Un- A prefix derived from two sources and with two uses, viz. those of negation, and those of reversal, or undoing. As expressive of simple negation it is A. Sax.

un- (Goth. *un-*, G. *un-*, D. *on-*, L. *in-*, all signifying not); and in this sense it is used chiefly before adjectives, past participles passive, and present participles used adjectively, being also prefixed to some nouns, as in *untruth*, *undress*, *unrest*, *unwisdom*, &c. Before some words of Latin origin it may be used alternatively with *in* or *non*; thus, *unalterable*, *unalterable*; *unelastic*, *inelastic*, and *non-elastic*. A expressing reversal it represents A. Sax. *on-*, *and-*, *ant-*, *an-* in answer (Icel. and Goth. *and-*, G. *ant-*, L. *ante*, before), and is generally prefixed to active transitive verbs, as, *undo*, *unlearn*, *unlock*, *unmake*, &c. As adjectives and participles with the prefix *un-*, simply in the sense of not, are almost unlimited in number, and their meaning generally quite obvious, many of them are omitted from this work. When such words, however, have a special signification or usage of their own, and are not simply to be explained as equivalent to 'not' and their latter element, they are here given (as, for instance, *unaccountable*, *unwily*, *unconscionable*, *unparalleled*, &c.). Verbs and nouns with the other *un* as a prefix are also carefully defined.

PRONOUNCING VOCABULARY OF GREEK, LATIN, SCRIPTURAL, AND OTHER ANCIENT NAMES.

RULES AND DIRECTIONS FOR PRONUNCIATION.

The pronunciation indicated in the following list is that usually heard from educated speakers of English, who as a rule do not attempt to pronounce Greek or Latin or Scriptural names in the way in which they were pronounced by the ancients themselves—if that could be with certainty determined—but rather seek to assimilate the pronunciation to that of their own language. There is therefore no great difficulty in the pronunciation of such words, and by attention to the following rules and directions any name in the list can be sounded correctly.

Special knowledge required for the right pronunciation of these words is—

1. The seat of accent; and
2. The sound to be given to the letters as they stand in the word.

The syllable of the word which is to receive the accent is denoted by the usual mark, an acute accent, placed immediately after it, as the first syllable of the word *Ca'to*, the second of the word *Cam-by'ses*, and the third of the word *San-cho-ni'a-thon*. The seat of the accent varies considerably in words of more than two syllables, though it is never on the last syllable; in dissyllables it is always on the first. The pronunciation of the latter, therefore, as also of monosyllabic words, after the following remarks are studied, will present no difficulty, and consequently few of them are given in the list below. The division into separate syllables is denoted by the mark - as well as by the accentuation mark. Two vowels coming together in a word, but having one or other of these marks between them, must therefore always be pronounced as belonging to different syllables.

The sounds to be given to the several letters will be considered under two general heads, viz.: 1. The vowel letters; and 2. The consonant letters. It must always be borne in mind that silent letters, so common in English (as final for instance), are the exception in the words here treated of.

I.—THE VOWEL LETTERS.

The vowels heard in the words *fate*, *me*, *pine*, *note*, and *tube*, are called long vowels; while those heard in the words *fat*, *met*, *pin*, *not*, and *us*, are called short vowels.

1. When any of the vowel letters *a*, *e*, *i*, *o*, and *u*, constitute an accented syllable, and also when they end one, they are pronounced as long vowels; thus, in the first syllable of the words *Ca'to*, *Pe'l'ops*, *Di'do*, *So'lon*, and *Ju'ba*, they are pronounced as in the respective key-words *fate*, *me*, *pine*, *note*, and *tube*.

2. When the vowel letters are followed by one or more consonants in a syllable, they are pronounced as short vowels; thus, in the first syllable of the words *Cæ's'ca*, *Hec'u'ba*, *Cin'na*, *Cor-du'ba*, and *Pub'l'i-us*, they are pronounced as in the respective key-words *fat*, *met*, *pin*, *not*, and *us*.

3. When the letter *o* constitutes an unaccented syllable, as in *A-by'dos*, and when it ends one, as in *Ju'ba*, it is pronounced as *a* in *fat*.

4. The so-called diphthongs *æ*, *œ*, are always pronounced as the *e* of *me*, and are therefore simple vowel sounds, as in *Cæ's'ar*, *Pæ's'tum*, *Æ'o'lus*, *Bœ'o'ti'a*.

5. The digraph *ai* in a syllable is pronounced like *ai* in *wait*. It occurs only in Scriptural names. The *ai* of Greek words was pronounced like common English affirmative *ay*, or much the same as *i* in *pine*; but by the common spelling it is Latinized into *æ*. An *a* and an *i* coming together, but belonging to different syllables, will of course have either the accent or the mark - between them.

6. When *y* follows *a* in the same syllable, and is itself followed by a consonant, as in *Ar'go*, *Car-tha'go*, the *a* is pronounced as in *far*. In such a word as *Ar'a'dus* it is sounded as in *fat*.

7. The digraph *au*, as in *Clau'di-us*, *Au'fid'i-us*, is pronounced as *a* in *fall*. An *a* and a *u* coming together, however, may belong to different syllables, as in *Em-ma'us*.

8. When *e* constitutes an unaccented syllable, as in the first of the word *E-te'o-cles*, and when it ends one, as in *E-vad'ne*, it is pronounced as *e* of *me*. And when *e* is followed by *s* as the final letter of a word, as in *Her'mes*, *Ar-is-top'h'a-nes*, it is always pronounced as *e* of *me*.

9. When *e* is followed by *r* in the same syllable, as in *Her'mes*, *Mer-cn'ri-us*, the *e* is pronounced as *e* of *her*. The letters *i*, *u*, and *y*, before *r*, have the same sound, as in *Vir'gil*, *Bur'sa*, *Cyr'nus*. When *er* is followed by a vowel, however, *e* is sounded as in *met*, thus *Era'to*, *Mer'o-e*.

10. The digraph *ei*, as in *Plei'a-des*, is pronounced as *i* of *pine*. An *e* and *i* coming together, however, may belong to different syllables. Compare Rules 5 and 7.

11. The diphthong or digraph *eu*, as in *Len-cip'pus*, *E-leu'sis*, *Ti-mo'theus*, is pronounced as *u* of *tube*. It occurs chiefly in Greek names. In other cases the *e* and *u* belong to separate syllables. Compare Rules 10 and 7.

12. When *i* constitutes the first and last syllables of words, whether accented or not, as in *I-be'ri-a*, *Fa'bi-i*, it is pronounced as *i* of *pine*. And *i* as the terminal vowel of a syllable at the end of words is also so pronounced, as in *Im'ri*, *A-ceph'a-li*.

13. But *i* at the end of any other unaccented syllable than the last, as in *In'di-a*, *Fa'bi-i*, is pronounced as *i* of *pin*.

14. In many cases *i* assumes the value of *y* consonant in English; thus *Aquila* is pronounced as *Aqui-le'ya*, *Caius* as *if Cai'us*. This is especially common in the terminations of words.

15. *O* at the end of an unaccented syllable, as also when constituting an unaccented syllable by itself, is generally pronounced long or of medium length. Followed by *r* in the same syllable, as in *Go'rgus*, it is not usually pronounced long, but as *o* of *not*. The *o* in such a position is, however, by some speakers pronounced rather long than short, this being pretty much a matter of taste.

16. At the end of an unaccented syllable, or forming an unaccented syllable (as in *Æ'du-i*, *A-bi'hu*), *u* is pronounced much the same as when accented, but shorter. Following *q* it is pronounced as *w*.

17. The letter *y* is pronounced as *i* would be in corresponding positions; thus the *y* in *Ty'a-na* is as *i* of *pine*; and the *y* in *Tyn-da-rus* as *i* of *pin*.

II.—THE CONSONANT LETTERS.

The consonant letters, *b*, *d*, *f*, *h*, *j*, *k*, *l*, *m*, *n*, *p*, *q*, *r*, *v*, *y*, and *z*, have each but one sound, and as that is the English sound, they present no difficulty. The letters *c*, *g*, *s*, *t*, and *x*, have each more than one sound, and hence require rules to pronounce them aright.

1. *C* and *g* are hard, or sounded as in *call* and *gun* respectively, when immediately followed by the vowel letters *a*, *o*, and *u*, as in *Cæ's'ca*, *Cor-ne'li-a*, *Cur'ti-us*, *Hec'te'a*, *Hec'u'ba*, *Gal'lus*, *Go'rdi-us*, *Au-gus'tus*, *Mega-ra*. *C* and *g* are also hard immediately before other consonant letters, as in *Clau'di-us*, *Ec-bat'a-na*, *Hec'tor*, *Glau'cus*.

2. *C* and *g* are soft when immediately followed by the vowel letters *e*, *i*, and *y*, and the so-called diphthongs *æ*, *œ*, either in the same or in the following syllable, as in *Cer'be-rus*, *Cin'na*, *Cy-re'ne*, *Cic'e-ro*, *Gel'l'i-us*, *Gis'co*, *Gy'as*, *Ag-e-la'us*, *Cæ's'ar*, *Cæ-cil'i-us*. In words such as *Dacia*, *Sicyon*, *Phocion*, *Accius*, *Glaucia*, *Cappadocia*, the *ci* or *cy*, having the accent immediately before it, is often pronounced as *shi*; some authorities, however, retain the *s* sound in such words.

3. In *Scriptural* names, such as Megiddo, Gideon, *g* is always hard, except in the single word Bethpage. In consulting the list this will have to be kept in mind. The *s* following *Scriptural* names will serve as a guide.

4. When *c* and *g* are initial letters of a syllable; and immediately followed by *n* or by *z*, they are usually left silent in pronunciation; thus, Cneus is pronounced Ne'us; Gnidus, Ni'dus; and Ctenos, Te'nos. Some persons, however, pronounce the *c* and *g* in these combinations; and should the reader elect to do so, he must pronounce them hard.

5. In *Scripture* names *h* often follows a vowel in the same syllable; as in Micah, Isaiah, Caine*h*, the vowel in these cases being pronounced with its short sound and the *h* being mute. In Greek names *rh* is equivalent to simple *r*.

6. The digraph *ch* is pronounced as *k*, thus, Achilles is pronounced A-kil'les; Chios, Ki'os; Enoch, E'nok. The *Scripture* name Rachel is the single exception to this rule, *ch* in it being sounded as in *chain*.

7. *S* as an initial of words is pronounced as *s* of the word *son*, as in So'lon, Spar'ta, Styx. It is commonly so pronounced as an initial of other than the first syllable of words, as in Su'sa, Si-sen'na; but in some exceptional cases the *s* receives the sound of *z*, as in the word Cæsar, which is pronounced Cæ'zar. These exceptions will be denoted by the direction 's as z,' inclosed within parentheses, thus, Cæ'sar (*s* as *z*). See also Rule 10.

8. *S* final of words, when preceded by *e*, is pronounced as *z*; thus Aristides is pronounced Ar-is-ti'dez. And the *e* so placed is that of the word *me* as remarked already. But when the final *s* is preceded by any other vowel, it is pronounced as *s* of *son*, as in Archytas, Amphipolis, Abydos, Adrastus.

9. *S* at the end of words when preceded by a liquid, *l*, *m*, *n*, or *r*, is pronounced as *z*, as in Mars, which is pronounced Marz; Aruns, A'runz.

10. *St* forming an unaccented syllable, preceded by an accented syllable with a final consonant, and followed by a vowel, is commonly pronounced *sh*; as in Al'si-um, Hor-ten'si-us. When the *st* is preceded by a vowel it is very commonly pronounced as *st*, as in Mæ'si-a, He'si-od, A-le'si-a, Cæ'si-us; and sometimes as the *s* of

pleasure, as in As-pa'si-a, The-o-do'si-a. But the *us, ge* in these cases is not very well settled, and some persons carefully preserve the pure sound of the *s* even in such situations.

11. When *t* followed by a vowel occurs next after the accented syllable of a word, it is pronounced as *sh*; thus Statius is pronounced Sta'stri-us; Helvetii, Hel-ve'shi-i; and similarly with Abantias, Actium, Maxentius, Laertius, &c. The proper sound of the *t* is preserved, however, when *t* is accented or when it follows *s* or another *t*, as in Mil-ti-a-des, Sal-us'ti-us, Brit'ti-i; so also in the termination -tion, as in A-e'ti-on. In such words as Domitius the *t* itself may be said to receive the *sh* sound: Do-mish'i-us.

12. The digraph *th* is pronounced as *th* of the word *thin*, as in Tha'li-a.

13. *X* at the beginning of syllables is pronounced as *z*, thus Xenophon is Zen'o-phon. But at the end of syllables it retains its voiceless sound of *ks*, thus Oxus is pronounced Oks'us. If, however, the *x* end a syllable which immediately precedes a vowel in the accented syllable, then the *x* may be pronounced with its voiced sound, that of hard *g* followed by *z*, as in Alexarchus, which is often pronounced Al-èz-ar'chus.

14. The letter *p*, when initial, and followed by *t*, is not usually uttered, as in Ptolemæus, which is pronounced To'le-mæ-us.

15. *Ph* represents the Greek character ϕ , and is pronounced as *f*; thus, Philippi is pronounced Fi-li'ppi. But when *ph* is followed by a consonant in the same syllable, as in Phthia, it is usually omitted in utterance, this word being pronounced Thi'a.

16. *P*s represents the Greek character ψ , which as an initial is pronounced as *s*, the *p* being generally omitted in utterance, as in Psyche, which is pronounced Sy'ke. Many persons, however, pronounce the *p* as well as the *s* of *ps*.

17. As a general rule, when any combinations of consonant letters which are difficult to utter occur at the initial part of words, the utterance of the first may be omitted, thus Tmolus may be pronounced Mo'lus; Mnemoeyne, Ne-mos'y-ne; Ctesiphon, Tes'i-phon; while the digraph *ch* is dropped in Chthona, making the pronunciation Tho'ni-a.

PRONOUNCING VOCABULARY

OF

MODERN GEOGRAPHICAL NAMES.

HINTS ON THE PRONUNCIATION OF FOREIGN NAMES.

FOREIGN geographical names are spelled in English books either in the same manner as they are spelled in the language of the country to which they belong (when that language uses the Roman alphabet), or phonetically in accordance with the prevailing sounds of the letters of the English alphabet.

In foreign languages there are many sounds or shades of sound not heard in English; but for ordinary purposes it is not necessary to try to reproduce all these, and in the key below it will be seen that only six signs are used to represent un-English sounds. These must be learned by the ear from those who are able to render them accurately, but it may be mentioned that the French sound heard long in *vûe* and short in *bûit* is like the sound of *u* in the Scotch word *abune*; that that heard long in *blêu* and short in *nêuf* has some resemblance to the sound of *e* in *her*; that the sound represented by *û* (as in the French *on*) is produced by emitting voice through the mouth and nose at the same time, and is accordingly not a pure nasal (like the English *ng* in *sing*) but a semi-nasal; and that the *ch* in the German *nacht* is a strongly aspirated guttural like *ch* in the Scotch word *loch*. [Strictly speaking *ch* has this sound after the vowels *a, o, u* only; after the other vowels and after consonants it is produced between the point of the tongue and the fore-part of the palate.] As the key shows, *y* is always used with its consonantal sound as in *yes*. It will be understood that in respelling names to indicate pronunciation, the consonants *b, d, f, h, j, k, l, m, n, p, r, t, v, u, w,* and *z*; and the digraphs *ng, nk,* and *sh* always have their usual English sounds; and *s* always has the hissing sound as in *sea*.

VOWELS AND VOWEL DIGRAPHS.

a is usually sounded *â* (see bottom of page), but sometimes long, sometimes short. In Hungarian it is often like *o* in *not*.

â in Swedish is sounded *ö*.
ä or *ae* is usually sounded like *ä* or *e*, in Flemish (and old Dutch) like *ä*.

aa in Danish is sounded as *ö*, in Dutch as *ä*.
ai and *ay* usually have each of the vowels sounded, the sound of *ä* being rapidly followed by that of *e*. In German they are sounded like *i* in *pine*, in French mostly like *ä*.
ao in Portuguese is sounded as *ou*.

au is usually pronounced either with the sounds of the vowels separately, or as a diphthong like *ou*. In French it is pronounced like *o* in *note*.

e is usually sounded like *ä* or *e* in *met*. Very often it has an obscure sound as in the English *golden*. In French it is often mute.

eau in French has the sound of *o* in *note*.
ei and *ey*, like *ai* and *ay*, usually have each of the vowels sounded separately, the sound of *ä* being rapidly followed by that of *e*. In Dutch and German they have the sound of *i*. In French they are pronounced like *ä* or *e*.

eu is sounded in Dutch as in French, in German like *oi*, in other languages with the sounds of the vowels separately.

i is usually sounded like *ë*, or, when short, much like *i*.
ie in Dutch, German, and French is sounded like *ë* except where the letters belong to two syllables.

ij in Dutch has a sound like that of *i* in *pine*.
o is usually sounded like *ö* or *o*, in Danish and Norwegian sometimes like *ö*.

ö or *oe* is sounded in German, Danish, and Swedish like *eu* in French.

o in Danish has a sound similar to *ö*.
oi is usually pronounced with the sounds of the separate vowels, in French it is like *wa* in *war*.

ou in French has the sound of *ö*, in Dutch and Norwegian that of *ou*.

u is usually sounded as *ö* or *u*; in French, as already mentioned, the sound is peculiar, and in Dutch is much the same *u* or *ue* in German is sounded like *ü* or *ü*.

û in Welsh is sounded like *e*.
ui in Dutch is pronounced like *oi* in *oil*.

y is usually sounded like *ë*; in Danish, Swedish, and Polish like the French *u*. In old Dutch it is used where the digraph *ij* is used in modern orthography. In Welsh, without an accent mark, it has the sound of *u*, except at the end of a word, when it sounds like *i*.

ÿ in Welsh has the sound of *e* in *me* (like the Welsh *ü*)

CONSONANTS AND CONSONANTAL DIGRAPHS.

Most of the consonants have the same sound in the languages of the European continent using the Roman alphabet as they have in English, but the following peculiarities are to be noted:—

b at the end of a word is often sounded in German like *p*. In Spanish it is pronounced with very feeble contact of the lips so as to be softened almost to a *v*-sound.

c before another consonant and before the vowels *a, o, u* is usually sounded like *k*. Before the vowels *e* and *i* in French, Danish, Swedish, and Portuguese it is sounded like *s*; in Italian like *ch* in *chain*, in Spanish like *th* in *thin*, in German like *ts*. In Italian where another vowel follows *ci* (as well as *gi* or *sci*) the *i* is not sounded, having merely the effect of softening the *c*. In Spanish America *c* is usually pronounced as *s* in those cases in which in Spain it is pronounced *th*. In Bohemian and Polish it is always sounded like *ts*, and in Celtic always like *k*.

ç is used in French and Portuguese to indicate the *s*-sound of *c* before the vowels *a, o, u*.

ch in Dutch, Polish, and Bohemian, as well as in German, has the sound of *ch*; in Italian it has the sound of *k*; in French (except in some words derived from the Greek, in which it is sounded like *k*) that of *sh*.

cs in Hungarian has the sound of *ch* in *chain*.
cz in Polish has the sound of *ch* in *chain*, in Hungarian that of *ts*.

d at the end of a word in German and Dutch is often sounded like *t*. In Spanish and Danish between two vowels, and after a vowel at the end of a word, it is softened to a sound resembling *th* (= *th* in *thine*). At the beginning of a word and when the Spanish *d* is preceded by another consonant, a sound like that of the English *d* is produced. When *d* comes after *l, n, r* in Danish it is not sounded.

dd in Welsh has the sound of *th*.
g before a consonant and before the vowels *a, o, u* mostly has the sound of *g* in *go*; and it has the same sound before other vowels also in German and Danish, and in all situations in Polish and Welsh. After a vowel it frequently has in German and Danish a guttural sound like *ch* of Scotch *loch*. In Dutch the sound is always like this, except in the combinations *gh* and *ng*, the former of which is pronounced like *g* in *go*, the latter like *ng* in *sing*. In French, Portuguese, Spanish, and Swedish it has the sound of the *j* of the same languages in all situations in which it has not the sound of *g* in *go*, and in Italian it is then sounded like our *j*. (See above under *c*.)

gh in Italian and Dutch has the sound of *g* in *go*.
gl in Italian has the sound of *ly* (*y* being sounded as in *yes*: *gli=lyë*).

gn in French and Italian has the sound of *ny* (Bologna=*bol-lön'ya*).

Fäte, fär, fat, fäll; mē, met, hēr, golden; pine, pin; nōte, not, möve, tübe, tub, bull; oil, pound; ch, chain; g, go; j, job; y, yes; th, then; th, thin; zh, azure. French, vûe, bûit; blêu, neuf; n, on. Scotch and German, ch, loch, nacht.

gu in French always, and in Portuguese and Spanish before e and i, has the sound of g in *go*.

gy in Hungarian has the sound of dy or dzh.

h in French, Italian, Spanish, and Portuguese is silent or scarcely audible. In Spanish it is heard as a slight aspiration before the combination ue. In Danish it is not sounded before j and v.

j in most languages has the sound of y; in French and Portuguese that of zh; in Spanish that of ch. In Danish the sound of the Danish j (that is, the sound of the consonant y) is always interpolated after the consonants k and g before the vowels æ, ø, ø, y, and i.

k in Norwegian before e, i, j, y, and the modifications of a and o, is sounded like ty.

lh in Portuguese has the sound of ly (Ital. gl).

ll in French in formal speech has the sound of ly, but colloquially is generally sounded like the consonant y without any l-sound. In Spain it always has the former sound (Sevilla=se-vel'ya), but in Mexico the latter is often substituted. In Welsh it has a peculiar sound, which is approximately rendered when one attempts to pronounce tl at the beginning of a syllable.

m in French and Portuguese often has the sound of n.

n in French has the peculiar pronunciation already mentioned.

ñ in Spanish

nh in Portuguese } have the sound of French and Italian gn.

qu in French always, and in Portuguese and Spanish before e and i, is sounded like k.

r is almost always more strongly trilled than in English.

ř in Bohemian } are both sounded like rzh.

rz in Polish }

s in German is usually pronounced soft, like English z, at the beginning of a word where a vowel follows; in Hungarian it is sounded as sh.

sc in Italian before e and i has the sound of sh. (See above under c.)

sch in German has the sound of sh; in Dutch is equivalent to sch, in Italian to sk.

sk before e, i, j, y, and the modifications of a and o, is sounded in Norwegian like sh.

stj in Swedish when followed by a vowel has the sound of sh.

sz in Polish } are both sounded like sh.

s in Bohemian }

sz in Hungarian is sounded like s.

th in Welsh is sounded like th in *thin*, in all other European languages using the Roman alphabet like the simple t.

tj in Swedish when followed by a vowel has the sound of ch in *chain*.

ts in Hungarian is sounded like ch in *chain*.

w in German and Dutch has a sound closely resembling that of v produced by bringing the lips feebly into contact, not by placing the upper teeth against the lower lip. In Welsh it has the sound of v or ü.

x in Portuguese has the sound of sh; in old Spanish spelling it is used where j is now used to represent the sound of ch.

y may be either a vowel or a consonant, and the latter sound is heard in Hungarian after d, g, l, n, and t.

z in German and Swedish has the sound of ts; in Italian sometimes that of dz, sometimes that of ts; in Spanish that of th in *thin*. In Spanish America it has usually the sound of s in *sing*.

ž in Bohemian } have the sound of zh.

zs in Hungarian }

The above rules have reference to languages, such as most of those of Europe, that use the Roman alphabet (with certain modifications). In regard to languages that do not use this alphabet, the general rule is to spell geographical names in English phonetically in accordance with the prevailing sounds of the letters of the English alphabet. In such phonetic spellings,

however, the vowels usually receive their continental sounds (as in *far, vein, pique, rule*). In Indian and some other Asiatic names and in Arabic names a is often used also to represent the sound of the English u in *but*. The vowel digraph ai usually represents the sound of y in *fly*, but sometimes that of a in *fate*; ei, most commonly that of a in *fate*, but sometimes that of y in *fly*; au for the most part sounds as ow in *now*, but in some cases as a in *fall*. In the spelling of Indian names this last digraph was often used where ð is now mostly used, the sound intended being that of a in *far*, or perhaps one somewhat broader. The consonants j, w, y, z have as a rule their characteristic English sounds, as in *jet, yet, well, zeal*; g usually has its hard sound as in *get*. Ch usually represents the sound which it has in *chain*; gh sometimes that of a very rough aspirate, sometimes a sound like that of the Northumberland or Berwickshire burr, sometimes, before e or i, merely the hard sound of g; kh is the combination most frequently used to represent the sound of ch; and th usually stands for the sound which it has in *thin*, sometimes for that which it has in *then*.

In Indian, Arabic, and some other names aspirated consonants occur, and are represented in spelling by an h following the consonant, as in Bhotan. The proper sound of this combination is accurately represented by the letters composing it, but in the English pronunciation of such names this peculiarity is commonly disregarded.

In the spelling of geographical names belonging to languages which do not use the Roman alphabet numerous variations are found from different causes. Very often the variation is due to the irregularity in the use of our own alphabet, which leads one person to represent the same sound phonetically in one way, another in another, as in Moorook, Muruk, &c. Sometimes the variation is due to the obscurity of the sounds themselves, as where a vowel sound is so short that its exact quality can hardly be determined, as in Bedouin, Bedawin. In other cases the variation is due to the adoption in English of a continental mode of spelling, as where dj is adopted from the French for j, as in Djebel for Jebel, or tch from the same language for ch, as in Kamchatka (the common spelling) for Kamchatka, or j from the practice of most continental nations using it for y, as in Jakutsk for Yakutsk. Other variations are due to the fact that the sounds to be represented have no signs for them in the Roman alphabet or any of its commonly used digraphs, so that different signs are adopted to represent them approximately in accordance with the conceptions of different persons. In other cases, again, the variation is accounted for by differences of dialect, or different pronunciations of the same dialect, in different parts of the country or region in which a particular language is spoken.

Such variations should be kept in mind by those who consult this list, since names not found under one spelling may be found under some other equivalent spelling. Thus names not found spelled with c, ch, z, y, &c., may be found under the spellings k, kh, s, j, &c. respectively; Spanish names in x may be found spelled with j, Dutch names in y may be found in ij, and so forth.

ACCENT.

As to the position of the accent no general rules can be given. Many languages exhibit no such marked accentual stress as is heard in English. This is the case with French indeed, though French words are commonly regarded as having an accent on the last. The accentuation of German, Dutch, and the other Teutonic tongues, in its main features coincides with that of English, the root syllable having the accent. Italian words ending in a vowel usually accent the syllable next the last; the same is the case with Spanish and Portuguese. Spanish words ending in a consonant almost always accent the last; if there is any peculiarity in accentuation the accented syllable is usually printed with an acute.

Fäte, fär, fat, fall; mä, met, her, golden; pine, pin; nöte, not, möve; tübe, tub, bull; oil, pound; . ch, chain; g. so;

FORMS OF ADDRESS

IN CEREMONIOUS COMMUNICATIONS WITH PERSONS OF TITLE OR OFFICIAL POSITION.

Ambassador. The title 'Excellency' belongs specially to ambassadors, as well as to governors of colonies, and the Lord-lieutenant of Ireland. Address letters 'His Excellency (with name or distinctive title following) Her Britannic Majesty's Ambassador and Minister Plenipotentiary to the Court of —, Begin: 'Sir,' 'My Lord,' according as the ambassador possesses title or not. When personal reference is made say 'Your Excellency.' An envoy extraordinary or chargé d'affaires, though inferior to an ambassador strictly so called, also usually receives the title 'Excellency,' and the wives of ambassadors are generally addressed similarly during their husbands' tenure of office and while residing abroad.

Archbishop. Address: 'His Grace the Lord Archbishop of —,' Begin: 'My Lord Archbishop.' Refer to as 'Your Grace.' The most formal method of addressing the Archbishop of Canterbury is as follows: 'The Most Reverend Father in God, James (or whatever the Christian name is), by Divine Providence Lord Archbishop of Canterbury, Primate of All England and Metropolitan.' The Archbishop of York is addressed as 'The Most Reverend Father in God, —, by Divine Permission Lord Archbishop of York, Primate of England and Metropolitan.' An Irish archbishop is now addressed as 'The Most Reverend the Archbishop of —.' An archbishop may be addressed as 'The Right Honourable and Most Reverend

the Archbishop of —' if he have a claim to be called 'Right Hon.' apart from his ecclesiastical position. In America the common form of address is 'The Most Reverend A— B—, D.D.' The wife of an archbishop has no special title in right of her husband's dignity, being only plain Mrs.

Archdeacon. An archdeacon is styled 'Venerable.' 'The Venerable the Archdeacon of —,' Begin: 'Venerable Sir,' or 'Reverend Sir,' or 'Mr. Archdeacon' (especially in speaking).

Baron. Address: 'The Right Hon. Lord —,' less formally 'The Lord —,' Begin: 'My Lord.' Refer to as 'Your Lordship.'

Baron's Daughter. Baron's daughters are all entitled to be called 'Honourable.' Unmarried they are addressed as 'The Hon. A— B—,' with Christian and surname. They retain the title 'Hon.' after marriage, the wife of a commoner being 'The Hon. Mrs.' with husband's surname, the wife of a knight or baronet being 'The Hon. Lady,' with husband's surname. Begin 'Madam,' refer to as 'Your Ladyship,' if so entitled by marriage. If a higher rank is conferred by the husband the title of course corresponds.

Baron's Son. All the sons are 'Honourable,' with Christian name and surname. In Scotland the eldest son is addressed as 'The Hon. the Master of' (peerage title), or 'The Hon. (John), Master of.' Begin: 'Sir.' The wife of a baron's son is 'The Hon. Mrs.,' with husband's surname or

both Christian name and surname. Begin: 'Madam.' If the daughter of an earl, marquis, or duke she must be addressed accordingly.

Baroness. Address: 'The Right Hon. the Baroness —,' or 'The Right Hon. Lady —,' or 'The Lady —,' Begin: 'Madam,' refer to as 'Your Ladyship.'

Baronet. Address: 'Sir A— B—, Bart., giving Christian name and surname. The Christian name must be given; it is quite wrong to speak, for instance, of 'Sir Vernon Harcourt' where 'Vernon' is merely one of the surnames. Begin: 'Sir.' A baronet's wife is addressed as 'Lady' with husband's surname (her Christian name would also be used if the daughter of a duke, marquis, or earl, and in this case she would also be 'Right Hon.'). Begin: 'Madam,' refer to as 'Your Ladyship.'

Bishop. Address: 'The Right Rev. the Lord Bishop of —,' or 'The Right Rev. A— B—, Lord Bishop of —,' or simply 'The Lord Bishop of —,' Begin: 'My Lord Bishop,' refer to as 'Your Lordship.' In formal documents a bishop is styled 'The Right Reverend Father in God, John, by Divine Permission, Lord Bishop of —.' A bishop suffragan is addressed as 'The Right Rev. the Bishop Suffragan of —,' Begin: 'Right Rev. Sir,' Bishops' wives have no share in their husbands' titles.

In Ireland the bishops of the Protestant church are now most correctly addressed as 'The Right Reverend the Bishop of

— (or in the case of Meath 'The Most Reverend'), Begin: 'Right Rev. Sir.' In Scotland the usage is the same—'The Right Rev. the Bishop of —,' or 'The Right Rev. A—B—, Bishop of —,' or 'The Right Rev. Bishop —' (with surname), Begin: 'Right Rev. Sir.' The Primum of the Scottish Episcopal Church is addressed as 'The Most Rev.' Begin: 'Most Rev. Sir.' Neither Irish nor Scottish bishops can claim to be spoken of as 'Lord Bishop,' 'Your Lordship,' though this is sometimes done.

A retired bishop is still addressed as 'Right Reverend'; 'The Right Reverend Bishop —,' 'Right Rev. Sir. In America the form of address to a bishop is generally 'The Right Rev. A—B—,' [Roman Catholic bishops in Ireland seem to claim the title 'Most Reverend.']. Canon. Address: 'The Rev. Canon —,' Begin: 'Reverend Sir.'

Cardinal. The special title of a cardinal as such is 'His Eminence.' Begin: 'Your Eminence.'

Chargé d'Affaires. See *Ambassador*. Clergy. The general form of address is 'The Reverend A—B—,' Begin: 'Rev. Sir' or simply 'Sir.' If a clergyman is the son of a duke or marquis he is to be addressed as 'The Rev. Lord A—B—,' if the son of an earl, viscount, or baron: 'The Rev. the Honourable A—B—,' or 'The Hon. and Rev. A—B—.' If he is a baronet, 'The Rev. Sir A—B—, Bart.'

Congress, Members of (U.S.). Addressed generally 'The Honourable A—B—.'

Consul. There is no special form of address to a person as such. 'A—B—, Esq., H. B. M.'s Consul,' 'Consul-general,' or as the case may be. In the U. States, however, a consul is commonly called 'Honourable.'

Countess. Address: 'The Right Honourable the Countess of —,' Begin: 'Madam,' refer to as 'Your Ladyship.'

Dean. Address: 'The Very Reverend the Dean of —,' Begin: 'Very Rev. Sir,' more familiarly 'Mr. Dean' (used in oral communications).

Doctor. The initials denoting the particular degree are placed after the usual form of address, whether D.D., LL.D., M.D., D.Sc., &c., 'The Rev. A—B—, D.D., A—B—, Esq., M.D.' Less formally; 'The Rev. Doctor B—,' 'Doctor A—B—.'

Dowager. When the holder of a title marries, the widow of a previous holder of the same title becomes 'dowager,' this being often inserted in addressing her: 'The Right Hon. the Dowager Countess of —,' 'The Dowager Lady —.' Instead of 'Dowager,' to which some ladies object, the Christian name may be used: 'The Right Hon. Mary Countess of —,' Begin: 'Madam,' refer to as 'Your Ladyship.'

Duchess. Address: 'Her Grace the Duchess of —,' Begin: 'Madam,' refer to as 'Your Grace.'

Duke. Address: 'His Grace the Duke of —,' Begin: 'My Lord Duke,' refer to as 'Your Grace.' All the children of a duke are entitled to be called 'Right Honourable.' Royal dukes are different. See *Prince*.

Duke's Daughter. Address: 'The Right Hon. Lady,' with Christian name and surname, or 'The Lady,' with Christian name and surname. Begin: 'Madam,' refer to as 'Your Ladyship.' If married to a commoner or a peer by courtesy, the surname is derived from the husband's name or title; if to a peer the wife takes a title corresponding to her husband's.

Duke's Son. A duke's eldest son takes by courtesy one of his father's secondary titles, and is thus usually a marquis or an earl, being addressed exactly as if really a peer with the respective rank. His wife receives the corresponding title, being thus a marchioness or countess, and their eldest son takes also a courtesy title belonging to the family, being thus either a viscount or a baron.

