Cady Stanton, fully enmeshed in a life of domesticity and motherhood, continued to contribute to the movement when she could. However, the suffrage movement grew slowly and was stifled by the Civil War. Many feminists put their energies into the war effort—making bandages and clothing, caring for the sick and wounded, alleviating the suffering of runaway slaves, and continuing to fight for abolition. Not until after the war and passage of the Fourteenth and Fifteenth Amendments granting African-Americans citizenship and black males voting rights did women reemerge as determined suffragists. After the war in 1865, enfranchisement was thrust to the forefront of the women's rights movement, creating schisms within the move-

The "Natural Differences" Argument Against Women's Suffrage

The view that men and women are different and suited for different work was regularly advanced by opponents of women's suffrage. In the following text, the argument is made by the Roman Catholic priest Joseph P. Machebeuf in a speech given in Denver on 6 February 1877.

Though strong-minded women who are not satisfied with the disposition of Providence and who wish to go beyond the condition of their sex, profess no doubt to be Christians, do they consult the Bible?—do they follow the Bible? I fear not. Had God intended to create a companion for man, capable of following the same pursuits, able to undertake the same labors, he would have created another man; but he created a woman, and she fell. . . . The class of women wanting suffrage are battalions of old maids disappointed in love—women separated from their husbands or divorced by men from their sacred obligations—women who, though married, wish to hold the reins of the family government, for there never was a woman happy in her home who wished for female suffrage. Who will take charge of those young children (if they consent to have any) while mothers as surgeons are operating indiscriminately upon the victims of a terrible railway disaster? . . . No kind husband will refuse to nurse the baby on Sunday (when every kind of business is stopped) in order to let his wife attend church; but even then, as it is not his natural duty, he will soon be tired of it and perhaps get impatient waiting for the mother, chiefly when the baby is crying.

ment regarding enfranchisement of black men and the continuing disenfranchisement of all women.

POSTWAR SUFFRAGE STRATEGIES AND STRIFE

By 1869, two women's suffrage organizations emerged from the American Equal Rights Association that had formerly been led by Elizabeth Cady

Stanton and Susan B. Anthony. The two groups had conflicting views over voting rights for black males that resulted from the passing of the Fifteenth Amendment. The women of the National Woman Suffrage Association (NWSA) believed that women should have been awarded the franchise before black men. The NWSA was led exclusively by women and sought legal recourse through federal legislation. The organization became more radical, resulting in a large array of feminist agendas. The NWSA attracted numerous charismatic members such as Fannie Wright and Victoria Woodhull, both of whom supported women's suffrage but also had personal agendas under the umbrella of women's rights. Numerous utopian movements and radical reform movements became a part of the rapidly changing landscape of postwar United States. The free love movement proposed by Victoria Woodhull, Fannie Wright, and others proved shocking to conservative citizens and was rejected in many circles. Radical reforms such as vegetarianism and spiritualism were short lived or rejected by mainstream society. Overall, the alternative cultures that emerged during the latter half of the nineteenth century demonstrate that the nation was progressing toward modernity and that the fight for women's enfranchisement would not be stifled. Nineteenth-century women continued to fight for the vote along with the most radical reformers who held personal liberty as the truest form of freedom. Members of the NWSA held to the anticlerical views adopted early in the movement and refused to use exclusionary tactics.

As a result of the conflict over the Fifteenth Amendment, a second organization—a conservative branch of the women's suffrage movement—emerged and became known as the American Women's Suffrage Association (AWSA). AWSA was led by Lucy Stone and her husband, Henry Blackwell, and unlike NWSA, had both male and female members and leaders. A longtime comrade of Anthony and Stanton, Stone broke away from NWSA over the Fifteenth Amendment. Stone was responsible for the 1869 schism that set feminists at odds with each other. AWSA rejected the radical position of the NWSA and rejected inclusion of members such as Woodhull. The strategies utilized

by Stone, Blackwell, and other members included appealing to state legislatures to gradually gain women enfranchisement over time. As time passed, the two organizations realized that their strength would be greater united, and the two groups merged in 1890 as the National American Woman Suffrage Association (NAWSA).

A NEW GENERATION OF SUFFRAGETTES

Elizabeth Cady Stanton, Susan B. Anthony, and Lucy Stone led the newly emerged NAWSA. Anthony was elected president and retained the leadership until 1900. After Stanton published *The Women's Bible* (a critical look at the Bible) in 1895, NAWSA considered her too radical, and the organization distanced itself from her. Leaders of NAWSA continued to demand a constitutional amendment but also realized that the support of individual states was vital to the success of the movement and put more emphasis on state victories.

The NAWSA felt the support of Southern women was crucial, and the organization tolerated segregation in its state affiliates. This practice came to a head at a historic Washington, D.C., suffrage march in 1913, when activist Ida B. Wells-Barnett was told by NAWSA officials that she and other African-American women would not be allowed to march with their state affiliates, and instead would have to stay together as a group at the back of the parade. In reaction to racism within the women's suffrage movement and in order to focus on educating African-American women on the need for all women to obtain the vote, a number of black women's suffrage organizations emerged, led by Wells-Barnett, Mary Church Terrell, and others.

PROGRESSIVISM AND THE VOTE

Around 1900, progressive reforms swept the nation in response to wide-scale poverty, vice, and overall social upheaval brought about by the Industrial Revolution, unfair economic and regulatory practices, and an increasingly corrupt political system. Labor organizers and social reformers fought for relief, and the Progressive Era ushered in corresponding legis-

lation to alleviate political and social problems. Unlike in early reform movements, all classes of society became part of the progressive reform movement, and as a result suffragists gained a wider audience. Leaders such as Alice Paul created the National Women's Party, and Carrie Chapman Catt created a "winning plan." During World War I, Catt encouraged state suffrage leaders to appeal to national representatives and to drop suffrage work in support of the war. Catt's goal was for the movement to appear patriotic to President Wilson, who could send suffrage legislation through Congress. Catt's plan worked, and Wilson submitted to Congress the Women's Suffrage Amendment, which was passed on to the states in 1919. In spite of the political resistance of the anti-suffragists, on 26 August 1920, three-fourths of the state legislatures ratified the Nineteenth Amendment, giving women full voting rights. By the summer of 1920 women had gained the right to vote in a special session arranged by President Wilson in Nashville, Tennessee. Through the hard work and leadership of several generations of women, the moment of victory had finally arrived.

women place on relationships and being connected to others. This value orientation is played out in a number of areas. In cognitive development, a woman's interest in making more personal connections and having a relationship with her subject is called connected knowing. This relationship value is found in the importance women place on putting events in their context in order to understand them more fully. The emphasis on context leads them away from universal applications across different situations.

In leadership studies, women often relate their struggle with traditional forms of hierarchical leadership. Their fear is that being at the top of an organization will isolate them and cause them to become disconnected from others in their team. This concern has led many women to seek different models of leadership such as leadership alongside, shared leadership, collaborative leadership, and invisible leadership.

The theme of relationships continues in the field of identity development, where research has found that a woman's identity is affected by her relationships with her parents and loved ones, and her relationship with herself. Therefore it should be no surprise that women would lead from the perspective of connecting with people in their organizations. Language such as *the web of inclusion*, *empowerment*, *coaching*, and *team builders* have described some of the assets that women bring to leadership. These strengths flow from their primary orientation to and valuing of relationships.

The orientation toward relationships is also revealed in women's focus on connections. Women often make connections with others and between people and ideas, structures, processes, and communities. It may be the commonly held process orientation, but many women have developed a facility for seeing patterns of connections within organizations.

This relationship orientation is also reinforced by recent biological and body chemistry studies on sex differences (as discussed in Blum 1997 and Hales 1999). One theory is that the higher level of estrogen in a woman's body chemically reinforces a woman's orientation toward relationships. So this orientation appears to be both social and physiological. Relationships shape other core value orientations. This theme mutually shapes the way a woman communi-

cates, uses power, leads, interprets information, and analyzes systems.

ORIENTATION TO ETHICS OF CARE

Carol Gilligan's research on moral development found that women developed their moral judgments through an ethic of care, while men were more likely to see moral decisions through an ethic of justice. While both men and women value fairness, the criteria they use to define it are different. The value themes of care and the interest in developing and empowering others as well as expressing both their own voices and the voices of others suggest that there may be a gender-related ethic of care that is at the base of their orientation. Women will take the context and their care of others into consideration when working through ethical dilemmas. The value of caring is reflected in the language of feelings that is found in women's organizations. When working in coeducational environments, one often hears "What did you think of this proposal?" but in women's organizations this question is supplemented by questions of "How are you feeling?" or "Did she seem hurt by what was said?" The caring orientation opens up the domain of emotions and time is spent reflecting on the emotional content of the message and the feelings of individuals in the organization.

ORIENTATION TO PROCESS

Women place a high value the process or way groups get to their end product. For them, both the means and the ends are important. The kinds of processes that are valued include collaboration, mutual writing of scripts, and co-creation, done in an environment where openness, care, feelings, challenges, and human development is valued. While the product is important, women believe that success should also result in increased levels of self-confidence and competence. While a focus on activity has diminished or overrun the voices of women, over time the emphasis on process has reinforced the value women place on giving everyone a voice, creating ways to increase equity and participation, and ensuring that everyone understands

zational learning are critical. Women's valuing of both sharing and learning together will be a strength in the organizations of the future, where optimizing the collective wisdom of individuals in a team will be the way intellectual capital will be leveraged.

ORIENTATION TO ASSOCIATIVE THINKING

A friend described his first meeting in a predominantly women's organization. He sat at the leadership team meeting and watched the other members progress through the agenda. The discussion went on numerous tangents. He had trouble following logic of the conversation and could not understand why the other members talked about so many different things on their way to accomplishing the agenda. The women in the room did not see their conversation as being off the topic. What he later understood was that in a women's organization, this associative thinking pattern was revealed in a way he had not experienced before in other organizations. He had just had a significant dose of associative thinking.

Brain research had found that women have more connections between the left and right hemispheres of the brain. This is one of the reasons why their conversations seem to take tangents. They are not really tangents to women, who see many connections; they are a way of seeing relationships between many variables. This awareness of the multiplicity of connection can cause puzzlement and frustration in people who do not think this way. However, think how frustrating it would be for a woman if a conversation proceeded in a straight line, with no detours, when she saw many variables and pieces of information that were relevant to the decision.

This thinking pattern also reveals itself in how women come to decisions. A seemingly unrelated topic can inform a decision. Coupled with a communication pattern that uses the rhetoric of understanding rather than debate, decisions can be hard to spot. The same man who found the thinking process different also did not think anything was actually decided at the meeting. But when the next meeting arrived, he realized that everyone else had understood what was being asked, had proceeded to accomplish their tasks, and were ready to communi-

cate their progress back to the group. As time went on, he learned not only to spot the decisions but to also see the tangents as relevant to the topic. It is a legitimate and different way of getting through an agenda.

This associative thinking orientation shows up in friendship conversations between women. Often the larger context is shared like a story with many subplots. Other women enjoy the details and richness of the surrounding story lines. This value women place on sharing details as a form of connection along with a brain structure that is wired differently than men lead to associative thinking patterns as a frame of reference.

The implications that this thinking pattern has for leadership is significant. Associative thinking is a perfect complement to the complexity in the interdependent systems we experience in our workplaces and world today. The developmental challenge for women is to identify the relevant variables in the many connections they might see. Otherwise a woman focused too closely only on connections (without seeing their relevance) might experience the kind of information overload that can get in the way of taking action.

CHANGE

Women's bodies are always changing. They go through change on a monthly cycle, major shifts in hormones are ongoing over the course of their life, and their bodies change shape significantly during pregnancy. The challenges a mother faces raising her children, and the continual seeking out of personal and professional development indicate that women value learning and change on both cognitive and psychological levels. This physical and psychological experience of change prepares them for the flexibility necessary to adapt to changing external environments.

Like other value orientations, the way women engage in change is mutually shaped by other values already discussed. They see change as a process that unfolds in the context of relationships. Making connections with people, finding agreement, and ensuring diverse participation drive their change process. They use their personal power to influence change and their capacity to empower others to create

change. Creating change is second nature to women, in part, because it is a natural activity in their lives.

IMPLICATIONS FOR LEADERSHIP

Leadership in the twenty-first century will be practiced in a context of connectivity and integrated networks as well as within a dynamic environment of on going change. Leadership will require ongoing learning on individual, group, and organizational levels and the ability to adapt to a changing environment through increased flexibility and capacity to live with ambiguity. Finally, it will be practiced within an increasing complex environment requiring synthesis as well as analysis.

A relationship orientation can be an asset in a connected world. As the workplace becomes more networked, women's orientation toward seeing the world through its relationships can enhance her leadership capacity. The values women place on relationships can enhance their ability to work with others, encourage, motivate, develop, and inspire them. However, women's orientation also presents a key developmental challenge. The developmental challenge for women is to develop a sense of boundaries in order to not be subsumed by the connectivity. For example, they need to know themselves as a separate individual. Sometimes the loss of one's individual identity can cause women to forget to include themselves as one of the people they need to care about. This is about optimizing the tensions between boundaries and connection.

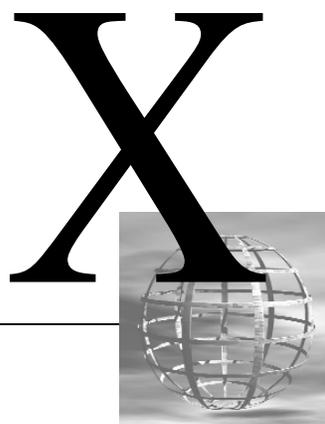

Women's values orientations will bring many assets to the practice of leadership in this kind of environment. Their relationship orientation will help them in two ways. First, it will help women develop strong networks through the power of their relationships and care. Second, their focus on process will help facilitate and create ways to involve people to solve increasing complex problems. Third, their associative thinking will help them see relationships between variables and think in more integrative ways about systems. Fourth, their values for equity and care will facilitate the empowering of traditionally excluded populations and enhance the diversity of

perspectives at the table. Finally, their capacity to see learning as a sharing and connecting activity will facilitate the creation of generative knowledge that can be leveraged through the combining of individual intelligences into collective or shared wisdom. When this deeper knowledge and wisdom is reinvested in the organization, the organization becomes stronger in adapting to the changing external environment.

XIAN INCIDENT

On 12 December 1936, a trusted top general kidnapped the leader of China to force the leader to bend to the general's demands and then accompanied the leader to the capital and turned himself over to police, receiving a sentence of house arrest for fifty years. The Xian Incident affected who would rule one of the largest, most populated countries in the modern world.

BACKGROUND

After completing military training with the Japanese Army, the Chinese general and politician Chiang Kai-shek (1887–1975) returned to China in 1911 and took part in the revolution against the Manchu dynasty. Chiang was active in attempts to overthrow the government of Yuan Shih-kai from 1913 to 1916, and when the Chinese statesman and revolutionary leader Sun Yat-sen established the Guangzhou government in 1917, Chiang served as his military aide. In 1923, Sun sent Chiang to the Soviet Union to study military organization and to seek aid for the Guangzhou government. On Chiang's return he was appointed commandant of the newly established Whampoa Military Academy. He grew even more prominent in China's middle-class revolutionary party, the Kuomintang (KMT), after the death of Sun

in 1925. The KMT was established in 1912 and originally called for parliamentary democracy and moderate socialism.

In 1926, Chiang launched the Northern Expedition with the intention of defeating their longtime rival Japan, leading the Nationalist (holding the idea of a cohesive, unified Chinese people and culture primarily under Chinese rule) army into Hankou and Nanjing. Chiang followed Sun's policy of cooperation with the Chinese Communist Party (CCP) and acceptance of Russian aid until 1927, when he dramatically reversed himself and initiated the long civil war between the KMT and the Communists.

In March 1927, Chiang and his revolutionary army easily took over Shanghai, China's industrial and commercial hub. Chiang's forces, an unconventional alliance of the CCP and the KMT, now controlled most of the country. By the end of the year, Chiang controlled the KMT, and in 1928, he became head of the Nationalist government at Nanjing and general of all Chinese Nationalist forces. After the Shanghai victory, Chiang swiftly moved his troops against the trade unions, purged the Communists from the KMT, banned the CCP, established the Nationalist government, and made himself president of China.

Only Manchuria, ruled by warlord Chang Tso-lin, remained outside Chiang's power. Chang Tso-lin, known as the "Old Marshal," was assassinated in 1928 by the Japanese, and his son, Chang Xue-liang

(later to be known as “Peter Chang”) (1898–2001), took Chang Tso-lin’s place as military governor of Manchuria. The younger Chang became known as the “Young Marshal” and was one of the most powerful military figures in China.

As leader of the Manchurian army, Chang realized that even with hundreds of thousands of soldiers under his command his army was still too weak to fight the Japanese alone. In 1928, he decided to submit to the Nationalist government under Chiang’s leadership and unite the divided military forces under the command of warlords in different parts of China. Chang supported Chiang against a rebellious northern army from 1929 to 1930 and was made deputy commander in chief of the Chinese armed forces and a member of the central political council.

Throughout the 1930s, Chiang firmly believed that the principal threat to China came not from Japanese aggression but rather from the tiny Communist movement in China. When Japanese troops began a gradual invasion of China in 1931, Chiang adopted a nonresistance policy to not provoke Japan further and to keep his troops available to fight the Communists.

When the Japanese invaded Manchuria in 1931, they drove out Chang and his men. Chiang refused to aid Chang’s army when the Japanese attacked and instead arranged to have Chang and his army transferred to northwest China, far from Japanese influence. When popular protests to the nonresistance policy broke out in China, the Japanese found pretexts to launch punishing military attacks on major cities, such as Shanghai, and they created a new independent state in Manchuria, called “Manchukuo,” with the last of the Manchu emperors appointed as king.

Chiang was reserving his military force to fight the Communists, whereas Chang regarded the Japanese as the real enemy. In 1934, Chiang ordered Chang to attack the Communists. During battles the Manchurian army suffered heavy losses and many defeats, and Chang became convinced that Chiang’s strategy would end in disaster for China. Chang felt that unification with the CCP was the only way to stop the imminent Japanese invasion, whereas Chiang’s strategy was to annihilate the Communists and

then focus his efforts on the Japanese. Chang ultimately refused to follow orders from Chiang to attack the Communists in northern Shannxi Province.

KIDNAPPED

On 12 December 1936, Chiang flew to the city of Xian to meet with Chang, who took the opportunity to try to coerce Chiang to change his strategy. Chang kidnapped Chiang with the help of the Communists and KMT Gen. Yang Hu-cheng to attempt to compel Chiang to develop cooperation between the KMT and the CCP so that together they could declare war against Japan. Chang had also invited the CCP diplomat Chou En-lai to come negotiate an all-China alliance with Chiang. Thirteen days later Chang escorted Chiang back to the capital of Nanjing. Chang, who then surrendered, was tried and sentenced for his part in the kidnapping.

The Japanese launched their all-out invasion of China in July 1937, World War II in Asia began, and the Nationalist government was driven out of Nanjing by the Japanese into the remote southwestern city of Chongqing. During this period, the CCP started building peasant support from its northern base in Yan’an, while the Nationalists were being bombed by the Japanese. Even as the Chinese Nationalists were attacked by the Japanese, the agreement between Nationalists and Communists soon broke down. Although the Nationalist government spared Chang’s life, it placed him under house arrest immediately after the Xian Incident. After being defeated by Communists in China in 1949, Chiang Kai-shek, the Nationalist government, and more than one million followers fled to Taiwan. Chang was brought to Taiwan as well, where he remained under house arrest until President Lee Teng-hui began Taiwan’s democratization process in the late 1980s. Chang was reported to have rejected offers from Communist Chinese authorities to live in China and, instead, moved to Taiwan when the Republic of China (ROC) government relocated to the island of Taiwan in 1949 after losing a civil war with the Communists. In 1990, Chang was finally granted his freedom, although the ROC government had long ceased treating him like a prisoner. In 1995, he flew to Honolulu, Hawaii,

with his third wife, Edith Chang (1912–2000), the daughter of a senior official who left her family while still in her teens to become his companion.

Historians had hoped that Chang would write a record of the Xian Incident and fill in many of the gaps in their knowledge of the event, particularly with regards to his relationship with Chiang during the two-week kidnapping. Chang, however, died in 2001 without having written such an in-depth record. Chang did, however, grant an extensive series of interviews that covered many topics, including the Xian Incident. The interviews can be read at Columbia University, which also is the central repository for the Changs' extensive papers and correspondence.

CONSEQUENCES

When news of Chiang's kidnapping spread, both Russia and China clamored for his release because the rulers of both countries feared that China could be split over the incident. Although the split in China did not occur, the incident may have caused other significant events to take place in China.

Chiang was forced to compromise with the CCP and to fight Japan. Many historians believe that the incident and these compromises dealt a blow to the Nationalist cause of defeating the Communists. They argue that the Red Army was given a chance to expand and eventually overtake the entire mainland. Perhaps an uninterrupted offensive against the Communists would have eventually led to the defeat of the Communist movement in China, but the Communists might have, in turn, been defeated by the Japanese.

The CCP was also forced to make concessions. It had to distance itself from the Soviet government, affirm its commitment to Sun Yat-sen's three principles (nationalism, democracy, and livelihood),

Peter Chang Oral History Materials

The Oral History Research Office at Columbia University is home to a lengthy and comprehensive interview with Peter Chang. The interview, totaling more than 4,800 pages, was conducted in Taiwan beginning in 1991 and was concluded in 1993. The oral history also includes portions of transcribed testimony from his wife, Edith Chang. The oral history is transcribed in Chinese characters, and includes an index in Chinese and English. A second, shorter interview with Mr. Chang conducted by Columbia University in 1990 has also been opened and an index of that interview is also available. The extensive interview was donated to Columbia in 1995 and, according to donor agreement, was released on what would have been Mr. Chang's 100th birthday.

The interviews include extensive material on the crucial events of the Xian Incident, scattered throughout the interviews. Other themes consist of Chang's relations with his family and the history of Manchuria in the early part of this century; Chang's relations with other Chinese warlords in the period leading up to the Xian Incident and his relations with the Chinese Communist Party, Chiang Kai-shek, and the Nationalist Party before and after the Xian Incident; discussions of Chang's personal political, philosophical, and religious beliefs and his education and how these were affected by his trip to Europe as a young man; his later years under house arrest and how it influenced his written work; speculation by Chang concerning recent developments in Chinese history; and comments about his family and personal habits, as well as discussion of the nature of modern Chinese studies in the United States.

Interested scholars may contact the Rare Book and Manuscript Manuscript Library at Columbia University, and make an appointment to read the interview. (Appointments may be made by calling 212-854-5590.)

abandon armed opposition to the KMT, end forced confiscation of landlords' property, and reorganize the Red Army as a component of national government.

Although it had to make concessions after the Xian Incident, China's Communist regime extolled Chang's move as an act of patriotism, and the Chinese government holds high-profile celebrations annually on his birthday in his native Manchuria. Not unexpectedly, the right-wing Chinese Nationalists have always condemned Chang for helping Communism to flourish.

Chang's bold move remains a controversial episode in modern Chinese history. Many believe that Chang acted out of self-interest to protect his armies in Manchuria and to avenge the death of his

father, whereas others praise Chang for his patriotism, stressing that there was nothing wrong with Chang's opposition to an internal war with the Communists in the face of external enemies.

TYPES OF LEADERSHIP

Both Chang and Chiang can be seen as leaders even after the Xian Incident. Chang held to his views, and whereas some say he had selfish motives for the kidnapping, most scholars would say that he put his life in jeopardy for what he felt was best for his country both by kidnapping Chiang and then by accompanying him back to the capital and turning himself in. Chang also showed his leadership skills by choosing to serve out his time under house arrest by the Nationalists, when he could have lived a relatively privileged life under the Communists.

Chiang's decisions regarding his nonresistance policy toward the Japanese led to a kidnapping that may have changed the course of history for China. Chiang also showed leadership by placing Chang under house arrest rather than imprisoning or even executing him. Chiang was also doing what he felt was best for his country, and, perhaps if his strategy to fight the Communists before the Japanese had been followed, China would not have been taken over by the Communists.

Interpretations of the Xian Incident vary widely from the perspectives of the KMT, the Communists,

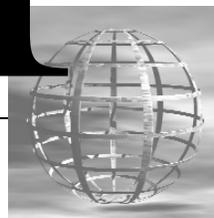

and independent scholars, but all agree that Chang's actions during the Xian Incident had a lasting effect on his country. Regardless of whether one believes Chang was a traitor or a patriot, he showed himself to be a leader who was willing to accept the consequences of his actions.

Y

YOUNG, BRIGHAM (1801–1877)

Mormon leader and colonizer of Utah

As successor to Joseph Smith Jr., Brigham Young became the second president of the Church of Jesus Christ of Latter-day Saints and the first territorial governor of Utah. His strong, pragmatic leadership despite widespread hostility ensured the survival of the church and the prosperity of the Mormon colony.

Born in Whitingham, Vermont, Young moved with his family to New York at age three. His father tried to support his wife and eleven children by working a succession of small farms in the vicinity of Genoa, New York. Subsistence was difficult, and Brigham and his five brothers were often hired out to neighbors. His formal education consisted of only a few days in a neighborhood school.

Brigham grew up in the “burned over district” of upstate New York, where millennialist fervor, revival meetings, and itinerant preachers were commonplace. His father was a devout Methodist who raised his children in a well-disciplined household.

In 1815, Brigham’s mother Nabby Young died and two years later, when his father remarried, sixteen-year-old Brigham left home for Auburn, New York, where he was apprenticed to a carpenter. In 1824, he married Angeline Works, and five years later the couple moved to Mendon, New York, where Young ran a sawmill and made furniture.

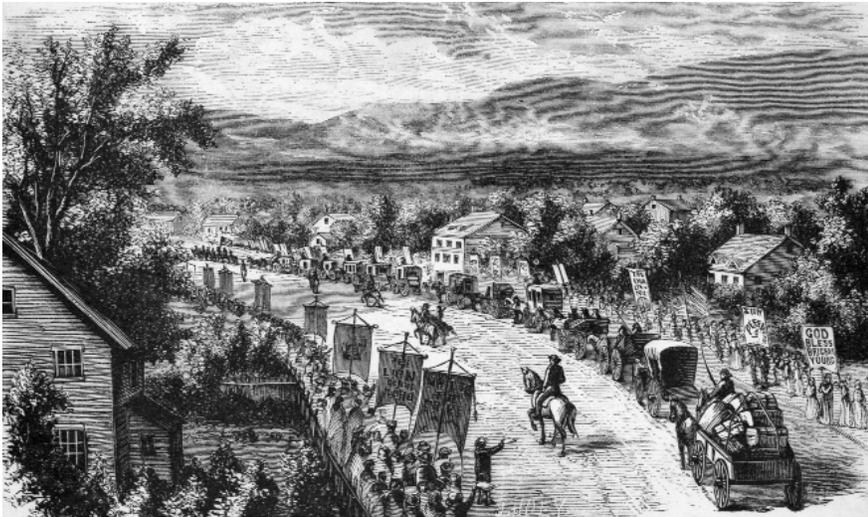

Young’s religious vocation developed slowly. Although raised in a Methodist household, he found camp meetings and revivals too emotional and unstructured. It was not until 1826 that he and his wife joined Mendon’s Methodist Episcopal Reform Church.

BECOMING A MORMON

In 1830, Joseph Smith Jr., of nearby Palmyra, New York, came forward with *The Book of Mormon*. Several members of Young’s family embraced the new religion, and in January 1832, Brigham Young and four others traveled to Columbia, Pennsylvania, to spend a week in a Mormon settlement. On 15 April 1832, he was baptized into the faith in the stream that ran beside his mill. On the same day, he was ordained an elder in the Mormon Church.

Four months later his wife died, leaving Brigham with two children. Shortly thereafter, he visited the Mormon enclave at Kirtland, Ohio, where he met Joseph Smith for the first time. In fall 1833, Young persuaded several friends and extended family members to move with him to Kirtland.

Still some time away from accepting polygamy, Young remarried in 1834 and joined Smith in leading a force to defend the Mormon colony at Zion, Missouri, then under attack by enraged settlers. In 1837, beset by creditors, Young and Smith, followed by a

This illustration shows Brigham Young leading a convoy of followers west out of Illinois. The banners carried by the followers read "God bless Brigham Young," "The Lion of the Land."
Source: Corbis; used with permission.

thousand Mormons from Ohio, returned to make a permanent home in Missouri. There they clashed violently with anti-Mormon forces. Amidst increasing bloodshed, the Prophet (as Joseph Smith was called by his followers) was briefly jailed, and the Saints (a term the Mormons used to refer to themselves) were driven from the state.

Young's influence in church matters had increased during the turbulent months in Missouri, and he led the Mormons to their new home in Nauvoo, Illinois. In late 1839, Smith dispatched him to England for two years of missionary work. When he returned home he was assigned to oversee the church's meager finances.

In 1844, Smith, whose behavior was growing ever more alarming, announced his candidacy for the White House, and Young campaigned tirelessly on the Prophet's behalf. In late June, while Young was speaking in New England, Smith was murdered by a mob in Carthage, Illinois. Young immediately left for Nauvoo to assume leadership of the church.

Young's succession came at a fortuitous time, for the Saints, having been driven from three states, were disorganized and close to despair. Since its inception, the church's widest appeal had come from among the most vulnerable, the poor, hard-scrabble frontiersmen and -women living on the

edge of dispossession. Young's brand of leadership was ideally suited to them because his single-minded dictatorship provided a sense of certainty to those whose lives often seemed out of control. He tolerated no disagreement, and dissenters were met with excommunication or violent reprisal. He masterfully exploited the siege mentality of his congregation and, by insisting on unity of purpose, was able to build a strong sense of community among Mormons, whose church had been close to dissolution in the last days of Smith's stewardship.

LEADING THE EXODUS AND FORMING A STATE

In 1846 and 1847, hoping that the desolation of the Salt Lake Valley would ensure their isolation, Young led the Mormon exodus to Deseret (later named Utah by Congress). In this endeavor he earned his place in history by bringing order from chaos.

Whether in religion or in colonizing, Young had no patience with theory. He was a practical man, and, borrowing heavily on the ideas of others, he combined the force of his own personality with the doctrine of necessity to carve an oasis in the Utah wilderness. Whether dispatching settlers to the most fertile spots of the valley, implementing plans for an irrigation system, or recruiting emigrants from eastern cities, Young's hand could be seen in every detail of this massive undertaking. His overbearing style of command was well suited to both his people and the harshness of the environment because his singular vision never faltered. As he saw it, Deseret was to be a cooperative, wholly self-sufficient Mormon community. He inculcated the value of hard work and the need for education in practical subjects, especially scientific farming.

The California Gold Rush of 1848 and the organization of the Utah Territory two years later ended

Mormon dreams of isolation and forced them into greater conformity with the American political mainstream. Anti-Mormon sentiment remained strong throughout the nation and in 1857 President James Buchanan sent troops to Utah to remove Young as territorial governor. Although warfare appeared inevitable, a settlement was reached and Young capitulated in 1858.

Political losses did little to diminish Young's power. He continued to rule through a succession of surrogate governors and the heavy stamp of his leadership was felt for the remainder of his life. He died on 29 August 1877, in the presence of his multiple wives and many children. Although several of his religious and political aspirations remained unfulfilled, his most enduring legacy was the strong, self-sufficient church he left behind.

—William F. Hanna

YOUTH LEADERSHIP

The field of leadership studies is empowering thousands of college students each year through graduate and undergraduate degrees, minors, and extracurricular programming. In schools and communities across the United States, youth benefit from youth leader-

ship programs that cater to their emotional, physical, social, cognitive, and moral growth. Leadership theory and curricula can be a powerful resource when they are adapted and applied to designing and developing effective youth leadership programs.

