BETTER FARMING SERIES

Thirty titles have been published in this series, designed as handbooks for agricultural education and training. They may be purchased as a set or individually..

FIRST YEAR

1. The plant: the living plant; the root
2. The plant: the stem; the buds; the leaves
3. The plant: the flower
4. The soil: how the soil is made up
5. The soil: how to conserve the soil
6. The soil: how to improve the soil
7. Crop farming
8. Animal husbandry: feeding and care of animals
9. Animal husbandry: animal diseases; how animals reproduce

SECOND YEAR

10. The farm business survey
11. Cattle breeding
12. Sheep and goat breeding
13. Keeping chickens
14. Farming with animal power
15. Cereals
16. Roots and tubers
17. Groundnuts
18. Bananas
19. Market gardening
20. Upland rice
21. Wet paddy or swamp rice
22. Cocoa
23. Coffee
24. The oil palm
25. The rubber tree
26. The modern farm business
27. Freshwater fish farming: how to begin
28. Water: where water comes from
29. Better freshwater fish farming: the pond
30. Better freshwater fish farming: the fish

Better freshwater fish farming

Exclusively Distributed by:

PREFACE

FAO's Better Farming Series is essentially based on the **Cours d'apprentissage agricole** prepared in the Ivory Coast by the **Institut africain de développement économique et social** for use by extension workers in contact with illiterate or semi-literate farmers. The approach is deliberately a general one, the intention being to constitute basic prototype outlines, to be supplemented in each area according to local conditions of agriculture.

Many of the booklets deal with specific crops, while others, such as this one, are intended to give the farmer information concerning the general agricultural context, and thus to allow him to gain some understanding of *why* he does what he does, so that he will be able to do it better.

Adaptations of the series, or of individual volumes in it, have been published, among others, in Amharic, Arabic, Bengali, Creole, Hindi, Igala, Indonesian, Kiswahili, Malagasy, SiSwati and Turkish, an impressive list which is some indication of the success and also of the value of the series. This volume has been prepared by the Inland Water Resources and Aquaculture Service, Fishery Resources and Environment Division of the Food and Agriculture Organization of the United Nations.

Requests for permission to issue this manual in other languages and to adapt it according to local climatic and ecological conditions are welcomed. They should be addressed to the Director, Publications Division, Food and Agriculture Organization of the United Nations, Via delle Terme di Caracalla, 00100 Rome, Italy.

OUTLINE OF COURSE

● Introduction	3
Filling your pond with water	6
Fertilizing the water in your pond	8
Putting fertilizer into the crib	10
When is your pond ready?	11
Taking care of your pond	12
● The fish	14
Growing your own baby fish	15
Feeding the fish in your nursery pond	20
Moving your baby fish	23
Carrying your baby fish	25
Putting baby fish into your big pond	28
Feeding your big fish	28
● Taking care of your fish	33
● Harvesting your fish	36
Harvest without draining the water	36
Harvest by draining all of the water	38
Harvest by draining part of the water	39
What to do with your big fish	40
What to do with your baby fish	41
● Now you must begin again	46

INTRODUCTION

1. You have built the new bigger pond described in Booklet No. 29, **Better freshwater fish farming: the pond.**

2. Before you let the water into your new pond, there are a few things that you must do.
3. Make sure that the screens on the inlet, outlet and overflow are in place and tight.

4. Make sure that the outlet is tightly closed.
To do this,
wrap a wood plug with old cloth,
put it in the outlet pipe
on the outside of the pond
and tap it lightly with a hammer
so that it will stay in the pipe
when the pond fills with water.

5. If you have built a better outlet
with a T or an L piece
(see Booklet No. 29, Items 97 to 101),
turn it to the upright position.

6. Put rocks on the bottom of your pond under the inlet where the water will fall when it begins to come into the pond.

7. This will keep the bottom from washing away. It will keep the water from getting too muddy. It will make the water splash when it first comes into the pond and bring air for the fish to breathe.
8. Now you are ready to fill your pond.

Filling your pond with water

9. Dig a small ditch from the water source to the inlet to bring the water to your new pond.

10. Let the water run into the pond until it reaches the level of the overflow pipe on the inside of the pond.

11. If your inlet pipe is about 10 centimetres in diameter, you will need about half a day to fill your pond.

12. When the water reaches the level of the overflow pipe it will be about 60 centimetres deep at the shallow upper part of the pond and about 90 centimetres deep at the deepest part.

13. Now you are ready to fertilize the water in your pond.
14. Build a crib from bamboo or wood to hold the fertilizer as you did with your first small pond. Build it in one corner in the shallow part of the pond. The drawing below will show you how.