A duke's younger son is addressed similarly to his sisters: 'The Right Honourable Lord A—B—,' or 'The Lord A—B—,' Begin: 'My Lord,' refer to as 'Your Lord-

ship.' Their wives are treated in a corresponding manner: 'The Right Honourable Lady A—B—,' or 'The Lady A—B—,' 'Madam,' 'Your Ladyship.'

Earl. Address: 'The Right Honourable the Earl of —,' or 'The Earl of —,' Begin: 'My Lord,' refer to as 'Your Lordship.' The wife of an earl is a countess. (See above.)

Earl's Children. The eldest son of an earl (like the eldest son of a duke) takes a courtesy title from his father and thus ranks either as a viscount or a baron, being treated as if really a peer and his wife as a peeress. The younger sons of an earl are all called 'Honourable' (their eldest brother is 'Right Honourable')—'The Hon. A—B—,' the same as the sons of a baron. (See above.)

The daughters of an earl are all 'Right Honourable,' and are addressed as the daughters of a duke. (See above.)

Envoy. See *Ambassador*.

Executive Council, Members of (in colonial governments). Generally addressed as 'The Honourable A—B—.'

Governor of Colony. Colonial governors have the title of 'Excellency' in virtue of their office. Address: 'His Excellency A—B—, Esq. (Sir A—B—, The Right Honourable the Earl of, &c.), Governor of —,' Begin according to rank; refer to as 'Your Excellency.' A duke holding such a position would, however, be 'His Grace,' 'Your Grace.' A governor's wife does not have any claim to be called 'Her Excellency.' Lieutenant-governors, as in India and the Dominion of Canada, are styled 'Honourable,' 'His Honour,' 'Your Honour.'

Governor of State (U.S.). Usually addressed as 'His Excellency,' 'His Excellency A—B—, Governor of —,' or 'His Excellency the Governor of —,' a lieutenant-governor is called 'Honourable.'

Judge. This in Britain has not a very distinctive meaning. In England and Ireland the judges of the supreme courts are called Lords Justices and Justices; in Scotland the judges are the Lords of Session. (See *Justice*, *Lord Justice*, *Lords of Session*.) In England the county court judges, however, are regularly called 'Judge.' 'His Honour Judge —' (surname), on the bench referred to as 'Your Honour.'

In many British colonies the members of the higher courts are called judges and addressed as 'The Honourable A—B—.' In the U. States the term judge is regularly applied to all such functionaries; and all are addressed in the same way.

Justice. Judges of the High Court of Justice in England, in the Chancery and other divisions, are called justices. Address: 'The Honourable Mr. Justice —,' or if a knight, 'The Hon. Sir A—B—,' Begin in both cases 'Sir.' On the bench he is addressed as 'My Lord,' and referred to as 'Your Lordship.'

King. To be addressed as 'The King's Most Excellent Majesty.' Begin: 'Sire,' or 'May it please Your Majesty,' refer to as 'Your Majesty.'

Knight Bachelor. Treated as a baronet, but 'Kt.' is not usually appended to the name in addressing a letter. As in the case of a baronet, carefully avoid using a surname instead of a Christian name.

Knight of the Bath, St. Michael and St. George, Star of India. Address: 'Sir A—B—, G.C.B.,' or K.C.B., K.M.G., K.S.I., as the case may be. Begin: 'Sir.'

According to the Bulletin Statistique the ratios in 1876 stood thus:—

The following table of age ratios in 1000 of population is from Census reports of the various nations:—

Country	Date	Under 5 Yrs.	5-20	20-40	40-60	Over 60
England	1881	136	326	297	169	72

Average	128	308	306	182	76

In the above table it will be observed that the lowest ratios of children are in France, Brazil, and Ireland. This is explained in the case of Ireland by the fact that the marriage rate is the lowest in the world. Moreover, the highest ratios for people over 60 years are in France and Ireland. The countries in which children form the largest ratios are Finland, Greece, and Spain, although the birth-rates in those countries are by no means the highest; it is explained in the case of Greece and Spain by the short span of life, the proportion of persons passing their sixtieth year, as shown above, being very low.

Another distribution is as follows :—

AGRICULTURE

This is the most important industry of mankind, for (without counting India, China, &c.) it occupies 80,000,000 peasants, represents a capital of 23,000 millions sterling, and has annual products to the value of almost 4000 millions. Capital and product have more than doubled since 1840, but the number of hands engaged has not risen 50 per cent., viz. :—

Year	Millions, £ Sterling		Agricultural Peasants
	Capital	Product	
1840	9,036	1,824	55,080,000
1860	14,923	2,483	66,000,000
1887	23,006	3,948	80,050,000

The following tables show approximately how agricultural capital was made up at the above dates :—

	Year 1840. Value in Millions, £ Sterling

The agricultural capital of Europe has doubled since 1840; that of the United States has increased sixfold. The average increase has been 197 millions sterling per annum in Europe, and 67 millions in the United States.

The value of agricultural products at the above periods was approximately as follows:—

Year	Millions, £ Sterling			
	Grain	Other Crops	Pastoral Products	Total
1840	702	538	584	1,824
1860	1,130	575	778	2,483
1887	1,091	1,445	1,412	3,948

The value of grain crops has diminished since 1860, while that of pastoral products has nearly doubled, the price of grain having declined very notably, while that of meat, as also of dairy products, has risen. The relative importance of the three great branches of agricultural industry at the said dates is shown as follows, judged by money values :—

	1840	1860	1887
Grain	38.5	45.5	27.5
Other crops	29.8	23.2	36.8
Pastoral produce	31.7	31.3	35.7

TILLAGE

The area under crops has risen from 492 million acres in 1840 to 807 millions in 1888, an increase of 315 millions, viz. :—

In Europe	131	million acres.
„ United States	151	„ „
„ Colonies, &c.	33	„ „
Total	315	„ „

In 48 years the area of tillage and planting has risen 65 per cent., but the grain crops have risen 120 per cent., viz. :—

Year	Millions of Bushels			
	Europe	U. States	Colonies	Total
1840	3,212	616	291	4,119
1860	4,046	1,240	464	5,750
1887	5,586	2,586	948	9,122

Improved implements and machinery have made tillage more productive and grain cheaper. In 1840 each peasant produced about 73 bushels of grain; in 1860 the average was 87, and in 1887 it had risen to 114; that is, two men now produce more grain than three did in 1840. The following table shows the distribution of grain-growing in 1887 :—

	Millions of Acres					Crops, Millions of Bushels				
	Wheat	Oats	Barley	Various	Total	Wheat	Oats	Barley	Various	Total
Europe	50	72	38	148	348	1,336	1,628	694	1,930	5,588
United States	31	26	3	75	142	442	640	58	1,446	2,586
Colonies, &c.	46	3	7	13	69	465	97	82	304	948
Total	174	101	48	236	559	2,243	2,365	834	3,680	9,122

In the United States 9,000,000 hands raise nearly half as much grain as 66 millions in Europe. Thus it appears that for want of implements or proper machinery there is

a waste of labour in Europe equal to 48 millions of peasants. In other words, one farm labourer in the United States is worth more than three in Europe.

PASTORAL INDUSTRY.

The production of meat at the same periods was approximately as follows :—

Year	Tons			
	Europe	United States	Colonies, &c.	Total
1840	6,800,000	2,120,000	200,000	9,120,000
1860	7,630,000	2,970,000	400,000	11,000,000
1887	8,633,000	4,750,000	920,000	14,303,000

The production of meat has risen 57 per cent. since 1840, while that of grain, as we have already seen, has increased 120 per cent. In aliquot parts production of meat showed thus :—

	1840	1860	1887
	Europe	74.5	69.3
United States	23.3	27.0	33.2

It is especially since 1860 that improvements in agricultural machinery have been attended with a notable extension of cultivated area.

AGRICULTURAL POPULATION

	1840	1860	1887
Europe	59,439,000	58,160,000	66,320,000

Total	55,080,000	66,000,000	80,050,000

The ratios of capital and products that corresponded to the agricultural population, that is, to each adult peasant, were :—

	Capital		Product	
	1840	1887	1840	1887
Europe	£ 162	£ 263	£ 31	£ 43

The cultivation of wheat and barley requires as follows:—

At	Days of Cultivation		Mean Temperature, Fabr.	
	Wheat	Barley	Wheat	Barley
Alsace	131	122	60	57

According to Broch (1885), the average product per acre of different kinds of grain, taken from five years' results in the various countries, was as follows:—

	Bushels					
	Wheat	Rye	Barley	Oats	Maize	Potatoes
U. Kingdom	35	33	38	33
France	16	16	20	25	16	102

He estimates the crops in Europe as follows:—

	Millions of Bushels		
	Crop	Deduct Seed	For Consumption
Wheat	1,236	176	1,060
Rye	1,230	175	1,055
Barley	630	90	540
Oats	1,528	218	1,310
Maize	210	30	180
Total	4,834	689	4,145

He says that 2227 million bushels are used for human food, and 1918 for cattle, alcohol, &c.; the average consumption of grain per head of population in Europe being 410 lbs., or almost 7 bushels, yearly. His estimates, however, appear altogether too low, being 100 million bushels short in wheat, and the same in oats, while his crop of maize is but little over half the reality. It is to be observed in his favour that the crops are now heavier than when he wrote, in 1885.

The production and consumption of grain in the various countries are approximately as follows:—

	Production, Million Bushels	Consumption, Millions of Bushels				
		Food	Sowing	Liquor	Cattle, &c.	Total

The values of these crops in 1887 were thus made up:—

Total	412	185	108	186	252	1,143

(Deducting India and Japan, the value will be 1091 millions, as in the table of nations at p. 11.)

If the average prices of 1874-84 had been maintained, mankind would have had to pay 1577 millions sterling for the crops of 1887, a sum nearly 40 per cent. in excess of the above value. The following table shows the countries (1886-87) that had surplus grain to export, and those that imported to cover deficits:—

Exporters	Bushels	Importers	Bushels
Russia	215,000,000	United Kingdom	286,000,000

Mr. Spallart sums up the value of all grain crops in 1884 thus:—

According to Mr. Spallart the average values of grain in 1878-81 throughout the world were as in the following table, and if these prices were applied to the average crops for ten years ending 1884, the results would be as follows:—

	Price, Pence per Bushel	Crop, Million Bushels	Value, Million £
Wheat	63	2,068	543
Rye	48	1,175	235
Barley	46	800	153
Oats	25	1,936	202
Maize	26	1,890	204
Sundry	25	290	30
Total		8,159	1,367

As near as we can ascertain, the crops and aggregate value were:—

Period	Million Bushels	Value, Millions £	Average Price, Pence per Bushel
1831-40	4,043	624	37
1851-60	5,593	1,130	48

The value of all live-stock was about 28 millions sterling; the production of meat about 160,000 tons yearly. The grain crop has increased 50 per cent. in the last twenty years. The value of products in 1886 was approximately thus:—

UNITED STATES

Tillage was a chief occupation of the first settlers. In 1602 Captain Gosnold grew peas and beans in Massachusetts, and in 1611 wheat was grown in Virginia. The Dutch of Manhattan (New York) sent home some wheat to Holland in 1626. Potatoes, previously unknown in North America, were introduced from England in 1629 and successfully grown in Massachusetts. Stebbins relates that in 1637 there were 100 ploughs at work in Virginia, and 37 in Massachusetts. In 1640 Mr. Endicott of Salem sold 500 fruit-trees for 250 acres of land, and in the preceding year Manhattan apples were sent to Holland. South Carolina exported 700 bushels of potatoes in 1749. New York 70,000 barrels of flour in 1750. The production of grain in the eighteenth century can only be roughly estimated on the basis of population; exact returns begin with the year 1840.

Year	Grain Product, Million of Bushels			Value of Crop, Million £
	Production	Home Consumption	Exported	
1700	5	5	...	1
1750	20	20	...	3
1775	60	60	...	8

1880	2,718	2,425	293	276
1889	3,454	243

The production is at present 52 bushels per inhabitant, against 30 in the year 1800. It forms 33 per cent. of the whole grain-crop of the world, and the ratio per inhabitant is only approached by Denmark, which has 42 bushels per inhabitant.

The progress grain-growing in twenty years is shown in the Agricultural Report for 1889 as follows:—

	Acreage				Increase of 20 Years	Per Cent.
	1869	1870-79	1880-83	1889

There are no returns as to rice and sugar in 1889, but they are doubtless the same as in 1880. The maize crop covers an area as large as Great Britain and Ireland, and the total acreage under grain exceeds the dimensions of the German Empire. The cotton covers as much land as the kingdoms of Holland and Belgium in the aggregate.

The area under hay is as large as England. The dimensions of the United States may be briefly expressed thus:—

	Millions of Acres	Ratio

Under pasturē.	447	19.5
Under forest	176	7.6

Meat supply may be taken at 500 lbs. per beef carcase, 50 lbs. per sheep, and 110 lbs. per pig. Tallow is as 14 to 100 lbs. of beef or mutton, and lard 20 to 100 lbs. of pig's meat.

The values of cattle in 1870 and 1890 were as follows:—

The distribution of live-stock in the great divisions of the Union in 1890 was as follows:—

The average value in dollars was as follows:—

States	Horses	Mules	Cows	Oxen	Sheep	Pigs
New England	94	...	28	24	3.0	9.0
Middle	91	102	28	25	3.4	6.5
South	71	85	18	12	2.0	3.5
West	64	71	20	15	2.3	5.0
The Union	68	78	22	16	2.3	4.8

These values, as shown above, are much lower than prevailed in 1870, which in the foregoing table are computed in gold, after allowing 13 per cent. discount on greenbacks. If prices had not fallen, the live-stock of 1890 would represent a total value of 591 millions £ sterling.

Cattle were first introduced into Virginia in 1609, and into New England in 1624. They increased so rapidly that in 1639 the number in the colonies was estimated at 30,000. Dairy-farming prospered in the eighteenth century, one farmer of Rhode Island in 1750 counting 100 milch-cows, and another in the same year selling six tons of cheese.

Nevertheless cattle-farming at first contended with difficulties. It is recorded that the first hogs, goats, and sheep introduced were killed and eaten by the colonists for want of food. A second supply was brought from the West Indies, and it was made in Virginia punishable with death to kill any of these animals. The records of New York show that in 1627 the price of a cow was £30, of a yoke of oxen £40; those of Philadelphia, that the city market consumed twenty head of horned cattle weekly; besides sheep and hogs. Sheep were found to thrive in Virginia, but no use was made of the wool; the sheep were shorn to keep them cool.

Although the prices in the Western States are lower than in other parts of the Union, the wealth which they possess in cattle is two-thirds of the total, amounting to 339 millions sterling. This sum far exceeds the value of live-stock in any European country except Russia, and is five times as great as that of the cattle of all kinds in Australasia. The increase numerically of stock in the Western States has been as follows:—

	1860	1880	1890
Horses	3,220,000	7,030,000	10,440,000
Cattle	12,900,000	22,700,000	39,148,000
Sheep	11,150,000	25,200,000	36,400,000
Pigs	15,200,000	32,050,000	35,160,000

The States richest in live-stock were as follows :—

The difference between my statement of values and the official tables (excepting 1886) can only be explained by supposing that meat, dairy products, poultry, vegetables, &c., were omitted by Census Commissioners. On the other hand, the Commissioner for Agriculture in 1886 has omitted nothing, and I adopt his figures in every item. There is no allowance for forestry, because the Americans do not regard it as an agricultural pursuit.

According to the Census of 1880 it appears that 76 per cent. of all farming hands were males between 16 and 60

years of age. If we suppose the same ratio for previous dates, we find the product per male adult has been as follows :—

Year	Agricultural Hands	Male Adults	Product, Million £	Product per Male Adult, £
1840	2,550,000	1,935,000	184	95
1850	3,311,000	2,515,000	250	99
1860	4,342,000	3,305,000	429	130
1870	5,923,000	4,500,000	502	111
1880	7,671,000	5,890,000	703	119
1886	9,000,000	6,840,000	776	113

The number of agricultural hands in the above table is based on the Census returns for each date and the Commissioner's estimate in his agricultural report for 1886; but as the Census returns for 1840-60 do not include slaves, I have added for those years 50 per cent. of the adult slaves. It will be seen that the highest product per head was in 1860, although improved machinery has rendered farm labour much more productive in later years. The explanation is that wheat, for example, has fallen 60 cents a bushel, and maize in the same ratio. If prices had remained the same, the average product per head in 1886 would have been £180.

It is not possible to ascertain how the 9,000,000 hands in 1886 were distributed, but if it were in the same ratio as in 1880, the agricultural power of the great divisions of the country would be thus :—

States	Agricultural Hands	Male Adults	Product, Millions £	Product per Male Adult, £
New England	351,000	267,000	35	130
Middle	981,000	745,000	123	164

In Massachusetts, according to the Agricultural Report for 1888, the gross product of land per cultivated acre was, in English money, as follows :—

Grain	£5	Onions	£29	Tobacco	£37
Potatoes	11	Cabbage	36	Strawberries	42

The value of products consumed at home and exported were:—

Year	Millions, £ Sterling			Value Home Consumption £ per Inhab.

In the above table for 1886 the agricultural values for each State are as set down in the Agricultural Report with 15 per cent. added for unclassified articles, the total, 467 millions sterling, being as given in the report. The pastoral products for each State are based on a medium of the value of dairy products (1880) and the value of cattle (1886).

The values, according to the great divisions of the country, were:—

States	Million £ Sterling (1886)				Ratio	
	In 1886			Nominal, 1880	1880	1886
	Agricultural	Pastoral	Total			
New England	18	17	35	23	5.0	4.5

Union	467	309	776	461	100.0	100.0

The product compares with the area of improved lands (1880) thus:—

	Acres Improved	Product, £	Shillings per Acre
New England	13,000,000	35,000,000	54
Middle	37,000,000	123,000,000	66

1880	2,116	340	518	2,974	60
1887	2,560	501	635	3,696	60

The above figures are official except as regards 1810 and 1840, also excepting the value of land in 1887, which is put down at 21 per cent. over 1880, because the area of crops is shown by the Commissioner to have risen 21 per cent. between 1880 and 1886.

The value of farms and cattle (without sundries), according to Census reports, was:—

Year	Million, £ Sterling					£ per Inhabitant				
	New England	Middle	Southern	Western	Union	New England	Middle	Southern	Western	Union
1850	88	276	245	167	776	32	42	30	30	35

1880	136	560	426	1,334	2,456	34	44	28	70	49

The increase of agricultural capital was as follows:—

Period	Increase, Million £	£ per Annum	Mean Number of Agricultural Male Adults	Increase per Head, £	Annual Increase per Head, £
1841-60	1,249	62,500,000	2,530,000	500	25
1861-70	396	39,600,000	3,880,000	102	10
1871-87	1,455	85,600,000	5,710,000	255	15
47 years	3,100	65,700,000	4,040,000	775	16

It appears from the foregoing statement that the individual gains of those engaged in agriculture were greatest in the period from 1841 to 1860, averaging £25 a year; the war which ensued in 1861 had a depressing effect, the average accumulation falling to £10 a year in the decade ending 1870, but since the latter year there has been a great recovery, the average reaching £15 per head per annum. This was not the annual average of earnings, but of savings, a result unexampled elsewhere.

CANADA

In 1852 the total grain crop was 45 million bushels, and potatoes 6 million bushels.

Ontario has 48 per cent. of the cattle, 48 per cent. of the area (of Canada proper), and produces 65 per cent. of the grain. It may be said to represent 60 per cent. of the agricultural value of the Dominion. Its farms in 1887 covered 11,100,000 acres of cleared land, of which 7,430,000 were under crops. The official valuation for

1887 is as follows, and enables us to give an estimate for the rest of the Dominion:—

	Ontario	Quebec and Other Provinces	All Canada
Land	130,870,000	87,230,000	218,100,000
Buildings	38,510,000	25,690,000	64,200,000

Total	200,400,000	141,700,000	342,100,000

The official valuation of all land-occupied as farms in Canada in 1861 amounted to 102 millions sterling. The agricultural capital was approximately as follows:—

	Millions, £ Sterling	
	1861	1887
Farms	102	282
Cattle	24	44
Sundries	14	36
Total	140	362

This shows an increase of 222 millions sterling in 26 years, equal to £8,500,000 per annum, or one-tenth of the annual average in the United States from 1871 to 1887, the ratio of population being likewise about one-tenth. The relation between agricultural capital and product in Canada in 1861 and 1887 was as follows:—

Year	Millions, £		Ratio to Capital
	Capital	Product	
1861	140	21	15.0
1887	362	56	15.4

In the products of Canada the preceding table includes timber, a considerable item, but the United States does not include it as an agricultural product.

- 1862. Armstrong's smooth-bore, charge 40 lbs., sent a 300-lbs. shot through a 5-inch wrought-iron plate.
- 1866. Woolwich 9-inch rifle, charge 43 lbs., sent a 250-lbs. Palliser shot through an 8-inch plate.
- 1872. First Woolwich Infant, 35 tons, shot 700 lbs., powder 120 lbs.. It sent a Palliser shot through 18½ inches iron and 12 of teak.
- 1874. Second Woolwich Infant, 80 tons, shot 1650 lbs., powder 300 lbs.
- 1876. Third Woolwich Infant, 81 tons, shot 1250 lbs., went through 50 feet of sand.
- 1876. Armstrong 100-ton guns, broke 22-inch Creusot steel plates.
- 1879. Shot from 9-inch gun, 75 lbs. powder, unable to pierce a 12-inch plate of iron and steel, alternate layers.
- 1886. Result of Krupp's experiments at Meppen :—

Gun	Inch	Shot Lbs.	Penetration	Foot-Tons
Krupp	9½	348	18.1	8,630
British	11½	812	17.9	12,260

Krupp's shot penetrated 18-inch plates; the British did not.

1889. Krupp's cast steel 130-ton gun has a range of 12 miles, and fires two shots per minute; each shot costs £300 sterling, and weighs 2600 lbs., going through 19 inches of armour; charge of powder, 700 lbs.

Down to 1876, Mr. Krupp had delivered 15,000 cannons from his factory to different nations. Great Britain sometimes manufactures two million shot and shell in a year, weighing 20,000 tons of iron. The cost of heavy guns is as follows (1882), per ton :—

Cast iron	£21	Krupp	£170
Armstrong	100	Whitworth	175

During the siege of Sebastopol, 1855, the Allies threw 30,000 tons of shot and shell into that place.

The cannon in various countries may be summed up thus (those in fortifications, &c., being approximately) :—

	Army	Navy	Fort, &c.	Total

In the war footing of European armies as given above only the first line of reserves is included. If all reserves were included the above numbers might be safely doubled. According to Napoleon Bonaparte, the proportions of an army should be 70 per cent. infantry, 17 per cent.

cavalry, and 13 per cent. between artillery, engineers, and train. The proportions of European armies in the above statement are 66 per cent. infantry, 12 per cent. cavalry, and 22 per cent. between artillery, engineers, and train.

The standing armies of twelve principal countries of Europe have been as follows:—

	Army			War Footing	Soldiers per 1000. Inhabitants in 1883

BALLOON

The most remarkable ascents on record are:—

Date	Aeronaut	Place of Ascent	Height, Yards	Distance, Miles
1783	Montgolfier . . .	Lyons	2,000	...
1804	Gay-Lussac . . .	Paris	7,700	...
1836	Holland	London	500
1859	Wise	New York	1,150
1862	Glaisher	Wolverton	12,000	...

During the siege of Paris, September 1870 to February 1871, there were 64 balloons sent up, containing 91 passengers, 354 pigeons, and 3 million letters (weighing 9 tons). Mr. Glaisher states that in 3500 balloon ascents only fifteen deaths have occurred, that is, about four per thousand.

Mr. Godard, who died in November 1890, made over 2000 ascents. Charles Green, who died in 1870, had made 600; and Mr. Coxwell, who is still living, over 700, having attained with Mr. Glaisher a height of seven miles.

The results of Professor Glaisher's observations during nine ascents in 1863-64 were as follows:—

Elevation, Feet	Decrease of Temperature, Fahr.		Humidity

In twenty years the specie reserve was trebled, while the paper issue only rose 33 per cent. The ratio of specie

B.

to paper money in general was 38 per cent. in 1870, and 79 per cent. in 1890.

It appears that the amount of capital employed in banking has almost doubled since 1870, and multiplied nearly tenfold since 1840. Banking power consists of capital, right of issue, and deposits in all banks, viz. :—

The figures for Spain and Netherlands are those of March 1890, the deposits for Austria of 1887, and the Scandinavian banks 1838.

The rates of interest* since 1851 have been as follows :—

	1861-60	1861-70	1871-80	1881-85	Average, 35 Years	1889

* In the Middle Ages 10 per cent. was the ordinary rate, Philip Augustus promulgated a law in France in 1222 limiting the maximum to 10 per cent.

The discounts of the principal banks (according to Spallart, down to 1880), were :—

Bank of—	1868	1880	1889-90
England	£ 18,500,000	£ 24,000,000	£ 36,900,000

It has been already shown that the banking power doubled between 1870 and 1888. The above table like-

In Austria the production of wax averages 2000 tons. The total annual yield of bees in Europe may be estimated thus :—

	Tons	Value, £
Honey	40,000	2,200,000
Wax	15,000	1,350,000
Total	55,000	3,550,000

One hundred bees weigh an ounce. The wing of a bee makes 190 movements a second, of a wasp 110, of a fly 330.

BEEFROOT

This is grown both as cattle food and for making sugar. The crop ranges from 5 tons of roots per acre in Russia, to 9 tons in Germany. In England it has given 12 tons per acre, equivalent for cattle food to 4 tons of hay, and worth 16 shillings per ton; but it has been found too costly in cultivation. Experimental growing in Canada has proved most successful. It takes about 11 tons of roots in Europe generally per ton of beet sugar, the average of saccharine matter being 9 per cent. as compared with 4 per cent. twenty years ago. In Germany 8 tons of roots give a ton of sugar.

The acreage and crop of all kinds of beetroot are approximately as follows :—

	Acres	Tons, Beet	Sugar, Beet
France	1,310,000	13,300,000	5,100,000
Germany	1,700,000	12,400,000	8,300,000
Russia	1,000,000	5,200,000	5,200,000
Austria	1,100,000	6,500,000	6,500,000
Belgium	145,000	2,100,000	2,100,000
Holland	60,000	600,000	400,000
Denmark	30,000	300,000	300,000
Europe	5,345,000	40,400,000	27,900,000

The *Journal de la Société Stat.* of Paris mentions that the production of beet sugar in the United States during five years ending 1884 averaged 337,000 tons per annum, from which must be inferred that the Union grows about 3 million tons of beetroot. The following table shows approximately the growth of all kinds of beetroot at different dates :—

	1836	1850	1870	1880	1888
	Tons	Tons	Tons	Tons	Tons
France	700,000	1,500,000	6,600,000	14,800,000	13,300,000

Russia	...	100,000	2,200,000	4,800,000	5,200,000
Austria	10,000	200,000	1,500,000	5,500,000	6,500,000
Belgium	...	150,000	800,000	1,800,000	2,100,000
Holland	100,000	440,000	400,000

Europe	750,000	2,500,000	14,100,000	38,840,000	40,200,000

It appears that two-thirds of the total crop is used for making sugar, the product of which now reaches 2,800,000 tons yearly in all the world.

Eider-duck	90 "	Pigeon	40 "

Carrier-pigeons from Paris to Versailles, ten miles, usually take twenty minutes. In November 1882 some flew from Canton Vaud to Paris, 160 miles, in 6½ hours.

The departure and return of birds of passage from England (*Brit. Assoc. Report*) are usually on the following dates :—

	Leave England	Return	Days Absent
Cuckoo	August 25th	April 14th	232
Blackcap	October 10th	" 22nd	194
Martin	" 12th	" 14th	184
Swallow	" 15th	" 10th	177

Birds' nests are used in China for making soup; 9,000,000 are imported yearly into Canton, valued at 10s. per oz., fifty weighing about 1 lb.

The average consumption yearly per inhabitant was approximately as follows :—

	Cwts. per Inhabitant		
	1830	1850	1888
United Kingdom	13	33	72
United States	2	7	40
Germany	1	4	28

Belgium	10	18	48
Russia	2
Austria	2	11
Holland	5	16
Spain	1	2
Italy	1	2
Sweden	1	6
Norway	1	6
Denmark	1	6
Switzerland	1	5
Europe	2	5	18

Since 1830 the consumption in Europe of coal per inhabitant has multiplied ninefold.

This is caused partly by manufactures, partly by railways and steamboats, but it is expected that the use of electric power will in future supersede in some manner that of coal. Meantime the consumption of coal increases year by year.

The following table shows the extent and estimated contents of some of the coalfields of the world :—

	Square Miles	Tons
Great Britain	9,000	90,000,000,000
France	1,800	...
Germany	3,600	39,000,000,000
Russia	27,000	10,000,000,000
Belgium, Spain, &c.	1,400	...
United States	194,000	...
India	35,000	14,000,000,000
China and Japan	200,000	150,000,000,000
Total	471,800	303,000,000,000

The contents, as estimated above, include nothing beyond a depth of 4000 feet, the deepest colliery at present working being that of Lambert in Belgium, 3500 feet. The deepest in the United Kingdom is the Rose-bridge, 2500 feet. The above five coalfields contain apparently 303,000 millions of tons, which is enough for 700 years, at the present rate of consumption. If to the above be added the contents of coalfields in the United States, Canada, Australia, France, Spain, and Belgium, the supply will be found ample for 1000 years. Improved machinery has greatly increased the yield per miner, and thus produced a fall in price, to the advantage of all industries. The official returns of Great Britain, Belgium, and Austria show as follows :—

	1874			1885		
	Miners	Tons Raised	Tons per Miner	Miners	Tons Raised	Tons per Miner
Great Britain	539,000	125,000,000	232	485,000	160,000,000	330
Belgium	110,000	15,000,000	136	101,000	17,000,000	168
Austria	67,000	9,000,000	135	73,000	18,000,000	247

In 1889 the coal used for making iron was approximately as follows :—

	Tons
Great Britain	17,400,000
United States	16,600,000
Germany	10,000,000
France, &c.	10,300,000

Total 54,300,000

In 1885 the coal-mining industry of the world stood approximately as follows :—

	Million Tons Coal	Number of Miners	Tons per Miner	Value of Coal, £	Product per Miner, £
Great Britain	160	485,000	330	53,700,000	111
United States	104	300,000	347	41,600,000	139
Germany	74	220,000	336	17,200,000	78
France	20	102,000	196	9,000,000	88
Belgium	17	101,000	168	6,400,000	63
Austria	20	73,000	270	4,200,000	57
Other countries	20	100,000	200	5,000,000	50
Total	415	1,381,000	300	137,100,000	99

The number of tons raised per miner is greater in United States and Germany than in Great Britain. Three English miners, nevertheless, raise as much as five French, and the price of coal in France is always much higher than in England.

Current prices at pit's mouth were :—

Period	Pence per Ton					
	England	France	Belgium	Austria	Germany	United States
1871-75	87	190	168	78	108	114
1876-80	88	120	102	66	66	80
1881-85	72	108	90	60	63	100

It appears that 9 tons of Massachusetts have as much carbon as 10 tons of Newcastle (English) coal. The percentage of coke obtained is as follows :—

Westphalia	36 per cent.	Pennsylvania	89 per cent.
Marseilles	41 "	Mayenne	90 "
Lancashire	58 "	Wales	91 "

The specific gravity and percentage of carbon in different kinds of coal are shown thus :—

	Weight, Lbs. per Cubic Yd.	Percentage Carbon		Weight, Lbs. per Cubic Yd.	Percentage Carbon
Rhode Island	3,054	86	Newcastle	2,160	87

Madeira and the Azores are not treated as colonial possessions, but as two integral provinces of Portugal, with deputies sitting in the Lisbon Cortes.

DUTCH COLONIES

The latest information is to the following effect :—

	Square Miles	Population
Java	51,300	18,100,000

Total	662,040	24,006,000

The East Indian possessions show an aggregate commerce of 14 millions sterling imports and 16 millions exports. The gross revenue is £11,800,000. The Dutch-India Company has a monopoly of Java, which gives a net profit of 3 millions sterling per annum. The population of the East Indian possessions is as follows :—

European settlers	34,000
Garrison	14,000
Chinese	*310,000
Natives	23,542,000
Total	23,900,000

Most of the natives are Mahometans, except those of the Moluccas, who are Christians.

The revenue is obtained thus :—

Coffee plantations	£4,700,000
Opium plantations	1,500,000
Land-tax, &c.	5,600,000
Total	11,800,000

DANISH COLONIES

Latest information may be summed up thus :—

	Square Miles	Population
Iceland	40,200	72,000
Greenland	34,000	10,000
Faroe Islands	500	11,000
St. Thomas, &c.	140	33,000
Total	74,840	126,000

Iceland is in reality a republic, under Danish protection. In 1804 the Census showed 4750 farms, with 47,000 inhabitants; some grain was then cultivated. At present the island depends mainly on its fisheries. A vessel of 60 tons with twelve men can earn £440 in the cod-fishing season. Greenland also depends on fishing, the annual product averaging 12,000 barrels of blubber and 3000 of cod-liver. The West Indian possessions comprise the three islands of St. Thomas, Sainte Croix, and St. John, which produce yearly 7000 tons of sugar and one million barrels of rum. Denmark was the first of all countries to abolish slavery, by liberating her West Indian slaves in 1826.

GERMAN COLONIES

The extent and population of the new German possession of Cameroons in Africa are not known. The other possessions are :—

	Square Miles	Population
New Guinea	70,000	107,000
Bismarck Archipelago	20,000	188,000
Solomon Islands	9,000	80,000
Marshall Islands	40	10,000
Total	99,040	385,000

Imports, of course, always sum up a higher value than exports, the former including freight, insurance, commission, and other charges, which make up about 6 per cent. on the original value of exports at port of shipment. The surplus thus represented by imports has been declining in ratio since 1880, probably owing to cheaper freights and the facilities afforded by telegraphs. The surplus was as follows :—

Period	Millions Sterling	Percentage over Exports
1861-70	927	11.7
1871-80	1,630	13.6
1881-86	810	9.0

The total weight of sea-borne merchandise composing the commerce of 27 years, down to 1887, and the value approximately of same at shipment, are shown as follows:—

	Millions of Tons	Value, Millions	Ratio of	
			Weight	Value
Coal	830	410	36.0	1.3
Iron	170	480	7.4	1.6
Timber	220	660	9.5	2.1

Sundries	712	24,982	31.1	80.6
Total	2,300	31,000	100.0	100.0

If we compare the weight of sea-borne merchandise with the tonnage of shipping of all nations at various dates, we find as follows:—

Year	Tons Shipping	Tons Merchandise	Tons Carried per Ton of Shipping
1840	9,400,000	20,000,000	2.1
1865	17,000,000	56,000,000	3.3
1875	18,000,000	88,000,000	4.9
1880	20,300,000	113,000,000	5.6
1887	21,200,000	140,000,000	6.6

Each ton of shipping now carries more than three times as much as it did in 1840, which is, of course, due to the use of steam, one ton of steam-shiping being equivalent to four of sailing-ships. The traffic of 1887 was approximately as follows:—

	Tonnage Register	Tons Carried
Steamers	8,600,000	102,000,000
Sailing	12,600,000	38,000,000
Total	21,200,000	140,000,000

In 1889 the production in the United States was 107,000 tons fine copper, and the consumption 75,000 tons.