DEFINING YOUTH LEADERSHIP

Over the years, youth leadership programs have been classified and delivered under many auspices, including youth development, civic engagement, community-based learning, service learning, student government, and youth empowerment. Whatever the rubric, these programs empower youth to lead change within themselves and the community. Additionally, youth experience leadership within the informal domains of peer relationships, family, and participation in community organizations.

For the purposes of this entry, youth are defined as individuals between the ages of nine and twenty-four years. Youth are exposed to the leadership process when they are involved in experiences that challenge them to innovate, take risks, and communicate effectively to work toward a shared vision. With youth defined by such a large age range, it is critical that leadership development programs take into account the development needs of each particular age group of participants. The needs of eleven- and twelve-year-olds are extremely different from the needs of high school students or students in college.

THE YOUTH MOVEMENT

The idea that young people can act as leaders to solve community problems and shape civic life emerged in the United States as a result of the youth movement of the 1950s–1970s. During that period, in addition to the call for civil rights, women's rights, and an end to the Vietnam War, a movement for youth rights also emerged. Across the country, large numbers of young people participated in the broader social movements of their time and advocated for change in policies that affected youth specifically. Youth activism was focused around issues such as the right to vote, education reform and students' rights, access to birth control, and stopping the draft.

During this period, national organizations such as the Student Nonviolent Coordinating Committee (SNCC), formed in 1960 in Raleigh, North Carolina, and Students for a Democratic Society (SDS), established in 1959 in Ann Arbor, Michigan, became loud and respected voices in the national dialogue on race, sex, and democracy.

As a result of the youth movement, schools across the country enacted curricular reforms and became more responsive to student needs. For example, some universities became more liberal in their core requirements (e.g., letting students choose from a range of courses to fulfill a math or science requirement rather than dictating that a specific introductory course be taken), and courses focusing on ethnic studies and feminism (deemed by students to be more relevant to their lives) were introduced. High schools allowed more freedom in dress and sought more student input on school decision making. Courts reformed the juvenile justice system and recognized that students have a constitutional right to free speech in the landmark case *Tinker v. Des Moines School District* (1969). But even more significant than these substantive reforms was the transformation of societal perceptions about young people. Youth were finally taken seriously as people who were actively involved in their communities, heavily invested in the future of the country, and inherently worthy of respect and many of the rights afforded to adults.

The contributions of young people to the United States' social and political landscape during the 1950s, 1960s, and 1970s demonstrated just how vital youth were to the nation's progress. The emergence of youth leadership is a reflection of the belief that all members of a society have something to contribute. The young founders of Students for a Democratic Society and the Student Nonviolent Coordinating Committee understood they had much to lose if they just sat on the sidelines. They innovated, took risks, and communicated effectively in order to achieve visionary goals for the country. Young leaders today do the same to empower themselves and others and to shape the United States' present and future.

While the social unrest of the mid-twentieth century has died down, the concept of youth leadership lives on. Young people are no longer seen merely as

objects to be shaped and molded. Indeed, society now acknowledges youth's potential as a source of new ideas and perspectives for the community and their role as shapers of civic vision. As a result, an extensive network of organizations and institutions that develop and support young leaders has blossomed since the 1960s.

YOUTH LEADERSHIP ORGANIZATIONS

At the local level, many schools and communities have after-school programs and initiatives that involve youth. One of the oldest national organizations is Hugh O'Brian Youth Leadership (HOBY), founded by the actor Hugh O'Brian in 1958. HOBY has hosted leadership training workshops and conferences for over 200,000 young people in its mission to nurture the next generation of U.S. civic and corporate leadership.

Another institution, America's Promise, was founded after the Presidents' Summit for America's Future in 1997. At the summit, Bill Clinton, at that time president of the United States, joined with former presidents George Bush, Jimmy Carter, and Gerald Ford, as well as Nancy Reagan (wife of former president Ronald Reagan), and Colin Powell, who became the chairman of America's Promise, to challenge the nation to promise young people five important things: caring adults, safe places, a healthy start, marketable skills, and opportunities to serve. Young people who wish to avail themselves of the fifth promise are supported by the alliance of national and local organizations that partner with America's Promise. Those organizations include the Boys and Girls Clubs of America, Junior Achievement, and the National 4-H Council.

Do Something is a prime example of a school-based youth leadership program. Founded in 1993, Do Something serves more than 4 million students and 15,000 educators in 20,000 schools in urban, rural, and suburban communities in every state and Congressional district in the nation each year. Educators, called community coaches, help young people develop ties to their communities and encourage them to take responsibility for social issues. Focusing on kindergarten through twelfth grade, Do

School Officials and Community Values

In his study of an alleged gang sexual assault in a New Jersey suburb, Bernard Lefkowitz focused on the role of adults in setting community values. Here, he describes the three adult leaders of the high school.

The center of command in the school was embodied in the two men standing there in the vestibule, waiting to greet the jaded returnees and the fumbling newcomers. They were the principal and the vice-principal. Both men had strong ties to the wide world of sports in Glen Ridge.

James Buckley, the principal since 1969, had been an assistant to the legendary football coach Bill Horey. During his long tenure in the town, Buckley had earned a reputation as a brilliant chemistry and physics teacher and a sensitive administrator who was reticent about meting out harsh punishment to misbehaving students. He was also known to cast a charitable eye on the shenanigans of rambunctious jocks.

John "Jack" Curtis, the assistant principal, had been the basketball coach at the high school. Curtis was a tall, beefy man with a ruddy complexion and the watchful eyes of a veteran detective. Which is how the sports crowd in the school sometimes viewed his job. For Curtis's primary task was maintaining discipline at Glen Ridge High. And one way he accomplished that was by functioning as school truant officer. The scariest sight in the world for some kid who decided to cut a few classes was the long shadow of John Curtis slanting across his front door.

The third member of the governing troika was, of course, Bill Horey himself. Horey, no longer football

coach by 1985, served as athletic director. He was in the twilight of an enviable career, but his moral and athletic judgments were still influential. An athlete who crossed the line would receive appropriate judgment, but if Horey believed that one of his "boys" was falsely accused or that his misconduct was exaggerated, Horey would defend him to the last bullet.

These men had known each other for so long, worked so closely together, that they seemed joined at the waist. If a student angered one of them, or won praise from another, the news would flash instantly through the chain of command in the school.

These were the caretakers of *all* the students in the school, both boys *and* girls. Nevertheless, those young women seeking assertive role models—seeking a responsive and comprehending school elder to whom they might whisper an intimate confidence about how young women were treated by certain male classmates, would not find that confidant in the old-boy administration of the school. To recall a female authority figure in their school lives, they would have to think back to elementary school four years ago, a past life as time is measured in preadolescence. In the middle and high schools, there were no women at the top. In high school there were only three middle-aged males, all former coaches.

Source: Lefkowitz, Bernard. (1997). *Our Guys: The Glen Ridge Rape and the Secret Life of the Perfect Suburb*. Berkeley and Los Angeles: University of California Press, pp. 105–106.

Something believes in continuous engagement, youth-owned participation, and youth-adult partnerships. Do Something links service to civic engagement and encourages young people to build leadership skills that will last a lifetime.

GLOBAL YOUTH PROGRAMS

Many U.S. youth organizations have exported the idea of youth programs to other countries. Successful examples include Big Brothers Big Sisters, which has programs in 32 countries; Quest, which is run through a partnership with the Lions Clubs International in 33 countries; and Junior Achievement, which is active in 112 countries.

However, exporting U.S. youth programs to other countries is challenging because of cultural differences. On the one hand, many countries are suspicious of U.S.-based ideas and programs because of a lack of confidence that the U.S.-designed youth programs are appropriate for the unique needs of their country's students. On the other hand, the United States has been the leader in encouraging youth mentorship and youth as volunteers, and in many countries U.S.-developed programs have been adapted to fit the culture and have become quite popular. For example, when the Quest program came to the Netherlands, which has more liberal drug laws than the United States, the focus shifted from a "just say no to drugs" stance to one that encourages good deci-

sion making and risk taking. Similarly, in Zambia a girl's empowerment program was adapted by removing any mention of birth control.

Technology has been a valuable platform in sharing youth leadership practices across cultures. More than twenty thousand youth leaders from more than 225 countries participate in the Taking It Global network, which provides a portal for youth to communicate, share resources, and learn from each other. Globally, many practitioners and youth educators subscribe to listservs and monthly e-newsletters to continually update their information on leadership.

TRENDS IN YOUTH LEADERSHIP

Traditional arenas for youth leadership have included positions in student government, athletics, clubs, and youth groups. In these contexts student leaders may be elected by their peers or selected by teachers or staff. Parental influence also plays a role.

In many cases, these leadership positions are assumed by students who perform well academically and are involved in a multitude of activities. But leadership development is beneficial for students of all abilities. Many educators would assert that it is most important that underserved youth at risk participate in leadership activities. Youth Leadership organizations like EnVision Leadership, the National Youth Leadership Council, and Project Adventure design programs and curricula for youth of all backgrounds and abilities.

The term *youth* has been expanded to include young adults up to age twenty-four. In many countries many policies extend educational, medical, transportation, and housing benefits to young people up to the age of twenty-six. This extension of the age range does not imply that young adults in their twenties are not ready to make adult decisions; rather, it recognizes that many people do not live independently until that age.

Service learning is another major trend in providing youth with leadership opportunities. The National Service-Learning Cooperative defines service learning as a teaching and learning method that connects meaningful community service experiences with academic learning, personal growth, and civic responsibility. Service learning represents a

collaborative effort between schools and communities and involves site learning that can be used with young people from elementary school through college. The National Youth Leadership Council helps school districts implement service learning, and Youth Service America offers student groups grants to implement service events annually. There is a growing pressure on schools to provide learning opportunities and to let students apply their abilities in contexts beyond the classroom. In quality service-learning programs students are expected to think critically, collaborate with others, integrate their learning from traditional classroom subjects, and connect with an increasingly diverse community.

FUTURE OF YOUTH LEADERSHIP

In the United States, youth are playing a more instrumental role in organizations at the local and national level. Political officials and community groups often contact local youth for their opinions when decisions will directly affect youth and their quality of life. Many school districts have youth representatives who attend school board meetings and report student opinions on a weekly basis.

Traditionally, board positions in nonprofit organizations have been limited to adults, but many youth-driven organizations are recognizing the value of youth representation. Some nonprofits have empowered youth as decision makers by involving them in leadership roles at the board level. As members of the board of directors of nonprofits, youth are responsible to guard the mission of the organization, engage in fiscal decisions, advocate and fundraise for the nonprofit, and make policy for the organization.

Youth are also serving in a philanthropic role and controlling resources. A few foundations that offer grants to organizations involve youth on the committees that review funding proposals. The most progressive foundations have empowered youth as board members who make the final decisions on awarding grants. Foundations like Do Something and Youth Ventures allocate grant money directly to youth for youth-led projects.

Another emerging trend in youth leadership is a focus on social enterprise and entrepreneurship. The

Youth Employment Summit (YES), which is a project of the Educational Development Center, encourages youth in more than sixty countries to create their own enterprises and opportunities. YES creates support networks and organizes global conferences to develop the leadership skills of youth. Youth are serving as activists and change agents when it comes to issues surrounding HIV/AIDS, the environment, fair trade policies, and education. In many cases it is hard to distinguish between youth leadership and activism and service because fighting for these social causes provide youth with a rewarding context in which to exercise their leadership ability.

The field of youth leadership education will continue to grow as more practitioners collaborate with academics to discuss the applications of leadership theory to youth. Youth development programs can be improved with a stronger emphasis on research and evaluation. The improvement of youth leadership development and the creation of new opportunities that are available to students of all backgrounds will empower greater numbers of students to exercise their leadership ability.

Appendix 1

Bibliography of Significant Books on Leadership

The Further Reading sections at the end of each article provide citations to what the authors of the articles consider the key publications on the topic. These include journal articles, chapters in books, dissertations, conference papers, edited works, dictionaries and handbooks, and books. The authors were encouraged to provide at least some citations to works (especially books) that are available to the general reader. All together, about 7,500 works are cited in the Further Reading sections. The works of some authors such as Burns, Bass, Bennis, Avolio, Conger, Chemers, Yukl, Ciulla, and H. Gardner are cited over a dozen times and those of many other authors are cited more than once. Still, though, about 6,000 works are cited in this encyclopedia at least once.

The select bibliography that follows provides references to several hundred key books in leadership studies selected from the works cited throughout this encyclopedia. Leadership studies is defined broadly, and

books listed below include older classics, recent books that are likely to become classics, books on leadership in general, books on specific aspects of leadership, books on related topics such as management and motivation, and books by and about famous or exemplary leaders and significant leadership events and situations. The citations are categorized into ones that focus on leadership in general, leaders and leadership events, specific aspects of leadership, and other topics relevant to leadership. The books included here are all ones that will provide the general reader a quick entry into the field of leadership studies. Inclusion of books in this list does not mean that the book is the “best” or even the “most important” book on the topic—although some are clearly the best or most important. Rather, it means that the book is a good place to begin one’s exploration of what we know about leadership and leadership studies.

Appendix 2

Directory of Leadership Programs

There are nearly 1,000 leadership programs in the United States and many others in other nations. There is no one central directory for these programs, and maintaining one would be extremely difficult as new programs appear almost every day. This Directory of Leadership Programs lists some 250 programs that had active websites as of 23 October 2003. (However, because we found that a number of program websites changed just during the period in which we prepared this list, we have chosen not to include the websites. Putting the program name into a search engine will yield the most current URL.) Included here are some general programs and those aimed at specific domains including education, youth, community, sports, executives, nonprofits, environment, health, science, criminal justice, women, minority, and the arts. Many leadership programs and courses operate within larger MBA and MPA programs. A good website with links to these programs is America's Best Graduate Schools 2004 Premium Online Edition (www.usnews.com). In addition, www.gradschools.com provides an extensive list of MPA programs.

The University of Texas at Dallas, Dallas, TX

University of Tulsa Center for Executive and Professional Development Leadership Programs

Mission Statement: To provide a variety of different programs for leaders to develop their skills and create a committed project team.

Center for Executive and Professional Development, University of Tulsa, 600 South College, Tulsa, OK, 74104

University of Wisconsin–Madison: Women in Science and Engineering Leadership Institute

Mission Statement: To address a number of impediments to women’s academic advancement by providing an effective and legitimate means of networking women faculty across departments, decreasing isolation, advocating for and mentoring women faculty, and linking women postdoctoral fellows in predominantly male environments with a variety of women faculty.

Women in Science and Engineering, University of Wisconsin-Madison, 2640 Engineering Hall, 1415 Engineering Drive, Madison, WI, 53706-1691

U.S.–Japan Leadership Program: U.S.–Japan Foundation

Mission Statement: To create closer ties of communication and understanding among a new generation of young Japanese and American leaders; to create an informed body of leading citizens on each side who will have a trusted network of friends in the other country.

U.S.–Japan Leadership Program, U.S.–Japan Foundation, 145 East 32nd Street, New York, NY, 10016

Vanderbilt University Owen Graduate School of Management Executive Leadership Program

Mission Statement: To help participants more effectively lead the change process within an organization, to teach the key leverage points for connecting with people and building a culture that best fits the organization.

Owen Graduate School of Management Executive Programs, Vanderbilt University, 401 21st Avenue South, Nashville, TN, 37203

Vital Voices Global Partnership

Mission Statement: To expand women’s roles in politics and civil society, increase successful women’s entrepreneurship, and fight trafficking in women and girls and other human rights abuses.

Georgetown University, 1050 Connecticut Ave., NW 10th floor, Washington, DC, 20036

Wallace Foundation

Mission Statement: To enable institutions to expand learning and enrichment opportunities for all people by supporting and sharing effective ideas and practices.

Two Park Avenue, 23rd Floor, New York, NY, 10016

Warren Wilson College Environmental Leadership Center

Mission Statement: To raise awareness of local, national, and global environmental realities and to inspire caring citizens—especially our youth—to reflect, to communicate, and to act as responsible caretakers of the earth by preparing future environmental leaders, creating community awareness and influencing public policy, and connecting people with nature.

Environmental Leadership Center, Warren Wilson College, P.O. Box 9000, Asheville, NC, 28815

Wharton Programs Executive Education

Mission Statement: To offer several programs that help to create and develop leadership, strengthen relationships, identify problems and find the solution, etc.

Aresty Institute of Executive Education, University of Pennsylvania, 255 S. 38th Street, Philadelphia, PA, 19104-6359

Wheelock College Center for International Education, Leadership, and Innovation

Mission Statement: To be the pre-eminent center for preparing individuals to assume important roles as edu-

cators with strong scholarly backgrounds and experiential knowledge.

Wheelock College, 200 The Riverway, Boston, MA, 02215-4076

William Davidson Institute Executive Education Leadership Programs

Mission Statement: To help participants with developing leadership skills and organizational-change and innovation capabilities, creating a change or innovation strategy, turning good ideas into great products, services, and processes, establishing a high-performance culture and work environment, developing a change or innovation process, and gaining buy-in from resisters.

The William Davidson Institute Executive Education, 724 East University Avenue, Wyly Hall, First floor, Ann Arbor, MI, 48109-1234

WLP Women's Learning Partnership

Mission Statement: To advance communication and cooperation among and between the women of the world in order to protect human rights, facilitate sustainable development, and promote peace.

Women's Learning Partnership, 4343 Montgomery Avenue, Suite 201, Bethesda, MD, 20814

Women & Politics Institute

Mission Statement: To enhance women's leadership by fostering the interaction of students with young women leaders, providing leadership training workshops, and awarding students recognition for leadership achievements.

American University, 4400 Massachusetts Ave., N.W., Washington, DC, 20016

Women's Executive Development Program, University of Technology, Sydney

Mission Statement: To enhance personal professional development opportunities for senior women to gain appropriate skills and experience for emerging management opportunities, to support the growth of organizational cultures that value diversity and encourage improved representation of women in senior executive positions, to build on the tangible benefits of the collaborative network between ATN universities by providing significant cross-institutional activities for senior women, and to strengthen strategic alliances with other organizations, nationally and internationally.

Australian Technology Network, University of Technology, Sydney, P.O. Box 123, Broadway NSW 2007, Australia

Women's Executive Leadership Summit, University of Wisconsin at Madison

Mission Statement: To provide an atmosphere that examines women's executive leadership and encourages discovery and the development of practices that succeed.

School of Business, Fluno Center for Executive Education, University of Wisconsin, Madison, 601 University Avenue, Madison, WI, 53715

Women's Leadership Development Program

Mission Statement: To provide opportunities for women in public service to improve and develop their leadership skills so they can become more effective in the various roles in which they are involved.

Institute for Public Administration, University of Delaware, 180 Graham Hall, Newark, DE, 19716

Women's Leadership Exchange

Mission Statement: To connect women who own or run growth companies with the knowledge, tools and people they need to crank up the volume and grow.

Women's Leadership Exchange, 14 Wall Street, 20th Floor, New York, NY, 10005

Women's Leadership Initiative

Mission Statement: To provide research, education, mentoring and networking for and about women in the meeting industry, to be an agent of change for women aspiring to leadership through career development, organizational advocacy and networking.

4455 LBJ Freeway Suite 1200, Dallas, TX, 75244-59003

Women's Leadership Institute

Mission Statement: To develop and strengthen leadership skills while exploring a feminist perspective in religion and society, to create a community committed to liberation and transformation.

Hartford Seminary, 77 Sherman Street, Hartford, CT, 06105

Women's Village: Leadership and Women

Mission Statement: To help women achieve greater positions of power and overcome the underutilization of women in virtually every arena.

IMDiversity.com, 909 Poydras Street, 36th Floor, New Orleans, LA, 70112

Yale School of Management Executive Programs: Leadership and Team Effectiveness

Mission Statement: To help senior managers increase their leadership potential by building upon their experience in leadership, decision-making, working effectively within teams, conflict resolution, and interpersonal communication.

Executive Programs, Yale School of Management, 135 Prospect Street, Box 208200, New Haven, CT, 06520-8200

Young Women's Leadership Program, WILD

Mission Statement: To promote human rights through the conscious leadership and action of women and girls.

WILD, 3543 18th Street, #11, San Francisco, CA, 94110

Youth Leadership Academy

Mission Statement: To promote learning, academic performance, and workforce preparation among disadvantaged young people; and to provide adults with the

resources necessary for long-term employability and economic security.

55 John Street, Suite 500, New York, NY, 10038

Youth Leadership Initiative, Center For Politics, University of Virginia

Mission Statement: To rekindle citizen interest and participation in the American democratic process by coupling academic excellence and cutting-edge technology with civic and community participation.

University of Virginia Center For Politics, 2400 Old Ivy Road, P.O. Box 400806, Charlottesville, VA, 22904

YWCA Institute of Public Leadership (IPL)

Mission Statement: To empower women from their initial participation as informed voters to their commitment to leadership.

1015 18th Street, NW, Suite 1100, Washington, DC, 20036

Appendix 3

Primary Sources

Presidential Speeches on Foreign Policy and War

Since the founding of the nation, U.S. presidents have delivered many of their most important leadership speeches when addressing the American people on issues of foreign policy and war. Below are key speeches on these topics from 1796 to 2002. These are

especially timely in 2004, which is a presidential election year when foreign policy and war are hotly debated issues. Read in chronological order, they provide a history of how American foreign policy has evolved since the founding of the nation.

George Washington's Farewell Address, 17 September 1796

In the speech below, George Washington explains his decision to leave office after his second term as president. This speech is remembered as the first comprehensive statement of American foreign policy, setting out ideas that would remain at the forefront for a century.

Friends, and fellow citizens: The period for a new election of a citizen, to administer the executive government of the United States, being not far distant, and the time actually arrived when your thoughts must be employed in designating the person who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed, to decline being considered among the number of those out of whom a choice is to be made.

I beg you, at the same time, to do me the justice to be assured that this resolution has not been taken without a strict regard to all the considerations appertaining to the

relation which binds a dutiful citizen to his country, and that, in withdrawing the tender of service which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest, no deficiency of grateful respect for your past kindness; but am supported by a full conviction that the step is compatible with both.

The acceptance of and continuance hitherto in the office to which your suffrages have twice called me have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped that it would have been much earlier in my power, consistently with motives which I was not at liberty to disregard, to return to that retirement from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of our affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea.

I rejoice that the state of your concerns, external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty or propriety, and am persuaded whatever partiality may be retained for my services, that in the present circumstances of our country, you will not disapprove my determination to retire.

The impressions with which I first undertook the arduous trust were explained on the proper occasion. In the discharge of this trust I will only say that I have, with good intentions, contributed toward the organization and administration of the Government the best exertions of which a very fallible judgment was capable. Not unconscious in the outset of the inferiority of my qualifications, experience in my own eyes, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and every day the increasing weight of years admonishes me more and more that the shade of retirement is as necessary to me as it will be welcome. Satisfied that if any circumstances have given peculiar value to my services they were temporary, I have the consolation to believe that, while choice and prudence invite me to quit the political scene, patriotism does not forbid it.

In looking forward to the moment which is intended to terminate the career of my public life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude which I owe to my beloved country, for the many honors it has conferred upon me; still more for the steadfast confidence with which it has supported me, and for the opportunities I have thence enjoyed of manifesting my inviolable attachment by services faithful and persevering, though in usefulness unequal to my zeal. If benefits have resulted to our country from these services, let it always be remembered to your praise and as an instructive example in our annals that under circumstances in which the passions, agitated in every direction, were liable to mislead; amidst appearances sometimes dubious; vicissitudes of fortune often discouraging; in situations in which not infrequently want of success has countenanced the spirit of criticism, the constancy of your support was the essential prop of the efforts and a guaranty of the plans by which they were effected. Profoundly penetrated with this idea, I shall carry it with me to my grave as a strong incitement to unceasing vows that Heaven may continue to you the choicest tokens of its beneficence; that the free Constitution which is the work of your hands may be stamped with wisdom and virtue; that, in fine, the happiness of the people of these States, under

the auspices of liberty, may be made complete by so careful a preservation and so prudent a use of this blessing as will acquire to them the glory of recommending it to the applause, the affection, and adoption of every nation which is yet a stranger to it.

Here, perhaps, I ought to stop. But a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me on an occasion like the present to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments which are the result of much reflection, of no inconsiderable observation, and which appear to me all important to the permanency of your felicity as a people. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion.

Interwoven as is the love of liberty with every ligament of your hearts, no recommendation of mine is necessary to fortify or confirm the attachment.

The unity to government which constitutes you one people is also now dear to you. It is justly so; for it is a main pillar in the edifice of your real independence, the support of your tranquillity at home, your peace abroad, of your safety, of your prosperity, of that very liberty which you so highly prize. But as it is easy to foresee that from different causes and from different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth; as this is the point in your political fortress against which the batteries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed, it is of infinite moment that you should properly estimate the immense value of your national union to your collective and individual happiness; that you should cherish a cordial, habitual, and immovable attachment to it; accustoming yourselves to think and speak of it as of the palladium of your political safety and prosperity; watching for its preservation with jealous anxiety; discountenancing whatever may suggest even a suspicion that it can in any event be abandoned; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts.

For this you have every inducement of sympathy and

interest. Citizens by birth or choice, of a common country, that country has a right to concentrate your affections. The name of American, which belongs to you, in your national capacity, must always exalt the just pride of patriotism, more than any appellation derived from local discriminations. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have in a common cause fought and triumphed together. The independence and liberty you possess are the work of joint councils and joint efforts, of common dangers, sufferings, and successes.

But these considerations, however powerfully they address themselves to your sensibility, are greatly outweighed by those which apply more immediately to your interest. Here every portion of our country finds the most commanding motives for carefully guarding and preserving the union of the whole.

The *North*, in an unrestrained intercourse with the *South*, protected by the equal laws of a common government, finds in the productions of the latter great additional resources of maritime and commercial enterprise and precious materials of manufacturing industry. The *South*, in the same intercourse, benefiting by the agency of the *North*, sees its agriculture grow and its commerce expand. Turning partly into its own channels the seamen of the *North*, it finds its particular navigation invigorated; and while it contributes, in different ways, to nourish and increase the general mass of the national navigation, it looks forward to the protection of a maritime strength, to which itself is unequally adapted. The *East*, in a like intercourse with the *West*, already finds and, in the progressive improvement of interior communications, by land and water, will more and more find a valuable vent for the commodities which it brings from abroad, or manufactures at home. The *West* derives from the *East* supplies requisite to its growth and comfort, and what is perhaps of still greater consequence, it must of necessity owe the *secure* enjoyment of indispensable *outlets* for its own productions to the weight, influence, and the future maritime strength of the Atlantic side of the union, directed by an indissoluble community of interest *as one nation*. Any other tenure by which the *West* can hold this essential advantage, whether derived from its own separate strength or from an apostate and unnatural connection with any foreign power, must be intrinsically precarious.

While, then, every part of our country thus feels an immediate and particular interest in union, all the parts combined cannot fail to find in the united mass of means and efforts greater strength, greater resource, propor-

tionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and, what is of inestimable value, they must derive from union an exemption from those broils and wars between themselves, which so frequently afflict neighboring countries not tied together by the same government—which their own rivalships alone would be sufficient to produce, but which opposite foreign alliances, attachments, and intrigues would stimulate and embitter. Hence likewise they will avoid the necessity of those overgrown military establishments which under any form of government are inauspicious to liberty, and which are to be regarded as particularly hostile to republican liberty: in this sense it is that your union ought to be considered as a main prop of your liberty, and that the love of the one ought to endear to you the preservation of the other.

These considerations speak a persuasive language to every reflecting and virtuous mind, and exhibit the continuance of the union as a primary object of patriotic desire. Is there a doubt, whether a common government can embrace so large a sphere? Let experience solve it. To listen to mere speculation in such a case were criminal. We are authorized to hope that a proper organization of the whole, with the auxiliary agency of governments for the respective subdivisions, will afford a happy issue to the experiment. 'Tis well worth a fair and full experiment. With such powerful and obvious motives to union affecting all parts of our country, while experience shall not have demonstrated its impracticability, there will always be reason to distrust the patriotism of those who in any quarter may endeavor to weaken its bands.

In contemplating the causes which may disturb our union it occurs as matter of serious concern that any ground should have been furnished for characterizing parties by *geographical* discriminations—*Northern* and *Southern*, *Atlantic*, and *Western*—whence designing men may endeavor to excite a belief that there is a real difference of local interests and views. One of the expedients of party to acquire influence within particular districts is to misrepresent the opinions and aims of other districts. You can not shield yourselves too much against the jealousies and heartburnings which spring from these misrepresentations; they tend to render alien to each other those who ought to be bound together by fraternal affection. The inhabitants of our *Western* country have lately had a useful lesson on this head. They have seen in the negotiation by the Executive and in the unanimous ratification by the Senate of the treaty with Spain,

and in the universal satisfaction at that event throughout the United States, a decisive proof how unfounded were the suspicions propagated among them of a policy in the General Government and in the Atlantic States unfriendly to their interests in regard to the Mississippi. They have been witnesses to the formation of two treaties—that with Great Britain and that with Spain—which secure to them everything that they could desire in respect to our foreign relations toward confirming their prosperity. Will it not be their wisdom to rely for the preservation of these advantages on the union by which they were procured? Will they not henceforth be deaf to those advisers, if such there are, who would sever them from their brethren and connect them with aliens?

To the efficacy and permanency of your union a government for the whole is indispensable. No alliances, however strict, between the parts can be an adequate substitute. They must inevitably experience the infractions and interruptions which all alliances in all times have experienced. Sensible of this momentous truth, you have improved upon your first essay by the adoption of a Constitution of Government better calculated than your former for an intimate union and for the efficacious management of your common concerns. This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers, uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true liberty. The basis of our political systems is the right of the people to make and to alter their constitutions of government. But the constitution which at any time exists until changed by an explicit and authentic act of the whole people is sacredly obligatory upon all. The very idea of the power and the right of the people to establish government presupposes the duty of every individual to obey the established government.

All obstructions to the execution of the laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle and of fatal tendency. They serve to organize faction, to give it an artificial and extraordinary force; to put in the place of the delegated will of the

nation, the will of a party, often a small but artful and enterprising minority of the community; and, according to the alternate triumphs of different parties, to make the public administration the mirror of the ill-concerted and incongruous projects of faction, rather than the organ of consistent and wholesome plans digested by common councils and modified by mutual interests.

However combinations or associations of the above description may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cunning, ambitious, and unprincipled men will be enabled to subvert the power of the people, and to usurp for themselves the reins of government—destroying afterwards the very engines which have lifted them to unjust dominion.

Toward the preservation of your Government and the permanency of your present happy state, it is requisite not only that you steadily discountenance irregular oppositions to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretexts. One method of assault may be to effect in the forms of the Constitution alterations which will impair the energy of the system, and thus to undermine what can not be directly overthrown. In all the changes to which you may be invited remember that time and habit are at least as necessary to fix the true character of governments as of other human institutions; that experience is the surest standard by which to test the real tendency of the existing constitution of a country; that facility in changes upon the credit of mere hypothesis and opinion exposes to perpetual change, from the endless variety of hypothesis and opinion; and remember especially that for the efficient management of your common interests in a country so extensive as ours a government of as much vigor as is consistent with the perfect security of liberty is indispensable. Liberty itself will find in such a government, with powers properly distributed and adjusted, its surest guardian. It is, indeed, little else than a name where the government is too feeble to withstand the enterprise of faction, to confine each member of the society within the limits prescribed by the laws, and to maintain all in the secure and tranquil enjoyment of the rights of person and property.

I have already intimated to you the danger of parties in the state, with particular reference to the founding of them on geographical discriminations. Let me now take a more comprehensive view, and warn you in the most solemn manner against the baneful effects of the spirit of party generally.

