Shahn's first photographs were taken in New York. Frustrated by his attempts to sketch a blind accordion player, he borrowed \$25 from his brother and purchased a Leica and a right-angled viewfinder. While assisting Mexican muralist Diego Rivera on the ill-fated Rockefeller Center mural, he began to photograph city life and soon came to appreciate the camera's ability to capture the fleeting and ephemeral. His first photographs were published in *New Theater* (November 1934) under the title "Scenes from the Living Theater—Sidewalks of New York." Shunning the modernism of Alfred Steiglitz, Charles Sheeler, and Berenice Abbott, who were also extensively photographing New York, Shahn focused on the lives of the city's ordinary inhabitants: on the faces, not the façades, of the modern metropolis. He fixed his gaze on the ethnic, working classes of lower Manhattan, photographing storefronts, meeting spots, and playgrounds, not the city's immense skyscrapers or bridges.

In 1935, Shahn was hired to design posters, pamphlets, and murals for the Special Skills Division of Roosevelt's Resettlement Administration (later known as the Farm Security Administration (FSA)). Almost immediately, however, Shahn was loaned out to Roy Stryker's Historical Section. As Hank O'Neal notes, "More than anyone else he showed Stryker that the photographs in the file could be more than history; they could be propaganda" (O'Neal 1976). Shahn himself took pho-

tography with great zeal. He produced over 6,000 negatives for Stryker, and his “Negro Sharecroppers”—published in *Survey Graphic* (March 1936)—was the second RA photograph to appear outside a government publication. His images also appeared in many important photo-texts—Archibald MacLeish’s *Land of the Free* (1938), Sherwood Anderson’s *Home Town* (1940), and Richard Wright’s *Twelve Million Black Voices* (1941)—as well as in the RA’s traveling exhibits.

For his first field assignment, Shahn journeyed through the mining towns of West Virginia and Kentucky, and the cotton country of Arkansas and Louisiana. Although he had traveled widely in Europe and North Africa, Shahn had never before journeyed beyond America’s northeastern seaboard:

Off I went and boy, that shook me up [...] I found realities there I had no idea about [...] Theories melted before such experience [...] There was the South and its storytelling art, stories of snakes and storms and haunted houses, unchanging and yet such talent thriving in the same human shell with hopeless prejudices, bigotry and ignorance.

(Martin et al. 2000; Shahn 1957)

While appalled by conditions in the South, Shahn refused to trade in the rhetoric of heroic fortitude or present his subjects as victims. Rather, Shahn portrayed the concrete realities of economic indenture and inequitable dependency. As opposed to, for example, fellow-FSA photographer Dorothea Lange, Shahn did not seek visual icons, but attempted to compile a more complete visual documentary. He went to great lengths to get to know his subjects, often spending a number of days in a community. In Roy Stryker’s view, compassion, not technical proficiency, was Shahn’s trademark:

Something happens there in those pictures. Maybe it was in the wonderful tolerance, sympathy and feeling he had for people – for human beings. [...] I believe that he did have the ability to reach out and reach into individuals by his nature, his manner, his approach when he was taking pictures. In some way people opened up.

(Greenfeld 1998)

The ideology of FSA photography changed with Roosevelt’s re-election. Prior to 1937, photographers had focused on the Depression’s negative social ramifications. After 1937, the FSA’s focus became more positive, emphasizing how the New Deal had improved American life. Depicting Americans at work and play, Shahn’s Southern photographs of 1937 contributed to this new philosophy and highlighted the strength of community in small-town America. A year later, Shahn extended and broadened this theme during a six-week stay in Ohio,

where he focused his attention on social interaction, not economic relations. He took many images of small-town folk culture—road signs, posters, local gatherings, fairs, and the summer harvest—and returned to his interest in street photography. As social documents, they are more journalistic than his images from the South. Essentially affirmative, they show the importance of human interaction and the value of local, communal custom.

After Ohio, Shahn’s photographic career ended. Although he continued to rely heavily on photography for his painting, basing many works on his earlier images, his commitment to photography was over. However, in 1959, Shahn tried to reinvigorate his interest in photography, and he took his camera on a visit to Asia, yet this venture failed to revive his earlier enthusiasm: “I could not get interested in it [...] I found it was gone. I still love to look at photographs of people, but I couldn’t make them myself any more” (Morse 1972).

Despite the short span of Shahn’s photographic career, his influence was, and continues to be, significant. In New York and Ohio, he clarified and exemplified the course of American street photography. As an FSA photographer, he greatly affected the concerns and direction of this government agency by portraying the rural poor with sympathy and compassion. To extend an observation made by Kate Sampsell, Shahn’s photographs are more *The Family of Man* than *You Have Seen Their Faces*. And as Howard Greenfeld recently noted, Shahn’s “renunciation of the camera represented a real loss to the world of American photography” (Greenfeld 1998). Shahn died in New York on 14 March 1968, and his photographic archive was acquired by Harvard University’s Fogg Art Museum in 1970.

ARKADII SHAIKHET

Russian

One of the leading figures of the early Soviet era in photography, Arkadii (also Arkady) Shaikhet was among the group of pioneering photographers who forged the foundations of modern photojournalism. Born in Nikolayev in 1898, after primary school Shaikhet went to work as a locksmith's apprentice before moving to Moscow in 1918. In 1922, he took a job as a retoucher for a portrait photographer, and by 1924 had moved from the portrait studio to become a photojournalist with the popular publications *Robochaya Gazeta* (Workers' Gazette) and *Ogonek*. His career continued to be successful, culminating in, during the 1930s, his contributions to the influential international magazine, *USSR na stroike* (*USSR in Construction*).

Shaikhet was, along with Max Alpert and Solomon Tules, one of the authors of the documentary project *Twenty-Four Hours in the Life of the Filippov Family*. Conceived by a member of the Austrian "Society of Friends of the USSR," to the Soviet Photo Agency Soyuz Foto so that the European audience might better understand the advancement being accomplished by the Communist Revolution, the project was supervised by Soyuz Foto editor Lazar Mezhericher. Executed in four days in July 1931 by the three photographers, it was eventually published as a cover story in the German weekly *Arbeiter Illustrierte Zeitung*.

The series was devised to show in a direct and straightforward manner the home, work, and leisure activities of the family of Nikolai Filippov, a metal worker at Moscow's Red Proletarian factory. Along with panoramic views of Moscow neighborhoods, the layout included pictures of the Filippovs' previous log residence contrasted with their new modern apartment. These images made clear the prosperity of Soviet life with comparison to pre-Soviet poverty. The series reflects Shaikhet and Alpert's desire to capture concrete reality as an organic whole in which individual parts and the whole form a dialectical unity. The work proved extremely influential, establishing the photo essay as an important photographic genre.

In a companion article, "How We Photographed the Filippovs," Shaikhet and Alpert situated them-

selves as proponents of the serial method of documentary photography, noting that they understood series "not as a 'simple' display of a succession of workbenches or detached people at workbenches; a series has to reveal the social essence of objects and events as a whole, in their complete dialectical diversity" (quoted in Tupitsyn, 1996). The most interesting approach to industrial subject matter, they argued, included the "observation of some giant in order to periodically reflect truly well through snapshots how it began to be built, what the difficulties of construction were, how it grew... and finally the collective that emerged a winner in this struggle" (quoted in Tupitsyn, 1996).

The article also offered a criticism of the unconventional photojournalistic practices deployed by Alexandr Rodchenko and his associates, those photographers who arrived "at a construction site [and] above all rapaciously jump[ed] on the most effective parts of it" (quoted in Tupitsyn, 1996). Shaikhet and Alpert maintained that they were "not against unusual angles of observation and shifted positions of the camera during photographing" as long as these techniques were not used to radically alter the meaning of a representation but rather to highlight content that has already been well defined (quoted in Tupitsyn, 1996). Indeed, several photographs within the Filippov series involve such techniques as diagonal compositions, close-ups, high views, and spatial compression. These are interspersed, however, alongside images that offer explicitly conventional framing and composition.

The conventional representational approaches offered in the *Twenty-four Hours in the Life of the Filippov Family* series led critics such as Sergei Tretiakov, a major proponent of montage, to offer harsh assessments of the work. Tretiakov dismissed the series as a "photo-biographical extract" while suggesting that "in their photographic traditions, a carefully posed photograph of two young women with tennis rackets is no different from photographs of bourgeois celebrities at fashionable resorts" (quoted in Tupitsyn, 1996). Critics also called attention to factual errors, most notably a half-empty street car, a rare sight in Moscow, where street cars were regularly packed. This called into question the authenticity of the photographs.

The Soviet government, however, was an enthusiastic supporter of the work from the beginning, primarily because it was intended for a European audience. The government held great expectations for the project as an opportunity to communicate important information about the lives of workers under Communism. In this it would fulfill an important propaganda role. Shaikhet was a prominent member of the Union of Russian Proletarian Photographers (ROPF) and as such was in the position to be on the correct side of the schism that happened in Soviet photography in the 1930s. While his colleagues, including Rodchenko, Boris Ignatovich, and Elizar Langman, who were associated with what was coming to be perceived as avant-garde or formalist tendencies began to be denounced, Shaikhet's style came to exemplify official Soviet photography.

Shaikhet was a leading voice in the debate. A statement by ROPF members in *Proletarian Photo* in 1931 condemned the photographers associated with the October Union for following a model of Western photography, which followed a position put forward by Shaikhet as early as 1929 in his article "The Competition of the Photojournalists Unfolds." In this article, Shaikhet argued that the October approach to photography was an inappropriate model for the Soviet press, declaring that "editors approve of photographs in which all events are fitted into absolutely concrete and intelligible forms for the reader" (quoted in Tupitsyn, 1996).

By 1930, this position had garnered official support. In 1931, the Central Committee of the Proletarian Cinematographers and Photographers lauded the photographic approach offered in *Twenty-Four Hours in the Life of the Filippov Family* as the model for the proletarianization of Soviet photography. The Central Committee's statement declared that the images in the series presented a "bright realist documentary representation of the class truth of our reality [plus] the ability to expose the class essence of the events" (quoted in Tupitsyn, 1996). This made explicit official support for the methods and theories of ROPF photographers as opposed to the October Association photographers.

In the Soviet press, Shaikhet's photos increasingly were presented as ideal types against which the works of the October photographers, especially Rodchenko, were unfavorably compared. As one example, a distinction was demonstrated by comparing two images of street paving during the first Five Year Plan. In Shaikhet's 1931 work, *The Steamroller*, the photographer offers a straightforward presentation of labor from a conventional perspective. This contrasts with Rodchenko's photograph of the same subject from his series

Paving Streets: Leningradskoe Highway, 1929, in which the horizon is eliminated and the body of the machine is truncated. Shaikhet attempts to capture the completeness of the paving process in one work while Rodchenko presents a series of fragments to reveal the operation of the productive components of the machinery. Where Shaikhet's work attempts an intelligible and naturalistic presentation, Rodchenko's depictions disorient the viewer by offering a montage of parts rather than shaping a whole.

Shaikhet's work was displayed at the *Exhibition of Works by the Masters of Soviet Photo Art* in 1935, the last exhibition to include avant-garde photography at the onset of socialist realism. He also exhibited in the First All-Union Exhibition of Photo Art at the State Pushkin Museum in Moscow in 1937. This exhibit signified the final chapter in post-revolution Soviet innovative photography. On the whole, however, his images were produced not for galleries or museums but for a broad audience. Indeed, most of Shaikhet's wartime photos, taken during his time on the frontlines as a war correspondent, were never shown in galleries. He died in 1959.

With the fall of the Soviet Union, Shaikhet, along with the entire field of Socialist photography, is being reevaluated by both Western and Russian scholars. Lauded as "a founding father of Soviet newline photography" in the press release for an exhibition of his work at the Russian State Museum, Moscow in 2001, Shaikhet's contributions, like that of many of his countrymen, have yet to be thoroughly accessed.

CHARLES SHEELER

American

Charles Sheeler (1883–1965) is predominantly known as a painter rather than a photographer, but photography played a significant role in the development of the artist's work. Moreover, Sheeler's engagement with photography was instrumental in the development of early twentieth-century photographic practice, particularly the notions of "straight" or "objective" photography in America. Sheeler's work is most often associated with Precisionism (sometimes referred to as Cubist-Realism), a style of American art identifiable by its fusion of indigenous industrial subject matter and European modernist abstraction. Considered the most accomplished of the so-called Precisionists, perhaps Sheeler's most highly regarded and famous paintings—*American Landscape* and *Classic Landscape*—are based on commissioned photographs of Ford's River Rouge Plant (for example, see *Ford Plant, River Rouge*,

Canal with Salvage Ship, 1927). The photographs of the Rouge are unusual in that the industrial processes of production remain hidden, almost mysterious; the images appear more a meditation on architectural and structural forms, as well as machinery rather than a linear documentary of the production processes (see *Ford Plant, River Rouge, Bleeder Stacks*, 1927). The images are also unusual because they have come to be seen as artistic photographs despite their commercial beginnings; the Rouge images represent a moment where art and commerce intersect, where Sheeler is both artistic photographer and photographer for hire.

Sheeler's radical interpretation of the Rouge has its roots in the artist's unusual relationship to photography, which can be traced back to the very beginning of his career. Charles Rettew Sheeler Jr. was born in 1883 in Philadelphia to middle-class parents who encouraged and supported his desire to be a painter. In 1900, at the age of 17, Sheeler

applied to but was rejected by the Pennsylvania Academy of the Fine Arts, and was directed instead to Philadelphia's School of Industrial Art. By 1903, Sheeler—thoroughly disenchanted by his studies at the design school—successfully reapplied to the Pennsylvania Academy and began to study under the American Impressionist painter, William Merritt Chase. Sheeler graduated from the Academy in 1906 and found moderate success as a painter in the period following. However, seeing first-hand the work of the European avant-garde (Paul Cézanne, Pablo Picasso, Georges Braque, and Henri Matisse, amongst others) during a trip to Europe in 1908–1909, Sheeler was to radically rethink his aesthetic, rejecting the teachings of Chase (spontaneity, fluidity) and taking up those of European modernism (design, flatness, abstraction).

Around 1910, Sheeler bought a camera and began working as a commercial photographer to support himself as an artist, photographing the work of Pennsylvania architects (1912–1914) and then, between 1914–1924, paintings and sculptures for various museums and collectors (e.g., John Quinn's collection of African Sculpture [1916–1918]; Walter Arensberg's apartment [c. 1918]). Sheeler initially chose photography because he felt it to be “far removed from art”; however, as the 1910s unfolded, he began to see photography less as a “necessary evil” but as part of his overall aesthetic vision. This change in perspective is marked by Sheeler's transposition of certain conventions of commercial photography into the realm of artistic photography. Sheeler's photographs of the barns of Bucks County, Pennsylvania—especially *Side of White Barn* (1915), and the photographs of the Doylestown House (c.1915; also in Bucks County)—are the earliest examples. These images of the weekend retreat Sheeler began renting in 1910 are the artist's first true exploration of an American context through the application of cubism's underlying principles combined with a “straight” approach. For Sheeler's biographer, Constance Rourke, *Side of White Barn* is “a simple poetry of surfaces, light and line” (Rourke 1938), but, more importantly, it is the work of an American modern artist blending high European modernist ideas with an American vernacular subject matter: Sheeler is an *American* modernist.

Side of White Barn and the images of the Doylestown House marked a major departure from the soft-focus, idealistic visions of Pictorialists such as Alfred Stieglitz (with whom Sheeler corresponded from 1911), whose aesthetic predominated photography at the turn of the century and into its beginning decades. With its hard lines, bright light, and distinct textures, as well as its honest

concentration on form and sharply focused composition, *Side of White Barn* is the antithesis of Pictorialism. The impact of these photographs was such that Marius de Zayas would claim, “It was Charles Sheeler who proved that cubism exists in nature and that photography can record it” (de Zayas, 1996). Sheeler continued to pursue exactly this vision in a series of seven photographs of New York (1920) (see *New York, Park Row Building*, 1920) taken of the rear of the Park Row building from the 41-story Equitable Building at 120 Broadway. Accentuating the images' architectural forms and the rhythmic patterns of the structures' windows are a shallow depth of field and careful cropping of each image so as to remove the horizon, which further collapses space within the frame. These images emerged from the short film, *Manhatta* (1920), made in collaboration with Paul Strand during the spring and summer of 1920. Barely seven minutes long, the film's narrative charts a day in the life of Manhattan; interspersed with lines of poetry from Walt Whitman's *Manhatta*, the camera captures the angular architecture and dizzying perspectives of New York City. *Manhatta* is one of three avant-garde films Sheeler made during the 1910s (only *Manhatta* survives), and he printed still images from them all, another aspect of practice that often goes unmentioned (see Mora in Stebbins, 2002). From *Manhatta*, Sheeler reproduced 15 images and from another lost film, a series of images of Katherine Baird Schaffer—whom he married in 1921—*Katharine, Nudes*, c. 1918–1919. The images of Katherine's body are tightly cropped and in some respects reminiscent of Edward Weston's nudes. They also form part of an identifiable style and approach in Sheeler's photographic work that continues throughout the 1920s. In 1926, and on the invitation of Edward Steichen, Sheeler became a staff photographer for Condé Nast, photographing fashion and portraits of “stars” for *Vogue* and *Vanity Fair*. Later that year, Vaughan Flannery, art director at the Philadelphia advertising firm, NJ Ayer & Sons, offered Sheeler the River Rouge Commission. The success of the images encouraged Sheeler to become a staff photographer for the Ford Motor Company, a position he held until 1929, a role that has been recently criticized (see Terry Smith). The artist made his final visit to Europe in 1929, visiting Chartres Cathedral and photographing the structure with the same approach and technique as he had the Rouge, linking the modern and pre-modern through photography's technological gaze. However, despite Sheeler's commercial and artistic photographic successes, the artist's engagement

SHEELER, CHARLES

with photography diminished from 1930 onwards becoming “only a means to an end...a tool used in planning paintings” (Stebbins, 2002). Although the artist joined the Metropolitan Museum of Art, New York as Senior Research Fellow in Photography in 1942, the affiliation was short lived, and he ended his tenure in 1944. The last decades of Sheeler’s life were punctuated with occasional photographs revisiting old themes but none as radical as his early work. Sheeler was incapacitated by a stroke in 1959. He died May 7, 1965.

CINDY SHERMAN

American

Cindy Sherman's photographs present ever-changing constellations of costumes, mannequins, body parts, and theatrical sets in scenes that are absolutely artificial or evoke cultural practices, such as film and fashion that specialize in the creation of artificial worlds and appearances. Born in Glen Ridge, New Jersey in 1954, she attended the State University of New York, Buffalo, receiving her Bachelor of Arts in 1976. The utilitarian approach to the photograph found in conceptual art deeply influenced her as an art student. Sherman moved to New York City in 1977. Her first major series, the *Untitled Film Stills* of 1977–1980, began to stretch the boundaries of what photography could represent. This group of 69 photographs combines her interest in using the photograph as a medium to convey a particular idea (here examining the stereotypical roles women inhabited in films and other elements of visual popular culture in the 1950s and 1960s) with a singular style and visual appeal more characteristic of traditional art photography.

As her career progressed, Sherman increasingly turned to theatrical lighting, props, and costumes, with the scenes becoming ever more elaborate and complex. She appears in various outfits and disguises in both her works from the late 1970s to the mid-1980s and in the series *History Portraits* from

1989 to 1990. Yet, despite her physical presence in the photographs, the work is never autobiographical. The theme of self-transformation, however, runs throughout much of her work. Her early series about the mass media's stereotypical presentation of women—the *Untitled Film Stills*, *Rear Screen Projection*, and *Centerfold* photographs, in particular—also address the issue of women's identification with these stereotypes and their own "self-transformation" through adopting the styles and characteristics of the figures. Sherman's *Fashion* series deals most explicitly with this issue, focusing on how changes in one's appearance affect the ways that we see ourselves and are in turn seen by others. Some of the *History Portraits* pictures, especially those that lampoon the desire of wealthy patrons in past centuries to immortalize themselves with portraits created by great artists, also deal with this issue of self-transformation. Sherman's obvious use of makeup and false body parts suggests the awkward and flawed physical characteristics of these vainglorious figures from the past, who attempted to transform themselves through the mirror of art.

Sherman uses herself as a medium through which she can express ideas about visual representation and other cultural and societal phenomena such as fashion, feminism, and popular culture. This aspect of her work was influenced by the work of artists

such as Vito Acconci, Eleanor Antin, and Adrian Piper, who used their physical presence in their work of the 1970s. Sherman's photographs, however, evoke a distinctly "postmodern" sensibility, in that her performances as various character "types" do not reflect the artist's sense of her "self," so much as they call attention to issues within contemporary culture and society. In this respect, she joined contemporaries such as Barbara Kruger, Sherrie Levine, and Richard Prince, who similarly used photography to mimic and critique the images and messages presented in the mass media. In the *Fashion* series, for example, she presents herself as a variety of women who appear alternately disheveled, depraved, or simply ridiculous in opposition to glamorous fashion photographs familiar to us from magazines. Similarly, Sherman transforms herself beyond recognition through the use of makeup and other forms of disguise in her 1985 *Fairy Tales* series, focusing on the darker aspects of these children's stories, which often are frightening and macabre.

Despite the disturbing and often grotesque subject matter in Sherman's work from the late 1980s to the present, her pictures are always rendered in a rich and lush palette of colors that lends an odd beauty to the unsettling scenes. In "Untitled #175" (1987) from her *Disasters* series (1986–1989), for example, an all-over pattern with decaying or half-eaten foodstuffs, vomit, and other refuse bears an affinity to the abstract painting style of Jackson Pollock. The viewer's revulsion at the sight of the trash is offset both by the cool blue light that bathes the scene and by the vision of Sherman in the mirrored lens of the discarded pair of sunglasses, an image that is at once frightening and comic. This tension between the visually appealing, the humorously absurd, and the darkly provocative and upsetting dominates later series such as the *Sex Pictures* and the *Horror and Surrealist* photographs. In this work, Sherman combines body parts in fantastically impossible conglomerations, constructs foreboding and eerie netherworlds, and alters and contorts gruesome masks while retaining her skillful composition in each picture.

In 1997, Sherman made an independent feature film titled *Office Killer*, a macabre comedy about a misfit at a corporate office who successively kills various co-workers and arranges them in a gruesome tableaux in her basement. The film marked a curious foray into the mainstream of popular culture for an artist whose work draws heavily on the history of cinema. Recent photographs have varied from her 1999 series of black-and-white images that resemble the *Sex Pictures* in their often violent

depictions of doll parts and mannequin figures in disturbing positions and situations. The more modest scale and return to the black-and-white of the *Untitled Film Stills* lent the works a unique intimacy and departed from the more spectacularly sized work that characterized her previous series. Sherman's series of images of women from 2000 focused on various social types, from the plastic surgery-heavy socialite to the aging hippie earth mother, drawing out the more disturbing physical attributes of each type.

Sherman's crowning accomplishment, perhaps, is her dynamic transformation of photography from a medium known for its ability to capture moments from real life to a vehicle for the presentation of rich fantastic worlds that make incisive comments on contemporary society and culture. This contribution to artistic practice is making its presence felt in the work of today's artists, which betrays the strong influence of her impulse toward making photographs happen, as opposed to taking them from spontaneous events as they happen in time. Thus, Sherman's ongoing career, as well as the continuation of her legacy by younger and emerging artists, both establishes her reputation as one of the most important artists of the past 50 years and guarantees the spread of her influence on future generations.

TOSHIO SHIBATA

Japanese

Toshio Shibata was born in Tokyo in 1949. At the age of 16, Shibata studied to be a painter and experimented in other media such as printmaking. He later trained as a graphic artist, earning a Bachelor of Fine Arts degree from the Tokyo National University of Fine Art and Music in 1972 and a Master of Fine Arts degree in 1974. After completing his studies in Tokyo, Shibata was awarded a Fellowship from the Ministry of National Education and Dutch Culture to study printmaking in depth at the Royal Academy in Ghent. While in Belgium, Shibata came across the Aperture monograph *Edward Weston: The Flame of Recognition*, and he was moved deeply by the direct, compelling powers of Weston's photographs. Following up on his initial attraction to the imagery, Shibata began reading Weston's daybooks. His interest in photography became decisive, and in 1979, Shibata abandoned printmaking to devote himself to working in the medium. Practicing a style akin to Weston's, his compositions are visually luxurious, with rich tonality and contrast, yet in Shibata's photographs, there is an undeniable measure of social commentary that underscores his subject matter. Working with a large-format camera, Shibata has retained the strong graphic sense of his printmaking, enabling him to accentuate tensions he sees in the landscape through an imagery that is hyper-real, in which sharp focus pushes every facet of the composition into startling clarity.

In an essay entitled "Crossing over the Desert" from *Aspects of Contemporary Photography* (Kawasaki Museum: Kawasaki, 1995), Masafumi Fukagawa discusses two tendencies in contemporary Japanese landscape photography. The first, in which photographs are described as "constructions," refers to scenes that are either imposed on the landscape by the photographer, or else are created entirely in the studio. The second tendency, known as the "strange landscape," is one practiced by Shibata and by his contemporary, Jun Morinaga. In Shibata's photographs, the human relationship with nature is scrutinized by the residue left in contact zones—bridges, dams, barriers, nets, erosion mats. As the ever-shrinking natural resources in Japan are strained to accommodate its large population and expanding

economic development, the tension between the artificial and the natural in the landscape increases exponentially. Man-made structures designed in attempt to contain the landscape, although intricate and beautiful, are nevertheless alien forces imposed on a natural environment. Shibata's photographs bear witness to this shift in contemporary Japanese terrain by exploring the landscape as a "man-scape."

In 1983, Shibata began work on a body of landscape photographs entitled *Quintessence of Japan*. Typical of Shibata's compositions is the enormous wealth of detail in photographs such as *Kashima Town, Fukushima Prefecture, Japan* (1990). The image is a large format gelatin silver print of a waterfall. Each leaf on the large tree in the upper-left hand corner of the image is carefully and graphically defined. Floating branches change the flow of the water at two places in the view. The course of the waterfall is as clear as if it had been combed. And, as always in Shibata's photographs, man's impact on the environment is illustrated by the evidence of interference in the landscape—here, a brick dividing wall rises incongruously out of the foliage. There is a strong sense of something awry in the landscape, and by consequence, in its depiction.

Though Shibata carries the contemplative tranquility of traditional Japanese landscape painting into the photograph, and nature is not conspicuously marred—the constructions he photographs are in fact designed to preserve it—these constructions, in contrast to the lush earth, have an extraterrestrial and thus subliminally monstrous appearance. They really don't belong in the scene, but there is no escape from them—they are an evil necessity (Kuspit 1993).

The photograph entitled *Onokami Village, Gunma Prefecture, Japan* (1994) depicts a quilted erosion mat covering a hillside gully. There is an interesting play of contrasts in the photograph between the pattern of the woven mat, which catches the shadows in its recesses, and the dark leaves of the trees behind. The erosion mat is evocative of many things—a road, a river, or a snake that has shed its skin. Once again, Shibata indicates the permanent results of urban impact on the landscape in the form of a structure: in this case, a concrete dam in the uppermost background of the photograph.

In 1996, Shibata was commissioned by the Museum of Contemporary Art, Chicago, to produce a series of American landscape photographs. Twenty-five gelatin silver prints were acquired by the Museum following the completion of this project. In traveling throughout the United States, Shibata sought out comparable sites of human impact on the landscape as he had examined in his native Japan, and was drawn to American reservoirs, irrigation systems, dams, and ditches that he observed in states such as Arizona, Washington, Montana, and North Carolina. As a traveler, Shibata was attracted to the familiar, but simultaneously was fascinated by the inherent differences in the landscapes of both countries, and the sensation of viewing an alien landscape is heightened in this series, in photographs such as *Kingman, Mohave County, Arizona* (1997). From the angle employed in this composition, it is difficult to tell what the large concrete structure is; nonetheless, its massive weight and presence are clearly discernible.

With the series *Quintessence of Japan*, Shibata established a reputation as one of Japan's leading contemporary photographers, and he has been steadily achieving an international recognition. Recently, his work was the subject of a solo exhibition at the Centre national de la photographie in Paris. Shibata's photographs are held in numerous international collections, including the Art Institute of Chicago; the Bibliothèque nationale de France, Paris; The Center for Creative Photography, The University of Arizona, Tucson; International Museum of Photography and Film, George Eastman House, Rochester; the Los Angeles County Museum of Art; the Metropolitan Museum of Art, New York; Museum of Modern Art, New York; National Gallery of Canada, the San Francisco Museum of Modern Art; and the Tokyo Metropolitan Museum of Photography.

STEPHEN SHORE

American

Stephen Shore's photography is associated with two trends that took shape during the 1970s: the New Topographics movement and the growing use of color among art photographers. Shore's work, largely unpopulated landscapes and urbancapes, combines an interest in formal qualities, a sense of detachment, the use of color film, and a focus on commonplace landscapes, often man-made and largely unpopulated.

Born in New York City in 1947, Stephen Shore took his first photographs at the age of nine. One of his earliest successful projects was photographing Andy Warhol and his now legendary workspace, The Factory, between 1965 and 1967, from which a group of images were published first in 1968 as *Andy Warhol* and again in 1995 as *The Velvet Years: Warhol's Factory*. In 1970, Shore received his only photographic training at a 10-day workshop given by Minor White at the Hotchkiss School in Lakeville,

Connecticut. The Metropolitan Museum of Art in New York awarded Shore his first solo exhibition of black-and-white photography in 1971. Other than a 1934 exhibition of 23 photographs by Alfred Stieglitz, Shore's 1971 show was the first monographic exhibition of a living photographer held by the Metropolitan. The 1970s were marked with many solo and group exhibitions, a Guggenheim Fellowship, and four National Endowment for the Arts grants.

In 1974, Shore began photographing in color, after having switched the year before from 35 mm to a 4 × 5 view camera, and by 1974 he was using an 8 × 10 view camera. While his inclusion in the groundbreaking group exhibition *New Topographics* in 1975, which gave the movement its name, and his use of color photography help define his body of work in relation to other photographers, Shore's distinctive qualities also deserve attention.

New Topographics, a movement defined in an exhibition by the same name at the George Eastman House International Museum of Photography

and Film, Rochester, New York, explored photography of the “man-altered landscape.” Curator William Jenkins brought together the color photography of Shore with the black-and-white landscapes of Joe Deal, Robert Adams, Lewis Baltz, Frank Gohlke, Nicholas Nixon and others to draw parallels between their photographs. The depopulated landscapes were treated with a detachment that asserted neither social commentary nor a strong personal involvement with the subject. New Topographics photographs characteristically feature uninflected, descriptive information about undistinguished places. This detachment contrasted sharply with the more familiar practices embodied, for example, by Robert Frank’s personal and charged images of America’s man-made places or Ansel Adams’s awe-inspired iconic views of natural grandeur.

The fact that Shore was the lone color photographer among the Topographics group points to his other major contribution: validation of color among fine-art photographers. Photographers were slow to adopt color photographic prints, available since 1935, in any widespread way until a small group of artists, including Stephen Shore, received attention for their color photography, beginning in the early 1970s. This new interest in color photography appeared in photographic critic Max Kozloff’s 1975 *Artforum* article “The Coming of Age of Color” and in solo exhibitions of William Eggleston and Stephen Shore at the Museum of Modern Art, New York, curated by John Szarkowski in 1976. In 1981, Sally Eauclore had begun to promote color photography in a series of books, the first of which was entitled *The New Color Photography*. Kozloff, Szarkowski, and Eauclore all featured Shore’s color work.

Beginning in 1977, Shore photographed in Impressionist painter Claude Monet’s garden at Giverny, France as part of a project originally commissioned by the Metropolitan Museum of Art. The 1983 publication, *The Gardens at Giverny*, shows views of the gardens, refurbished to reflect the grandeur they originally achieved during Monet’s life. Shore’s interest in color prints is eloquently described in an afterword included in a book of his photographs entitled *Uncommon Places*, 1982:

Until I was twenty-three I lived mostly in a few square miles in Manhattan. In 1972 I set out with a friend for Amarillo, Texas. I didn’t drive, so my first view of America was framed by the passenger’s window.

It was a shock. I would be in a flat nowhere place of the earth, and every now and then I would walk outside or be

driving down a road and the Light would hit something and for a few minutes the place would be transformed.

Color film is wonderful because it shows not only the intensity but the color of Light. There is so much variation in Light between noon one day and the next, between ten in the morning and two in the afternoon.

Shore’s use of color in his photography, in addition to capturing qualities of light as he does in images like his *Second Street, Ashland, Wisconsin*, 1973, often emphasizes their formal qualities. Many of Shore’s landscapes can be read for their organization of elements: shapes, lines, colors, and patterns across the surface of the image and within the edges of the photograph. In this type of a reading, the use of a field of subdued colors and hues is punctuated by the appearance of small amounts of intense color as in the reddish-orange on signs and cars in works such as *La Brea Avenue and Beverly Boulevard, Los Angeles, California*, 1975 to create a pattern for the viewer’s eye to follow.

In *New Color, New Work*, Sally Eauclore’s analysis of Shore’s landscape photography of the 1970s points to a recurrence of open spaces: vacant parking lots, deserted roads, and empty intersections defined by the homes, commercial buildings, trees, and distant mountains that surround them. These intervening spaces suggest a distance between photographer and subject, and create a detachment between photograph and viewer. Eauclore notes that this distanced quality in Shore’s work appears in photographs made while traveling in unfamiliar places throughout the United States, and she contrasts it to a connection seen in Shore’s landscapes in places where he has lived.

Since 1982, Shore has directed the Photography Program at Bard College in Annandale-on-Hudson, New York. Although Shore is almost completely self-taught, as a teacher of photography, Shore has worked to articulate for his students the various elements of photography’s unique grammar, vocabulary, and content, including the publication of a book on this subject in 1998 entitled *The Nature of Photographs*.

LORNA SIMPSON

American

Lorna Simpson first found recognition for conceptual assemblages of photographs and text in the mid-1980s. Her work is provocative in that it takes on issues of race, gender, history, identity, and communication, all themes of great interest to the contemporary art audience of the late century. She has utilized a number of photographic processes in her work: black-and-white gelatin silver prints, dye diffusion (Polaroid) color prints, photogravure and photo-serigraphy (silk-screen) on felt. Her early photographic work invites the viewer to interpret both the image and the text and consider their relationship. In this regard, Simpson's work has been compared to other women artists who use text and documentary images such as Clarissa Sligh, Cynthia Wiggins, Carrie Mae Weems, and Barbara Kruger.

At the end of the century, she began to use a new medium, video, which allowed her to more closely capture the way meaning is developed in real-life scenarios. Simpson has exhibited widely over the last twenty years in the United States and abroad. She has been the subject of numerous articles, has had several artist residencies, participated in numerous shows in major museums and galleries throughout the United States and the world, has had numerous solo exhibitions in the United States, and is in the permanent collections of museums in the United States and abroad.

Lorna Simpson was born in 1960 and raised in Brooklyn, New York. She was trained in traditional photography at the School of Visual Arts,

New York. She began working with documentary photography, but soon began to question the "objective" truth of this medium. Without forgetting photography's usefulness as visual evidence, she broke away from the traditions of her training. By combining her interest in narrative with a documentary method, she found that she could better address the themes of greatest interest to her. In 1990, five years after earning her Master's degree in Visual Arts from the University of California, San Diego, Lorna Simpson was the first African American woman to represent the United States in the Venice Biennale in Venice, Italy and to have a solo exhibition in the "Projects" series of the Museum of Modern Art in New York.

Simpson's influences can be found in conceptual art, African narrative storytelling traditions and nineteenth century documentary portraiture. She is especially known for her use of models photographed with their backs to the viewer or their faces not showing, as in *Waterbearer*, 1986; *You're Fine*, 1988; and *She*, 1992. *Waterbearer* presents the image of a black woman walking away from the viewer, pouring water from two containers raised by both arms. Three lines of text accompany the image: "She saw him disappear by the river," "They asked her to tell what happened," "Only to discount her memory." This work prompted cultural critic Bell Hook to remark:

Simpson's use of language brings a threat to the fore. It invites us to consider the production of history as a cultural text, a narrative uncovering repressed or forgotten memory. And it declares the existence of subjugated knowledge.