The ratio of copper to copper ore is as follows:—

	Per Cent. of Pure Copper		Per Cent. of Pure Copper
Germany . . .	3	England . . .	7
Austria . . .	4	Australia . . .	12
France . . .	5	United States . . .	18

The British copper trade since 1850 has been as follows:—

Year	Tons		Value		Fine Copper per Ton
	Imported	Exported	Imports	Exports	
1850	51,000	11,000	£ 1,412,000	£ 1,080,000	102
1851-60	78,000	26,000	2,254,000	2,531,000	98
1860	109,000	31,000	3,404,000	3,153,000	107
1861-70	133,000	46,000	4,016,000	3,844,000	89
1870	137,000	52,000	4,039,000	3,772,000	76
1871-80	147,000	56,000	5,151,000	4,413,000	78
1881	182,000	65,000	4,593,200	4,284,000	68
1888	283,000	40,000	8,600,000	3,100,000	80

The imports include, besides copper, a quantity of "regulus," or half-smelted ore.

The following table shows the annual yield of copper-mines in Great Britain:—

Period	Tons	Value, £	Period	Tons	Value, £
1725-45 . . .	560	81,000	1801-20 . . .	5,880	720,000
1746-65 . . .	1,030	160,000	1821-40 . . .	13,220	1,360,000
1766-85 . . .	2,020	290,000	1841-60 . . .	12,840	1,355,000
1786-1800 . . .	2,710	430,000	1861-80 . . .	8,070	686,000

The total value of the output for 100 years ending 1880 was 91 millions sterling. In 1888 the total product of copper in the world was valued at 20 millions sterling per annum. The prices of this metal, however, vary exceedingly; in 1882 it was £67 per ton, falling in 1886 to £40; whereupon a French "ring" drove up the price to £80, but it fell afterwards to £50.

It is remarkable that, although copper-money is no longer in use, the consumption of this metal is more than five times as great as it was forty years ago. This is in great measure explained by the enormous development of telegraph wire, cartridges, and other things in which copper largely enters.

COTTON

According to Baines and other authorities, the production of raw cotton was as follows:—

It appears that the United States have produced two-thirds of the cotton which has been consumed by the factories of the world in the last 67 years, and that the cotton-crop of the world shows a steady increase, the decade ending 1890 showing 400,000 tons a year more than the preceding. Great Britain consumes one-third of all the cotton produced, the United States being the next largest consumer. In this industry France stood ahead of Germany until the war of 1870.

There is an apparent discrepancy in the above table, the consumption of cotton in the period 1881-87 exceeding the production by 910,000 tons, which is explained by the circumstance that cotton yarn is often counted with raw cotton. In the said period the cotton-mills of

Continental Europe figure above for 4,930,000 tons of raw cotton, but this included 910,000 tons of yarn, which was thus counted twice, having been already included as raw cotton in the mills of Great Britain and other countries, that produce more yarn than they require.

The following table shows approximately the output of cotton cloth in English statute miles :—

D.

DAIRY

The subjoined table shows approximately the number of milch cows and the dairy products of various countries. English cows average 400 gallons of milk yearly, and the butter produce of a good cow is about 140 lbs. In Holland each cow gives about 80 lbs. of butter, and 180 lbs. cheese. New York cows average 330 lbs. cheese, Canadian 280 lbs., and Parmá 300 lbs. It takes a gallon of milk to make a pound of cheese.

UNITED KINGDOM

The annual production of milk in the United Kingdom exceeds 400 gallons per cow, say 1400 million gallons, of which 400 millions are used for making butter and cheese, 600 millions as milk for the table at an average of 16 gallons per inhabitant, and 400 millions in fattening calves, &c. The consumption in London is only a little over 6 gallons per inhabitant. At the churning competition of England in 1889 the average production of

butter was 4 per cent., that is 2½ gallons milk to one pound of butter.

The consumption of dairy products in the United Kingdom has been approximately as follows:—

Year	Native Butter and Cheese, Tons	Tons Imported			Total Consumption	Lbs. per Inhabitant
		Butter	Cheese	Total		
1850	90,000	15,000	15,000	30,000	120,000	10
1860	95,000	37,000	26,000	63,000	158,000	12
1870	100,000	52,000	46,000	98,000	198,000	14
1880	105,000	104,000	79,000	183,000	288,000	18
1889	110,000	136,000	82,000	218,000	328,000	19

The item of imported butter in 1889 was made up of 83,000 tons real butter and 53,000 tons margarine.

A farm in Cheshire of fifty milk cows has been found to produce 9400 tons of cheese, equal to 420 lbs. per cow, valued at £750 sterling. The farm covered 200 acres, of which 15 were under wheat, and the farmer's balance-sheet was as follows:—

	Payments, £		Receipts, £
Rent	400	Cheese	750
Taxes	60	Pigs	150
Labour (7 hands).	266	Sheep	133
Sundries	268	Wheat	180
Total	1,024	Total	1,213

This left the farmer a balance of £189 to support his family.

FRANCE

In 1888 the production of milk reached 1660 million gallons, or about 350 per cow. French economists think that about 40 per cent., say 660 million gallons, is used for making butter and cheese, the product of which would be about 360 million lbs. or 160,000 tons. The value of milk is officially put down at 7d. per gallon.

UNITED STATES

The death-rate of illegitimate children is 55 per cent. extra in Switzerland, and 100 per cent. in France over the normal rate. In Paris it is observed that for 100 children who die if suckled by the mother, 220 die if given out to nurse; also that 230 spoon-fed children die for 100

* This table, except as regards Ireland and Russia, is for the years 1831-83. Brun makes the number of children in Russia who complete their fifth year 460 per thousand; later writers only 425.

The returns of sickness and death from drink in armies is as follows:—

In the French army 33 men per million die yearly of drink. In the American war, 1861-63, deaths from drink were 350 per million, and 15 in 10,000 were sent to hospital for drink. In the British army the sick and deaths from this cause are:—

Station	Sick per 10,000	Deaths per 100,000
United Kingdom . . .	64	33

DEATH-RATES OF ARMIES

Army death-rates per 10,000 men yearly, not including killed in war, are shown as follows:—

Army	Date	Per 10,000
British . . .	1879-80	67
French . . .	1872-74	87
German . . .	1878	58
Russian . . .	1871-74	147

Italian . . .	1870-76	116
Belgian . . .	1870-74	107
Portuguese . . .	1861-67	127

The rates for the United Kingdom in later years compare with those of 1830-40 as follows:—

	Deaths Yearly per 10,000		1887
	1830-1840	1879-80	
Cavalry . . .	153	52	43
Infantry . . .	155	65	46

The death-rate among our troops before Dr. Farr's barrack reforms was enormous, the averages for the years 1818-40 being as follows per 10,000 men:—	
Great Britain . . .	159
Australia . . .	141
Cape . . .	155
Canada . . .	212
Gibraltar . . .	221
Corfu . . .	283
Mauritius . . .	305
Madras . . .	520
Ceylon . . .	570
Bengal . . .	630
Jamaica . . .	1430
Sierra Leone . . .	4830

The rates in the United Kingdom in 1879-80 were as follows per 10,000:—

Station	Cavalry	Arm
Ireland . . .	65	52
England . . .	65	63
Scotland . . .	78	65
United Kingdom . . .	67	72

The improved condition of troops in England is shown by the returns for the foot-guards thus:—

	Deaths per 10,000	
	1858	1875
Fever . . .	25	4
Phthisis . . .	125	37
Various . . .	54	56
Total . . .	204	77

On foreign service the death-rates have declined per 10,000 thus:—

	1818-36	1875
Gibraltar . . .	214	55
India . . .	690	175

The death-rates of the French army in the years 1872-77 were:—

Per 10,000 Men	
Engineers . . .	60
Infantry . . .	95
Zouaves . . .	106
Artillery . . .	106
Cavalry . . .	114
Turcos . . .	177
Under 20 . . .	54
20-26 . . .	103
26-36 . . .	71

The French army, according to a report in 1867, showed the following ratios:—

Years of Service	Composition of Force	Ratio of Deaths	Annual Death-Rate per 1000 Men
Under 1 . . .	9.6	9.7	10.1
1-4 . . .	19.3	21.3	12.0
4-6 . . .	19.0	21.0	11.2
6-8 . . .	16.4	14.0	8.6
8-11 . . .	12.5	9.8	7.8
11-14 . . .	10.5	11.0	10.4
Over 14 . . .	12.7	13.2	10.4
	100.0	100.0	100.0

It appears the mortality is heaviest from the first to the end of the fifth year, and lightest from the sixth to the end of the tenth year. The death-rate has declined, viz:—

1862-69 . . .	11.5
1872-77 . . .	9.5

The ratio in Algeria is usually double what it is in France. The Prussian army in 1872 had a death-rate of 7.2 per 1000, but in 1878 the rate for the whole German

Algerian statistics show that of 1000 infants born the following numbers die in the first twelve months:—

Parents	Death per 1000		
	Boys	Girls	General
French	244	146	207
Spanish	238	250	257
Italian	245	184	224
Jewish	236	182	213
Mahometan	530	488	500
German	344

Deaths according to months in Algeria, taking the year as 1200, were:—

January	96	July	127
February	86	August	138
March	91	September	102
First quarter	273	Third quarter	367
April	71	October	127
May	72	November	113

JAPAN

The returns for 1878-80 showed as follows:—

	Death-Rate per 1000	Ratio of Deaths
Under 10	25.8	28.0
10-20	5.4	4.9
20-30	8.6	7.7
30-40	9.2	8.6

50-60	11.5	11.4
60-70	13.9	13.8
70-80	12.1	11.6
Over 80	4.8	5.3
General rate	17.0	100.0

In 1000 deaths 527 were of males, 473 females.

BRAZIL

Death-rate at Rio Janeiro in 1867-69 averaged 24.4 per 1000, the ratio showing thus:—

Under 1	14.8	Quarter ending—	
1-7	11.6	March 31st	284
7-25	18.4	June 30th	261
25-40	22.9	September 30th	228
Over 40	32.3	December 31st	227
	100.0	Year	1,000

In 1000 deaths, 546 were of males, 454 females; 627 natives, and 373 foreigners.

UNITED STATES

The only death-rates published are these:—

Age	Annual Deaths per 1000 Inhabitants		
	Massachusetts	Maryland	United States
Under 5	65.8	51.7	58.8
5-10	10.7	9.5	10.1
10-15	5.1	5.4	5.3
15-25	5.8	5.4	5.6
25-45	11.9	10.1	10.8
45-55	16.4	18.2	17.6
55-65	26.3	28.1	27.2
65-75	46.9	56.5	51.4

DEPOPULATION

The only European country which has suffered depopulation in the present century is Ireland. It is the result partly of famine, partly of evictions by the landowners. The official returns show the number of persons evicted thus:—

1849-51	263,000
1852-70	157,000
1871-87	113,000

Total 533,000

This is, however, far short of the reality. The Census of 1861 showed the number of one-room cabins to be 89,400 against 491,300 in the Census of 1841, from which it appears that 402,000 cabins had been pulled down, the abodes of 2,000,000 inhabitants. The official number of emigrants from 1837 to 1888 was 4,338,000, but this did not include 600,000 who went to England or Scotland. The population has fallen from 8,275,000 in 1845 to 4,716,000 in 1889, a decline of 43 per cent. At present it is but 150 per square mile, against 190 in France, 240 in Germany, and 270 in Italy. The marriage-rate and birth-rate are the lowest in the world. The ratio of able-bodied population, male and female, between the ages of 20 and 55 is much less than in the sister kingdoms, as shown by the Census of 1881, viz:—

England	432 per 1000
Scotland	424 "
Ireland	408 "

The drain upon persons of the able-bodied age has been attended by a remarkable increase of pauperism, as the official returns show:—

Year	No. of Paupers	Per 1000 Inhab.
1874	79,600	15
1880	100,900	19
1888	113,900	24

In the above interval of 14 years the population declined by 584,000 souls, and yet the number of paupers increased in the ratio of 43 per cent.

The above does not include fish, eggs, fruit, vegetables, chestnuts, rice, and other articles of much importance. The aggregate food for a man doing physical or mental work should be equal to at least 3300 foot-tons daily, for a woman 2200, and for a child 1100 foot-tons.

Meat is apparently the most important element of food. Dr. De Renzi states that 4 per cent. of the population of Naples die of impoverishment of the blood caused by want of meat. At the ironworks of Thorn the operatives fed on vegetables, &c., lost fifteen days a year by sickness until meat was introduced in 1833, when the average fell to three days per operative. See *Food*.

The march of education in Europe has been remarkable, for whereas population has only increased 33 per cent. since 1840, the average number of children attending school has risen 145 per cent.

The percentage of conscripts who could read was as follows :—

	1868	1880	1884

There are also universities in Canada, Australia, and India, of which statistics are wanting.

The number of university students compared with population is much greater in Spain and Belgium than in other European countries.

Intermediate education embraces a great number of colleges, academies, lycæums, &c., of which details will be found in the various countries.

UNITED KINGDOM

In 1830 the Board of Education was established, with power to spend £30,000 on schools. The returns for Great Britain (excluding Ireland) have been as follows :—

Year	Sum Voted, £	Number of Schools Inspected	Accommodation for Pupils	Average Attendance
1850	180,000	2,613	...	225,400
1860	724,000	7,272	1,400,000	884,000
1870	912,000	10,949	2,215,000	1,454,000
1880	2,854,000	20,670	4,843,000	3,155,000
1888	4,168,000	22,326	6,043,000	4,111,000

The number of schools of all kinds, and the average attendance of school-children in the three kingdoms, showed thus :—

	Schools		Scholars	
	1846	1888	1846	1888
England	22,200	19,221	1,500,000	3,615,000
Scotland	5,042	3,105	220,000	495,000
Ireland	9,657	8,196	330,000	494,000
Total	36,899	30,522	2,050,000	4,605,000

The proportion of adults able to write is shown by those signing the marriage register, viz. :—

	Men	Women	General
England	92	90	91
Scotland	96	92	94
Ireland	78	76	77
United Kingdom	91	89	90

If we compare the returns of the whole United Kingdom for 1888 with those of 1878 we find as follows :—

	1878	1888	Ratio of Increase
Number of schools	26,734	30,522	14
Accommodation	5,543,000	7,105,000	29
Average attendance	3,219,000	4,605,000	44

The returns for the three kingdoms in 1888 were as follows :—

	Expenditure, £	Number of Schools	Accommodation	Average Attendance
England	7,440,000	19,221	5,356,000	3,615,000
Scotland	1,160,000	3,105	687,000	495,000
Ireland	1,090,000	8,196	1,062,000	494,000
U. Kingdom	9,690,000	30,522	7,105,000	4,605,000

The income of the schools in 1888 was made up thus :—

	England	Scotland	Ireland	United Kingdom
State subsidy	£ 3,600,000	£ 570,000	£ 900,000	£ 5,070,000
Rates, &c.	3,840,000	590,000	190,000	4,620,000
Total	7,440,000	1,160,000	1,090,000	9,690,000

From 1870 to 1888 the new schools built in England and Wales were :—

Schools	Number	Accommodation for Pupils
Board	4,562	1,809,000
Voluntary	6,738	1,668,000
Total	11,300	3,477,000

In 1888 the schools of England and Wales had 68,683 certified teachers and 29,901 pupil teachers; the average expenditure yearly was :—

	£	s.	d.
Board schools	2	4	8 per child
Voluntary schools	1	16	4 " " "

Local taxation supplied 18s. per child, fees 10s., and the subsidy from the State the rest. In London the expenditure was much higher, namely, 61s. in Board Schools, and 44s. in voluntary per child in average attendance. The working of both kinds of schools in England and Wales in 1881 is shown thus :—

	Schools		Average Attendance	
	1881	1888	1881	1888
Voluntary	14,370	14,659	2,008,000	...
Board	3,692	4,562	856,000	...
Total	18,062	19,221	2,864,000	3,615,000

In 1880 the religion of the school-children of the United Kingdom was as follows :—

	School Children	Percentage
Church of England	1,539,700	42.8
Presbyterian	527,400	14.6
Roman Catholic	526,600	14.6
Various	1,030,300	28.0
Total	3,624,000	100.0

The number of scholars is that on the rolls, but the average attendance is about 63 per cent. of same.

Year	On the Rolls	Average Attendance	Ratio
1880	9,705,000	6,049,000	62 per cent.
1885	11,170,000	7,020,000	63 "
1888	11,950,000	7,852,000	65 "

As the population in 1888 was 60 millions, the average attendance was equal to 131 per thousand of population, against 123 in the United Kingdom. Considering the vast extent and scattered population of the United States, this result is admirable.

School revenue seems largely to exceed expenditure, the latter in 1888 being stated at £25,510,000, whereas the school revenue of 1880 was said to reach £29,100,000 sterling.

The school-children in the various States were as follows:—

	1840	1860	1885	Average Attendance, 1885	Average Attendance per 1000 Population, 1880
Alabama	21,000	98,000	234,000	145,000	116

Total	2,025,000	5,693,000	11,170,000	7,020,000	140

In the preceding table the ratio of school children to population in 1885 is not correct, as the only basis for comparison is the Census of 1880, which figures are on an average 15 per cent. too low.

The two Virginias, be it noted, are put together as one State.

Taking the four great divisions of the Union, we find:

States	Average Attendance		Ratio of Increase	Per 1000 Population in 1885
	1880	1885		
New England	541,000	564,000	4 per cent.	140
Middle	1,417,000	1,505,000	6 "	120
South	1,509,000	1,852,000	22 "	120
West	2,582,000	3,099,000	19 "	164
Total	6,049,000	7,020,000	17 per cent.	140

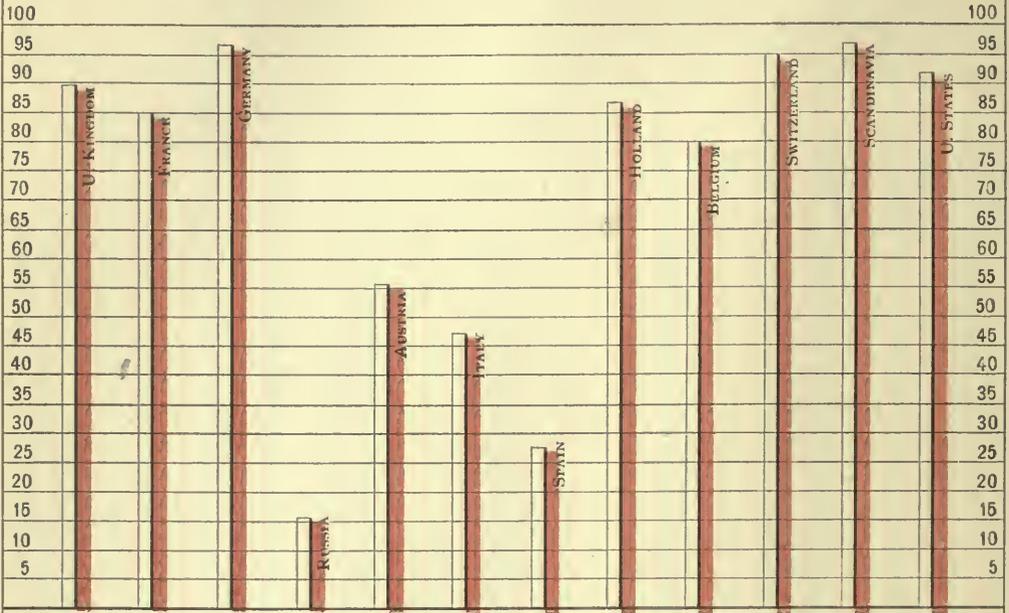

The expenditure on primary schools in 1880 was:—

States	Amount	Ratio per Inhabitant	Per Pupil, Average Attending
New England	£ 1,908,000	£ s. d. 0 9 6	£ s. d. 3 12 0
Middle	4,563,000	0 6 9	3 5 6
South	1,479,000	0 2 0	0 19 6
West	7,952,000	0 9 6	3 5 8
Pacific	683,000	0 10 9	5 3 0
The Union	16,585,000	0 6 6	2 15 0

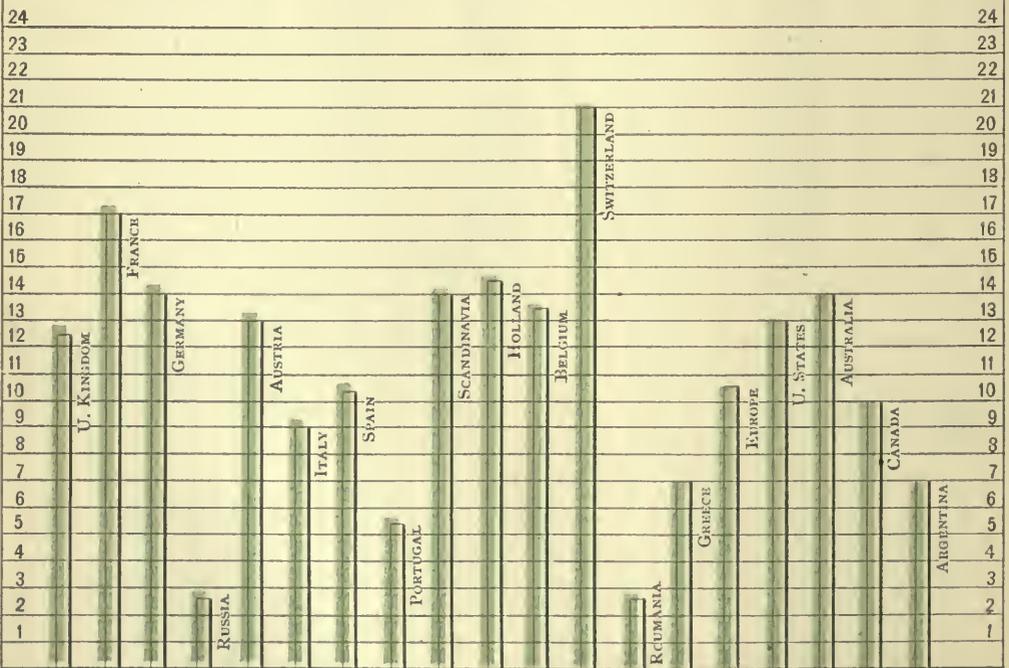

* Arkansas, Michigan, and Texas give no returns of "average attendance." For the sake of comparison, I assume the general ratio of the Union, that is, 63 per cent. of the children on the rolls,

EDUCATION.

Percentage of Adults able to write.

Percentage of population attending school; average attendance.

The number of white population over twenty years of age who could not read was as follows:—

Year	Number	Percentage of Population
1840	550,000	7.8
1850	1,053,000	11.2
1860	1,218,000	9.2

The Census subsequently extended the inquiry to all persons, white or coloured, over ten years of age, with the result:—

r	Unable to Read over Ten Years	Percentage of Population
1870	4,528,000	16.0
1880	3,019,000	8.1

This shows what progress education has made since 1870, the proportion of illiterate persons over ten years old having been reduced by one-half in a single decade. The greatest relative advancement is in the South, where (as shown above) the average attendance of school children rose 22 per cent. between 1880 and 1885. The number of children on the school rolls in 1860 and 1885 compared thus:—

States	Children on Rolls		Increase
	1860	1885	
New England .	722,000	801,000	11 per cent.
Middle	1,694,000	2,431,000	44 "
South	1,088,000	2,973,000	173 "
West	2,189,000	4,965,000	127 "
Total	5,693,000	11,170,000	96 per cent.

The intermediate and superior instruction in 1880 showed thus:—

	Number	Teachers	Students
University colleges	364	4,240	60,000
Academies	1,860	5,960	183,000
Total	2,224	10,200	243,000

The most celebrated University is Harvard, near Boston, founded in 1638. The number of universities and colleges in 1775 was ten, rising to 21 in 1791.

The University students in 1880 were:—

Law	3,100	Medicine	12,000
Theology	5,800	Arts	30,200
Science	8,900	Total	60,000

The records of Indian education for 1888 sum up thus:—

Schools	No.	Pupils	Schools	No.	Pupils	Schools	No.	Pupils
State	78,304	2,959,000	Males	126,298	3,193,700	Primary	89,400	2,557,000
Private	55,048	515,000	Females	7,054	280,300	Secondary . . .	43,952	917,000
Total	133,352	3,474,000	Total	133,352	3,474,000	Total	133,352	3,474,000

The above is the number of children on the rolls, the average attendance being 78 per cent., say 2,710,000 children.

The Government subsidy is £600,000, fees and local rates £1,500,000. The Universities of Calcutta, Madras, and Bombay have 6000 students.

In the preceding tables no account is taken of orphanages, &c., which in 1880 instructed 774,000 children, viz:—

	Number	Children
Orphanages	411	751,000
Blind, &c.	83	8,600
Reformatories	67	14,200
Total	561	773,800

The grand total of 1888 therefore reaches 13,126,000 persons receiving instruction, or 22 per cent. of the population.

CANADA

In 1850 there were but 1700 schools, and in 1887 the number exceeded 15,600. The returns for 1887 compare with 1879 as follows:—

	1879	1887
Schools	12,786	15,607
Teachers	16,297	18,942
Pupils	866,000	984,000

The returns for 1887 were as follows:—

Province	Teachers	Pupils on Roll	Average Attendance	Expenditure, £
Ontario	7,775	504,000	248,000	700,000
Quebec	6,121	253,000	130,000	70,000
Nova Scotia	2,119	105,000	51,000	130,000
New Brunswick . . .	1,644	69,000	34,000	80,000

Total	18,942	979,000	487,000	1,100,000

The Universities of Quebec, Montreal, and Toronto are ably conducted and largely attended.

MOROCCO

There is a Mahometan university at Fez, attended by 700 students, but the studies are mostly limited to the Koran.

INDIA

Public instruction may be said to date from 1858, when the East India Company possessions were annexed to the British Crown. The records show as follows:—

Year	Schools	Scholars	Expenditure
1857	200,000	200,000
1874	43,188	977,000	760,000
1878	82,561	2,196,000	1,660,000
1888	133,352	3,474,000	2,100,000

The voters and electors of the Empire were as follows:—

Year	Electors	Voters	Percentage Voting	Electors per 1000 Inhab.
1874	8,523,000	5,292,000	62	200
1880	9,124,000	5,832,000	64	205

BELGIUM

The following table shows the registered electors and the numbers that voted:—

Year	Electors	Voted
1841	24,900	19,100
1859	61,900	45,100
1878	125,100	64,200
1884	195,700	146,800

ELECTRICITY

Lights.—The following are some of the largest lights in use:—

	Candle-Power	Candle-Power	
Kensington Museum	2,000	Marseilles, lighthouse	40,000
Crystal Palace	3,000	Palais d'Industrie, }	150,000
British Museum	5,000	Paris	} 150,000
Liverpool Docks	6,000	Sydney, lighthouse	
San José, California	24,000		

The cost varies from 10d. an hour at Kensington, to 27d. at Marseilles, both Brush system.

The arc light at Liverpool costs 15d., the Siemens at the British Museum 24d. The San José electric moon stands on a tower 200 feet high, is worked by a 9-horse engine, and shows light for two miles around. The Sydney light is visible 50 miles, being the most powerful yet made. The Marseilles gives six times more light than the old system, at a saving of 9d. per hour. The Kensington Museum saves £235 a year by the change. The smallest lights are Swan and Edison's arc lights of 8 candle-power for domestic use. A contract with the Nottingham Municipality in May 1883 was for works and plant for supplying 60,000 Swan lamps of 20 candle-power. The cost of instalment was £220,000, and after allowing for all expenses and interest on capital, the electric light would cost 40 per cent. less than gas, and give 40 per cent. more light. In the United States, in 1890, there were 3,230,000 electric lights in use, 90 per cent. of the incandescent kind. Turin is lit with 73,000 candle-power (equal to 6000 gas lamps), at a cost of £5200 per annum. The gas only cost £3200.

In 1885 the *Journal of Arts* said:—"As regards the electric light, at the present time upwards of 600 dynamos and 20,000 lamps are in use, and the cost of their installation may be estimated at about one million sterling."

The Lane-Fox system may be described as follows:—

Horse-Power	Lights	Candle-Power	Aggregate Candle-Power
3	36	10	360
5	30	20	600
8	40	25	1,000
20	60	40	2,400

The Brush system, with an engine 40 horse-power, serves as follows:—

Number of Lights	Candle-Power	Aggregate Candle-Power
1	150,000	150,000
12	8,000	96,000
40	2,000	80,000
400	150	60,000

One engine of the above power feeds 400 lamps on a line of 30 miles, consuming 150 lbs. coal per hour, as compared with one ton per hour for gaslight over same length. The Yablochkoff system is said to supply 100 candle-

power at a cost of 1d. per hour, having reduced the cost from 6d. an hour in 1877.

The number of Edison lights, underground wires, in use in Europe on the 1st January 1889 was as follows:—

Berlin	73,400	Hamburg	5,000	Schwerin	3,000
Hanover	20,000	Dresden	4,000	Rotterdam	2,500
Milan	20,000	Lübeck	3,000	Munich	2,500
London	6,000	Turin	3,000	St. Etienne	4,000
Liverpool	2,000	Elberfeld	3,000	Strasbourg	2,500

besides Brunswick, Stuttgart, Halle, Crefeld, and Darmstadt, making a total of 170,000.

According to the *Magasin du Louvre* the relative cost of lighting is—gas 100, Edison 75, Yablochkoff 55 (in 1884).

MOTOR

1873. At the Vienna Exhibition a pump was worked at a distance of 1400 yards by means of an electric wire.

1879. At Sermaize, La Marne, a field of six acres was ploughed in six hours with a wire attached to a 12-horse engine a mile distant.

1881. At Oisiel a farmer named Meiner ploughed a large field by connecting an electric wire with a waterfall.

1882. Project to tap the force of Niagara by constructing turbines, the power of water being estimated at ten million cubic feet per second, or eight million horse-power. and to transmit this force through the United States. Estimated value, £300,000 a day, or 108 millions sterling per annum. A copper wire, half-inch diameter and 300 miles long, would suffice to convey 30,000 horse-power from Niagara to New York.

1883. Four electric locomotives constructed by the New York Railway Company to do the work of 160 ordinary locomotives. Tramcar at Kew, near London, running by electricity at six miles an hour, one accumulator of 80 lbs. sufficing for seven hours' work; cost 6s. per day, against 26s. worked by horses. Electric railway from Porthurst to Giant's Causeway, Ireland. Electric screw-boat on the Thames at Greenwich, 9 miles an hour.

1889. City of Buffalo contracts with Niagara Power Company for 10,000 horse-power at £30,000 per annum, to light the city and drive factories; cable, 20 miles long.

1890. There are at present 645 miles of street railways operated by electricity in the United States and Canada. At present 45 electric roads are in course of construction, aggregating 512 miles of way, for which 167 cars are being built. In a short time the total number of electric roads will be 854, running 1927 motor and trailing cars, with a mileage of 1158. . See *Telegraph, Telephones.*

EMIGRATION

Since the battle of Waterloo, no fewer than 27 millions of people in Europe have left their homes, broken up family ties, and sought their futures in new lands: *—

	1816-50	1851-88	Total
United Kingdom	2,369,000	7,491,000	9,860,000
France	320,000	1,220,000	1,540,000

Holland	25,000	320,000	345,000
Belgium	90,000	880,000	970,000
Other countries	20,000	200,000	220,000
Europe	4,994,000	22,211,000	27,205,000

* Besides the exodus of Europeans there has been an efflux of Coolies.

The emigration from India averages 22,000 yearly, the number registered abroad in 1880 being 335,000, viz. :—

Mauritius	141,000	Trinidad	26,000
Demerara	54,000	Natal	18,000
Bourbon	43,000	Jamaica, &c.	53,000

Numbers of Chinese Coolies emigrate to Cuba and Peru, where they are ill-treated. Cuba imported 116,000 in the years 1866-73, and refused to let them return to China on the expiration of their contracts; 67,000 died. The number imported into Peru in the year 1871 was 38,650, of whom many were put to death. In 1880 in one province 2000 were massacred.

The destinations of European emigrants were :—

	Down to 1850	1851-88	Total
United States	2,633,000	12,330,000	14,963,000
Australia	140,000	1,710,000	1,850,000
Canada	790,000	977,000	1,767,000
Argentina	80,000	1,450,000	1,530,000
Brazil	90,000	790,000	880,000
Uruguay	40,000	170,000	210,000
Algeria	140,000	420,000	560,000
Cape Colony	30,000	130,000	160,000
Various countries	1,051,000	4,234,000	5,285,000
Total	4,994,000	22,211,000	27,205,000

The exact proportions of sex and age cannot be given; the following table is not of uniform importance, some of the countries being classed from observations of ten years, others for a single year.

	Emigrants from							
	United Kingdom	Germany	Holland	Austria	Sweden	Denmark	Italy	Switzerland
Men	46	50	52	32	45	51	70	55
Women	32	25	23	28	35	26	18	32
Children	22	25	25	40	20	23	12	23
Total	100	100	100	100	100	100	100	100

If the proportions for the unascertained countries be taken on the basis of the first six countries in the above table, the whole emigration from Europe over the seas for 74 years may be put down thus :—

Men	11,550,000
Women	6,730,000
Children	5,120,000
Total	23,400,000

The numbers of those who died on sea can never be arrived at even approximately. Kapp says that 20,000 Irish perished of ship-fever in 1846-47. Many vessels lost 20 per cent. If we were to adopt the death-rate on Government emigrant-ships to Australia and Cape Colony, namely, 5 per 1000 for men, 6 for women, and 52 for children, the number of the foregoing who died at sea would be as follows :—

Men	58,000
Women	40,000
Children	266,000
Total	364,000

Births partly compensate for deaths, being about 1 in 200 women carried.

The professions of emigrants have not been uniformly classed; the following conveys a general idea :—

	Emigrants from			
	United Kingdom	Germany	Italy	Sweden
Educated	7	17	6	} 35
Artisans, &c.	55	47	43	
Farm labourers	18	24	39	
Servants	20	12	12	
Total	100	100	100	100

The amount of money which the emigrants took to their new homes was found to average as follows :—

	Per Head
	£ s. d.
Germans, 1848-52	29 10 0
„ „ 1853-54	35 0 0
British in Canada, 1834	33 5 0
New York arrivals, 1856	14 0 0

A moderate estimate of £10 per able-bodied man would result as follows :—

To	£
United States	75,000,000
Australia	9,200,000
Canada	8,800,000
River Plate	8,700,000
Brazil	4,400,000
Various countries	9,400,000
Total	115,500,000

The great value of the emigrants, meantime, has been in their capacity for work. Dr. Farr valued a man of 20 at £234 sterling, Engel at £200, and other writers at £260.