This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but in those of the popular form it is seen in its greatest rankness and is truly their worst enemy.

The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result gradually incline the minds of men to seek security and repose in the absolute power of an individual, and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation on the ruins of public liberty.

Without looking forward to an extremity of this kind (which nevertheless ought not to be entirely out of sight), the common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it.

It serves always to distract the public councils and enfeeble the public administration. It agitates the community with ill-founded jealousies and false alarms; kindles the animosity of one part against another; foment occasionally riot and insurrection. It opens the door to foreign influence and corruption, which find a facilitated access to the government itself through the channels of party passion. Thus the policy and the will of one country are subjected to the policy and will of another.

There is an opinion that parties in free countries are useful checks upon the administration of the government, and serve to keep alive the spirit of liberty. This within certain limits is probably true; and in governments of a monarchical cast patriotism may look with indulgence, if not with favor, upon the spirit of party. But in those of the popular character, in governments purely elective, it is a spirit not to be encouraged. From their natural tendency it is certain there will always be enough of that spirit for every salutary purpose; and there being constant danger of excess, the effort ought to be by force of public opinion to mitigate and assuage it. A fire not quenched, it demands a uniform vigilance to prevent its bursting into a flame, lest, instead of warming, it should consume.

It is important, likewise, that the habits of thinking in a free country should inspire caution in those intrusted

with its administration to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create whatever the form of government, a real despotism. A just estimate of that love of power and proneness to abuse it which predominates in the human heart is sufficient to satisfy us of the truth of this position. The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the guardian of the public weal against invasion by the others, has been evinced by experiments ancient and modern, some of them in our country and under our own eyes. To preserve them must be as necessary as to institute them. If in the opinion of the people the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit which the use can at any time yield.

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness—these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked, Where is the security for property, for reputation, for life, if the sense of religious obligation *desert* the oaths which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect the national morality can prevail in exclusion of religious principle.

It is substantially true that virtue or morality is a necessary spring of free government. The rule indeed extends with more or less force to every species of free government. Who that is a sincere friend to it can look with indifference upon attempts to shake the foundation of the fabric? Promote, then, as an object of primary

importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives; but it is necessary that public opinion should cooperate. To facilitate them the performance of their duty it is essential that you should practically bear in mind that toward the payment of debts there must be revenue; that to have revenue there must be taxes; that no taxes can be devised which are not more or less inconvenient and unpleasant; that the intrinsic embarrassment inseparable from the selection of the proper objects (which is always a choice of difficulties), ought to be a decisive motive for a candid construction of the conduct of the Government in making it, and for a spirit of acquiescence in the measures for obtaining revenue which the public exigencies may at any time dictate.

Observe good faith and justice toward all nations. Cultivate peace and harmony with all. Religion and morality enjoin this conduct. And can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and at no distant period a great nation to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt that in the course of time and things the fruits of such a plan would richly repay any temporary advantages which might be lost by a steady adherence to it? Can it be, that Providence has not connected the permanent felicity of a nation with its virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas! is it rendered impossible by its vices?

In the execution of such a plan nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded, and that in place of them just and amicable feelings toward all should be cultivated. The nation which indulges toward another an

habitual hatred or an habitual fondness is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable when accidental or trifling occasions of dispute occur. Hence frequent collisions, obstinate, envenomed, and bloody contests. The nation prompted by ill will and resentment sometimes impels to war the government contrary to the best calculations of policy. The government sometimes participates in the national propensity, and adopts through passion what reason would reject. At other times it makes the animosity of the nation subservient to projects of hostility, instigated by pride, ambition, and other sinister and pernicious motives. The peace often, sometimes perhaps the liberty, of nations has been the victim.

So likewise, a passionate attachment of one nation for another produces a variety of evils. Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest in cases where no real common interest exists, and infusing into one the enmities of the other, betrays the former into a participation in the quarrels and wars of the latter without adequate inducements or justification. It leads also to concessions to the favorite nation of privileges denied to others, which is apt doubly to injure the nation making the concessions by unnecessarily parting with what ought to have been retained, and by exciting jealousy, ill will, and a disposition to retaliate in the parties from whom equal privileges are withheld; and it gives to ambitious, corrupted, or deluded citizens (who devote themselves to the favorite nation) facility to betray or sacrifice the interests of their own country without odium, sometimes even with popularity, gilding with the appearances of a virtuous sense of obligation, a commendable deference for public opinion, or a laudable zeal for public good the base or foolish compliances of ambition, corruption, or infatuation.

As avenues to foreign influence in innumerable ways, such attachments are particularly alarming to the truly enlightened and independent patriot. How many opportunities do they afford to tamper with domestic factions, to practice the arts of seduction, to mislead public opinion, to influence or awe the public councils! Such an attachment of a small or weak toward a great and powerful nation dooms the former to be the satellite of the latter. Against the insidious wiles of foreign influ-

ence (I conjure you to believe me, fellow-citizens) the jealousy of a free people ought to be *constantly* awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike of another cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots who may resist the intrigues of the favorite are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the people to surrender their interests.

The great rule of conduct for us in regard to foreign nations is, in extending our commercial relations to have with them as little *political* connection as possible. So far as we have already formed engagements let them be fulfilled with perfect good faith. Here let us stop.

Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel.

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalry, interest, humor, or caprice?

It is our true policy to steer clear of permanent alliances with any portion of the foreign world, so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing engagements. I hold the maxim no less applicable to

public than to private affairs that honesty is always the best policy. I repeat, therefore, let those engagements be observed in their genuine sense. But in my opinion it is unnecessary and would be unwise to extend them.

Taking care always to keep ourselves by suitable establishments on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies.

Harmony, liberal intercourse with all nations are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand, neither seeking nor granting exclusive favors or preferences; consulting the natural course of things; diffusing and diversifying by gentle means the streams of commerce, but forcing nothing; establishing with powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the Government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary and liable to be from time to time abandoned or varied as experience and circumstances shall dictate; constantly keeping in view that it is folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard.

In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish, that they will control the usual current of the passions, or prevent our nation from running the course which has hitherto marked the destiny of nations. But if I may even flatter myself that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude of your welfare, by which they have been dictated.

How far in the discharge of my official duties I have been guided by the principles which have been delineated the public records and other evidences of my conduct must witness to you and to the world. To myself,

the assurance of my own conscience is that I have at least believed myself to be guided by them.

In relation to the still subsisting war in Europe my proclamation of the 22d of April, 1793, is the index to my plan. Sanctioned by your approving voice and by that of your representatives in both Houses of Congress, the spirit of that measure has continually governed me, uninfluenced by any attempts to deter or divert me from it.

After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound in duty and interest to take, a neutral position. Having taken it, I determined as far as should depend upon me to maintain it with moderation, perseverance, and firmness.

The considerations which respect the right to hold this conduct it is not necessary on this occasion to detail. I will only observe that, according to my understanding of the matter, that right, so far from being denied by any of the belligerent powers, has been virtually admitted by all.

The duty of holding a neutral conduct may be inferred, without anything more, from the obligation which justice and humanity impose on every nation, in cases in which it is free to act, to maintain inviolate the relations of peace and amity toward other nations.

The inducements of interest for observing that conduct will best be referred to your own reflections and experience. With me a predominant motive has been to endeavor to gain time to our country to settle and mature its yet recent institutions, and to progress without interruption to that degree of strength and consistency which is necessary to give it, humanly speaking, the command of its own fortunes.

Though in reviewing the incidents of my administration, I am unconscious of any intentional error, I am nevertheless too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils to which they may tend. I shall also carry with me the hope [that] my country will never cease to view them with indulgence, and that after forty-five years of my life dedicated to its service, with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest.

Relying on its kindness in this as in other things, and actuated by that fervent love towards it which is so natural to a man who views in it the native soil of himself and his progenitors for several generations, I anticipate with

pleasing expectation that retreat, in which I promise myself to realize, without alloy, the sweet enjoyment of partaking, in the midst of my fellow citizens, the benign influence of good laws under a free government, the ever favorite object of my heart, and the happy reward, as I trust, of our mutual cares, labors, and dangers.

Message of President James Monroe to Congress, 2 December 1823

In his seventh annual message to Congress, President James Monroe set forth American opposition to further European colonization in the Western Hemisphere and emphasized American neutrality in European affairs. It eventually became known as the Monroe Doctrine, principles that formed the foundation for American foreign policy.

Fellow-Citizens of the Senate and House of Representatives:

Many important subjects will claim your attention during the present session, of which I shall endeavor to give, in aid of your deliberations, a just idea in this communication. I undertake this duty with diffidence, from the vast extent of the interests on which I have to treat and of their great importance to every portion of our Union. I enter on it with zeal from a thorough conviction that there never was a period since the establishment of our Revolution when, regarding the condition of the civilized world and its bearing upon us, there was greater necessity for devotion in public servants to their respective duties, or for virtue, patriotism, and union in our constituents.

[. . .]

At the proposal of the Russian Imperial Government, made through the minister of the Emperor residing here, a full power and instructions have been transmitted to the minister of the United States at St. Petersburg to arrange by amicable negotiation the respective rights and interests of the two nations on the northwest coast of this continent. A similar proposal has been made by his Imperial Majesty to the Government of Great Britain, which has likewise been acceded to. The Government of the United States has been desirous by this friendly proceeding of manifesting the great value which they have inevitably attached to the friendship of the Emperor and their solicitude to cultivate the best understanding with his Government. In the discussions to which this interest has given rise and in the arrange-

ments by which they may terminate the occasion has been judged proper for asserting, as a principle in which the rights and interests of the United States are involved that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European powers.

[. . .]

It was stated at the commencement of the last session that a great effort was then making in Spain and Portugal to improve the condition of the people of those countries, and that it appeared to be conducted with extraordinary moderation. It need scarcely be remarked that the result has been so far very different from what was then anticipated. Of events in that quarter of the globe, with which we have so much intercourse and from which we derive our origin, we have always been anxious and interested spectators. The citizens of the United States cherish sentiments the most friendly in favor of the liberty and happiness of their fellow-men on that side of the Atlantic. In the wars of the European powers in matters relating to themselves we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are of necessity more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. This difference proceeds from that which exists in their respective Governments; and to the defense of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole nation is devoted. We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power in any

other light than as the manifestation of an unfriendly disposition toward the United States. In the war between those new Governments and Spain we declared our neutrality at the time of their recognition, and to this we have adhered, and shall continue to adhere, provided no change shall occur which, in the judgment of the competent authorities of this Government, shall make a corresponding change on the part of the United States indispensable to their security.

The late events in Spain and Portugal shew that Europe is still unsettled. Of this important fact no stronger proof can be adduced than that the allied powers should have thought it proper, on any principle satisfactory to themselves, to have interposed by force in the internal concerns of Spain. To what extent such interposition may be carried, on the same principle, is a question in which all independent powers whose governments differ from theirs are interested, even those most remote, and surely none more so than the United States. Our policy in regard to Europe, which was adopted at an early stage of the wars which have so long agitated that quarter of the globe, nevertheless remains the same, which is, not to interfere in the internal concerns of any of its powers; to consider the government *de facto* as the legitimate government for us; to cultivate friendly relations with it, and to preserve those relations by a frank, firm, and manly policy, meeting in all instances the just claims of every power, submitting to injuries from none. But in regard to those continents circumstances are eminently and conspicuously different. It is impossible that the allied powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor can anyone believe that our southern brethren, if [left] to themselves, would adopt it of their own accord. It equally impossible, therefore, that we should behold such interposition in any form with indifference. If we look to the comparative strength and resources of Spain and those new Governments, and their distance from each other, it must be obvious that she can never subdue them. It is still the true policy of the United States to leave the parties to themselves, in the hope that other powers will pursue the same course.

Abraham Lincoln's First Inaugural Address, 4 March 1861

The South had seceded from the Union by the time Lincoln was inaugurated, and Jefferson Davis had already taken office as president of the Confederacy.

With a war between the North and South looming on the horizon, Lincoln used his inaugural speech as an appeal to keep the Union whole.

Fellow-Citizens of the United States:

In compliance with a custom as old as the Government itself, I appear before you to address you briefly and to take in your presence the oath prescribed by the Constitution of the United States to be taken by the President “before he enters on the execution of this office.”

I do not consider it necessary at present for me to discuss those matters of administration about which there is no special anxiety or excitement.

Apprehension seems to exist among the people of the Southern States that by the accession of a Republican Administration their property and their peace and personal security are to be endangered. There has never been any reasonable cause for such apprehension. Indeed, the most ample evidence to the contrary has all the while existed and been open to their inspection. It is found in nearly all the published speeches of him who now addresses you. I do but quote from one of those speeches when I declare that—

I have no purpose, directly or indirectly, to interfere with the institution of slavery in the States where it exists. I believe I have no lawful right to do so, and I have no inclination to do so.

Those who nominated and elected me did so with full knowledge that I had made this and many similar declarations and had never recanted them; and more than this, they placed in the platform for my acceptance, and as a law to themselves and to me, the clear and emphatic resolution which I now read:

Resolved, That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depend; and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter what pretext, as among the gravest of crimes.

I now reiterate these sentiments, and in doing so I only press upon the public attention the most conclusive evidence of which the case is susceptible that the property, peace, and security of no section are to be in any wise endangered by the now incoming Administration. I add, too, that all the protection which, consistently with the Constitution and the laws, can be given will be cheerfully given to all the States when lawfully

demand, for whatever cause—as cheerfully to one section as to another.

There is much controversy about the delivering up of fugitives from service or labor. The clause I now read is as plainly written in the Constitution as any other of its provisions:

No person held to service or labor in one State, under the laws thereof, escaping into another, shall in consequence of any law or regulation therein be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

It is scarcely questioned that this provision was intended by those who made it for the reclaiming of what we call fugitive slaves; and the intention of the lawgiver is the law. All members of Congress swear their support to the whole Constitution—to this provision as much as to any other. To the proposition, then, that slaves whose cases come within the terms of this clause “shall be delivered up” their oaths are unanimous. Now, if they would make the effort in good temper, could they not with nearly equal unanimity frame and pass a law by means of which to keep good that unanimous oath?

There is some difference of opinion whether this clause should be enforced by national or by State authority, but surely that difference is not a very material one. If the slave is to be surrendered, it can be of but little consequence to him or to others by which authority it is done. And should anyone in any case be content that his oath shall go unkept on a merely unsubstantial controversy as to *how* it shall be kept?

Again: In any law upon this subject ought not all the safeguards of liberty known in civilized and humane jurisprudence to be introduced, so that a free man be not in any case surrendered as a slave? And might it not be well at the same time to provide by law for the enforcement of that clause in the Constitution which guarantees that “the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States”?

I take the official oath to-day with no mental reservations and with no purpose to construe the Constitution or laws by any hypercritical rules; and while I do not choose now to specify particular acts of Congress as proper to be enforced, I do suggest that it will be much safer for all, both in official and private stations, to conform to and abide by all those acts which stand unrepealed than to violate any of them trusting to find impunity in having them held to be unconstitutional.

It is seventy-two years since the first inauguration of a President under our National Constitution. During that period fifteen different and greatly distinguished citizens have in succession administered the executive branch of the Government. They have conducted it through many perils, and generally with great success. Yet, with all this scope of precedent, I now enter upon the same task for the brief constitutional term of four years under great and peculiar difficulty. A disruption of the Federal Union, heretofore only menaced, is now formidably attempted.

I hold that in contemplation of universal law and of the Constitution the Union of these States is perpetual. Perpetuity is implied, if not expressed, in the fundamental law of all national governments. It is safe to assert that no government proper ever had a provision in its organic law for its own termination. Continue to execute all the express provisions of our National Constitution, and the Union will endure forever, it being impossible to destroy it except by some action not provided for in the instrument itself.

Again: If the United States be not a government proper, but an association of States in the nature of contract merely, can it, as a contract, be peaceably unmade by less than all the parties who made it? One party to a contract may violate it—break it, so to speak—but does it not require all to lawfully rescind it?

Descending from these general principles, we find the proposition that in legal contemplation the Union is perpetual confirmed by the history of the Union itself. The Union is much older than the Constitution. It was formed, in fact, by the Articles of Association in 1774. It was matured and continued by the Declaration of Independence in 1776. It was further matured, and the faith of all the then thirteen States expressly plighted and engaged that it should be perpetual, by the Articles of Confederation in 1778. And finally, in 1787, one of the declared objects for ordaining and establishing the Constitution was “*to form a more perfect Union.*”

But if destruction of the Union by one or by a part only of the States be lawfully possible, the Union is *less* perfect than before the Constitution, having lost the vital element of perpetuity.

It follows from these views that no State upon its own mere motion can lawfully get out of the Union; that *resolves* and *ordinances* to that effect are legally void, and that acts of violence within any State or States against the authority of the United States are insurrectionary or revolutionary, according to circumstances.

I therefore consider that in view of the Constitution and the laws the Union is unbroken, and to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States. Doing this I deem to be only a simple duty on my part, and I shall perform it so far as practicable unless my rightful masters, the American people, shall withhold the requisite means or in some authoritative manner direct the contrary. I trust this will not be regarded as a menace, but only as the declared purpose of the Union that it *will* constitutionally defend and maintain itself.

In doing this there needs to be no bloodshed or violence, and there shall be none unless it be forced upon the national authority. The power confided to me will be used to hold, occupy, and possess the property and places belonging to the Government and to collect the duties and imposts; but beyond what may be necessary for these objects, there will be no invasion, no using of force against or among the people anywhere. Where hostility to the United States in any interior locality shall be so great and universal as to prevent competent resident citizens from holding the Federal offices, there will be no attempt to force obnoxious strangers among the people for that object. While the strict legal right may exist in the Government to enforce the exercise of these offices, the attempt to do so would be so irritating and so nearly impracticable withal that I deem it better to forego for the time the uses of such offices.

The mails, unless repelled, will continue to be furnished in all parts of the Union. So far as possible the people everywhere shall have that sense of perfect security which is most favorable to calm thought and reflection. The course here indicated will be followed unless current events and experience shall show a modification or change to be proper, and in every case and exigency my best discretion will be exercised, according to circumstances actually existing and with a view and a hope of a peaceful solution of the national troubles and the restoration of fraternal sympathies and affections.

That there are persons in one section or another who seek to destroy the Union at all events and are glad of any pretext to do it I will neither affirm nor deny; but if there be such, I need address no word to them. To those, however, who really love the Union may I not speak?

Before entering upon so grave a matter as the destruction of our national fabric, with all its benefits, its memories, and its hopes, would it not be wise to ascertain precisely why we do it? Will you hazard so desperate a step while there is any possibility that any

portion of the ills you fly from have no real existence? Will you, while the certain ills you fly to are greater than all the real ones you fly from, will you risk the commission of so fearful a mistake?

All profess to be content in the Union if all constitutional rights can be maintained. Is it true, then, that any right plainly written in the Constitution has been denied? I think not. Happily, the human mind is so constituted that no party can reach to the audacity of doing this. Think, if you can, of a single instance in which a plainly written provision of the Constitution has ever been denied. If by the mere force of numbers a majority should deprive a minority of any clearly written constitutional right, it might in a moral point of view justify revolution; certainly [it] would if such right were a vital one. But such is not our case. All the vital rights of minorities and of individuals are so plainly assured to them by affirmations and negations, guaranties and prohibitions, in the Constitution that controversies never arise concerning them. But no organic law can ever be framed with a provision specifically applicable to every question which may occur in practical administration. No foresight can anticipate nor any document of reasonable length contain express provisions for all possible questions. Shall fugitives from labor be surrendered by national or by State authority? The Constitution does not expressly say. *May* Congress prohibit slavery in the Territories? The Constitution does not expressly say. *Must* Congress protect slavery in the Territories? The Constitution does not expressly say.

From questions of this class spring all our constitutional controversies, and we divide upon them into majorities and minorities. If the minority will not acquiesce, the majority must, or the Government must cease. There is no other alternative, for continuing the Government is acquiescence on one side or the other. If a minority in such case will secede rather than acquiesce, they make a precedent which in turn will divide and ruin them, for a minority of their own will secede from them whenever a majority refuses to be controlled by such minority. For instance, why may not any portion of a new confederacy a year or two hence arbitrarily secede again, precisely as portions of the present Union now claim to secede from it? All who cherish disunion sentiments are now being educated to the exact temper of doing this.

Is there such perfect identity of interests among the States to compose a new union as to produce harmony only and prevent renewed secession?

Plainly the central idea of secession is the essence of anarchy. A majority held in restraint by constitutional

checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it does of necessity fly to anarchy or to despotism. Unanimity is impossible. The rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy or despotism in some form is all that is left.

I do not forget the position assumed by some that constitutional questions are to be decided by the Supreme Court, nor do I deny that such decisions must be binding in any case upon the parties to a suit as to the object of that suit, while they are also entitled to very high respect and consideration in all parallel cases by all other departments of the Government. And while it is obviously possible that such decision may be erroneous in any given case, still the evil effect following it, being limited to that particular case, with the chance that it may be overruled and never become a precedent for other cases, can better be borne than could the evils of a different practice. At the same time, the candid citizen must confess that if the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made in ordinary litigation between parties in personal actions the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal. Nor is there in this view any assault upon the court or the judges. It is a duty from which they may not shrink to decide cases properly brought before them, and it is no fault of theirs if others seek to turn their decisions to political purposes.

One section of our country believes slavery is *right* and ought to be extended, while the other believes it is *wrong* and ought not to be extended. This is the only substantial dispute. The fugitive-slave clause of the Constitution and the law for the suppression of the foreign slave trade are each as well enforced, perhaps, as any law can ever be in a community where the moral sense of the people imperfectly supports the law itself. The great body of the people abide by the dry legal obligation in both cases, and a few break over in each. This, I think, can not be perfectly cured, and it would be worse in both cases *after* the separation of the sections than before. The foreign slave trade, now imperfectly suppressed, would be ultimately revived without restriction in one section, while fugitive slaves, now only partially surrendered, would not be surrendered at all by the other.

Physically speaking, we can not separate. We can not remove our respective sections from each other nor build an impassable wall between them. A husband and wife may be divorced and go out of the presence and beyond the reach of each other, but the different parts of our country can not do this. They can not but remain face to face, and intercourse, either amicable or hostile, must continue between them. Is it possible, then, to make that intercourse more advantageous or more satisfactory *after* separation than *before*? Can aliens make treaties easier than friends can make laws? Can treaties be more faithfully enforced between aliens than laws can among friends? Suppose you go to war, you can not fight always; and when, after much loss on both sides and no gain on either, you cease fighting, the identical old questions, as to terms of intercourse, are again upon you.

This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing Government, they can exercise their *constitutional* right of amending it or their *revolutionary* right to dismember or overthrow it. I can not be ignorant of the fact that many worthy and patriotic citizens are desirous of having the National Constitution amended. While I make no recommendation of amendments, I fully recognize the rightful authority of the people over the whole subject, to be exercised in either of the modes prescribed in the instrument itself; and I should, under existing circumstances, favor rather than oppose a fair opportunity being afforded the people to act upon it. I will venture to add that to me the convention mode seems preferable, in that it allows amendments to originate with the people themselves, instead of only permitting them to take or reject propositions originated by others, not especially chosen for the purpose, and which might not be precisely such as they would wish to either accept or refuse. I understand a proposed amendment to the Constitution—which amendment, however, I have not seen—has passed Congress, to the effect that the Federal Government shall never interfere with the domestic institutions of the States, including that of persons held to service. To avoid misconstruction of what I have said, I depart from my purpose not to speak of particular amendments so far as to say that, holding such a provision to now be implied constitutional law, I have no objection to its being made express and irrevocable.

The Chief Magistrate derives all his authority from the people, and they have referred none upon him to fix terms for the separation of the States. The people themselves can do this if also they choose, but the Executive as such has nothing to do with it. His duty is to admin-

ister the present Government as it came to his hands and to transmit it unimpaired by him to his successor.

Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world? In our present differences, is either party without faith of being in the right? If the Almighty Ruler of Nations, with His eternal truth and justice, be on your side of the North, or on yours of the South, that truth and that justice will surely prevail by the judgment of this great tribunal of the American people.

By the frame of the Government under which we live this same people have wisely given their public servants but little power for mischief, and have with equal wisdom provided for the return of that little to their own hands at very short intervals. While the people retain their virtue and vigilance no Administration by any extreme of wickedness or folly can very seriously injure the Government in the short space of four years.

My countrymen, one and all, think calmly and *well* upon this whole subject. Nothing valuable can be lost by taking time. If there be an object to *hurry* any of you in hot haste to a step which you would never take *deliberately*, that object will be frustrated by taking time; but no good object can be frustrated by it. Such of you as are now dissatisfied still have the old Constitution unimpaired, and, on the sensitive point, the laws of your own framing under it; while the new Administration will have no immediate power, if it would, to change either. If it were admitted that you who are dissatisfied hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him who has never yet forsaken this favored land are still competent to adjust in the best way all our present difficulty.

In *your* hands, my dissatisfied fellow-countrymen, and not in *mine*, is the momentous issue of civil war. The Government will not assail *you*. You can have no conflict without being yourselves the aggressors. *You* have no oath registered in heaven to destroy the Government, while I shall have the most solemn one to “preserve, protect, and defend it.”

I am loath to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

Theodore Roosevelt's Annual Message to Congress, 6 December 1904

In what came to be known as the "Roosevelt Corollary to the Monroe Doctrine," President Theodore Roosevelt stated that in keeping with the Monroe Doctrine, the United States might be forced into the "exercise of an international police power" to keep order in the Western Hemisphere. Historians have pointed out the irony of using the Monroe Doctrine—principles intended to prevent European intervention in the Western Hemisphere—as the justification for the United States' own intervention in the Western Hemisphere.

To the Senate and House of Representatives:

The Nation continues to enjoy noteworthy prosperity. Such prosperity is of course primarily due to the high individual average of our citizenship, taken together with our great natural resources; but an important factor therein is the working of our long-continued governmental policies. The people have emphatically expressed their approval of the principles underlying these policies, and their desire that these principles be kept substantially unchanged, although of course applied in a progressive spirit to meet changing conditions.

Foreign Policy

In treating of our foreign policy and of the attitude that this great Nation should assume in the world at large, it is absolutely necessary to consider the Army and the Navy, and the Congress, through which the thought of the Nation finds its expression, should keep ever vividly in mind the fundamental fact that it is impossible to treat our foreign policy, whether this policy takes shape in the effort to secure justice for others or justice for ourselves, save as conditioned upon the attitude we are willing to take toward our Army, and especially toward our Navy. It is not merely unwise, it is contemptible, for a nation, as for an individual, to use high-sounding language to proclaim its purposes, or to take positions which are ridiculous if unsupported by potential force, and then to refuse to provide this force. If there is no intention of providing and keeping the force necessary to back up a strong attitude, then it is far better not to assume such an attitude.

The steady aim of this Nation, as of all enlightened nations, should be to strive to bring ever nearer the day when there shall prevail throughout the world the peace of justice. There are kinds of peace which are highly undesirable, which are in the long run as destructive as

any war. Tyrants and oppressors have many times made a wilderness and called it peace. Many times peoples who were slothful or timid or shortsighted, who had been enervated by ease or by luxury, or misled by false teachings, have shrunk in unmanly fashion from doing duty that was stern and that needed self-sacrifice, and have sought to hide from their own minds their shortcomings, their ignoble motives, by calling them love of peace. The peace of tyrannous terror, the peace of craven weakness, the peace of injustice, all these should be shunned as we shun unrighteous war. The goal to set before us as a nation, the goal which should be set before all mankind, is the attainment of the peace of justice, of the peace which comes when each nation is not merely safe-guarded in its own rights, but scrupulously recognizes and performs its duty toward others. Generally peace tells for righteousness; but if there is conflict between the two, then our fealty is due first to the cause of righteousness. Unrighteous wars are common, and unrighteous peace is rare; but both should be shunned. The right of freedom and the responsibility for the exercise of that right can not be divorced. One of our great poets has well and finely said that freedom is not a gift that tarries long in the hands of cowards. Neither does it tarry long in the hands of those too slothful, too dishonest, or too unintelligent to exercise it. The eternal vigilance which is the price of liberty must be exercised, sometimes to guard against outside foes; although of course far more often to guard against our own selfish or thoughtless shortcomings.

If these self-evident truths are kept before us, and only if they are so kept before us, we shall have a clear idea of what our foreign policy in its larger aspects should be. It is our duty to remember that a nation has no more right to do injustice to another nation, strong or weak, than an individual has to do injustice to another individual; that the same moral law applies in one case as in the other. But we must also remember that it is as much the duty of the Nation to guard its own rights and its own interests as it is the duty of the individual so to do. Within the Nation the individual has now delegated this right to the State, that is, to the representative of all the individuals, and it is a maxim of the law that for every wrong there is a remedy. But in international law we have not advanced by any means as far as we have advanced in municipal law. There is as yet no judicial way of enforcing a right in international law. When one nation wrongs another or wrongs many others, there is no tribunal before which

the wrongdoer can be brought. Either it is necessary supinely to acquiesce in the wrong, and thus put a premium upon brutality and aggression, or else it is necessary for the aggrieved nation valiantly to stand up for its rights. Until some method is devised by which there shall be a degree of international control over offending nations, it would be a wicked thing for the most civilized powers, for those with most sense of international obligations and with keenest and most generous appreciation of the difference between right and wrong, to disarm. If the great civilized nations of the present day should completely disarm, the result would mean an immediate recrudescence of barbarism in one form or another. Under any circumstances a sufficient armament would have to be kept up to serve the purposes of international police; and until international cohesion and the sense of international duties and rights are far more advanced than at present, a nation desirous both of securing respect for itself and of doing good to others must have a force adequate for the work which it feels is allotted to it as its part of the general world duty. Therefore it follows that a self-respecting, just, and far-seeing nation should on the one hand endeavor by every means to aid in the development of the various movements which tend to provide substitutes for war, which tend to render nations in their actions toward one another, and indeed toward their own peoples, more responsive to the general sentiment of humane and civilized mankind; and on the other hand that it should keep prepared, while scrupulously avoiding wrongdoing itself, to repel any wrong, and in exceptional cases to take action which in a more advanced stage of international relations would come under the head of the exercise of the international police. A great free people owes it to itself and to all mankind not to sink into helplessness before the powers of evil.

Arbitration Treaties—Second Hague Conference

We are in every way endeavoring to help on, with cordial good will, every movement which will tend to bring us into more friendly relations with the rest of mankind. In pursuance of this policy I shall shortly lay before the Senate treaties of arbitration with all powers which are willing to enter into these treaties with us. It is not possible at this period of the world's development to agree to arbitrate all matters, but there are many matters of possible difference between us and other nations which can be thus arbitrated. Furthermore, at the request of the Interparliamentary Union, an eminent body composed

of practical statesmen from all countries, I have asked the Powers to join with this Government in a second Hague conference, at which it is hoped that the work already so happily begun at The Hague may be carried some steps further toward completion. This carries out the desire expressed by the first Hague conference itself.