(Bell, "Facing Difference: The Black Female Body," *Art on My Mind: Visual Politics*, New York: The New Press, 1995, p. 94).

Her juxtapositions of text with images thus challenge viewers to interpret whether or not the work is conceptual or photojournalistic. This method directly contrasts with the way in which text is usually used with photographs—as an explanatory comment or caption. Simpson's "captions" are fundamentally political, but open to interpretation, and suggestive of many things. Throughout the late 1980s and mid-1990s, she continued to create a series of photo/text works that paired black, female bodies with text fragments. After 1988 she began to include close-up images of hair, shoes, candles and masks in her work.

In the mid-1990s, Simpson began to experiment with photo-serigraphing her images on groupings of large felt panels. From a distance these panel groupings, such as *Still*, 1997, appear to be large-format, straight photography, but as one approaches, the texture of the felt as well as text emerges thereby changing perceptions of the piece.

In 1992, the first retrospective of Simpson's work, nearly thirty photographs, was held at The Museum of Contemporary Art in Chicago. After this exhibition, Simpson reevaluated the direction of her work and not long thereafter began to experiment with film and video. An artist-in-residency at the Wexner Center for the Arts at Ohio State University in 1995 allowed her to complete her first combined video projections with still, black-and-white images and large, photo-serigraphed felt panels, *Interior/Exterior, Full/Empty* of 1997. In this same year Simpson also completed *Call Waiting for in SITE97*, San Diego (which was also exhibited Johannesburg Biennale in Cape Town, South Africa), and *Recollection*.

In her time-based works, Simpson focuses on brief exchanges between everyday, yet complex, characters. Each of her video installations is exhibited with related photographic work and serigraphed felt panels and the three together formed a touring exhibition known as *Scenarios*.

Referring to her switch to video installations, Simpson states, "I do not want to use the same devices again and again... I feel the need to present issues in different ways." Adding digital media to one's artistic repertoire was not uncommon in the 1990s, a time when more and more traditionally trained photographers, painters, and sculptors turned to new, computer-based technologies. Yet Lorna Simpson's video works with related photographs have much in common with her earlier photographs and

text works. Both reveal an interest in the writings of Roland Barthes, specifically his book *Camera Lucida*.

Photography purists may question whether or not Simpson's incorporation of video into her artistic repertoire has or will have a detrimental effect on her photography, but she has not ended her photographic work. Photography is no longer her sole medium, but most of Simpson's installations include photographs and serigraphed felt panels. Interpretation of how these relate may not be easy, but they *are* related, much like the relationship between the texts and images in her earlier work.

RAGHUBIR SINGH

Indian

Raghbir Singh was born in an affluent Rajput family in Jaipur, Rajasthan, in October 1942. Singh's grandfather was the commander of the Jaipur State Forces, and the family was close to the Maharaja of Jaipur. Singh's mother came from a village near Chittor. Singh ascribed his passion to his homeland: "My voice is essentially that of someone who spent his formative years in Rajasthan. My artistic sense was shaped early by the culture of the Rajputs of Rajasthan."

Singh's family lost its landholdings when the government of India introduced land reforms in 1950. He studied at the Hindu College, but he walked out during his graduation exam and applied for a job with tea companies, but failed to secure a job. It was around this time, still a teenager, that Singh took up active photography as a career and went on to become one of India's finest contemporary photographers. He lived in three continents outside India—in Hong Kong, Paris, London, and New

York—yet he returned periodically to take photographs of his home country. Singh photographed on assignment for numerous illustrated magazines, including *The New Yorker*, *National Geographic*, and *Time*. But ultimately he dedicated his photographic career to capturing all aspects of Indian subjects.

Singh was inspired from an early age by the celebrated French photographer Henri Cartier-Bresson's photographs of India. In 1966, Singh met Cartier-Bresson during the latter's visit to Jaipur. He keenly observed Cartier-Bresson's style, but he diverged on fundamental aspects of photography. In keeping with the Western tradition of photography, Cartier-Bresson practiced in the black-and-white medium. To Singh, colors represented an intrinsic culture of the hard, everyday life that defined true India. He explained:

Unlike people in the West, Indians have always intuitively seen and controlled color. Our theories, from antiquity, became a flowing and rhythmic entity on India's river of life—its river of color...the eyes of India only see in color.

Singh found no contradiction between the sadness and poverty he felt characterized everyday life for many Indians, and the often joyous and sensuous colors that naturally pervaded Indian life. Singh's color photographs produced from 35-mm Kodachrome slide films set him apart from his contemporaries, and, along with a few others, notably Eliot Porter or Ernst Haas, he marked the beginning of a new era for color photography.

Singh's photographic works have been published in more than a dozen books and organized geographically (by city, state, and river), thematically (festivals such as Kumbh Mela), and experientially (on the Grand Trunk Road and in the quintessential Indian car, the Ambassador)—each with an informative introductory text written by him. Always in pursuit of the right moment to take his photograph, Singh's relentlessly and instinctively animated snapshots encapsulate the historic, the natural, and the everyday images of India.

In 1968, Raghubir Singh visited Jaisalmer to watch the noted filmmaker Satyajit Ray film a musical titled *Goopy Gayen Bagha Bayen* (The Adventures of Goopy and Bagha). Like Ray, Singh appreciated the ways in which a new Western medium could be manipulated to capture vibrant images of ordinary Indian subjects. Singh's photographs of Rajasthan, published in the book titled *Rajasthan: India's Enchanted Land* (1980), are nostalgic photographic memoirs of his own life as he grew up there as a child, and as an adult when he revisited Rajasthan after moving to Paris. In an introspective introduction to the book, Singh reminisces about his family, his experiences, and the richness of his cultural legacy that was entrenched in the sights and sounds of Rajasthan, his native land. Through his lens, he captured both its everyday and spectacular. Singh's photographic subjects ranged from the simple village path and the village well, ordinary villagers on streets, farmers, performers, camels, schoolchildren, and bullocks; to images of the Pushkar Fair, celebration of Holi, Rajasthani wedding scenes, folk performances, and tribal dance-dramas, to images of ramparts and battlements of Rajasthan's historic landscape.

Of the varied experiential images on India that Raghubir Singh shot with his camera, those of the Grand Trunk Road are noteworthy. Singh first heard of the Grand Trunk Road, popularly known as the G.T. Road, as a high school student in 1961. In 1988, he drove the entire 1200-mile length of the G.T. Road. He traveled a second time on this road in 1991. Driving 60–80 miles a day, he traveled from Delhi to Amritsar and the nearby Pakistan border at Atari. After returning to Delhi via the same route,

Singh flew to Calcutta. Thereafter, he started his journey once again on the G.T. Road from near the Botanical Gardens, Howrah, across the Hooghly River from Calcutta and then headed north.

Along the long journey on the G.T. Road, Singh captured images of both the humble and the monumental: people, vehicles, monuments, shrines, pilgrimage sites, statues, and life in general. For him, the G.T. Road was a panorama of India, juxtaposing the religious with the mundane, the poor with the prosperous that defined Indian life. Thus, along the road, Singh captured images of passengers, pilgrims, tourists, water pipe repairmen, workers in pavement dwellings, street performers, and village fairs. Alongside holy sites of the Buddhists and Jains as well as Mughal monuments, Singh photographed bus stops, motels, floods, road accidents, political meetings, and processions, all representing the real images of a bustling but organic Indian life.

For over thirty years in India, Singh made most of his travels on the road in the quintessentially Indian car, the Ambassador, manufactured by Hindustan Motors since 1957. To him, like most Indians, this automobile was India's very own, a metaphor for Independent India. This ubiquitous people's car also served as the official vehicle of the Indian bureaucracy. "It is the People's Car, the Politician's Car, India's Rolls-Royce and stretch limousine all rolled into one solid, yet shaky, entity," observed Singh in his introduction to his collection of street photographs as he traveled far and wide in the Ambassador. He photographed people, animals, performers, landscapes, architecture, and even dirt during his rides. Singh utilized the various shapes and features of the automobile to frame his photographs. His compositions are thus both spontaneous and organic, and often deliberate.

A classic automobile, the Ambassador represented a cosmopolitan India, until the 1990s, when economic liberalization allowed in other automobile models and dwindled its popularity. Singh candidly describes it thus:

organic part of bird shit- and cow dung-coated India; it is the good and bad of India; it is a solid part of that India that moves on, even as it falls apart, or lags behind. In its imperfection, it is truly and Indian automobile.

Singh further notes that as the Ambassador slowly recedes into history, it is the symbolic watershed between the old and the new. Singh's last series of photographs before his death in 1999, *Auto-focus*, also associated with the Ambassador car, was exhibited in the Arthur M. Sackler Gallery, Washington, D.C., in 2003.

Singh is celebrated for his large volumes of city images. Particularly dramatic are those of Calcutta and Benares. Although Singh describes Calcutta as a dying city in his first book (*Calcutta*, 1975), its images, its living history, its people, and its cultural artifacts fascinated him. Singh's stark and dewy images earned him much criticism. However, he published a second work on Calcutta (1988), which was well received. Singh has rarely photographed the elite of a city as much as he did in Calcutta for his second book. He photographed the noted filmmaker Satyajit Ray, actors and actresses, poets, performers, intellectuals, and artists at work, aptly exposing the city's much-acclaimed cultural ambiance. Side by side, Singh also recorded glimpses of a historic Calcutta, reflected in the grandeur of the colonial edifices and the mansions of the British rulers and Indian elite alike. Yet, Singh didn't fail to notice the city's humdrum images, fairs and festivals, busy roadside bazaars, little shops, people walking or traveling in rickshaws and crowded buses, and the co-mingling of animals and humans on Calcutta's busy streets.

The River Ganges (or Ganga), so important to every aspect of Indian life, had deeply fascinated Raghbir Singh since he was a child. He was accustomed to hearing from his mother stories associated with the sacred river of India. His passion for the river brought him back to it several times between 1966 and 1990, during which time he produced countless photographs. In 1974, Singh's photographs of the River Ganges were published in a book titled *Ganga, Sacred River of India* (1974). In 1992, another collection of Singh's 123 color photographs was published as *The Ganges*. Singh traces the river from its origin in the snows of the Himalayas, along the plains of Uttar Pradesh, Bihar, and Bengal, past cities of Benares, Kanpur, Patna, and Calcutta, to the Bay of Bengal. Along this journey, Singh's images represent the different contrasting dispositions of the Ganges: its tranquil beauty at its source and its ferocity over the plains especially during the monsoons. He captured the simple, mundane life of people who derived their existence from the river, as well as the complex, urban ethos that prevailed in the big cities located along the Ganges. The journey along the Ganges and its living images revealed to Singh—and through the medium of his camera to viewers around the world—the sacred, historical, social, economic, and cultural ingredients that symbolized an India of contrasts, paradoxes, and diversity.

Raghbir Singh visited Benares in the 1980s during a solar eclipse. Singh's vibrant photographs of the sacred but splendid Benares waterfront,

showing the frenzy of human activity, are conventional, often picturesque, representations of the Indian landscape. A contrasting work is presented in his images of Bombay (1994), in which he mostly chronicles the hustle and bustle of a modern city through the vibrant, laissez-faire, and cosmopolitan qualities of its civic makeup.

Raghbir Singh published a colorful collection of his photographs of Jammu and Kashmir, as well as of several regions and mountainous tracks in the northwest provinces of India in a volume titled *Kashmir: Garden of the Himalayas* (1983). His primary interest was in Kashmir's natural beauty, but also its non-sectarian side, and its liberal traditions of art and culture. He visited the area many times between 1965 and 1982 during various seasons, following different paths each time. Each season offered a different view of the picturesque Kashmir, which Singh aptly captured through his lens. Often, Singh followed the course of the rivers and traced early trade routes. Singh traveled through the different corridors of the region into Central Asia, along the shores of the Wular Lake, over the Razdiangan Pass to the Galley of Gurais.

Other photograph collections of Raghbir Singh include his works on Bombay, Kerala, and Tamil Nadu. In all of his works, Singh balances images of the city with the humdrum lives of its people. At the same time, Singh creates enduring cultural documents, taking into account the geography of the land that helped shape a culture's history and personality. The photographs of Tamil Nadu are a testimony to this. R.K. Narayan points out that Raghbir Singh's unique photographs of Tamil Nadu express the tradition of temples, the richness and variety of life, and the change as well as continuity in the environment and life in general.

Singh rejected the idea that his work be labeled as travel photography, souvenirs, or coffee table books. Rather, he emphasized that his work embodied his response to Indian lives as he saw and understood them (Singh, 1988). As V.S. Naipaul rightly remarked, Singh's photographs cannot simply be looked at; they need attention; they have to be read.

In recognition of his contribution to photography, the government of India awarded the Padma Sri to Raghbir Singh in 1983. During 1985–1986, the National Museum of Photography, Film and Television, England offered him its first fellowship in photography. As a Fellow, Singh captured sundry images in England—from simple images of an Oriental woman in a burqa, of a boy burning rubbish, both in Bradford, to that of intellectual Nirad C. Chaudhuri in his Oxford home, and of Margaret Thatcher appearing on television in an Indian home.

SINGH, RAGHUBIR

Raghubir Singh's photographs are in the permanent collection of the Museum of Modern Art, New York, as well as other private collections, including the National Museum of Photography, Film and Television, Ilkley Community College, Bradford, the Art Institute of Chicago, The Metropolitan Museum of Art, The Tokyo Metropolitan Museum of Photography, and others.

Singh died of a heart attack in April 1999 in New York City.

MONOLINA BHATTACHARYYA

Biography

Born October 1942; studied at Hindu University and self-educated as a photographer. Met Henri Cartier-Bresson, 1966; moved to Paris, 1970; awarded the Padma Shri by the Government of India, 1983; Fellow, National Museum of Photography, Film & Television, Bradford, England, 1985–1986. Died April 1999.

Selected Works

Farmer Dredging Dal Lake, Kashmir, India, 1980
Norning on achganga Chat, Benares, Utter Pradesh, 1985
Subhas Candra Bose Statue, Calcutta, West Bengal, 1986
Television Set, Chidambaram Festival, Tamil Nadu, 1993
Rameshwaram, Tamil Nadu, 1994
Sunday Market, Ahmedabad, India, 1997

AARON SISKIND

American

Aaron Siskind began as a socially committed, documentary photographer. He is best remembered, however, as a pioneer of formal abstraction, a style

that he both adopted and promulgated from the mid-1940s. This development was, according to *The Times* of London, "significant for the whole future of art photography." Siskind's classic work

can be recognized by a distinctive personal approach. Typical subject matter might be the remains of a tattered poster or a paint-brushed graffiti on an urban wall. The image would take the form of a two-dimensional plane, composed in such a way as to emphasize its formal rather than representational qualities. In this way, even traditionally “ugly” subject matter could be rendered aesthetic, and the overt subject matter relegated to only secondary importance. As Siskind explained: “I regard the picture as a new object to be contemplated for its own meaning and its own beauty” (quoted in Lyons, 1965).

Aaron Siskind was born in New York City on December 4, 1903. His parents were poor Russian Jewish immigrants who settled on the Lower East Side of Manhattan. He was the fifth of six children; his parents spoke no English at home. He attended Dewitt Clinton High School and gained a social sciences degree from the City College of New York in 1926. He then began work as an English teacher in New York City schools and continued as a school teacher until 1949.

From an early age, Siskind took an active interest in radical politics. Even as a 12-year-old, he could be seen making speeches on the streets of New York. He became a member of the Junior Young People’s Socialist League, and his activism continued in high school. As a senior, he was informed by his principal that he would not be allowed to graduate unless he signed a document renouncing his political convictions. Without the diploma, he could not matriculate at the City College. Under protest, Siskind signed the document in order to be allowed to continue his education.

Politics and photography combined when in 1933 Siskind joined the Workers Film and Photo League. This was a group dedicated to documenting the lives of New York’s poor and disadvantaged, and it was through them that Siskind really learned how to make photographs. He became a leading member, contributing to and helping organize feature projects such as *Harlem Document*, *Dead End: The Bowery*, *The End of the Civic Repertory Theater*, and *The Most Crowded Block* between 1935 and 1941. The relationship was a stormy one, however. Siskind clashed with what he believed to be the League’s more politically dogmatic element, leaving for a year from 1935 to 1936, before rejoining and resigning again in 1941. He returned only briefly when he was asked to organize the historical section of the *This is the Photo League* exhibition in 1948. The disagreements between Siskind and the League were only partly political. He had become increasingly interested in the formal qualities of photographs rather than their socially

conscious, documentary subject matter. From the mid-1930s, Siskind had been photographing Tabernacle City, a religious revivalist camp on Martha’s Vineyard off Massachusetts. He had been intrigued by the architectural style of the buildings rather than by the lives of the people who used them. Some of his photographs began to concentrate on physical detail remote from its context, and increasingly the accent was on composition rather than reportage. When the Tabernacle City project was finally exhibited at the Photo League in 1941, it was denounced by fellow members as formalist and bourgeois. Siskind resigned for the last time.

This represented a period of personal and artistic change for the photographer. *The Harlem Document* was complete, and the United States had entered World War II. His first marriage was breaking up (it was dissolved in 1945), and he had parted company with his photographic roots. He became a free agent, abandoning the group aesthetic for an increasingly personal style. He had already begun photographing early architecture in Bucks County, Pennsylvania, demonstrating many of the formal and compositional concerns that he had with Tabernacle City. It was from 1943, however, that he developed the photographic style for which he is best remembered, and whose influence has been most significant since.

Photographing on the beach on Martha’s Vineyard, Siskind began to study strings of seaweed on the sand. These he pictured directly from above, so that the weed seemed to resemble a free-hand trace of paint on canvas or charcoal on paper. He continued in similar vein the following year at Gloucester, Massachusetts, creating a much larger series of work. Here, in addition to seaweed, were weathered timbers, frayed string, or a discarded glove. None of these represents traditional notions of beauty in its original state, but here they are ordered and composed by Siskind in such a way as to create a new work that transcends its subject matter.

The flat plane became still more of a feature of Siskind’s style as his work continued. As his individual style became more established, so did his reputation as a photographer. In 1947, he was first exhibited at the Egan Gallery in New York, and he began to mix with painters as well as photographers. Among the former, he associated with New York’s abstract expressionists. Among the photographers, he met Edward Weston and Harry Callahan. Siskind resigned from school teaching in 1949, and Callahan’s support eventually found him summer school work and, from September 1951, a teaching post at the Institute of Design, Illinois Institute of Technology, Chicago. It is a progres-

sion that saw Siskind become not only a practitioner but also a teacher of the photographic art. Ten years later, he was promoted to Head of Photography at Chicago, and ten years after that he became Professor of Photography at the Rhode Island School of Design. He finally retired from teaching photography in 1976, at the age of 73. As a teacher, he inspired and acted as an almost avuncular mentor for his often distinguished students, who credit him with encouraging them to develop their own, individual styles. In 1975, a group of five grateful former students staged an exhibition of their work under the title *For You Aaron*.

Siskind experimented with a number of different approaches. The mid-1950s, for example, saw him produce his *Pleasures and Terrors of Levitation* series, in which young men in swimming shorts were isolated in apparent free-fall against a white sky. In Martha's Vineyard, he composed structural studies of rocks and stones. Toward the end of the decade, he created a series of over 100 photographs of bare feet. Trees were a recurring theme to which he returned throughout both the 1960s and 1970s. He photographed weathered olive trees in Corfu, and returned continually to a favorite old oak in Martha's Vineyard, which appears in many different versions, but always designated simply as "The Tree."

From the 1940s to his death in 1991, however, Siskind's most consistent and personal theme remained the flat-plane abstraction, typically composed from the neglected details of the man-made environment. In Chicago and New York, he found decaying walls, graffiti, peeling paint, the remains of tattered posters, and rusting signs. Each was photographed in monochrome and printed with a richness that—despite the deliberate two-dimensional approach—nevertheless accentuated the texture of the subject. The subject itself, however, always remained relegated to a supporting role in aid of the greater composition.

Although Chicago and the East Coast provided Siskind with ample opportunities to photograph, he became an inveterate traveler in both North America and the rest of the world. He photographed in Arizona while on sabbatical from school teaching in 1949, and in North Carolina in 1951. In 1955, he took a ten-week trip to Mexico, to which he returned on numerous subsequent occasions. A recurring theme in his Mexican photographs is layers of graffiti on white-washed walls. In many cases, politically offending graffiti had been hastily painted over by the authorities; the paint had run in the hurry, and the rapid brushwork produced almost graphic forms and characters, which Siskind photographed with studied enthusiasm. Sometimes the fragmented rem-

nants of notices and posters would be added to the mix. Similar work was produced in Rome, Peru, and Mexico in the 1960s and 1970s. In the 1980s, he traveled to Brazil, Morocco, Mexico, Peru, Sicily, and the Italian mainland. In 1986, he broke a leg while traveling in Turkey. A long convalescence followed, and Siskind, now into his eighties and walking with a cane, began increasingly to depend upon assistants to help him with his work and domestic life. His last published series was one of tar-filled cracks in highways, made in Rhode Island, Connecticut, and Vermont between 1986 and 1988, and published the following year.

That travel was so important to Siskind and his work was underlined by the titles of two published collections of his photographs: *Places: Aaron Siskind Photographs* (1975) and *Road Trip* (1989). Two important points emerge from these photographic travels. First, the graffiti photographs—particularly those from South America and Italy—have much in common with the abstract expressionist painting with which Siskind had come into contact in New York during the 1950s and 1960s. This is especially true of his friend and collaborator Franz Kline, whose most famous works feature broad, black, graphic-style brushwork on a plain white ground. Kline died in 1962, and 10 years later, Siskind began a long-cherished project in *Homage to Franz Kline*. This included photographs taken in Mexico, Italy, Boston, and Peru, and was finally exhibited in Chicago in 1975, along with two paintings by Kline himself. The second important point to emerge from Siskind's "travel" photographs is their remarkable similarity. No matter when or where they are taken, Siskind's personal and recognizable style eclipses the specifics of time and location. Sicily in 1984, for example, is not markedly different from Lima in 1975 or even Chicago in 1948. To some, this represents a criticism of Siskind's work. To others, it emphasizes the uniqueness and consistency of his personal vision.

From an intellectual perspective, Siskind's flat-plane photography actively renounces one of photography's greatest achievements: the mechanical illusion of three-dimensional space on a two-dimensional surface. Siskind's work rejects the simple imitation of reality. It seeks neither to represent nature, nor to provide the viewer with a substitute for "being there" himself or herself. Instead, it creates the photograph as an individual work of art in its own right. This transcendence of subject matter (which had been understood by painters at least since the Post-impressionists) helps deny the claims of some theorists (such as Roger Scruton), who

claim that a photograph may only be beautiful if it is of a beautiful thing. Siskind, however, accomplished the mediation of the ugly into the aesthetic.

It would be a mistake, however, to consider Siskind as only an intellectual photographer. What Siskind did was combine the emotional with the cerebral by on the one hand creating formal order from a disordered world, while at the same time creating a new, photographic world in which fantasy and imagination were able to flourish. The photograph transposed reality in such a way that the photograph took on a life of its own.

Siskind enjoyed an energetic and at times uproarious social life. His family life was less successful, however. He was married three times: first in 1929 to Sidonie (Sonia) Glatter, who became mentally ill, and who was hospitalized from 1937; the marriage was annulled in 1945. Second, he married Cathy Spencer in 1952, but they divorced in 1957. Finally, in 1960, he married Carolyn Brandt, who suffered ill health and died in 1976. He suffered a stroke and died on February 8, 1991, at the age of 87. Today, the Aaron Siskind Foundation, which he had established in 1984, uses income from his vintage prints to provide financial support for contemporary photography and photographers.

SANDY SKOGLUND

American

Almost immediately after the debut of her first installations and photographs featuring intensely colored sculptures in artist-constructed environments, Skoglund experienced the overnight success associated with the 1980s art world. Within a year of the introduction of *Radioactive Cats* (1980), Skoglund had a show sold out before its opening at Castelli Gallery and was included in the 1981 Whitney Biennial. Since this recognition, Skoglund has created many compelling installations and photographic works that reflect the sensuality and latent neuroticism of American consumerism and domestic life.

Skoglund counts her teenage years growing up in Southern California, working as a waitress in Disneyland and decorating cakes on an assembly line, as formative experiences that introduced her to artificial realities. Foreshadowing her later installations, she spent the early 1970s working through conceptual and systems art making obsessive and repetitious works. In 1974, she made her first photographs—serial images of motel cottages. Taking cues from culinary photography, in 1978 Skoglund made her first photographs from still-lives she constructed.

Since 1980, Skoglund's installations and photographs have had a popular appeal because of their recognizable subject matter, formal beauty, and sensuous color and materials. They are acknowledged by critics and scholars as engaging in a social critique of consumption and raising compelling questions about mediation. In addition, Skoglund's best-known works are dreamscapes that evoke the uncanny through obsessively repeated and patterned objects and images.

The relationship between Skoglund's sculptural installations and photographs is especially problematic and worthy of note. Skoglund creates constructed tableaux of myriad materials but often featuring animal sculptures hand-made by the artist. Each environment is then composed in consideration of a photograph that will include human actors. Though Skoglund's work is best known through limited-edition, Cibachrome color photographs, the artist maintains many of her con-

structed spaces, recomposing their elements in consideration of their three dimensionality. Often, these installations and photographs are exhibited side-by-side, thus raising questions about the relationships of these objects. Skoglund accepts both as artistic outputs that are related, but that function independently. The photographs lack compelling three dimensionality, but the installations lack the singular, composed image and actors that seem to "complete" the photographs through the addition of an overtly human dimension. Some of Skoglund's installations, such as that for *Spirituality in the Flesh* (1992), are made of ephemeral materials, and the photograph becomes a record of a temporary tableau.

Skoglund's graphic works include photolithographs based on images of her sculptures placed in "real" landscapes such as the Asbury Park oceanfront of *Dogs at the Beach* (1992) and the car park of *Squirrels at the Drive-In* (1996). Her other major foray into graphics is *True Fiction* (1986), a portfolio of 20 dye-transfer prints that are collaged images from Skoglund's photographs of New York City, friends, and family airbrushed onto canvas and then rephotographed.

The human figures included in Skoglund's photographs give a sense of scale but are intriguing because of their secondary importance in dioramas that visually overwhelm the models through high-key and high-contrast colors, and optical patterns created through repeated elements. For instance, *The Cocktail Party* (1992) is a living room environment covered from floor to ceiling with bright orange cheese puffs. The four models staged in this photograph wear clothing covered with this same junk food and are juxtaposed with human-sized mannequins that are uncanny and mute ciphers composed of this overtly artificial snack. The actors' exposed faces and legs comprise a tiny portion of the overall composition. As in most Skoglund works, these figures have their humanity compromised by an obviously fake, yet sensually real environment—this existential crisis is heightened by their disaffected, even somnambulistic expressions and lack of interaction. In this way, Skoglund calls attention to the American situation within, and even preference for, alienating ersatz environments.

Dreadful evocations include humanity's erosion by a consumptive environment, and the horror in understanding that we have become as artificial as the processed food we eat.

Food plays a significant role in many Skoglund works. The artist has an admitted fascination with commercial food photography since in this visual discipline artifice is heightened as food is dyed, composed, and altered in unappetizing ways to achieve optimal photographability. An especially notable group of early photographic works includes studies of foods on patterned backgrounds, for example, the *Nine Slices of Marblecake* (1978) on obviously machine-printed "marbleized" paper and striped *Cookies on a Plate* (1978) situated on high-key plaid wallpaper. The most poignant of her food works are *Spirituality of the Flesh* and *Body Limits* (1992), in which mannequins and total environments are covered, respectively, in raw hamburger meat and uncooked bacon. *At the Shore* (1994) is another notable food work; here, 10 bikinied Barbies bask on a beach of golden French fries. The feminist critique of impossible beauty standards can't be missed when juxtaposed with America's favorite—fast, fattening food. Similarly meaningful are the tiered cake, strawberry jam walls, and orange marmalade floor of *The Wedding* (1994) through which Skoglund comments on the cloying quality of love and marriage.

Animals are used as another symbolic theme in many other Skoglund works. Her similar, though uniquely sculpted, creatures visually dominate each setting and the people within them. For instance, dozens of squirrels swarm the bright pink and blue suburban porch of *Gathering Paradise* (1991). The proliferation of these birdfeeder banes is a nightmarish revenge of nature on tract developments impinging on "wild" spaces. The dualism of "nature" and "culture" is obvious, but the animals Skoglund has used, including foxes, cats, dogs, fish, rabbits, and snakes, also connote myths and fables.

In 1998, Smith College Museum of Art organized a comprehensive retrospective, *Sandy Skoglund: Reality Under Siege*, of its esteemed alumna's work. To date, the accompanying catalogue is the most important monograph covering this artist's oeuvre. Skoglund exhibits internationally and develops new installations and photographs in conjunction with art institutions that commission her work. These include *Breathing Glass* (2000), featuring thousands of mechanically animated glass dragonflies and *Picnic on Wine* (2004) with figures situated atop a landscape of filled red wine glasses. Since the mid-1990s, Skoglund has also worked with

many college art programs and students to create collaborative installations.

MICHAEL SNOW

Michael Snow works in a diversity of media that characterises his career as an investigator of post-modern perception that has been shaped in large part, by photography (including film) and its unique capacity to present information. The enduring link has been not *what* is photographed, painted, filmed, sculpted, or played (Snow is a noted jazz trumpeter), but *how*, with the *why* lurking never far below the surface. Since 1961, Snow

has produced a number of photo works that enquire specifically into the act of seeing and the technologies of vision which have helped to define the possibilities and limits of the camera, and of art itself.

The diversity of Snow's artistic output lends his career an eccentric cast. While very well known as an experimental filmmaker, he has also had an impact on the development of contemporary art

in the 1960s and 1970s. Only more recently has his importance as a photographer and theorist been recognized as photography has taken its place front and center in contemporary art practice with the emergence of a younger generation in the 1980s. A good example is his piece *Walking Woman*, which occupied him between 1961 and 1967 when he showed eleven sculptures in the Ontario Pavillion at Montreal's Expo '67. The silhouetted, formulaic figure Snow presented in various media, including drawings and sculpture, took and gave meaning from how the figure was positioned, whether in print or in public spaces. Created during the ascendancy of Pop Art, the *Walking Woman* was a Pop Art icon in which subject and object are one; it was also a dense, highly experimental work that had its detractors.

The *Walking Woman* phase concluded Snow discovered a sheet of newspaper, exposed to sunlight, had taken the imprint of a small cutout he had casually left laying atop it. This convergence of human intervention (the creation of the cutout) and the vagaries of the larger world which have no intention or meaning unless humans ascribe meaning to them was for Snow a perfect expression of what he had been striving for. Thus began his search for an autonomous photography containing nothing outside of itself. However, the autonomy of Snow's work is always supplemented by autobiography, by his idea of photography as objectified memory, by self-conscious references to intentionality and spectatorship, all of which anticipates the major debates around art in the last decades of the twentieth century.

Born Michael James Aleck Snow in Toronto, Ontario, Canada in 1929. His early interests were in music, which he explored during visits to Chicago's legendary jazz clubs in the late 1940s. He played piano with various Toronto groups while a student 1948–1952 at the Ontario College of Art and took up the trumpet in the early 1950s. He lived and traveled in Europe in 1953 and 1954, playing jazz. He made his first film in 1955, an animated work called *A to Z*, made while working at Graphic Films and painted in an Abstract Expressionist style, showing these works at the Isaacs Gallery, Toronto beginning in 1957. He played with Dixieland trumpeter Mike White 1958–1961 and formed his own bebop groups in the late 1950s and early 1960s. He married filmmaker-artist Joyce Weiland in 1959.

Snow relocated to New York in 1962, where experimental filmmaker Jonas Mekas and the Cinematheque he had founded provided stimulus and encouragement. Snow made his best-known

work *Wavelength*, a 45-minute slow zoom across a studio, only occasionally interrupted by other, quasi-narrative footage in 1966–1967. The film and its movement conclude on a still photograph of waves. *Wavelength* was revelation and catalyst not only for filmmakers (it surprised Warhol who went on to make his own famous films where “nothing happened”) but for leading protagonists of minimalism in other areas, such as avant-garde musician and composer Steve Reich and sculptors Donald Judd and Richard Serra. In its mediation on the act of seeing, it questioned conventional narrative forms and anticipated many of the conceptual investigations artists were embarking upon in the 1960s.

Snow continued to question the authority of conventional modes of depiction (and thus perception) in works such as *Atlantic* (1967), in which a grid of different black and white photographs of waves is presented in recessed reflective metal boxes, encouraging but then curtailing perspectival viewing. *Authorisation* (1969) accumulates a record of the sequence of exchanges between the eyes of artist, camera and viewer.

The limits of the authority of the artist's eye are further exposed in *Venetian Blind* (1970), in which Snow holds the camera at arm's length, its eye looking at him. Closing his eyes, he pulls the trigger. The camera sees, blurrily because the hands holding it wobble, the “sightless” artist intercut with a sequence of renowned Venetian sights. The work encapsulates, with characteristic economy, the agency implied by vision. It is a theme which has dominated his work to the present. Another is the vacillation between representation and reality. *Midnight Blue* (1973–1974) sets within the framing conventions of a painting, a photograph of a candle which illumines the picture and has left the wax traces of its real existence on the shelf.

Other work from the period, although not made by the camera, was about camera-determined vision. His pivotal 1968 exhibition at the Poindexter Gallery in New York made the spectator, peering through apertures in its contrived spaces, into the embodiment of vision and induced the power that comes with surveillance. As the artist is not a machine, however, so photography is never a purely mechanical process. “I'd like people to learn how to see and hear so they can always see and hear...and know the truth,” Snow says, while his work seems to demonstrate the contingency of visual truth (*The Michael Snow Project—Collected Writings*, 1994). Snow, also a prolific writer, makes many glancing references to “religious inklings” and the shamanic powers of the artist throughout

his writings, the more provocative for not being conclusive. The rational and objectivist accounts of his works by himself and others spare the reader embarrassment, but for Snow there is something finally mysterious about the framing edge, optical bend, and the limits to vision. Microscopically exact accounts of the seeing process can never efface the possibility of the unseen. In this respect the eye of the camera is exactly as mysterious as the human eye both contending with “powerful forces over which we have no control.”

Snow returned to Toronto where he has lived since in 1972. Snow is a vigilant and shrewd participant in the recording of his career, self-referential and self-reflexive decades before these terms became common currency. In *Cover to Cover* (1976), he simultaneously makes clear and puzzling a simple sequence of actions as the artist leaves his house for his gallery and returns. It throws into doubt the viewer's position. The presence/absence of someone or something from the centre of the viewing circle lies at the core of the manoeuvres of the elaborate camera devised to film *La Region Centrale* (1981–1982).

The 1970 book *Michael Snow/A Survey* looks at who the artist is as much as what the artist does. It demonstrates that he came early to the dogged literalness that is one of the roots of his humour. The book closes on a snapshot of Snow at seven years old taken under his direction by his sister. In this photo he is positioned in such a way that the soles of his shoes appear gigantic—early visual cues to the pedigree of lifelong preoccupations.

Introducing his collected writings is a photograph taken by the artist's left hand showing his right hand in the act of writing. Its punning autobiographical conundrum that makes an object out of, at least two subjects exemplifies Snow's observation that people have two sides and that they fold. Snow's recurring theme of the embodied nature of perception anticipates the widespread attention to this theme by many other photographers in the 1980s and '90s. Snow's influence has been especially strong in shaping the work of some of the best known and influential Canadian artists using photography. Like Snow, Jeff Wall, Rodney Graham, Stan Douglas and Ken Lum push further at the ways in which perceptual understanding is shaped through the deployment of the camera.

In the 1980s Snow has experimented with holography, including a group of 48 images titled *The Spectral Image* for Expo '86 in Vancouver, British Columbia. A major retrospective of his work was mounted at the Art Gallery of Ontario; Toronto,

Ontario which traveled across North America in 1994, introducing his work to a new generation.