In Australia it is found that each immigrant, big and little, increases the revenue by £4 yearly. In the Argentine Republic the influx of 800,000 immigrants in twenty years ending 1883 was accompanied by a rise of £4,800,000 in the revenue, say £6 per head. But it is in the United States where the value of immigration is most apparent; for example, a group of 200 persons settled in 1858 on the territory now known as the State of Colorado, and in 1880 there were 1220 miles of railway, 14 daily papers, 190,000 inhabitants, real and personal estate valued at 9 millions sterling, agricultural products worth £700,000 a year; in 1886 the value of property in Colorado had risen to 27 millions sterling.

In the Republic of Uruguay in 1884 an official report showed 166,000 European settlers, holding property worth 52 millions. In the city of Buenos Ayres 40,000 Europeans in 1883 held bank-deposits and real property worth £47,600,000, besides Irish and Scotch sheep-farms valued at 21 millions sterling. The Census report of the United States in 1880 showed an increase of wealth since 1850 of 7593 millions sterling, and as immigrants were 12½ per cent. of the population, it follows that they stand for 949 millions of the increase.

In Canada the agricultural capital rose from 140 millions in 1861 to 343 millions in 1887, and as immigrants formed 30 per cent. of the population, they are entitled to take credit for that share of the increase, say 61 millions. Agricultural constituting only 50 per cent. of the wealth of Canada, the total accumulation due to the immigrants will be 122 millions sterling.

There has been, moreover, a notable increase of wealth in the Brazilian provinces of Rio Grande do Sul, San Paulo, &c., where numerous German colonies have converted forests into productive lands. The following table is exclusive of Brazil and Cape Colony.

Country	Wealth Accumulated by Immigrants				
	Period	Arrivals	Mean European Population	Wealth, Million £	Yearly Average per Head
United States	1850-80	8,002,000	4,600,000	949	£ s. d. 6 17 6
Australia	1850-88	1,710,000	1,200,000	714	15 12 0
Argentine Republic	1850 84	880,000	300,000	80	7 14 0
Uruguay	1850-84	305,000	166,000	52	8 18 6
Canada	1861-87	799,000	700,000	122	6 14 0

Except in Australia, the annual accumulations have been pretty much on a level, about £7 to £8 per annum, this ratio applying equally to men, women, and children. From the foregoing figures we can construct a table of the accumulations of emigrants between 1850 and 1888 as follows:—

Emigrants	Mean Number Abroad	Accumulation, Million £	Per Head, £
English	1,200,000	410	34s
Scotch	250,000	95	38s
Irish	1,520,000	411	27s
Germans	1,700,000	452	26s
Various nations	2,296,000	460	20s
Total	6,966,000	1,828	261

It is a coincidence that each emigrant accumulated in the last 38 years about £260, and that this is the precise value set by some writers on each able-bodied adult. The strongest impulse to immigration was given by the Homestead Law of the United States and similar measures, giving lands to colonists at nominal or low prices. Down to 1886 the United States Government had thus disposed of 255 million acres, the Australian colonies 101 million acres. (See *Lands*.)

The total number of persons living out of their own country is approximately as follows (exclusive of Coolies):—

	Per 1000 Inhab.
In Europe*	2,537,000
„ United States	8,510,000
„ Australia	1,200,000
„ River Plate	1,086,000
„ Canada	800,000
„ Brazil	460,000
„ Algeria	190,000
„ Egypt	91,000
„ South Africa	50,000
„ Chile	40,000
„ China and Japan	6,000
„ Other countries	200,000
Total	15,170,000

Foreign residents in the various countries of Europe are as follows:—

	Number		Number
U. Kingdom	155,000	Sweden and Norway	26,000
France	1,115,000	Denmark	61,000
Germany	276,000	Holland	69,000
Russia	148,000	Belgium	143,000
Austria	127,000	Switzerland	211,000
Italy	60,000	Roumania	89,000
Spain	37,000	Greece	20,000

* The number of foreigners in the various European States being 2,537,000, as shown above, it is made up approximately as follows:—

Germans	540,000	Spaniards	120,000
Belgians	460,000	Dutch	72,000
Austrians	360,000	British	70,000
Italians	330,000	Russians	70,000
French	180,000	Swedes	60,000
Swiss	140,000	Various	135,000

Comparing the above figures with the emigration statistics the result is approximately as follows:—

Period	Emigrated	Now Living Abroad
1815-50	4,994,000	430,000
1851-80	15,868,000	8,640,000
1881-88	6,343,000	6,100,000
74 years	27,205,000	15,170,000

from which it appears that 12,035,000 either died abroad or returned to their own countries.

The following table shows European emigration in 1888, as compared with population:—

From	Number	Per Cent. of Population
England	171,000	0.60
Scotland	36,000	0.90
Ireland	73,000	1.60
United Kingdom	280,000	0.74
France	23,000	0.06
Germany	104,000	0.23
Austria	46,000	0.12
Italy	297,000	1.00
Spain	71,000	0.40
Portugal	13,000	0.30
Holland	18,000	0.40
Belgium	23,000	0.40
Scandinavia	77,000	0.90
Switzerland	8,000	0.27

Making a total of 960,000 souls. Their destination was approximately as follows:—

United States	570,000
South America	280,000
British colonies	105,000
Various parts	5,000
Total	960,000

Emigrants from Northern Europe still go mostly to the United States; those from the Mediterranean to South America. The current of emigration to Canada and Australia is chiefly British.

UNITED KINGDOM

Official returns may be summed up as follows:—

	Per Annum
1815-29	314,000
1830-49	2,164,000
1850-69	4,278,000
1870-79	2,153,000
1880-88	3,228,000
74 years	12,137,000

The above, however, includes foreign emigrants, who formed about 22 per cent. of the total. The number of British subjects was a little under ten millions, the following classification of natives of the three kingdoms being

as close as can be ascertained, the figures before 1840, as Porter shows, being defective :—

Scotch	37,000	25,000
Irish	73,000	65,000
United Kingdom	280,000	254,000

At all periods the United States attracted the bulk of the emigration.

The number of colonists who survive and are still abroad, and the number of their children (estimated according to result of United States Census in 1880) may be set down approximately as follows :—

In recent years there has been a steady influx of returned emigrants, averaging 78,000 for the years 1881-88, or about 30 per cent. of the number of emigrants in that period. The remittances by Irish settlers in the United States to their friends at home, from 1851 to 1887, amounted to £32,200,000. The accumulations of wealth by British and Irish emigrants since 1850, as already shown, amounted to 916 millions sterling.

The destinations were as follows :—

FRANCE

In ten years ending 1887 the number of emigrants that left French ports was 460,000, but of these only 55,000 were French, say 5500 per annum.

In five years ending 1872 the number of French emigrants from Havre averaged 5100 yearly. The above figures do not include settlers going to Algeria (for which see *Colonies*, p. 126).

Approximately the emigration from France has been as follows :—

In the above returns the number of English is made to appear 459,000 in excess of, and that of Irish fully 600,000 less than the reality, as shown on p. 248, which is accounted for by the fact that many of the Irish were in earlier years classified as English or British. Moreover, the Census of 1880 showed that Irish settlers were more than double the number of English and Scotch collectively (1,855,000 to 917,000), whereas the above classification down to 1880 would make the ratio as 140 to 100. - The total immigration of 69 years may be correctly summed up as follows :—

	Number	Ratio
English	1,963,000	12.8
Scotch	318,000	2.8
Irish	4,140,000	27.0
United Kingdom	6,421,000	41.8

French	360,000	2.4
Various	3,287,000	21.4
Total	15,334,000	100.0

During 31 years the record of ages was kept ; and if we suppose the ratios to apply to the whole 69 years, the ages of immigrants showed as follows :—

	Number	Ratio
Under 10	2,300,000	15.0
10-20	3,220,000	21.0
20-30	5,670,000	37.0
30-40	2,450,000	16.0
Over 40	1,694,000	11.0
Total	15,334,000	100.0

The returns of the Census of 1880, and the estimates resulting from the immigration since then as to the actual number of foreigners, are :—

	Census, 1880	Arrivals, 1881-88	Estimated Residents, 1888

In the last fifty years the United States received nearly 15,000,000 settlers, and the Census of 1880 showed that every 100 settlers had the following number of children living :—German, 148 ; Irish, 144 ; British, 122 ; general average, 124. The foreign population in December 1883 stood approximately thus :—

	Immigrants	Children	Total
German	2,450,000	3,650,000	6,100,000
Irish	1,920,000	2,760,000	4,680,000

The numbers and proportion of resident foreigners in the whole population have been as follows :—

Year	Population	Foreign Residents	Percentage
1820	9,634,000	177,000	1.8
1840	17,069,000	859,000	5.0

1883	60,000,000	8,510,000	14.2

In the above table "foreign residents" of course include naturalised American citizens. Foreigners and their children, as shown in a previous table, constitute almost one-third of the population.

The net increase of population by settlers may be estimated on comparing the several Census returns ; and allowing for natural increase, the figures result approximately thus :—

The number of British and Irish emigrants who went to Canada from 1815 to 1883 amounted (see p. 248) to 1,577,000, or 90 per cent. of the above total.

The number of victims in Ireland in 1816-17 was stated by Murchison and Kennedy as above.

The Commissioners' report for 1846-47 reduced the number of victims to 600,000 by supposing "that 500,000 Irish went into Great Britain, and that the ordinary death-rate of Irish population is 22 per thousand yearly." Neither supposition was correct, the Census of 1851 showing that only 314,000 Irish had removed to England and Scotland, and the Registrar-General's report for 16 years ending 1880 showing that the normal death-rate of Ireland is 17 per 1000. In 1851 the number of persons missing in Ireland was 3,157,000, accounted for in this manner:—

	Official Report	Real Figures
Emigrated	1,079,000	1,079,000
Went to Great Britain	500,000	314,000
Natural deaths	978,000	755,000
Died of famine	600,000	1,009,000
Accounted for	3,157,000	3,157,000

Deaths from hunger and destitution in the United Kingdom average more than 500 per annum, and are

most frequent in London. In 1879 the deaths recorded from this cause were:—

	Number	Per 1000 Deaths
London	101	1.2
England	312	0.6
Ireland	3,789	37.6
France	260	0.3

In England there were 60 male to 40 female victims; in France 85 to 15. In London the real number of victims was much greater, many of the suicides resulting from hunger. In 1880 Mr. Forster said the Irish death-rate was 10 per cent. over the average of five years. In 1879-80 there were 17,200 extra deaths, apparently caused by destitution, in Ireland.

FASTING

1684. Four men taken alive out of a mine in England, after 24 days without food.

1880. Dr. Tanner, New York, lived on water 40 days, losing 36 lbs. weight.

On December 14, 1810, a pig was buried alive by fall of a cliff at Dover, and on May 23, 1811, it was dug out alive, after 160 days.

In 1870, during the siege of Metz, a dog that was accidentally locked in a room passed 39 days without food and recovered.

It appears that since 1830 the annual public expenditure in Europe per head of population has trebled, but that in the United Kingdom there has been no sensible increase. The ratio per inhabitant has, meantime, risen more in the United States, Canada, Australia, and Argentina than in Europe.

The revenue and expenditure of the principal countries since 1870 have been as follows :—

	1871-88		
	Amount in Million £		
	Revenue	Expenditure	Surplus Expenditure
United Kingdom	1,474	1,467	...
France	2,170	2,935	765
Germany	1,610	1,880	270
Russia	1,192	1,606	414
Austria	1,154	1,342	188
Italy	1,034	1,161	127
Spain	564	784	220
United States	1,228	964	...
Australia	333	464	131
Canada	109	139	30
India	1,152	1,230	78
Other countries	2,500	2,792	292
Total	14,520	16,764	2,244

The revenue and expenditure of Europe were approximately as follows :—

	Millions Sterling £		
	Revenue	Expenditure	Surplus Expenditure
1821-40	3,780	3,840	60
1841-50	2,290	1,320	30
1851-60	2,930	3,400	470
1861-70	3,840	4,760	920
1871-80	5,080	6,030	950
1881-88	5,150	6,110	960
68 years	23,070	26,460	3,390

In 38 years, from 1851 to 1888, the expenditure surpassed income by 3300 millions sterling, say 87 millions yearly, which went mostly in wars and armaments.

In the above table grain includes what is used both for man and beast. The averages per head of population were:—

Period	Lbs. per Inhabitant			
	Grain	Meat	Sugar	Coffee and Tea
1831-40	900	79	5	2
1851-60	1,040	79	8	3
1874-84	1,240	72	22	4½
1887	1,330	79	29	5

The production of wheat, as shown already when treating of Agriculture, has averaged as follows:—

Period	Tons Yearly			
	Europe	United States	Colonies, &c.	Total
1831-40	17,800,000	1,950,000	2,900,000	22,650,000
1851-60	21,420,000	3,430,000	5,120,000	29,970,000
1871-80	28,150,000	8,450,000	8,250,000	44,850,000
1881-87	30,770,000	11,000,000	11,230,000	53,000,000
1888	32,400,000	10,370,000	14,050,000	56,820,000

In the period ending 1840 Europe produced 80 per cent. of the wheat of the world, as compared with 56 per cent. at present. In the interval the production in the United States and in the Colonies has quintupled.

The weight and value of grain used for human food in 1887 are shown approximately in the following table:—

	Tons				Value, Millions £

Total	43,600,000	29,000,000	13,500,000	86,200,000	517

The different kinds of meat produced were as follows:—

Period	Tons Yearly			
	Beef	Mutton	Pork	Total
1831-40	3,821,000	2,050,000	2,830,000	8,701,000

1887	7,205,000	2,709,000	4,479,000	14,393,000

* Spanish statistics, as a rule, bear the impress of exaggeration, and hence the production and consumption of grain and the numbers of live-stock must be doubtful.

The production of other grain during the same period was approximately as follows:—

Period	Tons Yearly			
	Europe	United States	Colonies, &c.	Total
1831-40	62,500,000	11,550,000	4,300,000	78,350,000

1888	105,800,000	68,710,000	9,450,000	183,960,000

The total grain production since 1830 has been approximately:—

Period	Tons Yearly			
	Europe	United States	Colonies, &c.	Total
1831-40	80,300,000	13,500,000	7,200,000	101,000,000

1888	138,200,000	79,080,000	23,500,000	240,780,000

The ratio of increase in production of grain was thus:—

	1831-40	1851-60	1871-80	1888
Europe	100	126	144	172
United States	100	195	430	585
Colonies, &c.	100	160	214	326
Total	100	138	186	238

The consumption of meat in Europe at present averages 61 lbs. yearly per inhabitant, against 64 lbs. in the decade ending 1840, viz. :—

	Lbs. per Inhabitant	
	1840	1888
United Kingdom	87	109
France	43	77
Germany	60	64
Russia	67	51
Austria	76	61
Belgium	50	65

Meantime there has been an increased consumption per head in towns.

About 60,000 tons of frozen mutton are imported into Europe annually from Australia and the River Plate. An engine of 70-horse power serves to refrigerate a chamber containing 250 tons of meat, and consumes 50 tons of coal in a voyage of forty days.

The production of meat was approximately as follows:—

There is a surplus production of 126,000 tons, which is consumed in the West Indies, Brazil, and other countries. At present Europe imports 660,000 tons yearly, and large supplies may in future be obtained from the United States, Australia, and the River Plate. Taking the

slaughter as usual in Europe, viz., 20 per cent. yearly of horned cattle, 40 per cent. of sheep, and 100 per cent. of pigs, and the average carcass at 500 lbs. of beef, 50 lbs. of mutton, and 100 lbs. pork, the annual production and the available surplus for exportation would be:—

	Tons Production				Tons Consumption	Tons for Export
	Beef	Mutton	Pork	Total		
United States	2,190,000	390,000	2,170,000	4,750,000	4,140,000	610,000

The available surplus of the above three countries will be equal to 34 per cent. of the annual meat consumption of Europe, say four months' supply.

At present, however, the beef of the River Plate is out of the question, owing to the poor quality of the beasts. The importation of frozen mutton into England from the Southern Hemisphere has increased rapidly of late years. In 1889 the following quantities were received:—

From	Tons	Value, £	Per Ton, £
Anstralia	30,600	1,290,000	43
Argentina	19,700	750,000	38
Falklands, &c.	7,100	360,000	50
Total	57,400	2,400,000	42

New Zealand sheep average 70 lbs., Argentine 40 lbs., and the approximate cost of the mutton delivered in London is as follows:—

	Pence per Lb.	£ per Ton
First cost of meat	2.5	23.3
Freezing process	0.5	4.7
Freight and charges	1.0	9.4
Total	4.0	37.4

The production of beef-extract has also increased, as the slaughter at Liebig's factory at Fray Bentos, Uruguay, rose from 200,000 head of cattle in 1881 to 580,000 in 1884.

Block gave the average annual consumption of meat in the following cities in ten years down to 1877 as follows:—

In London the apparent consumption is only 230,000 tons, or 128 lbs. per inhabitant, but this does not include tinned meats, such as corned beef.

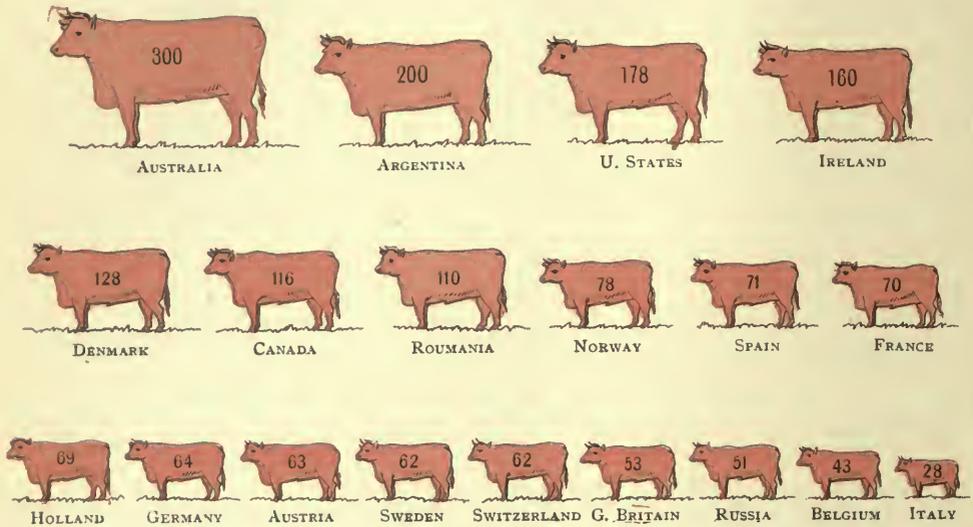

In 1861 the consumption per head was estimated at 172 lbs. in London, 138 in Paris, 119 in Berlin, and 103 in Madrid.

The above represents the values in first hands, to which must be added 30 per cent. for distribution in retail. As regards liquor, the excise duties are not included, these being comprised under Taxes. Professor Keleti estimates the expenditure for food in Austria-Hungary at £9 per man, £7 per woman, and £5 per

child, or £7 per inhabitant, which would be 266 millions sterling; being 20 per cent. over the estimate in the above table : his calculation is probably at retail prices.

* The blanks in the table stand for fractions, the amount of which is included at foot.

The actual amount of salt consumed for food is probably no more than 36 lbs. per inhabitant, as one-half is supposed to be used in manufactures. The following table shows how our bread-supply and meat are provided :—

It appears, therefore, that the United States produce 30 per cent. of the grain, and 33 per cent. of the meat of the world.

The consumption of food compared with population was as follows:—

Year	Lbs. per Inhabitant					
	Wheat	Other Grain	Meat	Sugar	Potatoes	Butter and Cheese
1840	240	1,400	260	19	360	...
1850	220	1,510	224	20	265	20

1887	250	1,610	155	53	170	20

Native sugar only forms 7 per cent. of what is consumed. The importation of coffee and tea has been as follows:—

	Tons Yearly			Lbs. per Inhabitant		
	1861-63	1871-73	1885-87	1861-63	1871-73	1885-87

Tea	11,000	27,000	36,000	0.8	1.5	1.4

The meat product of the United States was approximately as follows:—

Year	Tons				Lbs. per Inhabitant
	Beef	Mutton	Pork	Total	
1840	662,000	172,000	1,286,000	2,120,000	280

1888	2,190,000	390,000	2,190,000	4,750,000	178

It may be seen that the rapid increase of population causes the surplus of meat to diminish. As soon as the production falls to 120 lbs. per inhabitant, there will be no meat to export.

The Americans are the best fed people in the world, and contribute in a great measure to the abundance and cheapness of food in other countries, their share of production being shown thus:—

The forests of the world may be summed up approximately thus :—

Besides the foregoing, there are communal forests, the area of which is not easily ascertained.

SWEDEN AND NORWAY

Sweden and Norway produce about 900 million cubic feet, the felling of which employs 40,000 woodcutters. One-third is used for firewood, the rest made into timber for building, &c., of which 200 million cubic feet are exported. Of the total production, two-thirds correspond to Sweden, one-third to Norway.

BELGIUM

The total forest area is 1,220,000 acres, including 80,000 that belong to the State, and 340,000 to Communes, the rest being private estates. Annual product 70 millions cubic feet, which yields about 7s. an acre.

UNITED STATES

The value of timber and firewood consumed yearly is shown approximately as follows:—

	Value, £	
	1870	1880
Firewood	15,000,000	20,000,000
Fences	30,000,000	40,000,000
Sleepers, furniture, &c.	28,000,000	48,000,000
Export	4,000,000	4,000,000
Total	77,000,000	112,000,000

About 30,000 acres of timber are felled daily, the saw-mills of Maine consuming 50 million feet, those of Michigan 80 million feet monthly. In 1880 the Union counted 25,700 sawmills, with 141,600 hands, whose wages reached £6,700,000 yearly, turning out 18,000 million linear feet of boards, valued at £48,000,000 sterling. The consumption of wood for manufactures is enormous. Even trifling articles of use enter largely into the annual consumption. For example, the Harbour Springs factory turns out 8,000,000 wooden toothpicks daily. Minneapolis requires 2,000,000 barrels yearly for its flour-mills.

The forest area is distributed as follows:—

States	Acres	States	Acres
New England	19,000,000	Southern	233,000,000
Middle	18,000,000	West	196,000,000

Making up a total of 466 million acres.

CANADA

The annual production averages 70 million logs, equal to 560 million cubic feet, and 190,000 masts. The total value is £8,200,000, home use £4,000,000, exportation £4,200,000.

INDIA

Excluding Bengal and Upper Burmah, there are 45 million acres of forest (see p. 56).

AUSTRALIA

According to Simmonds, the forest area is:—

	Acres
New South Wales	3,760,000
Tasmania	4,000,000
Western Australia	19,200,000
Victoria	25,600,000
New Zealand	12,100,000
Total	64,660,000

He adds that in New Zealand it is being rapidly diminished.

FORTIFICATIONS

Louis Philippe spent 16 millions sterling on forts, especially the *enceinte* of Paris. Lord Palmerston spent 7½ millions on the coast fortifications begun by him in 1860. The German Government has spent 2½ millions in military works around Strasburg. The site occupied by

the Paris fortifications is 3900 acres, and was valued in 1840 at £140 an acre; it is now about to be sold for £700 an acre, on the levelling of the forts.

FREIGHT

The carrying trade of the world has been prodigiously developed since the introduction of railways and steam-boats. Down to the year 1850, when the Continent of Europe had only 7600 miles of railway, the ordinary cost of land-carriage for goods was £3 a ton per 100 miles, or six times what it is at present. Freight by sea then averaged over 40s. a ton, or more than double what it is now. The following table shows approximately the tonnage borne by rail and shipping at various dates:—

Year	Millions of Tons		
	Rail	Shipping	Total
1830	3	24	27
1840	16	30	46
1850	97	37	134
1860	193	48	241
1870	602	64	666
1875	715	80	795
1880	893	112	1,005
1887	1,358	139	1,497

The saving to the people of Prussia alone, in having their merchandise carried by rail, was estimated in 1878 at 120 millions sterling per annum; this would imply that the saving in 1887 for all nations (per annum) was as follows:—

	Tons	Millions £ Saved
Europe	752	1,128
United States	552	828
Colonies	54	81
Total	1,358	2,037

This saving may be considered approximately correct, and is equal to 80 per cent. of the total annual expenditure for food (see *Food*) by the nations comprised above. Nevertheless, the cost of railway carriage for goods is by no means uniform; the averages in 1885 showed thus:—

Cost per 100 Miles, Pence per Ton

U. States 63	Italy 108	G. Britain 135
Belgium 70	Austria 111	France 154
Germany 84	Holland 118	Sweden 160

In 1888 the railways of the United Kingdom carried about 260 million tons of merchandise, the average haulage being supposed to be 30 miles: the freight charged was £38,800,000, equal to 120d. per 100 miles. This is precisely the rate charged on the London and North-Western line for carrying meat from Liverpool to London.

American railways have reduced their charges more than 50 per cent. in twenty years, viz.:—

Railways of United States, Charge per Ton 100 Miles

Year	£ s. d.	Year	£ s. d.

The cost of sending a ton of grain from Chicago to Liverpool *via* New York was as follows:—

Year	Chicago to New York		New York to Liverpool	Chicago to Liverpool, Water-Route
	By Water	By Rail		
1868	£ 2 2 0	£ 3 10 0	£ 1 3 0	£ 3 5 0

1880	1 1 0	1 12 0	1 0 0	2 1 0
1884	0 12 0	1 1 0	0 12 0	1 4 0

The above charge for 1884 was equal to 7d. per bushel, and even lower rates have prevailed since then. The charge from Chicago to Liverpool fell 63 per cent. in the above interval of sixteen years. In 1888 the charges from Chicago to European ports per ton were as follows :—

Chicago to	Shillings per Ton	
	Bacon	Flour
Liverpool	37	31
London	35	32
Hamburg	44	37
Antwerp	43	36

The freights current for ocean routes in 1888 were :—

Route	Shillings per Ton	Miles	Pence per 1000 Miles
London to Singapore . .	25	8,400	36
London to Australia . .	27	11,000	30
London to San Francisco .	30	14,000	26

Newcastle to Bombay . .	22	6,500	40
Antwerp to Rio Janeiro .	36	5,400	80
China to New York . . .	45	14,000	39

This gives a general average of 37d. per thousand miles of ocean freight, against 90s. by railway; that is, the latter costs thirty times the former. The President of Civil Engineers in his inaugural speech for 1890 stated that in 1870 it cost £25 to send a ton of merchandise from London to Sydney, which now costs only 30s., a fall of 94 per cent. He added that in 1820 the conveyance of cotton bales from Liverpool to Manchester, thirty miles, cost 40s. a ton, which is now done at 7s., a fall of 82 per cent. With reference to the Manchester ship-canal, it was stated in 1889 that the railway charges between Manchester and Liverpool were still excessive, the freight on a ton of merchandise being as follows :—

Liverpool to Bombay	10 shillings
Liverpool to Manchester . . .	12 ..

The countries which import fruit are the following :—

United States	13,000	40,000	67,000	800,000	2,700,000	4,300,000

The countries which export fruit are the following :—

	1862	1875	1887	1862	1875	1887
Italy	48,000	99,000	240,000	1,200,000	1,600,000	2,200,000
Spain	34,000	72,000	160,000	700,000	1,500,000	2,200,000

Greece	42,000	87,000	107,000	540,000	1,470,000	1,900,000

The price of fruit in most countries has fallen notably in the last thirty years, which is due to the great increase of production, and to improved facilities for bringing fruit to ports for shipment.

Mr. Loring, ex-Commissioner of Agriculture, valued the fruit crop of the United States in 1880 at £42,000,000 sterling, and the annual consumption of fruit at 12s. English, per inhabitant of the Union, and 24s. in New York. The *Royal Agricultural Journal* of England states the acreage under fruit-trees in the United King-

The ordinary expense of carrying goods in 1884 in all countries was estimated thus :—

Shillings per Ton, 1000 Miles			
By sea	5	By railway	100
„ canal	20	„ highroad	300

There is not much difference between the freight paid by waggon on highroads in France and that charged by caravans across Central Africa. Thus, a camel-load of 600 lbs. from Berber to Suakim (280 miles) costs 25s., which is equal to 33s. a ton per 100 miles, 10 per cent. over the ordinary charge by waggon in Europe. The effects of freight on prices are shown by the fact that Athens imports wheat from Odessa because land-carriage in the interior of Greece is £10 a ton per 100 miles, and consequently it is cheaper to consume Russian wheat.

Brazilian railways still charge enormous freights—coffee, for example, paying 550d. per 100 miles, or nine times as much as in the United States. Even freight by water in Brazil is dear, the Brazilian steamers charging £16 a ton from Montevideo to Matto Grosso, the distance being 2500 miles.

In Australia the construction of railways has been attended with the following reduction of freight charges :—

Year	Haulage of One Ton Ten Miles	Pence
1864	75
1872	36
1878	24
1887	18

During the gold fever extravagant sums were paid for freight, the ordinary charge in 1851 from Melbourne to Bendigo being £150 per ton.

Gooseberry	7.2	Grape	14.9

dom, and the importation of apples from abroad, to be thus :—

GOLD AND SILVER

The quantity of precious metals at remote dates of antiquity has been often discussed. The following facts are worthy of note :—

<i>Date</i>		£
B.C. 520.	Cyrus's booty from Asia	8,000,000
B.C. 323.	Alexander's from Persia was 351,000 talents, equal to	81,000,000
B.C. 44.	Julius Cæsar seized in the Roman treasury 520 tons gold and 700 tons silver, together worth	75,000,000

According to Jacob, the Roman Empire in time of Augustus, A.D. 14, possessed 358 millions sterling of gold and silver. Jacob, Tooke, Newmarch, &c., estimated the stock of precious metals in the world at various dates, the result of their views being contained in the following table, with later information added :—

A.D.	Tons		Millions £		
	Gold	Silver	Gold	Silver	Total
1600	830	23,000	116	276	392
1700	1,310	45,000	183	450	633
1800	2,730	88,000	382	760	1,142
1850	3,620	113,000	507	976	1,483
1880	7,800	145,000	1,092	1,090	2,182
1888	8,600	160,000	1,204	1,010	2,214
1890	8,820	165,000	1,235	1,213	2,448

But for the sudden rise of 15 per cent. in the price of silver in 1890, the stock of that metal, at prices of 1889, would stand for no more than 1040 millions sterling.

Several eminent statista have published estimates of the production of precious metals since Columbus discovered the New World.

Soetbeer's table of the production of gold and silver is as follows :—

Period	Tons		Value, Million £			Annual Average of Total, £
	Gold	Silver	Gold	Silver	Total	
1493-1520	162	1,316	23	14	37	1,300,000

He estimated the total stock of gold and silver in Europe in 1492 at no more than £33,400,000, and accounted for the stock and production down to 1829 as follows :—

The value of gold is taken at £140,000 per ton, that of silver at the current market price.

He estimated the production in the rest of Asia as follows :—

362 years	198,440,000	33,520,000	231,960,000	640,000

It is worthy of remark, as shown in Soetbeer's table on the preceding page, that from 1851 to 1888 the annual production of precious metals averaged from 37 to 41 millions sterling. At present it is close on 40 millions, and there is no indication of any future decline.

The production of silver in the last ten years, according to the United States Mint Report, was as follows :—

Year	Ounces Fine Silver			Price, Average Pence per Oz.
	United States	Other Countries	The World	
1880	30,300,000	44,500,000	74,800,000	52

The production of precious metals in the United States is officially estimated as follows:—

Period	Gold, Oz.	Silver, Oz.	Value, £
1845-50	5,200,000	300,000	21,000,000
1851-60	28,500,000	500,000	114,000,000

1871-80	20,500,000	310,000,000	163,000,000
1881-88	13,100,000	310,000,000	129,000,000
44 years	92,000,000	700,800,000	547,000,000

In the above table, however, silver is valued at 60d. per oz.—much above the market price. The gold produced from 1851 to 1888 amounts to 2486 tons, the silver to 20,300 tons, which latter is about 5 per cent. over Soetbeer's estimate. The relative quantities of the two metals, as shown above, and the price of silver per oz., as well as its value in exchange for gold, are given in the following table, which shows conclusively that it is a fallacy to suppose that the world is being flooded with silver. If the production were, as compared with gold,

to be of the same magnitude as in the eighteenth century, we should require double the present quantity to be produced yearly. It appears, meantime, that silver is relatively much less used in manufactures than gold, the annual consumption under this head being 45 per cent. of the gold produced, and 27 per cent. of silver:—

Period	Tons of Silver to 1 of Gold	Price of Silver, Pence per Oz.	Ounces of Silver for 1 of Gold
1600-20	27.7	77.0	12.1

The uses to which the precious metals were put in fifty years down to 1888 are stated by Soetbeer to be:—

Year	Gold, Tons				Silver, Tons			
	Coinage	Manufactures	The East	Total	Coinage	Manufactures	The East	Total
1831-40	50	180	10	240	2,700	2,000	2,200	6,900

The stock of silver is relatively much lower now, as compared with gold, than in the early years of the present century, when there were 33 tons of silver in the world for 1 ton of gold. If the price of silver were ruled by ratio it would have been as follows:—

Period	Ratio of Silver to Stock of Gold	Pence per Oz.
1821-40	33.1	60
1881-88	18.6	107

If the foregoing estimates be correct, there has been a dearth of both gold and silver, the production falling short of the consumption, viz. :—

	1831-80	
	Gold, Tons	Silver, Tons
Production	6,358	57,273
Consumption	6,518	62,200
Deficit	160	4,927

The deficit was probably met by melting down old plate. The current of bullion (coined or uncoined) between nations since 1861 was as follows:—

Since 1881 Great Britain appears to have neither increased nor diminished her stock of gold, but to have exported a small quantity of silver. France has lost gold and gained silver: the United States has done exactly the reverse. India has absorbed both gold and silver.