Policy Toward Other Nations of the Western Hemisphere

It is not true that the United States feels any land hunger or entertains any projects as regards the other nations of the Western Hemisphere save such as are for their welfare. All that this country desires is to see the neighboring countries stable, orderly, and prosperous. Any country whose people conduct themselves well can count upon our hearty friendship. If a nation shows that it knows how to act with reasonable efficiency and decency in social and political matters, if it keeps order and pays its obligations, it need fear no interference from the United States. Chronic wrongdoing, or an impotence which results in a general loosening of the ties of civilized society, may in America, as elsewhere, ultimately require intervention by some civilized nation, and in the Western Hemisphere the adherence of the United States to the Monroe Doctrine may force the United States, however reluctantly, in flagrant cases of such wrongdoing or impotence, to the exercise of an international police power. If every country washed by the Caribbean Sea would show the progress in stable and just civilization which with the aid of the Platt Amendment Cuba has shown since our troops left the island, and which so many of the republics in both Americas are constantly and brilliantly showing, all question of interference by this Nation with their affairs would be at an end. Our interests and those of our southern neighbors are in reality identical. They have great natural riches, and if within their borders the reign of law and justice obtains, prosperity is sure to come to them. While they thus obey the primary laws of civilized society they may rest assured that they will be treated by us in a spirit of cordial and helpful sympathy. We would interfere with them only in the last resort, and then only if it became evident that their inability or unwillingness to do justice at home and abroad had violated the rights of the United States or had invited foreign aggression to the detriment of the entire body of American nations. It is a mere truism to say that every nation, whether in America or anywhere else, which desires to maintain its freedom, its independence, must ultimately realize that the right of such independence

can not be separated from the responsibility of making good use of it.

In asserting the Monroe Doctrine, in taking such steps as we have taken in regard to Cuba, Venezuela, and Panama, and in endeavoring to circumscribe the theater of war in the Far East, and to secure the open door in China, we have acted in our own interest as well as in the interest of humanity at large. There are, however, cases in which, while our own interests are not greatly involved, strong appeal is made to our sympathies. Ordinarily it is very much wiser and more useful for us to concern ourselves with striving for our own moral and material betterment here at home than to concern ourselves with trying to better the condition of things in other nations. We have plenty of sins of our own to war against, and under ordinary circumstances we can do more for the general uplifting of humanity by striving with heart and soul to put a stop to civic corruption, to brutal lawlessness and violent race prejudices here at home than by passing resolutions and wrongdoing elsewhere. Nevertheless there are occasional crimes committed on so vast a scale and of such peculiar horror as to make us doubt whether it is not our manifest duty to endeavor at least to show our disapproval of the deed and our sympathy with those who have suffered by it. The cases must be extreme in which such a course is justifiable. There must be no effort made to remove the mote from our brother's eye if we refuse to remove the beam from our own. But in extreme cases action may be justifiable and proper. What form the action shall take must depend upon the circumstances of the case; that is, upon the degree of the atrocity and upon our power to remedy it. The cases in which we could interfere by force of arms as we interfered to put a stop to intolerable conditions in Cuba are necessarily very few. Yet it is not to be expected that a people like ours, which in spite of certain very obvious shortcomings, nevertheless as a whole shows by its consistent practice its belief in the principles of civil and religious liberty and of orderly freedom, a people among whom even the worst crime, like the crime of lynching, is never more than sporadic, so that individuals and not classes are molested in their fundamental rights—it is inevitable that such a nation should desire eagerly to give expression to its horror on an occasion like that of the massacre of the Jews in Kishenev, or when it witnesses such systematic and long-extended cruelty and oppression as the cruelty and oppression of which the Armenians have been the

victims, and which have won for them the indignant pity of the civilized world.

Woodrow Wilson's Fourteen Points Address, 8 January 1918

This address put forth President Wilson's plan to bring an end to World War I. In an effort to bring peace, Wilson sought to boost Allied morale until the war was over and to assure the German people that the Allied peace terms would not be punitive.

The address of the President of the United States, this day delivered at a joint session of the two Houses of Congress, is as follows:

Gentlemen of the Congress, once more, as repeatedly before, the spokesmen of the Central Empires have indicated their desire to discuss the objects of the war and the possible bases of a general peace. Parleys have been in progress at Brest-Litvosk between Russian representatives and representatives of the Central Powers, to which the attention of all the belligerents has been invited for the purpose of ascertaining whether it may be possible to extend these parleys into a general conference with regard to terms of peace and settlement. The Russian representatives presented not only a perfectly definite statement of the principles upon which they would be willing to conclude peace, but also an equally definite programme of the concrete application of these principles. The representatives of the Central Powers, on their part, presented an outline settlement which, if much less definite, seemed susceptible of liberal interpretation until their specific programme of practical terms was added. That programme proposed no concessions at all either to the sovereignty of Russia or to the preferences of the populations with whose fortunes it dealt, but meant, in a word, that the Central Empires were to keep every foot of territory their armed forces had occupied—every province, every city, every point of vantage—as a permanent addition to their territories and their power. It is a reasonable conjecture that the general principles of settlement which they at first suggested originated with the more liberal statesmen of Germany and Austria, the men who have begun to feel the force of their own peoples' thought and purpose, while the concrete terms of actual settlement came from the military leaders who have no thought but to keep what they have got. The negotiations have been broken off. The Russian representatives were sincere and in earnest.

They cannot entertain such proposals of conquest and domination.

The whole incident is full of significance. It is also full of perplexity. With whom are the Russian representatives dealing? For whom are the representatives of the Central Empires speaking? Are they speaking for the majorities of their respective parliaments or for the minority parties, that military and imperialistic minority which has so far dominated their whole policy and controlled the affairs of Turkey and of the Balkan states which have felt obliged to become their associates in the war? The Russian representatives have insisted, very justly, very wisely, and in the true spirit of modern democracy, that the conferences they have been holding with the Teutonic and Turkish statesmen should be held within open, not closed, doors, and all the world has been audience, as was decided. To whom have we been listening, then? To those who speak the spirit and intention of the Resolutions of the German Reichstag of the ninth of July last, the spirit and intention of the liberal leaders and parties of Germany, or to those who resist and defy that spirit and intention and insist upon conquest and subjugation? Or are we listening, in fact, to both, unreconciled and in open and hopeless contradiction? These are very serious and pregnant questions. Upon the answer to them depends the peace of the world.

But whatever the results of the parleys at Brest-Litvosk, whatever the confusions of counsel and of purpose in the utterances of the spokesmen of the Central Empires, they have again attempted to acquaint the world with their objects in the war and have again challenged their adversaries to say what their objects are and what sort of settlement they would deem just and satisfactory. There is no good reason why that challenge should not be responded to, and responded to with the utmost candor. We did not wait for it. Not once, but again and again, we have laid our whole thought and purpose before the world, not in general terms only, but each time with sufficient definition to make it clear what sort of definitive terms of settlement must necessarily spring out of them. Within the last week Mr. Lloyd George has spoken with admirable candor and in admirable spirit for the people and Government of Great Britain. There is no confusion of counsel among the adversaries of the Central Powers, no uncertainty of principle, no vagueness of detail. The only secrecy of counsel, the only lack of fearless frankness, the only failure to make definite statement of the objects of the war, lies with Germany and her Allies. The issues of life

and death hang upon these definitions. No statesman who has the least conception of his responsibility ought for a moment to permit himself to continue this tragical and appalling outpouring of blood and treasure unless he is sure beyond a peradventure that the objects of the vital sacrifice are part and parcel of the very life of Society, and that the people for whom he speaks think them right and imperative as he does.

There is, moreover, a voice calling for these definitions of principle and of purpose which is, it seems to me, more thrilling and more compelling than any of the many moving voices with which the troubled air of the world is filled. It is the voice of the Russian people. They are prostrate and all but helpless, it would seem, before the grim power of Germany, which has hitherto known no relenting and no pity. Their power, apparently, is shattered. And yet their soul is not subservient. They will not yield in either principle or in action. Their conception of what is right, of what is humane and honorable for them to accept, has been stated with a frankness, a largeness of view, a generosity of spirit, and a universal human sympathy which must challenge the admiration of every friend of mankind; and they have refused to compound their ideals or desert others that they themselves may be safe. They call to us to say what it is that we desire, in what, if anything, our purpose and our spirit differ from theirs; and I believe that the people of the United States would wish me to respond, with utter simplicity and frankness. Whether their present leaders believe it or not, it is our heartfelt desire and hope that some way may be opened whereby we may be privileged to assist the people of Russia to attain their utmost hope of liberty and ordered peace.

It will be our wish and purpose that the processes of peace, when they are begun, shall be absolutely open and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement is gone by; so is also the day of secret covenants entered into in the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world. It is this happy fact, now clear to the view of every public man whose thoughts do not still linger in an age that is dead and gone, which makes it possible for every nation whose purposes are consistent with justice and the peace of the world to avow now or at any other time the objects it has in view.

We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secured once for all against their

recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us. The program of the world's peace, therefore, is our program; and that program, the only possible program, as we see it, is this:

1. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.

2. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

3. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

4. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

5. A free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

6. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distin-

guished from their own interests, and of their intelligent and unselfish sympathy.

7. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with another. Without this healing act the whole structure and validity of international law is forever impaired.

8. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly 50 years, should be righted, in order that peace may once more be made secure in the interest of all.

9. A readjustment of the frontiers of Italy should be affected along clearly recognizable lines of nationality.

10. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

11. Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

12. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

13. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

14. A general association of nations must be formed

under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right we feel ourselves to be intimate partners of all the governments and peoples associated together against the Imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved; but only because we wish the right to prevail and desire a just and stable peace such as can be secured only by removing the chief provocations to war, which this program does not remove. We have no jealousy of German greatness, and there is nothing in this program that impairs it. We grudge her no achievement or distinction of learning or of pacific enterprise such as have made her record very bright and very enviable. We do not wish to injure her or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world—the new world in which we now live—instead of a place of mastery.

Neither do we presume to suggest to her any alteration or modification of her institutions. But it is necessary, we must frankly say, and necessary as a preliminary to any intelligent dealings with her on our part, that we should know whom her spokesmen speak for when they speak to us, whether for the Reichstag majority or for the military party and the men whose creed is imperial domination

We have spoken now, surely, in terms too concrete to admit of any further doubt or question. An evident principle runs through the whole program I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Unless this principle be made its foundation no part of the structure of international justice can stand. The people of the United States could act upon no other principle; and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess. The moral climax of this the culminating and final war for human liberty has come, and they are ready to put their own

strength, their own highest purpose, their own integrity and devotion to the test.

Franklin D. Roosevelt's State of the Union Address, 6 January 1941

In 1941 the United States was coming out of the Great Depression and watching European nations fight a war that America would enter before the year was out. During an address that would come to be known as his "Four Freedoms" speech, President Franklin D. Roosevelt laid out the social and political objectives that Americans deserved to enjoy in a world facing "unprecedented" threats.

Mr. Speaker, members of the 77th Congress:

I address you, the members of this new Congress, at a moment unprecedented in the history of the union. I use the word "unprecedented" because at no previous time has American security been as seriously threatened from without as it is today.

Since the permanent formation of our government under the Constitution in 1789, most of the periods of crisis in our history have related to our domestic affairs. And, fortunately, only one of these—the four-year war between the States—ever threatened our national unity. Today, thank God, 130,000,000 Americans in forty-eight States have forgotten points of the compass in our national unity.

It is true that prior to 1914 the United States often has been disturbed by events in other continents. We have even engaged in two wars with European nations and in a number of undeclared wars in the West Indies, in the Mediterranean and in the Pacific, for the maintenance of American rights and for the Principles of peaceful commerce. But in no case has a serious threat been raised against our national safety or our continued independence.

What I seek to convey is the historic truth that the United States as a nation has at all times maintained opposition—clear, definite opposition—to any attempt to lock us in behind an ancient Chinese wall while the procession of civilization went past. Today, thinking of our children and of their children, we oppose enforced isolation for ourselves or for any other part of the Americas.

That determination of ours, extending over all these years, was proved, for example, in the early days during the quarter century of wars following the French Revolution. While the Napoleonic struggle did threaten inter-

ests of the United States because of the French foothold in the West Indies and in Louisiana, and while we engaged in the War of 1812 to vindicate our right to peaceful trade, it is nevertheless clear that neither France nor Great Britain nor any other nation was aiming at domination of the whole world.

And in like fashion, from 1815 to 1914—ninety-nine years—no single war in Europe or in Asia constituted a real threat against our future or against the future of any other American nation.

Except in the Maximilian interlude in Mexico, no foreign power sought to establish itself in this hemisphere. And the strength of the British fleet in the Atlantic has been a friendly strength; it is still a friendly strength. Even when the World War broke out in 1914 it seemed to contain only small threat of danger to our own American future. But as time went on, as we remember, the American people began to visualize what the downfall of democratic nations might mean to our own democracy.

We need not overemphasize imperfections in the peace of Versailles. We need not harp on failure of the democracies to deal with problems of world reconstruction. We should remember that the peace of 1919 was far less unjust than the kind of pacification which began even before Munich, and which is being carried on under the new order of tyranny that seeks to spread over every continent today. The American people have unalterably set their faces against that tyranny.

I suppose that every realist knows that the democratic way of life is at this moment being directly assailed in every part of the world—assailed either by arms or by secret spreading of poisonous propaganda by those who seek to destroy unity and promote discord in nations that are still at peace.

During sixteen long months this assault has blotted out the whole pattern of democratic life in an appalling number of independent nations, great and small. And the assailants are still on the march, threatening other nations, great and small.

Therefore, as your President, performing my constitutional duty to “give to the Congress information of the state of the union,” I find it unhappily necessary to report that the future and the safety of our country and of our democracy are overwhelmingly involved in events far beyond our borders.

Armed defense of democratic existence is now being gallantly waged in four continents. If that defense fails, all the population and all the resources of Europe and Asia, Africa and Australia will be dominated by con-

querors. And let us remember that the total of those populations in those four continents, the total of those populations and their resources greatly exceeds the sum total of the population and the resources of the whole of the Western Hemisphere—yes, many times over.

In times like these it is immature—and, incidentally, untrue—for anybody to brag that an unprepared America, single-handed and with one hand tied behind its back, can hold off the whole world.

No realistic American can expect from a dictator's peace international generosity, or return of true independence, or world disarmament, or freedom of expression, or freedom of religion—or even good business. Such a peace would bring no security for us or for our neighbors. Those who would give up essential liberty to purchase a little temporary safety deserve neither liberty nor safety.

As a nation we may take pride in the fact that we are soft-hearted; but we cannot afford to be soft-headed. We must always be wary of those who with sounding brass and a tinkling cymbal preach the ism of appeasement. We must especially beware of that small group of selfish men who would clip the wings of the American eagle in order to feather their own nests. I have recently pointed out how quickly the tempo of modern warfare could bring into our very midst the physical attack which we must eventually expect if the dictator nations win this war.

There is much loose talk of our immunity from immediate and direct invasion from across the seas. Obviously, as long as the British Navy retains its power, no such danger exists. Even if there were no British Navy, it is not probable that any enemy would be stupid enough to attack us by landing troops in the United States from across thousands of miles of ocean, until it had acquired strategic bases from which to operate.

But we learn much from the lessons of the past years in Europe—particularly the lesson of Norway, whose essential seaports were captured by treachery and surprise built up over a series of years.

The first phase of the invasion of this hemisphere would not be the landing of regular troops. The necessary strategic points would be occupied by secret agents and by their dupes—and great numbers of them are already here and in Latin America.

As long as the aggressor nations maintain the offensive they, not we, will choose the time and the place and the method of their attack.

And that is why the future of all the American Republics is today in serious danger. That is why this annual message to the Congress is unique in our history.

That is why every member of the executive branch of the government and every member of the Congress face great responsibility—great accountability.

The need of the moment is that our actions and our policy should be devoted primarily—almost exclusively—to meeting this foreign peril. For all our domestic problems are now a part of the great emergency. Just as our national policy in internal affairs has been based upon a decent respect for the rights and the dignity of all of our fellow men within our gates, so our national policy in foreign affairs has been based on a decent respect for the rights and the dignity of all nations, large and small. And the justice of morality must and will win in the end.

Our national policy is this :

First, by an impressive expression of the public will and without regard to partisanship, we are committed to all-inclusive national defense.

Second, by an impressive expression of the public will and without regard to partisanship, we are committed to full support of all those resolute people everywhere who are resisting aggression and are thereby keeping war away from our hemisphere. By this support we express our determination that the democratic cause shall prevail, and we strengthen the defense and the security of our own nation.

Third, by an impressive expression of the public will and without regard to partisanship, we are committed to the proposition that principle of morality and considerations for our own security will never permit us to acquiesce in a peace dictated by aggressors and sponsored by appeasers. We know that enduring peace cannot be bought at the cost of other people's freedom.

In the recent national election there was no substantial difference between the two great parties in respect to that national policy. No issue was fought out on the line before the American electorate. And today it is abundantly evident that American citizens everywhere are demanding and supporting speedy and complete action in recognition of obvious danger.

Therefore, the immediate need is a swift and driving increase in our armament production. Leaders of industry and labor have responded to our summons. Goals of speed have been set. In some cases these goals are being reached ahead of time. In some cases we are on schedule; in other cases there are slight but not serious delays. And in some cases—and, I am sorry to say, very important cases—we are all concerned by the slowness of the accomplishment of our plans.

The Army and Navy, however, have made substantial

progress during the past year. Actual experience is improving and speeding up our methods of production with every passing day. And today's best is not good enough for tomorrow.

I am not satisfied with the progress thus far made. The men in charge of the program represent the best in training, in ability and in patriotism. They are not satisfied with the progress thus far made. None of us will be satisfied until the job is done.

No matter whether the original goal was set too high or too low, our objective is quicker and better results. To give you two illustrations: We are behind schedule in turning out finished airplanes. We are working day and night to solve the innumerable problems and to catch up.

We are ahead of schedule in building warships, but we are working to get even further ahead of that schedule. To change a whole nation from a basis of peacetime production of implements of peace to a basis of wartime production of implements of war is no small task. The greatest difficulty comes at the beginning of the program, when new tools, new plant facilities, new assembly lines, new shipways must first be constructed before the actual material begins to flow steadily and speedily from them.

The Congress of course, must rightly keep itself informed at all times of the progress of the program. However, there is certain information, as the Congress itself will readily recognize, which, in the interests of our own security and those of the nations that we are supporting, must of needs be kept in confidence. New circumstances are constantly begetting new needs for our safety. I shall ask this Congress for greatly increased new appropriations and authorizations to carry on what we have begun.

I also ask this Congress for authority and for funds sufficient to manufacture additional munitions and war supplies of many kinds, to be turned over to those nations which are now in actual war with aggressor nations. Our most useful and immediate role is to act as an arsenal for them as well as for ourselves. They do not need manpower, but they do need billions of dollars' worth of the weapons of defense.

The time is near when they will not be able to pay for them all in ready cash. We cannot, and we will not, tell them that they must surrender merely because of present inability to pay for the weapons which we know they must have.

I do not recommend that we make them a loan of dollars with which to pay for these weapons—a loan to be repaid in dollars. I recommend that we make it pos-

sible for those nations to continue to obtain war materials in the United States, fitting their orders into our own program. And nearly all of their material would, if the time ever came, be useful in our own defense.

Taking counsel of expert military and naval authorities, considering what is best for our own security, we are free to decide how much should be kept here and how much should be sent abroad to our friends who, by their determined and heroic resistance, are giving us time in which to make ready our own defense.

For what we send abroad we shall be repaid, repaid within a reasonable time following the close of hostilities, repaid in similar materials, or at our option in other goods of many kinds which they can produce and which we need. Let us say to the democracies: "We Americans are vitally concerned in your defense of freedom. We are putting forth our energies, our resources and our organizing powers to give you the strength to regain and maintain a free world. We shall send you in ever-increasing numbers, ships, planes, tanks, guns. That is our purpose and our pledge."

In fulfillment of this purpose we will not be intimidated by the threats of dictators that they will regard as a breach of international law or as an act of war our aid to the democracies which dare to resist their aggression. Such aid is not an act of war, even if a dictator should unilaterally proclaim it so to be.

And when the dictators—if the dictators—are ready to make war upon us, they will not wait for an act of war on our part.

They did not wait for Norway or Belgium or the Netherlands to commit an act of war. Their only interest is in a new one-way international law which lacks mutuality in its observance and therefore becomes an instrument of oppression. The happiness of future generations of Americans may well depend on how effective and how immediate we can make our aid felt. No one can tell the exact character of the emergency situations that we may be called upon to meet. The nation's hands must not be tied when the nation's life is in danger.

Yes, and we must prepare, all of us prepare, to make the sacrifices that the emergency—almost as serious as war itself—demands. Whatever stands in the way of speed and efficiency in defense, in defense preparations at any time, must give way to the national need.

A free nation has the right to expect full cooperation from all groups. A free nation has the right to look to the leaders of business, of labor and of agriculture to take the lead in stimulating effort, not among other groups but within their own groups.

The best way of dealing with the few slackers or trouble-makers in our midst is, first, to shame them by patriotic example, and if that fails, to use the sovereignty of government to save government.

As men do not live by bread alone, they do not fight by armaments alone. Those who man our defenses and those behind them who build our defenses must have the stamina and the courage which come from unshakeable belief in the manner of life which they are defending. The mighty action that we are calling for cannot be based on a disregard of all the things worth fighting for.

The nation takes great satisfaction and much strength from the things which have been done to make its people conscious of their individual stake in the preservation of democratic life in America. Those things have toughened the fiber of our people, have renewed their faith and strengthened their devotion to the institutions we make ready to protect. Certainly this is no time for any of us to stop thinking about the social and economic problems which are the root cause of the social revolution which is today a supreme factor in the world. For there is nothing mysterious about the foundations of a healthy and strong democracy.

The basic things expected by our people of their political and economic systems are simple. They are:

- Equality of opportunity for youth and for others.
- Jobs for those who can work.
- Security for those who need it.
- The ending of special privilege for the few.
- The preservation of civil liberties for all.
- The enjoyment of the fruits of scientific progress in a wider and constantly rising standard of living.

These are the simple, the basic things that must never be lost sight of in the turmoil and unbelievable complexity of our modern world. The inner and abiding strength of our economic and political systems is dependent upon the degree to which they fulfill these expectations. Many subjects connected with our social economy call for immediate improvement. As examples:

- We should bring more citizens under the coverage of old-age pensions and unemployment insurance.
- We should widen the opportunities for adequate medical care.
- We should plan a better system by which persons deserving or needing gainful employment may obtain it.

I have called for personal sacrifice, and I am assured of the willingness of almost all Americans to respond to that call. A part of the sacrifice means the payment of more money in taxes. In my budget message I will recommend that a greater portion of this great defense program be paid for from taxation than we are paying for today. No person should try, or be allowed to get rich out of the program, and the principle of tax payments in accordance with ability to pay should be constantly before our eyes to guide our legislation.

If the congress maintains these principles the voters, putting patriotism ahead [of] pocketbooks, will give you their applause.

In the future days which we seek to make secure, we look forward to a world founded upon four essential human freedoms.

The first is freedom of speech and expression—everywhere in the world.

The second is freedom of every person to worship God in his own way—everywhere in the world.

The third is freedom from want, which, translated into world terms, means economic understandings which will secure to every nation a healthy peacetime life for its inhabitants—everywhere in the world.

The fourth is freedom from fear, which, translated into world terms, means a world-wide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any neighbor—anywhere in the world.

That is no vision of a distant millennium. It is a definite basis for a kind of world attainable in our own time and generation. That kind of world is the very antithesis of the so-called “new order” of tyranny which the dictators seek to create with the crash of a bomb.

To that new order we oppose the greater conception—the moral order. A good society is able to face schemes of world domination and foreign revolutions alike without fear. Since the beginning of our American history we have been engaged in change, in a perpetual, peaceful revolution, a revolution which goes on steadily, quietly, adjusting itself to changing conditions without the concentration camp or the quicklime in the ditch. The world order which we seek is the cooperation of free countries, working together in a friendly, civilized society.

This nation has placed its destiny in the hands, heads and hearts of its millions of free men and women, and its faith in freedom under the guidance of God. Freedom means the supremacy of human rights everywhere. Our

support goes to those who struggle to gain those rights and keep them. Our strength is our unity of purpose.

To that high concept there can be no end save victory.

Special Message to the Congress on Greece and Turkey by Harry S. Truman, 12 March 1947

In early 1947, the British government announced that it could no longer financially support Greece in fighting off an insurrection by Communist guerillas. At the same time, there were fears that the Soviet Union intended to expand into Turkey. Diplomats were concerned that if Soviet power moved into the Mediterranean, the Middle East would then be at risk of Communist takeover. In an address that put forth a policy that came to be known as the “Truman Doctrine,” President Truman asked Congress for \$400 million to aid Greece and Turkey.

Mr. President, Mr. Speaker, Members of the Congress of the United States:

The gravity of the situation which confronts the world today necessitates my appearance before a joint session of the Congress.

The foreign policy and the national security of this country are involved.

One aspect of the present situation, which I present to you at this time for your consideration and decision, concerns Greece and Turkey.

The United States has received from the Greek Government an urgent appeal for financial and economic assistance. Preliminary reports from the American Economic Mission now in Greece corroborate the statement of the Greek Government that assistance is imperative if Greece is to survive as a free nation.

I do not believe that the American people and the Congress wish to turn a deaf ear to the appeal of the Greek Government.

Greece is not a rich country. Lack of sufficient natural resources has always forced the Greek people to work hard to make both ends meet. Since 1940, this industrious, peace loving country has suffered invasion, four years of cruel enemy occupation, and bitter internal strife.

When forces of liberation entered Greece they found that the retreating Germans had destroyed virtually all the railways, roads, port facilities, communications, and merchant marine. More than a thousand villages had

been burned. Eighty-five percent of the children were tubercular. Livestock, poultry, and draft animals had almost disappeared. Inflation had wiped out practically all savings.

As a result of these tragic conditions, a militant minority, exploiting human want and misery, was able to create political chaos which, until now, has made economic recovery impossible.

Greece is today without funds to finance the importation of those goods which are essential to bare subsistence. Under these circumstances the people of Greece cannot make progress in solving their problems of reconstruction. Greece is in desperate need of financial and economic assistance to enable it to resume purchases of food, clothing, fuel and seeds. These are indispensable for the subsistence of its people and are obtainable only from abroad. Greece must have help to import the goods necessary to restore internal order and security so essential for economic and political recovery.

The Greek Government has also asked for the assistance of experienced American administrators, economists and technicians to insure that the financial and other aid given to Greece shall be used effectively in creating a stable and self-sustaining economy and in improving its public administration.

The very existence of the Greek state is today threatened by the terrorist activities of several thousand armed men, led by Communists, who defy the government's authority at a number of points, particularly along the northern boundaries. A Commission appointed by the United Nations Security Council is at present investigating disturbed conditions in northern Greece and alleged border violations along the frontier between Greece on the one hand and Albania, Bulgaria, and Yugoslavia on the other.

Meanwhile, the Greek Government is unable to cope with the situation. The Greek army is small and poorly equipped. It needs supplies and equipment if it is to restore authority to the government throughout Greek territory.

Greece must have assistance if it is to become a self-supporting and self-respecting democracy.

The United States must supply this assistance. We have already extended to Greece certain types of relief and economic aid but these are inadequate.

There is no other country to which democratic Greece can turn.

No other nation is willing and able to provide the necessary support for a democratic Greek government.

The British Government, which has been helping Greece, can give no further financial or economic aid

after March 31. Great Britain finds itself under the necessity of reducing or liquidating its commitments in several parts of the world, including Greece.

We have considered how the United Nations might assist in this crisis. But the situation is an urgent one requiring immediate action, and the United Nations and its related organizations are not in a position to extend help of the kind that is required.

It is important to note that the Greek Government has asked for our aid in utilizing effectively the financial and other assistance we may give to Greece, and in improving its public administration. It is of the utmost importance that we supervise the use of any funds made available to Greece, in such a manner that each dollar spent will count toward making Greece self-supporting, and will help to build an economy in which a healthy democracy can flourish.

No government is perfect. One of the chief virtues of a democracy, however, is that its defects are always visible and under democratic processes can be pointed out and corrected. The government of Greece is not perfect. Nevertheless it represents 85 percent of the members of the Greek Parliament who were chosen in an election last year. Foreign observers, including 692 Americans, considered this election to be a fair expression of the views of the Greek people.

The Greek Government has been operating in an atmosphere of chaos and extremism. It has made mistakes. The extension of aid by this country does not mean that the United States condones everything the Greek Government has done or will do. We have condemned in the past, and we condemn now, extremist measures of the right or the left. We have in the past advised tolerance, and we advise tolerance now.

Greece's neighbor, Turkey, also deserves our attention.

The future of Turkey as an independent and economically sound state is clearly no less important to the freedom-loving peoples of the world than the future of Greece. The circumstances in which Turkey finds itself today are considerably different from those of Greece. Turkey has been spared the disasters that have beset Greece. And during the war, the United States and Great Britain furnished Turkey with material aid.

Nevertheless, Turkey now needs our support.

Since the war Turkey has sought additional financial assistance from Great Britain and the United States for the purpose of effecting that modernization necessary for the maintenance of its national integrity.

That integrity is essential to the preservation of order in the Middle East.

The British Government has informed us that, owing to its own difficulties, it can no longer extend financial or economic aid to Turkey.

As in the case of Greece, if Turkey is to have the assistance it needs, the United States must supply it. We are the only country able to provide that help.

I am fully aware of the broad implications involved if the United States extends assistance to Greece and Turkey, and I shall discuss these implications with you at this time.

One of the primary objectives of the foreign policy of the United States is the creation of conditions in which we and other nations will be able to work out a way of life free from coercion. This was a fundamental issue in the war with Germany and Japan. Our victory was won over countries which sought to impose their will, and their way of life, upon other nations.

To ensure the peaceful development of nations, free from coercion, the United States has taken a leading part in establishing the United Nations. The United Nations is designed to make possible lasting freedom and independence for all its members. We shall not realize our objectives, however, unless we are willing to help free peoples to maintain their free institutions and their national integrity against aggressive movements that seek to impose upon them totalitarian regimes. This is no more than a frank recognition that totalitarian regimes imposed upon free peoples, by direct or indirect aggression, undermine the foundations of international peace and hence the security of the United States.

The peoples of a number of countries of the world have recently had totalitarian regimes forced upon them against their will. The Government of the United States has made frequent protests against coercion and intimidation, in violation of the Yalta Agreement, in Poland, Rumania, and Bulgaria. I must also state that in a number of other countries there have been similar developments.

At the present moment in world history nearly every nation must choose between alternative ways of life. The choice is too often not a free one.

One way of life is based upon the will of the majority, and is distinguished by free institutions, representative government, free elections, guarantees of individual liberty, freedom of speech and religion, and freedom from political oppression.

The second way of life is based upon the will of a minority forcibly imposed upon the majority. It relies upon terror and oppression, a controlled press and radio, fixed elections, and the suppression of personal freedoms.

I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.

I believe that we must assist free peoples to work out their own destinies in their own way.

I believe that our help should be primarily through economic and financial aid which is essential to economic stability and orderly political processes.

The world is not static, and the *status quo* is not sacred. But we cannot allow changes in the *status quo* in violation of the Charter of the United Nations by such methods as coercion, or by such subterfuges as political infiltration. In helping free and independent nations to maintain their freedom, the United States will be giving effect to the principles of the Charter of the United Nations.

It is necessary only to glance at a map to realize that the survival and integrity of the Greek nation are of grave importance in a much wider situation. If Greece should fall under the control of an armed minority, the effect upon its neighbor, Turkey, would be immediate and serious. Confusion and disorder might well spread throughout the entire Middle East.

Moreover, the disappearance of Greece as an independent state would have a profound effect upon those countries in Europe whose people are struggling against great difficulties to maintain their freedoms and their independence while they repair the damages of war.

It would be an unspeakable tragedy if these countries, which have struggled so long against overwhelming odds, should lose that victory for which they sacrificed so much. Collapse of free institutions and loss of independence would be disastrous not only for them but for the world. Discouragement and possible failure would quickly be the lot of neighboring peoples striving to maintain their freedom and independence.

Should we fail to aid Greece and Turkey in this fateful hour, the effect will be far reaching to the West as well as to the East.

We must take immediate and resolute action.