SNOWDON

(ANTHONY ARMSTRONG-JONES)

British

Snowdon is frequently referred to as a 1960s icon but he continues to produce new and unpredictable photographs. He has led a distinguished and varied career with work that has spanned and crossed over a variety of genres including society photography, portraiture, fashion, theatre, dance, social documentary, and topography and travel.

Born in 1930 to a barrister father and an heiress mother, Anthony Armstrong-Jones self-styled himself as Snowdon in 1961. His parents divorced when he was aged five and his childhood, and that of his elder sister, Susan, was often spent at their father’s Welsh estate. Following his schooling at Eton, he went on to Jesus College, Cambridge, to read natural sciences but soon transferred to architecture. He did not gain his university qualification but was awarded a “blue” because he coxed Cambridge to victory over Oxford in the 1950 annual boat race. After

leaving Cambridge, Snowdon was a partner in Owen Lloyd Car Hire, a line of business that reflects his lifelong appreciation of stylish but functional design. He soon went on to join the society photographer Baron de Merger as an assistant. Through this important association and also through his uncle, the celebrated interior and theatre designer Oliver Messel, who received his CBE in 1958, Snowdon was able to establish a studio home at 20 Pimlico Road in London from 1953 to 1960. He began to take photographs in his own right for publications such as *Tattler*. He also published early photographs in *Picture Post* in 1953. In 1954, an introduction to the director Peter Glanville led to his first published theatre photographs of Margaret Leighton and Eric Portman in their roles in Terrence Rattigan’s *Separate Tables*. The popular newspapers the *Daily Express* and the *Weekly Sketch* were soon to notice Snowdon’s work, including the huge enlargements he frequently displayed outside theatres to attract audi-

ences. Photographing celebrities, particularly those involved in the arts, has continued to provide him with a vehicle for drawing out the particular characteristics of gifted individuals. In contrast, a concern for the plight of the disabled and the elderly has also been a recurring theme in Snowdon's photography and also in his less well-known film work such as *Don't Count the Candles*, 1968, which won two Emmy awards. From his seat in the House of Lords, Snowdon continues to press for reform for the physically disadvantaged and is connected with the Helen Hamlyn Research centre in this capacity.

The edition of *Vogue* for October 1958 is typical of Snowdon's photographic breadth as it contained a group portrait of the cast of Billy Wilder's play *Irma la Douce*, which headed a 13-page fashion spread, a group portrait of the English Stage Company players, a portrait of Lord Harewood who was at the time directing an arts festival, an announcement for his ski-wear design, and a double self-portrait with one image showing him in disguise and the second image deliberately printed upside down. Snowdon's career very quickly gathered momentum in the late 1950s and early 1960s as he gained commissions from a large variety of clients connected with the arts and with fashion such as *Vanity Fair* and *The Sunday Times*, the latter publication also printing early examples of his social documentary work. His first exhibition was held in 1957 at the Kodak Studios in London's Kingsway. Thereafter he began a long and mutually beneficial relationship with the photographic company Olympus.

In May 1960 he became a household name when he married Princess Margaret, sister to Queen Elizabeth II. The marriage took place in Westminster Abbey with Cecil Beaton as official wedding photographer. He became the Earl of Snowdon in 1961 and in 1963 Constable of Caernarvon Castle. He quickly abbreviated this to Snowdon, a name he has subsequently retained, although he is sometimes colloquially referred to as Tony Snowdon. His new connection to royalty brought him a range of unique opportunities. In 1969 he created a modernised and telegenic form of royal pageantry for the investiture of the Prince of Wales, a service to the crown earning him the title of Knight Grand Cross of the Royal Victorian Order (GCVO). His royal commissions have also included many portrait assignments. Some of these portraits have been used for postage stamp designs, thus ensuring that his work was very widely seen. The subjects of his photographs for stamps have included Prince Charles' wedding in 1981. His portraits of Queen Elizabeth II have also been used by the British postal system, as was the case with a postal order engraved by Czeslaw Slania in 1985, which was based on a Snowdon photograph.

Although divorced from Princess Margaret in 1978, Snowdon's royal commissions have not ceased, a recent example being his portrait of Prince Harry to mark his sixteenth birthday, taken in September 2000.

In his professional activities Snowdon has always been an active collaborator. He worked with Cedric Price and Frank Newby on the design of the Aviary at London Zoo. It opened in 1965 and is now a Grade II listed building. In the 1980s he was involved in the design of the Phoenixphone version of the Trimphone telephone and from the publication of *London* in 1958, his books have frequently featured collaborators with writers.

Although Snowdon has exhibited in a number of important venues, particularly in connection with *Photographs by Snowdon: A Retrospective* at the National Portrait Gallery in London (2000) and at the Yale Centre for British Art in New Haven (2001), he has not overlooked the importance of smaller, more intimate spaces to showcase his work. October 2002 marked his return to Pimlico with a set of 30 portraits under the title *Interior Personalities* at the Linley Gallery. In recent years Snowdon has also initiated a number of new departures in his photographic practice. These include the production of a series of eight limited edition prints of wildflowers, created in association with London's Belgravia Gallery. He has also departed from a previously held conviction to avoid sponsored assignments by taking on a project based by the Open Russia Foundation to photograph contemporary Russia. A book of these photographs was launched in December 2003, and a related exhibition toured a number of important venues including the newly opened Alexandria Library in Egypt.

Biography

Anthony Charles Robert Armstrong-Jones, who from the 1960s has worked under the name of Snowdon, was born in 1930, the only son of Ronald Armstrong Jones QC and Anne Messel. His mother shortly afterwards remarried and became the Countess of Rosse. He attended Eton, where he revived the school's photographic society, going on to Jesus College, Cambridge, in 1949. He did not gain his qualification to practice as an architect but went on to work as an assistant to the society and arts photographer Baron. He soon began to work in his own right and was popular within many artistic circles where he received his early commissions. His work began to be published in 1953, and he soon became well known for society photography, dance and theatre work, portraiture and fashion, and travel and topogra-

phy, although it is often difficult to bracket his images in just one of these categories. He married Princess Margaret in 1960, the first commoner to marry into Queen Elizabeth II's family. He has published numerous books and has exhibited frequently. A major retrospective of his photographs was held in London in 2000 and New Haven in 2001.

SOCIAL REPRESENTATION

One of the most elusive concepts in the study of photography, social representation not only defines a particular photographic practice or subject matter, its terminological ambiguity also gives rise to a cluster of questions that point to core issues concerning the nature and power of photography. Strictly speaking, all photographs depicting people and their environment should qualify as examples of social representation, but the term is most often reserved for portrayals of various social groupings (e.g., Amerindians, women, Rastafarians, teenage parents, barbers, inhabitants of the area around Tokyo's Chuo Park), which attempt to provide insights into the everyday lives of these communities. More often still, and somewhat problematically, given the tenuous equation of concepts, the term refers specifically to photographic portraits of groups on the economic or political margins of mainstream society.

The whole concept of social representation—the idea that looking at photographs will afford the viewer some “truthful” or authentic glimpse of

the subjects' lives or values—is firmly rooted in nineteenth-century notions of photography's evidential character. Even today, with general sophistication concerning the final print's possible manipulations or the camera's perspectival restraints immensely increased and many modern techniques (e.g., digital or infrared photography, X-rays) attenuating the idea of resemblance, the photograph is still accepted as having a special, and especially trustworthy, relation to reality. It is impossible to overemphasize the constructed nature of all representation—someone is always depicting someone else for a particular purpose with a specific audience in mind—but precisely because representation constructs rather than reflects a reality, and because of photography's unique status in the public imagination, images of people have profound political significance. How photographs portray a certain group may determine how others view and treat its members in daily life; it may also influence the way the group sees and defines itself. Forever showing poor people exclusively in situations that connote victimhood—squalid, over-

SOCIAL REPRESENTATION

crowded living spaces, worn clothing, crying children, sad and exhausted faces—may lead outside viewers to think of those living in poverty as passive and indifferent, and therefore as somehow “deserving” their situation. In light of such potential impact, photography’s mechanical reproducibility, the fact that photographic images can be endlessly replicated and widely circulated, only serves to increase the stakes in social representation.

Of course, photographs never establish and uphold commonly held beliefs alone; they always constitute only one factor in a large and complex network of meaning. (Some critics, such as Susan Sontag, even hold that photographs in and of themselves have no power to persuade and always depend on outside elements to make sense.) And of course, no photograph ever invites a singular, inevitable interpretation; context and a viewer’s particularities may alter a reading considerably. Yet this does not suggest that people can make any image signify what they want it to signify, that its meaning is completely free-floating. Social codes restrict everyone’s access to possible ways of reading and seeing, as well as to what there is to see and read: power relations in society have generally privileged the able-bodied, economically comfortable, heterosexual, male, white perspective.

Since the nineteenth century, the histories of photography and the social sciences have often run parallel or intersected. While critics still argue over whether newly established human sciences such as anthropology, criminology, or sociology began applying photography as a useful instrument of documentation after the medium’s inception, or whether photography was invented because contemporary society, with the emergence of industrialized capitalism, required a tool that “authentically” recorded social hierarchies in order to keep them in place, all can agree that photographic images began playing an important role in fixing groups in their “appropriate” social positions almost as soon as the medium was formally introduced in 1839. Repeatedly, public institutions and the state made use of photography to “prove” what pseudosciences like physiognomy and anthropometry had established: that the white male constituted the apex of evolution, while women, the poor and laboring classes, and ethnic Others (which included Africans, Amerindians, Asians, Catholics, Jews, and Muslims) lagged behind and required firm social control.

Photography so employed not only suspended movement into an arrested image but also sought to fix the multiple, fluid interpretations any subject offers into a single one, rigidly delineating the boundaries of norm and difference. The Other, neatly

framed (often in full-body pose) in a limited, defined space, could now be gazed at and scrutinized at will, the photograph’s borders seeming to contain an unknown simultaneously fascinating and threatening. Denied their subjectivity, those represented, often under some form of coercion, became canvases for endless projections. “This is what the Other looks like,” J. T. Zealy’s photographs of African slaves or Jean-Martin Charcot’s photographs of hysterics seem to say. “This is the essence of difference [read: negative deviation].” Many images served to debase or vilify, but even photographs that supposedly celebrated their subjects, such as Edward S. Curtis’s early-twentieth-century portfolios of Amerindians, engaged in questionably reductive maneuvers. In his desire to capture “a vanishing race,” Curtis fixed his subjects in an idealized past—in clothing, occupation, and outlook—disallowing any signs of modernization or change in the communities he photographed.

Photographs taken to effect social reform—in the West, particularly until the 1950s—often perniciously straddled the dual objective of attempting to garner (financial) support for their subjects and portraying them in a manner that made them look “worthy” of such assistance. These so-called social documentary photographs relied heavily on the depiction of men, women, and children in their living or work spaces to expose the degrading environments they had to endure, a genre pioneered by Lewis Hine at the beginning of the twentieth century. Intimately tied to government or public agencies, such images often pursued specific, and rather narrow, goals—a fact that led to an emphasis on essences and the creation of types in this form of social representation. In the United States, the work of the Resettlement Administration/Farm Security Administration (RA/FSA) employees during the Great Depression of the 1930s has become paradigmatic of social documentary. Purporting to authentically document the everyday lives of the American people, the photographs most widely circulated focused on “the wronged and strong,” people persevering with dignity in the face of dire economic circumstances, in effect offering densely coded glimpses of mostly rural hardship and deprivation.

How much the camera, popularly viewed as a recorder of the real, was expected to produce veracious images can be concluded from a scandal surrounding FSA photographer Arthur Rothstein. *Fleeing a Dust Storm*, a picture he shot in 1936 to underline the adverse effects of drought in Oklahoma, showed a man and two young boys, one of them trailing behind, fighting the elements to reach a dilapidated hut. When it was revealed that the photograph had not been taken during an actual

dust storm, but rather in high winds, and that the family, deliberately staggered out by Rothstein, was not approaching their home for protection, but rather a tool shack, accusations of propaganda and deception erupted. Rothstein later defended himself with an essay entitled “Direction in the Picture Story” (1942), in which he claimed that slight manipulation and staging were acceptable if they best allowed the photographer to portray the underlying truth of a situation—in this case, the Dust Bowl’s hostility toward human inhabitation and the Depression’s divisive impact on family cohesion. Yet today, documentary photography generally continues to cast a suspicious eye on the kind of intervention Rothstein proposed; it is other types of photographic work that have come to fully embrace the use of manipulated surfaces as an appropriate means of social representation.

Debates about the authenticity of representation and an acknowledgment that the camera imposes its own morphology between viewers and reality—in other words, that photographs, rather than providing slices of the world as it is, result from complex decisions on the part of all those involved in their taking, distribution, and reception—eventually contributed to a retreat from overtly political-reformist projects after World War II. Rejecting the hierarchy of importance between weighty historical events and everyday occurrences, even between fact and appearance, photographers in larger numbers began training their cameras onto quotidian subjects to inform, without necessarily advocating a particular model of social change. Robert Frank’s *The Americans* (1958/1959) offered a bleak look at the spiritual emptiness of postwar American life, and its often blurred, grainy images lent evidence not only to the book’s underlying themes of human isolation and fragmentation but also to a new photographic vision aware of its interpretive limits—here, the “real” no longer poses as an unmediated truth.

Others of Frank’s contemporaries, recognizing the sometimes debilitating power dynamics in play when photographers merely step into their subjects’ lives for the short time period it takes to capture a few “scenes” on film (not to mention those resulting from differences in social standing), chose to work in series, photographing the same group of people over many months or years. Bruce Davidson spent the spring of 1959 following members of a Brooklyn teen gang called the Jokers, while Larry Clark’s *Tulsa* (1971) chronicled his experiences as a participant-observer with a group of drug users in Oklahoma. More recently, Chandra McCormick’s *Glendel Plantation Sugar Cane*

series and her ongoing work on life in black New Orleans neighborhoods depict communities the photographer has become well acquainted with through long-term immersion.

These developments should not suggest the complete absence of photographic projects specifically dedicated to social change in the past half century, however. The work of Fazal Sheikh, for example, illustrates the political project’s continuing relevance in documentary, as well as the major shifts in approach that have come out of recent debates in cultural studies and photography theory and that are concerned with issues of power and representation. *A Camel for the Son* (2001), the first in a varied series of publications and exhibitions addressing international human rights issues, focuses on the fate of Somali women living in refugee camps along the northern Kenyan border. Like some of his predecessors (especially from the 1930s), Sheikh supplements his visual records with written texts; yet unlike the former, he attempts to give some of the authorial voice over to the photographed subjects themselves through the inclusion of their letters or of stories told in their own words. Sheikh foregoes images that capture people in the context of their daily lives for more formal portraits. Keeping a respectful distance, he lets his sitters position themselves for the camera before plain backgrounds, emphasizing the always already staged conditions of all representation by refusing to crop stray shoes from the frame or by including pictures slightly blurred by unanticipated movement in the final publication. In a further effort to evade the essentializing character of so many descriptions of social Others, Sheikh’s captions identify his subjects by name—the potential designation “African woman with malnourished child” becomes Sheikh’s image title *Fatuma Abdul Rahman and Her Daughter Amina*.

Undertakings like Sheikh’s make clear that even the most genuine efforts at cross-cultural understanding and immersion cannot altogether counterbalance the status of an outsider regarding a community from a privileged position, the power dynamics such a situation entails, and the kind of work that can ultimately derive from it. Members of a group may also present themselves differently to their peers than to external observers, not all of whom, in turn, will succeed at fully shaking the preconceived notions they bring to their projects. To many present-day thinkers, insider photography—camera documents created by a member of the depicted group—thus promises greater authenticity of representation, especially in regard to the portrayal of marginalized communities.

SOCIAL REPRESENTATION

During the first half of the twentieth century, against a backdrop of blackness as degenerate, criminal, poor, oversexed, and intellectually inferior, photographers as varied as James VanDerZee, Richard Samuel Roberts, and Charles “Teenie” Harris posited likenesses of dignified African Americans, many of them well-to-do, thereby exposing the racist bias of mainstream imagery produced by and for white people. Their pictures lent evidence to the existence of vibrant, multifaceted urban communities engaged in social gatherings, political protests, entrepreneurial ventures, intellectual pursuits, and recreational activities—the face of black America otherwise often denied. In the 1980s and 1990s, Santu Mofokeng similarly turned his camera away from images of perpetual struggle in South African townships to focus on the everyday aspects, both joyous and sad, of residents’ lives in order to provide a more complete rendition of their situation. And Briton David Hevey draws on his own experiences to help present people with disabilities as active participants in the public realm, rather than as helpless victims of their afflictions.

Simply filling a previous absence of photographic representation can already prove highly transgressive. In order to counter the social invisibility of gay men in India, where homosexuality remains illegal, Sunil Gupta devised his 1987 *Exiles* series to subtly bring into view the plight of secrecy and stigma attendant on queer male culture on the subcontinent. Drawing the boundaries of intimate knowledge even more closely, contemporary artist Yurie Nagashima focuses, visual diary-style, on her own family and friends in an attempt to fathom the daily workings of Tokyo life from a female perspective. Taking a different approach, Wendy Ewald, an American, honors the possibility of divergent visions between insiders and outsiders in *I Dreamed I Had a Girl in My Pocket* (1996), where she combines her own photographs of Vichya, India, with those taken of village affairs by her young local students.

Not only professionals, of course, can produce insider photographs. What photo historian Geoffrey Batchen has called “vernacular photographs,” popular snapshots taken by lay photographers, have recently gained acceptance as valuable examples of social representation due to the, sometimes inadvertent, sights they offer of particular communities’ experiences. They can also, as cultural critic bell hooks has emphasized, function as powerful counter-narratives to demeaning depictions in the society at large. Yet even representational practice from the inside raises important questions: What exactly, given everyone’s multiple affinities, constitutes an

insider? What are the limits of photographer-subject identification? And can the presence of the camera itself, rather than just that of the person operating it, alter the group portrayed?

Highly manipulated in nature, the controversial photo-based works of Nikki Lee perhaps go to the core of such and similarly difficult questions. Half photographs, half performance pieces, her projects show groups of friends—Latinas, yuppies, members of the hip hop scene, Asian school girls, senior citizens—doing what they usually do together, the young Korean-born artist always in their midst, her physical appearance radically transformed to fit with the crowd surrounding her. Donning braids and fitted dance club clothes for the Hip Hop Project, and having darkened her skin, Lee highlights the external markers of community membership. The photographs, in fact snapshots taken by bystanders at Lee’s request, refuse to offer a coherent narrative, and the emphasis on exteriority provided through Lee’s guises not only suggests the fluidity and situational character of identity and identification but also the always possible undercurrent of the (stereo)type and of reductionism in group representation. While Lee’s mimicry often reaches near perfection in the images, her figure also always stands out to the viewer, infallibly identifying her as the outsider, as the one artificially inserted into the portrait to subtly change its composition, as the one who only temporarily has to bear the burden of representation and who can, ultimately, walk away from it with a change of makeup or dress.

Despite the high degree of design involved in their making, Lee’s images can still give the impression of documentary photographs, or casual snaps, at first glance. Yet manipulation made visible, even accentuated, marks another strand of social representation in photography. Following the dictum that truth lies in uncovering the artifice that poses as reality, many feminist and queer photographers, as well as artists of color, have chosen to modify or carefully construct the photographic surface in order to refocus viewers’ perceptions of the group depicted. Linn Underhill’s portraits of female sitters, taken head-on without cropping or props, reject the suggestions of earthiness and seduction so frequent in representations of women, thereby seeking to undermine conventional associations between women and nature or women and eroticism. Barbara Kruger has emphasized the constructed nature of gendered identities more bluntly by superimposing bold block type over her pictures, as in the 1983 *We Won’t Play Nature to Your Culture*, which shows a close-up of a woman’s face, her eyes covered by leaves.

Guarded Conditions, a 1989 work by Lorna Simpson, calls attention to the double plight of black women that results from both gender and skin color. The piece comprises 18 photographic panels joined to depict, from behind, a black female figure six times. The repeated phrases “SEX ATTACKS” “SKIN ATTACKS” complement these visual elements, running in three lines beneath them. Here, the model’s particular poses, the fragmentation of the body caused by the individual panels, and the repetitive words all combine to challenge representational, and hence social, conventions and expectations. Amerindian social campaigner Hulleah Tsinhnahjinnie frequently employs digital processes to craft visual-verbal collages that critique the Eurocentric perspectives until very recently disguised as “neutral vision,” while Bill Jacobson, photographing gay communities at the height of the AIDS pandemic, blurred the subjects of his black-and-white images beyond recognition so as to erase any visible differences between the healthy and the sick, between various ethnicities, or even between men and women.

It is important to recognize that all photographic representation in proliferation influences the way we perceive a particular group—whether the photographer consciously intended this effect or not, and no matter the degree of constructedness involved in the portrayal. It is also worth remembering that although many eloquent accounts, verbal and visual, exist that challenge and complicate their assumptions, the concepts of both photographic veracity and neutral vision still hold significant sway at the beginning of the twenty-first century, with, for example, millions of picture identity cards in circulation worldwide. And while it may be essentially impossible to successfully read character or attitude from a photograph, any photograph, we continuously do so anyway, thereby unwittingly accenting the importance of social representation and the necessity to carefully understand what we perceive, how, and why.

SOCIALIST PHOTOGRAPHY

Socialist photography emerged in the Soviet Union from a context of decades of severe social, economic, and political dislocations, including World War, revolution, civil war, and depression. The October Revolution of 1917 and eventual defeat of capitalist forces during the civil war of the 1920s offered the promise of peace and the end of centuries of oppression. The Soviet state, which claimed to be something radically new, a “dictatorship of the proletariat,” held out a promise of hope for the masses during a time of economic collapse and world depression. During the first decade following the revolution, photography suggested an effective means to identify social problems and suggest improvements by revealing the truth.

Photographers were enlisted to provide evidence of government programs for improving social welfare. This was a major undertaking of an impressive scale towards which substantial government resources were directed. Photographs would provide a national testament to government political policies and values. Photography was seen to offer more convincing evidence about reality than the written word.

Photographers in the new society provided the evidence in support of projects that suggested a heroic response to socioeconomic problems guided by a strong state. For the leaders of the new state, photography would confirm the successes of socialism in overcoming economic underdevelopment left by centuries of despotic feudal rule. This occurred within the context of a socialism from above that was established as an early part of Bolshevik rule under Lenin. Government control over information and culture favored a uniformity of easily understood and accessible products and images that might garner mass appeal.

At the same time one must avoid the common error of viewing the emergence and development of socialist photography as a uniform process of repression and censorship typically associated with Socialist Realism, a term that covers painting, sculpture, graphic arts, and architecture. While the government may have selected and shaped photography to advance its aims while covering its extreme and vast repression, in general the photographers were guided by their own convictions, hopes, and beliefs.

Rather than presenting an almost caricatured uniformity, as has traditionally been portrayed to Western audiences, socialist photography demonstrated a diversity of approaches.

In the early years there was room for lively debate and criticism concerning photographic techniques. Soviet photographers in the decade and a half after the Revolution were free to operate within generally broad parameters. Photographers and designers used approaches such as photomontage to celebrate Soviet accomplishments and offer prefigurative visions of the socialist future.

Photographers in the newly emerging post-capitalist society sincerely believed in the future of progress and fulfillment promised by socialism. Working in the service of constructing a classless society was a worthy and legitimate goal. Pictures were meant to show foreign audiences that Soviet workers were well off, not hungry as the foreign press suggested. It was typical practice for Soviet photographers to partake in the work they photographed in order to make their pictures more authentic and convincing to audiences. Indeed, within the Soviet ideology, photographers were workers themselves.

Soviet photographers, however, were not required to join the Communist Party, and most did not. At the same time, magazine and newspaper editors, who were the individuals held accountable for what was published, typically did join the Party. Editors were regularly given directives from the Central Committee of the Communist Party.

By the late 1920s almost every Soviet factory had a photo club. In exchange for access to equipment and materials photo club members were expected to produce photos showing the advances of socialist development and pictures had to meet government needs. This showed an early expression of the strong state interest in shaping photographic production. In adherence to the principle that photographers should become laborers themselves, learning the work to be photographed in order to represent labor convincingly and positively, photographers immersed themselves in the labor collectives at specific work sites prior to beginning the photo assignment. This practice, however, had the further philosophical and aesthetic effect of blur-

ring the line between observer and observed, a hotly debated tenet in contemporary art analysis.

A view eventually emerged that photographers were to be invisible in the process. They simply observed and recorded. This also was intended as a marker of objectivity. This was not accepted uniformly, however, and it was long a matter of much debate. The innovative constructivist El Lissitzky, for example, only adopted the view that documentary production should supercede the author's individuality in 1931. Prior to that he was a vocal opponent of perspectives that privileged the collective priorities/impulses of factographic approaches at the expense of the artist's expressivity. Favored images, such as sports parades, work crews constructing massive industrial projects, and farmers producing cooperatively, were all symbols for the Soviet collectivity, in which the individual, with the exception of select heroes, gave himself or herself over to the community.

Despite the relative openness and diversity of socialist photography in the first decade-and-a-half following the revolution, there were early indications of state intrusions and attempts at control. A censorship body, the Chief Literary Department or Gvolit, reviewed subjects with supposed military significance, including railroads, bridges, and high rises, and these photos were only published with formal approval.

The first photo agency in the post-Revolution years, Bureau-Cliche, supplied regional presses with photos. Through the early period of Soviet bureaucratic consolidation, this organization merged with the Telegraph Agency of the Soviet Union (TASS). The All Union Society for Cultural Relations with Foreign Countries (VOKS) established the RussFoto agency around the same time to serve public relations concerns abroad.

In 1931, the massive SoyuzFoto organization was created, incorporating VOKS and TASS. It also took in the Amalgamation of State Publishing Houses (OGIZ) and the Magazine and Newspaper Amalgamation (*ZhurGazOb'yedineniye*). SoyuzFoto organized branches in the Soviet republics and in the industrial centres. Dozens of photographers were sent out to document events in the furthest reaches of the Soviet empire. SoyuzFoto took responsibility for all Soviet press and public relations pictures, sending upwards of 600 copies of selected pictures to Soviet newspapers as well as the foreign press.

Under Lazar Mezhericher's management of SoyuzFoto's Foreign Department, notions of the power of photojournalism for popular political education became predominant. Mezhericher closely studied photographic practices in other countries

and tried to encourage and implement new ways to use the powerful photos being produced by Soviet photographers. He expressed great appreciation for Western commercial photography, sensing that advertising techniques held great potential for conveying Soviet messages. Mezhericher proposed the postcard, which in the West was wasted as mere entertainment, as a medium for Bolshevik information dissemination.

Rather than the privileged presentations of gallery shows, photos were intended for wide dissemination through newspapers, magazines, and posters. These provided an effective way to transmit the Soviet message, and special posters appeared on bulletin boards, on buildings, and in metro cars. Other socialist realist proponents among Soviet officials were also impressed with the persuasive powers of Western advertising techniques. They saw advertising as superior in this regard to American documentary photography as exemplified by President Franklin Roosevelt's Depression-era public works programs such as the Farm Security Administration and the Works Progress Administration.

The magazine *USSR na stroike* (*USSR in Construction*) made its appearance in 1930. The magazine, which included one of Russia's literary giants, Maxim Gorky, on its editorial board, was intended to show Soviet photography to a foreign audience, and was published in various editions, including English and German. In its pages contributors such as Max Alpert, Alexandr Rodchenko, and El Lissitzky offered photo stories and montages exulting Soviet accomplishments and pointing towards the new world in the making. Striking socialist realist portrayals of industrial development and collectivization, including Rodchenko's stunning White Sea Canal photo story, profoundly influenced magazine design worldwide, especially that of the American publication *Life*, whose first cover (by Margaret Bourke-White) showed a black-and-white industrial subject that through its composition conveyed grandeur and awe, overlaid with the bright red graphic elements so integral to El Lissitzky and Rodchenko's constructivist style.

In *USSR in Construction's* first issue, Gorky expressed the magazine's vision of socialist photography:

In order to keep our enemies at home and abroad from belittling the testimony of words and numbers, we have elected to employ the work of light and sun, that of photography. You can't blame the sun for distortion. It gives light to what exists, as it is.

(quoted in Bendavid-Val, 1999, 65)

Photography in other magazines such as *Ogonyuk* and *Soviet Foto* aimed at both the foreign

SOCIALIST PHOTOGRAPHY

and domestic audiences, also provided vivid pictures of Soviet life and the creative development of a new society. One of the most famous examples of this practice was Max Alpert, Arkadii Shaikhet, and Salomon Tules's 1931 picture story "Twenty-Four Hours in the Life of the Filippov Family" (increasingly translated as "A Day in the Life of a Moscow Working-Class Family") at the end of the century. The project was organized by Lazar Mezhnerich as a manifestation of his views as expressed in his article "Serial Photography as the Highest Stage of Photographic Propaganda." This photo-essay was not only published as a cover story in the German weekly *Arbeiter Illustrierte Zeitung* but, somewhat antithetically to the principles of socialist photography, resulted in an exhibition that toured Europe.

At a time when documentary photography was thriving in the United States and Europe, Soviet photographers inspired socialist artists in northern and central Europe and, to a lesser extent, photographers in America. This was especially the case during Lenin's NEP period in the 1920s. The European "worker photography" movement, including the British mass observation phenomenon, was strongly influenced by Soviet developments towards a new proletarian photography.

Aesthetic and Ideological Conflicts

At the same time a diversity of approaches, styles, viewpoints, and practices flourished throughout the first decades following the revolution. Leaders grappled with different approaches as they were developed and proselytized in their efforts to establish the most suitable means to communicate their goals with the masses. Multiplicity and variety continued even through the period of Joseph Stalin's ruthless consolidation of power against his Communist Party rivals after Lenin's death in 1924. This diversity of photographic expression continued through the 1920s and into the 1930s as Soviet leadership sought to develop effective means for popularizing their programs.

Throughout the period of the first Five-Year Plan, begun in 1928, a number of groups emerged side by side, each receiving critical attention. The one thing on which most agreed, to varying degrees, was a commitment to realism. Within this broad commitment, however, co-existed vast differences concerning the media and approaches that could best represent the goals and aspirations of the Soviet culture and, as significantly, the state. By the end of the first Five-Year Plan the model of the artist-producer was thriving.

During the early period of the Soviet regime there were two primary poles of attraction: those who sought to apply experimental modernist forms to render the new socialist reality and those who argued that everyday reality be presented in a straightforward manner. Much critical discussion at the time revolved around these different approaches to representation.

These differences are most clearly seen in the competing efforts of two main photography groups, the October Group and the Union of Russian Proletarian Photographers (ROPF). The October Group held their first exhibition at Gorky Park in 1930 and followed with a second exhibition at the House of Publishing in May 1931. The ROPF group held a separate exhibition at the House of Publishing at the time of October's showing. The simultaneous but separate exhibitions made clear the differences between the groups' works and initiated a series of intense debates over the proper vision for socialist photography. While October photographers approached reality in terms of fragments, uncertainties, and contradictions, ROPF photographers offered images that might provide a picture of the totality of Soviet social development. These reflected significant differences in approaches to composition. At the same time, even here, there was a cross-pollination as ROPF photographers employed techniques and angles used by October photographers.

The October Union, founded in 1928, was established by many of the artists who had become leading voices of the avant-garde worldwide in the teens and early 1920s; it brought together filmmakers, architects, sculptors, and graphic designers as well as photographers. Octoberist members included Alexandr Rodchenko and filmmaker Sergei Eisenstein. The photography section, most commonly referred to as the October Group, formed in 1930, including among its membership Rodchenko, Elizar Langman, Boris Ignatovich and his wife Olga and sister Elizaveta Ignatovich, Abram Shterenberg, and Dmitri Debabov.

The Octoberists sought to bring mass production techniques to their art while developing new media that might meet the needs of the emerging new society. For October members, artistic production would serve as a tool in socialist construction. This productivist approach was reflected in October's emphasis on artists as workers rather than creators and in their insistence that divisions between amateurs and professionals be eliminated. These photographers were motivated by the aims of the first Five-Year Plan and insisted that members, as cultural production workers, pursue photojournalism in popular media such as newspapers and maga-

zines. As a requirement of membership October photographers were required to supervise photo workshops in the factories and collective farms.

October photographers outlined their perspective in a series of self-published essays in which they rejected the approaches taken both by Western “abstract left” photographers like Man Ray and László Moholy-Nagy as well as the patriotic realism emerging in the Soviet Union. October also argued against the commercial tendencies in art, and in artistic patronage, that they saw as resulting from the return of market forces under Lenin’s New Economic Program of the civil war period.

We are for a revolutionary photography aesthetically unconnected with either the traditions of autonomous painting or the nonobjectivity of “left photography.” We are for a revolutionary photography, materialist, socially grounded, and technically well-equipped, one that sets itself the aim of promulgating and agitating for a socialist way of life and a Communist culture.

(quoted in Tupitsyn, 1996, 100)

A key feature of their work was its interdisciplinarity as they sought to overcome the barriers separating artists of diverse media. Many October members experimented with different media while October photographers experimented in combining journalistic and avant-garde approaches.

Rodchenko preferred to limit the straightforwardly narrative aspects of his photos. In *Machinery is Advancing*, produced for the publication *Let’s Give*, Rodchenko used only two images, a tilted shot of the plant building and close-ups of machinery that excluded their context/surroundings. Industrial imagery is reduced to specific parts rather than the grand and total images typically provided by ROPF photographers. These choices would eventually leave Rodchenko, and others including his colleague Igantovich, open to charges that they were suppressing political and social content in favor of formalist distractions.

Often, especially in the works of October photographers, workers are overshadowed by images of production and industry, often presenting only images of specific body parts such as working hands. Attention is regularly directed towards the products and processes of labor rather than the laborers themselves. In this way the individual worker is of less significance than the emphasis on the collective processes responsible for Soviet productive advances.

In October works, conventional content was presented through non-traditional and unpredictable angles and crops. October photographers offered challenging and disruptive depictions of industrial

life by using experimental practices, diagonal compositions, extreme close-ups, bird’s and worm’s eye views, cropped horizons, and fragmentary images, all towards the expression of socialist ideas. In presenting partial and unpredictable depictions of labor processes, their works were resistant to attempts to ascribe familiar narratives or readily available meanings. The intention was in fact to use such photographs as a means of disturbing the customary routines of everyday life; this disruption being understood as a necessary part of the revolutionary transformation of life required in the move from capitalist to socialist social relations. Rodchenko, for example, preferred anonymous representations of labor in which workers were not identifiable as a means to break regular associations and attachments that might otherwise be suggested to the viewer. The ongoing movement from the old order that was being dismantled to the new world under construction would not allow for a reliance on predictable and comfortable patterns, in work, community, or photography.

This was quite different from the approach taken by ROPF photographers who offered photos that allowed the audience a ready identification with the people and situations being portrayed. The Union of Russian Proletarian Photographers, ROPF, begun around the same time as the October group, opposed the October Group’s approach, preferring straightforward reportage. ROPF was led by those who pioneered photojournalism, such as Max Alpert and Arkadii Shaikhet, and included among its number Mark Markov-Grinberg.

While October photographers preferred a combination of realistic representation with experimental intentions and initiatives, ROPF photographers viewed realism as the expression of a social whole, emphasizing matters of content over formalistic considerations. In the works of ROPF photographers, a dialectical relationship exists between the individual elements and the whole of a series.

The ROPF photographers repudiated notions of art for art’s sake and preferred a realist emphasis on content to an experimentalist focus on angles and frames. An essay by ROPF members published in *Proletarian Photo* in 1931 placed the October Group in the camp of Western abstract left photographers. At the same time ROPF members came to incorporate October’s atypical frames and angles.

ROPF’s approach to photography is exemplified by the influential photo story “Twenty-Four Hours in the Life of the Filippov Family” produced by Max Alpert, Arkadii Shaikhet, and Solomon Tules. The idea for the photo story was proposed by a member of the Austrian branch of the Society of

SOCIALIST PHOTOGRAPHY

Friends of the USSR to SoyuzFoto, which commissioned the project in 1931. The series was devised to show in a direct and straightforward manner the everyday lives of members of the Filippov family, the husband and father of which worked at the Red Proletarian factory in Moscow. Under Mezhe-richter's editorial supervision the study was efficiently executed in five days.