Fertilizing the water in your pond

15. You can fertilize the water in your new pond with
 - compost made with animal manure
 - compost made with plant material
 - animal manure
 - plant material.

16. You can fertilize your new pond with animal or plant compost in the same way as you did with your old small pond.

17. Items 56 to 66, in Booklet No. 27, tell you how to make animal compost. If you do not have animal manure, you can fertilize your pond with compost made with plant material.

18. To make compost with plant material make a compost pile using layers of grass, chopped leaves or other plant material mixed with a little topsoil and damp it with water to make it rot faster.

Moving your baby fish

71. After about three months, there will be many baby fish of different sizes in your pond. Then you can begin to take baby fish out of your nursery pond to put into your big pond.

72. Use baby fish which are 5 centimetres or longer to put into your big pond. If there are many baby fish which are 5 centimetres or longer, choose the biggest ones to put into your big pond.

73. The easiest way to take out your baby fish is to use a seine net. If you use a seine net with a mesh size of about 1 centimetre and you will catch the fish of 5 centimetres or longer. **But be sure to put the fully grown fish back in your nursery pond.**

74. From now on,
you can take baby fish
out of your nursery pond each month
for your own use or to sell.
75. Be careful that your nursery pond
does not become too full of fish.
If there are too many fish,
they will not grow well
and your baby fish
will not be strong and healthy.
76. To keep your nursery pond
from becoming too full of fish,
drain all of the water
out of the pond each year
and collect all of the fish.

77. You can eat the big fish
that were in the nursery pond.
Item 144 in this booklet
will tell you what to do
with the baby fish.
78. Wait until the bottom
of the nursery pond is dry,
then clean and repair
the bottom and the banks.
Items 145 to 148 in this booklet
will tell you how.

79. Now fill the nursery pond with water and fertilize it as you did before. When the water is green, put in the right number of fully grown female fish and male fish. Items 56 to 58 in this booklet will tell you how many fully grown fish to use.

80. In about three months, you will be able to take more baby fish out of your nursery pond.

Carrying your baby fish

81. You must be very careful when you carry your baby fish from one place to another. Baby fish can be hurt easily.

82. When you take the baby fish out of your nursery pond using a seine net, do not carry them in the seine net. Carry them in a container such as

- a clay pot with a cover
- a bucket with a lid
- a plastic bag.

83. When you carry baby fish, you must be careful to

- use only clean water
- keep the fish out of the sun or cover the container with a wet cloth to keep it cool.

84. If you carry your baby fish in plastic bags, carry the bags in a box so that they will not break. Cover the box and the plastic bags with a wet cloth to keep them cool.

85. If you see that the baby fish are gasping for air, put some air into the water from time to time by

- splashing the water gently with your hand
- forcing air into the water with a bicycle tire pump.

Putting baby fish into your big pond

86. When your new big pond is full of water, you have fertilized it and the water has become green enough, you are ready to put in the baby fish.
87. You already know that if you use *Tilapia nilotica* in a pond 15 by 15 metres, you will need 450 baby fish which are 5 centimetres or longer.
88. Put the baby fish gently into your big pond as you did with your first small pond. Items 70 to 76, in Booklet No. 27, will tell you how.

Feeding your big fish

89. You already have learned that the big fish in your pond will get much of their food from small plants and animals which grow in the green water.

90. To keep the water green,
do not forget
to put a bucket of fertilizer
in the crib
in your pond each week.
If you are using
plant compost or plant material,
keep the crib filled to the water line.

91. To make your big fish grow more quickly,
you must also feed them
other kinds of food.
You can feed them

- termites
- tender leaves and waste
of banana and cassava
- grain mill sweepings
- rice bran
- beer wastes
- cottonseed or groundnut cake
- slaughterhouse wastes
- animal wastes
- kitchen wastes
- spoiled fruit and vegetables
- left-over food
- chopped grass.

92. With your old small pond,
you fed your fish only once a day.
But your fish will eat better
and grow faster if you feed them
two or three times during the day.
93. Prepare all the food
for one day's feeding
at the same time
and give the fish part of the food
at two or three different times
during the day.
94. **Always try to feed your fish
at the same times every day.**

7

12

17

95. The bigger your fish grow,
the more food they will need.
If your pond has 450 fish in it,
feed them
- 500 to 900 grams of food every day
during the first month
 - 900 to 1 200 grams of food every day
during the second month
 - 1 200 to 1 600 grams of food every day
during the third month