I therefore ask the Congress to provide authority for assistance to Greece and Turkey in the amount of \$400,000,000 for the period ending June 30, 1948. In requesting these funds, I have taken into consideration the maximum amount of relief assistance which would be furnished to Greece out of the \$350,000,000 which I recently requested that the Congress authorize for the prevention of starvation and suffering in countries devastated by the war.

In addition to funds, I ask the Congress to authorize the detail of American civilian and military personnel to Greece and Turkey, at the request of those countries, to assist in the tasks of reconstruction, and for the purpose of supervising the use of such financial and material assistance as may be furnished. I recommend that authority also be provided for the instruction and training of selected Greek and Turkish personnel.

Finally, I ask that the Congress provide authority which will permit the speediest and most effective use, in terms of needed commodities, supplies, and equipment, of such funds as may be authorized.

If further funds, or further authority, should be needed for the purposes indicated in this message, I shall not hesitate to bring the situation before the Congress. On this subject the Executive and Legislative branches of Government must work together.

This is a serious course upon which we embark.

I would not recommend it except that the alternative is much more serious.

The United States contributed \$341,000,000,000 toward winning World War II. This is an investment in world freedom and world peace.

The assistance that I am recommending for Greece and Turkey amounts to little more than 1/10 of 1 percent of this investment. It is only common sense that we should safeguard this investment and make sure that it was not in vain.

The seeds of totalitarian regimes are nurtured by misery and want. They spread and grow in the evil soil of poverty and strife. They reach their full growth when the hope of a people for a better life has died.

We must keep that hope alive.

The free peoples of the world look to us for support in maintaining their freedoms.

If we falter in our leadership, we may endanger the peace of the world—and we shall surely endanger the welfare of this Nation.

Great responsibilities have been placed upon us by the swift movement of events.

I am confident that the Congress will face these responsibilities squarely.

Dwight D. Eisenhower's Presidential Press Conference, 7 April 1954

By March of 1954, the French were clearly failing to defeat Ho Chi Minh's Communist forces in North Vietnam and appealed to the United States to intervene. Although Eisenhower eventually chose not to allow

U.S. involvement, he did fear that a French defeat would mean that the region known as Indochina (Laos, Cambodia, and Vietnam) could fall like a "row of dominoes" to Communist takeover.

Q. Robert Richards, Copley Press: Mr. President, would you mind commenting on the strategic importance of Indochina for the free world? I think there has been, across the country, some lack of understanding on just what it means to us.

The President. You have, of course, both the specific and the general when you talk about such things. First of all, you have the specific value of a locality in its production of materials that the world needs.

Then you have the possibility that many human beings pass under a dictatorship that is inimical to the free world.

Finally, you have broader considerations that might follow what you would call the "falling domino" principle. You have a row of dominoes set up, you knock over the first one, and what will happen to the last one is the certainty that it will go over very quickly. So you could have a beginning of a disintegration that would have the most profound influences.

Now, with respect to the first one, two of the items from this particular area that the world uses are tin and tungsten. They are very important. There are others, of course, the rubber plantations and so on.

Then with respect to more people passing under this domination, Asia, after all, has already lost some 450 million of its peoples to the Communist dictatorship, and we simply can't afford greater losses.

But when we come to the possible sequence of events, the loss of Indochina, of Burma, of Thailand, of the Peninsula, and Indonesia following, now you begin to talk about areas that not only multiply the disadvantages that you would suffer through the loss of materials, sources of materials, but now you are talking about millions and millions of people.

Finally, the geographical position achieved thereby does many things. It turns the so-called island defensive chain of Japan, Formosa, of the Philippines and to the southward; it moves in to threaten Australia and New Zealand.

It takes away, in its economic aspects, that region that Japan must have as a trading area or Japan, in turn, will have only one place in the world to go—that is, toward the Communist areas in order to live.

So, the possible consequences of the loss are just incalculable to the free world.

John F. Kennedy's Inaugural Address, 20 January 1961

President John F. Kennedy's memorable inaugural address would set the stage for an administration remembered for its energy and promise. In his speech, President Kennedy addressed his words—and his hopes for the future—not only to Americans but also to his “fellow citizens of the world.”

Vice President Johnson, Mr. Speaker, Mr. Chief Justice, President Eisenhower, Vice President Nixon, President Truman, reverend clergy, fellow citizens, we observe today not a victory of party, but a celebration of freedom—symbolizing an end, as well as a beginning—signifying renewal, as well as change. For I have sworn before you and Almighty God the same solemn oath our forebears prescribed nearly a century and three quarters ago.

The world is very different now. For man holds in his mortal hands the power to abolish all forms of human poverty and all forms of human life. And yet the same revolutionary beliefs for which our forebears fought are still at issue around the globe—the belief that the rights of man come not from the generosity of the state, but from the hand of God.

We dare not forget today that we are the heirs of that first revolution. Let the word go forth from this time and place, to friend and foe alike, that the torch has been passed to a new generation of Americans—born in this century, tempered by war, disciplined by a hard and bitter peace, proud of our ancient heritage—and unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed, and to which we are committed today at home and around the world.

Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe, in order to assure the survival and the success of liberty.

This much we pledge—and more.

To those old allies whose cultural and spiritual origins we share, we pledge the loyalty of faithful friends. United, there is little we cannot do in a host of cooperative ventures. Divided, there is little we can do—for we dare not meet a powerful challenge at odds and split asunder.

To those new States whom we welcome to the ranks of the free, we pledge our word that one form of colonial control shall not have passed away merely to be replaced by a far more iron tyranny. We shall not always

expect to find them supporting our view. But we shall always hope to find them strongly supporting their own freedom—and to remember that, in the past, those who foolishly sought power by riding the back of the tiger ended up inside.

To those peoples in the huts and villages across the globe struggling to break the bonds of mass misery, we pledge our best efforts to help them help themselves, for whatever period is required—not because the Communists may be doing it, not because we seek their votes, but because it is right. If a free society cannot help the many who are poor, it cannot save the few who are rich.

To our sister republics south of our border, we offer a special pledge—to convert our good words into good deeds—in a new alliance for progress—to assist free men and free governments in casting off the chains of poverty. But this peaceful revolution of hope cannot become the prey of hostile powers. Let all our neighbors know that we shall join with them to oppose aggression or subversion anywhere in the Americas. And let every other power know that this Hemisphere intends to remain the master of its own house.

To that world assembly of sovereign states, the United Nations, our last best hope in an age where the instruments of war have far outpaced the instruments of peace, we renew our pledge of support—to prevent it from becoming merely a forum for invective—to strengthen its shield of the new and the weak—and to enlarge the area in which its writ may run.

Finally, to those nations who would make themselves our adversary, we offer not a pledge but a request: that both sides begin anew the quest for peace, before the dark powers of destruction unleashed by science engulf all humanity in planned or accidental self-destruction.

We dare not tempt them with weakness. For only when our arms are sufficient beyond doubt can we be certain beyond doubt that they will never be employed.

But neither can two great and powerful groups of nations take comfort from our present course—both sides overburdened by the cost of modern weapons, both rightly alarmed by the steady spread of the deadly atom, yet both racing to alter that uncertain balance of terror that stays the hand of mankind's final war.

So let us begin anew—remembering on both sides that civility is not a sign of weakness, and sincerity is always subject to proof. Let us never negotiate out of fear. But let us never fear to negotiate.

Let both sides explore what problems unite us instead of belaboring those problems which divide us.

Let both sides, for the first time, formulate serious and precise proposals for the inspection and control of arms—and bring the absolute power to destroy other nations under the absolute control of all nations.

Let both sides seek to invoke the wonders of science instead of its terrors. Together let us explore the stars, conquer the deserts, eradicate disease, tap the ocean depths, and encourage the arts and commerce.

Let both sides unite to heed in all corners of the earth the command of Isaiah—to “undo the heavy burdens . . . and to let the oppressed go free.”

And if a beachhead of cooperation may push back the jungle of suspicion, let both sides join in creating a new endeavor, not a new balance of power, but a new world of law, where the strong are just and the weak secure and the peace preserved.

All this will not be finished in the first 100 days. Nor will it be finished in the first 1,000 days, nor in the life of this Administration, nor even perhaps in our lifetime on this planet. But let us begin.

In your hands, my fellow citizens, more than in mine, will rest the final success or failure of our course. Since this country was founded, each generation of Americans has been summoned to give testimony to its national loyalty. The graves of young Americans who answered the call to service surround the globe.

Now the trumpet summons us again—not as a call to bear arms, though arms we need; not as a call to battle, though embattled we are—but a call to bear the burden of a long twilight struggle, year in and year out, “rejoicing in hope, patient in tribulation”—a struggle against the common enemies of man: tyranny, poverty, disease, and war itself.

Can we forge against these enemies a grand and global alliance, North and South, East and West, that can assure a more fruitful life for all mankind? Will you join in that historic effort?

In the long history of the world, only a few generations have been granted the role of defending freedom in its hour of maximum danger. I do not shrink from this responsibility—I welcome it. I do not believe that any of us would exchange places with any other people or any other generation. The energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it—and the glow from that fire can truly light the world.

And so, my fellow Americans: ask not what your country can do for you—ask what you can do for your country.

My fellow citizens of the world: ask not what America will do for you, but what together we can do for the freedom of man.

Finally, whether you are citizens of America or citizens of the world, ask of us the same high standards of strength and sacrifice which we ask of you. With a good conscience our only sure reward, with history the final judge of our deeds, let us go forth to lead the land we love, asking His blessing and His help, but knowing that here on earth God’s work must truly be our own.

“Peace Without Conquest,” an Address by Lyndon Johnson, 7 April 1965

In response to a Vietcong attack on a U.S. Army barracks in Pleiku, North Vietnam, President Lyndon Johnson ordered gradually intensified air strikes on select targets in North Vietnam. Johnson’s speech, delivered at Johns Hopkins University, explains his plan for increasing American military commitments in South Vietnam—a commitment that would grow from 40,000 U.S. soldiers in April 1965 to 365,000 in a year’s time.

Tonight Americans and Asians are dying for a world where each people may choose its own path to change.

This is the principle for which our ancestors fought in the valleys of Pennsylvania. It is the principle for which our sons fight tonight in the jungles of Viet-Nam.

Viet-Nam is far away from this quiet campus. We have no territory there, nor do we seek any. The war is dirty and brutal and difficult. And some 400 young men, born into an America that is bursting with opportunity and promise, have ended their lives on Viet-Nam’s steaming soil.

Why must we take this painful road?

Why must this nation hazard its ease, its interest, and its power for the sake of a people so far away?

We fight because we must fight if we are to live in a world where every country can shape its own destiny, and only in such a world will our own freedom be finally secure.

This kind of world will never be built by bombs or bullets. Yet the infirmities of man are such that force must often precede reason and the waste of war, the works of peace.

We wish this were not so. But we must deal with the world as it is, if it is ever to be as we wish.

The Nature of the Conflict

The world as it is in Asia is not a serene or peaceful place.

The first reality is that North Viet-Nam has attacked the independent nation of South Viet-Nam. Its object is total conquest.

Of course, some of the people of South Viet-Nam are participating in attack on their own government. But trained men and supplies, orders and arms, flow in a constant stream from North to South.

This support is the heartbeat of the war.

And it is a war of unparalleled brutality. Simple farmers are the targets of assassination and kidnapping. Women and children are strangled in the night because their men are loyal to the government. And helpless villagers are ravaged by sneak attacks. Large-scale raids are conducted on towns, and terror strikes in the heart of cities.

The confused nature of this conflict cannot mask the fact that it is the new face of an old enemy.

Over this war—and all Asia—is another reality: the deepening shadow of Communist China. The rulers in Hanoi are urged on by Peking. This is a regime which has destroyed freedom in Tibet, which has attacked India and has been condemned by the United Nations for aggression in Korea. It is a nation which is helping the forces of violence in almost every continent. The contest in Viet-Nam is part of a wider pattern of aggressive purposes.

Why Are We in Viet-Nam?

Why are these realities our concern? Why are we in South Viet-Nam?

We are there because we have a promise to keep. Since 1954 every American President has offered support to the people of South Viet-Nam. We have helped to build, and we have helped to defend. Thus, over many years, we have made a national pledge to help South Viet-Nam defend its independence.

And I intend to keep that promise.

To dishonor that pledge, to abandon this small and brave nation to its enemies, and to the terror that must follow, would be an unforgivable wrong.

We are also there to strengthen world order. Around the globe from Berlin to Thailand are people whose well being rests in part on the belief that they can count on us if they are attacked. To leave Viet-Nam to its fate would shake the confidence of all these people in the value of an American commitment and in the value of America's word. The result would be increased unrest and instability, even wide war.

We are also there because there are great stakes in the balance. Let no one think for a minute that retreat from Viet-Nam would bring an end to the conflict. The battle would be renewed in one country and then another. The central lesson of our time is that the appetite of aggression is never satisfied. To withdraw from one battlefield means only to prepare for the next. We must say in Southeast Asia—as we did in Europe—in the words of the Bible: “Hitherto shalt thou come, but no further.”

There are those who say that all our effort there will be futile—that China's power is such that it is bound to dominate all southeast Asia. But there is no end to that argument until all of the nations of Asia are swallowed up.

There are those who wonder why we have a responsibility there. Well, we have it there for the same reason that we have a responsibility for the defense of Europe. World War II was fought in both Europe and Asia, and when it ended we found ourselves with continued responsibility for the defense of freedom.

Our Objective in Viet-Nam

Our objective is the independence of South Viet-Nam, and its freedom from attack. We want nothing for ourselves—only that the people of South Viet-Nam be allowed to guide their own country in their own way.

We will do everything necessary to reach that objective. And we will do only what is absolutely necessary.

In recent months attacks on South Viet-Nam were stepped up. Thus, it became necessary for us to increase our response and to make attacks by air. This is not a change of purpose. It is a change in what we believe that purpose requires.

We do this in order to slow down aggression.

We do this to increase the confidence of the brave people of South Viet-Nam who have bravely borne this brutal battle for so many years with so many casualties.

And we do this to convince the leaders of North Viet-Nam—and all who seek to share their conquest—of a simple fact:

We will not be defeated.

We will not grow tired.

We will not withdraw, either openly or under the cloak of a meaningless agreement.

We know that air attacks alone will not accomplish all of these purposes. But it is our best and prayerful judgment that they are a necessary part of the surest road to peace.

We hope that peace will come swiftly. But that is in the hands of others besides ourselves. And we must be

prepared for a long continued conflict. It will require patience as well as bravery, the will to endure as well as the will to resist.

I wish it were possible to convince others with words of what we now find it necessary to say with guns and planes: Armed hostility is futile. Our resources are equal to the challenge. Because we fight for values and we fight for principles, rather than territory or colonies, our patience and our determination are unending. . . .

Richard M. Nixon's Second Inaugural Address, 20 January 1973

As America's long involvement in Vietnam War was drawing to a close, President Richard M. Nixon spoke of being on the "threshold of a new era of peace" as the United States neared its 200th birthday. He also encouraged Americans "to turn away from the condescending policies of paternalism—of 'Washington knows best,'" asking for a wider division of responsibility. Nixon's resignation in 1974, in the wake of the Watergate scandal, meant that Gerald Ford—not Nixon—would be president during the bicentennial celebrations of 1976.

Mr. Vice President, Mr. Speaker, Mr. Chief Justice, Senator Cook, Mrs. Eisenhower, and my fellow citizens of this great and good country we share together:

When we met here four years ago, America was bleak in spirit, depressed by the prospect of seemingly endless war abroad and of destructive conflict at home.

As we meet here today, we stand on the threshold of a new era of peace in the world.

The central question before us is: How shall we use that peace? Let us resolve that this era we are about to enter will not be what other postwar periods have so often been: a time of retreat and isolation that leads to stagnation at home and invites new danger abroad.

Let us resolve that this will be what it can become: a time of great responsibilities greatly borne, in which we renew the spirit and the promise of America as we enter our third century as a nation.

This past year saw far-reaching results from our new policies for peace. By continuing to revitalize our traditional friendships, and by our missions to Peking and to Moscow, we were able to establish the base for a new and more durable pattern of relationships among the nations of the world. Because of America's bold initiatives, 1972 will be long remembered as the year of the

greatest progress since the end of World War II toward a lasting peace in the world.

The peace we seek in the world is not the flimsy peace which is merely an interlude between wars, but a peace which can endure for generations to come.

It is important that we understand both the necessity and the limitations of America's role in maintaining that peace.

Unless we in America work to preserve the peace, there will be no peace.

Unless we in America work to preserve freedom, there will be no freedom.

But let us clearly understand the new nature of America's role, as a result of the new policies we have adopted over these past four years.

We shall respect our treaty commitments.

We shall support vigorously the principle that no country has the right to impose its will or rule on another by force.

We shall continue, in this era of negotiation, to work for the limitation of nuclear arms, and to reduce the danger of confrontation between the great powers.

We shall do our share in defending peace and freedom in the world. But we shall expect others to do their share.

The time has passed when America will make every other nation's conflict our own, or make every other nation's future our responsibility, or presume to tell the people of other nations how to manage their own affairs.

Just as we respect the right of each nation to determine its own future, we also recognize the responsibility of each nation to secure its own future.

Just as America's role is indispensable in preserving the world's peace, so is each nation's role indispensable in preserving its own peace.

Together with the rest of the world, let us resolve to move forward from the beginnings we have made. Let us continue to bring down the walls of hostility which have divided the world for too long, and to build in their place bridges of understanding—so that despite profound differences between systems of government, the people of the world can be friends.

Let us build a structure of peace in the world in which the weak are as safe as the strong—in which each respects the right of the other to live by a different system—in which those who would influence others will do so by the strength of their ideas, and not by the force of their arms.

Let us accept that high responsibility not as a burden,

but gladly—gladly because the chance to build such a peace is the noblest endeavor in which a nation can engage; gladly, also, because only if we act greatly in meeting our responsibilities abroad will we remain a great Nation, and only if we remain a great Nation will we act greatly in meeting our challenges at home.

We have the chance today to do more than ever before in our history to make life better in America—to ensure better education, better health, better housing, better transportation, a cleaner environment—to restore respect for law, to make our communities more livable—and to insure the God-given right of every American to full and equal opportunity.

Because the range of our needs is so great—because the reach of our opportunities is so great—let us be bold in our determination to meet those needs in new ways.

Just as building a structure of peace abroad has required turning away from old policies that failed, so building a new era of progress at home requires turning away from old policies that have failed.

Abroad, the shift from old policies to new has not been a retreat from our responsibilities, but a better way to peace.

And at home, the shift from old policies to new will not be a retreat from our responsibilities, but a better way to progress.

Abroad and at home, the key to those new responsibilities lies in the placing and the division of responsibility. We have lived too long with the consequences of attempting to gather all power and responsibility in Washington.

Abroad and at home, the time has come to turn away from the condescending policies of paternalism—of “Washington knows best.”

A person can be expected to act responsibly only if he has responsibility. This is human nature. So let us encourage individuals at home and nations abroad to do more for themselves, to decide more for themselves. Let us locate responsibility in more places. Let us measure what we will do for others by what they will do for themselves.

That is why today I offer no promise of a purely governmental solution for every problem. We have lived too long with that false promise. In trusting too much in government, we have asked of it more than it can deliver. This leads only to inflated expectations, to reduced individual effort, and to a disappointment and frustration that erode confidence both in what government can do and in what people can do.

Government must learn to take less from people so that people can do more for themselves.

Let us remember that America was built not by government, but by people—not by welfare, but by work—not by shirking responsibility, but by seeking responsibility.

In our own lives, let each of us ask—not just what will government do for me, but what can I do for myself?

In the challenges we face together, let each of us ask—not just how can government help, but how can I help?

Your National Government has a great and vital role to play. And I pledge to you that where this Government should act, we will act boldly and we will lead boldly. But just as important is the role that each and every one of us must play, as an individual and as a member of his own community.

From this day forward, let each of us make a solemn commitment in his own heart: to bear his responsibility, to do his part, to live his ideals—so that together, we can see the dawn of a new age of progress for America, and together, as we celebrate our 200th anniversary as a nation, we can do so proud in the fulfillment of our promise to ourselves and to the world.

As America’s longest and most difficult war comes to an end, let us again learn to debate our differences with civility and decency. And let each of us reach out for that one precious quality government cannot provide—a new level of respect for the rights and feelings of one another, a new level of respect for the individual human dignity which is the cherished birthright of every American.

Above all else, the time has come for us to renew our faith in ourselves and in America.

In recent years, that faith has been challenged.

Our children have been taught to be ashamed of their country, ashamed of their parents, ashamed of America’s record at home and of its role in the world.

At every turn, we have been beset by those who find everything wrong with America and little that is right. But I am confident that this will not be the judgment of history on these remarkable times in which we are privileged to live.

America’s record in this century has been unparalleled in the world’s history for its responsibility, for its generosity, for its creativity and for its progress.

Let us be proud that our system has produced and provided more freedom and more abundance, more widely shared, than any other system in the history of the world.

Let us be proud that in each of the four wars in which

we have been engaged in this century, including the one we are now bringing to an end, we have fought not for our selfish advantage, but to help others resist aggression.

Let us be proud that by our bold, new initiatives, and by our steadfastness for peace with honor, we have made a break-through toward creating in the world what the world has not known before—a structure of peace that can last, not merely for our time, but for generations to come.

We are embarking here today on an era that presents challenges great as those any nation, or any generation, has ever faced.

We shall answer to God, to history, and to our conscience for the way in which we use these years.

As I stand in this place, so hallowed by history, I think of others who have stood here before me. I think of the dreams they had for America, and I think of how each recognized that he needed help far beyond himself in order to make those dreams come true.

Today, I ask your prayers that in the years ahead I may have God's help in making decisions that are right for America, and I pray for your help so that together we may be worthy of our challenge.

Let us pledge together to make these next four years the best four years in America's history, so that on its 200th birthday America will be as young and as vital as when it began, and as bright a beacon of hope for all the world.

Let us go forward from here confident in hope, strong in our faith in one another, sustained by our faith in God who created us, and striving always to serve His purpose.

Jimmy Carter's Speech on His Proposed Energy Policy, 18 April 1977

During 1973 and 1974, an Arab oil embargo caused energy shortages in the United States, forcing long lines at the gas pump and measures like mandated carpooling to conserve gasoline. Although the embargo had been lifted, many policymakers felt the need for a coordinated policy actions that would forestall another "energy crisis." In 1977 President Jimmy Carter spoke to the American people on the energy policy he was proposing to reduce U.S. dependence on foreign oil—an issue that he saw as someday threatening national security.

Tonight I want to have an unpleasant talk with you about a problem unprecedented in our history. With the

exception of preventing war, this is the greatest challenge our country will face during our lifetimes. The energy crisis has not yet overwhelmed us, but it will if we do not act quickly.

It is a problem we will not solve in the next few years, and it is likely to get progressively worse through the rest of this century.

We must not be selfish or timid if we hope to have a decent world for our children and grandchildren.

We simply must balance our demand for energy with our rapidly shrinking resources. By acting now, we can control our future instead of letting the future control us.

Two days from now, I will present my energy proposals to the Congress. Its members will be my partners and they have already given me a great deal of valuable advice. Many of these proposals will be unpopular. Some will cause you to put up with inconveniences and to make sacrifices.

The most important thing about these proposals is that the alternative may be a national catastrophe. Further delay can affect our strength and our power as a nation.

Our decision about energy will test the character of the American people and the ability of the President and the Congress to govern. This difficult effort will be the "moral equivalent of war"—except that we will be uniting our efforts to build and not destroy.

I know that some of you may doubt that we face real energy shortages. The 1973 gasoline lines are gone, and our homes are warm again. But our energy problem is worse tonight than it was in 1973 or a few weeks ago in the dead of winter. It is worse because more waste has occurred, and more time has passed by without our planning for the future. And it will get worse every day until we act.

The oil and natural gas we rely on for 75 percent of our energy are running out. In spite of increased effort, domestic production has been dropping steadily at about six percent a year. Imports have doubled in the last five years. Our nation's independence of economic and political action is becoming increasingly constrained. Unless profound changes are made to lower oil consumption, we now believe that early in the 1980s the world will be demanding more oil than it can produce.

The world now uses about 60 million barrels of oil a day and demand increases each year about 5 percent. This means that just to stay even we need the production of a new Texas every year, an Alaskan North Slope every nine months, or a new Saudi Arabia every three years. Obviously, this cannot continue.

We must look back in history to understand our energy problem. Twice in the last several hundred years there has been a transition in the way people use energy.

The first was about 200 years ago, away from wood—which had provided about 90 percent of all fuel—to coal, which was more efficient. This change became the basis of the Industrial Revolution.

The second change took place in this century, with the growing use of oil and natural gas. They were more convenient and cheaper than coal, and the supply seemed to be almost without limit. They made possible the age of automobile and airplane travel. Nearly everyone who is alive today grew up during this age and we have never known anything different.

Because we are now running out of gas and oil, we must prepare quickly for a third change, to strict conservation and to the use of coal and permanent renewable energy sources, like solar power.

The world has not prepared for the future. During the 1950s, people used twice as much oil as during the 1940s. During the 1960s, we used twice as much as during the 1950s. And in each of those decades, more oil was consumed than in all of mankind's previous history.

World consumption of oil is still going up. If it were possible to keep it rising during the 1970s and 1980s by 5 percent a year as it has in the past, we could use up all the proven reserves of oil in the entire world by the end of the next decade.

I know that many of you have suspected that some supplies of oil and gas are being withheld. You may be right, but suspicions about oil companies cannot change the fact that we are running out of petroleum.

All of us have heard about the large oil fields on Alaska's North Slope. In a few years when the North Slope is producing fully, its total output will be just about equal to two years' increase in our nation's energy demand.

Each new inventory of world oil reserves has been more disturbing than the last. World oil production can probably keep going up for another six or eight years. But some time in the 1980s it can't go up much more. Demand will overtake production. We have no choice about that.

But we do have a choice about how we will spend the next few years. Each American uses the energy equivalent of 60 barrels of oil per person each year. Ours is the most wasteful nation on earth. We waste more energy than we import. With about the same standard of living, we use twice as much energy per person as do other countries like Germany, Japan and Sweden.

One choice is to continue doing what we have been doing before. We can drift along for a few more years.

Our consumption of oil would keep going up every year. Our cars would continue to be too large and inefficient. Three-quarters of them would continue to carry only one person—the driver—while our public transportation system continues to decline. We can delay insulating our houses, and they will continue to lose about 50 percent of their heat in waste.

We can continue using scarce oil and natural to generate electricity, and continue wasting two-thirds of their fuel value in the process.

If we do not act, then by 1985 we will be using 33 percent more energy than we do today.

We can't substantially increase our domestic production, so we would need to import twice as much oil as we do now. Supplies will be uncertain. The cost will keep going up. Six years ago, we paid \$3.7 billion for imported oil. Last year we spent \$37 billion—nearly ten times as much—and this year we may spend over \$45 billion.

Unless we act, we will spend more than \$550 billion for imported oil by 1985—more than \$2,500 a year for every man, woman, and child in America. Along with that money we will continue losing American jobs and becoming increasingly vulnerable to supply interruptions.

Now we have a choice. But if we wait, we will live in fear of embargoes. We could endanger our freedom as a sovereign nation to act in foreign affairs. Within ten years we would not be able to import enough oil—from any country, at any acceptable price.

If we wait, and do not act, then our factories will not be able to keep our people on the job with reduced supplies of fuel. Too few of our utilities will have switched to coal, our most abundant energy source.

We will not be ready to keep our transportation system running with smaller, more efficient cars and a better network of buses, trains and public transportation.

We will feel mounting pressure to plunder the environment. We will have a crash program to build more nuclear plants, strip-mine and burn more coal, and drill more offshore wells than we will need if we begin to conserve now. Inflation will soar, production will go down, people will lose their jobs. Intense competition will build up among nations and among the different regions within our own country.

If we fail to act soon, we will face an economic, social and political crisis that will threaten our free institutions.

But we still have another choice. We can begin to prepare right now. We can decide to act while there is time.

That is the concept of the energy policy we will present on Wednesday. Our national energy plan is based on ten fundamental principles.

The first principle is that we can have an effective and comprehensive energy policy only if the government takes responsibility for it and if the people understand the seriousness of the challenge and are willing to make sacrifices.

The second principle is that healthy economic growth must continue. Only by saving energy can we maintain our standard of living and keep our people at work. An effective conservation program will create hundreds of thousands of new jobs.

The third principle is that we must protect the environment. Our energy problems have the same cause as our environmental problems—wasteful use of resources. Conservation helps us solve both at once.

The fourth principle is that we must reduce our vulnerability to potentially devastating embargoes. We can protect ourselves from uncertain supplies by reducing our demand for oil, making the most of our abundant resources such as coal, and developing a strategic petroleum reserve.

The fifth principle is that we must be fair. Our solutions must ask equal sacrifices from every region, every class of people, every interest group. Industry will have to do its part to conserve, just as the consumers will. The energy producers deserve fair treatment, but we will not let the oil companies profiteer.

The sixth principle, and the cornerstone of our policy, is to reduce the demand through conservation. Our emphasis on conservation is a clear difference between this plan and others which merely encouraged crash production efforts. Conservation is the quickest, cheapest, most practical source of energy. Conservation is the only way we can buy a barrel of oil for a few dollars. It costs about \$13 to waste it.

The seventh principle is that prices should generally reflect the true replacement costs of energy. We are only cheating ourselves if we make energy artificially cheap and use more than we can really afford.

The eighth principle is that government policies must be predictable and certain. Both consumers and producers need policies they can count on so they can plan ahead. This is one reason I am working with the Congress to create a new Department of Energy, to replace more than 50 different agencies that now have some control over energy.

The ninth principle is that we must conserve the fuels that are scarcest and make the most of those that are more plentiful. We can't continue to use oil and gas for 75 percent of our consumption when they make up seven percent of our domestic reserves. We need to shift to plentiful coal while taking care to protect the environment, and to apply stricter safety standards to nuclear energy.

The tenth principle is that we must start now to develop the new, unconventional sources of energy we will rely on in the next century.

These ten principles have guided the development of the policy I would describe to you and the Congress on Wednesday.

Our energy plan will also include a number of specific goals, to measure our progress toward a stable energy system.

These are the goals we set for 1985:

- Reduce the annual growth rate in our energy demand to less than two percent.
- Reduce gasoline consumption by ten percent below its current level.
- Cut in half the portion of United States oil which is imported, from a potential level of 16 million barrels to six million barrels a day.
- Establish a strategic petroleum reserve of one billion barrels, more than six months' supply.
- Increase our coal production by about two thirds to more than 1 billion tons a year.
- Insulate 90 percent of American homes and all new buildings.
- Use solar energy in more than two and one-half million houses.

We will monitor our progress toward these goals year by year. Our plan will call for stricter conservation measures if we fall behind.

I can't tell you that these measures will be easy, nor will they be popular. But I think most of you realize that a policy which does not ask for changes or sacrifices would not be an effective policy.

This plan is essential to protect our jobs, our environment, our standard of living, and our future.

Whether this plan truly makes a difference will be decided not here in Washington, but in every town and every factory, in every home and on every highway and every farm.

I believe this can be a positive challenge. There is something especially American in the kinds of changes we have to make. We have been proud, through our

history of being efficient people.

We have been proud of our leadership in the world. Now we have a chance again to give the world a positive example.

And we have been proud of our vision of the future. We have always wanted to give our children and grandchildren a world richer in possibilities than we've had. They are the ones we must provide for now. They are the ones who will suffer most if we don't act.

I've given you some of the principles of the plan.

I am sure each of you will find something you don't like about the specifics of our proposal. It will demand that we make sacrifices and changes in our lives. To some degree, the sacrifices will be painful—but so is any meaningful sacrifice. It will lead to some higher costs, and to some greater inconveniences for everyone.