The series, which published 52 of more than 80 photographs, reflects the ROPF photographers' desire to capture concrete reality as an organic whole in which individual parts and the whole form a dialectical unity. The images depict specific events in the life of what was claimed to be a typical family, beginning with portrayals of the Moscow neighborhood in which the Filippovs live. Contrast is made between the Filippov's pre-revolutionary wooden house and their new and comfortable apartment building by including a shot of their former dwelling. The meaning of such juxtapositions is reinforced with explanatory texts detailing the surroundings inside and outside of the building.

The photographers went on to present a portrait of the Filippov family as they enjoy morning tea, with text that identifies each family member so that the viewer can follow them as they go about their day, on the streetcar, in the factory where the father and son work, in the stores where the mother shops, and in the store where the daughter works.

The Soviet government was an enthusiastic supporter of the project since it promised to fulfill an important propaganda role in displaying the idylls of socialist life for a European audience. It held great expectations for the project as a rare opportunity to communicate information about the lives of workers under Communism.

In their article "How We Photographed the Filippovs," Alpert and Shaikhet suggest that they viewed series photos "not as a 'simple' display of a succession of workbenches or detached people at workbenches; a series has to reveal the social essence of objects and events as a whole, in their complete dialectical diversity" (quoted in Tupitsyn, 1996, 85–86). Alpert and Shaikhet further criticized the documentary approach taken by photojournalists such as Rodchenko and Ignatovich who, in their view, arrived at a work site and opportunistically selected parts of it. Alpert and Shaikhet proposed what they saw as a more productive approach to industrial subject matter involving the "observation of some giant in order to periodically reflect truly well through snapshots how it began to be built, what the difficulties of construction were, how it grew... and finally the collective that emerged a winner in this struggle" (quoted in Tupitsyn, 1996, 86). For Alpert

and Shaikhet, and this is reflected in their Filippov series, the task of the photographer is to grasp material reality as an organic whole and to present it in accessible and complete photos. In their approach meaning is derived from the particularity of the people and contexts presented in each picture.

Soviet magazines had begun to experiment with photographic sequences, or photo stories, that went beyond single images to present narratives over space and time in the late 1920s, but the impact of the Filippov study made such projects the preferred form of socialist photo work. Following the publication of the series, *Proletarskoye Foto* analyzed the photo essay, calling it a new art form, akin to, but unique from, film. In 1931, the Central Committee of the Proletarian Cinematographers and Photographers lauded the photographic approach offered in "Twenty-Four Hours" as the model for the proletarianization of Soviet photography. Other important photo stories, including Rodchenko's White Sea Canal series and Markov-Grinberg's study of the miner Izotov, soon followed.

During the first few years of the first Five-Year Plan the Communist Party had given little support for one representational approach over another and various groups pursued their particular projects simultaneously. As long as the work could be viewed as generally supportive of the state's social and economic projects, photographers were subjected to minimal interference. Government magazines provided space for multiple perspectives on photographic practice within the Soviet Union and allowed various schools to make their claims on the face of and future for socialist photography.

This began to change towards the end of the first Five-Year Plan. The first expressions of official condemnation, directed at the October photographers, came at the time of their photo exhibition of 1931. Significantly the most severe and influential denunciations came from the leaders of the ROPF photographers Alpert and Shaikhet. This culminated on April 23, 1932, when the Communist Party issued a "Decree on the Reconstruction of Literary and Artistic Organizations," which abolished the diverse art and literary organizations that had emerged since the revolution. The era of multiple approaches was brought to a close with the realists, such as those in ROPF, emerging as the preferred approach.

The Codification of Socialist Realism

A month after the April decree was published, photographers were served further notice, in a report

entitled “Public Censure of Photojournalist Langman” in the magazine *Proletarskoye Foto* (Proletarian Photo), which provided the details of court proceedings against Octoberist photographer Elizaveta Langman. In addition to a public censure of Langman, the court recommended “political education” so that photojournalists might promote socialist labor in their work; as well, photojournalists were to be more closely monitored in how they benefited from their photography. Nonconforming artists would be branded “enemies of the people,” which included the pre-revolution intelligentsia and prosperous peasants (kulaks).

Photographers were subjected to public censure for acts such as taking “a formalist approach” to their work and failing to give proper “consideration for its political significance” (Bendavid-Val 1996, 40). Explorations of form were deemed a repudiation of content, and in the view of some proponents of socialist art the battle against formalism took on the character of a class struggle waged at the level of ideology. Formalism, in renouncing representational content, was said to play a reactionary class role, indicative of a declining period of late bourgeois society. Failing to give proper consideration for “political significance” included when photographers’ work “did not provide a complete depiction of the activities of our socialist industrial complexes; atypical individual aspects of the construction were provided, [and/or] illustrations of people heroically building the socialist complex were lacking” (quoted in Bendavid-Val, 1999, 40). Increasing suspicions about capitalist proclivities amongst photographers were behind court proposals that photojournalists “turn in their negatives to publishing house archives for the purpose of thwarting their commercial aspirations” (quoted in Bendavid-Val, 1999, 40). In 1933, a law was passed requiring a permit to photograph privately in public in Moscow, allowing authorities to control photographers’ activities, and unsanctioned photographers were restricted to such public events as sports matches, parades, and official functions. During this period numerous artistic organizations were closed and the realism of the ROPF approach emerged as the preferred model.

Changes emerged not only with regard to form but also in terms of content. By the early 1930s photos depicting heroes who were ready to make great personal sacrifices for economic or military advancement became favored. This provided the Soviet regime with exemplars of loyalty that the population should emulate. Images of heroic workers such as Angelina Praskovya Nikitchina, a

skilled Ukrainian tractor driver and the miner Alexei Stakhanov, both photographed by Yevgeny Khaldei, and the miner Nikita Izotov, photographed by Mark Markov-Grinberg, were widespread, appearing in newspapers and calendars. Towards the end of the first Five-Year Plan and with the institution of the Second Five-Year Plan, an even more significant symbolic shift occurs. In the earlier period, images of workers are imbued with the force of the industrial achievements of the emerging Soviet society. Later however, the images of workers would be replaced by the universal symbol of Soviet progress embodied in the figures of Stalin, and less centrally, Lenin. These developments became the clichéd face of Socialist Realism for the rest of the century.

In 1934, at the First All-Union Congress of Soviet Authors, the official Party representatives, including Nikolai Bukharin, Andrei Zhdanov, and Maxim Gorky, decreed Socialist Realism to be the only acceptable form of art. Despite the growing government interference and censorship through the early 1930s, until this point debates about photographic methods could occur as long as the discussion remained nonpolitical. The artistic discussion that occurred in the early 1930s was fully brought to an end, however, with the terror that encompassed Soviet life beginning in 1937.

By 1937, suggestive of the repression that had descended upon Soviet society and closed off artistic liberty, Mezhericher had been branded a Trotskyist saboteur and arrested as an “enemy of the people.” Newspaper accounts of Mezhericher’s fall suggest the conditions under which Soviet photographers and editors had to work:

The saboteur content of Mezhericher’s numerous articles and speeches, though cunningly hidden behind the screen of hurrah-revolutionary phrases, now leaves no doubt about their counter-revolutionary sense. This must be explained to the broad masses of photo workers.

(quoted in Bendavid-Val, 1999, 64)

Another article cast suspicion on the exhibitions Mezhericher organized in other countries:

Toward who or what did Mezhericher orient photographs as he selected them for the presentation of the Soviet Union abroad? From piles of pictures showing the struggle of collective farmers Mezhericher selected and displayed a casual picture of goslings just because a gosling in the photograph seemed stirring....Such distortions have been employed by the Trotskyist saboteur Mezhericher in his own interests.

(quoted in Bendavid-Val, 1999, 64)

SOCIALIST PHOTOGRAPHY

By 1937 the state control of photographic images was almost total. Photos of “enemies of the people” were recalled from circulation and reworked with airbrushes. Photos labeled formalist, like those of Rodchenko and Boris Ignatovich, were rarely published. Indeed at this point perhaps only the international renown of photographers such as Rodchenko saved them from the tragic fates that befell other disfavored artists.

Photography proved particularly suited to socialist realism. Images could be presented in a straightforward and readily accessible style and easily reproduced for purposes of mass propaganda. Favored images of Socialist Realism included military and political rallies, sports parades, collective farming, and work crews on massive industrial projects. Images of mass meetings and public demonstrations became nearly obligatory for all photographers. Other preferred Soviet themes included industrialization and collectivization, science and technology, defense and education. These images emphasized the view that government works could vastly improve people’s lives. Socialist Realism offered a utopian vision that masked a reality of massive repression.

By the 1950s the Stalinization of photography had been firmly established, a model that could be easily reproduced by the Communist Party leadership following Stalin’s death in 1953. Photos became a primary means for legitimizing the Soviet model of progress and history. Retouching and supportive commentary became methods for obscuring historical facts as well as the social reality of life in the Soviet Union. Photography represented not the lived reality of the populace but rather the social vision and ideas of the totalitarian state. Only the “correct” view of life under Communism could be permitted. Forbidden subjects included any aspect of society that socialism was supposed to have eliminated, including poverty, social deviance and illegality, the unemployed, and dissidents. Other forbidden subjects included environmental pollution, bureaucratic mismanagement, religion, human nudity, and “anti-social” practices such as alcoholism.

Photographers came to produce mass propaganda materials sanctioned by officials of the state. The debates and contesting approaches of the 1920s and early 1930s gave way to a technocratic application of specific skills to achieve predetermined ends as desired by the state. Individual or even idiosyncratic images were replaced with typical cases selected for their appropriateness in expressing the totalitarian ideology of the state

and party leadership. Public analysis and evaluation of new works became muted and then fell silent. With the near elimination of creative experimentation and public discussion, the form and content of photography became circumscribed by overriding concerns of ideological functionalism.

Tracing the history of photography from this point on becomes incomplete and fragmentary because “incorrect” images were refused publication without public commentary and records of such photos are not readily available. Many skilled photographers simply resigned from the field.

Socialist Realism was strongly enforced throughout the period following the Second World War. Its enforcement diminished somewhat following Stalin’s death in 1953 but it remained the dominant approach to art in the Soviet Union until the 1980s.

SOLARIZATION

The term “solarization” is used to describe the effect occurring when a negative or print is re-exposed to light during development. Although there is continuing debate about the accuracy of this term as commonly applied, the effect it describes is a distinct and recognizable process that results in the tonal range of the image changing to part positive, part negative with the divisions of light and shade often bordered by a soft outline. In the early 1930s one of the most famous practitioners of this technique, Man Ray, was the first to use this term, which had previously been reversed to describe the intentional or accidental reversal of a negative image by extreme overexposure. The Daguerreotypists of the 1840s had been familiar with problems of partial reversal on their plates. Highlights had a tendency to record as a delicate though darker shade of blue, making skies appear unnaturally realistic on the normally monochromatic image. This occurrence was not limited to nineteenth-century emulsions. Minor White’s photograph from 1955 *The Black Sun* is a winter landscape dominated by the strangeness of the sun, visually reversed to a dark orb through accidental overexposure. White found poetic symbolism in this unexpected portrayal of “a dead planet,” caused by his shutter freezing through extreme cold.

What Man Ray called solarization had been known by the term “Sabatier effect,” which had been in use since 1862 when Armand Sabatier, a French scientist and amateur photographer, gave his name to the phenomenon in a paper published by the French Society of Photography. However, five years previously the Journal of the Photographic Society of London had printed a letter from one of its members, William Jackson, entitled *On a Method of Reversing the Action of Light on the Collodian Film and Therefore Producing Transparent Positives*, which informed his readers how he had purposefully obtained positive images by exposing his glass plates to a faint light during their development. This is the basic technique used to produce the Sabatier effect or as it is often called, “pseudo-solarization” or even Sabatier solarization to distinguish it from solarization caused by overexposure. A black and white negative (or print) during development consists of silver halide grains darkening as the chemical action

of the developer in time reduces these grains to metallic silver. When exposed to a controlled level of light in this state of partial development, the clearer parts of the negative, (what would print as darker shadows), will start to rapidly develop (or reduce) due to the sudden exposure. Providing the light of this second exposure is not too strong, which would result very quickly in the total darkening of the image, the highlights will in proportion to the shadows develop less quickly due to the majority of these silver halide grains already having been reduced. Where these two areas of the negative meet, a thin, clear line can occur due to the desensitizing effect of the action of light on the developed highlights, preventing the edge of this region from developing further. It is often inaccurately referred to as a “Mackie line,” which is a more subtle edge effect occurring during normal development when unused developing agents within the shadows of a negative diffuse into the edges of a highlight causing an increase of development, seen as a faint, soft outline.

The creative discovery of what is now commonly termed solarization is credited to Man Ray and Lee Miller in 1929. Despite his desire to be seen as a Surrealist artist Man Ray was better known in his time as a portrait photographer. Miller had come to him as initially a student but was soon his assistant, lover, model, and collaborator in his photography. He would have been familiar with the idea of solarization in the sense of the overexposure of a negative but the accidental rediscovery of the Sabatier effect inspired him to make some of his most seminal and original work. Miller was quoted in 1975 on her part in the process, giving a detailed visual description of the results:

Something crawled across my foot in the darkroom and I let out a yell and turned on the light. I never did find out what it was, a mouse or what. Then I realized that the film was totally exposed: there in the developing tanks, ready to be taken out, were a dozen practically fully developed negatives of a nude against a black background. Man Ray grabbed them, put them in the hypo and looked at them: the unexposed parts of the negative, which had been the black background, had been exposed by this sharp light that had been turned on and they had developed and came right up to the edge

SOLARIZATION

of the white, nude body. But the background and the image couldn't heal together, so there was a line left which he called 'solarization'.

(Amaya, 57)

Though a romantic story, it is probable that Miller embellished the tale over the years of telling it and the happy accident was probably caused by a faulty darkroom light. Man Ray, however, was methodical in recreating the technique to use in his portraiture discovering which composite parts of the process controlled different aspects of the outcome. The dark background (though not always used), was important to ensure an unexposed area to solarize, while the lighting had to be softened not to let the subject become too contrasty in development for the reversal exposure to work. Miller was to successfully use the technique in her own photography during the 1930s, though despite her initial involvement in creating a working and repeatable process, it was Man Ray's name that would come to be associated with solarization. Though he initially tried to keep the workings of the process secret, his colleague Maurice Tabard published the process in 1933 (ending the friendship between the men). A book popularizing the technique to professionals and amateurs alike, *Photographic Amusements*, was published in 1937. The technique was adopted and used by a succession of photographers, primarily Francis Bruguière, Wynn Bullock, Raoul Ubac, and Edmund Kestig, specifically for its mysterious and surreal qualities. In the 1950s, numerous "how-to" articles appeared in amateur photography books and magazines, making the technique extremely popular.

According to some critics, solarization can produce photographs of outstanding beauty but has also been at times overused. As is often the case, when a technique is employed purely for effect or displaying the technical skills of the photographer, the resulting imagery exhibits a sameness and reg-

ularity that contradicts the original intentions of its maker.

ABIGAIL SOLOMON-GODEAU

American

Abigail Solomon-Godeau joined the premier ranks of American art historians of photography almost before the ink dried on her PhD from the Graduate Center, City University of New York. Writing *Calotypomania: The Gourmet Guide to Nineteenth-Century Photography* propelled Solomon-Godeau's critical analysis of how museums and collectors were exerting undue influence on the shape of the history of photography for years to come. In a concluding passage, she writes of the ill effects she envisioned this promulgating of a biased reading of the photographic works would have on future generations:

The historians who promulgate a univocal art history of photography unfortunately function as hatcheries of the next generation of photography historians. In their evident belief that artists exist in the world just as chickens do (one has only to identify, to recognize, to name it), they are creating an entirely specious construction, innocent of its own premises.

(Solomon-Godeau, Abigail, "Calotypomania: The Gourmet Guide to Nineteenth-Century Photography," *Afterimage*, Summer 1983, 27)

Solomon-Godeau sought to correct historians of photography from venturing further in a direction she felt was detrimental to the field of study. Solomon-Godeau's early writing, such as "Calotypomania," on museums and the formation of a canon of the history of photography, exposes the many ways in which art objects are historically, stylistically, and formally chosen, periodized, presented, marketed, and consumed, all in order to conform to a given set of desires.

Solomon-Godeau's later writing moved from a focus on the nineteenth century and the origins of photography into more theoretical analysis of subjects ranging from the role of the male and female nude in sixteenth-century France, the lesbian subject and construction of gender as displayed in art, and the deconstruction of the myth of the "savage" artist and the primitive as essential to pure artistic expression. Her text, *Male Trouble: A Crisis in Representation*, which grew out of an earlier published essay of the same title, disrupted the flow of consensual

thought concerning eighteenth- and nineteenth-century French painting by focusing on the feminization of the male image during this period. This text, which Solomon-Godeau co-wrote with Linda Nochlin, the Lila Acheson Wallace Professor of Modern Art at New York University's Institute of Fine Arts, caused some uproar from other well-known and well-respected art historians.

Satish Padiyar, who reviewed *Male Trouble* in an article titled "Crisis? What Crisis?" in the June 1998 issue of *Art History*, found fault with Solomon-Godeau for suppressing any discussion of the existence of eighteenth-century French feminism, the evidence of women as spectators and patrons, and the influence these factors may have had on French neoclassical painting. He argues that *Male Trouble* is a revisionist view of history that wrongly seeks to uncover a violently negated female self within the masculine depiction on the painted neoclassical canvas. Padiyar counters Solomon-Godeau's thesis by arguing that both men and women of the eighteenth century were complicit in the rise of the commodification of the neoclassical ephebe in French painting.

Solomon-Godeau went on to collaborate with Nochlin on the book *Realism and Tradition in Art* and late, in December of 2000, with the publication in the magazine *Art in America* of their collaborative piece, "Sins of the Fathers," which sought to expose the persistent misogyny of European art. Later, Solomon-Godeau authored "Realism Revisited" in *Self and History: A Tribute to Linda Nochlin*, which argues that the political optimism inherent to Nochlin's early and seminal feminist tracts is mired in the milieu of the early 1970s.

"Sins of the Fathers" praises the exhibition organized by Regis Michel, chief curator of the Louvre's graphics department, which explored how violence and sexuality are inscribed in the most exalted works of Western art in the Louvre's collection. Solomon-Godeau, whose approach has frequently been criticized for dwelling too much on issues of sexual difference and constructions or inversions of female identity, received validation of her efforts in that Michel was one of the few male scholars to make contributions to the field of

feminist theory. Numerous critics considered issues of sexual difference to be solely a woman's issue.

Solomon-Godeau continues to expand the application of a feminist perspective to the field of art history and criticism. She has applied her philosophy of art history to courses she has taught at the School of Visual Arts, Hunter College, New York University, and the University of California, Berkeley. Solomon-Godeau has also held positions as the Robert Sterling Clark Visiting Professor of Art at Williams College, Williamstown, Massachusetts; as a visiting professor at the Universities of Stockholm, Uppsala, Lund, Gothenberg; at the Art Academy of Malmo in Sweden; and as a visiting professor at the Center for Research on the Arts and Languages in Paris, France.

Solomon-Godeau was an influential guide to numerous scholars of art, and she helped to radically reexamine the issue of identity in art at the end of the century. Her article, "Katharina Sieverding," which appeared in *NParadoxa* in 2003, discusses the artist's impassive self-representation as a monumental icon. Similar to this article, "The Equivocal 'I': Claude Cahun as Lesbian Subject," in *Inverted Odysseys: Cahun, Deren, Sherman, and Photographic Transformation* edited by Lynn Gumpert and Shelley Rice, explores the representation of the self presented in the surviving photographic work by Claude Cahun. In this essay, Solomon-Godeau argues that Cahun's sexual orientation, while only one of many factors to influence her photographs, must not be overshadowed by, or excluded from, the discussion of her work. In this essay, Solomon-Godeau advances the notion of an expanded idea of the self that incorporates the desire to "try on" other roles, a recurring theme in her written work.

Solomon-Godeau was influenced by her travels to Europe and the United States. She was awarded a National Endowment for the Humanities Summer Fellowship for Twentieth-Century Studies in 1985, the Florence J. Gould Tocqueville Award for French Art History from the American Council of Interdisciplinary Humanities Center for 1990–1991, a J. Paul Getty Postdoctoral Fellowship for 1993–1994, and a John Simon Guggenheim Memorial Fellowship for 2001–2002. In addition to being a prolific writer in the history of art, Solomon-Godeau has curated numerous exhibitions, including *Sexual Difference: Both Sides of the Camera*, which opened at the C.E.P.A. Gallery in Buf-

falo, New York, and subsequently toured to the State University of New York's Art Gallery, the New Langton Arts in San Francisco, and the Miriam and Ira Wallach Gallery of Columbia University, New York.

Biography

Solomon Godeau was born in New York in 1947. Attended the University of Massachusetts, Boston, BA, magna cum laude; the Graduate Center, CUNY, PhD. In addition to numerous articles and catalogue essays, she is author of *Photography at the Dock: Essays on Photographic History, Institutions, and Practices* (1991) and *Male Trouble: A Crisis in Representation* (1996). Teaches and publishes in the fields of photography, contemporary art, nineteenth-century French art, and feminist and critical theory. Her essays, which have been widely anthologized, have appeared in journals such as *Afterimage*, *Art in America*, *Art Bulletin*, *Camera Obscura*, *October*, *Screen*, and others. Currently Associate Professor of Art History at the University of California, Santa Barbara.

FREDERICK SOMMER

American

Viewing photography as a means to extend a mental image, Frederick Sommer saw art as an intellectual production and not merely object creation. To Sommer, art was the process of making a photograph by assembling things in a certain order to construct a new thing. He did not see photography as a way to capture a bit of reality, which separated him from many of his contemporaries, who dismissed his work as unphotographic. Sommer's preference for surrealist compositions and abstract images relegated him to obscurity for most of his long career.

Born Fritz Sommer in 1905 in Angri, Italy to a German father and Swiss mother, Sommer moved with his family frequently throughout Germany and Switzerland because of his father's occupation as a horticulturist. In 1913, the family moved to São Paulo, Brazil to enjoy the warm climate and luxurious tropical plants. The move permitted Sommers to escape Europe just before the devastation of World War I. Three years later, the family relocated to Rio de Janeiro, where Carlos Sommer established a flourishing landscape architecture firm and nursery. Sommer, heavily influenced by his father's enthusiasm for the structural aesthetics of the natural landscape, began to assist Carlos with architectural drawings at age of 11. In 1922, the child prodigy bought a folding Kodak camera to make photographs for architectural study. In the following year, he began accepting commissions as a landscape architect.

Sommer's growing reputation as a landscape architect led him to the United States, where he became an assistant to E. Gorton Davis, head of the Landscape Architecture Department at Cornell University in Ithaca, New York. Sommer received a Master's Degree in Landscape Architecture from Cornell in 1927 without ever having earned a Bachelor's Degree. He returned to Rio, with his new wife Frances, and formed a business partnership with his father.

Sommer appeared set on a life as an avant-garde architect until tuberculosis struck him in 1930. While recuperating in Europe, he studied philosophy and art, including the works of the Cubists and the Futurists. Sommer now began to consider photography

for its own sake. He purchased two cameras, a $2\frac{1}{4} \times 3\frac{3}{4}$ Plaubel Makina and a folding Zeiss Ikon, in the same format. After a friend showed him how to develop photographs, Sommer made contact prints on gold-toned printing out paper.

Having regained his strength by 1931, Sommer and his wife decided to settle in the more healthful climate of Arizona. The desert had a haunting beauty that Sommer appreciated, but the small city of Tucson offered few opportunities for an innovative landscape architect. Sommer therefore decided to pursue art as a vocation, painting in a geometric, architectonic style. He picked up cash by teaching watercolor, drawing, and design in a small studio that he operated with painter Lucy Marlow.

Sommer did not fully embrace photography until influenced by famed photographer Alfred Steiglitz. Sommer had sent his watercolors to Steiglitz in 1935 and, following a meeting with the older man, began to see photography as an art form. He resolved to explore photography but also began to receive recognition for his drawings and watercolors.

Throughout the late 1930s and 1940s, Sommer continued to make paintings and photographs that are largely independent of one another. His paintings are abstract, structural studies, while his photographs focus on the concrete and specific. The earliest Sommer photographs, made with an 8×10 -inch Century Universal view camera and a 210-mm Zeiss Tessar lens, are still-life close-ups of organic discards, animal carcasses, and entrails that he encountered near Prescott, Arizona.

It is Sommer's choice of often repulsive subject matter that brought controversy to his career and prevented him from gaining recognition for most of his life. *Amputated Foot* (1939) particularly offended critics, notably Ansel Adams. A black-and-white photograph, it shows an actual human amputated lower leg and foot that Sommer received from a surgeon friend. *Horse* (1945) depicts the carcass of a horse that appears to be smashed into the earth while the camera lens depicts, with foreground emphasis, the frontal pair of legs as astonishingly fully shaped, outlined effectively by deep, black shadow. The use of a short lens in combination with a close-up vantage point accounts for much of the image's impact.

Sommer also carefully arranged leftover chicken parts obtained from a butcher to create *Anatomy of a Chicken* (1939). Reflecting on the times—during World War II—Sommer challenged people who regarded his work as barbaric:

[H]ow could anybody think that anything I could do with a camera could in any way annoy anybody's finer feelings, when they were giving consent to warfare on a scale unprecedented? I can't answer it . . . Those things exist and you might say this was homage to existence as it is.

(quoted in Glenn, 1980)

Yet Sommer also sensitively photographed children, although not without a sense of the strange, as in *Livia*, 1948, which shows a beautiful but intense young girl in front of a cracking and peeling wall. Sommer's entire body of work is imbued with an unwillingness to pursue a single or obvious photographic agenda. Arrangement and pictorial structure are important, but clear associations are not. Sommer's photographs had counterparts in the Surrealist movement, and his resistance to any type of canon is comparable to Surrealism's anarchic resistance to established, rational art making. It is not surprising that his photographs were included in the avant-garde, predominantly Surrealist magazine *VVV* in the 1940s. Yet Sommer shunned any connection to the movement, declaring that Surrealists were not rigorous enough in their thinking. His images were intentioned, carefully structured, and designed to withstand intellectual interpretation. Sommer never wanted to abandon the intellectual content of his work.

In the mid-1950s, Sommer began to make images that did not require the use of a camera. Reflecting his drawing background, he developed a method of working with paint on cellophane, making the paint so tacky that he could control its application. These photograms are wholly abstract. *Paracelsus* (1959) depicts a sculpture-like torso with photographic tones and textures that give the image a burnished, refined look. Sommer later explored the application of candle smoke deposits on grease-coated cellophane in the belief that soot could outperform silver images. Upon taking these synthetic negatives into the darkroom, he exposed them in the conventional manner to create images with remarkable definition and no grain problems.

In the 1990s, with the publication of *All Children are Ambassadors* and a number of exhibitions in major museums, Sommer finally began to receive popular acclaim. He died in Prescott, Arizona in January of 1999 at the age of 93.

Biography

Born Fritz Sommer in Angri, Italy, 7 September 1905. Naturalized American citizen, 1939. Landscape architect, 1923–1925. Earned a Master's Degree in Landscape Architecture from Cornell University (1927) but self-taught in photography. Landscape architect in father's firm in Rio de Janeiro, Brazil, 1927–1930. Married Frances Watson, 1928. Diagnosed with tuberculosis in 1930. Moved to Tucson, Arizona, 1932. Private instructor in watercolor, drawing, and design in a Tucson, Arizona studio 1932–1934. Moved to Prescott, Arizona, 1935. Instructor, Institute of Design, Chicago, 1957–1958. Visiting lecturer, Institute of Design, Illinois Institute of Technology, Chicago, 1963. Coordinator of Fine Art Studies, Prescott College, Prescott, Arizona, 1966–1971. Lecturer, Rhode Island School of Design, 1967. Awarded a John Simon Guggenheim Fellowship in photography, 1974. The Frederick Sommer archive is established at the Center for Creative Photography, University of Arizona, Tucson, 1975. Awarded honorary Doctorate in Fine Arts, University of Arizona, 1979. Visiting Senior Fellow of the Council of Humanities and Old Dominion Fellow, Visual Arts, Princeton University, 1979. Distinguished Career in Photography award from the Friends of Photography, Carmel, California, 1983. College of Fine Arts Achievement Award for Art, Arizona State University, Tempe, 1985. Died Prescott, Arizona, 23 January 1999.

SUSAN SONTAG

American

One of the most eclectic and eminent essayists of modern culture, Susan Sontag was extremely instrumental in widening photography's intellectual appreciation. Her six articles on photography, published between 16 October 1973 and 23 June 1977 in *The New York Review of Books*, initiated a serious dialogue within academia concerning not only the status of photography as a fine art form, but also its potential for conveying meaning about the real world. Revised, expanded, and collected under the title *On Photography*, these essays are still considered to be of fundamental importance for any scholar of photography.

Sontag was born in New York City in 1933. She was raised in Tuscon, Arizona and in Los Angeles, California, and at the age of 15 attended the University of California at Berkeley. The following year, she transferred to the University of Chicago, from which she graduated in 1951. At Harvard University, she studied English literature (M.A., 1954) and philosophy (M.A., 1955). The following year, she studied in Paris (Sorbonne) on a scholarship and at Oxford. Upon her return to New York, Sontag began to teach philosophy in a number of colleges and universities, and she established her reputation as an innovative writer in a range of subjects that extend from AIDS to camp, fascist aesthetics to pornographic literature, modern art and music to drugs. In the 1960s, Sontag's essays, mostly published in *The New York Review of Books*, *Commentary*, and *Partisan Review*, and the success of her first novel, *The Benefactor*, secured her international attention.

The 1970s are marked by the writer's keen interest in photography. Taking part in what is often described as the "photo boom," Sontag added her authoritative voice to the growing discussion on the subject and helped promote photography as a sub-

ject worthy of social and philosophical considerations. At the beginning of the fall of 1973, Sontag began publishing a series of essays on photography in *The New York Review of Books*. In April 1975, she participated in a well-attended series of lectures held at Wellesley College entitled "Photography within the Humanities." In 1977, with the publication of *On Photography*, Sontag secured not only the intellectual prestige of photography, but also her own international standing alongside such well-known photographic critics as Walter Benjamin and John Berger.

Sontag's seminal work on photography is composed of six sections and a concluding collection of 64 quotations on photography. In it, she emphasizes that although photographs appear to have a more direct and accurate relation to reality than any other representation, they actually fabricate a new and parallel reality. According to Sontag, photography's message—and also its aggression—reside in its seemingly passive registration of reality.

In the first section of *On Photography* entitled "In Plato's Cave," Sontag defines photography as an art of the masses and argues that its introduction in modern culture has promoted a discontinuous or fragmentary experience of the world. With the increased popularity and accessibility of photography, people have come to see the world as a potential photograph, a voyeuristic practice that has the effect of leveling the meaning of all events. From the beginning, Sontag argues that the camera interprets reality and converts experience. She also suggests that the act of taking a photograph is an empowering one insofar as it provides a false but convincing knowledge of its "real" subject. Photography, which appears to document reality, provides people with an imaginary possession of the world. Indeed, Sontag defines the camera as a predatory weapon that

violates its subjects and turns them into objects that can be symbolically possessed.

Throughout *On Photography*, Sontag returns to and expands the notion that photography has been influential in making everything equally important, or better, equally unimportant. In section two, "America, Seen Through Photographs, Darkly," she traces photography's lack of differentiation between beauty and ugliness, importance and triviality, and draws a comparison (framed by Walt Whitman's conviction that beauty can also be found in the ordinary) between the photographic work of Edward Steichen, Pop artist Andy Warhol, Walker Evans, Alfred Stieglitz, Diane Arbus, and writer Nathanael West. That the invention of photography has promoted the value of appearances and thereby changed the very idea of reality is further explored in section four, "The Heroism of Vision." Drawing a contrast between the concept of a universal or "natural" way of seeing and the fact that nobody takes the same picture of the same subject, Sontag proposes that "photographic seeing" launched a new way for people to see the world that surrounds them.

In the third section, provocatively entitled "Melancholy Objects," Sontag makes a case for photography as a natively surreal art—that is, an art that creates a duplicate world and presents a reality that is at once more limited and more dramatic than the real world. The photograph is surreal because i) in capturing a time past, it is moving, mysterious, and irrational; ii) it provides a means for the photographer to appropriate an alien reality by crossing spatial and social borders as well as moral and historical ones; and iii) it is a collectible artifact that abbreviates history, stills and distorts time, and lends itself to montage.

On Photography also underlines the contradictory notions informing photography. In "Photographic Evangels" (section five), Sontag contrasts theorists who approach photography as a lucid, precise, and faithful recording of the real with those who conceive it as an intuitive and highly subjective experience. After quickly delineating their differences, she concludes that the two approaches are similar in that they presuppose that photography shows the viewer a new way of seeing reality. In the final section, "The Image-World," Sontag reworks the contradiction between the instrumental and aesthetic approaches to photography to re-emphasize how the photograph produces an experience and a

knowledge that are disassociated from the real. Ultimately, she argues that photography is a narcissistic and alienating practice that distorts reality and displaces experience.

On Photography was published at a time when photography was beginning to receive attention in such diverse disciplines as art history, American studies, anthropology, and philosophy. Although Sontag's antirealist claims about the inauthenticity of photographs were frowned upon by many photographers who were quick to point out her photographic amateurishness, there is little doubt that *On Photography* helped introduce to photography a critical appreciation that was both interdisciplinary and academic.

PHOTOGRAPHY IN SOUTH AMERICA

In 1833, Hercules Florence, a Frenchman living in Brazil, invented a silver nitrate image-producing process that he called *photographie*. Due to the vicissitudes of the invention process and his geographic location, Florence's achievement went unrecognized at the time, and photography's "invention" is generally credited to developments in Europe and specifically to Louis Daguerre in 1839. Until recently, most developments in Latin American photography have continued to be overlooked. Peter Yenne, a photographer engaged in a project to preserve a Peruvian archive, recently wrote:

Perú remains terra incognita for most photographic historian...this comes as no surprise given the scholarly oblivion to which Latin American photography has historically been consigned.

When one examines the record, oblivion is an unmerited fate. Beginning in 1840, native and foreign-born photographers assiduously engaged in the business of portraiture and later began to record distinctive and "exotic" aspects of their national cultures and landscape. As the nineteenth century ended, prominent photographers like Alejandro Witcomb (Argentina), Benjamin Rivadeneira (Ecuador), and Max. T. Vargas (Perú) served as transitional figures between the nineteenth and twentieth centuries. By the 1920s, their students, influenced by avant-garde ideas, had branched out beyond formal portraits and panoramic views. A number of younger photographers were, according to photographer and critic, Fernando Castro, "imbued with the spirit of modernity." As an example, the Peruvian brothers Carlos and Miguel Vargas "produced bromoils of romantic nocturnes in which the automobile was featured prominently." Castro notes that avante-garde iconoclasm in South America did not come from European post-World War I angst but "came by way of intellectual expectations and social upheaval." During the 1910s and 1920s, enterprising photographers and publishers used panoramic images and lavishly illustrated city books depicting buildings and parks to generate national pride and motivate potential investors. Images of modern capitals were juxtaposed with postcard images of "Tipos" (native types) and pre-Columbian sites. Postcards, which were in their

heyday between 1900 and 1930, served like their predecessors the stereoview and *carte de visite* had—to disseminate images of "exotic" people and locations. Thus, photographic genres that emphasized urban development and prevailing notions of exoticism obscured the aesthetic inclinations of Latin American photographers. Postcolonial discourse intent on resisting hegemonic incursions cannot avoid the essentialist "national character" debate. Thus, in discussing photography, art historian Max Kozloff has asserted that there is a "Latin American aura," a notion that others strongly take issue with. Another debate centers on whether photography is a sociohistorical document or an aesthetic statement. Cuban writer Edmundo Desnoes suggests that due to sociopolitical pressures, Latin American photography "shares a political content and a didactic intent" that must be placed in the service of social change. Fernando Castro and others argue that an overemphasis on the ideologies of exoticizing and politicizing have discouraged and ignored the experimental, artistic photography that nevertheless has always existed in Latin America. The overwhelming number of political and documentary images selected for the Primer Coloquio Latinoamericano de Fotografía held in Mexico City in 1978 provide a salient example. The Coloquio marked the first time that a large number of photographers, critics, and researchers interested in Latin American photography had come together. In spite of controversy over ideology, the traveling exhibition *Hecho en Latinoamérica* succeeded in opening international doors to Latin American photography. In 1981, the major exhibition *Fotografie Lateinamerika* was held in Zurich, and in 1992, a third was held at the Houston FotoFest. Both these latter exhibitions were accompanied by major books. The history of photography in Latin America contains the visual record of more than 20 diverse countries, which are best examined, not as a unified entity—Latin America—or even South America independent from Central America, Mexico, and the Caribbean, but as individual entities that both share similarities and have distinct historical and cultural traditions. As a basis for further research on the region's photographic history, relevant names,

events, and trends in each country must be more widely known.