The total current to and from the United States for sixty-eight years is stated thus :—

Period	Millions £ Sterling

1841-60	34	93

According to Mr. O'Conor, India received in thirty years (1860-89) and retained no less than :—

Gold	£ 113,200,000
Silver	227,000,000
Total	340,200,000

To which he adds 102 millions for the preceding twenty-five years, making altogether 442 millions sterling in fifty-five years. He considers that the gold has been practically withdrawn from circulation, to be hoarded or converted into ornaments. Another writer says that in 280 years ending 1830 India absorbed 55,000 tons of

silver, worth 490 millions sterling. Official tables give the net imports as follows :—

Period	Millions £ Sterling		
	Gold	Silver	Total
1850-59	18	52	70
1860-69	59	101	160
1870-79	18	50	68
1880-85	28	50	78

Mr. N. Spallart summed up the production and consumption of precious metals in fifty years down to 1880 as follows :—

	Value, Millions £ Sterling		
	Gold	Silver	Total
Coinage	543	28	581
The East	78	351	429
Manufactures	294	131	425
Total	915	520	1,435
Production	915	520	1,435

In the above, "coinage" does not include what was minted in the East

The weight of precious metals used in forty years in the various mints (including re-coinage) from 1850 to December 1889 was :—

	Tons		Aggregate Value, Millions £
	Gold	Silver	
Great Britain	1,301	2,620	207
France	2,159	5,135	349
Germany	894	6,420	183
Russia	1,102	2,580	178
Austria	137	5,360	67
Italy	123	2,530	40
Spain and Portugal . .	220	1,480	43

Japan	110	1,100	25
Spanish America	140	7,700	90
Total	9,194	81,235	2,020

The total is made up of 1227 millions sterling of gold, and 793 millions of silver money. The stocks of coined and uncoined bullion appear to have been at various dates approximately as follows :—

A. D.	Gold, Millions £			Silver, Millions £		
	Coined	Uncoined	Total	Coined	Uncoined	Total
1600	29	87	116	102	174	276
1700	75	108	183	225	225	450
1800	126	256	382	360	400	760
1848	157	343	500	388	580	968

1890	790	445	1,235	642	571	1,213

The above table will be clearer if given in tons, viz. :—

A. D.	Gold, Tons			Coined, Ratio per Cent.	Silver, Tons			Coined, Ratio per Cent.
	Coined	Uncoined	Total		Coined	Uncoined	Total	
1600	208	622	830	25	8,500	14,500	23,000	37
1700	537	773	1,310	41	22,500	22,500	45,000	50
1800	908	1,822	2,730	33	42,000	46,000	88,000	48
1848	1,125	2,450	3,575	32	45,200	67,800	113,000	40
1880	5,250	2,550	7,800	67	73,700	71,300	145,000	51
1890	5,640	3,180	8,820	64	88,100	76,900	165,000	53

It appears that coinage now absorbs nearly two-thirds of the total stock of gold, and more than half the silver, whereas forty years ago it took only 32 per cent. of gold, and 40 per cent. of silver.

The actual bulk of gold and silver coin in various countries, according to Spallart, in 1885 was as follows :—

	Tons		Aggregate Value, Millions £ Sterling
	Gold Coin	Silver Coin	
Great Britain	915	2,420	144
France	1,335	16,500	328
Germany	915	4,950	167

Algeria	15	330	5
Spanish America, &c.	232	2,070	50
The world	5,925	88,100	1,591

The total value is made up of 790 millions sterling in gold coin and silver money nominally representing 801 millions, but worth only 642 millions.

In 1886 Spallart estimated the annual consumption for manufactures as follows :—

	Gold, Oz.	Silver, Oz.	Per 1000 Population	
			Gold, Oz.	Silver, Oz.
U. States	683,000	4,020,000	12	70
G. Britain	600,000	2,520,000	16	66
France	595,000	2,600,000	15	65
Germany	420,000	2,870,000	9	60
Switzerland	370,000	840,000	125	285
Austria	84,000	1,120,000	2	28
Italy	155,000	665,000	5	22
Russia	85,000	1,100,000	1	12
Holland & Belgium	102,000	840,000	10	34
Various	56,000	1,445,000
Total	3,150,000	18,020,000

The total makes up 90 tons gold and 515 tons silver yearly, which is in harmony with Soetbeer's estimate.

Besides the consumption for manufactures, gold coin loses 1 per cent. of its weight in fifty years, silver 1 per cent. in ten years. This means a yearly loss of 1 1/4 tons of gold, and 88 tons of silver.

The following table shows the amount of gold and silver plate stamped yearly in the United Kingdom and France :—

Date	United Kingdom, Oz. Yearly		Date	France, Oz. Yearly	
	Gold	Silver		Gold	Silver
	1801-20	6,080		1,072,000	1830

GRAIN

The average yield per acre in various countries, mostly from 1880 to 1887, was in bushels as follows :—

Tables showing the acreage and production of the various kinds of grain will be found under *Agriculture*, p. 8. For consumption, see *Food*.

In the manufacture of grain it is found that 100 lbs. of wheat produce 82 lbs. of flour, and 100 lbs. of barley 78 of malt.

I.

ICE

The consumption in the United Kingdom exceeds 500,000 tons yearly, the quantity imported averaging 300,000 tons, mostly from Norway. The ice-crop of the United States, according to Simmonds, averages 12 million tons, of which the Hudson supplies 2,400,000. The capital employed in this trade in the United States has been estimated at 8 millions sterling; the ice, when cut, is valued at 4s. a ton, but is retailed at 12s. Some of the cities of the world consume as follows:—

	Tons	Lbs. per Inhab.
London	200,000	102
Paris	60,000	60
New York	700,000	1,300
Boston	100,000	700

Russia consumes enormous quantities. St. Petersburg alone counting 10,000 ice-houses.

INCOME

The subjoined table shows approximately the annual earnings or income of nations. It is compiled thus: 90 per cent. of agricultural values, 90 per cent. of mining, 60 per cent. of manufactures. Transport is computed at 10 per cent. on the gross value of agriculture, mining, and manufactures; house-rent, according to the assessed valuation or the nearest estimate; commerce, 10 per cent. on imports and exports; shipping, 30s. per ton yearly of carrying power; banking, 5 per cent. on banking power; and furthermore an allowance of 10 per cent. on the total of the preceding eight items, to cover the earnings of domestic servants, learned professions, army, police, civil service, &c. This is, of course, a conventional method for estimating the earnings of nations, but will answer fairly well for the sake of comparison.

Professor Leone Levi in 1884 estimated the earnings of the people as follows:—

	Millions £ Sterling Yearly			
	England	Scotland	Ireland	U. Kingdom
Upper class . . .	477	59	36	572
Middle class . . .	98	14	8	120

He estimated the wage-earners in 1884 as follows:—

	Number	Millions £	£ per Head
Professional . . .	300,000	16	53
Domestic . . .	2,400,000	86	36

According to income-tax assessments, the number of persons in the United Kingdom since 1860, and Great Britain before that date, having an income of £200 or upwards yearly, was as follows:—

Year	Number	Per Million Population
1812 . . .	39,765	3,314
1850 . . .	65,389	3,115
1860 . . .	85,530	2,949
1870 . . .	130,375	4,206
1880 . . .	210,430	6,313

The number of persons enjoying great wealth has by no means increased in the same ratio. Assessments over £5000 a year showed as follows:—

Year	Number	Per Million Population
1812 . . .	409	34
1850 . . .	1,181	56
1860 . . .	2,558	53
1870 . . .	2,080	67
1880 . . .	2,954	68

Taking the relative numbers of each class to the whole population, we find:—

Persons of	Per Million Inhabitants		Rate of Increase
	1860	1880	
Great wealth . . .	53	88	66 per cent.
Easy fortune . . .	2,949	6,313	112 „

This shows a greater diffusion of wealth, contrary to

the common impression that “the rich are getting richer every day.”

The classification of incomes in 1877 was as follows:—

	Over £10,000	£1000 to £10,000	£150 to £1000	Total
England . . .	975	18,622	275,733	295,330
Scotland . . .	147	2,191	27,642	29,980
Ireland . . .	35	878	14,473	15,386
U. Kingdom	1,157	21,691	317,848	340,696

The earnings of the classes which pay income-tax are supposed to reach just one-half those of the nation. Levi made the earnings of the working-classes in 1883 amount to 521 millions, and Jeans in 1884 to 535 millions sterling. The assessments to income-tax have more than doubled since 1850, the following table including an estimate of 18 millions for Ireland in 1850 (in which year that country was exempt from this tax):—

Year	Annual Income, Millions £			
	Houses	Lands	Professions, &c.	Total
1850 . . .	47	56	171	274
1860 . . .	61	58	216	335
1870 . . .	77	65	303	445
1880 . . .	115	70	392	577
1888 . . .	135	61	440	636

Year	England	Scotland	Ireland	United Kingdom
1860 . . .	282	30	23	335
1870 . . .	379	40	26	445
1880 . . .	486	56	36	578
1888 . . .	543	57	36	636

The relative increase of the several items of income since 1850 showed thus:—

Year	Houses	Lands	Railways	Professions	Total
1850 . . .	100	100	100	100	100
1860 . . .	130	104	143	125	122
1870 . . .	164	116	228	174	162
1880 . . .	238	123	295	228	211
1888 . . .	280	107	351	252	232

The relative increase of each of the three kingdoms since 1860 was:—

Year	England	Scotland	Ireland	United Kingdom
1860 . . .	100	100	100	100
1870 . . .	34	133	113	133
1888 . . .	193	190	156	191

FRANCE

The income has been estimated as follows:—

Year	Millions £	£ per Inhab.	Population
1780 . . .	160	6.1	26,300,000
1800 . . .	216	7.7	27,400,000
1820 . . .	315	10.4	30,300,000
1840 . . .	480	14.1	34,000,000
1868 . . .	806	21.6	37,500,000
1888 . . .	1,046	27.8	38,500,000

The distribution of income, according to house valuation, seems to be approximately as follows:—

Class	Number of Families	Average Income, £	Amount, Millions £
Rich . . .	160,000	800	128
Middle . . .	1,700,000	260	442
Working . . .	6,000,000	79	476
Total . . .	7,860,000	133	1,046

GERMANY

In 1885 Soetbeer and others estimated the earnings of the people of Prussia, Saxony, and Baden at 517 millions sterling, to which adding *pro rata* for the rest of Germany, the table stands thus:—

	Population	Earnings, £	Per Head, £
Prussia	28,300,000	438,000,000	15.5
Saxony	3,180,000	57,100,000	18.0
Baden	1,600,000	22,400,000	14.0
Bavaria, &c. . .	13,770,000	220,000,000	16.0
Total	46,850,000	737,500,000	15.8

The above, perhaps, has reference only to the classes liable to income-tax, the total being manifestly too low to include also the working-classes.

The income-tax assessments of Prussia in 1881 and 1886 were as follows:—

Income,	Families Assessed	
	1881	1886
£150 to £210	79,000	89,600
£210 to £480	71,700	82,400
Over £480	21,800	26,800
Total	172,500	198,800

The above comprises only families with incomes over £150 a year. In 1883 there were 7,800,000 persons paying a poll-tax whose incomes were under £150. In Saxony the income assessments were:—

Year	Number	£
1875	972,000	50,900,000
1884	1,213,000	57,100,000

The annual earnings of the whole Empire would seem to be distributed approximately as follows:—

Class	Families	Average, £	Total, Millions £
Rich	150,000	1,230	185
Middle	1,200,000	240	288
Working	8,050,000	75	603
Total	9,400,000	114	1,076

gross earnings of the German people in 1889 amounted to 1076 millions sterling, or £22 4s. per inhabitant, against £28 in France, and £34 in the United Kingdom.

AUSTRIA

Neumann Spallart estimated the national earnings at 600 millions sterling in 1874, as compared with 430 millions in 1868, and 336 millions in 1859, this last being Czernig's estimate. If we take the florin at its nominal value of 24d., the estimate of Roschman for 1883 will be 650 millions sterling; but if we allow for the depreciation of the currency, it will not exceed 610 millions. My estimate for 1888 is 616 millions sterling, as shown in the table.

ITALY

Official returns published in 1881 give a very inadequate idea of the earnings of the nation; the first two columns are official, the last is the apparent result:—

Income,	Number Assessed	Gross Result, £
Under £40	559,000	8,400,000
£40 to £200	71,000	7,100,000
£200 to £400	5,300	1,600,000
Over £400	3,200	11,300,000
Total	638,500	28,400,000

As already shown, the earnings of the Italian nation are about 364 millions sterling, or £12 per inhabitant, which is less than half the average per head in France.

UNITED STATES

In 1840 Tucker's estimate of the earnings of the American people was 1066 millions dollars, or 221 millions £ sterling, made up thus:—

Product of farms	£137,200,000
Manufactures, &c. . . .	83,600,000
Total	220,800,000

The above estimate was too low, seeing that agricultural products were worth 184 millions sterling (as already shown).

The national earnings at various dates are shown approximately thus:—

	Millions £		
	1850	1870	1886-89
Agriculture	225	452	698
Manufactures	127	444	866
Mines	40	60	96
Transport	50	130	231

Shipping	7	10	12
Banking	5	19	52
Sundries	109	218	371
Total	570	1,350	2,358

This left a profit of £520,000, say about 6 per cent. on a capital of £8,500,000 sterling. The following is an official record of all payments by insurance companies for losses by fire or other calamity:—

	1871	1885
Fire	£ 1,560,000	£ 2,280,000
Hail	1,920,000	5,100,000

Cattle-plague	1,800,000	1,500,000
Phylloxera	6,640,000
Sundries	220,000	880,000
Total	10,000,000	17,800,000

The total payments in 1881 were £16,000,000, including £5,700,000 for phylloxera.

RUSSIA

Official estimates for 1884-85 show an average loss of property yearly amounting to £9,100,000 sterling, of which £3,300,000 covered by insurance. The loss compared with population is estimated at 4s. per head in towns, and 2s. in the rural population yearly.

AUSTRIA

Policies paid on losses caused on farms in 1886 amounted in Austria to £2,900,000, of which £1,800,000 by fire, the rest by hail. Losses paid on farms in Hungary for fire were £1,100,000, being 20 per cent. over the average of six preceding years.

UNITED STATES

The *Journal of Commerce* (New York) gives the following:—

Year	Insurances in Force, £	Loss by Fire, £
1875	1,260,000,000	16,200,000

1885	2,180,000,000	21,400,000

The above table shows the total loss by fire, insured and uninsured. The latter shows the amounts paid by the companies for losses:—

Marine Insurance

In 1880 the amount of marine insurance was estimated at 887 millions sterling, viz.:—

	Millions £
Lloyds	480
Hamburg	105
French, &c.	302

In 1888 the aggregate returns of seven Liverpool companies showed an average premium on all insurances during three years of only 7 per 1000, viz.: Average annual insurances, 137 millions sterling; premium, £950,000; damages settled, £400,000; expenses of management, £100,000; annual dividend, 14 per cent. on a paid-up capital of £840,000. The losses, therefore, of ships and cargoes were only 3 per 1000 of value.

The Hamburg Company showed as follows:—

Year	Insured, £	Rate per 1000
1803	400,000	...
1820	11,000,000	17
1840	20,000,000	15
1860	47,000,000	14
1878	105,000,000	12

The French marine insurance returns were:—

	1884	1886
Policies issued	£ 200,100,000	£ 175,100,000
Premiums	740,000	710,000
Rate per £1000	3.7	4.1
Losses paid	530,000	460,000

The losses, therefore, averaged 53s. per £1000.

IRON

The production of pig iron, which amounted to 60,000 tons in the year 1500, advanced very slowly until the nineteenth century. The following table shows the quantities approximately:—

Continent, &c.	680,000	655,000	1,335,000
Total	1,940,000	1,715,000	3,655,000

According to Mr. Chisholm's tables and others, the production of steel in all countries has been as follows since 1870 :—

The aggregate production of steel in forty years may be set down approximately as follows :—

Period	Tons					
	Great Britain	United States	Germany	France	Various	Total
1850-69	2,600,000	700,000	1,300,000	800,000	700,000	6,100,000
1870-79	8,300,000	3,800,000	3,100,000	2,200,000	2,100,000	19,500,000
1880-89	25,100,000	21,700,000	12,200,000	3,800,000	6,100,000	68,900,000
40 years	36,000,000	26,200,000	16,600,000	6,800,000	8,900,000	94,500,000

In twenty years ending 1889 it appears that railways have absorbed 43,500,000 tons of steel, or almost half the total product. The life of an iron rail is sixteen, that of a steel one forty, years.

Sweden exports yearly 200,000 tons bar iron and 60,000 tons pig-iron. Her manufactures of iron and steel are about £4,200,000.

BELGIUM

In 1816 Mr. John Cockerill, from England, introduced the method of smelting with coke, and established at Seraing one of the finest ironworks in Europe. The industry advanced greatly after the separation from Holland in 1830, but its most striking progress has been in the last thirty years. Official returns since 1845 show as follows:—

Year	Blast Furnaces	Operatives	Output, Tons	
			Iron	Steel
1845 . . .	56	14,600	62,000	...
1850 . . .	65	11,600	73,000	...
1860 . . .	51	26,300	218,000	...
1870 . . .	48	41,200	523,000	4,000
1880 . . .	36	37,300	493,000	132,000
1887 . . .	29	34,100	534,000	216,000

The exports of bar and wrought iron were as follows:—

Year	Tons	Value, £	Year	Tons	Value, £
1860	63,000	440,000	1875	183,000	2,000,000
1865	118,000	800,000	1880	228,000	1,600,000
1870	220,000	1,400,000	1887	335,000	1,600,000

The iron and steel manufactures are worth about £10,600,000.

UNITED STATES

In 1620 a group of forty ironworkers arrived from Sussex, England, and commenced to make iron, but in 1662 a decree was issued to prohibit the importation of this metal, with the view to promote iron manufactures in the Colony. This prohibition was removed in 1682. The first regular foundry in North America was that established by Joseph Jenks in 1663, at Lynn, Massachusetts. There were six existing in the Colonies in 1750, when the British Parliament passed a law to close all mills, forges, or furnaces in the Colonies, the better to protect British manufactures. After the Independence this branch of industry made progress, but soon collapsed, owing to the influx of British merchandise. In 1833 Frederick Gershenhamer obtained a patent for using hot-blast with anthracite coal, and in 1835 produced the first iron so made.

The total output of iron, which was only 40,000 tons in 1796, rose to 287,000 in 1840, viz.:—

	Tons
Pennsylvania	98,000
Ohio	35,000
Other States	154,000
Total	287,000

A table published in the latter year compared the production and the number of operatives with 1830 as follows:—

Year	Operatives	Tons Iron	Tons per Man
1830	29,000	184,000	6.3
1840	56,000	287,000	5.1

From this time the construction of railways, especially after the war of 1861-65, gave a great impetus to this industry, the production being as follows:—

Year	Tons
1850	564,000
1870	1,580,000

In 1873 there were 719 furnaces at work. In 1889 the output of pig-iron reached 7,600,000 tons, being second only to Great Britain.

The Census returns of foundries and ironworks showed thus:—

	1870	1880
Hands	178,600	141,000
Wages, £	7,500,000	11,600,000
Manufactures, £	37,400,000	62,000,000

The production of pig-iron in 1888 and 1889 was as follows:—

	1888 Tons	1889 Tons
Pennsylvania	3,200,000	3,730,000
Ohio	990,000	1,090,000
Other States	2,300,000	2,780,000
Total	6,490,000	7,600,000

The manufacture of steel dates from 1808: as follows:—

Year	Tons
1808	900
1850	2,000
1860	12,000
1870	64,000
1876	520,000
1889	3,390,000

At present the United States produce one-third the steel of the world. The make of steel in 1880 included 1,510,000 tons of rails.

The rivalry between Great Britain and the United States in iron and steel production is thus indicated by Mr. Swank:—

	Great Britain, Tons		United States, Tons	
	1882	1889	1882	1889
Pig-iron	8,580,000	8,250,000	4,620,000	7,605,000
Steel ingots	1,670,000	2,140,000	1,510,000	2,930,000
Steel rails	1,230,000	940,000	1,280,000	1,510,000

The production of steel of all descriptions in 1889 was 3,690,000 tons in Great Britain and 3,390,000 in the United States.

IRRIGATION

FRANCE

Only 260,000 acres irrigated, which yield crops worth £3 per acre more than ordinary.

ITALY

The canals in the Po valley irrigate 1,370,000 acres, which receive every day in summer 45 million tons of water, measured through a great number of little sluice-gates: the permanent right to an inch of water is worth from £500 to £800. The usual rent of these lands is £6 per acre per annum.

BELGIUM

Since 1859 an area of 160,000 acres of waste lands has been made valuable by irrigation, adjoining State canals.

SPAIN

Land unwatered may be rented at 5s. an acre, but the irrigated lands of Valencia, where the old canals and works of the Moors remain, readily rent at £5 per acre. The total area of irrigated lands is 2½ million acres.

ALGERIA

The most important work is the "barrage" at Habra, with a basin holding 30 million tons of water, the main wall being 110 feet high, 120 feet thick, and 1500 feet long. The distributory canals are 310 miles, irrigating 70,000 acres. It belongs to a French Company, and cost £160,000.

K.

KANGAROO

These animals will soon be extinct, as the squatters kill them wholesale. The export of kangaroo skins from Melbourne was as follows:—

Year	No.	Value, £
1883	20,000	1,500
1888	260,000	54,000

Kangaroos can jump a fence 11 feet high.

KOUMISS

Extracted by the Tartars from mares' milk, a gallon of milk giving three ounces of Koumiss brandy.

KINGS

There are 22 kings or emperors. The number who have ruled in various countries since the battle of Hastings, A.D. 1066, has been as follows:—

	Average		Average	
	No.	Reign, Years	No.	Reign, Years
England	35	23	Spain	32
France	34	24	Denmark	39
Germany	39	21	Sweden	53
Russia	50	16	Turkey	35

The Turkish dynasty dates only from 1299. The average reign of the above 317 monarchs was just twenty years.

L.

LABOURER

Dr. Farr estimates the value of an agricultural labourer to the commonwealth as follows:—

Age	Value, £	Age	Value, £	Age	Value, £
10	117	30	241	55	138
15	192	35	228	60	97
20	234	40	212	65	46
25	246	50	168	70	0

These figures of Dr. Farr have been often called in question as being too high, but the best authorities in the United States and Australia set even a higher value on able-bodied immigrants.

LACE

This industry employs in Great Britain 9000 men and 41,000 women, who produce lace annually to the value of 6 millions sterling. It is stated that more than 500,000 women on the Continent make lace worth 30 millions yearly, or £60 each, but this seems a high average.

LAKES

The following table is merely intended as a comparison of some of the most remarkable lakes in the world:—

	Square Miles	Depth, Feet	Area Equal to

LAND

The following conspectus shows at a glance the distribution and tenure of land in various countries, the number of owners, the approximate value, the cultivated area, and other important features. The "data" do not correspond to any particular year, but represent the latest information:—

Colbert in his letter to Louis XIV. estimated the value of land in France, England, and Holland in the seventeenth century (1660) as follows:—

	Value	Rental	Per Acre	
			Value	Rental
	£	£	s.	s.
France	122,000,000	15,000,000	24	3
England	135,000,000	8,500,000	90	6
Holland	49,000,000	4,000,000	180	15

BELGIUM

Excluding holdings of less than 2½ acres, the tenure of land has been :—

Acres	Number of Holdings			Holdings in 1880.		
	1846	1866	1880	Cultivated by Owners	By Tenants	Total
2½-12	166,000	220,000	226,000	152,000	74,000	226,000
12-50	69,000	82,000	74,000	51,000	23,000	74,000
Over 50	19,000	22,000	15,000	8,000	7,000	15,000
Total	254,000	324,000	315,000	211,000	104,000	315,000

In 1866, according to Consul Grattan's report, only 34 per cent. of the land was cultivated by proprietors; in 1880, by the official returns, the proportion was 60 per cent.

GREECE

In 1836 the State sold farm-lots of 30 acres each to a large number of agricultural families at 47s. per acre, say £70 per farm. In 1862 there were 147,500 peasant proprietors, who held 5,600,000 acres, an average of 38 acres, one-third being under crops; also 16,100 landed gentry with large farms, who usually let their lands to tenants at 22s. per acre. The area of the kingdom was as follows :—

	Acres
Under crops	1,920,000
Capable of cultivation	3,700,000
Woods	1,440,000
Mountain and pasture	4,700,000
Total	11,760,000

ALGERIA

The land grants ceded to settlers were :—

	Acres
1840-70	2,110,000
1871-80	1,120,000
Total	3,230,000

The tenure is described at p. 40. Only 4 per cent. of the landed area is held by European settlers, the Arabs holding 52 per cent. in farms of 100 acres per family, and the remainder (44 per cent.) being under forest or Crown-lands.

UNITED STATES

The area of the United States and the portion under cultivation appear as follows :—

Date	Total Area, Millions of Acres	Under Farms, Millions of Acres	Improved, Million Acres	Ratio under Farms, per Cent.	Ratio of Improved, per Cent.
1776	269	80	30	30	11
1810	1,018	164	64	36	6
1850	1,902	293	113	16	6
1860	2,291	407	163	18	7
1870	2,291	410	190	18	8
1880	2,291	534	285	23	12
1888.	2,291	...	356	...	15

The above are official returns except for 1888 (see fourth paragraph on p. 43, *Agriculture*), and estimate of farms in 1776 based on Census of 1790.

Sales of public lands in United States were as follows :—

Period	Acres	Amount Received, £	Annual Average Acres Sold
1787-1810	4,700,000	1,800,000	200,000
1811-20	15,300,000	8,600,000	1,530,000
1821-30	10,100,000	2,800,000	1,010,000
1831-40	62,300,000	14,100,000	6,230,000
1841-60	68,500,000	12,700,000	3,430,000
1861-80	94,100,000	9,500,000	4,710,000
Total	255,000,000	49,500,000	2,700,000
1881-88	99,400,000	...	12,400,000
Grand total	354,400,000	...	3,500,000

The sales of lands during ten years ending 1889 showed thus :—

	Acres	Acres
Dakota	41,300,000	Minnesota 9,000,000
Kansas	23,200,000	Florida 7,300,000
Nebraska	21,000,000	Montana 6,700,000
Washington	12,900,000	Louisiana 4,300,000
California	11,400,000	Various 39,500,000
Colorado	10,900,000	Total 187,500,000

The disposal of public lands in 102 years was approximately as follows :—

	Millions of Acres		
	1787-1860	1861-1888	Total
Sold	154	68	222
School grants	68	9	77
Railway grants	26	166	192
Military grants	44	18	62
Homestead grants	125	125
Sundry grants	45	18	63
Total	337	404	741

In this last table Homestead grants are distinguished, but in the preceding one they are included among lands sold. In eight years ending 1887 the lands taken up by settlers comprised 124 million acres of Government lands and 18 millions belonging to railway companies, in all averaging 18 million acres yearly, say 120,000 farms of 150 acres each. The Homestead Law of 1862 has had a powerful influence in promoting agriculture, the area of improved lands being now apparently 356 million acres against 163 millions in 1860, an increase of 118 per cent., the area newly improved each year averaging 7,100,000 acres. By this law any immigrant family can obtain a farm-lot of 160 acres, on condition of five years occupation, without other cost than £3 for the title-deeds. From 1862 to 1886 no fewer than 690,000 families received farm-lots of this kind, covering 111 million acres, or one-fifth of the total area under farms.

According to the agricultural product of 1886 for the Union, the average for these Homestead farms would be products of an annual value of 155 millions sterling, or £220 per family, and the farms would represent a capital value of 816 millions sterling, or nearly £1200 per farm. Compared with the total earnings of the nation, these

Homestead farmers appear to earn almost 8 per cent., and the value of their farms and stock stands for 7 per cent. of the aggregate wealth of the United States.

The number and area of farms in the great divisions of the country, according to Census reports, were as follows:—

States	Number of Farms				Millions of Acres			
	1850	1860	1870	1880	1850	1860	1870	1880
New England	167,000	185,000	182,000	207,000	18	20	21	22
Middle	351,000	413,000	456,000	539,000	43	47	49	53
Southern	488,000	640,000	849,000	1,481,000	165	220	185	227
Western	444,000	716,000	1,167,000	1,778,000	67	120	155	232
Total	1,450,000	1,954,000	2,654,000	4,005,000	293	407	410	534

The proportion of farms over 100 acres is increasing:—

Acres	Number of Farms			Ratio		
	1860	1870	1880	1860	1870	1880
Under 20	306,000	467,000	390,000	15.0	17.6	9.8
20-50	617,000	848,000	781,000	30.1	32.0	19.5
50-100	609,000	754,000	1,033,000	29.8	28.4	25.7
100-500	487,000	565,000	1,696,000	23.9	21.3	42.4
Over 500	25,000	20,000	105,000	1.2	0.7	2.6
Total	2,844,000	2,654,000	4,005,000	100.0	100.0	100.0

The size of farms in the Union is, however, diminishing, as appears from the following Census reports, viz:—

Census	Number of Farms	Area, Acres	Average Acres per Farm
1850	1,450,000	293,000,000	202
1860	2,044,000	407,000,000	200
1870	2,654,000	410,000,000	154
1880	4,005,000	534,000,000	134

It may be noted that farms over 100 acres constituted only 22 per cent. of the total in 1870, and rose to 45 per cent. in 1880.

Although most of the farms are cultivated by the owners, the three forms of tenure known in France and Italy exist in the United States, namely, owners, tenants, and "metayers," the last-mentioned giving the landlord half or other portion of the crops in lieu of rent.

The Census of 1880 showed as follows:—

Farms Held by	New England	Middle States	Southern	Western	Total
Proprietors	190,000	510,000	690,000	1,594,000	2,984,000
Tenants	10,000	56,000	141,000	115,000	322,000
Metayers	7,000	88,000	306,000	302,000	703,000
Total	207,000	654,000	1,137,000	2,011,000	4,009,000

The proportion of these holdings is shown as follows:—

Held by	New England	Middle States	Southern	Western	Total
Proprietors	91.8	78.0	60.6	79.2	74.5
Tenants	4.8	8.5	12.4	5.7	8.0
Metayers	3.4	13.5	27.0	15.1	17.5
Total	100.0	100.0	100.0	100.0	100.0

It will be observed that the metayer or share system is

twice as common as that of tenants paying rent in money. The above table refers merely to the number of farms.

The classification according to size of farms in 1880 was:—

Acres	Number of Farms held by			To
	Owner	Tenant	Metayer	
Under 10	88,000	24,000	27,000	139,000
10-50	583,000	138,000	314,000	1,035,000
50-100	805,000	70,000	159,000	1,034,000
100-500	1,416,000	85,000	196,000	1,697,000
Over 500	92,000	5,000	7,000	104,000
Total	2,984,000	322,000	703,000	4,009,000

The value of land per acre is highest in New Jersey, the Agricultural Report for 1888 showing the following table of averages:—

State	Dollars per Acre	State	Dollars per Acre
New Jersey	65	Vermont	36
Massachusetts	50	Maryland	32
Ohio	46	Illinois	32
New York	44	Wisconsin	23

In some of the Western States it is less than five dollars or £1 sterling per acre.

The following table shows the areas of lands improved and unimproved, the number of hands engaged in agriculture, and the value of the farms:—

States	Millions of Acres							
	Improved				Unimproved			
	1850	1860	1870	1880	1850	1860	1870	1880
New England	11	12	12	13	7	8	8	8

1860	19,581	8,550,000
1870	56,015	19,460,000

In 1880 there were 23,000 school libraries containing 45,000,000 volumes, and 314 large public libraries, exclusive of all containing less than 10,000 volumes.

LIFE

The following table shows the expectation of life in various countries at different ages:—

Age	Years to Live					
	Eng-land	United States	Belgium	Holland	Saxony	Sweden
10	49.2	48.7	44.3	46.5	47.0	48.0
20	41.0	42.2	37.1	38.9	39.3	40.1

70	8.9	8.5	8.2	8.0	6.9	8.0
80	5.5	4.4	5.3	4.6	3.9	4.1

The expectation of life is always longer with females than males, viz:—

Age	Years to Live							
	England		Holland		Sweden		Belgium	
	Male	Female	Male	Female	Male	Female	Male	Female
Birth	41.9	45.2	34.1	36.4	41.3	45.6

It will be observed that the mean expectation at five years of age is greater than at birth, but after five years it diminishes. Finlayson's table of expectation for English ladies of fortune coincides closely with the result of widows in France in receipt of pensions:—

Age	Years of Life		
	English Ladies	French Widows	French Male
40	29.9	29.3	...
50	23.0	22.8	18.7
60	16.2	16.0	14.3
70	10.1	10.1	8.7
80	5.7	5.9	4.4

Kasper gives the percentage of persons of various professions who reach 70 years thus:—

	<i>Per Cent.</i>		<i>Per Cent.</i>		<i>Per Cent.</i>
Physician	24	Lawyers	29	Merchants	33
Teachers	27	Clerks	32	Farmers	40
Artists	28	Soldiers	32	Clergy	42

Expectation of life varies as follows in England with condition:—

Age	Years to Live			
	Gentry	Farm Labourers	Sober	Intemperate
20 . . .	38	48	40	14
30 . . .	31	41	34	13

In the United States the span of life for various professions is as follows:—

	Years		Years
Shopmen . . .	41.8	Mechanics . . .	47.3
Waggoners . . .	43.6	Merchants . . .	48.4
Labourers . . .	44.6	Lawyers . . .	52.6

Madden's table of famous men, and Neville's average for professions at Frankfort, give the following spans of life:—

Many remarkable cases of longevity are recorded in all countries and all ranks of life.

1. Countess of Desmond, killed by falling from a cherry-tree in her 146th year. 2. Thomas Parr, died after a dinner-party at Lord Arundel's, aged 152. 3. Cardinal de Salis, who recommended daily exercise in all weathers, aged 110. 4. John Riva, of Venice, who chewed citron bark daily, died aged 116, leaving a son of 14 years. 5. Henry Jenkins, died aged 116, at Bolton-on-Swale in 1670. 6. Mme. Koviro, aged 164, who died in 1741, leaving a son aged 116. 7. Peter Garden, died at Edinburgh in 1775, aged 131. Bertherand's death-roll of slaves at Carthage showed 5 per cent. over 80, and 1 per cent. over 100 years. The Third Legion of Augustus had a death-record which showed that 17 per cent. passed 70 years. Moreover, Pliny says—"The year of our Lord 76 is memorable, for in that year there was a Census from which it appears that in the part of Italy lying between the Apennines and the River Po, there were found fifty-four persons 103 years old; fifty-seven 110 years; two 120 years; four 130 years; four 135 years; and three 140 years each."

In the eighteenth century Sejoncourt published a list of 49 persons who had died between the ages of 130 and 175 years. Among centenarians of recent date were Mrs. Anne Butler, daughter of Admiral Winn, died at Portsmouth, January 1883, aged 103, and Mrs. Betty Lloyd, at Ruabon, Wales, March 1883, aged 107. According to Dr. Farr's tables, of one million male and female persons born, 77 males and 147 females will reach 100 years; but the newer tables of Dr. Ogle give only 41 males and 112 females.

A meeting of 2000 persons over 70 years of age is annually held at Leicester, and of these 400 die before the next anniversary.

Korösi shows that poverty and overcrowding shorten the span of life at Buda-Pesth: in healthy quarters it is 47 years, in the workmen's tenement dwellings only 32 to 37.

Evidence to the same effect will be found in other parts of this book; the reader has only to turn to the Index for the items *Infant-mortality* and *Overcrowding*.

See Sir James Douglas's report to the British Association in 1886. The cost of lighting Smeaton's Eddystone lighthouse in 1759, with a light of 67 candle-power, was

18d. per hour, a sum now sufficient to provide a light of 160,000 candle-power. Canada uses 100,000 gallons of petroleum for lighting yearly, at a cost of £4000. Dunge-ness first adopted the electric light in 1862, and the French lighthouses followed in 1863.

LIGHTNING

According to Mr. Preece, there are 500,000 lightning conductors in the United Kingdom. The number of houses burnt yearly by lightning in Bavaria was:—

1833-43	32
1880-82	134

The number of persons killed by lightning averages 23 in England, 92 in France, 165 in Germany, 908 in Russia.