But the sacrifices will be gradual, realistic and necessary. Above all, they will be fair. No one will gain an unfair advantage through this plan. No one will be asked to bear an unfair burden. We will monitor the accuracy of data from the oil and natural gas companies, so that we will know their true production, supplies, reserves, and profits.

The citizens who insist on driving large, unnecessarily powerful cars must expect to pay more for that luxury.

We can be sure that all the special interest groups in the country will attack the part of this plan that affects them directly. They will say that sacrifice is fine, as long as other people do it, but that their sacrifice is unreasonable, or unfair, or harmful to the country. If they succeed, then the burden on the ordinary citizen, who is not organized into an interest group, would be crushing.

There should be only one test for this program: whether it will help our country.

Other generation of Americans have faced and mastered great challenges. I have faith that meeting this challenge will make our own lives even richer. If you will join me so that we can work together with patriotism and courage, we will again prove that our great nation can lead the world into an age of peace, independence and freedom.

Ronald Reagan's Remarks at the Annual Convention of the National Association of Evangelicals, 8 March 1983.

Known as President Reagan's "evil empire" speech, this talk hit hard on the themes of banning abortions and maintaining the importance of God and religion in America. Reagan then moved into a perennial theme

for conservatives—being watchful of the Soviet Union, which Reagan characterized as an "evil empire."

Those of you in the National Association of Evangelicals are known for your spiritual and humanitarian work. And I would be especially remiss if I didn't discharge right now one personal debt of gratitude. Thank you for your prayers. Nancy and I have felt their presence many times in many years. And believe me, for us they've made all the difference.

The other day in the East Room of the White House at a meeting there, someone asked me whether I was aware of all the people out there who were praying for the President. And I had to say, "Yes, I am. I've felt it. I believe in intercessory prayer." But I couldn't help but say to that questioner after he'd asked the question that—or at least say to them that if sometimes when he was praying he got a busy signal, it was just me in there ahead of him. I think I understand how Abraham Lincoln felt when he said, "I have been driven many times to my knees by the overwhelming conviction that I had nowhere else to go." From the joy and the good feeling of this conference, I go to a political reception. Now, I don't know why, but that bit of scheduling reminds me of a story—which I'll share with you.

An evangelical minister and a politician arrived at Heaven's gate one day together. And St. Peter, after doing all the necessary formalities, took them in hand to show them where their quarters would be. And he took them to a small, single room with a bed, a chair, and a table and said this was for the clergyman. And the politician was a little worried about what might be in store for him. And he couldn't believe it then when St. Peter stopped in front of a beautiful mansion with lovely grounds, many servants, and told him that these would be his quarters.

And he couldn't help but ask, he said, "But wait, how—there's something wrong—how do I get this mansion while that good and holy man only gets a single room?" And St. Peter said, "You have to understand how things are up here. We've got thousands and thousands of clergy. You're the first politician who ever made it."

But I don't want to contribute to a stereotype. So I tell you there are a great many God-fearing, dedicated, noble men and women in public life, present company included. And yes, we need your help to keep us ever mindful of the ideas and the principles that brought us into the public arena in the first place. The basis of those ideals and principles is a commitment to freedom and

personal liberty that, itself, is grounded in the much deeper realization that freedom prospers only where the blessings of God are avidly sought and humbly accepted.

The American experiment in democracy rests on this insight. Its discovery was the great triumph of our Founding Fathers, voiced by William Penn when he said: "If we will not be governed by God, we must be governed by tyrants." Explaining the inalienable rights of men, Jefferson said, "The God who gave us life, gave us liberty at the same time." And it was George Washington who said that "of all the disposition and habits which lead to political prosperity, religion and morality are indispensable supporters."

And finally, that shrewdest of all observers of American democracy, Alexis de Tocqueville, put it eloquently after he had gone on a search for the secret of America's greatness and genius—and he said: "Not until I went into the churches of America and heard her pulpits aflame with righteousness did I understand the greatness and the genius of America . . . America is good. And if America ever ceases to be good, America will cease to be great."

Well, I'm pleased to be here today with you who are keeping America great by keeping her good. Only through your work and prayers and those of millions of others can we hope to survive this perilous century and keep alive this experiment in liberty, this last, best hope of man.

I want you to know that this administration is motivated by a political philosophy that sees the greatness of America in you, her people, and in your families, churches, neighborhoods, communities—the institutions that foster and nourish values like concern for others and respect for the rule of law under God.

Now, I don't have to tell you that this puts us in opposition to, or at least out of step with, a prevailing attitude of many who have turned to a modern-day secularism, discarding the tried and time-tested values upon which our very civilization is based. No matter how well intentioned, their value system is radically different from that of most Americans. And while they proclaim that they're freeing us from superstitions of the past, they've taken upon themselves the job of superintending us by government rule and regulation. Sometimes their voices are louder than ours, but they are not yet a majority.

An example of that vocal superiority is evident in a controversy now going on in Washington. And since I'm involved I've been waiting to hear from the parents

of young America. How far are they willing to go in giving to government their prerogatives as parents?

Let me state the case as briefly and simply as I can. An organization of citizens, sincerely motivated and deeply concerned about the increase in illegitimate births and abortions involving girls well below the age of consent, some time ago established a nationwide network of clinics to offer help to these girls and, hopefully, alleviate this situation. Now, again, let me say, I do not fault their intent. However, in their well-intentioned effort, these clinics have decided to provide advice and birth control drugs and devices to underage girls without the knowledge of their parents.

For some years now, the federal government has helped with funds to subsidize these clinics. In providing for this, the Congress decreed that every effort would be made to maximize parental participation. Nevertheless, the drugs and devices are prescribed without getting parental consent or giving notification after they've done so. Girls termed "sexually active"—and that has replaced the word "promiscuous"—are given this help in order to prevent illegitimate birth or abortion.

Well, we have ordered clinics receiving federal funds to notify the parents such help has been given. One of the nation's leading newspapers has created the term "squeal rule" in editorializing against us for doing this, and we're being criticized for violating the privacy of young people. A judge has recently granted an injunction against an enforcement of our rule. I've watched TV panel shows discuss the issue, seen columnists pontificating on our error, but no one seems to mention morality as playing a part in the subject of sex.

Is all of Judeo-Christian tradition wrong? Are we to believe that something so sacred can be looked upon as a purely physical thing with no potential for emotional and psychological harm? And isn't it the parents' right to give counsel and advice to keep their children from making mistakes that may affect their entire lives?

Many of us in government would like to know what parents think about this intrusion in their family by government. We're going to fight in the courts. The right of parents and the rights of family take precedence over those of Washington-based bureaucrats and social engineers.

But the fight against parental notification is really only one example of many attempts to water down traditional values and even abrogate the original terms of American democracy. Freedom prospers when religion is vibrant and the rule of law under God is acknowl-

edged. When our Founding Fathers passed the First Amendment, they sought to protect churches from government interference. They never intended to construct a wall of hostility between government and the concept of religious belief itself.

The evidence of this permeates our history and our government. The Declaration of Independence mentions the Supreme Being no less than four times. "In God We Trust" is engraved on our coinage. The Supreme Court opens its proceedings with a religious invocation. And the members of Congress open their sessions with a prayer. I just happen to believe the schoolchildren of the United States are entitled to the same privileges as Supreme Court justices and congressmen.

Last year, I sent the Congress a constitutional amendment to restore prayer to public schools. Already this session, there's growing bipartisan support for the amendment, and I am calling on the Congress to act speedily to pass it and to let our children pray.

Perhaps some of you read recently about the Lubbock school case, where a judge actually ruled that it was unconstitutional for a school district to give equal treatment to religious and nonreligious student groups, even when the group meetings were being held during the students' own time. The First Amendment never intended to require government to discriminate against religious speech.

Senators Denton and Hatfield have proposed legislation in the Congress on the whole question of prohibiting discrimination against religious forms of student speech. Such legislation could go far to restore freedom of religious speech for public school students. And I hope the Congress considers these bills quickly. And with your help, I think it's possible we could also get the constitutional amendment through the Congress this year.

More than a decade ago, a Supreme Court decision literally wiped off the books of fifty states statutes protecting the rights of unborn children. Abortion on demand now takes the lives of up to one and a half million unborn children a year. Human life legislation ending this tragedy will someday pass the Congress, and you and I must never rest until it does. Unless and until it can be proven that the unborn child is not a living entity, then its right to life, liberty, and the pursuit of happiness must be protected.

You may remember that when abortion on demand began, many, and indeed, I'm sure many of you, warned that the practice would lead to a decline in respect for human life, that the philosophical premises used to jus-

tify abortion on demand would ultimately be used to justify other attacks on the sacredness of human life; infanticide or mercy killing. Tragically enough, those warnings proved all too true. Only last year a court permitted the death by starvation of a handicapped infant.

I have directed the Health and Human Services Department to make clear to every health care facility in the United States that the Rehabilitation Act of 1973 protects all handicapped persons against discrimination based on handicaps, including infants. And we have taken the further step of requiring that each and every recipient of federal funds who provides health care services to infants must post and keep posted in a conspicuous place a notice stating that "discriminatory failure to feed and care for handicapped infants in this facility is prohibited by federal law." It also lists a twenty-four-hour, toll-free number so that nurses and others may report violations in time to save the infant's life.

In addition, recent legislation introduced in the Congress by Representative Henry Hyde of Illinois not only increases restrictions on publicly financed abortions, it also addresses this whole problem of infanticide. I urge the Congress to begin hearings and to adopt legislation that will protect the right of life to all children, including the disabled or handicapped.

Now, I'm sure that you must get discouraged at times, but you've done better than you know, perhaps. There's a great spiritual awakening in America, a renewal of the traditional values that have been the bedrock of America's goodness and greatness.

One recent survey by a Washington-based research council concluded that Americans were far more religious than the people of other nations; 95 percent of those surveyed expressed a belief in God and a huge majority believed the Ten Commandments had real meaning in their lives. And another study has found that an overwhelming majority of Americans disapprove of adultery, teenage sex, pornography, abortion, and hard drugs. And this same study showed a deep reverence for the importance of family ties and religious belief.

I think the items that we've discussed here today must be a key part of the nation's political agenda. For the first time the Congress is openly and seriously debating and dealing with the prayer and abortion issues; and that's enormous progress right there. I repeat: America is in the midst of a spiritual awakening and a moral renewal. And with your biblical keynote, I say today, "Yes, let justice roll on like a river, righteousness like a never-failing stream."

Now, obviously, much of this new political and social consensus I've talked about is based on a positive view of American history, one that takes pride in our country's accomplishments and record. But we must never forget that no government schemes are going to perfect man. We know that living in this world means dealing with what philosophers would call the phenomenology of evil or, as theologians would put it, the doctrine of sin.

There is sin and evil in the world, and we're enjoined by Scripture and the Lord Jesus to oppose it with all our might. Our nation, too, has a legacy of evil with which it must deal. The glory of this land has been its capacity for transcending the moral evils of our past. For example, the long struggle of minority citizens for equal rights, once a source of disunity and civil war, is now a point of pride for all Americans. We must never go back. There is no room for racism, anti-Semitism, or other forms of ethnic and racial hatred in this country.

I know that you've been horrified, as have I, by the resurgence of some hate groups preaching bigotry and prejudice. Use the mighty voice of your pulpits and the powerful standing of your churches to denounce and isolate these hate groups in our midst. The commandment given us is clear and simple: "Thou shalt love thy neighbor as thyself."

But whatever sad episodes exist in our past, any objective observer must hold a positive view of American history, a history that has been the story of hopes fulfilled and dreams made into reality. Especially in this century, America has kept alight the torch of freedom, but not just for ourselves but for millions of others around the world.

And this brings me to my final point today. During my first press conference as president, in answer to a direct question, I pointed out that, as good Marxist-Leninists, the Soviet leaders have openly and publicly declared that the only morality they recognize is that which will further their cause, which is world revolution. I think I should point out I was only quoting Lenin, their guiding spirit, who said in 1920 that they repudiate all morality that proceeds from supernatural ideas—that's their name for religion—or ideas that are outside class conceptions. Morality is entirely subordinate to the interests of class war. And everything is moral that is necessary for the annihilation of the old, exploiting social order and for uniting the proletariat.

Well, I think the refusal of many influential people to accept this elementary fact of Soviet doctrine illustrates a historical reluctance to see totalitarian powers for

what they are. We saw this phenomenon in the 1930s. We see it too often today.

This doesn't mean we should isolate ourselves and refuse to seek an understanding with them. I intend to do everything I can to persuade them of our peaceful intent, to remind them that it was the West that refused to use its nuclear monopoly in the forties and fifties for territorial gain and which now proposes a 50-percent cut in strategic ballistic missiles and the elimination of an entire class of land-based, intermediate-range nuclear missiles.

At the same time, however, they must be made to understand we will never compromise our principles and standards. We will never give away our freedom. We will never abandon our belief in God. And we will never stop searching for a genuine peace. But we can assure none of these things America stands for through the so-called nuclear freeze solutions proposed by some.

The truth is that a freeze now would be a very dangerous fraud, for that is merely the illusion of peace. The reality is that we must find peace through strength.

I would agree to freeze if only we could freeze the Soviets' global desires. A freeze at current levels of weapons would remove any incentive for the Soviets to negotiate seriously in Geneva and virtually end our chances to achieve the major arms reductions which we have proposed. Instead, they would achieve their objectives through the freeze.

A freeze would reward the Soviet Union for its enormous and unparalleled military buildup. It would prevent the essential and long overdue modernization of United States and allied defenses and would leave our aging forces increasingly vulnerable. And an honest freeze would require extensive prior negotiations on the systems and numbers to be limited and on the measures to ensure effective verification and compliance. And the kind of a freeze that has been suggested would be virtually impossible to verify. Such a major effort would divert us completely from our current negotiations on achieving substantial reductions.

A number of years ago, I heard a young father, a very prominent young man in the entertainment world, addressing a tremendous gathering in California. It was during the time of the cold war, and communism and our own way of life were very much on people's minds. And he was speaking to that subject. And suddenly, though, I heard him saying, "I love my little girls more than anything—" And I said to myself, "Oh, no, don't. You can't—don't say that." But I had underestimated

him. He went on: "I would rather see my little girls die now, still believing in God, than have them grow up under communism and one day die no longer believing in God."

There were thousands of young people in that audience. They came to their feet with shouts of joy. They had instantly recognized the profound truth in what he had said, with regard to the physical and the soul and what was truly important.

Yes, let us pray for the salvation of all of those who live in that totalitarian darkness—pray they will discover the joy of knowing God. But until they do, let us be aware that while they preach the supremacy of the state, declare its omnipotence over individual man, and predict its eventual domination of all peoples on the earth, they are the focus of evil in the modern world.

It was C.S. Lewis who, in his unforgettable *Screwtape Letters*, wrote: "The greatest evil is not done now in those sordid 'dens of rime' that Dickens loved to paint. It is not even done in concentration camps and labor camps. In those we see its final result. But it is conceived and ordered (moved, seconded, carried and minuted) in clean, carpeted, warmed, and well-lighted offices, by quiet men with white collars and cut fingernails and smooth-shaven cheeks who do no need to raise their voice."

Well, because these "quiet men" do not "raise their voices," because they sometimes speak in soothing tones of brotherhood and peace, because, like other dictators before them, they're always making "their final territorial demand," some would have us accept them as their word and accommodate ourselves to their aggressive impulses. But if history teaches anything, it teaches that simpleminded appeasement or wishful thinking about our adversaries is folly. It means the betrayal of our past, the squandering of our freedom.

So, I urge you to speak out against those who would place the United States in a position of military and moral inferiority. You know, I've always believed that old *Screwtape* reserved his best efforts for those of you in the church. So, in your discussions of the nuclear freeze proposals, I urge you to beware the temptation of pride—the temptation of blithely declaring yourselves above it all and label both sides equally at fault, to ignore the facts of history and the aggressive impulses of an evil empire, to simply call the arms race a giant misunderstanding and thereby remove yourself from the struggle between right and wrong and good and evil.

I ask you to resist the attempts of those who would have you withhold your support for our efforts, this

administration's efforts, to keep America strong and free, while we negotiate real and verifiable reductions in the world's nuclear arsenals and one day, with God's help, their total elimination.

While America's military strength is important, let me add here that I've always maintained that the struggle now going on for the world will never be decided by bombs or rockets, by armies or military might. The real crisis we face today is a spiritual one; at root, it is a test of moral will and faith.

Whittaker Chambers, the man whose own religious conversation made him a witness to one of the terrible traumas of our time, the Hiss-Chambers case, wrote that the crisis of the Western world exists to the degree in which the West is indifferent to God, the degree to which it collaborates in communism's attempt to make man stand alone without God. And then he said, for Marxism-Leninism is actually the second-oldest faith, first proclaimed in the Garden of Eden with the words of temptation, "Ye shall be as gods."

The Western world can answer this challenge, he wrote, "but only provided that its faith in God and the freedom He enjoins is as great as communism's faith in Man."

I believe we shall rise to the challenge. I believe that communism is another sad, bizarre chapter in human history whose last pages even now are being written. I believe this because the source of our strength in the quest for human freedom is not material, but spiritual. And because it knows no limitation, it must terrify and ultimately triumph over those who would enslave their fellow man. For in the words of Isaiah: "He giveth power to the faint; and to them that have no might He increased strength . . . But they that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary . . ."

Yes, change your world. One of our Founding Fathers, Thomas Paine, said, "We have it within our power to begin the world over again." We can do it, doing together what no one church could do by itself.

God bless you, and thank you very much.

George Herbert Walker Bush's Address to a Joint Session of Congress, 11 September 1990

As the United States prepared to help Kuwait defend itself against an invading Iraqi army, this speech laid the groundwork for what President George H. W. Bush

termed "a new world order." It was a world where, after the fall of Communism in Eastern Europe, the Russians could now be our partners in peace.

Mr. President and Mr. Speaker and Members of the United States Congress, distinguished guests, fellow Americans, thank you very much for that warm welcome. We gather tonight, witness to events in the Persian Gulf as significant as they are tragic. In the early morning hours of August 2d, following negotiations and promises by Iraq's dictator Saddam Hussein not to use force, a powerful Iraqi army invaded its trusting and much weaker neighbor, Kuwait. Within 3 days, 120,000 Iraqi troops with 850 tanks had poured into Kuwait and moved south to threaten Saudi Arabia. It was then that I decided to act to check that aggression.

At this moment, our brave servicemen and women stand watch in that distant desert and on distant seas, side by side with the forces of more than 20 other nations. They are some of the finest men and women of the United States of America. And they're doing one terrific job. These valiant Americans were ready at a moment's notice to leave their spouses and their children, to serve on the front line halfway around the world. They remind us who keeps America strong: they do. In the trying circumstances of the Gulf, the morale of our service men and women is excellent. In the face of danger, they're brave, they're well-trained, and dedicated.

A soldier, Private First Class Wade Merritt of Knoxville, Tennessee, now stationed in Saudi Arabia, wrote his parents of his worries, his love of family, and his hope for peace. But Wade also wrote, "I am proud of my country and its firm stance against inhumane aggression. I am proud of my army and its men. I am proud to serve my country." Well, let me just say, Wade, America is proud of you and is grateful to every soldier, sailor, marine, and airman serving the cause of peace in the Persian Gulf. I also want to thank the Chairman of the Joint Chiefs of Staff, General Powell; the Chiefs here tonight; our commander in the Persian Gulf, General Schwartzkopf; and the men and women of the Department of Defense. What a magnificent job you all are doing. And thank you very, very much from a grateful people. I wish I could say that their work is done. But we all know it's not.

So, if there ever was a time to put country before self and patriotism before party, the time is now. And let me thank all Americans, especially those here in this Chamber tonight, for your support for our armed forces and

for their mission. That support will be even more important in the days to come. So, tonight I want to talk to you about what's at stake—what we must do together to defend civilized values around the world and maintain our economic strength at home.

Our objectives in the Persian Gulf are clear, our goals defined and familiar: Iraq must withdraw from Kuwait completely, immediately, and without condition. Kuwait's legitimate government must be restored. The security and stability of the Persian Gulf must be assured. And American citizens abroad must be protected. These goals are not ours alone. They've been endorsed by the United Nations Security Council five times in as many weeks. Most countries share our concern for principle. And many have a stake in the stability of the Persian Gulf. This is not, as Saddam Hussein would have it, the United States against Iraq. It is Iraq against the world.

As you know, I've just returned from a very productive meeting with Soviet President Gorbachev. And I am pleased that we are working together to build a new relationship. In Helsinki, our joint statement affirmed to the world our shared resolve to counter Iraq's threat to peace. Let me quote: "We are united in the belief that Iraq's aggression must not be tolerated. No peaceful international order is possible if larger states can devour their smaller neighbors." Clearly, no longer can a dictator count on East-West confrontation to stymie concerted United Nations action against aggression. A new partnership of nations has begun.

We stand today at a unique and extraordinary moment. The crisis in the Persian Gulf, as grave as it is, also offers a rare opportunity to move toward an historic period of cooperation. Out of these troubled times, our fifth objective—a new world order—can emerge: a new era—freer from the threat of terror, stronger in the pursuit of justice, and more secure in the quest for peace. An era in which the nations of the world, East and West, North and South, can prosper and live in harmony. A hundred generations have searched for this elusive path to peace, while a thousand wars raged across the span of human endeavor. Today that new world is struggling to be born, a world quite different from the one we've known. A world where the rule of law supplants the rule of the jungle. A world in which nations recognize the shared responsibility for freedom and justice. A world where the strong respect the rights of the weak. This is the vision that I shared with President Gorbachev in Helsinki. He and other leaders from Europe, the Gulf, and around

the world understand that how we manage this crisis today could shape the future for generations to come.

The test we face is great, and so are the stakes. This is the first assault on the new world that we seek, the first test of our mettle. Had we not responded to this first provocation with clarity of purpose, if we do not continue to demonstrate our determination, it would be a signal to actual and potential despots around the world. America and the world must defend common vital interests—and we will. America and the world must support the rule of law—and we will. America and the world must stand up to aggression—and we will. And one thing more: In the pursuit of these goals America will not be intimidated.

Vital issues of principle are at stake. Saddam Hussein is literally trying to wipe a country off the face of the Earth. We do not exaggerate. Nor do we exaggerate when we say Saddam Hussein will fail. Vital economic interests are at risk as well. Iraq itself controls some 10 percent of the world's proven oil reserves. Iraq plus Kuwait controls twice that. An Iraq permitted to swallow Kuwait would have the economic and military power, as well as the arrogance, to intimidate and coerce its neighbors—neighbors who control the lion's share of the world's remaining oil reserves. We cannot permit a resource so vital to be dominated by one so ruthless. And we won't.

Recent events have surely proven that there is no substitute for American leadership. In the face of tyranny, let no one doubt American credibility and reliability. Let no one doubt our staying power. We will stand by our friends. One way or another, the leader of Iraq must learn this fundamental truth. From the outset, acting hand in hand with others, we've sought to fashion the broadest possible international response to Iraq's aggression. The level of world cooperation and condemnation of Iraq is unprecedented. Armed forces from countries spanning four continents are there at the request of King Fahd of Saudi Arabia to deter and, if need be, to defend against attack. Moslems and non-Moslems, Arabs and non-Arabs, soldiers from many nations stand shoulder to shoulder, resolute against Saddam Hussein's ambitions.

We can now point to five United Nations Security Council resolutions that condemn Iraq's aggression. They call for Iraq's immediate and unconditional withdrawal, the restoration of Kuwait's legitimate government, and categorically reject Iraq's cynical and self-serving attempt to annex Kuwait. Finally, the United Nations has demanded the release of all foreign nation-

als held hostage against their will and in contravention of international law. It is a mockery of human decency to call these people "guests." They are hostages, and the whole world knows it.

Prime Minister Margaret Thatcher, a dependable ally, said it all: "We do not bargain over hostages. We will not stoop to the level of using human beings as bargaining chips ever." Of course, of course, our hearts go out to the hostages and to their families. But our policy cannot change, and it will not change. America and the world will not be blackmailed by this ruthless policy.

We're now in sight of a United Nations that performs as envisioned by its founders. We owe much to the outstanding leadership of Secretary-General Javier Perez de Cuellar. The United Nations is backing up its words with action. The Security Council has imposed mandatory economic sanctions on Iraq, designed to force Iraq to relinquish the spoils of its illegal conquest. The Security Council has also taken the decisive step of authorizing the use of all means necessary to ensure compliance with these sanctions. Together with our friends and allies, ships of the United States Navy are today patrolling Mideast waters. They've already intercepted more than 700 ships to enforce the sanctions. Three regional leaders I spoke with just yesterday told me that these sanctions are working. Iraq is feeling the heat. We continue to hope that Iraq's leaders will recalculate just what their aggression has cost them. They are cut off from world trade, unable to sell their oil. And only a tiny fraction of goods gets through.

The communique with President Gorbachev made mention of what happens when the embargo is so effective that children of Iraq literally need milk or the sick truly need medicine. Then, under strict international supervision that guarantees the proper destination, then food will be permitted.

At home, the material cost of our leadership can be steep. That's why Secretary of State Baker and Treasury Secretary Brady have met with many world leaders to underscore that the burden of this collective effort must be shared. We are prepared to do our share and more to help carry that load; we insist that others do their share as well.

The response of most of our friends and allies has been good. To help defray costs, the leaders of Saudi Arabia, Kuwait, and the UAE—the United Arab Emirates—have pledged to provide our deployed troops with all the food and fuel they need. Generous assistance will also be provided to stalwart front-line nations, such as Turkey and Egypt. I am also heartened to report

that this international response extends to the neediest victims of this conflict—those refugees. For our part, we've contributed \$28 million for relief efforts. This is but a portion of what is needed. I commend, in particular, Saudi Arabia, Japan, and several European nations who have joined us in this purely humanitarian effort.

There's an energy-related cost to be borne as well. Oil-producing nations are already replacing lost Iraqi and Kuwaiti output. More than half of what was lost has been made up. And we're getting superb cooperation. If producers, including the United States, continue steps to expand oil and gas production, we can stabilize prices and guarantee against hardship. Additionally, we and several of our allies always have the option to extract oil from our strategic petroleum reserves if conditions warrant. As I've pointed out before, conservation efforts are essential to keep our energy needs as low as possible. And we must then take advantage of our energy sources across the board: coal, natural gas, hydro, and nuclear. Our failure to do these things has made us more dependent on foreign oil than ever before. Finally, let no one even contemplate profiteering from this crisis. We will not have it.

I cannot predict just how long it will take to convince Iraq to withdraw from Kuwait. Sanctions will take time to have their full intended effect. We will continue to review all options with our allies, but let it be clear: we will not let this aggression stand.

Our interest, our involvement in the Gulf is not transitory. It predated Saddam Hussein's aggression and will survive it. Long after all our troops come home—and we all hope it's soon, very soon—there will be a lasting role for the United States in assisting the nations of the Persian Gulf. Our role then: to deter future aggression. Our role is to help our friends in their own self-defense. And something else: to curb the proliferation of chemical, biological, ballistic missile and, above all, nuclear technologies.

Let me also make clear that the United States has no quarrel with the Iraqi people. Our quarrel is with Iraq's dictator and with his aggression. Iraq will not be permitted to annex Kuwait. That's not a threat, that's not a boast, that's just the way it's going to be.

Our ability to function effectively as a great power abroad depends on how we conduct ourselves at home. Our economy, our Armed Forces, our energy dependence, and our cohesion all determine whether we can help our friends and stand up to our foes. For America to lead, America must remain strong and vital. Our world leadership and domestic strength are mutual and

reinforcing; a woven piece, strongly bound as Old Glory. To revitalize our leadership, our leadership capacity, we must address our budget deficit—not after election day, or next year, but now.

Higher oil prices slow our growth, and higher defense costs would only make our fiscal deficit problem worse. That deficit was already greater than it should have been—a projected \$232 billion for the coming year. It must—it will—be reduced.

To my friends in Congress, together we must act this very month—before the next fiscal year begins on October 1st—to get America's economic house in order. The Gulf situation helps us realize we are more economically vulnerable than we ever should be. Americans must never again enter any crisis, economic or military, with an excessive dependence on foreign oil and an excessive burden of Federal debt.

Most Americans are sick and tired of endless battles in the Congress and between the branches over budget matters. It is high time we pulled together and get the job done right. It's up to us to straighten this out. This job has four basic parts. First, the Congress should, this month, within a budget agreement, enact growth-oriented tax measures—to help avoid recession in the short term and to increase savings, investment, productivity, and competitiveness for the longer term. These measures include extending incentives for research and experimentation; expanding the use of IRA's for new homeowners; establishing tax-deferred family savings accounts; creating incentives for the creation of enterprise zones and initiatives to encourage more domestic drilling; and, yes, reducing the tax rate on capital gains.

And second, the Congress should, this month, enact a prudent multiyear defense program, one that reflects not only the improvement in East-West relations but our broader responsibilities to deal with the continuing risks of outlaw action and regional conflict. Even with our obligations in the Gulf, a sound defense budget can have some reduction in real terms; and we're prepared to accept that. But to go beyond such levels, where cutting defense would threaten our vital margin of safety, is something I will never accept. The world is still dangerous. And surely, that is now clear. Stability's not secure. American interests are far reaching. Interdependence has increased. The consequences of regional instability can be global. This is no time to risk America's capacity to protect her vital interests.

And third, the Congress should, this month, enact measures to increase domestic energy production and energy conservation in order to reduce dependence on

foreign oil. These measures should include my proposals to increase incentives for domestic oil and gas exploration, fuel-switching, and to accelerate the development of the Alaskan energy resources without damage to wildlife. As you know, when the oil embargo was imposed in the early 1970's, the United States imported almost 6 million barrels of oil a day. This year, before the Iraqi invasion, U.S. imports had risen to nearly 8 million barrels per day. And we'd moved in the wrong direction. And now we must act to correct that trend.

And fourth, the Congress should, this month, enact a 5-year program to reduce the projected debt and deficits by \$500 billion—that's by half a trillion dollars. And if, with the Congress, we can develop a satisfactory program by the end of the month, we can avoid the ax of sequester—deep across-the-board cuts that would threaten our military capacity and risk substantial domestic disruption. I want to be able to tell the American people that we have truly solved the deficit problem. And for me to do that, a budget agreement must meet these tests: It must include the measures I've recommended to increase economic growth and reduce dependence on foreign oil. It must be fair. All should contribute, but the burden should not be excessive for any one group of programs or people. It must address the growth of government's hidden liabilities. It must reform the budget process and, further, it must be real.

I urge Congress to provide a comprehensive 5-year deficit reduction program to me as a complete legislative package, with measures to assure that it can be fully enforced. America is tired of phony deficit reduction or promise-now, save-later plans. It is time for a program that is credible and real. And finally, to the extent that the deficit reduction program includes new revenue measures, it must avoid any measure that would threaten economic growth or turn us back toward the days of punishing income tax rates. That is one path we should not head down again.

I have been pleased with recent progress, although it has not always seemed so smooth. But now it's time to produce. I hope we can work out a responsible plan. But with or without agreement from the budget summit, I ask both Houses of the Congress to allow a straight up-or-down vote on a complete \$500-billion deficit reduction package not later than September 28. If the Congress cannot get me a budget, then Americans will have to face a tough, mandated sequester. I'm hopeful, in fact, I'm confident that the Congress will do what it should. And I can assure you that we in the executive branch will do our part.

In the final analysis, our ability to meet our responsibilities abroad depends upon political will and consensus at home. This is never easy in democracies, for we govern only with the consent of the governed. And although free people in a free society are bound to have their differences, Americans traditionally come together in times of adversity and challenge.