Argentina

At the beginning of the twentieth century, Alejandro Witcomb's (1835–1905) studio was the most prestigious in Buenos Aires. Witcomb also dispatched a cadre of photographers to record various aspects of the country. Although South American photographers were producing historically valuable and aesthetically sound images, in Argentina as in other countries, their work was refused admission to mainstream art circles. The international movement Pictorialism, with its soft focus and mimicking of established painting styles, remained the standard into the 1930s. When the Sociedad Estimulo de Bellas Artes organized the first photo competition in 1927, not surprisingly all the judges were artists. The cause of photography as fine art was promoted by camera clubs. Members of the La Sociedad Fotográfica de Argentina de Aficionados (1889–1926) contributed documentary work of “types.” Other clubs included the Federación Argentina de Fotografía (1948) and the Foto Club Buenos Aires, founded in 1923 by photographer Jorge Pico. Journalistic and photographic periodicals that pioneered the use of photography included: *Caras y Caretas* (1898–1939), *Sintonía* (1920), *Foto Revista* (1920), *El Correo Fotográfico Sudamericano* (1921–), which now serves as the national photography record, *El Rombo* (1939), and *Click* (1940).

There are several notable early twentieth-century photographers. Fernando Paillet (1880–1967), the first “humanist” photographer in Argentina, is remembered for a series of workplace interiors taken in 1922. Juan di Sandor (1898–1986), the “dean” of photojournalists, is famous for his images of Buenos Aires and the Graf Zeppelin, sailing over the city. German-born Grete Stern (1904–1999) immigrated to Argentina in the 1930s, bringing avant-garde concepts from the Bauhaus school in Berlin. She is known for her portraits of artists and intellectuals, collage advertising photos, use of natural light, and lack of retouching. She also documented Argentine cities and regions (Gran Chaco). Horacio Coppola (1906–), influenced by Le Corbusier and the Bauhaus, married Grete Stern and immigrated to Argentina. He excelled at portrait photography and is noted for his images of 1930s and 1940s Buenos Aires. Later, he experimented with static shapes and color abstractions. Annemarie Heinrich (1912–) opened her first studio at age 18. She is highly re-

spected for her studio technique and use of lighting, and for her portraits of show business people and her images of the ballet in Argentina. Her work also includes montage, experimental nudes, landscape, and fashion photography. The influence of Stern, Heinrich, and Coppola was significant. Photographer, critic, and publisher Sara Facio noted that up until 1960, the three were considered “the paradigms of Argentine photography.” But in the wake of political repression between 1966 and 1984, there was, according to Facio, a “growing need for social testimony of a humanistic tendency.” The generation of photographers representing that period include Aldo Sessa, Andy Goldstein, Sara Facio, Alicia D’Amico, and Adriana Lestido. Memorable images of “Los Desaparecidos” (The Disappeared) and “Las Madres de La Plaza” (Mothers of the Plaza) were made by photographers like Carlos Bosch, Roberto Pera, and Alejandro Cherep. Radical publications during this period included *Noticias* and *El Descamisado*. In 1942, Julio Riobó organized the first photographic exhibit in the country. In 1973, Sara Facio, Alicia D’Amico, and María Cristina Orive founded La Azotea, the first publishing house solely dedicated to publishing Latin American photography. Recent major photography exhibitions include *Myths, Dreams and Realities in Contemporary Argentine Photography* at the Museum of Fine Arts, Houston (1999) and *Mirando al Sur: Fotografía Argentina al Fin del Milenio* (1999). Photographers active in the latter decades of the twentieth century include Eduardo Gil, Marcelo Brodsky, and Marcos López.

Bolivia

According to researcher and Bolivia postcard expert Daniel Buck, major surveys of Latin American photography have ignored Bolivia. Buck notes that little has been written about the topic, and research is often dependent on the photographs themselves, which are scattered in family collections, museums, and libraries in Bolivia and other countries. Some recovery work has been done by Paceño historian Gaston Dick, who published *La Paz de Ayer y Hoy* and *Potosí de Ayer*. Buck suggests the following as important Bolivian photographers of the twentieth century: Julio Cordero Castillo (1879–1961), who was both a photographer and cinematographer; and Victor Crespo, whose images were widely distributed on postcards. In 1973, photographer Rolando Costa Ardúz published *La Paz: Sus Rostros en el Tiempo*, using the images in the Cordero family archive. The Italian immigrant Luis Gismondi, worked in La Paz and

SOUTH AMERICA, PHOTOGRAPHY IN

in Lima, Perú, and his photos and postcards were popular at the turn of the century. Rodolfo Torrico Zamudio (1890–1955) traveled extensively recording portions of Bolivia. He published the groundbreaking *Bolivia Pintoresca* (c. 1926), and his archive has been preserved. Photographers active in the latter decades of the twentieth century include Alfonso Gumucio, Jorge Morato, Eric Bauer, and Manuela Zamora. Major exhibitions include the work of Rolando Costa Ardúz and German immigrant Arthur Posnansky's work from the early 1900s.

Brazil

Marc Ferrez (1843–1923) is among the most notable of Brazilian photographers, and his career bridged the nineteenth and twentieth centuries. He is known for his scenic views, architectural landmarks, and street scenes. In the early 1900s, Ferrez embarked on an ambitious project to visually inventory a number of Brazil's provinces, and he also recorded the construction of each building of Rio's main avenue. Gilberto Ferrez and Weston Naef described his images as "technically perfect without being arid." In the early part of the twentieth century, photo clubs sponsored exhibits and their members' acceptance of the pictorialist aesthetic led in the 1930s and 1940s to an increased acceptance of photography in Brazil's museums and galleries. The Photo Club Brasileiro (1923) organized the first national photography show in Brazil. Photography journals and periodicals that used photographs included: *Revista da Semana* (1900), *Ilustracao Brasileira* (1901), *Kosmos* (1904), *Revista Photographica* (1909), which was Brazil's first photographic journal, the modernist *O Cruzeiro* (1928), and *Manchete* (1950s).

Brazil has a significant tradition of photojournalism. Between the 1930s and 1950s, *O Cruzeiro* published a visual record of the nation's sociocultural upheavals. In the 1950s, Thomaz Frakas photographed the creation of the city of Brazilia, the symbol of modern Brazil. Another significant influence was the São Paulo School, where Geraldo de Barros (1923–1998) was a major figure. Emphasizing "constructionism and abstractionism," the school's modernist approach gained Brazilian photography its first international recognition. More recently, Mario Cravo Neto is recognized for his use of Afro-Brazilian symbols in his syncretistic images.

Sebastião Salgado has received worldwide recognition for his images of workers and displaced chil-

dren. He once stated that since he comes from the Third World, it would be "immoral" for him "to think of nothing but aesthetics." Women photographers include Alice Brill, Ana Regina Nogueira, and Cynthia Brito. In the early 1960s, government censorship reduced opportunities for photography. According to photography historian Maria Luiza Carvalho, it was not until the 1980s that the photography scene in Brazil experienced a renaissance. Nucleos de Fotógrafos in Mina Gerais hosted a major exhibition of women photographers in 1988. Photo agencies like F4 and Agil Fotojornalismo were formed by photographers concerned with social issues such as indigenous land rights and the plight of street children. In the 1990s, Nucleo Dos Amigos da Fotografia (NAFOTO) organized 27 exhibitions attended by 150,000 people.

Chile

Photo Clubs, which formed in Valparaiso at the beginning of the twentieth century promoted the cause of photography by sponsoring annual exhibitions and competitions. Periodicals and newspapers that used photographs included: *Zig Zag*, *Sucesos*, *El Diario Ilustrado*, and *El Mercurio*. Women photographers were active, and at least three exhibited at the II Salon Fotografico del Club Fotográfico de Chile in 1938. Ana Maria Parra Sanchez de Gabella (1911–c. 1965), daughter of photographer Victor Parra, worked with her father and later owned studios with her sister and two other women photographers. Historian and researcher Hernán Rodríguez Villegas considers the following to be the notable twentieth-century Chilean photographers: In his day, Jorge Saure Carpinello (1896–1984) was considered the most prestigious portrait photographer in Santiago, and his style marks a specific epoch in Chilean photography. His studio was a gathering spot for the intellectuals of the day. Antonio Quintana Hernández (1905–1972) specialized in industrial, panoramic, and social photography. Jorge Opazo (1908–1979) a portraitist, is considered by Rodríguez to be "one of the first modern photographers in the western hemisphere." Luis Ross de Ferrari (1880–1943) was known for his images of Chilean daily life. Heliodoro Torrente Campos (1914–c. 1992) was a consummate photojournalist. Hugo Ercilla Olea produced a major photographic record of Chile from 1937 onward. Marcos Chamudes (1907–1988), a World War II correspondent, is known for a series of photo essays, many of them political, and his portraits of writers and artists.

Photographers who worked during the politically tumultuous period between 1970 and 1988, include Alvaro Hoppe, Oscar Navarro, and Hector López.

Colombia

The early twentieth century was a turbulent and painful time for Colombia. Amid economic and political chaos, Panama was separated from Colombia. To compensate, the collective psyche of Colombia turned its focus on symbols of modernity. As in Argentina, city albums were popular in the 1910s and 1920s, and they served to promote national pride and encourage foreign investments. Magazines using photographs included *El Gráfico* (1910) and *Cromos* (1916), both of which used images that anticipated those in *Life* magazine. The time period between 1900 and 1940 represents the “belle époque criolla” in Colombian photography. Melitón Rodríguez (1875–1942) recorded the areas of Medellín and Antioquía, and is considered the representative photographer of his time. Benjamín de la Calle (1869–1934) was known for his superb studio portraits and his images of Medellín. Juan Nepomuceno Gómez (1885–1946) is considered the preeminent photographer of his time in Bogotá due to the excellence of his studio portraits. Luis Ramos (1899–1955), influenced by Henri Cartier-Bresson, is considered the father of modern Colombian photography. Jorge Obando (c. 1891–1982) photographed the “common” people in developing urban centers. He also recorded singer/icon Carlos Gardel’s fatal airplane accident in 1935. Pedro Lafont photographed the activities inside banks, offices, jails, and tailor shops of Bogotá. Luis B. Gaitán and Leo Matiz are known for their images of the civil unrest of April 1948. Photographers active in the latter decades of the twentieth century include Miguel Angel Rojas, Beatriz Jaramillo, and Javier Galeano. It was not until 1974 that photographs were admitted to Salones Nacionales on an equal par with the other arts. In 1983, the Museo de Arte Moderno de Bogotá sponsored the *Historia de la Fotografía en Colombia* exhibition. Two books on the history of photography in Colombia resulted from the exhibit.

Ecuador

Photographer and researcher Lucia Chiriboga considers the following to be among the most notable Ecuadoran photographers of the twentieth century. In the early 1900s, José Domingo Laso produced an album of striking images of Quito and a gallery

of oficios (trades). Carlos Rivadeneira, son of nineteenth-century photographer Benjamin Rivadeneira, worked with Underwood and Underwood, a firm that published stereoviews from around the world. In Cuenca, Manuel Serrano and José Salvador Sánchez published postcards, as well as views of the city and its people. During the 1940s, foreign-born photographers who recorded rural and urban Ecuador include Rolf Blomerg, Gottfried Hirtz, and Bodo Wuth. In the late 1970s, Hugo Cifuentes was recognized for his documentary photography, and Luis Mejía, a photojournalist, for his urban street images. In the 1980s and 1990s, Camilo Luzuriaga, Judy de Bustamante, Marcela García, José Avilés Diego Cifuentes, and Lucia Chiriboga emerged as the new generation of photographers.

Perú

Peruvian photo-historian Adelma Benavente suggests that during the early 1900s, the center of photographic activity in Perú was in the south, specifically in Arequipa and Cuzco. Max T. Vargas (c. 1872–c. 1958), a commercially successful photographer, owned studios in Arequipa and La Paz, Bolivia. He trained and mentored a number of young men who artistically surpassed him, including Martín Chambi, the Vargas brothers (probably no relation to Max), and Juan Manuel Figueroa Aznar. Vargas’ studio produced portraits, landscapes, vistas, and also ethnographic images on postcards. Sometime in the 1920s, Vargas relocated to Lima, where he continued on a modest commercial level, doing portrait work and producing postcards of Lima and its environs. His career spanned almost 70 years, and he served as an aesthetic and didactic link between the late nineteenth- and early twentieth-century generation of Peruvian photographers. Carlos (1885–1979) and Miguel (1886–1979) Vargas, also in Arequipa, were bohemian dandies whose photographs personified what writer Tom Rowson called the “stylized glamour culture of the twenties.” Their surrealist, avante-garde images included modern, daring images of women. Most notable were their nocturnos (night scenes), produced with dramatic illumination. Their archive languished until 1990, when photographer Peter Yenne organized an ongoing project to preserve and digitize their archive. Martín Chambi (1891–1973) eventually settled in Cuzco during the heyday of the Cuzco School of Photography and the Indigenismo movement (c. 1910–1930). Cuzco School photographers were influenced by the Indigenismo movement, which advocated for the poli-

tical and social rights of the Indigenous people of Perú. Chambi is recognized for his photos of Macchu Picchu, but most notably for his images of people and cityscapes of Cuzco. Castro has noted that Chambi photographed Cuzco society “without exoticizing the Indians or ridiculing the wealthy.” Between the late 1930s and the late 1970s, Chambi was scarcely acknowledged, until, due to the efforts of photographer Edward Ranney and other researchers, Chambi emerged into the international spotlight and is now considered one of the fathers of twentieth-century Latin American photography. According to photographer and researcher Jorge Heredia, the decade of the 1950s was the “era of photojournalism” in Perú, represented by Pestaña and Chino Domínguez. In the late 1970s, photographer Fernando La Rosa was director of Fotogalería Secuencia, which “fostered a renaissance among photographers of all ideologies.” Another notable project was TAFOS (1986–1997), which provided the means for grassroots people to photograph themselves. Fernando Castro noted that their images “reveal their own intimate world without transgressing it.” Other Peruvian photographers include Romulo Sessarego, Sebastián Rodríguez, Abraham Guillén Melgar, Billy Hare, and Roberto Huarcaya. A major international exhibition, *Peruvian Photography: Images of the Southern Andes, 1900–1945* (1996) showcased the work of Cuzco School photographers Martín Chambi, Miguel Chani, Juan Manuel Figueroa Aznar, Jose Gabriel González, and Crisanto Cabrera.

Uruguay

The Sociedad Fotográfica de Aficionados was founded in 1884, and The Foto Club de Montevideo operated from 1901 to 1917. The Foto Club Uruguayo was founded in 1940 and has been a major promoter of photography in Uruguay. In 1990, it sponsored FotoEvento, a homage to 150 years of photography in Uruguay and 50 years of the Foto Club. It also sponsors an annual exposition and publishes the journal *Revelarte*. Notable photographers include long-lived Jose Maria Silva (1897–2000), who was Carlos Gardel’s favorite photographer, and who also specialized in portraits of entertainers. Alfredo Testoni (1919–), a photojournalist, is known for his surrealist “psychological images” of artists and writers. Mario Marotta, also a photojournalist, works with mixed-media experimental photography. Other photographers active in the latter decades of the

twentieth century include Jorge Ameal, Daniel Caselli, Juan Ángel Urruzola, and Daniel Stapff.

Venezuela

Between the end of the nineteenth century and the beginning of the twentieth, Henrique Avril was Venezuela’s “gran fotógrafo.” He traveled throughout Venezuela photographing various regions and also founded El Club Daguerre (c. 1898), which over time assembled what is now considered the “grand photographic archive” of Venezuela. His wife Maria Lourdes was a retoucher and may have taken a number of photographs attributed to Henrique. Two other early twentieth-century women photographers were Maria Luisa González Rincones (1910–1990) and Fina Gómez Revenga (1920–). As in other locations, acceptance of photography in mainstream art circles was slow. The Primer Salon de Aficionados del Arte Fotográfico was held in 1934, and exhibiting photographers included five women. In 1952, photographer Alfredo Boulton’s article “Is Photography an Art?” marked the beginning of contemporary photography in Venezuela. In it he proposed that photographers stop arguing about aesthetics and begin inquiring about the intrinsic possibilities of the camera. Other notable Venezuelan photographers include Luis Felipe Toro (1881–1955), who chronicled the government of Juan Vicente Gomez and the urban development of Caracas; Ricardo Razetti; Carlos Puche; Luis Brito; Carlos Herrera; Nelson Garrido; Barbara Brändli; and Paolo Gasparini (1934), considered a major influence on Venezuelan photography since the 1950s. Publications using photographs included *Cojo Ilustrado* (1892–1915), *Elite* (1925), *Farol* (1939–1975), *CAL* (1962–1967), *El Círculo Anaranjado/Disco Anaranjado* (1948–1975), and *Revista Shell* (1952–1962). In 1952, The Museo de Bellas Artes held its first photography exhibition, signaling a new acceptance of photography. The bookstore La Librería, founded in 1973, was also a significant force in marketing photography books and sponsoring exhibits. The first exhibit on the history of photography in Venezuela was held in 1977.

The history of South American photography is a multifaceted record, one of portrait studios that expanded into documenting the quotidian, cultural, and geographic facets of their countries. Their inventory of images included the pre-Columbian and the modern, the exotic and the banal. It is also a record of the struggle to legitimize photography, and the role played by photo clubs and publications in promoting acceptance. It is a record

of the continuing debate between comprometido (socially committed) photography and artistic photography that often incorporates cultural symbols. It is a record that is not yet known and appreciated outside and even within the region. Problems relating to collecting, preserving, organizing, and disseminating the visual record of the region are myriad. Art historian Keith McElroy has noted that the literature that exists on the subject, including bibliographies, is limited and not readily available. Major photography history encyclopedias lack a representative number of entries on Latin American photographers. The history of women photographers is unwritten. Few details are known about early twentieth-century photography in Paraguay. While several U.S. institutions actively collect Mexican, Central American, and Caribbean photography, there is no major initiative to procure and/or fund recovery, preservation, and exhibits of South American photography. South Americans and their allies from other countries are engaged in a variety of projects aimed at increasing the visibility of their images and knowledge about the history of the images, their makers, and the sociocultural and political contexts they worked in. In Venezuela, the Ministry of Culture publishes *Extra Cámara*, while the Biblioteca Nacional is involved in collection and conservation efforts. Major researchers on the history of Venezuelan photography include Manuel Barroso and the late Josune Dorronsoro. A growing network of preservation efforts in Perú includes The Fototeca Andina, a major research archive containing over 20,000 photographs of life in southern Perú prior to 1950. The Circulo de Fotógrafos Profesionales de Bolivia launched the publication *Foto Bolivia*, which highlights both modern and historic photography. Researcher Javier Nuñez de Arco maintains an archive of early Bolivian photography. Folklorist Antonio Paredes Candia (Bolivia) and photographer Juan Antonio Varese (Paraguay) are researching the histories of their respective countries. Daniel Buck (Bolivia) and Javier Yubi (Paraguay) continue their research on postcards, an underestimated source of primary information on photography history. In the early 1980s, the Casa de la Cultura en Ecuador held its first conference, and in 1988, Lucia Chiriboga founded the Taller Visual, a center for visual research and communication. The Taller is collecting the images of native people of the Ecuadoran Amazon taken by missionaries during the late nineteenth and early twentieth centuries. In Chile, the first study of its photography history was produced in 1942 by Eugenio Pereira Salas. Currently, Hernán Rodrí-

guez has completed a major directory of Chilean photographers. In Colombia, archival recovery efforts include the work of El Centro de Memoria Visual de Medellín, which has acquired several archives, including that of Melitón Rodríguez. Argentine researchers include Miguel Angel Cuarterolo, Roberto Ferrari, and Abel Alexander, great-great-grandson of Adolfo Alexander, a nineteenth-century daguerreotypist. They have helped coordinate a number of photography conferences in Argentina, and the proceedings have been published. At present, they are engaged in efforts to form a coordinating entity: the Ibero-American Society for the History of Photography. Another effort to make historical information internationally accessible is the *History of Latin American Photography, 1850–1950* web site.

PHOTOGRAPHY IN SPAIN AND PORTUGAL

Photography in Spain

The study of the last decades of the nineteenth century and first of the twentieth shows the consolidation of Spanish-born photographers against the common presence of foreign studios in the first decades of photography in Spain. Portraits and views of cities were still the main source of income, and studios in Madrid (Franzen, 1864–1923; Kaulak, 1874–1933), Barcelona (Audouard, 1856–1919; Esplugas, 1852–1929); and other cities become more and more sophisticated with the use of backdrops and props to place the sitter in the atmosphere he wished. Also, portrait studios were the first to collaborate with the emergence of the illustrated press. *Blanco y Negro* and *Nuevo Mundo* magazines were founded in the early 1890s, but they only began publishing photographic articles after 1895–1896 using material produced by the studios of Amador (1863–1939), Brangulí (1879–1945), Campúa (1870–1936), Franzen Company (c. 1850–1910), and Fernando Debas (active 1870–1897).

Among the pioneers of modern photojournalism in Madrid, Alfonso Sánchez García (1880–1953) stands out; he worked for *Nuevo Mundo*, *El Heraldo*, *El Sol*, and *El Imparcial*, but his son, Alfonso Sánchez Portela (1902–1990), rose to surpass him. Starting professionally at 16 years old publishing a gallery of popular characters in *El Heraldo* and *El Liberal*, he captured the public image of the main personalities of the period (Machado, Unamuno, Valle Inclán), and he produced successful feature articles, such as the only interview of Abd-el Krim (leader of the Moroccan guerrillas fighting Spain). Other photojournalists of this period were Campúa, Company, Luis Escobar (1887–1963), Francisco Goñi (1873–1936), and Diego González Ragel (1893–1951). Goñi, who died in the Civil War, most likely as a result of his royalist leanings, took photographs of the Royal Family that captured their everyday activities with spontaneity. Luis Escobar (1887–1963) opened a studio in Albacete and collaborated with several magazines; he depicted every level of society with great humor. Despite the tendency of magazines to be up-to-date

technologically (*Blanco y Negro* reproduced color images from autochromes in 1911), photographers were poorly considered; and even as of 1930, of all the press photographers in Madrid, only one, Alfonso, had a permanent contract.

Progressively, photography was used in other fields—in science and humanities (the famous Iberian sculpture the *Dama de Elche* was photographed the day after its discovery in 1897), or for industrial and commercial uses (Francisco Fernández Trujillo's images of shipbuilding, 1915–1962). And the Spanish middle class started using the camera. The still scarce research has revealed names such as Amós Salvador (1845–1922) and Liborio Porset (c. 1850–c. 1820), who produced an extensive collection of portraits and informal scenes similar to Jacques Henri Lartigue. Others, like Frederic Bordas, combined their hobby (mountaineering) with photography. Photo clubs were founded (Real Sociedad Fotográfica in 1899; Club Fotográfico Barcelonés, 1894). Pictorialism reigned; amateur photographers soon surpassed the number of professionals in these clubs, where they valued artisan processes (gum, carbon, bromoil) and scenes with remembrance of Victorian collages, between them the mythological scenes of Joaquim Pla Janini (1879–1970), or the Don Quixote series by Luis de Ocharán (active 1890–1910).

In this pompous maelstrom, a few approached more direct documentation in an attempt to recover “Spanish” types, habits, and landscapes, and they obtained international recognition in salons and publications. Without doubt, the most renowned was José Ortiz Echagüe (1881–1980), whose major work was published in four books (*Tipos y Trajes*, *España Mística*, *Pueblos y Paisajes*, and *Castillos y Alcázares*) and who mastered the direct Fresson process. Also, Pla Janini (1879–1970) evolved in the same direction with his series titled *Spain of Work and Mysticism*. In the 1920s, certain international influences can be traced, such as the German *Neue Sachlichkeit* or “New Objectivity” in Emili Godes’ (1895–1970) advertisement and scientific photographs, the cityscapes of Joaquim Gomis (1902–1991) and the close-ups of Aurelio Grasa (1893–1972); or the dramatic lighting and collages of the Russian avant-

garde in the ads and political posters by Pere Català Pic (1899–1971).

The tragedy and rupture caused by the Spanish Civil War were exemplified by the death of the young Nicolas de Lekuona (1913–1937), avid disciple of the avant-garde movements, whose photomontages have elements floating in a gravityless surrealist space. Concurrently, Josep Renau (1907–1982) discovered the work of John Heartfield and used collage for social and political criticism, exemplified by his great work “The American Way of Life” created after during his postwar exile in Mexico. The Spanish Civil War became a testing ground not only for new weapons but also for a new style of photojournalism. Newspapers and agencies sent their best photographers: Robert Capa, Hans Namuth, David Seymour “Chim.” Nevertheless, Spanish coverage of the war continues to prove difficult to research, as many archives were destroyed during the war and after it due to the risk the material posed to photographers who had sided with the defeated Republican cause. One of the most complete archives remaining is that of Agustí Centelles (1909–1985), who captured street fighting in Barcelona and the despair of the exiled. A curious case is Antoni Campaña (1906–1989), who combined constructivist viewpoints with pictorialist processes (gum).

Unfortunately, the years of the Franco dictatorship (1939–1975) halted experimentation and solely favored classical images of the working, religious Spain found in the “icons” of Ortiz Echagüe or Eduardo Susanna (1884–1951). Some of the best photographers (Centelles, Renau, Suárez) were forced into exile. Yet, slowly photography revived. In the 1950s, the reportages of José Suárez (1902–1974), Otho Lloyd (1885–1979), and specially Francesc Catalá Roca (1922–1998) captured dynamic images with humor and spontaneity. The Madrid studios of Jalón Angel, Amer-Ventosa, or Juan Gyenes created syrupy official portraits, while the Hungarian-born Nicolas Müller (1913–1999) made studio portraits and worked in photojournalism. The news agency, EFE, founded in 1939, boasts an extensive photographic archive mainly related to the official propaganda of the regime. However, it is possible that the best photography of the 1950s is still undiscovered in the archives of numerous photographers located in outlying provinces. Manuel Ferrol’s (1923) work on Spanish emigration or the small town portraits of Virxilio Vieitez (1930), share a synthesis of document and emotion.

Another serious problem in the 1950s and 1960s was the poor photographic infrastructure, in which photographic clubs became rancid educational and exhibition centers, where censorship imposed the

“right” subjects and techniques, and most photographic activity was focused on official contests. Despite this, some photographers catalyzed timid renovations: Jaume Jorba Aules, Pedro Martínez Carrión (1931–), Josep María Ribas Prous (1940–), Ramón Vilalta Sensada (Cataluña), José Veiga Roel (Galicia), or Juan Vacas (Andalucía). Also, the so-called “Escuela de Madrid” group—Leonardo Cantero (1907–), Gabriel Cualladó (1925–), Juan Dolcet (1914–1990), Francisco Gómez (1918), Fernando Gordillo (1933), Sigfredo De Guzmán (1925), Ramón Masats (1931–), Francisco Ontañón (1930–), and Gerardo Vielba (1921–1991)—promoted a more personal and subjective approach. The magazine *Arte Fotográfico* (founded in 1952) had the key role of connecting clubs and provided most of the then-scarce information about the field. Other more innovative magazines, albeit short lived, were *Cuadernos de Fotografía*, *Imagen y Sonido*, and *Eikonos*. Curiously far from Madrid’s centralism, in Almeria, the vibrant AFAL club started its influential magazine (1958–1963) under direction of Carlos Pérez Siquier (1930–); and the next decade in Barcelona, the so-called *Gauche Divine* cultural movement, was photographed by Isabel Steva “Colita” (1940–), Oriol Maspons (1928–), Leopoldo Pomés (1931–), and Xavier Misrach (1937–1998).

However, the most effective renewal came through the magazine *Nueva Lente*, begun in 1970. Its dadaist tone united various tendencies that rejected “official” images. During its first period, directed by Pablo Pérez Mínguez (1946–), it published images that hovered between surrealism and abstraction: Jorge Rueda (1943–), Elías Dolcet (1948–) and Juan Ramón Yuste; or using elements of everyday life (Pablo Pérez Mínguez and his brother Luis (1950–)). From 1975–1979, under the direction of Rueda, the balance completely tipped towards fiction through Rueda’s own collages, the Yeti team (Antonio Lafuente y Felix Lorrio, both 1948), Joan Fontcuberta (1955–), and Antonio Gálvez (1928–), as with the staged scenarios of Manuel Falces (1952–), Antón y Ramón Eguiguren (1947–; 1945–), Barbara Allende “Ouka Lele” (1957–), and Rafael Navarro (1940–). Towards the late 1970s, various photographers started extensive documentary projects to capture rural traditions before they disappeared: Cristina García Roderó (1949–), Koldo Chamorro (1949–), Cristóbal Hara (1946–), Fernando Herráez (1948–), and Ramón Zabalza (1938–). Moving from documentary to studio photography to achieve wide acceptance were Toni Catany (1942–), with atmospheric still lifes; and Alberto Schommer (1928–), with

“psychological portraits” of famous personalities. Both later evolved towards book projects on cities and civilizations.

The 1970s saw the birth of a growing, although weak, infrastructure: in Barcelona, the schools Institut d'Estudis Fotogràfics de Catalunya and Spectrum; in Madrid, the gallery Redor and the schools Photocentro and CEI; in Zaragoza, the Spectrum gallery. Also, Lumen published the book collection *Palabra e Imagen* with attractive layouts matching a well-known writer and a photographer. Unfortunately, except for the Institut and Zaragoza's Spectrum, most of these private initiatives disappeared and the next two decades saw the blooming of festivals sponsored by several distinct political administrations: FOCO and PHoto-España in Madrid, Primavera Fotografica de Catalunya, Fotobienal de Vigo, Imago in Salamanca, and others. In the 1980s, the magazine *Photovision* and Lunwerg Publishers initiated their publications with excellent reproductions and serious research on historic and contemporary photographers.

During the 1980s, some authors proposed a more formally constrained image linked to neotopographism: the landscapes of Carlos Cánovas (1951–), Manolo Laguillo (1953–), and Ferrán Freixa (1950–) or the portraits of Humberto Rivas (1937–) and Valentín Vallhonrat (1956–). Also, the possibilities of color as a documentary element were explored by Genín Andrada (1963–), Xurxo Lobato (1956–), José M. Navia (1957–), Manuel Sendón (1951–), Marta Sentís (1949–), and Miguel Trillo (1953–). In photojournalism, the attempted coup of 1982 was photographed by Manuel Perez Barriopedro and Manuel Hernandez de Leon with worldwide coverage. More dream-like visions were those of Manel Esclusa (1952–) and Manel Serra (1949–), which show the possibilities of photography as a light trail.

Since the 1980s, there has been a clear movement back towards the studio work and experimentation with a deeply introverted image, artisan processes, or combinations of photography with other media. The studio group includes the kitsch scenes of Ciuco Gutiérrez (1956–), the surrealist irony and visual poetry of Chema Madoz (1958–), or the more conceptual work of Iñigo Royo (1962–), Javier Vallhonrat (1953–), and Manuel Vilariño (1952–). Inspired by the documentary work of the 1970s, a new generation emerged in the 1990s, including Clemente Bernad (1963–), Kim Manresa (1961–), José Muñoz, Txema Salvans (1971–), and Ana Torralva (1957–). The message becomes more introspective, gathering up intimate experiences, in the documentary works of Alberto García Alix (1956–) or Luis Baylón (1958–).

In the artisanal group, various mediums agitate in a fruity cocktail—physical matter and image join in the work of Ramón David (1963–) and Javier Esteban (1963–); video and photography in Luis Contreras (1959–); painting and photography in Tomy Ceballos (1959–), Susy Gómez (1964–), and Darío Villalba (1939–); sculpture and photography in the installations of Eduardo Cortils (1963–), Paloma Navares (1947–), Daniel Canogar (1964–), and the teams Palacín-Viaplana (1964–; 1962–) and Elorza-Mota (1961–; 1965–). In this turmoil, some authors proposed a more radical approach, deconstructing the assumptions about photographic truth, such as Joan Fontcuberta's projects *Flora*, *Fauna* (with Pere Formiguera, 1952–), and *Sputnik*. Meanwhile, Pablo Genovés (1959–), Juan Urrios (1962–), and others are combining painting's brushstroke with the digital image to welcome the twenty-first century.

It should be noted that photography confirmed its status in the commercial art scene in the late 1990s, obtaining high sales in Arco, the biggest art fair in Spain, and some museums and institutions have started to organize their photographic collections and plan new acquisitions. However, in contrast with the abundance of photofestivals, Spain clearly lacks more stable structures that could promote acquisition, research, and promotion of photographic collections; and a mere handful of institutions store a representative sample of the history of photography in Spain.

Photography in Portugal

Towards the end of nineteenth century, Portuguese society took an interest in photography, and in August of 1899 the first issue of *Photo-Velo-Club* was published in Oporto, an illustrated magazine devoted to photography, painting, and bicycling. Soon after, on December 31, the first exhibition of amateur photographers was opened in the Geographical Society in Lisbon, organized by Comte de Tomar, Eduardo Coelho, and Camilo A. dos Santos with 52 participants. Professional photographers criticized the easy social success of this exhibition in the magazine *Echo Photographico*, later *Arte Fotografica*. Nevertheless, such exhibitions continued, and the participation extended to women, such as Maria da Conceição Lemos Magalhães in the 1910 *L'Ilustração* exhibition, together with Alfonso Lopes Vieira, Julio Worm, Alfredo Black, and Dr. Annibal Bettencourt. In June 1913, after the commercialization of the autochrome, the Portuguese Photographic Society organized the first exhibition of color photographs in Portugal.

Photography was taken up by the publishing industry. Books in photogravure promoted the natural and monumental richness of Portugal, including, in 1902, *O Minho e suas Culturas* by Vizconde de Villarinho de S. Romão and the eight volumes of *A Arte e a Natureza em Portugal* of Emilio Biel, with oversize images by Fernando Brütt y Cunha Moraes. And the illustrated magazine *Ilustração Portuguesa* (1903–1918) covered political and social news in which photography dominated over text with an emphasis on a candid photography far from rigid studio poses. Among its photographers were Joshua Benoliel (1878–1932), Anselmo Franco (1879–1965), Aurelio da Paz dos Reis (1862–1931), and Arnaldo Garcez (1886–1964).

In the twenties and thirties, pictorial photography declined in magazines as a straighter approach gained hold, especially in *Ilustração Moderna*, and *New Vision* as well as Mario Novaes's (1899–1986) architecture photographs, the work of Horacio Novais, and San Payo, who wrote a text on Photography and Futurism. In *Presença* published Edmundo de Bettencourt y Branquinho da Fonseca. As in Spain, some photographers worked halfway between pictorialism and experimentation, such as Comandante Antonio José Martins (1882–1948), who worked with bromoil but also experimented with infrared film for iceberg photos, and promoted use of the Leica. Early in the 1930s, President Salazar's regime established a Propaganda Secretariat that published *Portugal 1934* and *Portugal 1940* with images of Novaes, Novais, Silva, San Payo, and others. Between those editions, it released five volumes recording the Presidential visit to the colonies (1938–1939), with images of a clear and dynamic composition, mostly by Marques da Costa using 9 × 12-cm glass plates.