- 1 600 to 2 000 grams of food every day during the fourth month
 - 2 000 to 2 700 grams of food every day during the fifth month
 - 2 700 to 3 500 grams of food every day during the sixth month and until the time that you harvest your fish.
96. It is not easy to know exactly how much food to feed your fish.
You must watch them when they eat to learn how much food they need.
97. Feed your fish in the shallow part of the pond so that you can see them eat.
98. If you see that the fish do not eat all of their food, give them a little less the next day.
99. If you see that the fish eat all of their food quickly, give them a little more the next day.
100. If you feed your fish at the same place every day, you will see whether the fish are eating well.
If you give them too much, the food which is not eaten will stay on the bottom.
101. **Too much uneaten food on the bottom of the pond will take the air out of the water.**

102. To make it easier to see if your fish are eating well, mark several places in your pond to feed them.
103. Mark each place by making a square or a ring of light wood or bamboo. Drive a pole into the pond bottom and attach the square or ring, as shown in the drawing.

104. When you feed the fish, put the food inside the square or ring. You may be able to see any uneaten food on the bottom under the square or ring. If you cannot see the bottom, feel with your hands to find any uneaten food that may be there.

TAKING CARE OF YOUR FISH

105. You must take very good care of your fish.
Watch them carefully to see that they are healthy and swimming strongly.
106. If you find any dead fish floating in your pond, take them out right away and change some of the water in your pond.

107. To do this, open the inlet and let in some new clean water. The old water will drain out of the pond at the overflow. Do this for 2 or 3 hours each day for several days until you see that your fish are well.

108. If the weather is too hot,
if you feed your fish too much,
or if you put too much fertilizer
into the pond,
there may be too little air
in the water
for your fish to breathe.
109. If you see your fish
coming to the surface
gasping for air,
give them less food
and do not put any fertilizer
into your pond for several weeks.

110. Put more air
into the water of your pond
by changing some of the water
for several days,
as you did in Item 107
in this booklet.

111. When you let new water into the pond,
let it in quickly
so that it will come with a splash
and bring more air into the water.
This will help your fish to breathe easily.

112. If you see any other things wrong
with your fish
that you do not understand,
stop feeding them
and stop putting fertilizer
into the pond.
Then change some of the water
in your pond
every day for several days,
as you did in Item 107
in this booklet.
113. After several days
if your fish are still not well,
if they are not eating well
or gasping for air
or are not swimming strongly,
ask your extension agent
or your fish culture station for help.

HARVESTING YOUR FISH

114. When you harvested the fish in your first small pond, you first drained all of the water out of the pond. Then you collected the fish. Items 91 to 98, in Booklet No. 27, tell you when and how to do this.
115. But there are several ways to harvest your fish. You can harvest them
- without draining the water
 - by draining all of the water
 - by draining part of the water.
116. Here are some things that you should know about these different ways of harvesting your fish.

Harvest without draining the water

117. If you do not have enough water to fill your pond again and you want to harvest only part of your fish, you can use a seine net to gather them without draining the water.
118. A seine net with a mesh of 3 to 3.5 centimetres will catch the biggest fish and allow the small fish to escape through the net.

119. You will need several people to harvest with a seine net. Perhaps your family can help you. Perhaps you can ask your neighbours for help, and later help them with their work or give them some fish to pay them for their help.

120. Start at the deep end of the pond and pull the seine net slowly toward the shallow end. The drawing shows you how.

121. You can also use a cast net or a lift net to harvest some of the fish from your pond without draining the water.

122. With a cast net or a lift net, it is easier to catch the fish while they are eating and they are all together. Keep the biggest fish and put the smaller fish back into the pond.

Harvest by draining all of the water

123. If you have enough good water to fill the pond again, it is best to drain all of the water. If you drain all of the water, you will be sure to catch all of the fish and you can clean the bottom of your pond.

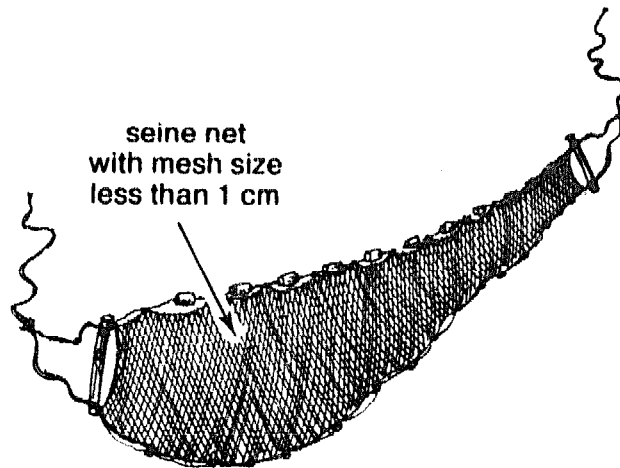

124. While the pond is being drained, use baskets or hand-nets to take the fish out of the water. After all of the water has been drained from the pond, you may still find small pools here and there on the bottom. Be careful to gather all of the fish in the pools.