Once again, Americans have stepped forward to share a tearful goodbye with their families before leaving for a strange and distant shore. At this very moment, they serve together with Arabs, Europeans, Asians, and Africans in defense of principle and the dream of a new world order. That's why they sweat and toil in the sand and the heat and the sun. If they can come together under such adversity, if old adversaries like the Soviet Union and the United States can work in common cause, then surely we who are so fortunate to be in this great Chamber—Democrats, Republicans, liberals, conservatives—can come together to fulfill our responsibilities here. Thank you. Good night. And God bless the United States of America.

William Jefferson Clinton's Address to the National Geographic Society, 11 June 1998

Like the Soviet Union, China had been widely viewed as a post-World War II threat to the security of democratic nations. In the 1990s the push for economic reforms in China led to a new spirit of cooperation between the United States and China. In the speech below, President Clinton talks about how he envisions U.S.-China relations evolving into the twentieth century.

THE PRESIDENT: Thank you very much, President Fahey. I don't know what to say about starting the day with this apparition. (Laughter.) But it's probably good practice for our line of work. (Laughter.) I try to read every issue of the National Geographic, and I will certainly look forward to that one.

Chairman Grosvenor, members of Congress, members of the administration, and members of previous administrations who are here and others who care about the national security and national interests of the United States. First let me, once again, thank the National Geographic Society for its hospitality, and for the very important work that it has done for so long now.

As all of you know, I will go to China in two weeks time. It will be the first state visit by an American Pres-

ident this decade. I'm going because I think it's the right thing to do for our country. Today I want to talk with you about our relationship with China and how it fits into our broader concerns for the world of the 21st century and our concerns, in particular, for developments in Asia. That relationship will in large measure help to determine whether the new century is one of security, peace, and prosperity for the American people.

Let me say that, all of you know the dimensions, but I think it is worth repeating a few of the facts about China. It is already the world's most populous nation; it will increase by the size of America's current population every 20 years. Its vast territory borders 15 countries. It has one of the fastest growing economies on Earth. It holds a permanent seat on the National Security Council of the United Nations. Over the past 25 years, it has entered a period of profound change, emerging from isolation, turning a closed economy into an engine for growth, increasing cooperation with the rest of the world, raising the standard of living for hundreds of millions of its citizens.

The role China chooses to play in preventing the spread of weapons of mass destruction are encouraging it in combatting or ignoring international crime and drug trafficking; in protecting or degrading the environment; in tearing down or building up trade barriers; in respecting or abusing human rights; in resolving difficult situations in Asia from the Indian subcontinent to the Korean Peninsula or aggravating them. The role China chooses to play will powerfully shape the next century.

A stable, open, prosperous China that assumes its responsibilities for building a more peaceful world is clearly and profoundly in our interests. On that point all Americans agree. But as we all know, there is serious disagreement over how best to encourage the emergence of that kind of China, and how to handle our differences, especially over human rights, in the meantime.

Some Americans believe we should try to isolate and contain China because of its undemocratic system and human rights violation, and in order to retard its capacity to become America's next great enemy. Some believe increased commercial dealings alone will inevitably lead to a more open, more democratic China.

We have chosen a different course that I believe to be both principled and pragmatic: expanding our areas of cooperation with China while dealing forthrightly with our differences. This policy is supported by our key democratic allies in Asia, Japan, South Korea, Australia,

Thailand, the Philippines. It has recently been publicly endorsed by a number of distinguished religious leaders, including Reverend Billy Graham and the Dalai Lama. My trip has been recently supported by political opponents of the current Chinese government, including most recently, Wang Dan.

There is a reason for this. Seeking to isolate China is clearly unworkable. Even our friends and allies around the world do not support us—or would not support us in that. We would succeed instead in isolating ourselves and our own policy.

Most important, choosing isolation over engagement would not make the world safer. It would make it more dangerous. It would undermine rather than strengthen our efforts to foster stability in Asia. It would eliminate, not facilitate cooperation on issues relating to mass destruction. It would hinder, not help the cause of democracy and human rights in China. It would set back, not step up worldwide efforts to protect the environment. It would cut off, not open up one of the world's most important markets. It would encourage the Chinese to turn inward and to act in opposition to our interests and values.

Consider the areas that matter most to America's peace, prosperity and security, and ask yourselves, would our interests and ideals be better served by advancing our work with, or isolating ourselves from China.

First, think about our interests in a stable Asia, an interest that China shares. The nuclear threats—excuse me—the nuclear tests by India and Pakistan are a threat to the stability we seek. They risk a terrible outcome. A miscalculation between two adversaries with large armies would be bad. A miscalculation between two adversaries with nuclear weapons could be catastrophic. These tests were all the more unfortunate because they divert precious resources from countries with unlimited potential.

India is a very great nation, soon to be not only the world's most populous democracy, but its most populous country. It is home to the world's largest middle class already and a remarkable culture that taught the modern world the power of nonviolence. For 50 years Pakistan has been a vibrant Islamic state, and is today a robust democracy. It is important for the world to recognize the remarkable contributions both these countries have made and will continue to make to the community of nations if they can proceed along the path of peace.

It is important for the world to recognize that both India and Pakistan have security concerns that are legitimate. But it is equally important for India and Pakistan

to recognize that developing weapons of mass destruction is the wrong way to define their greatness, to protect their security, or to advance their concerns.

I believe that we now have a self-defeating, dangerous, and costly course underway. I believe that this course, if continued, not moderated and ultimately changed, will make both the people of India and the people of Pakistan poorer, not richer, and less, not more, secure. Resolving this requires us to cooperate with China.

Last week, China chaired a meeting of the permanent members of the U.N. Security Council to forge a common strategy for moving India and Pakistan back from the nuclear arms race edge. It has condemned both countries for conducting nuclear tests. It has joined us in urging them to conduct no more tests, to sign the Comprehensive Test Ban Treaty, to avoid deploying or testing missiles, to tone down the rhetoric, to work to resolve their differences including over Kashmir through dialogue. Because of its history with both countries, China must be a part of any ultimate resolution of this matter.

On the Korean Peninsula, China has become a force for peace and stability, helping us to convince North Korea to freeze its dangerous nuclear program, playing a constructive role in the four-party peace talks. And China has been a helpful partner in international efforts to stabilize the Asian financial crisis. In resisting the temptation to devalue its currency, China has seen that its own interests lie in preventing another round of competitive devaluations that would have severely damaged prospects for regional recovery. It has also contributed to the rescue packages for affected economies.

Now, for each of these problems we should ask ourselves, are we better off working with China or without it? When I travel to China this month, I will work with President Jiang to advance our Asian security agenda, keeping the pressure on India and Pakistan to curb their nuclear arms race and to commence a dialogue; using the strength of our economies and our influence to bolster Asian economies battered by the economic crisis; and discussing steps we can take to advance peace and security on the Korean Peninsula. I will encourage President Jiang to pursue the cross-strait discussion the PRC recently resumed with Taiwan, and where we have already seen a reduction in tensions.

Second, stopping the spread of nuclear, chemical and biological weapons is clearly one of our most urgent security challenges. As a nuclear power with increasingly sophisticated industrial and technological capabil-

ities, China can choose either to be a part of the problem or a part of the solution.

For years, China stood outside the international arms control regime. In the last decade it has joined the Nuclear Nonproliferation Treaty, the Chemical Weapons Convention, the Biological Weapons Convention, and the Comprehensive Test Ban Treaty, each with clear rules, reporting requirements and inspection systems. In the past, China has been a major exporter of sophisticated weapons-related technologies. That is why in virtually all our high-level contacts with China's leadership, and in my summit meeting with President Jiang last October, nonproliferation has been high on the agenda.

Had we been trying to isolate China rather than work with it, would China have agreed to stop assistance to Iran for its nuclear program? To terminate its assistance to unsafeguarded nuclear facilities such as those in Pakistan? To tighten its export control system, to sell no more anti-ship cruise missiles to Iran? These vital decisions were all in our interest, and they clearly were the fruit of our engagement.

I will continue to press China on proliferation. I will seek stronger controls on the sale of missiles, missile technology, dual-use products, and chemical and biological weapons. I will argue that it is in China's interest, because the spread of weapons and technologies would increasingly destabilize areas near China's own borders.

Third, the United States has a profound stake in combatting international organized crime and drug trafficking. International criminal syndicates threaten to undermine confidence in new but fragile market democracies. They bilk people out of billions of dollars and bring violence and despair to our schools and neighborhoods. These are problems from which none of us are isolated and which, as I said at the United Nations a few days ago, no nation is so big it can fight alone.

With a land mass spanning from Russia in the north to Vietnam and Thailand in the south, from India and Pakistan in the west to Korea and Japan in the east, China has become a transshipment point for drugs and the proceeds of illegal activities. Last month a special liaison group that President Jiang and I established brought together leading Chinese and American law enforcement officials to step up our cooperation against organized crime, alien smuggling, and counterfeiting.

Next month the Drug Enforcement Agency of the United States will open an office in Beijing. Here, too,

pursuing practical cooperation with China is making a difference for America's future.

Fourth, China and the United States share the same global environment, an interest in preserving it for this and future generations. China is experiencing an environmental crisis perhaps greater than any other nation in history at a comparable stage of its development. Every substantial body of water in China is polluted. In many places, water is in short supply. Respiratory illness is the number one health problem for China's people because of air pollution.

Early in the next century, China will surpass the United States as the world's largest emitter of greenhouse gases, which are dangerously warming our planet. This matters profoundly to the American people, because what comes out of a smokestack or goes into a river in China can do grievous harm beyond its borders. It is a fool's errand to believe that we can deal with our present and future global environmental challenges without strong cooperation with China.

A year ago, the Vice President launched a dialogue with the Chinese on the environment to help them pursue growth and protect the environment at the same time. I have to tell you that this is one of the central challenges we face—convincing all developing nations, but especially China, and other very large ones, that it is actually possible to grow their economies in the 21st century without following the pattern of energy use and environmental damages that characterize economic growth in this century. And we need all the help we can to make that case.

In Beijing, I will explore with President Jiang how American clean energy technology can help to improve air quality and bring electricity to more of China's rural residents. We will discuss innovative tools for financing clean energy development that were established under the Kyoto climate change agreement.

Fifth, America clearly benefits from an increasingly free, fair and open global trading system. Over the past six years, trade has generated more than one-third of the remarkable economic growth we have enjoyed. If we are to continue generating 20 percent of the world's wealth with just four percent of its population, we must continue to trade with the other 96 percent of the people with whom we share this small planet.

One in every four people is Chinese. And China boasts a growth rate that has averaged 10 percent for the past 20 years. Over the next 20 years, it is projected that the developing economies will grow at three times the rate of the already developed economies. It is mani-

festly, therefore, in our interest to bring the Chinese people more and more fully into the global trading system to get the benefits and share the responsibilities of emerging economic prosperity.

Already China is one of the fastest growing markets for our goods and services. As we look into the next century, it will clearly support hundreds of thousands of jobs all across our country. But access to China's markets also remains restricted for many of our companies and products. What is the best way to level the playing field? We could erect trade barriers. We could deny China the normal trading status we give to so many other countries with whom we have significant disagreements. But that would only penalize our consumers, invite retaliation from China on \$13 billion in United States exports, and create a self-defeating cycle of protectionism that the world has seen before.

Or we can continue to press China to open its markets—its goods markets, its services markets, its agricultural markets—as it engages in sweeping economic reform. We can work toward China's admission to the WTO on commercially meaningful terms, where it will be subject to international rules of free and fair trade. And we can renew normal trade treatment for China, as every President has done since 1980, strengthening instead of undermining our economic relationship.

In each of these crucial areas, working with China is the best way to advance our interests. But we also know that how China evolves inside its borders will influence how it acts beyond them. We, therefore, have a profound interest in encouraging China to embrace the ideals upon which our nation was founded and which have now been universally embraced—the right to life, liberty and the pursuit of happiness; to debate, dissent, associate and worship without state interference. These ideas are now the birthright of people everywhere, a part of the Universal Declaration of Human Rights. They are part of the fabric of all truly free societies.

We have a fundamental difference with China's leadership over this. The question we Americans must answer is not whether we support human rights in China—surely, all of us do—but, rather, what is the best way to advance them. By integrating China into the community of nations and the global economy, helping its leadership understand that greater freedom profoundly serves China's interests, and standing up for our principles, we can most effectively serve the cause of democracy and human rights within China.

Over time, the more we bring China into the world the more the world will bring freedom to China.

China's remarkable economic growth is making China more and more dependent on other nations for investment, for markets, for energy, for ideas. These ties increase the need for the stronger rule of law, openness, and accountability. And they carry with them powerful agents of change—fax machines and photocopiers, computers and the Internet. Over the past decade the number of mobile phones has jumped from 50,000 to more than 13 million in China, and China is heading from about 400,000 Internet accounts last year to more than 20 million early in the next century. Already, one in five residents in Beijing has access to satellite transmissions. Some of the American satellites China sends into space beam CNN and other independent sources of news and ideas into China.

The licensing of American commercial satellite launches on Chinese rockets was approved by President Reagan, begun by President Bush, continued under my administration, for the simple reason that the demand for American satellites far out-strips America's launch capacity, and because others, including Russian and European nations, can do this job at much less cost.

It is important for every American to understand that there are strict safeguards, including a Department of Defense plan for each launch, to prevent any assistance to China's missile programs. Licensing these launches allows us to meet the demand for American satellites and helps people on every continent share ideas, information, and images, through television, cell phones, and pagers. In the case of China, the policy also furthers our efforts to stop the spread of missile technology by providing China incentives to observe nonproliferation agreements. This policy clearly has served our national interests.

Over time, I believe China's leaders must accept freedom's progress because China can only reach its full potential if its people are free to reach theirs.

In the Information Age, the wealth of any nation, including China, lies in its people—in their capacity to create, to communicate, to innovate. The Chinese people must have the freedom to speak, to publish, to associate, to worship without fear of reprisal. Only then will China reach its full potential for growth and greatness.

I have told President Jiang that when it comes to human rights and religious freedom, China remains on the wrong side of history. Unlike some, I do not believe increased commercial dealings alone will inevitably lead to greater openness and freedom. We must work to speed history's course. Complacency or silence would run counter to everything we stand for as Americans. It

would deny those fighting for human rights and religious freedom inside China the outside support that is a source of strength and comfort. Indeed, one of the most important benefits of our engagement with China is that it gives us an effective means to urge China's leaders publicly and privately to change course.

Our message remains strong and constant: Do not arrest people for their political beliefs. Release those who are in jail for that reason. Renounce coercive population control practices. Resume your dialogue with the Dalai Lama. Allow people to worship when, where, and how they choose. And recognize that our relationship simply cannot reach its full potential so long as Chinese people are denied fundamental human rights.

In support of that message, we are strengthening Radio Free Asia. We are working with China to expand the rule of law and civil society programs in China so that rights already on the books there can become rights in reality.

This principled, pragmatic approach has produced significant results, although still far from enough. Over the past year, China has released from jail two prominent dissidents—Wei Jingsheng and Wang Dan—and Catholic Bishop Zeng. It announced its intention to sign the International Covenant on Civil and Political Rights, which will subject China's human rights practices to regular scrutiny by independent international observers. President Jiang received a delegation of prominent American religious leaders and invited them to visit Tibet.

Seeking to isolate China will not free one more political dissident, will not open one more church to those who wish to worship, will do nothing to encourage China to live by the laws it has written. Instead, it will limit our ability to advance human rights and religious and political freedom.

When I travel to China I will take part in an official greeting ceremony in front of the Great Hall of the People, across from Tiananmen Square. I will do so because that is where the Chinese government receives visiting heads of state and government, including President Chirac of France and, most recently, Prime Minister Netanyahu of Israel. Some have suggested I should refuse to take part in this traditional ceremony, that somehow going there would absolve the Chinese government of its responsibility for the terrible killings at Tiananmen Square nine years ago, or indicate that America is no longer concerned about such conduct. They are wrong.

Protocol and honoring a nation's traditional practices

should not be confused with principle. China's leaders, as I have repeatedly said, can only move beyond the events of June 1989, when they recognize the reality that what the government did was wrong. Sooner or later they must do that. And, perhaps even more important, they must change course on this fundamentally important issue.

In my meetings with President Jiang and other Chinese leaders, and in my discussions with the Chinese people I will press ahead on human rights and religious freedom, urging that China follow through on its intention to sign the Covenant on Civil and Political Rights, that it release more individuals in prison for expressing their opinions, that it take concrete steps to preserve Tibet's cultural, linguistic, and religious heritage.

We do not ignore the value of symbols. But, in the end, if the choice is between making a symbolic point and making a real difference, I choose to make the difference. And when it comes to advancing human rights and religious freedom, dealing directly and speaking honestly to the Chinese is clearly the best way to make a difference.

China has known more millennia than the United States has known centuries. But for more than 220 years, we have been conducting a great experiment in democracy. We must never lose confidence in the power of American experience or the strength of our example. The more we share our ideas with the world, the more the world will come to share the ideals that animate America. And they will become the aspirations of people everywhere.

I should also say we should never lose sight of the fact that we have never succeeded in perfectly realizing our ideals here at home. That calls for a little bit of humility and continued efforts on our part on the home front.

China will choose its own destiny, but we can influence that choice by making the right choice ourselves—working with China where we can, dealing directly with our differences where we must. Bringing China into the community of nations rather than trying to shut it out is plainly the best way to advance both our interests and our values. It is the best way to encourage China to follow the path of stability, openness, nonaggression; to embrace free markets, political pluralism, the rule of law; to join us in building a stable international order where free people can make the most of their lives and give vent to their children's dreams.

That kind of China, rather than one turned inward and confrontational, is profoundly in our interests. That

kind of China can help to shape a 21st century that is the most peaceful and prosperous era the world has ever known.

Thank you very much.

George W. Bush's State of the Union Address, 29 January 2002

In his State of the Union address following the September 11th terrorist attacks on the United States, President George W. Bush spoke of his aims for the War on Terrorism. In the speech, he characterized Iraq, Iran, and North Korea as an "axis of evil" that threatened the freedom and security of the world.

Thank you very much. Mr. Speaker, Vice President Cheney, members of Congress, distinguished guests, fellow citizens: As we gather tonight, our nation is at war, our economy is in recession, and the civilized world faces unprecedented dangers. Yet the state of our Union has never been stronger. (Applause.)

We last met in an hour of shock and suffering. In four short months, our nation has comforted the victims, begun to rebuild New York and the Pentagon, rallied a great coalition, captured, arrested, and rid the world of thousands of terrorists, destroyed Afghanistan's terrorist training camps, saved a people from starvation, and freed a country from brutal oppression. (Applause.)

The American flag flies again over our embassy in Kabul. Terrorists who once occupied Afghanistan now occupy cells at Guantanamo Bay. (Applause.) And terrorist leaders who urged followers to sacrifice their lives are running for their own. (Applause.)

America and Afghanistan are now allies against terror. We'll be partners in rebuilding that country. And this evening we welcome the distinguished interim leader of a liberated Afghanistan: Chairman Hamid Karzai. (Applause.)

The last time we met in this chamber, the mothers and daughters of Afghanistan were captives in their own homes, forbidden from working or going to school. Today women are free, and are part of Afghanistan's new government. And we welcome the new Minister of Women's Affairs, Doctor Sima Samar. (Applause.)

Our progress is a tribute to the spirit of the Afghan people, to the resolve of our coalition, and to the might of the United States military. (Applause.) When I called our troops into action, I did so with complete confidence in their courage and skill. And tonight, thanks to

them, we are winning the war on terror. (Applause.) The man and women of our Armed Forces have delivered a message now clear to every enemy of the United States: Even 7,000 miles away, across oceans and continents, on mountaintops and in caves—you will not escape the justice of this nation. (Applause.)

For many Americans, these four months have brought sorrow, and pain that will never completely go away. Every day a retired firefighter returns to Ground Zero, to feel closer to his two sons who died there. At a memorial in New York, a little boy left his football with a note for his lost father: Dear Daddy, please take this to heaven. I don't want to play football until I can play with you again some day.

Last month, at the grave of her husband, Michael, a CIA officer and Marine who died in Mazur-e-Sharif, Shannon Spann said these words of farewell: "Semper Fi, my love." Shannon is with us tonight. (Applause.)

Shannon, I assure you and all who have lost a loved one that our cause is just, and our country will never forget the debt we owe Michael and all who gave their lives for freedom.

Our cause is just, and it continues. Our discoveries in Afghanistan confirmed our worst fears, and showed us the true scope of the task ahead. We have seen the depth of our enemies' hatred in videos, where they laugh about the loss of innocent life. And the depth of their hatred is equaled by the madness of the destruction they design. We have found diagrams of American nuclear power plants and public water facilities, detailed instructions for making chemical weapons, surveillance maps of American cities, and thorough descriptions of landmarks in America and throughout the world.

What we have found in Afghanistan confirms that, far from ending there, our war against terror is only beginning. Most of the 19 men who hijacked planes on September the 11th were trained in Afghanistan's camps, and so were tens of thousands of others. Thousands of dangerous killers, schooled in the methods of murder, often supported by outlaw regimes, are now spread throughout the world like ticking time bombs, set to go off without warning.

Thanks to the work of our law enforcement officials and coalition partners, hundreds of terrorists have been arrested. Yet, tens of thousands of trained terrorists are still at large. These enemies view the entire world as a battlefield, and we must pursue them wherever they are. (Applause.) So long as training camps operate, so long as nations harbor terrorists, freedom is at risk. And America and our allies must not, and will not, allow it. (Applause.)

Our nation will continue to be steadfast and patient and persistent in the pursuit of two great objectives. First, we will shut down terrorist camps, disrupt terrorist plans, and bring terrorists to justice. And, second, we must prevent the terrorists and regimes who seek chemical, biological or nuclear weapons from threatening the United States and the world. (Applause.)

Our military has put the terror training camps of Afghanistan out of business, yet camps still exist in at least a dozen countries. A terrorist underworld—including groups like Hamas, Hezbollah, Islamic Jihad, Jaishi-Mohammed—operates in remote jungles and deserts, and hides in the centers of large cities.

While the most visible military action is in Afghanistan, America is acting elsewhere. We now have troops in the Philippines, helping to train that country's armed forces to go after terrorist cells that have executed an American, and still hold hostages. Our soldiers, working with the Bosnian government, seized terrorists who were plotting to bomb our embassy. Our Navy is patrolling the coast of Africa to block the shipment of weapons and the establishment of terrorist camps in Somalia.

My hope is that all nations will heed our call, and eliminate the terrorist parasites who threaten their countries and our own. Many nations are acting forcefully. Pakistan is now cracking down on terror, and I admire the strong leadership of President Musharraf. (Applause.)

But some governments will be timid in the face of terror. And make no mistake about it: If they do not act, America will. (Applause.)

Our second goal is to prevent regimes that sponsor terror from threatening America or our friends and allies with weapons of mass destruction. Some of these regimes have been pretty quiet since September the 11th. But we know their true nature. North Korea is a regime arming with missiles and weapons of mass destruction, while starving its citizens.

Iran aggressively pursues these weapons and exports terror, while an unelected few repress the Iranian people's hope for freedom.

Iraq continues to flaunt its hostility toward America and to support terror. The Iraqi regime has plotted to develop anthrax, and nerve gas, and nuclear weapons for over a decade. This is a regime that has already used poison gas to murder thousands of its own citizens—leaving the bodies of mothers huddled over their dead children. This is a regime that agreed to international inspections—then kicked out the inspec-

tors. This is a regime that has something to hide from the civilized world.

States like these, and their terrorist allies, constitute an axis of evil, arming to threaten the peace of the world. By seeking weapons of mass destruction, these regimes pose a grave and growing danger. They could provide these arms to terrorists, giving them the means to match their hatred. They could attack our allies or attempt to blackmail the United States. In any of these cases, the price of indifference would be catastrophic.

We will work closely with our coalition to deny terrorists and their state sponsors the materials, technology, and expertise to make and deliver weapons of mass destruction. We will develop and deploy effective missile defenses to protect America and our allies from sudden attack. (Applause.) And all nations should know: America will do what is necessary to ensure our nation's security.

We'll be deliberate, yet time is not on our side. I will not wait on events, while dangers gather. I will not stand by, as peril draws closer and closer. The United States of America will not permit the world's most dangerous regimes to threaten us with the world's most destructive weapons. (Applause.)

Our war on terror is well begun, but it is only begun. This campaign may not be finished on our watch—yet it must be and it will be waged on our watch.

We can't stop short. If we stop now—leaving terror camps intact and terror states unchecked—our sense of security would be false and temporary. History has called America and our allies to action, and it is both our responsibility and our privilege to fight freedom's fight. (Applause.)

Our first priority must always be the security of our nation, and that will be reflected in the budget I send to Congress. My budget supports three great goals for America: We will win this war; we'll protect our homeland; and we will revive our economy.

September the 11th brought out the best in America, and the best in this Congress. And I join the American people in applauding your unity and resolve. (Applause.) Now Americans deserve to have this same spirit directed toward addressing problems here at home. I'm a proud member of my party—yet as we act to win the war, protect our people, and create jobs in America, we must act, first and foremost, not as Republicans, not as Democrats, but as Americans. (Applause.)

It costs a lot to fight this war. We have spent more than a billion dollars a month—over \$30 million a day—and we must be prepared for future operations.

Afghanistan proved that expensive precision weapons defeat the enemy and spare innocent lives, and we need more of them. We need to replace aging aircraft and make our military more agile, to put our troops anywhere in the world quickly and safely. Our men and women in uniform deserve the best weapons, the best equipment, the best training—and they also deserve another pay raise. (Applause.)

My budget includes the largest increase in defense spending in two decades—because while the price of freedom and security is high, it is never too high. Whatever it costs to defend our country, we will pay. (Applause.)

The next priority of my budget is to do everything possible to protect our citizens and strengthen our nation against the ongoing threat of another attack. Time and distance from the events of September the 11th will not make us safer unless we act on its lessons. America is no longer protected by vast oceans. We are protected from attack only by vigorous action abroad, and increased vigilance at home.

My budget nearly doubles funding for a sustained strategy of homeland security, focused on four key areas: bioterrorism, emergency response, airport and border security, and improved intelligence. We will develop vaccines to fight anthrax and other deadly diseases. We'll increase funding to help states and communities train and equip our heroic police and firefighters. (Applause.) We will improve intelligence collection and sharing, expand patrols at our borders, strengthen the security of air travel, and use technology to track the arrivals and departures of visitors to the United States. (Applause.)

Homeland security will make America not only stronger, but, in many ways, better. Knowledge gained from bioterrorism research will improve public health. Stronger police and fire departments will mean safer neighborhoods. Stricter border enforcement will help combat illegal drugs. (Applause.) And as government works to better secure our homeland, America will continue to depend on the eyes and ears of alert citizens.

A few days before Christmas, an airline flight attendant spotted a passenger lighting a match. The crew and passengers quickly subdued the man, who had been trained by al Qaeda and was armed with explosives. The people on that plane were alert and, as a result, likely saved nearly 200 lives. And tonight we welcome and thank flight attendants Hermis Moutardier and Christina Jones. (Applause.)

Once we have funded our national security and our

homeland security, the final great priority of my budget is economic security for the American people. (Applause.) To achieve these great national objectives—to win the war, protect the homeland, and revitalize our economy—our budget will run a deficit that will be small and short-term, so long as Congress restrains spending and acts in a fiscally responsible manner. (Applause.) We have clear priorities and we must act at home with the same purpose and resolve we have shown overseas: We'll prevail in the war, and we will defeat this recession. (Applause.)

Americans who have lost their jobs need our help and I support extending unemployment benefits and direct assistance for health care coverage. (Applause.) Yet, American workers want more than unemployment checks—they want a steady paycheck. (Applause.) When America works, America prospers, so my economic security plan can be summed up in one word: jobs. (Applause.)

Good jobs begin with good schools, and here we've made a fine start. (Applause.) Republicans and Democrats worked together to achieve historic education reform so that no child is left behind. I was proud to work with members of both parties: Chairman John Boehner and Congressman George Miller. (Applause.) Senator Judd Gregg. (Applause.) And I was so proud of our work, I even had nice things to say about my friend, Ted Kennedy. (Laughter and applause.) I know the folks at the Crawford coffee shop couldn't believe I'd say such a thing—(laughter)—but our work on this bill shows what is possible if we set aside posturing and focus on results. (Applause.)

There is more to do. We need to prepare our children to read and succeed in school with improved Head Start and early childhood development programs. (Applause.) We must upgrade our teacher colleges and teacher training and launch a major recruiting drive with a great goal for America: a quality teacher in every classroom. (Applause.)

Good jobs also depend on reliable and affordable energy. This Congress must act to encourage conservation, promote technology, build infrastructure, and it must act to increase energy production at home so America is less dependent on foreign oil. (Applause.)

Good jobs depend on expanded trade. Selling into new markets creates new jobs, so I ask Congress to finally approve trade promotion authority. (Applause.) On these two key issues, trade and energy, the House of Representatives has acted to create jobs, and I urge the Senate to pass this legislation. (Applause.)

Good jobs depend on sound tax policy. (Applause.) Last year, some in this hall thought my tax relief plan was too small; some thought it was too big. (Applause.) But when the checks arrived in the mail, most Americans thought tax relief was just about right. (Applause.) Congress listened to the people and responded by reducing tax rates, doubling the child credit, and ending the death tax. For the sake of long-term growth and to help Americans plan for the future, let's make these tax cuts permanent. (Applause.)

The way out of this recession, the way to create jobs, is to grow the economy by encouraging investment in factories and equipment, and by speeding up tax relief so people have more money to spend. For the sake of American workers, let's pass a stimulus package. (Applause.)

Good jobs must be the aim of welfare reform. As we reauthorize these important reforms, we must always remember the goal is to reduce dependency on government and offer every American the dignity of a job. (Applause.)

Americans know economic security can vanish in an instant without health security. I ask Congress to join me this year to enact a patients' bill of rights—(applause)—to give uninsured workers credits to help buy health coverage—(applause)—to approve an historic increase in the spending for veterans' health—(applause)—and to give seniors a sound and modern Medicare system that includes coverage for prescription drugs. (Applause.)

A good job should lead to security in retirement. I ask Congress to enact new safeguards for 401K and pension plans. (Applause.) Employees who have worked hard and saved all their lives should not have to risk losing everything if their company fails. (Applause.) Through stricter accounting standards and tougher disclosure requirements, corporate America must be made more accountable to employees and shareholders and held to the highest standards of conduct. (Applause.)

Retirement security also depends upon keeping the commitments of Social Security, and we will. We must make Social Security financially stable and allow personal retirement accounts for younger workers who choose them. (Applause.)

Members, you and I will work together in the months ahead on other issues: productive farm policy—(applause)—a cleaner environment—(applause)—broader home ownership, especially among minorities—(applause)—and ways to encourage the good

work of charities and faith-based groups. (Applause.) I ask you to join me on these important domestic issues in the same spirit of cooperation we've applied to our war against terrorism. (Applause.)

During these last few months, I've been humbled and privileged to see the true character of this country in a time of testing. Our enemies believed America was weak and materialistic, that we would splinter in fear and selfishness. They were as wrong as they are evil. (Applause.)

The American people have responded magnificently, with courage and compassion, strength and resolve. As I have met the heroes, hugged the families, and looked into the tired faces of rescuers, I have stood in awe of the American people.

And I hope you will join me—I hope you will join me in expressing thanks to one American for the strength and calm and comfort she brings to our nation in crisis, our First Lady, Laura Bush. (Applause.)

None of us would ever wish the evil that was done on September the 11th. Yet after America was attacked, it was as if our entire country looked into a mirror and saw our better selves. We were reminded that we are citizens, with obligations to each other, to our country, and to history. We began to think less of the goods we can accumulate, and more about the good we can do.