LIVING, COST OF

The cost of a workman's food in various countries in 1880 was:—

	Shillings per Week		Percentage of Food Cost

The following table shows approximately the expenditure of the principal nations in the ordinary items that make up the cost of living. Food is at wholesale price in first hands (retail price being 30 per cent. higher), and taxes include all duties, tolls, and rates, direct or indirect, that go towards national or local revenues:—

	Millions £ Yearly

It is hardly necessary to say that the foregoing table is merely intended to shew comprehensively in round numbers the annual outlay of each nation under the principal headings and in the aggregate. Nothing like mathematical accuracy is to be expected, for it would be impossible. The figures, however, are not set down at random, but are estimates based on the observations of well-known writers and whatever is available in the way of official or semi-official statements. It is true that the cost of food, and indeed the outlay under any of the above heads, is likely to vary remarkably from one year to another, from which some persons may feel disposed to think that the table is of no value whatever. But this is an objection that might be made to many tables of a similar kind, whether in the present work or in those of other writers.

A statement was published in Paris in 1882 of the cost of maintenance of an artisan's family, and another by Miss Octavia Hill of a similar family in London in 1888, viz. :-

	Weekly Expenditure, Pence	
	Paris	London
Rent	30	69
Clothing	24	56
Coal and light	10	16
Bread	90	40
Meat	63	48
Vegetables and fruit	21	36
Milk, butter, &c.	39	23
Tea and coffee	14	16
Sugar	7	10
Wine and liquor	35	10
Total	£1 7 9	£1 7 0

The earnings in both cases are supposed to reach 30s. a week. The London artisan has to pay, moreover, 20d. a week to his insurance club: his surplus therefore is only 16d. a week.

The retail prices paid by workmen for food in 1880 were (pence):—

FRANCE

The cost of maintaining a small family of the middle class has been at various dates as follows:—

Year	Per Annum, £	
	France	Paris
1789	15	29
1840	19	48
1860	44	114
1880	51	135

In the seventeenth century the maintenance of a noble family cost £600. per annum, but 10 francs at that time contained as much silver as 19 at present, and £600 was therefore in reality £1100, irrespective of the superior purchasing power at that period. In 1679 Madame de Maintenon writes to her sister, whose family consisted of

her husband, herself, seven male and three female servants, "You can live like a princess on £600 a year," viz. :-

	House Expenses		Per Annum
Meat	£44	Food, &c.	£240
Bread	20	Rent	40
Wine	20	Wages	40
Butter	36	Opera, &c.	120
Sundries	120	Dress, &c.	160
Total	240	Total	600

The expenditure of the population of Paris in 1826 was :-

	Per Inhabitant	Amount

The chief items of food were :-

	Per Inhabitant	£ s. d.

Wine, gallons	25	3 2 0
Meat, lbs.	165	3 19 0
Dairy	1 0 6
Sugar, lbs.	26	1 0 0
Sundries	2 8 0
Total	14 2 0

The Industrial Committee of Mulhouse reported that of every 100 francs earned by a workman, 20 went for bread, 15 for groceries, 18 for milk, &c., 8 for meat, 15 for rent, and 16 for clothes, leaving 8 francs for sundries.

GERMANY

In 1850 the annual maintenance of a peasant family of five persons in Prussia cost as follows :-

	£ s. d.
Food	16 0 0
Clothing	5 8 0
Rent	2 14 0
Coal and light	2 14 0
Taxes	1 5 0
Sundries	3 9 0
Total	31 10 0

Engel estimates the annual cost of maintenance for a peasant family in Germany thus :-

Man	£ 19
Wife	16
Three children	21
Family of five persons	56

He considers that a child of 10 years represents an outlay of £80, a youth of 15 one of £140.

Roth estimates that a child of 10 has cost £132, and one of 13 no less than £186.

Engel's figures are preferable. The students of Heidelberg University in 1871 were able to maintain themselves at an average outlay of £31

per annum, but this rose to £58 in 1875, and to £69 in 1878.

RUSSIA

The income and expenditure of a fisherman's family, yearly is as follows :-

Income	£ s. d.	Expenditure	£ s. d.
Game, 200 lbs.	2 10 0	Rye, 1 ton	7 0 0
Caviar, 200 lbs.	2 10 0	Taxes	2 6 0

Woodcutting	2 10 0	Sundries	0 14 0
Total	12 10 0	Total	12 10 0

As regards the income and expenditure of the ordinary Moujik or peasant, Strebinski writes as follows: "The surplus grain which he has for sale brings him in £10 sterling, which goes thus :-

	£ s. d.
Rent	3 12 0
Taxes	0 16 0
Clothing	2 10 0
Sundries	3 2 0
Total	10 0 0

"His agricultural capital is (exclusive of cattle) about £33 sterling, viz. :-

Carts and harness	3 0 0
Implements, &c.	5 8 0
Total	33 8 0

ITALY

The Piedmontese peasant, who earns 18s. a week, spends 13s. on food; the labourer of the island of Sardinia earns only 9s., and spends 7s. on food, viz. :-

	Piedmont, Pence Weekly	Island of Sardinia, Pence Weekly
Bread	16	26
Meat	42	5
Wine	40	6
Sundries	58	47
Total	156	84

LOCAL TAXATION

The amount annually levied by local authorities in taxes, tolls, &c., was approximately in the various countries as follows, 1886-87 :-

England	£ 38,010,000	Russia	£ 11,200,000
Scotland	4,440,000	Austria	5,300,000

MACHINERY

The following examples show the economy of labour resulting from machinery:—

1. Arkwright's spinning-jenny enabled one operative in 1815 to produce as much yarn as 200 could a few years before.

2. The crane of Cologne Cathedral in 1870, with two men, did the same work in one hour, in lifting stone, as required 60 men to work 12 hours in the Middle Ages; that is, one man now is equal to 180 of the olden time.

3. The American boot-making machine enables one man to turn out 300 pair of boots daily; one factory near Boston makes as many boots as 32,000 bootmakers in Paris. In 1880 there were 3100 of these machines at work, producing 150 million pair of boots yearly.

4. Altmann's American reaper cuts and binds grain at 45 minutes per acre. D. Glynn of California cuts, threshes, winnows, and bags with each of his machines 60 acres of grain daily.

5. The United States in 1888 produced 600,000 sewing-machines, which could do the work of 7,200,000 women.

6. In the Western States of America one man can raise as much wheat as will feed 1000 persons for 12 months; a second can thresh, winnow, and bag it, and a third convey it to market.

7. A girl 12 years of age in a Lancashire mill can turn out 35 yards of printed calico daily, her work in one year sufficing to clothe yearly 1200 persons in the East.

The export of machinery from Great Britain is large. In 1888 Russia took 300 steam-threshers and 250 portable steam-engines.

The Trade Returns show the value of British machinery exported thus:—

1853	£ 2,000,000	1870	£ 5,300,000
1860	£ 3,800,000	1888	£ 13,000,000

The United States crop in 1888 reached 1988 million bushels, or 49,700,000 tons. Spallart estimated the crop for the whole world thus:—

Year	Millions of Bushels
1871-80	1,528

It appears that the production of metals has multiplied fifty-fold since 1800.

Textile Manufactures.—The consumption of fibre by all nations has been approximately as follows:—

Reducing to tons the total weight of fibre consumed in 100 years down to 1880, we find it was approximately as follows:—

In 1873 the Government estimated all Spanish manufactures at £60,000,000 sterling: much too low a figure.

SCANDINAVIA

In 1765 the Government of Sweden, finding the nobles unable to keep up agriculture, passed a law to close most of the factories, which caused the skilled workmen in steel-works and silk-mills to migrate into Russia. The law was repealed in 1785, but the mischief was done.

The factory statistics show thus:—

Year	Factories	Product, £
1772	886	..
1830	1,857	700,000
1840	2,176	1,200,000
1850	2,513	2,100,000
1865	2,315	4,200,000
1876	2,825	9,600,000

A statement published in 1837 was as follows:—

	Woollens	Cottons, &c.	All Textiles
Factories	109	1,940	2,049
Operatives	3,000	10,300	13,300
Output, £	300,000	760,000	1,060,000

The statement for 1865 was as follows:—

Textiles	£	Miscellaneous	£
Cottons	490,000	Sugar	730,000
Woollens	480,000	Tobacco	360,000
Silks, linens, &c.	470,000	Hardware, &c.	1,680,000
All textiles	1,440,000	Total	2,770,000

According to Knut Bonde, the factories represented about half the manufactures produced, the total value having been £1,400,000 in 1824, and £4,800,000 in 1850. The hands employed in factories were 13,300 in 1837, and 53,000 in 1876.

In the latter year the factories were as follows:—

Worked by	Number	Horse-Power
Steam	684	28,000
Water	637	..
Animals	1,504	..
Total	2,825	..

In later years a valuable industry has sprung up at Jonköping in the manufacture of wooden matches, of which 450 millions are exported yearly, weighing 15,000 tons.

In 1880 Denmark had 720 factories, with 25,000 operatives and 10,000 horse-power. The textile products of all Scandinavia hardly reach four millions sterling per annum.

Hardware manufactures in Sweden may be estimated thus:—

	Tons Consumed	Manufactures, Value £
Iron	300,000	4,100,000
Steel	80,000	2,200,000
Total	380,000	6,300,000

Those of Norway are about £400,000, and of Denmark £600,000.

BELGIUM

In 1830, when Belgium threw off the Dutch yoke, her factories were already flourishing, for they counted 12,000 steam-engines, with an aggregate of 20,000 horse-power. Since then her steam-power in fixed engines for factories and mines has grown prodigiously, viz. :—

Year	Horse-Power
1830	20,000
1838	25,300
1860	162,000
1880	209,000

In 1838 the following table was published:—

	Textile Factories		
	Capital, £	Operatives	Product, £
Cotton	2,400,000	122,000	3,400,000

Besides the foregoing, the linen factories turned out 750,000 pieces yearly, and the production of lace was valued at £350,000.

There were also 175 foundries, with 14,000 operatives, turning out 150,000 tons pig iron.

The production of textiles was approximately as follows:—

Year	Millions £

1840	2	3	1	6
1860	3	3	2	8
1880	6	3	8	17

Production and consumption in 1887 were approximately:—

	Millions £	
	Production	Consumption
Cottons	3	3
Woollens	6	6
Linens	5	1
Silks, &c.	2	1
Total	16	11

The following table combines the official reports of 1846 and 1880:—

In 1880 the ratio of horse-power was 56 to every 100 operatives, whereas in 1846 it was less than 12. Horse-power grew seven-fold in thirty-four years.

The balance-sheet of textile industries for 47 years may be summed up thus:—

Since 1840 there has been a steady increase in the average product per operative, which was then only £160, and in 1880 exceeded £400. This is mainly due to improved machinery, enabling two men now to produce as much as five did in 1840.

The Census of 1850 showed as follows :—

The value of manufactures was artificially heightened by protective customs duties. My estimate for 1888, at page 378, is 1443 millions sterling. The results of the last five Censuses may be summed up thus :—

CANADA

The earliest record of manufactures was published in 1830, as follows :—Domestic looms 1300, turning out 4,000,000 yards of woollens and linens yearly; saw-mills 1580, with an aggregate capital of £1,250,000; export of timber £1,000,000 sterling. There were also 1086 mills of various other kinds, and seven foundries.

The industrial Census of 1881 compared with 1871 as follows :—

Year	Capital, £	Product, £	Operatives	Average Wages, £
1871	16,200,000	46,000,000	188,000	45.2
1881	34,400,000	64,400,000	255,000	48.4

The average product per operative was £244 in 1871, and £253 in 1881.

AUSTRALIA

Only three of the Australian colonies publish detailed statistics of manufactures, which are given for 1886-89 in Mr. Coghlan's Official Report for New South Wales. These three Colonies, however, comprise three-fourths of the population, and if we suppose the others have manufactures in the same ratio, the account will stand thus :—

	Factories	Hands	Value of Machinery, £
New South Wales	3,106	45,600	5,740,000
Victoria	2,974	54,500	5,490,000
New Zealand	1,946	22,100	2,110,000
Four other Colonies	2,680	40,700	4,450,000
Total	10,706	162,900	17,790,000

In New South Wales the value of land and buildings occupied by factories in 1888 was £9,350,000, making a total of £15,100,000 invested in this branch of industry. Supposing the ratio to be the same in the other Colonies as compared with value of machinery, the result is :—

	Manufactures, Capital, £	£ per Inhabitant
New South Wales	15,100,000	13.6
Victoria	14,400,000	13.0
New Zealand	5,500,000	9.0
Four other Colonies	11,500,000	12.7
Total	46,500,000	12.8

manufactures being probably about 64 millions sterling, as already stated.

The growth of manufactures has been very rapid, the number of hands in New South Wales, for example, having risen thus :—

	1878	1888
Males	21,500	41,300
Females	3,200	4,300
Total	24,700	45,600

This shows a rise of 80 per cent. in ten years,

The foregoing table of tonnage gives only the metal of gold and silver, the quantities of ore being unknown. It has been, however, stated that the average was in California 70,000 tons for one ton of gold, and in Australia 94,000 tons for one.* As regards silver, the ordinary yield in Spanish America is 80 oz. to the ton. At these rates we can estimate the amount of ore raised. The account of all mining will then stand thus:—

The total mining product may be summed up thus:—

	Millions £ Sterling
Precious metals	1,897
Metallic ores	815
Coal	3,859
Total	6,571

The shares corresponding to the several countries were:—

* The quartz raised by the gold mines of California and Australia would suffice to build 150 pyramids like that of Cheops. The gold extracted would fit in a room 40 by 20 feet, and 15 high.

Excluding precious metals, the values of mining products were, in order of time, as follows:—

The extraction of other minerals in 88 years was approximately as follows:—

1820	165,000	10,000	20,000	30,000	25,000	250,000

The weight of minerals raised compares with miners approximately, thus:—

Year	No. of Miners	Tons Raised	Tons per Man
1820 . . .	250,000	27,000,000	108
1840 . . .	442,000	71,000,000	160

1888 . . .	2,032,000	565,000,000	270

The ratio for British miners in 1889 was 330 tons per man.

The superiority of English miners is stated by the Iron and Steel Institute to be shown in the proportion of iron ore extracted by each miner yearly as follows:—

	Tons	Spain	Tons
England . . .	923		292
France . . .	393		283
Algeria . . .	323	Belgium	127

This, however, appears to be exaggerated as regards English miners, for we find (see p. 401) that the annual product of all minerals in Great Britain in 1883 did not exceed 301 tons per miner.

In 1884 the deepest mines in the world were:—

Mine.	Country	Mineral	Depth, Feet

About 100 years ago the weight of minerals raised daily in Great Britain was 25,000 tons, and in 1888 it rose to 600,000. Improved machinery has effected a great economy of labour, one man in 1888 raising as much as four could do in 1800. This has caused a notable fall in the price of minerals. Thus it happens that although the weight of minerals raised has increased twenty-one-fold since 1780, the value of same has only risen ten-fold.

BELGIUM

There are, moreover, stone quarries, whose product is valued at £1,300,000 per annum.

SWEDEN AND NORWAY

The mining products of Sweden may be summed up as 900,000 tons of iron ore and 300,000 tons of coal; the mines employ 29,000 persons. The production of iron ore has trebled since 1850. Norway has 28 mines, employing 2000 hands, the output averaging £180,000 per annum. The mining returns of Sweden for 1870 and 1887 compare thus :—

	Tons Ore	
	1870	1887
Iron	700,000	900,000
Copper	2,000	1,000
Zinc	33,000	50,000

Of precious metals Sweden raised in 1870 gold to the value of £150,000 and silver worth £10,000; in 1887 silver represented £40,000 sterling.

GREECE

The lead mines of Laurium have been worked for many years by a French company, producing 1,200,000 tons ore in twelve years ending 1888, one half of which was smelted near the mines. Small quantities of zinc ore are also raised in Greece. The total value of mineral products is about £600,000 yearly.

UNITED STATES

The following table shows the date of discovery and the commencement of mining of certain minerals :—

	Place	Discovered	Began Mining
Iron	Virginia	1610	1663
Copper	Massachusetts	1632	1648
Coal	Pennsylvania	1768	1784

Petroleum	Pennsylvania	1826	1845
Gold	California	1849	1849
Silver	Nevada	1858	1859
Quicksilver	California	1860	1860

The first iron-foundry was at Lynn, Massachusetts, the first copper smelting-works at Salem in the same State. In 1660 the Dutch worked copper mines in New Jersey, and about the same time the French Jesuits at Lake Superior. A cargo of ninety tons of copper was shipped from New York in 1766, but little progress was made until 1843, when the United States Government bought the Lake Superior copper-fields from the Chippeway Indians. The production of lead in 1829 was 7200 tons. The first regular oil-wells were found near Pittsburg, Pennsylvania, in 1845 (see Oil). Gold was discovered at Sutor's Mill, California, in 1849, silver by J. H. Comstock and James Phinney at Storey Co., Nevada, in 1858; small quantities of gold had been found in the Southern States previously.

The following table shows approximately the principal

mining products (except gold and silver) at various dates :—

1850	650	1842	21,800	1846

About 60 per cent. of the copper comes from the Lake Superior fields above mentioned, which produced 190,000 tons of metallic copper in the ten years ending 1882.

The Potosi mines yielded 600 millions sterling in 320 years.

CANADA

The mining products in 1887 were :—

	Tons	Value, £
Coal	2,100,000	1,000,000
Gold	200,000
Sundries	1,800,000
Total	3,000,000

MEXICO

There are 350 mines, which are said to occupy 100,000 men. In sixty years ending 1880 were raised 180 millions sterling worth of silver, and nearly one million sterling of gold. The mines are supposed at present to support a capital of 6 millions sterling. According to Messdaglia, the mines yielded in 383 years, to 1875, as follows :—

	Tons	Value, £
Gold	265	36,000,000
Silver	76,200	677,000,000
Total	76,465	713,000,000

ARGENTINA

Rickard's report in 1869 showed 2700 men employed in various mines. The product was 3000 oz. gold, 44,000 oz. silver, 700 tons copper, and 1000 tons lead; total value £70,000 per annum, the capital employed being £300,000.

In 1885 the yield of the mines was estimated thus :—

	£
Catamarca Copper	70,000
San Juan Silver	40,000
Mendoza "	40,000
Cordoba and Rioja "	64,000

Total 214,000

The actual yield is supposed at present to barely reach £150,000.

CHILE

Copper is the most important mineral, and the ores extracted since 1850 are supposed to be equivalent to the following quantities of fine copper :—

Period	Tons	Value, £
1851-60	190,000	15,200,000
1861-70	270,000	20,500,000
1871-80	330,000	20,300,000
1881-88	300,000	18,000,000
38 years	1,090,000	74,000,000

In late years nitrate has obtained importance, shipments rising from 350,000 tons in 1885 to 800,000 in 1888. The coal-fields are supposed to yield 10 million tons yearly; and the silver mines 5 million oz. of that metal, worth £800,000.

VENEZUELA

The latest reports show as follows :—

	Oz.	Value, £
Gold	250,000	900,000
Copper	150,000
Total	1,050,000

MONEY

The amount of money in use among nations at various dates was (excluding copper and nickel, which are of trifling value) approximately as follows :—

PERSIA

The currency has been depreciated since 1875 by increasing the alloy in gold and silver coins. The kran has now but 71 grains of silver, against 83 in the year 1875, and the alloy of gold has been raised from 109 to 115 per 1000. The kran has fallen from a value of 10d. to 6½d., and the gold is at 45 per cent. premium. Baron Reuter has a concession to issue bank-notes up to £800,000, with bullion reserve 50 per cent.

JAPAN

In 1888 the currency was as follows:—

Gold	19,000,000
Silver	9,000,000
Bank-notes	15,500,000
Treasury notes	10,500,000
Total	54,000,000

Paper-money is at a discount, gold being 25 per cent. premium.

ARGENTINA

The currency consists wholly of paper-money notes, ranging from one halfpenny up to £20 sterling. The halfpenny notes are nominally for 5 cents, the dollar being worth about 12d. In December 1884 the paper dollar

was worth 48d., but specie payments were suspended in January 1885, and the quotations since then have been:—

Next in antiquity are the Round Towers of Ireland, probably of the 6th century or earlier: there are 45, the highest at Kilmacduagh, Galway, 108 ft. diameter 18½ ft.

The average of guns to a vessel was 29 in 1810, rising to 46 in 1840, and declining to less than 4 in 1889. Modern naval warfare has been changed by the invention of armour-plated ships, the first of which were built for the Crimean war, 4-inch plates perfectly shot-proof, in 1853. The *Merrimacs* and *Monitors* of the United States in 1862 marked a great advance. Finally, the Italians used plates 36 inches thick for the *Lepanto*. The ironclad fleets of the world stand at present approximately as follows:—

	Vessels	Tons	Max. Plating, Inches	Guns	Tonnage of Guns
Great Britain	66	460,000	24	610	9,100

The same paper says: "In ships we are well ahead of any competitor. It is in the matter of guns that our weakness lies. We have afloat or ready to go afloat 1065 modern heavy guns; France has 1447, Russia has 423, Italy has 180, and Germany has 508. When all our war-ships are armed, we shall have afloat of guns that can pierce 15 in. of armour and upwards 104, while France will have 124; Russia 38, Italy 40, and Germany 61."

UNITED STATES

The first Census as to occupation was taken in 1820, the second in 1840, since which latter date they have been decennial, viz. :—

Year	Agriculture	Manufactures	Commerce, &c.	Total
1820	2,071,000	350,000	72,000	2,493,000
1840	3,718,000	792,000	287,000	4,797,000
1850	2,401,000	958,000	2,013,000	5,372,000
1860	3,220,000	1,311,000	3,756,000	8,287,000

1880	7,671,000	2,707,000	7,014,000	17,392,000

The returns for 1820 and 1840 include all ages and colours, but those for 1850 and 1860 are only for free male adults. Assuming that in these years 50 per cent. of negro adults were engaged in agriculture, and 50 per cent. in commerce, &c., the real number of workers would be :—

Year	Agriculture	Manufactures	Commerce, &c.	Total
1820	2,071,000	350,000	72,000	2,493,000
1840	3,718,000	792,000	287,000	4,797,000
1850	3,229,000	958,000	2,950,000	7,237,000
1860	4,342,000	1,311,000	4,878,000	10,531,000

1880	7,671,000	2,707,000	7,014,000	17,392,000

Adopting the second table as more correct, and comparing the numbers of persons occupied with that of all inhabitants, male and female, between 16 and 60 years of age, we find as follows :—

	Workers	Persons of Working Age	Ratio of Workers
1820	2,493,000	4,816,000	51.7
1840	4,797,000	8,887,000	53.9

In 1888 the production was as follows:—

	Millions Weekly

Birmingham stands for 180 millions of those made in England. In 1850 the annual output in England was 1250 tons, valued at £1,100,000.

PLACARDS

The largest use on record was prior to the Paris election of 27th January 1889. General Boulanger had 15,000 billstickers, who put up 45,000 daily, in all 900,000, at a cost of £8000 sterling. Jacques had 10,000 men, who put up 25,000 daily, in all 500,000, at a cost of £5000. In some places, when they were torn down after the election, there were found sixty layers alternating of the rival placards.

For each offender (including drunkenness and misdemeanours), the police expenditure is £13 in London, and £5 in Paris. The number of London police in 1888 was 13,900.

The population of Europe hardly exceeded 50 millions before the 15th century.

The population of Europe, according to the best authorities, has been as follows:—

UNITED STATES

The population of the country now known as the United States was estimated at various periods before Independence, and has been regularly taken in decennial Census since 1790.

Year	Population	Year	Population	Year	Population
1790	3,930,000	1840	17,063,000	1890	62,481,000

Dr. Currie's tables published in 1798 are complete as regards the 18th century, and besides the above he gives figures for the New England States in the preceding century, showing a population of 24,100 souls in 1654, and of 68,400 in 1673. It is to be observed that in the above table the column for 1775 includes 500,000 slaves, and in 1795 likewise 698,000.

The population, according to Tucker and the Census returns, was composed as follows :—

Year	White, Native	Coloured	Foreigners	Total
1800	4,262,000	1,002,000	44,000	5,308,000
1810	5,770,000	1,377,000	93,000	7,240,000
1820	7,684,000	1,772,000	177,000	9,633,000

1880	36,829,000	6,647,000	6,680,900	50,156,000

The increase of population chiefly arose from the surplus of births over deaths, but was materially swelled by the number of European settlers. Tucker's tables down to 1820, and the Census returns since that year, show as follows :—

Period	Natural Increase	Immigration Increase	Total	Ratio of Increase per 1000 Pop.
1801-10	1,883,000	49,000	1,932,000	365

The Census Commissioner believes that the Census returns for 1870 were defective, especially in the Southern States, and that the real returns since 1860 should be read thus :—

Period	Natural Increase	Immigration	Total	Per 1000
1861-70	6,262,000	2,295,000	8,557,000	272
1871-80	7,341,000	2,815,000	10,156,000	254
1881-90	7,078,000	5,247,000	12,325,000	246

Allowing this amendment, as recommended by Commissioner Porter, the ratio of increase in each decade per 1000 inhabitants was as follows :—

	1801-10	1811-20	1821-30	1831-40	1841-50	1851-60	1861-70	1871-80	1881-90

The various nationalities that composed nearly 15 millions of settlers from 1820 to 1888 stood thus :—

	1821-50	1851-60	1861-70	1871-80	1881-88	Total
Germans	682,000	951,000	820,000	759,000	1,104,000	4,316,000
Irish	1,352,000	1,013,000	723,000	450,000	536,000	4,074,000
British	49,000	325,000	385,000	542,000	658,000	1,959,000
Scandinavians	5,000	25,000	136,000	261,000	412,000	839,000
Italians	9,000	13,000	61,000	201,000	284,000
French	125,000	76,000	38,000	75,000	36,000	350,000
Dutch	5,000	11,000	10,000	18,000	151,000	195,000
Swiss	4,000	25,000	24,000	31,000	68,000	152,000
Various	354,000	163,000	318,000	748,000	1,154,000	2,737,000
Total	2,576,000	2,598,000	2,467,000	2,945,000	4,320,000	14,906,000

There is a very marked decline of natural increase, which is now only two-thirds of the ratio that prevailed early in the century. The total immigration may be summed up thus :—

Period	Number	Per Annum
1654-1701	134,000	2,800
1702-1800	492,000	4,950
1801-20	178,000	8,000
1821-50	2,576,000	86,000
1851-80	8,010,000	267,000
1881-90	5,247,000	540,000
237 years	16,637,000	...

The number of foreign residents at each Census, and the number of those who died or left the country, are shown in the following table :—

Census Year	Number Enrolled	Immigrants of Decade	Total	Number at End of Decade	Missing
1850	2,245,000	2,598,000	4,843,000	4,139,000	704,000
1860	4,139,000	2,467,000	6,606,000	5,567,000	1,039,000
1870	5,567,000	2,945,000	8,512,000	6,680,000	1,832,000
1880	6,680,000
...	3,575,000

The number missing at the end of each decade ranged from 15 to 21 per cent.

The loss by death or leaving the country in thirty years ending 1880 is shown as follows :—

	Germans	Irish	British	Various	Total
Number in 1850	584,000	962,000	380,000	319,000	2,245,000
Arrived, 1851-80	2,530,000	2,186,000	1,252,000	2,042,000	8,010,000
Total	3,114,000	3,148,000	1,632,000	2,361,000	10,255,000
Number in 1880	1,967,000	1,855,000	916,000	1,942,000	6,680,000
Loss	1,147,000	1,293,000	716,000	419,000	3,575,000

In thirty years 35 per cent. of the total either died or left the country.

The foreign residents found living in the United States at each Census since 1850 were as follows :—

	1850	1860	1870	1880
Germans	584,000	1,276,000	1,691,000	1,967,000
Irish	962,000	1,611,000	1,856,000	1,855,000
British	380,000	588,000	766,000	916,000
Scandinavians	18,000	73,000	242,000	440,000
Italians	4,000	11,000	17,000	44,000
French	54,000	110,000	116,000	107,000
Dutch	10,000	28,000	47,000	58,000

Total	2,245,000	4,139,000	5,567,000	6,680,000

The losses among Germans in the several decades were :—

Census	Resident	Immigration	Total	Number at End of Decade	Missing
1850	584,000	951,000	1,535,000	1,276,000	259,000
1860	1,276,000	820,000	2,096,000	1,691,000	405,000
1870	1,691,000	759,000	2,450,000	1,967,000	483,000
1880	1,967,000
...	1,147,000

The percentage of loss was less than among Irish, as appears from the subjoined table of all nationalities.

The loss in the first decade ending 1860 was 17 per cent., and in the subsequent decades almost 20 per cent.

The tables as regard Irish settlers show as follows:

Census	Resident	Immigration	Total	Number at End of Decade	Missing
1850	962,000	1,013,000	1,975,000	1,611,000	364,000
1860	1,611,000	723,000	2,334,000	1,856,000	478,000
1870	1,856,000	450,000	2,306,000	1,855,000	451,000
1880	1,855,000
	1,293,000

The loss among Irish settlers in the first decade was 18 per cent., in the second 20, and in the third 19 per cent. The war of 1861-65 apparently cost the Union 53,000 German, and 48,000 Irish settlers. According to the Census of 1880, it appeared that for every 100 foreign settlers, of whatever age, there were 124 children born in the country of foreign parents, whereas in 1870 there were only 96. It appears, moreover, that foreign settlers comprise a larger ratio of people of working age than they do of the general population, viz. :-

	Population of all Ages					
	1830	1840	1850	1860	1870	1880
Americans	972	950	903	868	856	867
Foreigners	28	50	97	132	144	133

When the American native population would have 100 persons of working age, foreigners have 145. The percentages of persons of working age in Ameri-

The growth of the white American and of the coloured population, in intervals of twenty years, is shown thus:—

Year	Number		Increase		Rate of Increase	
	American	Coloured	American	Coloured	American, per Cent.	Coloured, per Cent.
1800	...	1,002,000
1820	4,220,000	1,772,000	3,294,000	770,000	78	44
1840	7,514,000	2,874,000	4,997,000	1,102,000	67	62
1860	12,511,000	4,486,000	6,316,000	1,612,000	58	66
1880	18,827,000	6,647,000	9,726,000	2,161,000	52	48

The white American race increased faster than the coloured, except during the interval of 1841-60.

The total increase during eighty years was:—

American whites 576 per cent.
Coloured population 564 per cent.

The difference is small, but the figures show conclusively that the white American race has no tendency to die out, as often stated.

The rate of increase has, however, declined very notably since 1820, both among whites and blacks, especially the latter, that among whites having been nearly stationary since 1840.

can and in foreign population are shown at each decade thus:—

Year	Persons between 15 and 60 Years of Age		
	Of 1000 Americans	Of 1000 Settlers	Of 1000 General Pop.
1830	504	750	511
1840	509	751	521
1850	520	748	543
1860	520	748	551
1870	527	752	559
1880	513	750	544

There was a steady rise until 1870, notwithstanding the war of 1861-65, but the last decade showed a fall, which is explained by the greater number of persons over sixty years of age, who were 56 per 1000 in 1880, against 50 in 1870. It is, nevertheless, surprising to find that the able-bodied ratio among foreign settlers is precisely the same as it was fifty years ago, and has not sensibly varied in the whole period. It has improved remarkably among the American population. If we compare the growth of the three great elements of population between 1850 and 1880, counting the children born of foreign parents as foreigners, and assuming their ratio in 1850 to have been as in 1870—that is, 96 per 100 settlers—we find as follows:—

	1850	1880	Ratio of Increase, per Cent'
American whites	15,152,000	28,553,000	88
Coloured population	3,639,000	6,647,000	83
Foreign	4,401,000	14,956,000	240
Total	23,192,000	50,156,000	116

The aliquot parts of the population, always counting children of foreign parents as foreign, show as follows:—

	1800	1820	1840	1860	1880
Americans	794	781	733	602	570
Coloured population	190	184	169	141	132
Foreign	16	35	98	257	298
Total	1,000	1,000	1,000	1,000	1,000

In considering the ratios of the sexes, we find the preponderance of males was very great in 1860, the year before the war, and the lowest in 1870. If the ratio in the latter year were the same as in 1860, there would have been 19,900,000 males, instead of 19,550,000. This shows a loss of 350,000 males, which may be set down as the blood-cost of the war.

It will be seen from the preceding tables that the white American population in 1880 was 28,553,000, or 57 per cent. of the total. This, however, supposes the grandchildren of European settlers to be of American race, which is not strictly true.

The following table shows the population of each State at three distinct periods :—

UNITED STATES

The first printing-press was brought from Amsterdam with 49 lbs. of type, and set up at Cambridge, Massachusetts, A.D. 1639, where Harvard University now stands. Another was started by W. Penn at Philadelphia in 1686. The "Hoe" press was invented by Robert Hoe at New York in 1833, and improved by his sons, who have made 10-cylinder presses for many of the great journals of America and Great Britain. The first newspaper was at Boston in 1690, and was at once suppressed by the Governor. The *Boston Newsletter* was founded in 1704; the *Mercury* of Philadelphia in 1719. Franklin began the *New England Courant* in 1721. The *New York Gazette* appeared in 1725.

The number of papers at various dates, and the aggregate issue of copies monthly, were as follows :—

In 1880 there were 10,515 papers in English, 641 in German, 49 in Swedish or Danish, 41 in French, and 26 in Spanish. No fewer than 57 were edited by women.

JAPAN

In 1888 there were 470 newspapers and magazines, the principal journal being the *Osaka-Nippo*, which issues 10,000 copies daily. The *Japan Mail* and *Higo Times* are in English. The aggregate issue of newspapers, is

about two millions monthly. The *Life of Washington* was published in 1880 in 42 quarto volumes.

CHINA

The *Pekin Court Gazette* celebrated in 1884 the completion of its 10th century : it was 640 years old when the first newspaper was printed in Europe in 1524. Secretary Ho has published a translation of Shakespeare, and a Peking publisher has also issued Blackstone's Commentaries in Chinese.

AUSTRALIA

The first paper was printed at Sydney in 1803. There were 43 in Australasia in 1840, and the number rose to 270 in 1882. The returns at present are incomplete, but may be taken approximately thus :—

Dailies	156
Weeklies, &c.	252
Total	408

The number of newspapers sent through the post compared with population thus :—

Year	Number	Per Inhab.
1851	2,150,000	4.7
1871	17,580,000	9.3
1888	93,410,000	25.9

The above shows an average postal circulation of 300,000 copies daily : the total issue, therefore, can hardly fall short of half-a-million copies, say 13 millions monthly, or one-tenth of that of the United Kingdom in 1882.

CANADA

In 1765 the first paper was printed at Quebec. There were 88 in 1840, and the latest report showed 565. The number of newspapers sent through the post was :—

Year	Number	Per Inhab.
1870	20,200,000	5.5
1887	64,300,000	13.2

The total issue is approximately 350,000 copies daily.