Aside from these exceptions, the 1940s and 1950s were marked by the documentary images of photo-clubs and contests, with the influence of magazines *Objectiva* (1937–1945) and the Spanish *Arte Fotográfico*. The groups Câmara (Coimbra, 1949), Asociación Fotográfica de Oporto (1951), and Fotoclub 6,6 (Lisbon, 1956) promoted a whirl of contests and salons, with frequent plagiarism or reframing of the same photos, repetition of subjects, and the like. Efforts to connect with the international scene did not have much continuity; for example, the magazine *Plano Focal* published only four issues.

In 1959, the book *Lisboa, Cidade Triste e Alegre* by Costa Martins and Vitor Palla (both 1922) was published, a three-year project exhibited as a "film" with a sequence of strong contrast photographs where atmosphere reigned over description.

Several later generations consider it a starting point, among them: Jorge Guerra (1936) and Pedro Ferreira (1957). During the 1960s, Portugal was visited by foreign fashion and travel magazine photographers, and since the April 25, 1974 "revolution of the carnations," many great photojournalists covered the internal changes, including Sebastião Salgado, Guy le Querrec, Gilles Peress, and Josef Koudelka.

Integration of photography into the art world happened in the 1970s, first with the exhibit *Six Photographers* (Patric Buyhot, José Reis, Pedro Baptista, João Bafo, Alberto Pico, and Luis Carvalho) and mainly with the mutual interactions that were shown in *Photography in Portuguese Modern Art* (Oporto, 1977) with works by Noronha da Costa (1949), Helena Almeida (1934), Fernando Azevedo (1923), Fernando Lemos (1926), Alberto Carneiro (1937), Manuel Casimiro, and Cruz Felipe. One of the key artists of this period was Jorge Molder, who concentrated in his images all the emotion of objects and minimal scenes. Another influential approach, was started by Maria Madalena Soares de Azevedo in 1979, through research on antique processes, using platinum, gum, and gelatin POP papers.

In 1980, the work of recovering the photographic heritage began with the symposium organized by the Association for the Defense of Cultural Heritage of the Alcobça Region, followed in 1982 by the first National Symposium on Antique Photography in the National Archives. The first Coimbra Photography Festival also opened in 1980, highlighted by the discovery of Paulo Nozzolino in an exhibit. Nozzolino is considered one of the most influential contemporary Portuguese photographers. He published the book *Para Sempre* (1982) and works for the French newspaper *Liberation* and occasionally for poetry magazines. His condensed, intimate atmospheres invite the viewer to delve into the chiaroscuro and dense shadows of his images. Gradually, other festivals have appeared (Encontros da Imagem de Braga and Fotoporto), and commercial galleries have begun to include photography, the most active being Módulo and Ether; the later has promoted several recovery projects such as those focusing on Martins-Palla and Sena da Silva.

At the end of the century, the number of artists working with photographic media in Portugal defies categorization. However, some curators and critics have pointed out two poles of attraction, marked by the "northern" coolness and rationality of Jorge Molder and the "southern" warmth and sensuality of Paulo Nozzolino. The first group includes the anthropological approach of Luis

Pavao (1955–), Antonio Júlio Duarte (1965–), and José Maças de Carvalho (1960–); the isolated landscapes of José Afonso Furtado (1955–) and Augusto Alves da Silva (1963–); and the gardens of Domingo Caldeira (1953–). Closer to the second “ploe” are the social documentary photography published in the weekly *Independiente* by Ines Gonçalves (1964–), Daniel Blaufuks (1963–), João Tabarra (1966–), and Céu Guarda (1960–); or the atmospheric work of Albano da Silva Pereira (1950–). Finally, it should be noted that Gulbenkian Foundation and the National Archives of Photography of the IPPC have consolidated their collection project (first exhibited in 1990), in which Jorge Calado has gathered significant examples of Portuguese and international photography.

JO SPENCE

British

Jo Spence became a major figure in British photography in the early 1980s. Although she had a long and varied career in photography, the real blossoming of her personal work was in this period and was tragically cut short by her untimely death in 1992.

An energetic and prolific photographer, teacher, writer, public persona, and self-styled “cultural sniper,” Spence was enormously influential, particularly for a generation of young women photographers. Working outside the mainstream of both commercial and artistic practice for much of her life, she brought personal experience, political understanding, and critical theory together to inform her work.

Spence said that she produced her work “to evolve new thinking processes whereby I took and used photographs to help me ask questions rather than to reiterate what I thought I knew already.” Her work consistently addressed political and personal issues through a series of issue-based projects and is marked by a direct, confrontational, style frequently undercut by humor. Central to these projects were concerns of health, class, power and

powerlessness, identity, memory, the family, and the psyche.

She drew from a wide range of theory from the educational ideas of Paulo Freire to contemporary thinkers Michel Foucault and Louis Althusser; she also drew from her research into photographic and film history, including the work of avant-garde Soviet filmmaker Dziga Vertov, John Heartfield, and the worker photography movement, and from her collaborations with practitioners from a range of disciplines. Equally important, however, was her desire to make images that were accessible and empowering.

Jo Spence was born in 1934, the child of working-class and trade unionist parents, and brought up in London. As a child during World War II, she was evacuated to the country, an experience which was to be tellingly recreated in her 1988 work *Evacuee*, in which she is labelled like a piece of luggage (part of *The Crisis Project: Scenes of the Crime*, made with David Roberts). On leaving school, she trained as a secretary and in later years was frequently to rely on her secretarial skills to support herself while working on photographic projects. She took up photography while working as a “girl Friday” for photographers, and for sev-

eral years she ran her own portrait and wedding studio in London. Her move into a more theorized and political practice began in the 1970s when she met photographer Terry Dennett, her partner for many years, with whom she set up Photography Workshop in 1975. They joined the left-wing Half Moon Gallery in the East End of London and were instrumental in setting up the critical magazine *Camerawork*. When the two organizations split, Photography Workshop set up its own publishing project, *Photography/Politics*.

By this time, Spence was also working with the Hackney Flashers, a collective of socialist feminist photographers, who produced exhibitions on women's issues. In 1979, she enrolled on a degree course in Film and Photographic Arts at the Polytechnic of Central London, then headed by Victor Burgin and with a reputation as the leading institution in theoretical approaches to photography. She had also started investigating her own background by using her family photographs to question the conventions of the family photograph and to argue that the family album hides more truths than it reveals and constructs a myth of the happy family. Her autobiographical work, *Beyond the Family Album*, which focused on these limitations, was shown at the Hayward Gallery, London, in 1979, and it became part of a storm of controversy. This focused both on the subject matter and the apparent ordinariness of Spence's imagery, which was seen as unsuitable for an art gallery.

In 1982, the year she left college, Spence discovered that she had breast cancer, the disease which had killed her mother. It was this discovery that was to change her life and her work most radically. Spence had been active in challenging modes of representation and in questioning the power relations set up by documentary photography; she now found she needed to find new ways of representing what was happening in her own life and to challenge her role as victim of the medical establishment. Typical of this work is the 1982 self-portrait, in which she has marked her left breast "property of Jo Spence," which she took into hospital as a talisman. Of the images made at this time, she said:

I had used my own body to make statements about the history of the nude. But that was totally different—the body I put up on the wall then was not diseased and scarred. Those nudes had been about ideological things. Cancer was about my own history. So taking this step was profoundly difficult for me.

Spence finally found the new method that she was to use in all her later work when, in 1983 while exploring different alternative therapies, she met

Rosy Martin on a co-counselling course. Together, they developed the practice of phototherapy in which family and other dramas are revisited and restaged for the camera. Their aim was to "represent what has hitherto been conceived of as unrepresentable," and they described the process as "serious playing" and "the making visible of psychic reality."

Spence subsequently used phototherapy with a range of health practitioners, friends, colleagues, students, and her partner, David Roberts, to produce a body of work that is remarkable for its honesty and insight. In working collaboratively and using the most basic photographic technology, she consciously opened her practice to anyone, amateur or professional, who might be interested in using her methods for their own work.

She became well known and was very active for a number of years, speaking about her work, touring Australia and the United States, and becoming involved in a number of television programs made about her work. But by the end of 1990, Spence had developed leukaemia, and her breast cancer had recurred. Nonetheless, she continued to work up to the time of her death, making photographs and exhibitions, and collating material for her (posthumous) book *Cultural Sniper*. She made a *Video Diary* for television with her brother, Michael Clode. Even while she was in a hospice, she continued to take photographs of her visitors and work on her projects. A month before her death, she married Roberts and arranged to set up *The Jo Spence Memorial Archive* with her long-time colleague, Terry Dennett, which continues to promote and tour her work.

Biography

Born Joan Clode in South Woodford, Essex June 15, 1934.

Family subsequently moved to London. Evacuated to Cornwall and then Derbyshire, 1940. Trained as a secretary, 1948–1950. A typist and then studio manager at Photo Coverage and industrial photographer Barnet Saidman and freelance printing work, 1951–1962. Assistant to advertising photographer Walter Curtin, 1962–1964. Married Keith Holland, worked as a farm secretary, 1964. Changed name to Spence while living with Neil Spence, 1966. Ran Joanna Spence Associates, portrait and wedding studio in London, 1967–1974. Photographic projects with Childrens Rights Workshop, 1970–1973. Founded Photography Workshop with Terry Dennett, 1975. Joined Half Moon Gallery, which became

Half Moon Photography Workshop (HMPW) and co-founded *Camerawork* magazine, 1975–1976. Split from HMPW 1976. Member of the Hackney Flashers, women's photography group from 1977. Photography/Politics editorial group from 1977. Secretary at British Film Institute, 1977–1989. BA in Film & Photography at the Polytechnic of Central London, and part of Polysnappers, 1979–1982. Developed breast cancer, had lumpectomy, and opted for alternative health treatment, 1982. Created phototherapy with Rosy Martin, 1983. Retrospective exhibition at *Camerawork*, 1985. *Arena*, television programmes, 1986 and 1987. Publication of first book *Putting Myself in the Picture*, 1986. Keynote speech at National Photography Conference, 1987. Working freelance as lecturer, writer, and facilitator, 1989. Joined Educated Working Class Women's Group, 1989. Tour of Australia and the United States, and recurrence of breast cancer and development of leukaemia, 1990. Glasgow New Gallery established *The Jo Spence Room*, 1990. *Video Diary* made for television, 1991. Married David Roberts 1992. Died in Marie Curie Hospice, Hampstead, London June 24, 1992. Jo Spence Memorial Archive established, 1994.

Individual exhibitions

- 1985 *Review of Work 1950–1985*; *Camerawork*; London and touring
 1990 *Jo Spence—Collaborative Works*; exhibition touring Australia and the United States
 1994 *Jo Spence: Matters of Concern*; Royal Festival Hall; London and touring
 1995 *The Cancer Project*; Melkweg Gallery; Amsterdam

Group exhibitions

- 1979 *Women and Work in Hackney*; Hackney Flashers—*Who's Holding the Baby*; Hackney Flashers
Three Perspectives on Photography; Hayward Gallery; London
 1982 *Family, Fantasy, Photography*; Polytechnic of Central London; London
The Picture of Health; Photography Workshop; London
 1985 *The Photography Road Show*; Photography Workshop; London and traveling
 1987 *Double Exposure—the Minefield of Memory*; The Photographers' Gallery; London
Body Politics; The Photographers' Gallery; London

DOUG AND MIKE STARN

American

Doug and Mike Starn are identical twins who work collaboratively on photography-based art. For the Starns, photographs can manifest themselves in a variety of manners: installations, kinetic photo-sculptures, and illuminated photoworks. They received recognition early in their careers (the late eighties) for work that questioned and extended the definition of photography. Characteristic of their early work were large collages of well-known images from the history of art, toned either blue, yellow, or brown, and roughly pieced back together with cellophane tape. By 1987, they had been invited to participate in the prestigious Whitney Biennial in New York, and three years later, they were the subject of an exhibition that toured the United States.

Mike and Doug were born on May 18, 1961, in Somers Point, New Jersey. During high school in New Jersey, Doug and Mike discovered their interest in photography, and they went on to study at the School of the Museum of Fine Arts, Boston, from 1980–1985. Since their student days, the Starns have shown that to them photography was more than the perfect, unblemished print promulgated as fine-arts photography since the 1930s, and they have continually, purposively drawn attention to the photograph's status as an object. Their early, large-scale photographic constructions also reflected the ambitiousness of neo-expressionist art of the 1980s, a decade during which increasing numbers of artists were incorporating photography into their work as photographic truth in a media culture that was no longer taken for granted.

The Starns' work is visually enticing in its mimicking of antiquated, nineteenth-century qualities, particularly the warm tones and effects characteristic of Pictorialism. The subject matter of their early work was often from museums visited or architecture seen while traveling. But the Starns did not try to make their photographs look like icons from the history of painting. Rather, they photographed this iconic material strictly for their own purposes to open up their concept of what photography can be. The Starns' work added a twist to the ongoing debate of photography's status

as a fine-arts medium because of its sculptural qualities achieved through montaging photographs and creating irregularly shaped works.

The Starns were the focus of considerable discussion since first emerging primarily within the context of contemporary art rather than the photography world. Some were enthusiastic about the Starns' work, while others were skeptical about the Starns' quick ascent in the art world or the romantic nature of their work. Others applauded their dismissal of many conventions of photography, particularly the fact that they created visually lush, one-of-a-kind works on a par with paintings, or were intrigued by the idea of their collaborative process. Andy Grundberg, the author of the book *Mike and Doug Starn*, also describes their work as a "paradox," on the one hand emphasizing its uniqueness and "aura," while on the other being based on the technology of photography as a mechanical process that produces no originals.

In 1989, the Starns moved their studio from Boston to Brooklyn, where they currently reside. There they began a series on transparent, polyester film put under stress from bent wood and pipe clamps in an effort to add conceptual and physical tension to the work. One representative work from this series, "X," 1989–1990, is a self-portrait of the Starns, where transparent images of the brothers' faces overlap and are bowed to the breaking point by the pipe clamps.

Following the success of their 1990–1991 survey, the Starns' work began to change, shifting focus as they began to explore one of the essential elements of photography, light, and its source, the sun, the results of which are the *Sun Works*. The first of the Sun Works were the *Spectroheliographs*, a series that included recurrent images of a young woman by the fifteenth-century painter Petrus Christus and images of the sun taken by NASA. One of this series, *Ameratsu*, 1994, a suspended, kinetic, photographic sculpture over ten feet in diameter, is lit from within by golden light and exhibited along with a video that shows its making.

The next year, Doug and Mike exhibited the second series of *Sun Works*, the *Helio Libri* series (1992–1995). This series questioned the truth of scientific theories about the universe and the way

the solar system has been understood over time. For this series, Doug and Mike constructed Plexiglas light boxes that contained more imagery of the sun, maps of the heavens, the Christus *Young Woman*, and pages from Dante's *Paradiso*, all on transparent film.

In 1996, the Starns exhibited at the Tower of David Museum in Jerusalem, Israel, *Rampart's Cafe*, an installation consisting of a transparent table that enclosed see-through polyester prints of pages of religious texts such as the Koran, the Bible, and the Dead Sea Scrolls. These prints were lit from below by fluorescent lights. Books as a source of enlightenment began to take on more importance for the Starns, and among their next projects was a notebook lit by fiberoptics embedded in the pages. In the late 1990s, the Starns took their interest in light in a new direction with their film *Attracted To Light*, a film about insects attracted to light. In 1997, the brothers were artists-in-residence of the NASA Art Program, and they began a number of projects utilizing NASA's extensive image banks and the SOHO satellite, which observes the sun.

In the late 1990s, reflecting the increasing technological complexity of their previous series of works, Doug and Mike began exploring digital technology. The *Black Pulse* series uses advanced technology to produce two-dimensional prints of large images of dried leaves. First scanned into a computer, the images are then manipulated and printed on various delicate and textured Japanese papers and finally pieced together. Unlike many other contemporary photographer-artists, such as Nancy Burson or Japanese video and photo artist Mariko Mori, whose use of digital technologies allows them to create seamless, entirely modern images, the Starns' work retains its handcrafted qualities with the intentional patina of time that shows that the blurring of the lines separating photography and art are still a primary concern.

STEDELIIK MUSEUM

The Amsterdam Stedelijk Museum (Municipal Museum) was the first European museum of modern art to develop a photography collection. Although the Stedelijk exhibited photographs as early as 1908, 1958 should be considered the real starting point for the museum's photographic program. In that year director Willem Sandberg took the initiative to establish a photographic archive, which blossomed over the years to become an internation-

ally renowned collection, which today consists of over 8,000 pictures.

The Stedelijk Museum was founded by the city of Amsterdam in 1895 as a part of the execution of the will of Sophia Augusta de Bruyn, Douairière Jhr. Lopez Suasso. The museum also incorporated the collection of the Association for the Creation of a Public Collection of Contemporary Art (VVOVHK), which was founded a few years earlier. In the 1930s

and 1950s the museum acquired parts of the collection of paint manufacturer Pierre Alexander Regnault. With works by, amongst others, Kandinsky, Picasso, and Ensor, the Regnault acquisitions still form the centre of gravity of the museum's collection of paintings.

In 1945, Willem Sandberg became the museum's fourth director. Under his leadership, the Stedelijk was not only able to secure some top quality works from the German expressionist, cubist, and the Stijl movements, the museum also saw the structured entrance of photography in its collection. Sandberg's passion for photography went back to the pre-war era. At that time he was a member of the Association for Crafts and Applied Arts, VANK. The VANK organized the groundbreaking *Foto 37* exhibition at the Stedelijk in 1937. *Foto 37* made The Netherlands familiar with different forms and applications of photography. Eleven years later, while Sandberg was already in charge, another noteworthy photography exhibition was hosted by the museum; *Foto 48*. Again an association of artists, this time the GfK, the Association of Practitioners of the Applied Arts, was responsible for the exhibition that put the emphasis on photojournalism. The museum only played a facilitating role.

The earliest passage of photography through the museum took place in August 1908 with the *International Exhibition of Photographic Art*. That exhibition was set up in the tradition of the salons for painting, which were very popular. The exhibition, directly and indirectly, had influence on photography and the collecting of the medium. Yet the Stedelijk did not seem quite ready to explore those paths itself. Also important to mention in this context are the national exhibitions of photographic works the Stedelijk annually hosted in the 1920s. But as the 1937 and 1948 efforts, those exhibitions were not part of the museum's policy. Only in January 1958, just under 50 years after the museum's first association with the medium, a strategy for collecting and conserving photography was set up.

Director Sandberg, the head of the museum's library, Kloet, and an advisory committee of GfK photographers outlined the program. The photographic archive would be placed under the aegis of the museum's library and led by Kloet, himself an enthusiastic amateur photographer. The mission was to collect primarily Dutch photography after 1950. Photographers were asked to send work of predefined measurements to the museum for approval. Upon acceptance the pictures were mounted in aluminum frames. Later, when the value of the vintage prints became obvious, the

original prints were again lifted. Soon the museum possessed a significant collection.

The photography collection was frequently presented at the Stedelijk, and until the end of the 1960s, up to three exhibitions a year were mounted. In 1961, at the *Dag Amsterdam* (Hello Amsterdam) exhibition 59 photographers were featured with the pictures they all took on the same day in Amsterdam. But at the end of the decade the museum's attention to the medium faded. Only after lobbying by the GfK was the photography program revitalized in the mid-1970s. Then-Director Edy de Wilde decided the collection would be a part of the Applied Arts Department and led by Freerk Sleeboom. Sleeboom left after nearly two years but in that time made the first move towards the collection's internationalization. His successor, Els Barents, proceeded with that effort, although developments in Dutch photography were not neglected. During the 14 years Barents was in charge, the collection took its definitive shape developing around several thematic clusters. Gifts and acquisitions played an important part in that process. Notable acquisitions include a collection of Bauhaus photographs in 1983, reinforcing the avant-garde cluster of the collection, and that of the Diepraam collection of over 1,000 photographs with the accent on Pictorialism and photojournalism, in 1987. Other important hubs are modernism, documentary photography, and artists' portraits. In 1994, the photography collection doubled with the permanent loan of the National Fine Arts Service collection of twentieth-century Dutch photography. The loan, giving the museum a collection of over 8,000 photographs, was the last significant acquisition of the century.

Since the 1980s, the museum's attention shifted toward artists for whom photography was just one possible medium, allowing the photography collection to tie in more closely with its painting collection as well as be more in line with developments in contemporary art in the decades that followed. However, due to the impressive archive founded by Sandberg and Kloet and to the shift in attention of the 1980s, the photography collection offers the museum the unique possibility to not only be able to show recent developments, but also unveil the foundations of those developments. The 1996 exhibition *100 X Photo* did just that, emphasizing the unparalleled position the Stedelijk has in the European museum and photography landscape.

EDWARD STEICHEN

American

Edward Steichen is a photographer, graphic designer, painter, and pioneering museum curator whose name resounds throughout the history of twentieth-century art; his role in the unfolding of twentieth-century photography was significant in how his sensibility, bridging the fine arts, commercial, and popular arenas shaped perceptions of the medium for much of the century. Steichen's photographic oeuvre is immense, and it demonstrates styles and topics that mirror the aesthetic developments of the early years of the century in which he participated. As did his colleague Alfred Stieglitz, Steichen worked in the Pictorialist idiom and went on to experimental, modernist photography. An important practitioner and innovator in the fields of fashion photography and advertising photography, he also made striking portraits and landscapes, and he created important thematic series in both black and white and color of flowers, sculptural studies, and dance documentation. Described as flamboyant and a natural showman, Steichen popularized photography in ways that sometimes distressed the more serious minded.

Steichen's career may be best grasped by acknowledging its three poles: his production as a fine-arts photographer and founding member of the Photo-Secession, which sought to establish the medium as equal to the traditional artistic mediums; his commercial work for prestigious magazines like *Vogue*; and his work as creator and designer, with Stieglitz, of a magazine about modernity: *Camera Work*, the organ of the Photo-Secession, and his role as an exhibition organizer and curator. Steichen was responsible for one of the best-known photography exhibitions of the century, *The Family of Man*, which appeared at

the Museum of Modern Art in 1955 and traveled around the world.

Born Eduard Jean Steichen in Luxembourg in 1879, he was a young child when his family moved to United States in 1881. The Steichens settled in the small mining town of Hancock, Michigan, but relocated to Milwaukee when Eduard was 10, where, as a result of his mother's successful millinery business, the family's situation greatly improved. It was his mother who introduced him to the world of ideas and aesthetics, and she enabled him to purchase his first camera. A seminal experience of his youth was his attendance at the 1893 World's Columbia Exposition in Chicago, famous for displaying all that was modern and up-to-date, including works of art. He simultaneously studied painting at Milwaukee's Art Students League and undertook an apprenticeship in lithography, which he completed at age 19, during which he realized his first photographic works, shown at the Second Philadelphia Photographic Salon in 1899 (including *The Lady in the Doorway*, in 1897 and *Wood Interior*, 1898). In parallel, showing his considerable organizational abilities, he brought together a group dubbed the Milwaukee's Art Students League where he pursued painting, which he continued to practice for more than 20 years.

Nineteen-hundred was a turning point in Steichen's life. Traveling to New York with the intention of going on to Paris to continue his painting studies, he met Clarence White, who in turn recommended him to Stieglitz. With his new associations, he immersed himself in Pictorialist photography, creating one of his best-known works of this style, a self-portrait as a dandified painter who looks as if he has stepped out of the galleries of the Louvre. In 1901, he traveled to Paris for the first time, and here he was introduced to sculptor Auguste Rodin

STEICHEN, EDWARD

by a mutual acquaintance; they became trusted friends. This friendship gave birth to a series of pictures of the great master's bronzes such as *Rodin-Le Penseur*, of 1902, or *Balzac de Rodin*, of 1908, which were widely circulated and admired.

Back in New York in 1902, Steichen, Stieglitz, and others of their circle founded the Photo-Secession group, with Steichen designing the cover of the initial issue of *Camera Work*; he also worked on a publicity campaign to launch the magazine. He began experimenting with color techniques, particularly the autochrome process, completing color studies of the Flatiron building as early as 1904. In 1905, with Stieglitz, he opened The Little Galleries of the Photo-Secession at 291 Fifth Avenue, which quickly became better known as Gallery 291. Mostly because of Steichen's study of and acquaintance with modern painting, the space rapidly became a privileged site for the emerging giants of European modernism—Paul Cézanne, Henri Matisse, Pablo Picasso, Constantin Brancusi—American modernists such as John Marin, and in a radical move, photographs. In 1908, Steichen moved to Voulangis, outside Paris, where he pursued an interest in cultivating flowers and developing hybrids (he later established the Umpawaug Plant Breeding Farm in West Redding, Connecticut), moving back to New York at the outbreak of World War I.

In 1913, Stieglitz, a tireless supporter of Steichen's work (although later the relationship between the two cooled) published a double issue of *Camera Work* devoted to his Pictorialist work of Steichen (*Across the Salt Marshes, Huntington* of 1905), his first attempts in experimental photography using plant subjects (*Heavy Roses* of 1914 and *Lotus, Mount Kisco, New York* of 1915), and insects. Many of these pictures were the result of his continuing fascination with color processes. During these years, Steichen also realized nudes, portraits of artists (*Henri Matisse and the Serpentine*, 1909), and New York and Paris intelligentsia, using variously platinum, silver, and arabic gum processes, often retouching his prints with paint, as was typical of the Pictorialists. Steichen's work in this arena remains among the most important in art history.

With the outbreak of World War I, Steichen joined the army in 1917; he was assigned to the aerial photography services, doing pioneering work in this field. He eventually became commander of the photographic division of the American Expeditionary Forces, and, shocked by what he witnessed on the Western Front, Steichen began to question his quest with artistic photography, later writing, "I am no longer concerned with pho-

tography as an art form. I believe it is potentially the best medium for explaining man to himself and his fellow man." He left the army in 1919, at which time he officially changed his first name, cementing his identity as a modern American. He continued to travel between France and New York, and gave up the Pictorialist style in order to work on highly contrasted images, using tight close-ups. Landscape is replaced by object or still-life studies, and he completed important series including a cup and its saucer, eggs (*Triumph of the Egg* of 1921), fruit (*Three Apples and a Pear* of 1921), and plants (*Sunflower Seeds* of 1920). These images are markedly modern, becoming almost abstract when he focused on architectural and architectonic forms as seen in works such as *Milk Bottles, Spring New York* in 1915 and *Time-Space Continuum* in 1920. In 1922, Steichen returned from France to New York and married his second wife, Dana Desboro. This year, he also repudiated painting and burned many of his canvases.

From 1923 to 1938, Steichen was active as a commercial assignment photographer, completing commissions for magazines including *Vanity Fair* and *Vogue*. He became chief photographer for Condé Nast publications and worked for the advertising giant J. Walter Thompson. It is his photographs of this period that are perhaps best known to the popular audience. His *Vanity Fair* portraits in particular became renowned, such as, that of screen sirens Greta Garbo (1928), whom he photographed in a dramatic black wrap, and Marlene Dietrich reclining in an armchair (1932). He also completed close-up portraits producing one of the iconic images of twentieth-century photography, *Gloria Swanson, New York 1924*, in which the *femme fatale's* face is veiled by black lace. He also made now-famous portraits of actor and singer Paul Robeson, and a striking multiple profile portrait of poet Carl Sandburg.

At *Vogue*, Steichen redefined fashion photography, conceiving it within the framework of the avant-garde movements with which he was so familiar. He innovated by using not a single source of studio lighting, but many, including cross-lighting that highlighted details such as the garment's construction and fabric, as can be seen in *Condé Nast Fashion, Lenore Ulric*, 1932. During this period, Steichen made no distinction between commercial work and his personal, fine arts work, and he worked tirelessly to see that photography was recognized as an art medium. Part of this battle was the recognition of modern art in general; and from 1926 to 1928, Steichen instituted proceedings against the American government in order to prove

that Bracusi's metal sculpture, *Bird in Space* (of which he had taken a photograph in 1925, entitled *The First Cast of Bracusi's Bird in Space*) was a bona fide work of art. This precedent-setting case involved U.S. Customs classifying the artwork within the category of kitchen utensils and hospital supplies, thus subjecting it to tariffs when brought into the country for exhibition. Steichen, with others, testified in court against the Customs Service's claims that the work had no aesthetic value and was not in fact a bird, with the decision ultimately in Bracusi's favor.

In 1929, Steichen's populist instincts led him to collaborate with renowned poet Carl Sandberg (incidentally his brother-in-law) on a lavish book entitled *Steichen: The Photographer*. In this monograph, Steichen makes little distinction between the refined taste preferred by the elites and that of the common man; and, rather than having artistic pretensions, photography's value is shown as an important component of democracy. This project also led to a division between Steichen and Stieglitz that was repaired only late in their lives. The next year, further exploring popular outlets for photography, he collaborated with his daughter Mary in the realization of *The First Picture Book: Everyday Things for Babies*, which featured photographs of a teddy bears, toys, and other humble subjects.

The years from the mid-1930s to the beginning of World War II in 1945 saw Steichen moving further away from the avant-garde and experimental circles in which he had emerged in favor of a more humanist approach. He took a more socially active stance, working on photomurals for large public projects and venues such as the 1933–1934 Century of Progress Fair in Chicago. He closed his studio in New York and traveled in Mexico in 1938, inspired by the work of the social documentarians of the Farm Security Administration. During World War II, even though he was well into his sixties, Steichen volunteered for service and managed the Naval Aviation Photographic Unit, commanding all naval combat photography. Steichen also organized two important wartime exhibitions for MoMA: *Road to Victory* (1942) and *Power in the Pacific* (1945), using material he had access to through his commission that showed the U.S. operations in the Pacific theater. In 1944, he made a foray into filmmaking, directing *The Fighting Lady*, produced by the U.S. Navy.

After the war, Steichen cemented his long association with MoMA when he became director of the photographic department in 1947. He continued his humanist vision for photography, which reaches its apotheosis in the 1955 traveling exhibition *The Family of Man*. With its worldwide tour,

including stops in Germany, Australia, South Africa, France, Japan, and the Soviet Union, the show was a huge success, attracting more than 9 million visitors. Selected from millions of photographs, the exhibition was composed of 503 pictures by 273 authors representing 68 countries. Photographs were grouped by 37 themes like love, child-bearing, family, education, children, war, and peace. Steichen's goal in selecting and compiling these images was to represent "daily relationships" and express the "flaming creative forces of love and truth and the corrosive evil inherent in the lie" (*The Family of Man*, 1955).

After becoming more active as a curator, writer, and arts administrator, Steichen's photographic production fell off. But in 1955 he returned to an early love, color photography. He focused on a study of a shad-blow tree that stood on the grounds of his Connecticut home. He took 35 mm Kodachrome pictures of the tree under many lighting conditions, at different angles, times of the day, and during the different seasons. With this last photographic series, Steichen established a connection between his unique motif and the human life, from birth to death. In 1957, his second wife died, and Steichen suffered a stroke. Recovering, in 1960, he married Joanna Taub. In 1962, Steichen resigned from his curator of museum job and devoted his time to his biography, published one year later under the title of *Steichen, A Life in Photography*. The year 1964 saw the opening of the Edward Steichen Photography Center at the Museum of Modern Art. In 1973, Steichen died at the age of 94.

Biography

Born Eduard Jean Steichen 27 March 1879 in Luxembourg; immigrated with his family to U.S. in 1881, first in Hancock, Michigan, then Milwaukee. Began a four-year lithography apprenticeship at Milwaukee's American Fine Art Company, 1894. Worked under Richard Lorenz and Robert Schode at the Milwaukee Art Students League, 1894–1898. Self-taught in photography, begins to photograph in 1896. Photographs accepted to Second Salon of Philadelphia, 1899. Moved to New York City; became a naturalized American citizen, 1900. Traveled to Paris where he photographed Rodin's sculptures, 1901. With Stieglitz opened the Little Galleries of the Photo-Secession at 291 Fifth Avenue in New York,

STEICHEN, EDWARD

1905. Joined Army and commanded the photographic division of the U.S. Expeditionary Forces in World War I, 1917–1919 directed the U.S. Naval Photographic Institute in World War II. During the 1920s and 1930s worked as a commercial photographer for *Vogue* and *Vanity Fair* and other commercial clients. Appointed director of the Department of Photography at the Museum of Modern Art, New York, 1947. Organized *The Family of Man* exhibition 1955. Left MoMA, 1962; The Edward Steichen Photography Center at MoMA opens, 1964. Numerous awards include Chevalier de la légion d'honneur, 1919; Honorary Fellow, Royal Photographic Society of Great Britain, 1931; Presidential Medal of Freedom, 1963; and Commander of Order of Merit, 1966. Died in West Redding, Connecticut, 25 March 1973.

Individual Exhibitions

ANDRÉ STEINER

French

Born in 1901 in Mihald, André Steiner chose exile after the end of World War I and the proclamation of the Republic of Hungary and at the age of 17 established himself in Vienna, Austria. During his stay in Vienna between 1918 and 1928, Steiner received a diploma in electrical engineering at the Technische Hochschule, where he became the assistant of Josef Maria Eder, the author of *Geschichte der Photographie (History of Photography)*, a landmark in photographic literature.

It is almost certainly Eder who led Steiner to take an interest in photography. Almost immediately, Steiner placed photography at the disposal of his two passions: his partner, Lily, of whom he took a series of nude photographs; and sports, which he associated with the rendering of movement and instantaneity. He used a Leica, offered by the Leitz firm itself. Through Eder, Steiner was asked by the German company to test the potential of the first small-format Leica prototypes. Particularly suited to snapshots, this camera would remain Steiner's tool throughout his career.

To this point, Steiner had been practicing photography as an amateur. His departure to Paris in 1928 seems to have been a turning point. The French capital was already hosting other Hungarian immigrants, with several—André Kertész, Frantisek Kollar, and Brassai—taking part in the photographic avant-garde. But Steiner, not yet known as a photographer, did not make much contact with with countrymen. In Paris, he worked for Alsthom, until 1932, as a sound engineer for Paramount Studios and the Phototone Society, before collaborating with Gasparcolor on the development of color film. It was only at the end of these photography-related professional experiences that Steiner decided to give precedence to his passion for photography. In 1933, he opened a

commercial studio that provided him sufficient financial return to carry on with his personal experiments, based on the study of nudes and movement. The same year, his research led him to create a series entitled *Anamorphose (Anamorphosis)*. The image of objects, faces or hands, reflected by a distorting mirror, demonstrated this well-known artistic process, namely anamorphosis. Close in spirit to the *Distorsions (Distortions)*, which André Kertész produced the same year, Steiner's work varied in that it excluded nude figures.

This series punctuated Steiner's research—initiated in the 1930s—on cast shadows created by various transparent or translucent materials. The exploration of what is perceptible by the camera is carried out, in Steiner's work, within a limited repertory of forms. The *Anamorphosis* series materializes this exploration by the use of a distorting surface; the nude photography requires another methodology. The pose of the model, the framing, and the lighting are Steiner's main parameters. Through lighting, flesh itself becomes light, detaching from a dark background. As he re-centers his compositions, Steiner isolates, fragments, and redefines the human body as pure plastic form. But, as opposed to Man Ray, who also uses re-centering in order to interpret the human body, there is no surrealist ambition in Steiner's work. For Steiner, the question is to exalt the human body in its previously unsuspected aspects and to utilize it to carry a new, modernist visual language based on the specific technical capabilities of the camera. His vision is also nourished by the numerous technical inventions developed by modernist photography, as his use of solarization demonstrates, as in the works *Variation I* and *Variation II* of 1930.

Steiner's interest in the human body also expresses itself in a completely different arena—sports. Participating in the general passion for leisure and sports that existed in Europe between the

STEINER, ANDRÉ

two World Wars, numerous photographers celebrated the expression of the body liberated by modernity. In Steiner's work, this liberation is translated by the representation of movement.