For too long our culture has said, "If it feels good, do it." Now America is embracing a new ethic and a new creed: "Let's roll." (Applause.) In the sacrifice of soldiers, the fierce brotherhood of firefighters, and the bravery and generosity of ordinary citizens, we have glimpsed what a new culture of responsibility could look like. We want to be a nation that serves goals larger than self. We've been offered a unique opportunity, and we must not let this moment pass. (Applause.)

My call tonight is for every American to commit at least two years—4,000 hours over the rest of your lifetime—to the service of your neighbors and your nation. (Applause.) Many are already serving, and I thank you. If you aren't sure how to help, I've got a good place to start. To sustain and extend the best that has emerged in America, I invite you to join the new USA Freedom Corps. The Freedom Corps will focus on three areas of need: responding in case of crisis at home; rebuilding our communities; and extending American compassion throughout the world.

One purpose of the USA Freedom Corps will be homeland security. America needs retired doctors and nurses who can be mobilized in major emergencies;

volunteers to help police and fire departments; transportation and utility workers well-trained in spotting danger.

Our country also needs citizens working to rebuild our communities. We need mentors to love children, especially children whose parents are in prison. And we need more talented teachers in troubled schools. USA Freedom Corps will expand and improve the good efforts of AmeriCorps and Senior Corps to recruit more than 200,000 new volunteers.

And America needs citizens to extend the compassion of our country to every part of the world. So we will renew the promise of the Peace Corps, double its volunteers over the next five years—(applause)—and ask it to join a new effort to encourage development and education and opportunity in the Islamic world. (Applause.)

This time of adversity offers a unique moment of opportunity—a moment we must seize to change our culture. Through the gathering momentum of millions of acts of service and decency and kindness, I know we can overcome evil with greater good. (Applause.) And we have a great opportunity during this time of war to lead the world toward the values that will bring lasting peace.

All fathers and mothers, in all societies, want their children to be educated, and live free from poverty and violence. No people on Earth yearn to be oppressed, or aspire to servitude, or eagerly await the midnight knock of the secret police.

If anyone doubts this, let them look to Afghanistan, where the Islamic "street" greeted the fall of tyranny with song and celebration. Let the skeptics look to Islam's own rich history, with its centuries of learning, and tolerance and progress. America will lead by defending liberty and justice because they are right and true and unchanging for all people everywhere. (Applause.)

No nation owns these aspirations, and no nation is exempt from them. We have no intention of imposing our culture. But America will always stand firm for the non-negotiable demands of human dignity: the rule of law; limits on the power of the state; respect for women; private property; free speech; equal justice; and religious tolerance. (Applause.)

America will take the side of brave men and women who advocate these values around the world, including the Islamic world, because we have a greater objective than eliminating threats and containing resentment. We seek a just and peaceful world beyond the war on terror.

In this moment of opportunity, a common danger is erasing old rivalries. America is working with Russia and China and India, in ways we have never before, to achieve peace and prosperity. In every region, free markets and free trade and free societies are proving their power to lift lives. Together with friends and allies from Europe to Asia, and Africa to Latin America, we will demonstrate that the forces of terror cannot stop the momentum of freedom. (Applause.)

The last time I spoke here, I expressed the hope that life would return to normal. In some ways, it has. In others, it never will. Those of us who have lived through these challenging times have been changed by them. We've come to know truths that we will never question: evil is real, and it must be opposed. (Applause.) Beyond all differences of race or creed, we are one country, mourning together and facing danger together. Deep in the American character, there is honor, and it is stronger

than cynicism. And many have discovered again that even in tragedy—especially in tragedy—God is near. (Applause.)

In a single instant, we realized that this will be a decisive decade in the history of liberty, that we've been called to a unique role in human events. Rarely has the world faced a choice more clear or consequential.

Our enemies send other people's children on missions of suicide and murder. They embrace tyranny and death as a cause and a creed. We stand for a different choice, made long ago, on the day of our founding. We affirm it again today. We choose freedom and the dignity of every life. (Applause.)

Steadfast in our purpose, we now press on. We have known freedom's price. We have shown freedom's power. And in this great conflict, my fellow Americans, we will see freedom's victory.

Thank you all. May God bless. (Applause.)

Appendix 4

Primary Sources

Sacred Texts

The excerpts below from the sacred texts of major religions illustrate the role of key leaders and leadership concepts within each religion.

Genesis 22

This is a founding narrative of Judaism, Christian, and Islam—the Abrahamic religions. It may be used as a narrative to explain the virtue of blind obedience to the divine will or the nature of Abraham’s God, who unlike the others does not demand human sacrifice.

- ¹And it came to pass after these things, that God did tempt Abraham, and said unto him, Abraham: and he said, Behold, here I am.
- ²And he said, Take now thy son, thine only son Isaac, whom thou lovest, and get thee into the land of Moriah; and offer him there for a burnt offering upon one of the mountains which I will tell thee of.
- ³And Abraham rose up early in the morning, and saddled his ass, and took two of his young men with him, and Isaac his son, and clave the wood for the burnt offering, and rose up, and went unto the place of which God had told him.
- ⁴Then on the third day Abraham lifted up his eyes, and saw the place afar off.
- ⁵And Abraham said unto his young men, Abide ye here with the ass; and I and the lad will go yonder and worship, and come again to you.
- ⁶And Abraham took the wood of the burnt offering, and laid it upon Isaac his son; and he took the fire in his hand, and a knife; and they went both of them together.
- ⁷And Isaac spake unto Abraham his father, and said, My father: and he said, Here am I, my son. And he said,

Behold the fire and the wood: but where is the lamb for a burnt offering?

- ⁸And Abraham said, My son, God will provide himself a lamb for a burnt offering: so they went both of them together.
- ⁹And they came to the place which God had told him of; and Abraham built an altar there, and laid the wood in order, and bound Isaac his son, and laid him on the altar upon the wood.
- ¹⁰And Abraham stretched forth his hand, and took the knife to slay his son.
- ¹¹And the angel of the LORD called unto him out of heaven, and said, Abraham, Abraham: and he said, Here am I.
- ¹²And he said, Lay not thine hand upon the lad, neither do thou any thing unto him: for now I know that thou fearest God, seeing thou hast not withheld thy son, thine only son from me.
- ¹³And Abraham lifted up his eyes, and looked, and behold behind him a ram caught in a thicket by his horns: and Abraham went and took the ram, and offered him up for a burnt offering in the stead of his son.
- ¹⁴And Abraham called the name of that place Jehovahjireh: as it is said to this day, In the mount of the LORD it shall be seen.
- ¹⁵And the angel of the LORD called unto Abraham out of heaven the second time,
- ¹⁶And said, By myself have I sworn, saith the LORD, for because thou hast done this thing, and hast not withheld thy son, thine only son:
- ¹⁷That in blessing I will bless thee, and in multiplying I will multiply thy seed as the stars of the heaven, and as the sand which is upon the sea shore; and thy seed shall possess the gate of his enemies;

¹⁸And in thy seed shall all the nations of the earth be blessed; because thou hast obeyed my voice.

Exodus 3

The verses below are significant as evidence of the call of Moses, and as an illustration of the nature of charismatic leadership and the promise of deliverance.

¹Now Moses kept the flock of Jethro his father in law, the priest of Midian: and he led the flock to the backside of the desert, and came to the mountain of God, even to Horeb.

²And the angel of the LORD appeared unto him in a flame of fire out of the midst of a bush: and he looked, and, behold, the bush burned with fire, and the bush was not consumed.

³And Moses said, I will now turn aside, and see this great sight, why the bush is not burnt.

⁴And when the LORD saw that he turned aside to see, God called unto him out of the midst of the bush, and said, Moses, Moses. And he said, Here am I.

⁵And he said, Draw not nigh hither: put off thy shoes from off thy feet, for the place whereon thou standest is holy ground.

⁶Moreover he said, I am the God of thy father, the God of Abraham, the God of Isaac, and the God of Jacob. And Moses hid his face; for he was afraid to look upon God.

⁷And the LORD said, I have surely seen the affliction of my people which are in Egypt, and have heard their cry by reason of their taskmasters; for I know their sorrows;

⁸And I am come down to deliver them out of the hand of the Egyptians, and to bring them up out of that land unto a good land and a large, unto a land flowing with milk and honey; unto the place of the Canaanites, and the Hittites, and the Amorites, and the Perizzites, and the Hivites, and the Jebusites.

The Book of Proverbs

The Book of Proverbs shows a parallel from the Abrahamic traditions to the Eastern traditions.

Proverbs 1

¹The proverbs of Solomon the son of David, king of Israel;

²To know wisdom and instruction; to perceive the words of understanding;

³To receive the instruction of wisdom, justice, and judgment, and equity;

⁴To give subtilty to the simple, to the young man knowledge and discretion.

⁵A wise man will hear, and will increase learning; and a man of understanding shall attain unto wise counsels:

⁶To understand a proverb, and the interpretation; the words of the wise, and their dark sayings.

⁷The fear of the LORD is the beginning of knowledge: but fools despise wisdom and instruction.

Proverbs 4

¹⁰Hear, O my son, and receive my sayings; and the years of thy life shall be many.

¹¹I have taught thee in the way of wisdom; I have led thee in right paths.

¹²When thou goest, thy steps shall not be straitened; and when thou runnest, thou shalt not stumble.

¹³Take fast hold of instruction; let her not go: keep her; for she is thy life.

¹⁴Enter not into the path of the wicked, and go not in the way of evil men.

¹⁵Avoid it, pass not by it, turn from it, and pass away.

¹⁶For they sleep not, except they have done mischief; and their sleep is taken away, unless they cause some to fall.

¹⁷For they eat the bread of wickedness, and drink the wine of violence.

¹⁸But the path of the just is as the shining light, that shineth more and more unto the perfect day.

¹⁹The way of the wicked is as darkness: they know not at what they stumble.

²⁰My son, attend to my words; incline thine ear unto my sayings.

²¹Let them not depart from thine eyes; keep them in the midst of thine heart.

²²For they are life unto those that find them, and health to all their flesh.

²³Keep thy heart with all diligence; for out of it are the issues of life.

²⁴Put away from thee a froward mouth, and perverse lips put far from thee.

²⁵Let thine eyes look right on, and let thine eyelids look straight before thee.

²⁶Ponder the path of thy feet, and let all thy ways be established.

²⁷Turn not to the right hand nor to the left: remove thy foot from evil.

Proverbs 12

¹Whoso loveth instruction loveth knowledge: but he that hateth reproof is brutish.

- ²A good man obtaineth favour of the LORD: but a man of wicked devices will he condemn.
- ³A man shall not be established by wickedness: but the root of the righteous shall not be moved.
- ⁴A virtuous woman is a crown to her husband: but she that maketh ashamed is as rottenness in his bones.
- ⁵The thoughts of the righteous are right: but the counsels of the wicked are deceit.
- ⁶The words of the wicked are to lie in wait for blood: but the mouth of the upright shall deliver them.
- ⁷The wicked are overthrown, and are not: but the house of the righteous shall stand.
- ⁸A man shall be commended according to his wisdom: but he that is of a perverse heart shall be despised.
- ⁹He that is despised, and hath a servant, is better than he that honoureth himself, and lacketh bread.
- ¹⁰A righteous man regardeth the life of his beast: but the tender mercies of the wicked are cruel.
- ¹¹He that tilleth his land shall be satisfied with bread: but he that followeth vain persons is void of understanding.
- ¹²The wicked desireth the net of evil men: but the root of the righteous yieldeth fruit.
- ¹³The wicked is snared by the transgression of his lips: but the just shall come out of trouble.
- ¹⁴A man shall be satisfied with good by the fruit of his mouth: and the recompence of a man's hands shall be rendered unto him.
- ¹⁵The way of a fool is right in his own eyes: but he that hearkeneth unto counsel is wise.
- ¹⁶A fool's wrath is presently known: but a prudent man covereth shame.
- ¹⁷He that speaketh truth sheweth forth righteousness: but a false witness deceit.
- ¹⁸There is that speaketh like the piercings of a sword: but the tongue of the wise is health.
- ¹⁹The lip of truth shall be established for ever: but a lying tongue is but for a moment.
- ²⁰Deceit is in the heart of them that imagine evil: but to the counsellors of peace is joy.
- ²¹There shall no evil happen to the just: but the wicked shall be filled with mischief.
- ²²Lying lips are abomination to the LORD: but they that deal truly are his delight.
- ²³A prudent man concealeth knowledge: but the heart of fools proclaimeth foolishness.
- ²⁴The hand of the diligent shall bear rule: but the slothful shall be under tribute.
- ²⁵Heaviness in the heart of man maketh it stoop: but a good word maketh it glad.
- ²⁶The righteous is more excellent than his neighbour:

but the way of the wicked seduceth them.

²⁷The slothful man roasteth not that which he took in hunting: but the substance of a diligent man is precious.

²⁸In the way of righteousness is life: and in the pathway thereof there is no death.

Daniel 5

Chapter 5 of the Book of Daniel offers an exemplar of speaking truth to power:

¹Belshazzar the king made a great feast to a thousand of his lords, and drank wine before the thousand.

²Belshazzar, while he tasted the wine, commanded to bring the golden and silver vessels which his father Nebuchadnezzar had taken out of the temple which was in Jerusalem; that the king, and his princes, his wives, and his concubines, might drink therein.

³Then they brought the golden vessels that were taken out of the temple of the house of God which was at Jerusalem; and the king, and his princes, his wives, and his concubines, drank in them.

⁴They drank wine, and praised the gods of gold, and of silver, of brass, of iron, of wood, and of stone.

⁵In the same hour came forth fingers of a man's hand, and wrote over against the candlestick upon the plaister of the wall of the king's palace: and the king saw the part of the hand that wrote.

⁶Then the king's countenance was changed, and his thoughts troubled him, so that the joints of his loins were loosed, and his knees smote one against another.

⁷The king cried aloud to bring in the astrologers, the Chaldeans, and the soothsayers. And the king spake, and said to the wise men of Babylon, Whosoever shall read this writing, and shew me the interpretation thereof, shall be clothed with scarlet, and have a chain of gold about his neck, and shall be the third ruler in the kingdom.

⁸Then came in all the king's wise men: but they could not read the writing, nor make known to the king the interpretation thereof.

⁹Then was king Belshazzar greatly troubled, and his countenance was changed in him, and his lords were astonished.

¹⁰Now the queen by reason of the words of the king and his lords came into the banquet house: and the queen spake and said, O king, live for ever: let not thy thoughts trouble thee, nor let thy countenance be changed:

- ¹¹There is a man in thy kingdom, in whom is the spirit of the holy gods; and in the days of thy father light and understanding and wisdom, like the wisdom of the gods, was found in him; whom the king Nebuchadnezzar thy father, the king, I say, thy father, made master of the magicians, astrologers, Chaldeans, and soothsayers;
- ¹²Forasmuch as an excellent spirit, and knowledge, and understanding, interpreting of dreams, and shewing of hard sentences, and dissolving of doubts, were found in the same Daniel, whom the king named Belshazzar: now let Daniel be called, and he will shew the interpretation.
- ¹³Then was Daniel brought in before the king. And the king spake and said unto Daniel, Art thou that Daniel, which art of the children of the captivity of Judah, whom the king my father brought out of Jewry?
- ¹⁴I have even heard of thee, that the spirit of the gods is in thee, and that light and understanding and excellent wisdom is found in thee.
- ¹⁵And now the wise men, the astrologers, have been brought in before me, that they should read this writing, and make known unto me the interpretation thereof: but they could not shew the interpretation of the thing:
- ¹⁶And I have heard of thee, that thou canst make interpretations, and dissolve doubts: now if thou canst read the writing, and make known to me the interpretation thereof, thou shalt be clothed with scarlet, and have a chain of gold about thy neck, and shalt be the third ruler in the kingdom.
- ¹⁷Then Daniel answered and said before the king, Let thy gifts be to thyself, and give thy rewards to another; yet I will read the writing unto the king, and make known to him the interpretation.
- ¹⁸O thou king, the most high God gave Nebuchadnezzar thy father a kingdom, and majesty, and glory, and honour:
- ¹⁹And for the majesty that he gave him, all people, nations, and languages, trembled and feared before him: whom he would he slew; and whom he would he kept alive; and whom he would he set up; and whom he would he put down.
- ²⁰But when his heart was lifted up, and his mind hardened in pride, he was deposed from his kingly throne, and they took his glory from him:
- ²¹And he was driven from the sons of men; and his heart was made like the beasts, and his dwelling was with the wild asses: they fed him with grass like oxen, and

his body was wet with the dew of heaven; till he knew that the most high God ruled in the kingdom of men, and that he appointeth over it whomsoever he will.

- ²²And thou his son, O Belshazzar, hast not humbled thine heart, though thou knewest all this;
- ²³But hast lifted up thyself against the Lord of heaven; and they have brought the vessels of his house before thee, and thou, and thy lords, thy wives, and thy concubines, have drunk wine in them; and thou hast praised the gods of silver, and gold, of brass, iron, wood, and stone, which see not, nor hear, nor know: and the God in whose hand thy breath is, and whose are all thy ways, hast thou not glorified:
- ²⁴Then was the part of the hand sent from him; and this writing was written.
- ²⁵And this is the writing that was written, MENE, MENE, TEKEL, UPHARSIN.
- ²⁶This is the interpretation of the thing: MENE; God hath numbered thy kingdom, and finished it.
- ²⁷TEKEL; Thou art weighed in the balances, and art found wanting.
- ²⁸PERES; Thy kingdom is divided, and given to the Medes and Persians.
- ²⁹Then commanded Belshazzar, and they clothed Daniel with scarlet, and put a chain of gold about his neck, and made a proclamation concerning him, that he should be the third ruler in the kingdom.
- ³⁰In that night was Belshazzar the king of the Chaldeans slain.
- ³¹And Darius the Median took the kingdom, being about threescore and two years old.

Matthew 5

The Sermon on the Mount (Matthew 5:1–7:27), excerpted below, is a collection of sayings by Jesus. A seminal teaching in Christianity, many interpreters see it as a call to leadership as service (or “servant leadership”) toward God’s kingdom, or God’s reign.

- ¹And seeing the multitudes, he went up into a mountain: and when he was set, his disciples came unto him:
- ²And he opened his mouth, and taught them, saying,
- ³Blessed are the poor in spirit: for theirs is the kingdom of heaven.
- ⁴Blessed are they that mourn: for they shall be comforted.
- ⁵Blessed are the meek: for they shall inherit the earth.
- ⁶Blessed are they which do hunger and thirst after righteousness: for they shall be filled.

- ⁷Blessed are the merciful: for they shall obtain mercy.
- ⁸Blessed are the pure in heart: for they shall see God.
- ⁹Blessed are the peacemakers: for they shall be called the children of God.
- ¹⁰Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven.
- ¹¹Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake.
- ¹²Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you.
- ¹³Ye are the salt of the earth: but if the salt have lost his savour, wherewith shall it be salted? it is thenceforth good for nothing, but to be cast out, and to be trodden under foot of men.
- ¹⁴Ye are the light of the world. A city that is set on an hill cannot be hid.
- ¹⁵Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house.
- ¹⁶Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven.
- [. . .]
- ³⁸Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth:
- ³⁹But I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also.
- ⁴⁰And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also.
- ⁴¹And whosoever shall compel thee to go a mile, go with him twain.
- ⁴²Give to him that asketh thee, and from him that would borrow of thee turn not thou away.
- ⁴³Ye have heard that it hath been said, Thou shalt love thy neighbour, and hate thine enemy.
- ⁴⁴But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you;
- ⁴⁵That ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust.
- ⁴⁶For if ye love them which love you, what reward have ye? do not even the publicans the same?
- ⁴⁷And if ye salute your brethren only, what do ye more than others? do not even the publicans so?

⁴⁸Be ye therefore perfect, even as your Father which is in heaven is perfect.

The Bhagavad Gita

The Bhagavad Gita is a primary sacred text in Hinduism. Its focus is on the development of human consciousness—considered necessary preparation for leadership.

Arjuna said: “Krishna, what are the symptoms of one whose consciousness is thus merged in beyondness? How does he speak, and what’s his language? How does he sit, and how does he walk? (2:54)

The Blessed Lord said: “Partha, when a man gives up all varieties of sense desire which arise from mental concoction, and when his mind finds satisfaction in the self alone, then he is said to be in pure supernatural consciousness. (2:55)

One who is not disturbed in spite of the threefold miseries, who is not elated when there’s happiness, and who is free from attachment, fear and anger, is called a sage of steady mind. (2:56)

He who is without attachment, who does not rejoice when he obtains good, nor lament when he obtains evil, is firmly fixed in perfect knowledge (2:57)

One who is able to withdraw his senses from sense objects, as the tortoise draws its limbs within the shell, is to be understood as truly situated in knowledge. (2:58)

The embodied soul may be restricted from sense enjoyment, though the taste for sense objects remains. But, ceasing such engagements by experiencing a higher taste, he is fixed in consciousness. (2:59)

The senses are so strong and impetuous, Arjuna, that they forcibly carry away the mind even of a man of discrimination who is endeavoring to control them. (2:60)

One who restrains his senses and fixes his consciousness on me, is known as a man of steady intelligence. (2:61)

While contemplating the objects of the senses, a person develops attachment for them, and from such attachment lust develops, and from lust anger arises. (2:62)

From anger, delusion arises, and from delusion bewilderment of memory. When the memory is bewildered, intelligence is lost, and when intelligence is lost, one falls down again into the material pool. (2:63)

One who can control his senses by practicing the regulative principles of freedom can obtain the complete

mercy of the lord and thus become free from all attachment and aversion. (2:64)

For one who is so situated in the Divine consciousness, the threefold miseries of material existence exist no longer; in such a happy state, one's intelligence soon becomes steady. (2:65)

One who is not in supernatural consciousness can have neither a controlled mind nor steady intelligence, without which there's no possibility of peace. And how can there be any happiness without peace? (2:66)

As a boat on the water is swept away by a strong wind, even one of the senses on which the mind focuses can carry away a man's intelligence. (2:67)

So, mighty-armed, one whose senses are restrained from their objects is certainly of steady intelligence. (2:68)

What's night for all beings is the time of awakening for the self-controlled; and the time of awakening for all beings is night for the introspective sage. (2:69)

A person who is not disturbed by the incessant flow of desires—that enter like rivers into the ocean which is ever being filled but is always still—can alone achieve peace, and not the man who strives to satisfy such desires. (2:70)

A person who has given up all desires for sense gratification, who lives free from desires, who has given up all sense of proprietorship and is devoid of false ego - he alone can attain real peace. (2:71)

That's the way of the giant and godly life, after attaining which a man is not bewildered. Being so situated even at the hour of death, one can enter into the realm of God. (2:72)

The Analects

Composed of short statements primarily attributed to Confucius, the Analects is a highly influential text in Chinese philosophy. Through the stories in the Analects, virtues are taught in hopes that a person will become a moral example for others.

Part 15

The Duke Ling of Wei asked Confucius about tactics. Confucius replied, "I have heard all about sacrificial vessels, but I have not learned military matters." On this, he took his departure the next day.

When he was in Chan, their provisions were exhausted, and his followers became so in that they were unable to rise.

Tsze-lu, with evident dissatisfaction, said, "Has the

superior man likewise to endure in this way?" The Master said, "The superior man may indeed have to endure want, but the mean man, when he is in want, gives way to unbridled license."

The Master said, "Ts'ze, you think, I suppose, that I am one who learns many things and keeps them in memory?"

Tsze-kung replied, "Yes, -but perhaps it is not so?"

"No," was the answer; "I seek a unity all pervading."

The Master said, "Yu I those who know virtue are few."

The Master said, "May not Shun be instanced as having governed efficiently without exertion? What did he do? He did nothing but gravely and reverently occupy his royal seat."

Tsze-chang asked how a man should conduct himself, so as to be everywhere appreciated.

The Master said, "Let his words be sincere and truthful and his actions honorable and careful; -such conduct may be practiced among the rude tribes of the South or the North. If his words be not sincere and truthful and his actions not honorable and careful will he, with such conduct, be appreciated, even in his neighborhood?"

"When he is standing, let him see those two things, as it were, fronting him. When he is in a carriage, let him see them attached to the yoke. Then may he subsequently carry them into practice."

Tsze-chang wrote these counsels on the end of his sash.

The Master said, "Truly straightforward was the historian Yu. When good government prevailed in his state, he was like an arrow. When bad government prevailed, he was like an arrow. A superior man indeed is Chu Po-yu! When good government prevails in his state, he is to be found in office. When bad government prevails, he can roll his principles up, and keep them in his breast."

The Master said, "When a man may be spoken with, not to speak to him is to err in reference to the man. When a man may not be spoken with, to speak to him is to err in reference to our words. The wise err neither in regard to their man nor to their words."

The Master said, "The determined scholar and the man of virtue will not seek to live at the expense of injuring their virtue. They will even sacrifice their lives to preserve their virtue complete."

Tsze-kung asked about the practice of virtue. The Master said, "The mechanic, who wishes to do his work well, must first sharpen his tools. When you are living in any state, take service with the most worthy among its great officers, and make friends of the most virtuous among its scholars."

Yen Yuan asked how the government of a country should be administered.

The Master said, "Follow the seasons of Hsia.

"Ride in the state carriage of Yin.

"Wear the ceremonial cap of Chau.

"Let the music be the Shao with its pantomimes. Banish the songs of Chang, and keep far from specious talkers. The songs of Chang are licentious; specious talkers are dangerous."

The Master said, "If a man take no thought about what is distant, he will find sorrow near at hand."

The Master said, "It is all over! I have not seen one who loves virtue as he loves beauty."

The Master said, "Was not Tsang Wan like one who had stolen his situation? He knew the virtue and the talents of Hui of Liu-hsia, and yet did not procure that he should stand with him in court."

The Master said, "He who requires much from himself and little from others, will keep himself from being the object of resentment."

The Master said, "When a man is not in the habit of saying 'What shall I think of this? What shall I think of this?' I can indeed do nothing with him!"

The Master said, "When a number of people are together, for a whole day, without their conversation turning on righteousness, and when they are fond of carrying out the suggestions of a small shrewdness;-theirs is indeed a hard case."

The Master said, "The superior man in everything considers righteousness to be essential. He performs it according to the rules of propriety. He brings it forth in humility. He completes it with sincerity. This is indeed a superior man."

The Master said, "The superior man is distressed by

his want of ability. He is not distressed by men's not knowing him."

The Master said, "The superior man dislikes the thought of his name not being mentioned after his death."

The Master said, "What the superior man seeks, is in himself. What the mean man seeks, is in others."

The Master said, "The superior man is dignified, but does not wrangle. He is sociable, but not a partisan."

The Master said, "The superior man does not promote a man simply on account of his words, nor does he put aside good words because of the man."

Tsze-kung asked, saying, "Is there one word which may serve as a rule of practice for all one's life?" The Master said, "Is not Reciprocity such a word? What you do not want done to yourself, do not do to others."

The Master said, "In my dealings with men, whose evil do I blame, whose goodness do I praise, beyond what is proper? If I do sometimes exceed in praise, there must be ground for it in my examination of the individual.

"This people supplied the ground why the three dynasties pursued the path of straightforwardness."

The Master said, "Even in my early days, a historiographer would leave a blank in his text, and he who had a horse would lend him to another to ride. Now, alas! there are no such things."

The Master said, "Specious words confound virtue. Want of forbearance in small matters confounds great plans."

The Master said, "When the multitude hate a man, it is necessary to examine into the case. When the multitude like a man, it is necessary to examine into the case."

The Master said, "A man can enlarge the principles which he follows; those principles do not enlarge the man."

The Master said, "To have faults and not to reform them,-this, indeed, should be pronounced having faults."

The Master said, "I have been the whole day without

eating, and the whole night without sleeping:-occupied with thinking. It was of no use. better plan is to learn.”

The Master said, “The object of the superior man is truth. Food is not his object. There is plowing;-even in that there is sometimes want. So with learning;-emolument may be found in it. The superior man is anxious lest he should not get truth; he is not anxious lest poverty should come upon him.”

The Master said, “When a man’s knowledge is sufficient to attain, and his virtue is not sufficient to enable him to hold, whatever he may have gained, he will lose again.

“When his knowledge is sufficient to attain, and he has virtue enough to hold fast, if he cannot govern with dignity, the people will not respect him.

“When his knowledge is sufficient to attain, and he has virtue enough to hold fast; when he governs also with dignity, yet if he try to move the people contrary to the rules of propriety: full excellence is not reached.”

The Master said, “The superior man cannot be known in little matters; but he may be intrusted with great concerns. The small man may not be intrusted with great concerns, but he may be known in little matters.”

The Master said, “Virtue is more to man than either water or fire. I have seen men die from treading on water and fire, but I have never seen a man die from treading the course of virtue.”

The Master said, “Let every man consider virtue as what devolves on himself. He may not yield the performance of it even to his teacher.”

The Master said, “The superior man is correctly firm, and not firm merely.”

The Master said, “A minister, in serving his prince, reverently discharges his duties, and makes his emolument a secondary consideration.”

The Master said, “In teaching there should be no distinction of classes.”

The Master said, “Those whose courses are different cannot lay plans for one another.”

The Master said, “In language it is simply required that it convey the meaning.”

The music master, Mien, having called upon him, when they came to the steps, the Master said, “Here are the steps.” When they came to the mat for the guest to sit upon, he said, “Here is the mat.” When all were seated, the Master informed him, saying, “So and so is here; so and so is here.”

The music master, Mien, having gone out, Tsz-chang asked, saying. “Is it the rule to tell those things to the music master?”

The Master said, “Yes. This is certainly the rule for those who lead the blind.”

Book 2 of the Qur’an

The excerpts below come from the Book 2 of the Qur’an and deals with submission of all just men, regardless of rank, to Allah and the roots of Islam in the faith of Abraham.

[2.136] Say: We believe in Allah and (in) that which had been revealed to us, and (in) that which was revealed to Ibrahim and Ismail and Ishaq and Yaqoub and the tribes, and (in) that which was given to Musa and Isa, and (in) that which was given to the prophets from their Lord, we do not make any distinction between any of them, and to Him do we submit.

[2.137] If then they believe as you believe in Him, they are indeed on the right course, and if they turn back, then they are only in great opposition, so Allah will suffice you against them, and He is the Hearing, the Knowing.

[2.138] (Receive) the baptism of Allah, and who is better than Allah in baptising? and Him do we serve.

[2.139] Say: Do you dispute with us about Allah, and He is our Lord and your Lord, and we shall have our deeds and you shall have your deeds, and we are sincere to Him.

[2.140] Nay! do you say that Ibrahim and Ismail and Yaqoub and the tribes were Jews or Christians? Say: Are you better knowing or Allah? And who is more unjust than he who conceals a testimony that he has from Allah? And Allah is not at all heedless of what you do.

[2.141] This is a people that have passed away; they shall have what they earned and you shall have what you earn, and you shall not be called upon to answer for what they did.

[2.142] The fools among the people will say: What has

turned them from their qiblah which they had? Say: The East and the West belong only to Allah; He guides whom He likes to the right path.

[2.143] And thus We have made you a medium (just) nation that you may be the bearers of witness to the people and (that) the Apostle may be a bearer of witness to you; and We did not make that which you would have to be the qiblah but that We might distinguish him who follows the Apostle from him who turns back upon his heels, and this was surely hard except for those whom Allah has guided aright; and

Allah was not going to make your faith to be fruitless; most surely Allah is Affectionate, Merciful to the people.

[2.144] Indeed We see the turning of your face to heaven, so We shall surely turn you to a qiblah which you shall like; turn then your face towards the Sacred Mosque, and wherever you are, turn your face towards it, and those who have been given the Book most surely know that it is the truth from their Lord; and Allah is not at all heedless of what they do.