SOUTH AMERICA

The first printing-press introduced into the New World was that established by the Jesuits at Cordoba, in the province of Tucuman, about 1610. Another was established at Misiones, in Paraguay, about 1680, and some books of this press are in the British Museum, dated 1705-24. General Auchmuty, after the capture of Monte Video, founded a paper called the *Southern Star* in 1806, which lasted only three months. In 1826 Mr. Love founded at Buenos Ayres a weekly called the *British Packet*, which died in 1858. A well-known weekly paper called the *Panama Star*, was founded by Archibald Boyd in 1849, which still flourishes. The first daily paper in the English language which appeared in Spanish America was the *Buenos Ayres Standard*, founded by the author of this Dictionary, 1st May 1861, which is now the best known journal of South America. The press of Argentina in 1886 was as follows :—

	Dailies	Weeklies, &c.	Total
Buenos Ayres	25	57	82
Provinces	13	101	114
Total	38	158	196

There are 4 English, 3 French, 3 Italian, 2 German, and 184 Spanish newspapers, which issue 3,600,000 copies monthly.

INDIA

In 1880 there were 644 newspapers, of which forty were in English, the rest in Bengali, Marathi, and other native tongues. In 1886 there were published 8900 works, of which nine-tenths were in native languages.

From the above it would appear that from the time of Alexander the Great down to that of Columbus the price of wheat averaged 28s. per ton; but the discovery of America, in 1492, was followed by such an influx of gold and silver into Europe that prices of all commodities rose in succeeding centuries, and the price of wheat from 1751 to 1800 averaged four times as much as in the time of Columbus.

The tables of Sir Morton Eden and Marquis Garnier from 1401 to 1756, with continuation to the present date, show the price of wheat reduced to English money as follows :—

The foregoing method, however, has the disadvantage that all articles are treated as of equal importance, what the same as gunpowder in affecting the level of prices. The British Association appointed a committee under Professor Edgeworth to frame a more suitable method of price-level, and the committee adopted one similar to that of Mr. Jevons.

The following are the various scales that have been proposed :—

* Butter includes also cheese and milk.

In the foregoing scales it will be observed that four writers took no account of coal, and one omitted wine. There seems to have been no good reason for inserting indigo and palm-oil, which are items of trifling value, while fish, lard, rice, potatoes, and other important articles, are omitted. Another feature that seems inexplicable is, that four of the above writers give barley the same relative importance as wheat, whereas the latter, (see page 12) ought to be three times greater than the former. A similar remark applies to oats, which should stand for only half the value of wheat.

Beginning from 1841, we have in the following table a retrospect of values for 44 years; that is to say, if the same quantity of merchandise produced and consumed yearly from 1881 to 1884 were bought and sold at prices ruling in the four preceding decades, the amounts would be approximately as follows:—

The Paris police reports show that 89 per cent. are French, 11 per cent. foreign. According to the *Dict. des Sciences Med.*, 100 prostitutes may be expected in their lives to give birth to 60 infants; 100 married women to 480.

PROTECTION

In order to promote certain local products or manufactures, which in some cases could not be profitably cultivated otherwise, "protection" is given either by means of bounties or by heavy import dues on foreign goods.

UNITED KINGDOM.

Between the years 1690 and 1830 Great Britain paid the inhabitants of Belfast and Dundee 28 millions sterling to enable them to sell and export Irish and Scotch linen at less than cost. The export of linen has quadrupled since the bounties were abolished in 1830, the average bounty before that year having been £150,000 per annum.

Bounties on the exportation of grain in England averaged £160,000 per annum for some years, until their abolition in 1805.

FRANCE

In 1860, by virtue of the Cobden Treaty, it was stipulated that no duties on foreign imports should exceed 25 per cent. *ad valorem*. The treaty has since lapsed. In 1880 a system of shipping bounties was established as follows:—48 shillings per ton for building iron vessels, and 16 shillings for wooden; 15 pence per ton per 1000 miles run on French-built vessels entering French ports; 7½ pence per ton for French vessels not built in France. The amounts paid for these bounties were:—

Year	Building	Navigation	Total
1881	£38,000	£39,000	£77,000
1884	179,000	344,000	523,000
1886	120,000	303,000	423,000

There are also fishing bounties, which in some years reach £200,000, and sugar bounties, £600,000. The effect of the shipping bounties has certainly been to promote French shipping, viz:—

Entries	1880	1887	Increase
French	3,614,000	4,770,000	33 per cent.
Foreign	8,750,000	8,710,000	...

In 1889 the duties were increased on imported food to protect the French farmers: cattle now pay 32 shillings, sheep 4 shillings per head, and wheat 50 shillings per ton. This causes bread to be at times so dear that municipal bakeries are established to sell cheap bread to the poor.

BELGIUM.

Sugar bounties average £170,900 a year in Belgium, and £150,000 in Holland.

UNITED STATES.

Protective duties in 1885 compelled San Francisco to pay £9 a ton for American made rails, when as good could be landed from England at £5 a ton. Iron ore at Pittsburg cost 40 shillings per ton, when Bilbao ores could be landed in New York at 12 shillings.

PUBLIC WORKS

There is no means of ascertaining the value or cost of these in the various countries. In France a sum of 402 millions sterling was expended in 80 years, down to 1880, on roads, bridges, harbours, and canals. In England about 200 millions have been spent on sanitary works and schools. The United States Government in 90 years, down to 1880, spent 93 millions sterling on public edifices, arsenals, lighthouses, &c. The system of dykes in Holland represents an outlay of 300 millions sterling. The following table shows the amount of loans for public works in the United Kingdom from 1817 to 1881:—

	Advanced	Balance Due
Great Britain	£44,700,000	£26,020,000
Ireland	31,800,000	6,100,000
Total	£76,500,000	£32,120,000

The total account of public works loans from 1792 to 1890 for the whole United Kingdom showed thus:—

Sums advanced	£115,324,000
Repaid by borrowers	63,979,000
Bad debts, &c.	12,685,000
Balance due in 1890	38,660,000

QUAKERS

There are 18,000 in the United Kingdom. They have a longer span of life than the general population, their death-rate during twenty years averaging only 18 per thousand as compared with 22 per thousand, probably the result of temperate habits. They have, however, one-fifth more insane than the rest of the population, namely, 33 per 10,000 against 28, which perhaps arises from inter-marriage.

QUICKSILVER

The *Times* published the following estimate of production:—

RABBITS

The annual slaughter is supposed to reach 20 millions in Great Britain, 70 millions in France.* The annual exportation from Belgium averages 5 millions; the importation into Great Britain, 3 millions. The consumption in Melbourne market is one million yearly. Rabbits were introduced into Australia a few years ago for food, but multiplied so rapidly as to become a pest. A single pair of rabbits can become multiplied in four years into 1,250,000. The Sydney Cabinet in the year 1887 destroyed 25,300,000 rabbits, having spent £700,000 in four years to mitigate the pest. Mr. Coghlan says that 100 million acres of land have been more or less injured by them. To check their onward march a fence of 290 miles between the Macquarie and Darling rivers was made at a cost of £24,000; another of 346 miles from the Murray River north; another of 260 miles on the southern line of Queensland; another of 340 miles from Albury to the Macquarie; but the rabbits broke through. The number of rabbit-skins exported averages yearly:—

New South Wales	15,000,000
New Zealand	6,000,000
Victoria	3,000,000

besides 1000 bales yearly from South Australia. The Cabinet of Victoria spends £15,000 a year in killing rabbits.

RAILWAYS

The *Almanac de Gotha* gives the total mileage at various dates as follows:—

Year	Miles	Year	Miles
1830	210	1870	139,860
1840	5,420	1875	177,600

tremendous death-rate. In 1888 the value exported from Spain was £500,000. A flask of quicksilver weighs 76 lbs. According to Kolb, the production in California was as follows:—

Year	Flasks	Tons	Value	Value per Flask
1859	3,400	113	£26,000	7.6
1860	9,450	315	66,000	7.0
1865	42,500	1,420	232,000	5.5
1870	13,800	460	96,000	7.0
1876	41,100	1,370	342,000	8.3

It appears that the production has now fallen to 26,000 flasks or 880 tons yearly, being about equal to one-third of what is produced annually in Spain.

The annual production and consumption average:—

There are no particulars, except length of line, known as regards Servia, Bulgaria, Greece, and Turkey: it is assumed in the above table that the ratios per mile are the same as in Roumania. The cost of construction in Mexico, being unknown, is assumed to be the same as in the United States. In some cases the traffic is not for the same year as the mileage. Tables of traffic per mile are given farther on. In the preceding table there are blanks as regards traffic for 5780 miles, or 1½ per cent. of the total. Allowing for these blanks, the whole railway business of the world is summed up as follows:—

English lines are the most costly, Swedish the cheapest, the difference being as 7 to 1. Only India and Germany earn over 5 per cent. on capital, the average for the world being 3½ per cent. There are 13 countries earning over the average, and 11 less than the average.

The following table shows the earnings and expenses per mile run by locomotives in various countries in 1887-88 :—

The mileage run by locomotives in the United States far exceeds the aggregate mileage for the Continent of Europe. The cost of running in the United States is higher per mile than in Europe.

An ordinary locomotive has 300 horse-power, and burns one ton of coke for 40 miles of goods train, or 80 miles of passenger train. The life of a locomotive is usually fifteen years, during which it will run 240,000 miles, and earn £60,000. The price is usually £2000; and according to *Engineering*; Europe could turn out 6400 locomotives yearly, viz., Great Britain, 2200; Germany, 2000; France, 1000; Belgium, 500; Austria, 400; and other countries, 300. Boesig's factory at Berlin could make 300 yearly. Each locomotive has 5416 pieces. The first in use from Liverpool to Manchester in 1830 was of 8 tons, and had a speed of 20 miles an hour. In 1872 the largest in the United Kingdom were of 27 tons, rising in 1889 to 45 tons.

There are many 60-ton locomotives in the United States, and some in Canada of 70 tons. The weight of an empty passenger train in England is: locomotive, 35; tender, 25; two trucks, 12; eight carriages, 64; in all, 136 tons. If there be 60 passengers, their weight will be 3 tons, against 136 tons dead-weight. The engine of an express train consumes 10 gallons of water per mile; some of the American locomotives have tenders with a capacity of 3000 gallons.

Jeans's table of rolling-stock in 1885 compares with mileage and traffic as follows :—

	Locomotives, Number	Carriages, Number	Waggons, Number	Locomotives, per 100 Miles	Carriages, per Million Passengers	Tons of Goods Carried per Waggon

A French scientific journal in 1890 states that Europe has 61,000 locomotives, and the rest of the world 43,000, making a total of 104,000; it adds that England has 80 per 100 miles of railway, Germany 53, and France 47. The increase of rolling-stock in ten years was very great :—

	Europe		The World	
	1875	1885	1875	1885
Locomotives	42,000	56,500	62,000	99,000

Waggons	1,000,000	1,360,000	1,470,000	2,510,000

Jeans adds that the above rolling-stock in 1875 carried 1371 million passengers and 715 million tons of goods.

The weight of rail in England varies from 28 to 76 lbs. per yard. In 1882 the tonnage of rails in various countries was as follows (an estimate for 1888 is added) :—

	Tons of Rails			Tons per Mile of Rail	Tons Estimate in 1888

The following table shows the steepest gradients in some of the most difficult railways :—

	Per Cent.		Per Cent.
Mont Cenis	3.0	Oroya	6.0
Genoa-Turin	3.5	Utliberg	7.0
Darjeeling	4.0	Cantagallo	9.5
Tiflis	4.5	Righi	28.0
Einsiedlen	5.0	Vesuvius	63.0

The Righi is in one part as steep as a staircase, the Vesuvius as a ladder. Resistance increases with gradient, and if the normal figure be adopted of 8 lbs. per ton on level way, the resistance at various gradients will be :—

Gradient	Lbs. per Ton	Gradient	Lbs. per Ton
1 in 100	15	5 in 100	45
3 " "	30	10 " "	83

Resistance likewise increases with speed as follows, on level way :—

Miles per Hour	Lbs. per Ton	Miles per Hour	Lbs. per Ton
10	8	40	26
20	14	50	33
30	17	60	51

The resistance on a railway is only one-third of what it is on an ordinary highroad.

The standard gauge of the world may be said to be 4 ft. 8½ inches. In 1885 the lines were summed up thus :—

Gauge	Miles	Ratio
4 ft. 8½ in.	224,000	74.0
Under 4 ft. 8½ in.	42,400	14.0
Over 4 ft. 8½ in.	36,600	12.0

New railways had a marvellous effect in opening up the Western and some of the Southern States as follows:—

	Railways, Miles		Increase per Cent.	Farms, Acres		Increase per Cent.

Eleven States	27,934	52,568	88	157,311,000	250,726,000	60

It appears that in the above eleven States the construction of 26,600 miles of railway, at a cost of 280 millions sterling, was accompanied by a spread of farming to an extent of 93,500,000 acres; the value of the increased area amounting to 520 million dollars, or 108 millions sterling, that is, 39 per cent. of the total cost of the new railways.

The annual construction of railways has averaged:—

£1800, sleeping cars £3500. The railway of greatest passenger traffic was the New York Elevated, carrying 191 million passengers yearly. The construction of this line took 2200 tons of iron per mile, and cost £44 per yard, against £500 for the London Metropolitan.

The return on capital is shown thus:—

Year	Cost, £	Net Product, £	Percentage

1888	1,949,000,000	60,000,000	3.1

The average for each passenger was a journey of 25 miles, for which he paid 28d., and for each ton of goods a haulage of 115 miles, for which the fare was 60d. The value of merchandise carried was estimated at 2950 millions sterling. The average price of locomotives was

Dominion Government	26,900,000
Provincial grants	7,400,000

Latest returns to the end of 1889 showed 13,330 miles, made at a cost of £152,100,000, say £11,400 per mile.

MEXICO

Official returns of mileage show as follows:—

Year	Miles	Year	Miles
1865	20	1880	660
1870	120	1889	5,010

In 1889 the traffic was as follows:—

PERU

The number of miles working was as follows:—

Year	Miles	Year	Miles
1860	47	1880	1,180
1870	250	1889	1,630

In 1870-72 the Government borrowed in London 49 millions sterling, and proceeded to make railways up

The above estimate shows that, speaking approximately, the railways of Australia have already in saving of freight charges paid nearly one-fourth of the cost of construction; also that they cause an annual saving to the people of £1,600,000 sterling.

SOUTH AFRICA

Mileage returns show as follows:—

Year	Cape Colony	Natal	Total
1874	64	...	64
1880	910	100	1,010
1888	1,780	230	2,010

All the lines belong to the State, except one of 180 miles in Cape Colony. Cape lines in 1880 carried 2,700,000 passengers and 420,000 tons goods, being 1500 passengers and 230 tons per mile. The average cost of construction was £8900. This would give a total outlay of 16 millions sterling. Receipts £1,450,000, expenses £760,000, leaving a net profit of £690,000, say 4.3 on the cost of construction.

The first line was from Cape Town to Wellington, 58 miles, opened in 1860; cost £500,000. The line to Kimberley diamond fields was opened in 1885. In 1888 there were three principal lines: the Western 720, the Midland 590, and the Eastern 290 miles.

ALGERIA

The official returns are as follows:—

Year	Miles	Cost, £	Passengers	Goods, Tons	Receipts, £	Expenses, £	Net, £
1877	410	7,700,000	1,020,000	260,000	270,000	230,000	40,000

1887	1,580	840,000

Goods tons, as given above, averaged a haulage of 100 kilometres, or 63 miles: official returns give this item under the form of kilometric tons. Including the Tunis lines, 260 miles, the whole system in 1889 reached a length of 1840 miles, representing an approximate outlay of 26 millions sterling.

EGYPT

The first line was opened in 1856, from Alexandria to Cairo, 130 miles; cost of construction, £8000 per mile. Records of mileage show thus:—

Year	Miles	Net Product, £
1860	275	...
1879	920	750,000
1885	950	930,000
1889	956	730,000

Details of receipts and expenditure showed thus:—

Year	Receipts, £	Expenses, £	Per Mile	
			Receipts, £	Expenses, £
1885	1,540,000	610,000	1,620	640
1889	1,330,000	600,000	1,400	630

In 1888 the lines carried 3,600,000 passengers. The actual length of railways is 1260 miles, but some are not working. The earnings on the total mileage would not exceed £1050, expenses £480 per mile.

Ismail Pachà, during his reign, expended a sum of £13,300,000 in the construction of railways, one line extending along the Nile valley to Siout, in Upper Egypt. Net earnings are 4 per cent. on cost.

WEST INDIES

The principal railways in this part of the world are:—

England	18,798,000	1,066,000	114,000	5,990,000	25,968,000

United Kingdom	19,533,000	5,336,000	3,597,000	6,319,000	34,785,000

In 1871 the estimated numbers were:—

	Anglicans	Roman Catholics	Dissenters	Jews	Total
England	17,781,000	1,058,000	3,971,000	39,000	22,849,000

U. Kingd.	18,537,000	5,520,000	7,507,000	46,000	31,610,000

No census as to religion is taken in England or Scotland. The above estimates are according to the ratios resulting from the marriages solemnised yearly in the different churches.

In 1882 a private census of people attending church on Sundays was taken, showing percentage to population as follows:—

Sheffield	23	Southampton	38
Nottingham	24	Hull	41
Liverpool	26	Portsmouth	41
Bristol	31	Bath	52

The above was, however, much in excess of the real percentage, many persons going to church twice. Only 37 per cent. of the total worshippers attended the Church of England, 8 per cent. being Roman Catholics and 55 per cent. Dissenters.

UNITED STATES.

The number of churches at various dates was:—

	1830	1840	1850	1860	1870	1885

Total	18,200,000	74,200,000	14,358,000	50,159,000

In 1883 the Roman Catholics possessed 7424 churches, 650 colleges, 3100 schools, and 520 hospitals and asylums.

SCIENCE

The learned societies of the United Kingdom in 1880 were 118 in number and counted 66,200 members; but as many of these were repetitions, it is not likely that the cultivators of science were more than 44,000. The aggregate of 15 principal societies at various dates was:—

Year	Members
1830	2,201
1850	15,769
1880	29,001

In 1882 the principal societies showed as follows:—

Royal	552	Pharmaceutical	3,250
Statistical	807	Law	1,530
Archæological	580	Arts	3,340
Geological	850	Agricultural	7,950
Antiquaries	640	Zoological	2,000
Geographical	3,430	British Association	2,400
Botanical	1,660	Social Science	1,550

In 1881 the United Kingdom had 1355 schools of science, with 66,600 pupils; annual cost £295,000, or 89 shillings per pupil. In the same year the number of visitors to the different museums was as follows:—

British Museum	790,000	National Gallery	958,000

The following is an approximate table of shipping at various dates, the British flag including colonial vessels:—

	1800	1820	1842	1860	1888
British	1,856,000	2,654,000	3,311,000	5,713,000	9,050,000
French	250,000	350,000	634,000	930,000	960,000
German	150,000	250,000	550,000	700,000	1,230,000
American	970,000	1,280,000	2,180,000	5,350,000	4,310,000
Various	800,000	1,300,000	2,795,000	3,777,000	6,100,000
Total	4,026,000	5,834,000	9,380,000	16,470,000	21,650,000

If marines and coastguards were added, the total would fall little short of two millions of men, or nearly 3 per cent. of the able-bodied men of the Christian world.

SEASONS

For medical purposes the seasons are supposed to begin on the following dates:—

	Northern Hemisphere	Southern Hemisphere
Spring	March 1st	September 1st
Summer	June 1st	December 1st
Autumn	September 1st	March 1st
Winter	December 1st	June 1st

The mean temperature of the seasons in various countries is as follows, in degrees Fahrenheit:—

	Spring	Summer	Autumn	Winter
England	47	61	51	40
France	54	68	56	41
Germany	48	65	48	33
Italy	59	75	61	45
Spain	61	79	67	51
Canada	43	71	47	17
Jamaica	77	81	79	76
New South Wales	63	70	64	54
Cape Colony	61	69	63	56
Brazil	73	79	75	69

SERVANTS

Of 1000 families at Berlin there were 194 which kept servants in 1864, and only 173 in 1871. Professor Leone Levi in 1883 computed 1,951,000 domestic servants in the United Kingdom, earning £68,500,000 per annum, say £35 each.

SHIPPING

The following is Mr. Kiaer's table of the shipping of the world, with a column added for carrying power, in which steamers are counted as four times the power of sailing-vessels:—

Year	Steam, Tons	Sail, Tons	Total, Tons	Carrying Power
1816	1,500	3,420,000	3,421,500	3,426,000
1820	6,200	3,160,000	3,166,200	3,185,000
1830	30,200	3,020,000	3,050,200	3,140,000
1840	97,000	4,560,000	4,657,000	4,950,000
1850	217,000	6,380,000	6,597,000	7,250,000
1860	764,000	10,710,000	11,474,000	13,770,000
1870	1,710,000	12,350,000	14,060,000	19,190,000
1880	4,650,000	13,270,000	17,920,000	31,870,000
1886	7,400,000	12,000,000	19,400,000	41,600,000

Mr. Kiaer's figures doubtless apply only to vessels of "long cours," as they are less than the total shipping. For example, Lloyd's list in 1842 shows for Europe only, no fewer than 88,100 vessels of 6,547,000 tons.

The nominal tonnage of the various flags was approximately as follows (see *Lloyd's List for 1842*):—

	1842	1860	1888		
	All Vessels	All Vessels	Steam	Sail	Total
United Kingdom	2,570,000	4,660,000	4,350,000	3,115,000	7,465,000

Exclusive of junks and canal-boats.

Mr. Kiaer's table of vessels over 100 tons, in 1881, was as follows:—

Flag of	Number			Total Tonnage
	Steamers	Sailing	Total	
Great Britain	2,869	11,893	14,762	7,010,000
France	335	2,772	3,107	840,000

The World	6,392	48,584	54,976	18,325,000

It would appear, therefore, that the whole shipping of the world may be summed up as follows, for 1888:—

	Number	Tons Register	Carrying Power	Carrying Power per Vessel
Steamers	19,740	9,040,000	36,160,000	1,820
Sailing-vessels	25,197	11,510,000	11,510,000	460
Small craft	62,200	1,132,000	1,132,000	18
Total	107,137	21,682,000	48,802,000	453

Hence it may be said that, excluding 62,200 small craft, the commerce of the world is carried on by 45,000 vessels, of 20,500,000 tons register, with a carrying power of 48 million tons.

The relative amounts of carrying power that corresponded to steam and sail at various dates were as follows:—

Year	Nominal Tonnage			Carrying Power			Percentage	
	Steam	Sail	Total	Steam	Sail	Total	Steam	Sail
1820	20,000	5,814,000	5,834,000	80,000	5,814,000	5,894,000	1.4	98.6

The increase of nominal tonnage and of effective carrying power in various periods was approximately as follows :—

	Annual Average of Increase			
	Tons Register		Tons Carrying Power	
	1841-60	1861-88	1841-60	1861-88
British	120,000	119,000	180,000	560,000

Various	1,000	...	14,500	94,400
Total	360,000	179,000	562,000	968,000

The net increase of nominal tonnage from 1861 to 1888 was 179,000 per annum; but this is not the sum of the above column, as several countries showed a decline.

Great as has been the growth of carrying power in the last 30 years it is much less than the increase in the tonnage of port entries, which has been 3½-fold, while the carrying power has little more than doubled, viz. :—

Year	Nom. Tonnage	Carrying Power	Port Entries
1860	16,600,000	21,730,000	64,100,000
1870	15,940,000	25,100,000	95,400,000

1888	21,680,000	48,800,000	225,200,000

The tonnage of port entries of sea-going vessels at various dates was approximately as follows (the item marked "various" not being accurately known) :—

	1860	1870	1880	1888
U. Kingdom	12,350,000	18,120,000	29,360,000	33,950,000

Entries in ballast, which are included in the above table, showed tonnage and ratio to total entries thus :—

	1870	1880	1888	1870	1880	1888

U. Kingdom	3,200,000	5,100,000	6,900,000	17	17	21

It would seem from the above that as regards European ports the aggregate of entries in ballast has not materially varied, in proportion, since 1870, the ratio being as 21 per cent. of all entries. The following table shows the ratio of entries in each country belonging to the flag of that country, and the ratio corresponding to other or foreign flags :—

	National			Foreign Flags		
	1870	1880	1887	1870	1880	1887

The principal commercial ports of the world showed the tonnage of sea-going entries in 1888 as follows :—

	Tons	Tons
London	7,470,000	1,810,000
New York	5,470,000	1,590,000
Liverpool	5,370,000	1,590,000
Hamburg	4,410,000	1,620,000
Antwerp	3,660,000	1,550,000
Marseilles	3,360,000	1,480,000
Hong-Kong	3,330,000	1,180,000

Boston		1,100,000
San Francisco		1,050,000
Bordeaux		1,050,000
Stettin		1,040,000
Philadelpia		1,030,000
Glasgow		990,000

The above sums up a total of 64 million tons, which is nearly one-third of the commerce of the world, minor ports making up more than two-thirds.

If we compare the value of the imports of all nations with the tonnage of port entries (excluding ballast entries) at various dates, we find :—

Year	Imports, Millions £	Port Entries, Tons	Value, £ per Ton
1860	1,707	51,000,000	13.9
1870	1,040	76,000,000	13.8
1880	1,440	133,000,000	10.8
1888	1,502	180,000,000	8.3

This appears to show that coal, iron, and articles of less value, form every succeeding year a larger ratio of sea-borne merchandise

The registered shipping belonging to the various ports in 1882 was as follows :—

	Sail	Steam	Total	Carrying Power

Italian vessels seem to be worked cheaper than others. The following statement was published in 1881 as the monthly average expense of a vessel of 1000 tons with a crew of twenty men :—

Italian	95	German	135
Austrian	125	British	145
French	135	American	200

The percentage of vessels lost yearly, and the average life of shipping of various flags, as shown by Mr. Kiaer, are :—

	Annual Loss		Years of a Ship's Life
	Steamer	Sailing	
American	4.06	5.45	18
French	2.47	4.04	29
Dutch	3.84	4.49	23
German	2.77	4.04	22
British	2.94	3.93	26
Italian	1.74	2.94	28
Scandinavian	1.96	3.20	30

The weight of anchors and chain-cables for vessels is as follows :—

Vessel, Tons	Anchors, Tons	Heaviest in Cwts.	Cable, Inches	Cable, Length in Fathoms
200	3	13	1.0	180
500	6	25	1.5	270
1,000	9	42	2.0	300
2,000	18	77	2.5	390

It is usual for vessels to carry seven anchors, four of the maximum weight prescribed above.

The value of shipping and cargoes lost yearly at sea cannot be ascertained precisely. The Annual Register

Port entries in 1883 were as follows:—

At	Tons	Flag	Tons
Constantinople . . .	8,790,000	British . . .	9,270,000
Levant and Black Sea	18,790,000	Turkish . . .	4,810,000

Persian Gulf	160,000	Various . . .	10,480,000
Total	28,280,000	Total	28,280,000

In 1883 no fewer than 15,820 vessels entered the Dardanelles, with an aggregate of 10,460,000 tons, the share of British vessels being 7,030,000 tons.

EGYPT

The trade returns of the Suez Canal since 1870 will be found under the head of *Canals*, p. 102.

The tonnage of arrivals at Alexandria and that of vessels passing through the Suez Canal in 1883 showed thus:—

Turkish	250,000	30,000
French	250,000	580,000

American shipping differs from that of other nations, inasmuch as less than one-fourth is engaged on the high seas; coasting and internal traffic take 77 per cent. of the total merchant-navy. The carrying-power has risen only 20 in the last thirty years. It was less in 1880 than twenty years before, but has since recovered.

The tonnage of vessels built since 1812 was as follows:—

Period	Sail	Steam	Total	Carrying Power	Do. per Annum
1812-20	730,000	25,000	755,000	830,000	92,000

If we suppose that the vessels which have disappeared from the register in the last nine years were either lost or broken up (since very few have been sold to other flags), we find the death-rate of American vessels as follows:—

Sail Steam	Lost, &c., Tons Yearly	Tonnage of Shipping	Annual Loss per Cent.
Sail	140,000	2,700,000	5.2
Steam	45,000	1,500,000	3.0
Total	185,000	4,200,000	4.4

The principal maritime states showed tonnage of vessels belonging to citizens of same in 1850 and 1886 thus:—

State	Tons	
	1850	1886
New York	944,000	1,220,000
Massachusetts	685,000	440,000

The following table of steamboat traffic was published in 1881 for the preceding year :—

The crews mustered 57,100 men, their wages averaging £85. The steamers carried merchandise 21 times their own tonnage, besides passengers. Each steamer carried in the year 33,000 passengers and 5000 tons of merchandise. One tug on the Mississippi can convey in six days, from St. Louis to New Orleans, boats carrying 10,000 tons of grain, which would require 70 railway trains of 15 waggons each.

The official return of wrecks and casualties shows :—

CANADA

The merchant navy has grown in tonnage very rapidly, viz. :—

Year	Steam	Sail	Total	Carrying Power
1841	5,000	345,000	350,000	365,000
1866	28,000	727,000	755,000	840,000
1877	77,000	1,233,000	1,310,000	1,540,000
1888	207,000	880,000	1,087,000	1,710,000

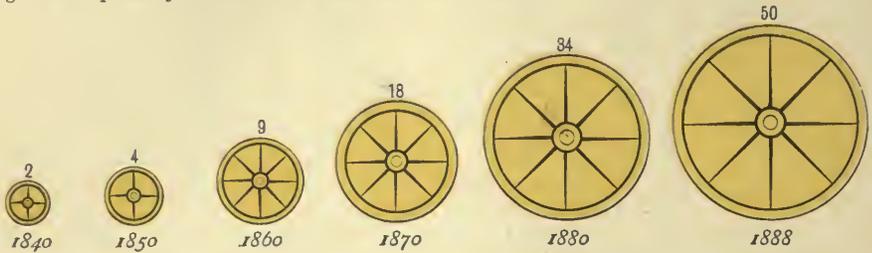

Although there has been a decline of 220,000 nominal tonnage in the last eleven years, there is an actual increase of 170,000 tons in carrying power owing to steamers taking the place of sailing vessels. Port entries of the high seas show the following tonnage :—

Year	Tons	Year	Tons
1829	430,000	1880	3,690,000
1860	2,650,000	1885	3,840,000
1870	3,150,000	1888	4,620,000

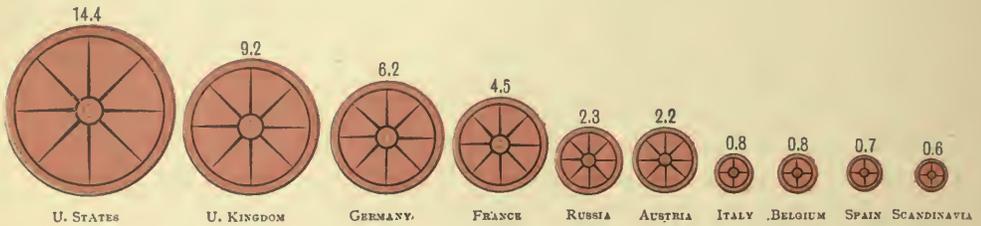

Of the entries in 1888 there were 35 per cent. in ballast.

STATISTICS.

The library of the Royal Statistical Society comprises 27,000 volumes, and is far from complete. There are at least 50,000 statistical works extant, and if a student were able to examine three of them daily he would require 50 years to get through them. More than 500 new works on statistics are published yearly.

Steam being measured by horse-power, it is well to bear in mind the following facts:—

One horse-power will raise 10 tons per minute a height of 12 inches, working 8 hours a day. This is about 5000 foot-tons daily, or 12 times a man's work.

(1.) Mail-coach horses: Four will draw a coach, say 2 tons, at the rate of 10 miles an hour, for 6 days every week, and last 5 years.

(2.) Canal horses: One will draw a barge of 25 tons, resistance 108 lbs., at 2½ miles per hour.

(3.) Waggoners' horses: One will easily draw a ton 30 miles in a day of 12 hours.

Sims mentions a Devonshire cart-horse, 15 hands, 1200 lbs., which gave an average of 8000 foot-tons daily.

The horse-power of Niagara is 3½ millions nominal, equal to 10 million horses effective, valued at £15,000,000 per annum, if conveyed by electricity to New York.

The measurement of horse-power, that is, of raising a certain weight 12 inches per minute during 8 hours daily, is variously given by the best authorities, viz:—

	Lbs.		Lbs.
Smeaton	22,000	Desaguliers	27,500
Sims	23,400	Watt	32,000
Tredgold	27,500	Saussure	34,000

In 1880 Mr. Engel showed that the value of industries dependent on steam was 6275 millions sterling; his table for 1880 may compare with one for 1888 as follows:—

	Millions £ Sterling		Increase
	1880	1888	
Railways	4,000	5,700	1,700
Factories, &c.	2,000	2,600	600
Steamers	275	410	135
Total	6,275	8,710	2,435

This shows that in eight years about 300 millions sterling per annum of new capital went into industries worked by steam. Mr. Engel finds that the maintenance of a 300-horse locomotive costs £900 a year, or £3 per horse-power, whereas the food of a live horse costs £30 per annum. Stationary engines, he says, cost £15 per annum per horse-power. A water-wheel of 100 horse-power costs only £7 per annum, or less than 18d. per horse. He shows that during twelve years ending 1878 each locomotive in Prussia drew yearly 1710 tons a distance of 6 miles per horse-power; that is, a 300-horse engine drew nearly the above weight daily 10 kilometres or 6 miles. He shows further that a live horse draws about 92 tons in the year a distance of 6 miles, and that on comparing the cost of maintenance, the locomotive does its work at one halfpenny per ton, whereas the live horse costs 7s. for the same, that is, one ton for 6 miles. In other words, horse-draught costs 168 times as much as that done by locomotive. In simple form it may be stated thus:—

Locomotive draws daily 100 tons a length of 100 miles for 50s., say 6d. per ton per 100 miles.

Horse draws one ton two miles daily for 20d., being at the rate of 84s. per ton per 100 miles.

In 1880 the average power of locomotives was 250 horse in England, 290 in Germany, 350 in France, and 420 in Switzerland.

UNITED KINGDOM

In 1775 England had 20 steam-engines, with an aggregate of 300 horse-power. The use of steam in textile factories rose as follows:—

Year	Horse-Power
1835	41,000
1850	108,000
1860	375,000
1870	478,000

According to Fairbairn, in 1860 the steam-engines, fixed and movable, amounted to an aggregate of 3,650,000 horse-power. Engel made the aggregate in 1880 no less than 6,986,000. The following table shows approximately the growth of the various classes of steam-power:—

Year	Horse-Power			
	Fixed	Locomotives	Steamboats	Total
1840	350,000	180,000	70,000	600,000
1850	500,000	700,000	90,000	1,290,000
1860	700,000	1,350,000	350,000	2,400,000
1870	940,000	2,100,000	1,000,000	4,040,000
1880	2,000,000	3,200,000	2,400,000	7,600,000
1888	2,200,000	3,500,000	3,500,000	9,200,000

Engel seems to have under-estimated the horse-power of steamers, his estimate for the United Kingdom in 1880 being as follows:—

Fixed	2,000,000
Locomotives	3,240,000
Steamboats	1,746,000
Total	6,986,000

In the preceding table steamboats, of course, include both merchant vessels and the royal navy. Actual horse-power is double the nominal.