These sports photographs, as a series of pictures taken in 1933 during a trip to Morocco, sealed Steiner's reputation. The publication of a group of pictures in the annual album *Photographie 1934*, edited by Arts et métiers graphiques, got the attention of Europe's illustrated magazine directors, among them Lucien Vogel, the art director of *Vu*. Among others reproduced in the magazine, the series titled *Le Saut (The Jump)* of 1934 was granted a full page in its number 433 issue (July 1, 1936). Showing a swimmer at four different stages of his jump, just before diving, it disregards the swimming pool, so that these instantaneous views of a moving body, suspended in the air, evoke a real choreography. The magazine presentation reinforced this reading by titling this group of photographs *Arabesque aérienne (Aerial Arabesque)*. This bringing together of sport and dance will be found again in Steiner's work in a series of photographs of the dancer Lisa Fonssagrives from 1939.

Most of the magazines Steiner collaborated with in the mid-1930s (*Vu*, *Paris-Soir*, *Marianne*, etc...) not only reproduced his pictures, but also offered him commissions, for the most part reportages on sports events. But Steiner also created images for advertising and architecture, the later commissioned by such prestigious architects as Le Corbusier and Mallet-Stevens. To document their new art of building, Steiner captured surprising points of view, so characteristic of modernist photography.

As Steiner received recognition from the field of applied photography, he also soon became known as an author. After a group exhibition at the bookstore gallery La Pléiade, he appeared among the artists selected for the International Exhibition of Contemporary Photography, organized at the Museum of Decorative Arts in Paris in 1936. Unfortunately, the publication Steiner planned of a book gathering his nude photographs was postponed by the outbreak of World War II. He finally published three books of his photographs between 1948 and 1953.

During the War, as a member of the French Air Army, then of the Resistance, Steiner obtained French nationality. But the war more or less put an end to his artistic career. After 1945, he abandoned his personal creations in favor of applied photography and worked as a technical consultant in the field of industrial and medical imagery. André Steiner died in Paris in 1978.

Biography

Born in Mihald, Hungary, in 1901. Left for Vienna, attended the Technische Hochschule and received a diploma as an electrical engineer, assistant of Doctor Josef Maria Eder and Professor Holzknrecht at the Central Institute of X-rays, 1918–1924. Started to take photographs with a Leica offered by the Leitz firm in order to test it, 1924; Decathlon Champion at the Worldwide University Games, 1928. Left for Paris, Engineer for Alsthom 1928–1932; Engineer for Paramount Studios, Phototone, and Gasparcolor. Traveled to Morocco, 1933; opened a photography studio, 1933; published in French illustrated magazines including *Vu* and *Art et Médecine*, 1935–1939 and foreign illustrated press including *Harper's Bazaar*, and *Vogue*, 1936–1939. Volunteer in the French Air Army, Member of the Resistance, obtains French nationality, 1939–1944; gave up artistic photography in favor of applied photography, 1945. Consultant in industrial and medical imagery 1945–1960s. Died in Paris in 1978.

LOUIS STETTNER

American

Louis Stettner's black-and-white photographs of New York and Paris capture a poetic glimpse of urban life and comprise his rich body of work that spans over 60 years. Stettner emerged as an artist during the late 1940s and 1950s, an era when post-war American street photography was characterized by a psychological tone and aesthetic that evoked the rhythms of the urban scene. Working in the street photography tradition of his contemporaries Robert Doisneau, Louis Faurer, William Klein, Saul Leiter, and Leon Levinstein, Stettner roamed the streets, subways, train stations, parks, and public spaces of New York and Paris in search of life's revealing moments. Stettner practiced what

he called "humanist realism," photography that sympathetically interpreted the spectacle of humanity and the world around him.

Born in Brooklyn in 1922 to immigrant parents from Ukraine, Stettner and his three brothers, one his twin, were raised in Flatbush. Stettner began photographing in 1936 when he was given a simple box camera. He augmented his amateur picture-making with regular Saturday visits to The Metropolitan Museum of Art to study original photographs by Alfred Stieglitz, Clarence White, and Paul Strand. He also read back issues of Stieglitz's celebrated photography journal *Camera Work* and visited his gallery, An American Place. Stettner acquired his first serious camera, a large wooden 6½ × 8½-inch view camera, and in 1938

he shared his early work with Stieglitz and Paul Strand, who encouraged him. Essentially a self-taught photographer, Stettner enrolled in a brief eight-week course in photo basics at The Photo League, an association of amateur and professional photographers committed to making socially responsible documentary photographs. His experience at The Photo League and his mentor Sid Grossman, another Photo League photographer, influenced Stettner to focus his camera with sympathy on everyday people. Throughout his career, he employed a variety of cameras and formats to photograph the streets including an 8 × 10 view camera on a tripod, a 2¼-inch Rolleiflex, and a 35-mm Leica.

At the outbreak of World War II, Stettner enlisted in the U.S. Army. He asked to be trained as a combat photographer, and from 1940–41 he was a military student in engineering at Princeton University in New Jersey. From 1942–45, he was assigned to the photography section of the Signal Corps and was a combat photographer in New Guinea, the Philippines, and Japan. It was after the War that Stettner returned to New York eager to start his photography career, and he became a member of The Photo League. Also in 1945, Stettner met documentary photographer Lewis Hine, his mentor Sid Grossman, and tabloid news photographer Weegee (Arthur Fellig). He formed lasting friendships with Weegee and Grossman, and they remained a lifelong influence on Stettner.

In July of 1946, Stettner traveled to Paris, and he fell in love with the city, which persuaded him to live and photograph there until 1952. Stettner forged his mature artistic vision in Paris and befriended the leading photographers Brassai, Édouard Boubat, Willy Ronis, Izis, and Robert Doisneau. His friendship with Brassai, with whom he would regularly meet to talk about photography at Brassai's apartment on the Boulevard St.-Jacques, had the most impact on Stettner; he considered the great French master his teacher. While in Paris, Stettner also met regularly with American photographer Paul Strand in 1951. Stettner's early work in Paris was made with an 8 × 10 view camera. He realized that working with a tripod slowed down his ability to quickly capture telling vignettes and the poetry of the street, and he also used a 2¼-inch Rolleiflex or a 35-mm Leica rangefinder. Strolling the streets and working in his humanist style that is both documentary and poetic, Stettner photographed the lyrical vitality of Paris as can be seen in his photographs *Avenue de Chatillon* (now Avenue Jean Moulin), Paris, 1947 and *Boulevard de Clichy, Paris*, c. 1951. In 1949, Stettner had his first exhibition in the *Salon des*

Indépendants at the Bibliothèque nationale. In 1950, at age 28, he received a top award from *Life* magazine in a young photographers contest. Also during his time in Paris, Stettner worked as a freelance photographer for *Time*, *Fortune*, *Du*, *Paris-Match* and other American and French magazines to support himself. He also received a commission from The Photo League in 1947 to organize the first exhibition of postwar French photographers in New York; this marked the first time that Brassai, Boubat, Ronis, Izis, Daniel Masclet, and Doisneau were exhibited in America.

In 1952, Stettner returned to New York. He continued to work a series of freelance advertising and photojournalist commissions so he could support his art. His photographs of New York, a central theme of his work, suggest the community yet anonymity of its citizens. His iconic photographs such as *Manhattan from the Brooklyn Promenade*, 1954, *Madison Avenue, New York*, 1954, and *Elbowying, Out of Town Newsstand, New York*, 1954 evoke the poetry of his vision. In 1958, Stettner produced one of his most memorable New York series, photographs taken at Pennsylvania Station. He exploited the artistic potential of blur, grain, and high contrast to capture the beauty of the glistening silver trains, the architecture of the old Penn Station, and New York's commuters. Using the natural framing device of the train's windows, Stettner photographed the businessmen and professional women reading their newspapers, playing cards, or napping with their feet up. Soft grain images such as *Odd Man Out, Penn Station, New York*, 1958 and *Waitresses, Pullman Car, Penn Station, New York*, 1958 reveal Stettner at his best.

Between 1952 and 1972, Stettner traveled to Paris, Greece, Holland, Mexico, Portugal, and Spain to photograph. In 1972, he gave up freelance and advertising work, and, inspired by the work of social documentary photographers Jacob Riis and Lewis Hine, he produced series on workers. He photographed in furniture factories, auto plants, and construction sites, to honor people at labor. From 1971–1979, Stettner wrote a monthly column of photography criticism called "Speaking Out" for *Camera 35*. Through the rest of the 1970s, 1980s, and 1990s, Stettner continued to photograph in America and Europe, also working on a series of still lifes, nudes, and landscapes. In 1986, he photographed in New York's Bowery, and in 1989 Stettner photographed the *Seine* series and the *Manhattan Wall* series.

In 1990, Stettner moved to Saint-Ouen, near Paris, where he currently lives with his fourth wife, Janet. He visits New York periodically to photograph. During the 1990s, he produced several photographic series, among them the *Héros du*

Métro, *Têtes du Louvre*, and *Marché aux Puces*. Stettner also made bronze sculptures and assemblages of painting and photography. Stettner's photographs have been exhibited and collected internationally, and are included in many prominent American and French museums.

ALFRED STIEGLITZ

American

Alfred Stieglitz is one of the key figures in photography of the twentieth century and the development of Modern art in America. A man who wore several hats—photographer, editor, gallery owner, essayist—he devoted himself to all these activities with the same passion and success. Stieglitz was a key figure in the dissemination of ideas that arose in both the French and American avant-gardes of the turn of the nineteenth century, beginning with Pictorialism. He was the most famous American Pictorialist, leading a movement that contributed greatly to the development of photography and its acceptance as art. He also was the key figure who turned away from Pictorialism as it became exhausted in the late teens, accepting the revolutionary Modern ideas flowing from Europe in the 1920s both as an artist and impresario.

Alfred Stieglitz was born in Hoboken, New Jersey in 1864. He was the oldest of six children in a German-Jewish family of comfortable means and attended schools in New York. In 1881, he was sent abroad to complete his education, and he started a training course in Berlin in order to become an engineer. After taking a photochemistry course taught by the eminent scientist Wilhelm Vogel in 1883, Stieglitz became fascinated by photography. At the age of 19, he took his first pictures. In 1887, he received a prize, his first of hundreds, for the photograph *A Good Jake*, taken from his series about Italian farmers. At that time, Stieglitz was taking part in numerous competitions and penned many articles about photography.

After nearly 10 years in Europe, Stieglitz returned to New York in 1890 to become a partner in the Photochrome Engraving Company. He was admitted to the Society for Amateur Photographers and soon was writing articles for their publication. *Cosmopolitan* magazine devoted an article to his work as early as 1891. He was becoming famous and adopted a nature commensurate with his role as a leading artist and intellectual. His marriage to Emmeline Obermeyer in 1894 provided him a sufficient income to devote himself full time to his artistic projects, which included increasing involvement in Pictorialism, the leading photo-

graphic aesthetic of the day. This same year, he was elected to membership in the prestigious English club of pictorialists, the Linked Ring.

In 1896, Stieglitz was instrumental in the creation of the Camera Club of New York out of the Society for Amateur Photographers, serving as editor of their magazine *Camera Notes*. This well-produced magazine (George H. Seeley, Edward Steichen, and Clarence White were all involved) was seminal in disseminating photography to a larger public with its luxurious photoengravings supervised by Stieglitz himself. At this time, Stieglitz also published portfolios like *Picturesque Bits of New York* (1897).

In 1899, Stieglitz's work was featured in his first monographic exhibition at the New York Camera Club. This increasing notoriety drew around him the leading amateur and professional photographers of the day, and in 1902 Stieglitz spearheaded the Photo-Secession named and modeled after avant-garde groups that had formed earlier in Vienna and Munich. In 1903, the first issue of the Secession's organ, *Camera Work*, was published. This prestigious magazine produced 50 issues over 14 years of publication.

In 1905, Stieglitz opened a gallery at 291 Fifth Avenue that became known as the Little Galleries of Photo-Secession or Gallery 291. As early as 1907, with his colleague Steichen, who at that time was living in Europe and serving as Stieglitz's agent on the continent, Stieglitz arranged exhibitions of the future great names of modern painting and sculpture, including Henri Matisse, Francis Picabia, Pablo Picasso, Constantin Brancusi, and Auguste Rodin. He also showed African sculpture in an exhibition entitled *The Picasso-Braque-African Carving Exhibition at 291* in 1915.

Stieglitz also continued his photographic career. Although the ideal of the Photo-Secession was to create a new photographic language wherein photography would be received as a fine art equal to painting and sculpture, the Pictorialists sought this equality through mimicking painting. Photographic images were highly manipulated, both on the glass plate negatives and when printed out, mostly as gum-bichromate prints. Stieglitz, however, began to develop his own form of pictorialism, eventually rejecting retouching and other

forms of manipulation. In his Pictorial mode, Stieglitz concentrated on motifs such as rain or snow (*Winter Fifth Avenue*, 1893; *The Terminal*, 1893), claiming that the photographer's personal view must prevail over technical matters.

Between 1902 and 1907, Stieglitz radically altered his photographic style. He focused on New York as a changing urban landscape, as shown in the pictures *The City of Ambition* of 1902 and *Old and New New York* of 1910. When Stieglitz aimed his camera at subjects at the time deemed marginal both in terms of the pictorialist aesthetic (which tended to focus on domestic and middle-class subjects) and by those of cultured taste, he proved himself a brilliant innovator. The best-known example of this period of his work is without a doubt *The Steerage* of 1907. This photograph of the poorest of immigrants arriving in New York Harbor aboard a great ship reveals a meticulous sense of geometry and framing. He realized a series of pictures shot at night that relate the surroundings and the buildings in the neighborhood of the 291 gallery (*Snapshot from my Window*, *New York*, 1902), and increasingly turned to a new approach, which came to be called Straight Photography. This direction is confirmed by his recognition of Paul Strand. Stieglitz's move into this more modern photographic realm perhaps was sealed by his exhibition of Marcel Duchamp's famous "Fountain"—a standard urinal—rejected in a *cause du celebre* from the now-legendary 1917 Armory Show, in Gallery 291, and his photographing of it at Duchamp's request. With the *Fountain de Marcel Duchamp* of 1917, Stieglitz created a sensual, highly abstract photograph that conferred upon this common object status as a work of art.

It was also in 1917 that Stieglitz met the painter Georgia O'Keeffe, who was to become his model and wife. Their intense emotional relationship is evident in his many pictures of her. In nudes, portraits, and studies of her graceful hands (*Georgia O'Keeffe, Hands* of 1918) Stieglitz captured the vitality of Modernism. In *Georgia O'Keeffe, A Portrait* of 1933 her hand and willowy forearm seem to be a part of the curvature of the tire of a car, setting up a subtle game of correspondences between the mechanical and human being. Stieglitz's pictures of O'Keeffe, made between 1917 and 1933, can also be read as an echo of her paintings and drawings. In many of these works, he uses the semi-close-up and the close-up, establishing a metaphor for three distinct levels of reading: on the fragment of body and the whole body, on the use of fragmentation as a photographic practice, and on the artworks of his painter-model.

In 1922, Stieglitz began work on what was to become one of the most conceptually influential

series of photographs of the twentieth century. He began concentrating on a more poetical photography while adopting a sole topic: the sky. He called his first series *Music: A Sequence of Ten Clouds Photographs*. Subsequent pictures were regrouped under the title *Songs of the Sky*. From 1923, he framed cloud formations, deleting all landscape features that might orient the viewer, creating photographic variations upon the theme and giving birth to the series *Equivalents*.

With the closing of the 291 Gallery and the final issue of magazine *Camera Work* in 1917, Stieglitz retired from organizing exhibitions for four years. Yet his passion for modern art saw him mounting exhibitions at the Anderson Galleries from 1921 to 1925, the Intimate Gallery between 1925 and 1929, then An American Place from 1929 to his death. This space for the most part did not show photography; rather, it served as the showcase of the "Six plus X" group composed of American Modernist painters John Marin, Marsden Hartley, Arthur Dove, Paul Strand, Georgia O'Keeffe, himself, and another artist (the X). During this period, Stieglitz photographed at his summer home in Lake George, New York, and focused on landscapes, particularly on trees in the park of his residence and their evolution with the passing seasons. Forced by ill health to abandon taking pictures in 1937, and now considered the master and elder figure in American photography, Stieglitz was sought out by numerous younger photographers seeking advice and opportunity, including Ansel Adams. Yet during his last decade, he supported only the work of Adams and nature photographer Eliot Porter at An American Place. Stieglitz died in New York City in 1946.

Significant collections of Stieglitz works can be found at the Art Institute of Chicago; the National Gallery, Washington, D.C.; the J. Paul Getty Museum, Los Angeles; the Metropolitan Museum of Art, New York; and the Museum of Modern Art, New York.

THOMAS CYRIL

Biography

Born 1864, Hoboken, New Jersey. Largely self-taught in photography. Established a series of photography magazines, including the *American Amateur Photographer* (1892–1906), *Camera Notes* (1897–1902), and *Camera Work* (1902–1917), the latter the organ of the Photo-

STIEGLITZ, ALFRED

Secession, founded 1902, a group in whose formation he was instrumental. Established the seminal gallery "291" at 291 Fifth Avenue in New York City, 1905. Produced his major works, including portraits of Georgia O'Keeffe and the cloud series through which he developed his concept of photographic "equivalents." 1917–1925. Opened the Intimate Gallery, 1925 to 1929 and An American Place, 1929 to 1946, in New York. Awarded over 150 medals and awards, including Progress Medal of RPS (1924), Townsend Harris Medal (1927), Honorary Fellowship of the Photographic Society of America, 1940. Died, New York City, 1946.

SASHA STONE

Russian

Sasha Stone understood photography as technique, and he thought of himself in terms of expertise rather than inspiration. His production of documents for the commercial trade made use of tricks and wit of the kind associated with the illustrated magazines for which he worked as well as avant-garde journals, such as *Die Form* and *Das neue Berlin*. Stone's photographs are technically

superb and express with clarity the character of his subject.

He was born Aleksandr Serge Steinsapir on 16 December 1895 in St. Petersburg, Russia. He lost his parents at an early age, and at four or five years of age he went to live in Warsaw with his mother's family. He completed his studies in electrical engineering at the Technical Institute from 1911 to 1913 and demonstrated an extraordinary technical ability, including designing a model electrical canon that

he later destroyed for fear of its being used by the United States in World War I. At the end of his studies, he left for the United States, arriving in New York, where he changed his name to Alexander Stone and became an American citizen. He quickly found work as a technical draftsman for airplane manufacturing and later in Thomas Edison's laboratories. At the same time, he developed his artistic interests, studying sculpture with the respected sculptor Hunt Diederich. He became Diederich's assistant and established a small art forging business. It is possible that during this time Stone met Camille Schammelhout (Cami Stone), his future wife, who had emigrated to the United States from Belgium. As war clouds gathered in Europe, he registered for the army and was stationed in England with the 25th airborne squadron, where he was both flight teacher and co-pilot. It was during this time that Stone's first known photographs—small-format souvenir photos of colleagues, airplanes, and scenes of everyday military life—were taken. Other photographs document the reality of war. It seems as though Stone's decision to take up photography had to do with the possibility of combining technical ability, scientific interest, and aesthetic sensibility.

After his discharge from the Army, Stone returned to the United States. His idea for the improvement of the automobile's mechanics proved profitable for his former partner Hunt Diederich, but not for Stone. Facing the need to begin over, Stone returned to Europe and settled in France. He began his artistic studies in the fields of drawing, painting, and sculpture at the A.E.F. Training Center in Bellevue near Paris with the help of a stipend from the American army. In 1922, he left Paris for Berlin.

In Berlin, Stone attended Russian Constructivist Alexander Archipenko's sculpture course at the art school he had opened in 1921 and assisted on some of Archipenko's projects. Finding Berlin amenable to his ambition of operating a sculpture studio and a place where he could connect with those who had similar artistic intentions, he stayed in the German capital. He exhibited his work under his new name, Sasha Stone, with an artist group called *Kornscheuer*, of which he was a member. The strong geometrical forms that dominate his pictures and sculptural objects not only reveal Archipenko's influence but also an affinity with radical constructivism, represented by the avant-garde journal *G. Material für elementare Gestaltung* (G. Material for elemental design). The *G-Group* was made up of artists and intellectuals such as Werner Graff, Hans Richter, Max Buchartz, Walter Ruttmann, Raoul

Hausmann, Walter Benjamin, Natan Altmann, Naum Gabo, Ludwig Hilbersheimer, Mies van der Rohe, and it represented various disciplines: painting, sculpture, architecture, film, and photography. The members of the *G-Group* understood themselves and experts (Fachmänner) rather than artists. In 1924, Stone ended his career as painter and sculptor, unable to succeed financially due to the inflated economy of the Weimar Republic. Photography proved more profitable, and he opened "Atelier Stone."

Stone's career as a photographer developed rapidly in between the inflation of 1923 and the Depression of 1929, and it also paralleled the steady increase in the publication of illustrated magazines. As of 1926, many of his photographs appeared in the major illustrated magazines published by the Ullstein Verlag: *Uhu*, *Die Dame*, and *Die Praktische Berlinerin*. He produced photographs for specific articles, such as "Chiromantie. Die Sprache der Hand" in *Die Praktische Berlinerin*, and "Die Schönheit der Technik. Die Geburt einer neuen Kunst," *Uhu* (März 1926). His photographs work within the spirit of the New Objectivity (*Neue Sachlichkeit*) in terms of his use of unconventional angles and tight close-ups of faces and figures. However, his take on this constructive process of picture making emphasizes the special qualities of person, object, or urban landscape, allowing them to find expression through the medium. This can be seen in his portraits of the actress Tilla Durieux and the reporter Egon Erwin Kisch and his photomontage portraits of Erwin Piscator.

As of 1927, Stone's photographs appeared regularly in other illustrated magazines: *Berliner Illustrierte Zeitung*, *Querschnitt*, *Südwestdeutschen Rundfunkzeitschrift*, even on the front cover. His work focuses at this time on the technical reality, the topic the illustrated press wanted to bring to its readers. The best reportage Stone produced at this time was published in 1929 in Heft 9 of the magazine *Die Form*, dedicated to the large electrical factory Klingenberg. Between 1925 and 1928, Stone's reportages focused on the themes of entertainment, comedy, and suspense. Berlin stood at the center of this popular theatrical culture with its many theaters, variety, and pleasure palaces, where the best clowns, artists, and actors performed. The illustrated magazines in turn encouraged this collective atmosphere of entertainment with their use of witty photos and extensive reportage provided by Stone on clown groups, the famous juggler Enrico Rastelli, and the Jackson Girls, a Folies Bergère-style dance troupe.

Concomitant with Stone's reportage on popular theatrical culture are his photographs for the Erwin Piscator Theater am Nollendorfplatz, which introduced the elements of Piscator's technique of epic theater. This new style of staging used all possible technical media in a radical constructivist manner (i.e., projections, films, movable stage, adoption of the review performance style). In the context of Piscator's book *Das politische Theater* of 1929, Stone's photographs served the purpose of a visual primer for this new theatrical style and didactic of political theater.

Stone also collaborated with various writers to illustrate their books or design the book jacket for their book, including Walter Benjamin's *Einbahnstraße* (One-Way Street, 1928), Adolf Behne's edited volume *Berlin in Bildern* (Berlin in Pictures, 1929), and Paul Cohen-Porthem's travel guide *Paris*. He also provided photographs for such surrealist journals as the Belgian magazine *Variétés*, and the Parisian magazine *Bifur*, as well as arranged an exhibition for American sculptor Alexander Calder, a friend of the Parisian surrealists at the Galerie Neumann and Nierendorf in Berlin, where Stone's photographs of Calder's wire sculptures were shown.

After working four years as a professional photographer, Stone's work became indicative of the new social applications of photography in Germany. Stone's work had appeared in all the representative publications of the time and was included in the first international photography exhibition *Fotografie der Gegenwart* (Contemporary Photography) held in Essen, Germany the same year. His work was also presented in the seminal Werkbund exhibition *Film und Foto* held in Stuttgart in 1929. It was ranked among the most innovative of modern photographers such as Man Ray, El Lissitzky, Edward Steichen, John Heartfield, László Moholy-Nagy, and Otto Umbehr. As of 1929, Stone increased his work for advertising photography and was constantly engaged. Even an article in *Gebrauchsgrafik* in 1930 focused on his ad-photographs. Stone represented the advanced style of advertising photography practiced in Germany in an exhibition held at the Camera Club in London in 1930.

After 1930, Stone's photographs rarely appeared in the German illustrated press. In September 1931, Stone moved to Brussels, the home city of Cami Stone, and together they opened "Studio Stone." Cami had relatives in Brussels, whom they frequently visited in the 1920s, and, at that time, Stone had first made contact with the art broker

Paul-Gustave van Hecke. Cami and Sasha participated in the *Exposition Internationales de la Photographie* in 1932 in Brussels. The French magazine *Arts et Métiers Graphique* published Stone's picture book *Femmes* in 1933 in its book series on the human body. Stone's commissioned work at this time is mostly from industrial companies: Metalen Gallen, Antwerp; industrial furniture company Sidam, Brussels; interior furnishings company Simonis; and piano broker Vriamont. He, nevertheless, kept active in the cultural sphere regularly taking artist portraits for the *Théâtre de la Monnaie*, collaborating with writers such as Paul Colin, and maintaining contact with the intellectual and artistic group around the editor of *Variétés* Paul-Gustave van Hecke, i.e., ELT Mesens, Franz Hellens, Robert Goffin, Nico Rost and the filmmaker Henri Storck. In 1939, Stone opened a new studio by himself without Cami. Fleeing the Nazis, he and his family with Lydia Edens fled Belgium on 14 May 1940 over France and Spain with the goal of escaping to the United States. Stone died along the way in Villelongue-la-Salanque near Perpignan in France on 6 August 1940.

Biography

Born Aleksandr Serge Steinsapir, 16 December 1895 in St. Petersburg, Russia. Studied electrical engineering at the Warsaw Technical Institute, 1911–1913. Attended A.E.F. Training Center in Bellevue near Paris, ca. 1916. Left Paris for Berlin, 1922, and attended Alexander Archipenko's art course. Befriended Walter Benjamin and collaborated with artists and intellectuals of the magazine *G*, 1923. Opened photostudio in Berlin and ended career as artist and sculptor, 1924. Photographs published in illustrated magazines as of 1925. Photographer for Erwin Piscator and his theater, 1927–1928. Represented advanced style of German advertising photography in exhibition, Camera Club, London, 1930. Left Berlin for Brussels, 1931. Worked for the firm Metalen Gallen and the industrial company Sidam, 1933. Opened new studio in Brussels, separated from Cami Stone, 1939. Fled Brussels, 1940. Died 6 August 1940 in Villelongue-la-Salanque, France.

PAUL STRAND

American

During his lifetime, Paul Strand’s work was alter-nately praised, puzzled over, and ignored, before finally becoming recognized as a significant contri-bution to twentieth-century photography. From the first, Strand signaled his respect for reality, choosing his subjects from nature, from people, and from the artifacts they had constructed. Along with these predilections, his preference was for large-format equipment, sharp lenses, and straight unmanipu-lated, but fully realized, processing methods. He thought of the photographer as an explorer—one who brings back what he or she discovers of the real world rather than as one who relies on imagination for inspiration. At the same time, his keen attention

to the formal aspects of camera imagery gave his realism its distinctive aesthetic character.

Strand was born in New York City on October 16, 1890 to parents of Bohemian Jewish background. The extended family, including grandparents whose forebears had emigrated to the United States in the late 1840s, lived a fairly comfortable life on the Upper West Side of the city. Strand grew to man-hood during the Progressive Era—a crucial period of development in both American social thought and American photography. The presence of large num-bers of recent immigrants living in slum conditions inspired the Progressives to seek social change through education and legislation. With regard to pho-tography, the appearance of simplified equipment and easier processing methods had transformed the

medium. It had become simultaneously a popular pastime, a more commercialized professional pursuit, and a mode of artistic expression.

Strand's attendance at the Ethical Culture School high school brought him into contact with Progressive thought and in particular the photographic work of Lewis W. Hine, who undoubtedly communicated his interest in social photography to his students. Hine in turn introduced Strand to Alfred Stieglitz, at the time spokesman for the most advanced wing of American aesthetic camera expression known as the Photo-Secession. Contacts with these two figures and with the ideas emanating from them combined to form the central core of Strand's concept of photographic art as being concerned with real life but also as being formally resolved in the manner of all notable artistic expression.

Introduced to modern art at Stieglitz's Photo-Secession Gallery 291 and at the Armory Show of 1913, Strand became one of the first American photographers to seriously experiment with cubist ideas while turning the camera lens on real objects. The resulting images, made in the summer of 1916 while vacationing at Twin Lakes, Connecticut, were an unprecedented group of geometric abstractions based on bowls, fruit, and structural elements. In the same year, he turned his attention to picturing the grittiness of urban New York—at the time considered an “inartistic” theme suitable for documentation. His views of commonplace structures and his portraits of ordinary street people—notably a blind newspaper vendor—were recognized for their freshness of vision and their structural rigor.

In 1920, Strand continued his interest in the city when he took up another aspect of his career that was to prove significant for his future activities. He and painter-photographer Charles Sheeler collaborated on a short film entitled *Manhatta*, based on Walt Whitman's *Leaves of Grass*. This work was expressive of the city's dazzle and energy in a manner similar to Strand's still work of the time.

Before being called for army duty in World War I, Strand exhibited at Gallery 291 and his work was featured in the last two issues of the Photo-Secession journal *Camera Work*. Throughout the 1920s, he and his first wife, Rebecca James, maintained a close friendship with Stieglitz and his wife, Georgia O'Keeffe, helping out with commissions, working on publications, and visiting frequently in New York City and their Summer cottage Lake George, New York. While earning his living during this period as a free lance motion picture cameraman, Strand was yet able to produce a series of unprecedented still images of machines, starting with views of his Akeley movie camera and

expanding to include the machine tools used in the camera's repair facility. This series was followed in the latter part of the decade by intense close-ups of natural forms, as Strand, becoming less entranced with the commercialism of the era, turned towards nature and the simpler life. His work from this period was exhibited first at the Intimate Gallery and then at An American Place, both under the directorship of Stieglitz.

In 1932, Strand's career as an independent cinematographer was affected by the move to the West Coast of the movie business. In addition, finding himself agitated by developments in both his personal life and in society at large, he left New York for New Mexico. Shortly thereafter, he traveled to Mexico in order to aid the newly installed government in the production of socially relevant images. His efforts resulted in a series of still images of peasants, architecture, and religious statuary, published in 1940 (by his second wife, Virginia Stevens) as a portfolio of gravure prints entitled *The Mexican Portfolio*. His primary charge, however, was the creation of a re-enacted documentary film, entitled *Redes (The Wave)*, financed by the Ministry of Education. Filmed in the seaport village of Alvarado, it concerned a strike by Mexican fishermen against a rapacious owner of the boat and its catch.

Despite an unsuccessful trip to the Soviet Union in 1935 to investigate working with film director Sergei Eisenstein, Strand continued his involvement with documentary film. On his return to the United States, he worked on the federally funded Resettlement Administration film entitled *The Plow That Broke the Plains*. Settling once again in New York City, he became president of a newly established production company, Frontier Films. In this capacity, he helped create a series of politically concerned documentaries, the best known of which is *Native Land*, based on the findings of the LaFollette Senate investigating committee about the prevalence of labor spies in industry. He also became active as an advisor and teacher at the Photo League, an organization of still photographers concerned with portraying street life in working-class neighborhoods. These activities established Strand as a left-thinking individual whose opinions were to become unwelcome in the Cold War atmosphere that followed the end of the Second World War.

By the mid-1940s, the difficulty of financing documentary films impelled Strand to consider other forms for disseminating his work. Following a retrospective exhibition of his still photographs at the Museum of Modern Art in 1945, he and acting curator Nancy Newhall embarked on a publication project that eventually appeared in 1950 as *Time in*

STRAND, PAUL

New England. Conceived during World War II, text and image were designed so that the photographs would not illustrate the words, but both together would embody the history of the nation's democratic heritage as it had developed in New England. Strand discovered that his cinema experience was useful in laying out the images, so despite his disappointment with the book's production, it became the model for the later publications that the photographer conceived and executed after he moved to France in 1950 with his third wife, Hazel Kingsbury.

The move, occasioned by the ungenerous political climate prevailing in the United States at the time, provided Strand with a 25-year period of remarkable activity in terms of both still images and book publication. Initially, he aimed to create a portrait of a single French village, basing this idea loosely on the much earlier American classic of poetry entitled *Spoon River Anthology*. But in crisscrossing France in search of an ideal location, he produced instead a portrait of an entire nonindustrial people. The publication that resulted, *La France de Profil*, written and designed by Claude Roy, evokes a sense of a rural country lovingly depicted but already about to disappear.

The single village for which Strand had unsuccessfully searched in France did materialize in 1954 in Luzzara, Italy; it was the birthplace of neo-realist screenwriter Cesare Zavattini, who supplied the text for Strand's next venture entitled *Un Paese*. In the 1950s and early 60s, Strand also traveled to the Hebrides Islands, to Egypt at the invitation of President Nasser, and to Ghana at the behest of President Nkrumah. The resulting publications—all but the one on Ghana designed by Strand—affirmed his belief in the published photograph in book format as a vehicle that might reach a wide audience. All the while, he photographed also in the garden at his home in Orgeval, a small village some 35 kilometers west of Paris. While in France, he also made portraits of well-known figures in the arts and sciences, among them the painters Georges Braque and Paolo Picasso, and chemist Irène Joliot-Curie, with the expectation, unfulfilled, of creating a book that would conjoin the flowers of French culture with actual botanical examples. After a debilitating illness, Strand died in March 1976 in his home in Orgeval. Besides the publications he supervised on his own, he left enough material for his publisher, Aperture, to produce five additional books of photographs and texts.

Strand's concept of photographic art and his attitude toward its dissemination have been matters of confusion because he seemed to harbor two somewhat opposed ideas. From the first, he de-

manded extraordinarily high prices for individual prints, both in platinum and silver, arguing, as his mentor Stieglitz had, that photographic art merited the same respect in the marketplace as works of hand-made graphic art. But his conviction that art should not be confined to an elite audience impelled him also to seek formats that would bring his work to the attention of a wider, less affluent public. When making motion pictures proved impractical, he settled on book publication as a democratic instrument and one over which he could exercise the kind of control that he felt the artist must retain. Thus, he found the means to realize, consciously or otherwise, the precepts about art and its social use handed down in his earliest experiences with Hine and Stieglitz.

STREET PHOTOGRAPHY

In general, the history of urban photography can be divided into two trends. On the one hand, cities have been depicted within a topographical approach favoring the distant gaze and the panoramic view. In these photographs, all attention is focused on the buildings and on the relations with their urban or natural surroundings. No or merely a few people can be detected in these photographs. In the beginning, this was undoubtedly the result of technical restric-

tions. However, already early on, aesthetic and artistic motives started to generate a vast production of empty or deserted urban images: some emulated the clarity of architectural drawings, others drew attention on the abstract play of light and volumes, still others evoked feelings of sublime terror, fear, or modern alienation.

On the other hand, urban photography contains a tradition that favors the street-level view. In some

STREET PHOTOGRAPHY

cases, this approach embraces characteristics that are similar to the topographical method. In the beginning of the century, Eugène Atget, for instance, without using the privileged viewpoint of nineteenth-century architectural photographers, emptied his Paris street pictures of people and transformed the city into the silent and mysterious environment cherished by Surrealism. By changing the vibrant metropolis into a series of frozen images that evoke a necropolis inhabited by (blurred) ghosts, Atget appropriated the gaze of the *flâneur*. Eminent scholars of the modern urban condition, such as Walter Benjamin, have conceived of this character as the ultimate metropolitan. The *flâneur*, after all, is perfectly capable of playing along with the fleeting perceptions of modern urban life with its speeding traffic and circulating commodities. Instead of being a passive consumer and a mere observer or a *badaud*, the *flâneur* faces the city as an artist. The act of *flanerie*, which requires a specific training of the gaze, transforms the mundane metropolis into a series of dense images. The *flâneur*, in the words of the poet Baudelaire, is able to distil the eternal from the ephemeral. By translating the dynamic city into a series of visual impressions, *flanerie* became a perfect and perhaps excessively used metaphor for the practice of street photography. Like *flanerie*, street photography presents the metropolis as both a subject and an instrument of scopophilia.