Harvest by draining part of the water

125. If you have only enough water to fill part of your pond, do not drain out all of the water. Drain only part of it out.
126. Pull the wood plug closing the outlet, or, if you are using a siphon, put the siphon in place and begin to let the water out.
127. Let half the water flow out through the outlet or siphon. Then put the plug back in the outlet or remove the siphon.

128. Now you can begin to harvest your fish with a seine net.
Do it the same way as you did in Item 119 in this booklet.
If you have a seine net with a mesh size of less than 1 centimetre, you will be able to catch all of your fish.

129. Take all the big fish and put the small fish back. If you have too many baby fish, Item 144 in this booklet will tell you what to do with them.
130. When you are finished harvesting, let water flow back into the pond until it reaches the level of the overflow pipe.

What to do with your big fish

131. You will harvest more than twice as many big fish from your new big pond as you did from your old smaller pond.

132. When you harvest your big fish, you must be ready to eat them or sell them or preserve them the same day.
Items 105 to 112, in Booklet No. 27, will tell you what to do.

What to do with your baby fish

133. When you harvest your pond, you will also catch many fish that are too small to eat or to be sold at the market.
134. If you have not built a nursery pond, you may need some of these baby fish to put back into the big pond you are harvesting.
You may also be able to sell some to another fish farmer.
But you must take good care of the baby fish until you are ready to use them or sell them.

135. If you have another pond that is full of water, you can put these baby fish in a pen of split bamboo or net in the corner of the other pond. You can also keep these baby fish in a net pen or in a floating cage of split bamboo.

net pen

bamboo pen

net cage

floating bamboo cage

136. If you do not have another pond, you should keep the baby fish alive in a special small pond nearby, until you are ready to use them, as you did when you harvested your first small pond (see Booklet No. 27).

137. The small pond can be a simple hole in the ground about 3 by 3 metres and about 40 centimetres deep. You should have it ready before you begin to harvest.
138. Your baby fish will stay alive longer if they are out of the sun. Build the small pond in the shade, under a tree or put a shelter over it. You can build a simple shelter using bamboo or wood.

139. Your baby fish will stay alive longer if they have fresh water. Build the small pond with an overflow and put the small pond near the ditch which brings water to your big pond. That way you can have fresh water running through your small pond.
140. You can also let fresh water into your small pond with a small ditch or a siphon.

141. Your baby fish will stay alive longer if you feed them a little food each day. Feed your baby fish termites or finely ground rice bran, cottonseed cake or groundnut cake when they are in the small pond.

142. If you keep your baby fish in a small pond out of the sun in fresh water and if you feed them each day, they will stay alive for about 5 days. This is enough time to dry and clean and repair the bottom of your big pond, to fill it with water and begin to fertilize it, and to put the baby fish back into your big pond.
143. If you have built your own nursery pond, you will not need these baby fish.

144. If you have more baby fish then you can use or sell, you can dry them in the sun. After you have dried the baby fish, grind or pound them and mix them with crushed cottonseed or groundnut cake or with rice bran to feed your big fish, your poultry or your pigs. You can also use the baby fish to fertilize your farm garden.

NOW YOU MUST BEGIN AGAIN

145. If you have drained all of the water from your pond,
you can clean the bottom
of the pond.
146. But do not let your pond bottom
become too dry.
If the bottom of your pond
becomes too dry, it may crack
and will not hold water well
when you are ready
to fill the pond with water again.
147. Repair the banks
and cut the weeds and grass
on the banks around the pond.
148. If there are any water leaks
in the banks
or around the inlet, outlet or overflow,
stop them by packing them
with good clay soil.

149. When you are finished, let water into the pond and fertilize the water with animal compost, plant compost, animal manure or plant material, as you did before.

150. When the pond is green again, put 450 baby fish into the pond. Use only healthy fish which are 5 centimetres or longer.

151. In about 6 months
you will be able
to harvest another crop of fish.
152. This booklet has told you
how to grow more fish
and how to grow them better.
153. Now that you have built
your first big pond
and you have used it
to grow more fish better,
you may decide that you would like
to improve your fish farming even more.
154. Booklet No. 29 has told you
how to build a bigger pond
and how to build it better.
155. But there are still more ways
to improve your fish farming.
You can
- build still bigger ponds
 - build more than one pond
 - build new and better kinds
of inlets and outlets
 - grow fish in several ponds
in such a way
that you can harvest fish
all year round
 - grow fish in pens and cages
 - manage your fish farming
together with your farm animals
and gardens and fields
so that they will be better
and produce more.
156. You will learn more about these ways
in a later booklet.