In 1832 the ordinary wages in piece-work for army-clothing were as follows :—

	Pence	Dozen caps	Pence
Tunic	38	Dozen towels	30
Trousers	14	„ belts	12
Frock	22		

A good worker earns 4s. daily. The wages of a collier in 1884 averaged 49d. daily, being exactly the same as in 1870, but the output of coal rose in the interval from 230 to 318 tons per miner; thus the cost of extracting a ton of coal was 46d. in 1884, against 65d. in 1870.

FRANCE

Wages in the 13th and 14th centuries, reduced to the same weight of silver in English money of to-day, were as follows per month :—

Bodio's table of wages for certain trades, reduced to English money, gives the following:—

The aggregate weekly earnings of 20 operatives in the above occupations compared as follows:—

Thus in 15 years, from 1859 to 1874, wages rose 41 per cent., but it would appear from the subjoined table that there has been hardly any perceptible rise since 1874.

We learn from the preceding table that the average wages for operatives have been increasing every decade. Three operatives in 1880 earned more than four did in 1850: they also produced more (see p. 379).

The ratio which wages bore to the value of goods manufactured was:—

States	1850	1860	1870	1880	Average per Cent.
New England	26	22	21	21	22
Middle	22	19	18	18	19

During the gold fever at San Francisco, daily wages were as follows:—

	s.	d.		s.	d.
Bricklayer	41	8	Tailor	16	8
Stonecutter	41	8	Hatter	29	2
Plasterer	37	6	Watchmaker	33	4

WARS

The wars of ninety years down to 1880 involved an expenditure of 3047 millions sterling, besides the loss of 4,470,000 lives, viz. :—

British Wars.—In less than 300 years, Great Britain has expended 1359 millions sterling in war, viz. :—

Date	Locality	Expenditure, Million £	Commander
1599	Ireland	4	Essex
1642-48	England and Ireland	57	Cromwell

In the Crimean War, 97,000 men took the field, of whom 2755 were killed in action; 18,280 were wounded, and of these 1847 died in hospital, and 17,580 died of disease; total deaths 22,182, or 22½ per cent. of the total strength.

French Wars.—In 218 years France spent 993 millions sterling in war, viz. :—

In the Crimean war 309,400 men took the field, of whom 8490 were killed in action; 39,870 were wounded, and of these 11,750 died in hospital, and 75,375 died of disease; total deaths 95,615, or 31 per cent. of total strength. It is remarkable that 29 per cent. of the wounded died, and 30 per cent. of men admitted to hospital for disease, whereas the British lost only 10 per cent. of wounded and 12 per cent. of men admitted for disease. At the same time only 71 per cent. of the French army were admitted to hospital for disease, namely 225,000; whereas 147 per cent. of the British were so admitted, that is, the whole army nearly twice over during the campaign, such admission reaching 144,400, or 46,000 more than the total strength. The casualties of the

French compare with those of the other belligerents in the Crimea thus:—

	English	French	Turk	Russian	Total

In the Franco-Italian war 128,000 French took the field, of whom 2536 were killed in action; 17,054 were wounded, and of these 2962 died in hospital, besides 2040 who died of disease; total deaths 7538, or 6 per cent.

In the Mexican war of 1862-66 there were 35,000 French landed in Mexico, of whom 1180 were killed in action; 2559 were wounded, and of these 549 died; deaths from disease were 4925, making a total of 6654, or 19 per cent. of total strength.

In the Franco-German war of 1870-71, 710,000 French took the field, and of these no fewer than 138,870 were killed in action or died in hospital, including 2977 officers. The death-roll of the French was, of men killed in action or died in hospital, as follows:—

In France . . .	119,929
In Germany . .	17,240
In Switzerland .	1,701
Total . . .	138,870

This includes 45,000 deaths from disease, but it is believed that many not recorded died of wounds, having gone to their homes. Deaths were at least 20 per cent.

German Wars.—The campaign of Sadowa, between Prussia and Austria, in 1866, showed as follows:—

	Prussians	Austrians	Total
Took field . . .	309,000	330,000	639,000

The Prussians had one officer killed or wounded for 21 men, the Austrians one for 18 men.

In the Franco-German war of 1870-71 the casualties were as shown in the following table:—

	French	Germans	Total

The number of Germans killed includes 4010 missing, who are supposed to have been slain in action. The hospital records of the Germans showed that 127,870 wounded of their army were admitted, but only 10,710 died, say 8½ per cent. Deaths from disease included 6965 of typhoid fever. The minimum force in the field was 781,000 in August 1870, the maximum 937,000 in February 1871. The death-rate during the whole campaign in the different arms was:—

	Per 1000	Per 1000
Engineers	17.6	Staff 105.0
Cavalry	27.1	Captains 87.0
Artillery	27.2	All officers 76.0
Infantry	52.8	Officers and men . . 45.9

The Germans fired off 30 million musket cartridges and 363,000 rounds of artillery, with which they killed or mortally wounded 77,000 French, being 400 shots to kill, as compared with 740 in the Crimean war (q.v.). See *Battles*.

Russian Wars.—The campaigns of the last sixty years cost 335 millions sterling and 664,000 men, viz:—

American Wars.—According to Stedman, an officer under Lord Cornwallis, the strength of the British and American armies in the War of Independence was:—

Year	British	Americans
1776	27,700	3,300
1777	30,000	8,000
1781	7,000	32,600

The British army consisted largely of Hessian and other soldiers bought in Germany by George III., and for whom the British Government paid the following sums to the German princes:—

	Men	Sum, £	£ per Man	Perished in the War
Hesse	16,992	2,600,000	153	6,500
Brunswick . . .	5,723	780,000	137	3,015

Total	29,166	5,127,000	175	11,843

During the five years that the war lasted 288,200 Americans fought for their country, the States being represented by the following numbers:—

	Men.	Men
Massachusetts . .	83,000	New Jersey 17,000
Connecticut . . .	49,000	New Hampshire . . 15,000

New York	21,000	South Carolina . . . 6,400
Maryland	18,000	Georgia, &c. 5,500

The American army, after the surrender of Lord Cornwallis, was found to number thus:—

49	regiments of foot	23,224
4	" horse	1,536
4	" artillery	2,340
1	" pioneers	480
Total		32,580

The total expenses of the war were 135 million dollars, say 28 millions sterling. In the second war with England (1812-15), the American army at one time counted 32,000 men under the colours. In the war with Mexico (1845), the Americans had 90,100 men, of whom 7780 died, including 6060 of disease, and the rest killed in action or who died of wounds received.

An official statement of the war for the Union in 1863-65 was as follows:—

Northern Army

	Officers	White Men	Coloured	Total	Ratio

The Ordnance department served out 7892 cannon, 4,022,000 rifles, 2,360,000 equipments for infantry and cavalry, 12,000 tons powder, 42,000 tons lead, and 1022 million rounds of cartridge.

A ton of water contains 224 gallons or 36 cubic feet, but sea-water is 2 per cent heavier. An inch of rainfall gives 14,500,000 gallons of water to the square mile, or 22,500 gallons to the acre. Snow requires 8 cubic feet to produce one cubic foot of water. Current requires a minimum fall of one inch in 10 miles. The water-power of Niagara is 10,000,000 cubic feet per minute, equal to 3,000,000 horse-power. In 1880 the United States had 51,000 water-wheels with an aggregate of 1,500,000 horse-power.

Water supply has always been a matter of the highest importance. Rome, in the time of the Cæsars, had nine aqueducts, measuring 249 miles in the aggregate: they poured into the city 330 million gallons daily, or 160 gallons per inhabitant. The great aqueduct of Peru, built by the Incas, was 360 miles long. Among modern works the most famous are:—

Name	Miles	Million Gallons Daily	Cost of Work, £
Cröton (New York)	41	88	1,800,000

Marseilles	57	60	4,500,000

The supply of various cities is shown as follows:—

Artesian wells are of great antiquity; they were known at Thebes 2000 years before the Christian era. In modern times that of Grenelle, near Paris, is the most famous, having taken eight years in boring, 1833-41; it gives 700,000 gallons daily, the water rising 32 feet above the surface, with a temperature of 81 1/2° Fahr.

Well	Depth, Feet	Diameter, Inches	Gallons Water per Minute	Cost of Well, £
Grenelle	1,798	3.74	484	14,550

There are 78 of these wells in England, varying from 100 to 1000 feet. Several have been sunk in China more than 1000 feet, at a cost of only seven shillings per foot.

The water companies of London in 1880 showed: capital, £12,463,000; receipts, £1,460,000; expenses, £740,000; net profit, £720,000.

The water-supply of Paris in 1884 was as follows, daily:—

Aqueduct	55,000,000
Seine and wells	33,000,000
Total	88,000,000

WEALTH

The following conspectus shows approximately the wealth of nations in 1888. The United States occupies the first place. As regards the amount of wealth per inhabitant the United Kingdom stands second only to Australia; and when we consider that most of Australia is mortgaged to British capitalists we may say that in reality the United Kingdom has most wealth per head. Excluding Ireland (where the ratio is only £124 per head), the ratio for Great Britain is £263 per inhabitant. It is well to observe that the subjoined table may serve for comparison, but cannot be considered mathematically correct:—

Regarding Petty's valuation, we only know that land constituted 57 per cent. of the total, the selling price being then under £5 an acre. At the time of Davenant it had risen to £9, and of Young to £18. Towards the close of the 18th century Beeke, Pitt, and Eden made valuations of Great Britain, all previous ones being of England without Scotland. Dr. Beeke valued the real estate at 920 millions, viz.:—

	£
Land in England	600,000,000
Land in Scotland	120,000,000
Houses in Great Britain	200,000,000
Real estate	920,000,000

The most elaborate work of this kind was Colquhoun's in 1812, the first valuation of the United Kingdom: he made the total 2745 millions in the currency of the period, equal in gold to 2190 millions sterling. His

table of values evidently formed the basis on which Lord Liverpool and Pablo Pebrer afterwards constructed theirs. Pebrer's estimate of the value of the United Kingdom in 1833 was as follows:—

	Million £ Sterling			
	England	Scotland	Ireland	United Kingdom
Lands	1,000	200	400	1,600
Cattle	150	26	66	242
Grain	40	7	13	60
Houses	400	40	93	533
Furniture	173	20	53	246
Public buildings	42	4	11	57
Mines and canals	151	10	5	166
Merchandise	133	21	32	186
Jewellery and clothes	66	7	13	86
Sundries	316	38	64	418
Total	2,471	373	750	3,594

He furthermore estimated the earnings and capital of the United Kingdom and Colonies thus:—

	Earnings, £	Capital, Million £	£ per Inhab.		
			Population	Capital	
U. Kingdom	514,800,000	3,594	24,300,000	149	21.0
Canada	17,600,000	62	910,000	68	19.4
West Indies	22,500,000	89	730,000	121	31.0
Mauritius	1,200,000	13	100,000	130	12.0
South Africa	1,100,000	6	55,000	109	20.0
Australia	500,000	3	40,000	75	12.5
Total	557,700,000	3,767	25,135,000	144	21.5

Porter's estimate in 1840 in a manner confirmed all those previously made, showing a progressive increase of wealth, and relied, moreover, on the legacy and succession returns. Dr. Giffen's tables for 1865-75-85 are *sui generis*, laying down a new method of valuation, namely, capitalising the various sources of income in the income-tax returns. His table for 1885 may be condensed thus :-

	Income, £	Capital Value, Mill. £	Years' Purchase
Lands	65,090,000	1,691	28
Houses	128,500,000	1,927	15
Farmers' profits	65,223,000	522	8
Foreign loans	21,096,000	527	25
British railways	33,270,000	932	28
Foreign railways	3,868,000	76	20
Trades and professions	38,096,000	541	15
Furniture, &c.	960	...
Various companies	34,789,000	696	20
Mines and quarries	8,536,000	34	4
Gasworks	5,026,000	126	25
Waterworks	3,260,000	65	20
Ironworks	2,265,000	9	4
Canals	3,546,000	71	20
Investments abroad	50,000,000	500	10
Public property	500	...
Sundries	91,517,000	860	...
Total	554,022,000	10,937	...

If there be a weak point in Dr. Giffen's method, it is the capitalising of farmers' profits and income arising from trades and professions, together 1063 millions sterling; many people will question whether these items should be counted at all.

The following table shows approximately the principal items of national wealth at various dates :-

	Million £			
	1812	1840	1860	1888
Lands	1,380	1,680	1,748	1,544
Cattle, &c.	240	280	350	414
Houses	255	740	1,100	2,424
Railways	21	348	865

Bullion	23	61	105	124
Foreign loans	105	330	420	1,460
Roads, works, &c.	286	525	675	880
Total	2,190	4,100	5,560	9,400

Land is still one of the great features of wealth. For the sake of comparison, we may capitalise the rental at thirty years' purchase since the middle of the 18th century. As regards 1888, it is admitted that the rental valuation is 20 per cent. more than the landlords actually receive, and hence in the following table the value for 1888 is computed accordingly :-

Year	Value of Land, Million £ Sterling			
	England	Scotland	Ireland	Total
1750	381	24	93	498
1780	507	36	159	702
1814	1,112	145	213	1,470
1843	1,264	167	246	1,677
1850	1,286	167	252	1,704
1860	1,289	189	270	1,748
1868	1,433	216	276	1,925
1877	1,548	231	298	2,077
1888	1,125	171	248	1,544

The value of land in the three kingdoms rose 40 per cent. during the wars in Canada and United States, but the wars against Bonaparte caused a still greater rise owing to the enormous prices paid for grain. The upward movement continued until 1877, from which date there has been a steady, continuous decline.

Houses in the early part of the present century were little over 10 per cent. of the wealth of the nation; at present they exceed 25 per cent. of the total. I have capitalised the rental at 18 years, while Dr. Giffen thinks 15 years sufficient.

The increase of house property in the United Kingdom in a single lifetime, say 67 years, has been over 2000 millions sterling, viz. :-

Year	Number of Houses	Rental, £	Value, Million £	Annual Increase	
				Houses	Value, Million £
1821	3,572,000	20,300,000	366
1841	4,775,000	41,500,000	747	60,000	19
1861	5,131,000	61,200,000	1,102	18,000	18
1887	7,100,000	134,700,000	2,424	77,000	56

It must not, however, be supposed that 2000 millions sterling have been expended on new houses since 1821: the value of sites has risen very remarkably, which is included in the above table. The actual house property of the United Kingdom may be distinguished approximately thus :-

	Number	Value, Million £	£ per House-
Built before 1840	4,400,000	1,570	357
„ since 1840	2,700,000	854	316
Total	7,100,000	2,424	341

There is no country in the world in which the value of house property to population is so high as in England, nor any (except Russia) where it is lower than in Ireland. The houses and values in the three kingdoms stand thus :-

	Houses	Value, £	£ per House
England	5,206,000	2,131,000,000	408
Scotland	980,000	230,000,000	235
Ireland	914,000	63,000,000	69
U. Kingdom	7,100,000	2,424,000,000	341

The growth of house property in each of the three kingdoms has been already set forth in detail under the title *Houses*.

Railways constitute an entirely new element of wealth that has sprung up in the last fifty years: they represent at present a value far in excess of the National Debt.

Year	Miles	Cost, £	Cost per Mile
1840	650	21,000,000	32,000
1860	10,430	348,100,000	33,400
1888	19,810	864,700,000	43,700

The increase of railway capital in twenty years, down to 1860, was £16,400,000 per annum, and £18,400,000 in the years from 1860 to 1888. Shipping has grown about nine-fold in value since Colquhoun's estimate in 1812, and at present represents a sum equal to the collective values of all the other merchant navies of the world; for this item, be it understood, does not include war-vessels, the latter being counted with dockyards, arsenals, and other public property.

The shipping of our merchant navy, including machinery and fittings, represents the following amount :—

	Tons	Value, £	£ per Ton
Sailing	3,115,000	24,920,000	8
Steam	4,350,000	108,750,000	25
Total	7,465,000	133,670,000	...

Merchandise in the above summary is put down at a sum equal to six months' imports and exports at the several dates.

Furniture is, at auctioneers' estimates, taken at 50 per cent. of the value of house property. Bullion and foreign loans have been estimated at various dates more or less at the figures stated. Foreign investments in 1888 were approximately as follows :—

Colonial loans and railways	430,000,000
Australian mortgages	330,000,000
Foreign loans and railways	700,000,000

Total 1,460,000,000

Public properties in the United Kingdom were approximately thus :—

180,000 miles of roads	90,000,000
6000 miles of streets	60,000,000
Canals, docks, and royal navy	115,000,000
Drains, waterworks, telegraphs	178,000,000
Public buildings	240,000,000
Parks, crown forests, arsenals, &c.	197,000,000

Total 880,000,000

The total wealth of the three kingdoms in 1888 was approximately as follows :—

	Million £ Sterling			
	England	Scotland	Ireland	Total
Lands	1,125	171	248	1,544
Houses	2,131	230	63	2,424
Cattle, &c.	267	53	94	414
Railways	714	114	37	865
Furniture	1,066	115	31	1,212
Other items*	2,511	265	165	2,941
Total	7,814	948	638	9,400

The distribution of wealth in the United Kingdom may be approximately arrived at if we multiply the number of estates that paid legacy-duty by fifty, which corresponds more or less to the number of inhabitants. The official returns showing the amount of property changing hands under probate or legacy in the years 1885-89 give the averages thus per annum :—

Estates	Number	Amount, £	Average, £
Over £500,000	11	9,400,000	855,000
£100,000-£500,000	147	27,800,000	190,000
£10,000-£100,000	2,279	60,400,000	26,500
£1,000-£10,000	11,153	35,500,000	3,200
Under £1000	30,660	10,100,000	330
Total	44,250	143,200,000	3,250

The above is exclusive of estates paying succession-duty, which amounted in the same years to an average of £44,800,000, equal to 31 per cent. of the former. In order, therefore, to estimate the total value of property

* As the amount under this heading that would correspond to each country cannot be ascertained, the sum is distributed *pro rata* according to the income-tax assessments of the three kingdoms.

changing hands, we may be permitted to add 31 per cent. to the number of each class as given above, and likewise to the amount. The account will then stand thus :—

Estates	Amount, £	Average, £
Over £500,000	12,000,000	855,000
£100,000-£500,000	36,700,000	190,000
£10,000-£100,000	78,500,000	26,500
£1,000-£10,000	46,800,000	3,200
Under £1000	14,000,000	340
Total	188,000,000	3,250

If we follow Porter's method, and multiply the above number of estates by fifty, as the number of living persons is about fifty times the annual number of deaths, we find the wealth of the kingdom is held as in the subjoined table. Moreover, as each estate proved may be taken to stand for a household averaging 5½ persons, we must distribute the amount in households, and not per individual :—

Class	Households	Average, £	Aggregate, Millions £
Millionaires	700	855,000	599
Very rich	9,650	190,000	1,834
Rich	148,250	26,500	3,928
Middle	730,500	3,200	2,336
Struggling	2,008,000	340	680
Poor	3,916,900
Total	6,814,000	...	9,377

The above total is almost equal to the amount given in the conspectus as the wealth of the kingdom, which included 880 millions for public works, &c. It is, however, apparent that a portion (probably 10 per cent.) of the wealth on which probate duty is paid consists of fiduciary documents which cannot be considered in a nation's wealth, such as bills of exchange and stocks of the National Debt. This last, 700 millions sterling, is held in the United Kingdom, and consequently figures among testamentary estates, while adding nothing to the nation's wealth.

FRANCE

Numerous estimates have been made: those of La-visoier, 1789, and Chaptal, in 1815, were as follows :—

	Millions £	
	1789	1815
Rural property	840	1,040
Urban property	280	320
Personal property	400	440
Total	1,520	1,800

Those of Fournier de Flaix and Yves Guyot, from 1826 to date, are as follows :—

Year	Flaix			Guyot		
	Million £			Million £		
	Real	Personal	Total	Real	Personal	Total
1826	1,560	1,020	2,580	1,720	1,120	2,840
1833	1,674	1,152	2,826	1,840	1,280	3,120
1841	1,881	1,359	3,240	2,080	1,520	3,600
1849	2,115	1,530	3,645	2,280	1,560	3,840
1857	2,322	1,971	4,293	2,480	1,880	4,360
1865	2,934	2,646	5,580	2,640	2,200	4,840
1873	3,510	3,312	6,822	3,560	3,240	6,800
1882	4,835	4,275	9,110	4,480	4,080	8,560

The following is a summary of the most notable estimates:—

Year	Million £	Author
1789	1,520	Lavoisier
1815	1,800	Chaptal
1853	5,000	Girardin
1871	7,000	Wolowski
1872	7,600	Ayen
1879	8,000	Foville
1879	7,520	Leroy Beaulieu
1879	9,600	Amelin
1880	9,200	Vacher
1881	8,640	Mouey
1882	9,110	Flaix
1885	8,560	Guyot

The following table shows approximately the components of the wealth of France at various dates:—

	Value in Million £				
	1789	1826	1840	1873	1888
Land . . .	740	1,293	1,473	3,000	2,688

Sundries . . .	112	274	312	377	1,143
Total . . .	1,520	2,840	3,600	6,822	8,560

De Flaix and Vacher make the total 500 or 600 millions more than the above estimate for 1888, but perhaps they have not sufficiently allowed for the depreciation of land since 1880. The above total is that given by Yves Guyot for 1885. The increase of wealth since 1873 appears to have averaged 116 millions sterling per annum.

BELGIUM

Massalski, in his *Richesse de Belgique* (1880), sums up the national wealth at 29½ milliards of francs, or 1180 millions sterling, which is 17 per cent. over my estimate. It is to be observed that properties subject to legacy and succession duties from 1880 to 1885 averaged only 18 millions sterling, which at the current death-rate of 20 per thousand would give a total wealth of 900 millions sterling, exclusive of royal palaces, public works, &c.: these latter would hardly exceed 110 millions sterling.

GERMANY

It is remarkable that whereas the earnings of the German people, as set forth under the head of *Income*, are only 1 per cent. less than those of France, the wealth of Germany appears to be one-fourth less. This is, however, in great measure explained by the great difference in the value of land, Germany averaging £21, France £33 per cultivated acre. The imperial assessment for taxation is in the following ratio, and if we suppose wealth to be distributed in like manner, it will be as in the subjoined table:—

	Ratio	Millions £
Prussia	60.3	3,425
Bavaria	11.7	665
Saxony	6.6	375
Wurtemberg	4.3	244
Baden	3.4	193
Alsace	3.4	193
Hesse	2.1	119
Other States	8.2	467
Total	100.0	5,681

Soetbeer shows that the earnings of the Prussian people advanced 25 per cent. from 1872 to 1885, and if we suppose that wealth increased in like degree, this makes the accumulation of thirteen years amount to 1136 millions, or 88 millions sterling per annum—say 40s. per inhabitant, against 72s. in the United Kingdom.

AUSTRIA

In 1880 Beer estimated the total wealth of the monarchy at 40,000 million florins, or about 3800 millions sterling, being only 1½ per cent. under my estimate. We have no means to arrive at the increase of wealth, but Roschmann in 1883 estimated the national earnings, at 610 millions sterling, against 550 millions in 1874, an increase of 11 per cent. If wealth increased in the same ratio the accumulation must have been 380 millions sterling, or 42 millions per annum, say 23s. per inhabitant, against 4cs. in Germany.

ITALY

Newmann Spallart valued the total wealth of the country thus:—

	Million £ Sterling
Lands	1,160
Houses	360
Furniture, railways, &c.	404
Total	1,924

This was too low a valuation, an Italian writer in 1868 having arrived at a total of 1934 millions.

Pantaleoni, following Porter's method, based on legacy returns, shows that (exclusive of public property) the wealth of the people exceeds 2100 millions; he multiplies the amount of property subjected to legacy or succession by forty. The amount of such property in 1884 was £53,500,000, and hence the national wealth was 2140 millions sterling. This is exclusive of roads, public buildings, royal navy, arsenals, harbours &c., worth at least 300 millions, bringing up the total to 2440 millions sterling. This is 16 per cent. less than my estimate. Possibly some of the property subjected to legacy-duty was undervalued, in order to enable the heirs to evade a part of the duties. According to the *Archivio*, the value of lands and houses in 1880 was 1562 millions sterling; in my table they stand for 1576 millions, a difference of less than 1 per cent.

SPAIN

The figures of the Junta de Medios in 1832 compare with mine for 1888 as follows:—

	Million £ Sterling		
	1832	1888	Increase
Lands	686	984	298
Houses	237	340	103
Railways	94	94
Sundries	186	1,098	912
Total	1,109	2,516	1,407

It is manifest that the item of sundries in 1832, which included everything in the kingdom except land and houses, was very much understated. Personal property alone would have been at least 25 per cent. of total. A proper valuation in 1832 would perhaps have shown a total of 1400 millions. In that case the accumulation of the 56 years down to 1888 would average 20 millions sterling per annum, or 27s. per inhabitant, as compared with 40s. in Germany, and 72s. in United Kingdom.

DENMARK

In 1885 Falbe estimated the total wealth at 372 millions sterling, or 8 per cent. less than my total for 1868. His figures were:—

	Million £
Houses and lands	257
Personal property	115
Total	372

He estimated that real estate had risen from 65 millions sterling in 1848, being an increase of 192 millions sterling in 37 years, say £5,200,000 per annum. This (irrespective of chattels or personal property) was equivalent to an accumulation of 60s. yearly per inhabitant. It was the direct result of breaking up the estates of the nobles, and facilitating their purchase by the peasantry.

HOLLAND

The value of testamentary and succession property which changed hands in the years 1879-83, latest that the *Résumé* publishes, averaged as follows:—

	£
Houses and lands	9,100,000
Dutch National Debt	1,200,000
Other personal assets	13,000,000
Total	23,300,000

Excluding the National Debt for reasons already given, we find a sum of £22,100,000, which, multiplied by 44 (as the living were in those years 44 times the number of deaths), gives approximately the wealth of Holland, say 972 millions sterling; the figure in the conspectus is 980 millions.

UNITED STATES

The first Census of wealth was taken in 1790, which showed as follows:—

	\$	£
Lands	479,000,000	99,800,000
Houses, &c.	141,000,000	29,400,000
Total	620,000,000	129,200,000

The following table shows the results in English gold at each Census, and an estimate for 1888 as already given:*

* The New York *Journal of Commerce* in 1887 estimated the wealth of the Union at 61,000 millions of dollars, or 12,700 millions sterling, showing, moreover, that the amount of insured property had risen as follows:—

Year	£
1870	735,000,000
1880	1,495,000,000
1885	2,184,000,000

The several Census returns from 1850 to 1880 show the wealth of each State in values reduced to English gold (allowing 14 per cent. discount for paper values in 1870) as follows:—

	Million £ Sterling				Increase of 30 Years	£ Sterling per Inhabitant

Comparing the Census returns of 1880 with those of 1850, it appears that the accumulations of thirty years amounted in the State of New York alone to 1360 millions sterling, and that the six States of New York, Pennsylvania, Illinois, Ohio, Massachusetts, and California stood for 60 per cent. of the total accumulations of the Union. If we suppose that each inhabitant contributed equally to the public wealth, and take the mean number of each nationality for the 30 years in question, we find the accumulations of 30 years ending 1880 were made up thus:—

State	Increase of Wealth, Million £ Sterling, by

The accumulations per inhabitant in thirty years average £205 sterling, or nearly £7 per annum, viz. :-

States	Increase Million £	Annual Average, £	Mean Population	Annual Accumulation per Head
New England	842	28,070,000	3,400,000	£ s. d. 8 4 0
Middle	2,749	91,630,000	9,500,000	9 13 0

West	3,287	109,600,000	12,200,000	9 0 0
Union	7,591	253,100,000	36,800,000	6 17 0

This is a prodigious growth of wealth in thirty years, and without parallel in the history of the human race. Nevertheless the accumulation per head is less than in Australia.

AUSTRALIA

According to Mr. Coghlan the wealth of Australia was approximately as follows :-

	Millions	Population	Per Head
1838	£ 26	200,000	£ 130
1863	181	1,264,000	144
1888	1,136	3,680,000	307

This includes the five Colonies of the mainland, and

also Tasmania and New Zealand. It is, however, incomplete, because it excludes public works, crown-lands, and other public properties.

The total wealth, as shown in the conspectus, appears to reach the sum of 1373 millions sterling, and to have grown in eighteen years as follows :-

	Million £ Sterling	
	1870	1888
Lands	89	533
Cattle	47	67
Railways	27	94
Houses	60	239
Furniture	30	120
Merchandise	29	65
Sundries	38	255
Total	320	1,873

At a meeting of one of the Australian banks in London in 1888, it was stated that the wealth of the seven Colonies was as follows :-

	Million £
Private wealth	1,015
Public works	175
Banks	148
Total	1,338

This was, however, irrespective of crown-lands, the value of which could not be easily stated.

Mr. Coghlan's distribution of the wealth of the several Colonies differs from my estimates as follows (1888) :—

	Millions Sterling	
	Coghlan	Mulhall
New South Wales	410	483
Victoria	386	370
Queensland	106	132
South Australia	57	131
Tasmania	26	36
New Zealand	145	208
Western Australia	6	13
Total	1,136	1,373

Mr. Coghlan's figures, as already stated, exclude railways, crown-lands, &c. The principal components of wealth in 1888 may be estimated to have stood thus in million £ sterling :—

	Land	Cattle	Railways	Houses	Furniture	Merchandise	Sundries	Total	£ per Head
N. S. Wales	181	25	27	92	46	23	89	483	440
Victoria	107	12	28	91	46	18	68	370	337
Queensland	58	12	13	12	6	6	25	132	330
S. Australia	64	5	10	13	7	7	25	131	413
Tasmania	16	1	2	5	3	2	7	36	240
New Zealand	100	11	13	25	12	8	39	208	345
W. Australia	7	1	1	1	1	1	2	13	310
Total	533	67	94	239	120	65	255	1,373	377

The increase of wealth in Australia would therefore seem to have been as follows :—

Date	Wealth, Million £	Annual Increase, £	Mean Population	Annual Accumulation per Inhabitant
1838	26	£ s. d.
1863	181	6,200,000	700,000	8 16 0
1870	320	19,900,000	1,600,000	12 9 0
1888	1,373	58,500,000	2,800,000	20 18 0

The average annual accumulation per inhabitant has been more than double that in the United States, where it has never exceeded £8 10s.

Respecting the Colony of New South Wales, Mr. Coghlan states that if public works, railways &c., were included, the total would reach 521 millions sterling, that is, 8 per cent. over my estimate. And as regards Victoria, one of the Melbourne papers (apparently quoting the official statistics of Mr. Hayter) says :—“ In the statistics of the Colony for 1886, an estimate is made of the wealth of the population on the basis of the property left by deceased persons, it being supposed that the average amount left by each person dying is equivalent to the average amount possessed by each person living. On this basis the national wealth amounted to nearly 144 millions sterling, or £185 per head in the five years 1872 to 1876; to nearly 187 millions sterling, or £223 per head in the five years 1877 to 1881; and to nearly 286 millions sterling, or £305 per head in the five years 1882 to 1886.”

The above is exclusive of railways, public works &c., which would doubtless bring up the total to my figure of 370 millions sterling in 1888. With respect to New Zealand, the official returns for 1886, exclusive of public

works, and crown-lands, amounted to 152 millions sterling, which was apparently equivalent to 200 millions, including the items omitted. It is right to observe that the public debt, which was 175 millions sterling in December 1889, is held almost wholly in England, and ought therefore to be deducted from the wealth. This would leave a balance of 1200 millions sterling, or £330 per inhabitant, against £247 in the United Kingdom, £210 in the United States, £230 in Denmark, £224 in France.

CANADA

The following table shows approximately the total wealth in 1861 and 1888 :—

	Million £ Sterling		
	1861	1888	Increase
Lands	102	282	180
Cattle, &c.	38	80	42
Railways	23	151	128
Houses	80	127	47
Furniture	40	64	24
Merchandise	11	21	10
Sundries	98	255	157
Total	392	980	588

This shows an annual accumulation of 22 millions sterling, with a mean population of 4,000,000 souls, say £5 10s. per head, against £8 10s. in the United States, and £17 10s. during the same period in Australia.

CAPE COLONY

In 1883 the value of lands and houses was assessed as follows :—

	£
Cape Town	4,979,000
Port Elizabeth	1,950,000
Kimberley	1,711,000
Rural districts	29,160,000
Total	37,800,000

This is 10 per cent. less than my estimate for 1888, as shown in the conspectus.

WINDMILLS

Holland has 10,100 windmills, representing a value of 20 millions sterling, with an aggregate force of 52,200 horse-power. Cost of drainage, 10d. per acre, with a lift of 3 feet; 20d. at 6 feet, and so on. The average area drained by each mill in Holland is 310 acres, each lifting 150,000 tons or 33 million gallons water daily.

The figures for 1876-85 are by Newmann Spallart, those of 1880-88 from the *Moniteur Vinicole* (apparently too high), and the latest estimates are from numerous sources. An acre of vineyard has ordinarily 2400 vine plants.

The vine flourishes between 35 and 50 degrees of N. lat., and 28 and 46 S.

The largest vine in the world is said to be one growing at Oys, Portugal, which has been in bearing since 1802. Its maximum yield was in 1864, in which year it produced a sufficient quantity of grapes to make 165 gallons of wine. In Portugal it is customary to plant 2500 vines to the acre, and the yield is often 240 gallons per acre, or a gallon from 10 vines. In South Africa a bushel of grapes gives a gallon of wine.

FRANCE

A table of French vintages since 1810 is given at page 19 (*Agriculture*).

The following statistics of Champagne are published at Rheims:—

The stock in 1886 was considered equal to four years' consumption, which comprises 3,000,000 bottles yearly in France, and 17,000,000 in other countries.

UNITED STATES

Official returns of the vintages since 1840 show thus:—

Rudesheimer is worth £20 a gallon. Prince Woronzoff sells his Tokay, 220 years old, at £9 a bottle. Champagne vintage averages 20 million bottles, of which France exports 17 millions. The Xeres vineyards, 15,000 acres, produce 4 million gallons yearly of sherry. Wine loses strength after 200 years,

The woollen industry dates its importance from the reign of Edward III., who introduced foreign workmen. Gregory King in 1690, estimated the value of woollen manufactures at eight millions sterling, of which one-fourth were exported; he valued the wool at two millions sterling. The woollen industry approximately was thus:—

The Seats of the Senators of the first Class shall be vacated at the Expiration of the fourth Year, of the second Class at the Expiration of the sixth Year, so that one-third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.

³No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

SECTION 4. ¹The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

²The Congress shall assemble at least once in every Year, and such meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

³Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

⁴Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

²Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States. If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by yeas and nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House, respectively. If any Bill shall not be returned by the President within ten Days (Sunday excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the