Street photographers, however, do not always transform the modern vibrant metropolis into its opposite of the silent and empty dreamscape such as in the work of Atget or in Brassai's explorations of nocturnal Paris in the 1930s. On the contrary, in the act of *flanerie*, many twentieth-century street photographers gave shape to the colorful kaleidoscopic effects and hectic rhythms of the metropolis, which have been celebrated in both literature and the visual arts of high modernism. In doing so, street photography also answers to the intensification of nervous stimulation that an urban sociologist such as Georg Simmel thought of as typical of modern urban life.

This combination of the street-level view and the evocation of urban dynamism is already apparent in the first manifestations of street photography in the nineteenth century, such as Charles Nègre's pictures of street characters or the congested city views in stereoscopic images. The genre of street photography, however, only developed fully at the turn of the century with the proliferation of hand cameras. In the 1890s and early 1900s, artists such as Paul Martin, Heinrich Zille, George Hendrik Breitner, and Arnold Genthe explored the streets in London, Berlin, Amsterdam, and San Francisco's Chinatown, respectively. They were joined by rich amateurs

such as Giuseppe Primoli, Jacques Henri Lartigue, and Alice Austen and professional firms such as Byron in New York and Seeberger in Paris. Despite many differences among these photographers, they all contributed to the development of a snapshot aesthetics that favored the spontaneous. Although older pictorial models remained important and sometimes staging was used, they roamed the streets and responded to the massive amount of chance events that are considered as typical of modern urban life and that only could be captured by the instantaneous. Their own impulsiveness was paralleled by the casualness of their subjects, who were usually unaware of the photographer's presence. The street photographer is not only a *flâneur* but also, in Susan Sontag's words, a "voyeuristic stroller" who sometimes uses candid cameras. This device would play an important role in the history of the genre: Arnold Genthe's impressions of San Francisco's Chinatown, Ben Shahn's use of the right-angle viewfinder in the 1930s, and Walker Evans's subway portraits are unmistakably some of its highlights taken with a candid camera. In the late nineteenth and early twentieth centuries, this voyeurism involved an exploration of the hidden urban realm of the lower classes. Photographers such as Jacob Riis and Lewis Hine, however, managed to reconcile inquisitiveness, often expressed by a direct confrontation with their subjects, with a social consciousness that appealed to the spirit of progressivism of the reform politics of the turn of the century. This spirit would also dominate the photographic culture of the New Deal, which would contribute significantly to the development of the genre of street photography with figures such as Ben Shahn, Walker Evans, or Helen Levitt, and organizations such as the Farm Security Administration and The Photo League.

Early twentieth-century street photographers created a kind of snapshot aesthetics that was perfectly adapted to modern city life, which modern artists and scholars were exactly conceptualizing as a vast amount of contingencies. Urban rhythms were translated into a celebration of the instantaneous and into an acceptance of unclassical framings and a moderate motion blur. In the 1930s, these aesthetic principles were brought to perfection by photographers working with the Leica such as Henri Cartier-Bresson and André Kertész. Cartier-Bresson's famous notion of "the decisive moment" answers to an essentially modern urban condition: only the metropolis contains such a vast amount of chance encounters and only the modern urbanite, who has interiorized the shock experiences of modernity, is capable of making the necessary fast and immediate reactions. Cartier-Bresson combined these quick

reflexes with a gracious elegance. His knee-jerk reactions on urban life are always combined with balanced compositions transcending the contingent. Kertész, too, unites the human-interest shot with a certain formalistic approach and a more abstract interest in the scene. In some of his pictures, Kertész managed to reconcile the architectural approach of German modern photography with an interest for street life—a combination that characterizes some of Walker Evans' pictures as well.

Undoubtedly, the work of Cartier-Bresson became the guideline for the street photography on both sides of the Atlantic in the decades following the Second World War. His influence permeates in the flourishing photographic portraits of Paris in the 1940s and 1950s. Labelled as “the cradle of street photography,” Paris had already been immortalized before the war by photographers such as, Kertész, Lartigue, Brassai, Eli Lotar, Germaine Krull, and Moï Ver and Cartier-Bresson himself. Shortly after the war, Paris street life became a favorite subject of a veritable avalanche of photo books by Robert Doisneau, André Maurois, Izis, Cas Oorthuys, Willy Ronis, Ed van der Elsken, and Johan Van der Keuken, among others. Cartier-Bresson also affected the urban photography of what Jane Livingston has called the New York School, which she situates between 1936 and 1963. In those years, photographers such as Sid Grossman (Chim), Alexey Brodovitch, Lisette Model, Helen Levitt, Robert Frank, Louis Faurer, William Klein, Weegee, Ted Croner, Saul Leiter, Leon Levinstein, David Vestal, Bruce Davidson, Don Donaghy, Diane Arbus, and Richard Avedon, depicted neighborhood life in both Harlem and the Lower East Side or pictured the “random choreography of the city’s sidewalks, the crush of bodies on Coney Island’s beaches, the glow of street lights, and the glare of Times Square.” Evoking what architect Rem Koolhaas once called the “culture of congestion” of “Manhattanism,” their pictures were characterized by a peculiar photographic style influenced by certain conventions of documentary journalism, such as the use of a small camera and available light and a sense of the fleeting and the candid. All these photographers also avowed certain humanistic values. City life and people in their daily environments rather than urban space were the subjects of their images. Most of these photographers took to the streets snap-shooting incidents with a 35 mm camera. Each picture was presented as the product of a unique encounter. Responding perfectly to a cultural climate determined by existentialism, action painting, jazz, film noir, neorealist cinema, and the *nouvelle vague*, these photographers sought to capture the hectic flux of metropolitan life. Although

clearly indebted to Cartier-Bresson, his graceful lines and elegant compositions were often exchanged for an almost expressionist use of dynamic and asymmetrical compositions, tilted angles, distortions, and disjointed elements. Lisette Model, for instance, uses these formal structures in order to evoke a metropolitan hustle. In some of her pictures, the camera is held down at the level of the pavement and the tangle of passing feet in the crowd, as if they were taken from the point of view of somebody being trampled in a panic in the streets.

Compared with the depiction of Paris street life during the same years, the street photography of the New York School usually looks more edgy and metropolitan. In the works of Weegee, Frank, and Klein in particular, streets are no longer places of friendly interactions but rather evoke a roughness and urban alienation. Both this harshness and the expressionist formal elements of the New York School were further elaborated by Garry Winogrand and Diane Arbus in the later 1960s. Winogrand’s entire career is predicated on the abrupt configuring of faces, gestures, and surroundings. Restlessly documenting chance encounters in public space, Winogrand shows individuals or couples who appear amidst the anonymous crowd but never belong to an urban community. His quasi-instinctive way of shooting, which resulted in casual pictures with wide-angle lens distortions and tilted and off-center framings, situated the urbanite in hectic but indifferent surroundings. This peculiar relation between people and the urban environment is perfectly rendered in nervous and hard-edge descriptions, which contrast with the rather smudgy style of the 1950s that is aptly rendered in the pictures of neon lights and glass reflections in low light and bad weather conditions. Winogrand’s emphasis on the unguarded moment is also testimony of a voyeuristic method, which characterizes Diane Arbus’s emotionally confrontational work as well. Instead of the edgy street snapshots of Winogrand, Arbus opted for the full-frame frontality of formal portraiture in order to focus on social outcasts.

The works of Winogrand and Arbus can be interpreted as both a culmination of and the end of the genre of street photography. The genre came under pressure by the spatial and social transformations of the metropolis itself, which was eroded by the processes of suburbanization and, eventually, disurbanization of people, industry, and commercial activities. In the late twentieth century, the differences between center and periphery, and between city and countryside are no longer clearly defined. In an age of urban sprawl the city is no longer a place, but rather a condition. The streets

STREET PHOTOGRAPHY

and public spaces of the city, the hunting grounds of the street photographer, were increasingly eroded by suburbanization, ghettoization, and so-called urban renewal programs. From the late 1950s onwards, street photography lost its appeal simply because streets and street life were disappearing. Izis showed that in Paris, even the banks of the Seine were given over to motorways and that its quays became only occupied by young tourists and *clochards*. Working-class people, an obligatory motif of Paris street photography, were pushed out to the new suburban housing projects. Cartier-Bresson, Ronis, and Doisneau attempted to follow their subjects to these new outer suburbs. Strikingly, while their earlier street scenes of the city had been full of interaction, in these new photographs single figures are often dwarfed by large blocks of houses or expanses of wastelands.

In the late 1960s and early 1970s, street photography also lost its symbolic power because of the drastic transformations of the notions of community and *civitas*. Especially in its so-called humanist phase shortly after World War II, street photography, both in its celebration of neighborhood life and in its appraisal of the hectic rhythm of the inner cities, had been closely connected to the idea of a metropolitan community. Although the modern metropolis was the breeding ground for social atomization and the process of individualization, intellectuals and artists presented the city as a spatial realm embodying the colorful interaction and democratic unity of its components. In the last decades of the century, however, urban public spaces have increasingly been privatized and transformed into theme parks or tourist sites.

Furthermore, the increasing diversification of the metropolitan population, the rise of a so-called multicultural society, the development of identity politics, and the growing importance of subcultures and peer groups undermined the traditional notions of civic community and public space. The metropolis came to be presented as a key symbol and site of the postmodern condition where Difference and the Other—other sexualities, races, nations, and peoples—could be visualized. A series of photographers working in the wake of Winogrand and Arbus during the 1970s and early 1980s converted to making subcultural documentaries. Marked by the breakdown of communal values, their pictures evoke an urban landscape characterized by crime, fiscal crisis, racial tension, and the faltering of the nuclear family. Utilizing the camera-handlings and image constructions of Arbus, Friedlander, and Winogrand, street photographers such as Bruce Davidson, Larry Clark, and Nan

Goldin increasingly favored bizarre overtones and “extreme” subjects. Attracted to exotica and weirdness, these photographers joined a long tradition of photographing minorities and social outcasts but their interest in social enclaves and fringe scenes no longer advanced ideas about metropolitan life in general. According to Max Kozloff, in their pictures and in those of more recent photographers of New York street life such as Larry Fink, Jeff Mermelstein, Jeff Jacobson, Mary Ellen Mark, Ralph Gibson, Alex Webb, and Sylvia Plachy,

the erstwhile and shopworn iconicity of Manhattan was replaced by scenes of ever more local or even private import, which no longer represented any thinking about the city as a whole. (...) No longer a polis, the city is regarded as a hunting ground for small incidents that may, at any moment, speak of the cruelty, the ludicrousness, or the impromptu wackiness of life.

The end of street photography in the classical sense was not only affected by social and urban factors. It was also accompanied by a renewed aesthetic and photo-theoretical awareness. Conceptual artists such as Martha Rosler, Hans Haacke, and Allan Sekula denounced street photography's voyeurism and invented new photographic practices to visualize the social mechanisms that determine urban space. Street photography's cult of the spontaneous and the master-eye of the photographer were also parodied by the deskilled photography of other conceptual artists. In the bland, amateurish pictures of Vito Acconci and Douglas Huebler, for instance, aleatory processes or the contingent acts of outsiders determine the artwork.

First and foremost, however, in the late 1960s and early 1970s, urban photography in general was affected by a geographical shift from the inner cities to the suburbs and peripheral areas. This coincided with technical and aesthetic changes. The hot, jerky snapshot aesthetic of street photography was exchanged in favor of a reevaluation of the large-view camera and its cooler, slower, and more architectural and topographical approach more adapted to lower density suburban areas. The leading tendencies in the urban photography of the last four decades—conceptual art, New Topographics, and the new German photography of Bernd and Hilla Becher, Andreas Gursky, Thomas Struth, Thomas Ruff, and Axel Hütte—are characterized by a topographical interest or by a predilection for spatial structures, often inspired by a minimalist abstraction. Recent urban photography, by consequence, dissociates itself from the tradition of street photography that focused on the human presence in urban space.

Nevertheless, the posturban landscape as well has been portrayed in some form of street photography. However, its most interesting examples are not nostalgic attempts at restoring an old tradition. On the contrary, one can speak of a certain subversion of the genre from within. Many urban photographers in the 1980s and 1990s portray people in their urban surroundings but brush aside other essential characteristics of the genre. Their pictures do not show chance encounters or spontaneous events. There is no evocation of the candid or the fleeting impressions of metropolitan life. Instead, a large amount of recent street photography seems to have adopted the stasis of the large format topographical urban photography. Photographers such as Joel Sternfeld, Richard Renaldi, Francesco Jodice, Shizuka Yokomizo, or Jitka Hanzlova show characters in their everyday urban surroundings while posing or consciously looking into the camera. In the works of artists such as Francis Alÿs, Florian Schwinge, or Erwin Wurm, human subjects are almost transformed into living sculptures. Late twentieth-century street photography even involved a revival of staging and (digital) image processing. A case in point is the work of Jeff Wall, who integrates artificially conjured tableaux in location shots and combines modern techniques and aesthetic options with the formulas of traditional genre painting. Thus, street life's spontaneity and contingency turn out to be

Bruce Davidson, East 100th Street, Spanish Harlem, New York City, 1996.

stage-managed and digitally processed. Something of Wall's mysterious and emblematic content comes through in Philip-Lorca diCorcia's so-called *Streetworks* as well. Although these pictures are not staged, they cannot be said to have much in common with Klein's or Winogrand's work. Instead of a small Leica, he operates a large-format camera and a whole armory of powerful lights that catch his streetwalkers off-guard. The touch of arbitrariness is immediately checked by strong theatrical lights (activated by the pedestrians themselves by setting off a sensor) that transform each picture into a histrionic act. Similar staging practices or comparable strategies of image manipulation can be found in the works of Nikki S. Lee, Hannah Starkey, Valéry Jouve, Suzanne Lafont, or Beat Streuli, who all turn street photography into a simulacrum that only stages the spontaneous and contingent quality of street life. Their pictures appear to indicate that the spontaneity of the core city's neighborhoods, as evoked and idealized by urban critics such as Jane Jacobs in the early 1960s, has long been suppressed by a logic that tailors public space principally to a logic of consumption or transforms it into a theme park, an open-air museum, or a tourist attraction. Wall, diCorcia, and many other "anti-street photographers" stage street life in a way that responds very closely to how urban space itself has been to some extent converted into a simulacrum.

THOMAS STRUTH

German

Thomas Struth is among the foremost artist/photographers to emerge from what has been called the “German” School,” composed of the students of renowned Düsseldorf photographers Bernd and Hilla Becher. The informal group includes Andreas Gursky, Thomas Ruff, Axel Hütte, Candida Höfer, and Struth—all of whom first came to prominence during the 1980s. While the entire circle reflects the Bechers’ desire to renew and revitalize analytical documentary photography as it had existed before World War II in the work of such pivotal figures as August Sander, Karl Blossfeldt, and Albert Renger-Patzsch, each individual has focused on aspects of the Becher teachings in highly personal ways. Working, as Bernd and Hilla Becher always have, in ongoing series, Struth refers to his photographs as “readable,” and expects investigation and interaction on the part of viewers.

Thomas Struth attended the Kunstakademie Düsseldorf from 1973–1980 and while there he studied with Peter Keetman, Bernd Becher (then a professor at the academy whose wife, also a trained photographer, shared in his teaching), and Gerhard Richter, who taught painting. In 1978, the school provided a scholarship for Struth’s residency at P.S. 1 Studios, Long Island City, New York, where he embarked upon a series of urban architectural scapes that he

would continue in Europe and Japan, in addition to other American cities. These black-and-white street photographs, while displaying the heritage of *Neue Sachlichkeit* or the “New Objectivity” movement of the 1930s and the tonal qualities found in the Bechers’ exquisitely refined portraits of industrial architecture, lack the frontal centering of the image and, instead, employ the large-camera format and extreme perspective to invite the viewer to place himself in the scene.

It was a practice that would quickly distinguish Struth’s work from that of Ruff and Gursky, who are known for a more frontal, minimalist formalism; from Höfer, who developed a number of series topics, settling primarily on deep-space views of interior architecture; and from Hütte, whose formal, manipulated, Renaissance-perspective views are constructs depicting anonymous architecture. Architectural spaces, and on occasion portraiture, however, have long been common threads linking the diverse aesthetics of the “German School.”

Struth’s first influential images—including Crosby Street, New York 1978; *West 44th Street, New York 1978*; and *Broadway at 22nd Street, New York 1978*—were made during the period of the P.S. 1 fellowship, during which time he was also given his first major solo exhibition, *Thomas Struth: Streets of New York* (P.S. 1/Institute for Art and Urban Resources, Long Island City, 1978).

Whether in Düsseldorf, Munich, or New York, Struth began all of the street pictures in the same manner, placing the camera in the middle of the street, roughly at eye level, and selecting the hours of the early morning when he could pretty much depend on the deserted look that he needed to focus attention on the layered architectural personality of the urban vista. In *The Village Voice*, speaking of one of the black-and-white SoHo photos, Peter Schjedahl said, "I recall the sullen charm of the picture's cast-iron buildings, whose familiar architectural prose-poetry seemed more pungent for the fact of their marginality, like side walls of a stage, to a scene that centered essentially on nothing" (Schjedahl 1993).

From New York, Struth went on to record the more-or-less anonymous streets and squares of Paris, Rome, Edinburgh, Tokyo, and beyond, allowing the cities to reveal themselves in their peculiarly majestic ordinariness. One of the most satisfying retrospective views of the urban landscape images is preserved in the 1987 book/exhibition catalogue *Unbewusste Orte/Unconscious Places*. The photographs presented, ranging from 1978–1987, are at once Germanically stolid, yet infused with a captivating, almost infinite detail that resonates with only the most patient viewer.

Struth's explorations are open ended, and, while pursuing the street pictures, in 1985 he also began a series of portraits—family portraits. His interest had been piqued several years earlier during an investigative collaboration with psychoanalyst Ingo Hartman, during which time they collected images documenting family life, and once again when he wished to make remembrance photos of two families he had lived with briefly on trips to Scotland and Japan. He has said that, in general, he sees the family portraits as collaborations—elaborately discussed, planned, scripted, and prepared. The series grew slowly; between 1985 and the mid-1990s it had grown to only 18 images. Because the subjects face the lens rather than the photographer (who stands beside the large-format camera); because the individuals are very conscious of their placement within the group or the planned scenario; and because of the uncomfortably long exposure, the participants seem to mutate from the act of posing to simply being in the structure—being present. Such images as *The Ghez Family, Chicago 1990* make it clear that these portraits, like the architectural photographs, are about structure—that is, the principles of organization within a complete whole. Struth remains concerned with probing and analyzing and, in this instance, developing an understanding of people and their history. The works reflect the nature of the relationships within them, yet they have a powerful

presence in the viewer's space by virtue of the intense, audience-directed gazes and the grand scale. Soon, single portraits followed, a number of which were exhibited and published in *Thomas Struth: Strangers and Friends*, 1994.

Beginning in 1989, Struth extended his dialogue with people into specific architectural settings, producing what would become his most famous series: the Museum Photographs. Returning to his interest in architecture while continuing to illuminate social relationships, Struth began depicting public scenes in the world's greatest museums on a scale that stretched the boundaries of the medium. The images—some more than 6 feet by 8 feet—allow the viewer to physically feel the sense of wandering among the gallerygoers, while also confronting the grand, historic paintings in an appropriate scale. At the same time, the photographer's conception of the entire scene is shared in the blurred passers-by (a result of the long exposure) emphasizing the comings and goings of Struth's reality, as always depicted in exquisite exactitude. Speaking of the Museum Photographs in *The Museum as Muse: Artists Reflect* (New York: The Museum of Modern Art, 1999), exemplified by *Galleria dell'Accademia I Venice 1992*, Struth explained, "What I want to achieve with this series...is to make a statement about the original process of representing people leading to my act of making a new picture...."

In the late 1990s, Struth added nature pictures to the repertoire, returning to the unpopulated environment with dense foliage-filled landscapes that continue to take the viewer into spaces which he defines. All of the works are surveyed in a major retrospective of 2002–2003 seen at the Dallas Museum of Art; the Museum of Contemporary Art, Los Angeles; the Metropolitan Museum of Art, New York; and the Museum of Contemporary Art, Chicago.

Biography

Born in Geldern, Niederrhein, Germany, 1954. Studied at the Kunstakademie Düsseldorf (Academy of Fine Arts) 1973–1980, and received a stipend for travel to New York in 1978. Alternative civil service in a community center 1980–1982. Works of the 1970s include street photographs made in Japan, Europe, and America. Collaborated with psychoanalyst Ingo Hartman, studying

STRUTH, THOMAS

family snapshots during the mid-1980s, producing a series of black-and-white and color portraits of families and individuals. Developed an interest in Renaissance painting, which resulted in the *Museum Photographs*, beginning in 1988. Began association with Galerie Max Hetzler, Cologne, 1987; Marian Goodman Gallery, New York, 1990. Appointed professor of photography at the Staatliche Hochschule für Gestaltung, Karlsruhe, Germany, 1990. Awarded the "Spectrum" International Prize for Photography, Stiftung Niedersachsen, Germany in 1977. Living in Düsseldorf, Germany.

ROY STRYKER

American

Roy Stryker, who saw photography as a tool for social change, was responsible for coordinating the United States' largest photo documentary project for the Farm Security Administration (FSA) from 1935–1943. He continued his role as a champion for the social viability of photography at the Standard Oil Company of New Jersey and oversaw the compilation of the most comprehensive photographic documentary of American life ever created, ensuring its preservation at the Office of War Information. Stryker, the son of a radical populist farmer from Kansas, received his early training in social radicalism as a photo editor for a groundbreaking economics textbook in 1925, *American Economic Life and the Means of Its Improvement*. Written by Stryker's Columbia University Economics professor Rexford G. Tugwell, later a part of President Franklin Delano Roosevelt's "brains trust" who often used photography as teaching tool, the purpose of this book was to illustrate economic inequity and other principles.

Stryker was born in 1893 and grew up on a farm in Colorado. His father was a progressive populist,

instilling ideas of social equality in his son early on. After service in the Army in World War I, Stryker received a degree in economics from Columbia University, New York, in 1924. He continued his association with the university as a professor in the economics department. In 1935, Stryker was invited by Tugwell, then heading the Historical Section of the Resettlement Administration—one of Roosevelt's "New Deal" programs created to help alleviate the hardships caused by the Great Depression—to create a photographic record of the program's successes. Indeed, Stryker's success was not only to publicize a government program but to be at the center of a turning point in the history of photography. The work undertaken by the FSA photographers promoted a new approach and aesthetic that revealed the power of what was to become known as documentary photography to shape public opinion, which could work both to transform stereotypes and also to bolster a government program or corporate image. Under the direction of Stryker, who exercised enormous control over the collecting, printing, and distribution of the images, over a quarter of a million negatives were created for the FSA. As Stryker hoped, these photographs comprise an extraordinary

pictorial archive that documents rural and small-town American life in the 1930s. They were widely disseminated both at the time of their making and throughout the twentieth century, and they are canonical in the history of American photography in scope, influence, and visual strength as a unified portrait of an economically depressed America.

Stryker gathered a small but dynamic team of skilled, socially engaged photographers, including Arthur Rothstein, Carl Mydans, Walker Evans, Jack Delano, Ben Shahn, Marion Post Wolcott, and Dorothea Lange. He sent them across the United States to photograph small-town and rural life with understanding and intelligence, avoiding holding their subjects up to ridicule or violating their dignity as human beings. To help achieve this, Stryker provided detailed shooting scripts that gave the photographers the economic, social, and historical background of the subjects and regions. Using newly available portable photographic equipment, including small cameras and flash bulbs, the photographers embarked on a mission to show the real America. They were also expected to answer abstract questions pictorially, such as “What keeps the town going?” or “What do people across class lines do in the evenings?” These broad questions were not easily visualized; rather, they represented overarching concepts that could be illustrated by creating the notion of parallel lives within a geographical region, showing the humanity that the poor, though they lacked the economic or cultural freedom, shared with those better off. The informed position of the photographers made them at times seem more like historians or journalists than artists. Stryker, while appreciating their artistry (for the project he had chosen for the most part proven photographers whom he personally admired), was dedicated to using photographs intelligently. To further his aims, he stipulated that the images—distributed for free in government publications, the national press, traveling exhibitions, and the increasingly popular picture magazines such as *Life* (founded 1936) or *Look* (founded 1937)—were always accompanied by descriptive text, which further grounded the subject of the image in social and cultural reality. The photographs were intended to be educational rather than sensational, bringing the desperate circumstances of America’s destitute to national attention rather than to further exploit their misery by reducing them to mere tabloid fodder. Although the mission was ostensibly to “show America to Americans,” Stryker also hoped to create empathy for the plight of the poor throughout the country. It was an overt goal to show them as worthy of the benefits of

middle-class society that New Deal welfare programs would bestow upon the rural and urban poor, including Blacks, migrant farmers, single mothers, and others who had been written off as alien by the mainstream mass media and unworthy of government assistance. Some have criticized this tactic as an inappropriate use of creative photography for governmental propagandistic purposes, yet the FSA photographs were instrumental in turning public sentiment favorably toward the New Deal’s relief programs.

Stryker drew his photographic philosophy from the progressive tradition of turn-of-the-century crusaders Jacob Riis and Lewis Hine, who did not identify themselves as photographers and instead used the power of the medium to achieve their social aims: in Riis’s case the plight of immigrants; and Hine’s, child labor. Yet because Stryker’s photographers were independent, creative individuals with varying aesthetic aims and photographic styles, Stryker’s methods have recently come under scrutiny. Some theorists have gone so far as to argue against realism in photography by revealing the detailed construction of these “realistic” images through shooting scripts, photographer’s experiences, and Stryker’s editing and handling of the actual images. They have sought to reveal the ideological underpinnings of publicity photography, which had begun to emerge in the 1930s. Although within the body of FSA work, individual photographs did bring their own aesthetic interests into their works—Walker Evans’s penchant for photographing posters and photographs to represent people rather than photographing people directly is often cited—Stryker was without a doubt the force that created the vision of America seen through the FSA photographs. A good example is Dorothea Lange’s iconic image *Migrant Mother, Nipomo, California* (1936). This image was not only selected from a group of images that showed the children in very different relationships to their mother; it was cropped to focus on the intended “message” of motherly compassion despite the obvious hardships faced. This message was further reinforced by suppressing personal information about the woman, ensuring the proper reading of the image. Stryker, known for his brash personality that sometimes erupted into disputes with his photographers, himself did not waver from his ideals, and he was open about the project’s commitment to the ideological mission of the New Deal.

As the 1930s drew to a close and the national attention turned to a looming war in Europe, the FSA’s documentation seemed less imperative.

America's isolation in the grip of the Great Depression was shattered by the attack on Pearl Harbor in December 1941 by the Japanese, and entry into World War II drew attention away from domestic programs, the FSA project among them. In June 1942, the FSA was subsumed into a new department, the Office of War Information (OWI), as part of the Office of Emergency Management and was dissolved altogether a year later. Although unhappy at the OWI and facing not only the loss of his job but the loss of the FSA legacy, Stryker worked furiously to compile, catalogue, and protect the 270,000 negatives made by the FSA photographers, placing them in the Library of Congress, Washington, D.C.

Stryker moved next to the corporate world, taking a position in 1943 with Standard Oil of New Jersey (SONJ) in their public relations department. Here, he directed a large-scale documentary project not unlike the FSA. He hired some of the former FSA documentarians, as well as such upcoming young photographers as Elliott Erwitt and Gordon Parks. Again a significant body of work was amassed, although at the service of the corporate ideals of SONJ, at that time facing a great deal of bad press, including accusations of possible wartime collusion with the Germans. The SONJ photographs managed to express New Deal principles of equal opportunity, economic security, and the greater good while making the argument that it would be the free enterprise system and SONJ in particular that would create this utopia. Ultimately hiring a full-time staff of 12 and building an archive of some 70,000 photographs, Stryker left this position in 1950.

Stryker next was appointed director of the Pittsburgh Photographic Library at the University of Pittsburgh, Pennsylvania, in 1950. This organization was created by a group of civic and business leaders to document and archive the hoped-for rebirth of the dirty, industrial city into a modern urban center; Stryker seemed the only man for the job. Although he left the project in 1952, he created a collection of over 12,000 negatives. The project continued for several years, and Stryker was involved in negotiating the transfer of the then roughly 18,000 photographs to a proper repository. In 1960, the collection was transferred to the Carnegie Library.

In the late 1950s, Stryker consulted for various firms and businesses interested in photography, the most prominent being the Jones & Laughlin Steel company. Out of this association came the book *These Are Our People* (1956) celebrating the United Steel Workers of America, another pictorial history

using images as a form of educational and the aesthetic of "worker" realism as an expression of social values. The negatives, prints, and transparencies from the Standard Oil project and all of the original negatives and transparencies from the Jones & Laughlin Steel project are held in the Roy E. Stryker Collections of the University of Louisville, Kentucky, Photographic Archives. Stryker conducted several seminars on photojournalism at the University of Missouri, Columbia, before retiring to Colorado in the 1960s, where he died in 1975.

JOSEF SUDEK

Czechoslovakian

The lyrical photographs of Josef Sudek reveal the artist's craft in developing and perfecting his own personal style devoid of strong outside influences. Although he first attained recognition in Czechoslovakia in 1928 and was named the "Poet of Prague" with the publication of a book on the medieval cathedral of St. Vitus, the deeply individual style he evolved was not recognized in North America until the 1960s. Above all else, Sudek saw himself as an artist and chose a personal expression true to the "music" that was playing inside him. He created a world in which he lived on his own terms, independent of time and place to capture a stern, but gentle sense of order, as he said:

...every thing around us, dead or alive, in the eyes of a crazy photographer mysteriously takes on so many variations, so that seemingly each object comes to life through light or by its surroundings... to capture some of this—I suppose that's lyricism.

Twelve years after Sudek was born in Kolín, Bohemia in 1896, he began his training as a book-

binder and started taking photographs in 1913 as an amateur. He was inducted into military service with the Czech army and sent to the Italian front, where in 1917 he was severely wounded, resulting in the amputation of his right arm. In 1920, he joined the Prague Club of Amateur Photographers, and in 1922 he enrolled in the newly formed State School of Graphic Arts. Sudek and his close friend Jaromír Funke, joined by Adolf Schneeberger, created the progressive Czech Photographic Society in 1924. By 1927, Sudek moved into his garden atelier at Újezd that he kept the rest of his life. For the next nine years, he worked with the Družstevní Práce artist cooperative taking portraits, advertising, and reportage assignments. In 1932, Sudek had his premier one-man show in the rooms of Družstevní Práce and since has exhibited extensively in Czechoslovakia.

From 1939–1945, Sudek retreated to his studio as a result of the German occupation of Prague and the regime's subsequent banning of photography. This further limited his world; he had not left Czechoslovakia since 1926 and would never leave it again.

However, in 1940 his artistic world expanded as he began contact printing for the majority of his work, evolving still lifes taken on his window sill and images in his secluded garden. Further maturity came in 1950 as he began applying a Panoramic view of familiar themes: Prague and the Czech countryside. In Sudek's later years, his work reflects memories, dreams, relationships, and the deeper meaning behind the objects, including *Labyrinths* 1948–1973 and the poetic work honoring Czech composer Leoš Janáček. Sudek continued practicing his calm contemplative harmonies that were honored in an exhibition for his 80th birthday, only months before his death.

Sudek's active participation in Prague's cultural life brought many young artists to his studio. Requested advice was always given generously, but not first without great thought and probing into the artist's intentions. The inseparable involvement of Sudek's photography to the arts is echoed in the few students he took on. Of the small handful of four, one became a painter, another a film maker, the third an eye doctor, and it was only Sonja Bulaty, who was instrumental in bringing Sudek to the public eye in the United States, who became a photographer. Sudek was also honored by artists in the 1960 Czech exhibition that mounted the work of 22 artists who paid tribute to the master photographer and his influence on their work.

From the beginning, even before his military service, the subjects of Sudek's photographs were landscapes and Prague. It was with the same incredible patience that he had in waiting and finding just the right light that he used to explore endless variations, sometimes for decades, for just the right poetry to reveal itself and to bring a poem cycle to completion. Sudek's early inspiration from the Czech Romantic landscape artists, rather than photographers, shows in the idyllic worlds he created in such series as *Kolínský Island and Stromavak Park* 1924–1926 and *Invalidovna* 1922–1927. Concurrently, *St. Vitus' Cathedral* 1924–1928 contains photographs where heavenly light streaming through windows illuminates his search for the truth of his subjects beyond preconceptions. In these early years, he was exposed to the Group f/64 and the photographs of Edward Weston, Paul Caponigro, and the soft-focus work of Clarence White. People in his photographs disappeared by 1928 as did his blurred romantic lens. The Czech Cubist painter Emil Filla and Funke's strong modernist ideas did influence him, echoed 40 years later in the abstract compositions of *Glass Labyrinths*.

While Sudek worked in many of the successive styles that characterize the development of modernism, he was indifferent to labels. The most important force in Sudek's life was music. He played recordings while printing, and held Tuesday night gatherings in his studio where he would play from his extensive record collection. He lived meagerly while supporting and exploring all of the arts, and joined the cultural life of Prague. *The Window of my Studio* series (1940–1954) reflects the outer and inner worlds separated with the misted glass hinting at a return to the romantic and a deepening of his self-defined art as if trying to get beyond the objects themselves—where possibilities seemed limitless inside a restricted outside world, unfettered by labels.

The Panorama camera reoriented Sudek's work, generating graceful compositions in the demanding extreme proportions of roughly 1×3 . The published book of these images, *Prague Panorama*, in 1959 became one of Sudek's best known for its sweeping balance. In the woods of Bohemia and Moravia, he captured huge dead trees—his “sleeping giants”—sympathetically with limbs missing. The series *A Walk in the Magic Garden* was a collaboration with friend and architect Otto Rothmayer, which displayed surrealist aesthetics—or arguably simply Sudek's love for the magic in life—and most certainly an evolving exploration of familiar themes. Increasingly frequently, he created “remembrances” for people who had touched his life.

For more than 20 years, Sudek had made both contact prints and enlargements, but starting in 1940 he began almost exclusively making contact prints. He also began experimenting with printing papers and techniques. The large format cameras, usually 5×7 , 12×16 or $2\frac{1}{4} \times 3\frac{1}{4}$ for note-taking, were the reason he could be seen prowling the streets of Prague or roaming the Czechoslovakian countryside with a tripod and view camera. In 1950, after he was able to repair an 1894 Kodak Panorama he had located, he began working extensively with it, reviving a cycle he began during the war by placing two separate photographs together to obtain an elongated image.

Sudek has been labeled an escapist because he was consistently apolitical during tremendously turbulent times. Yet Sudek records the world as an embodiment of overarching history. And his art offers an experience of stability and serenity brought forward as a shared humane surroundings to history, presented for the present moment, wherever it stands.

HIROSHI SUGIMOTO

Japanese

Hiroshi Sugimoto’s works seem to capture the Japanese notion of “aware,” a term connoting surprise or delight, the aesthetic experience of ephemeral beauty and the emotional awareness required to have such an experience. His artistic career comprises close studies of sameness and difference, the natural and the man-made, and the tenets of photographic vision, in eight distinctive series. Sugimoto has often returned to his subjects and adds to each series as inspirations and opportunities present themselves. His main subjects and corresponding years he initiated each series are: *Dioramas* (1976), *Wax Museums* (1976), *Theaters* (1978), *Seascapes* (1980), *Hall of Thirty-Three Bays* (1995), *Architecture* (1997), *In Praise of Shadows* (1999), and *Pine Landscapes* (2001).

Sugimoto’s photographs of dioramas and figures from wax museums are often unsettling as the artist uses photography to reinforce the sense of “reality” in these staged settings. Sugimoto excludes the surrounding architecture, glass, and labels to heighten verisimilitude. The illusionistic spaces of the painted, panoramic backgrounds are accommodated through focal points and technical solutions that do not seem to distort them. In his diorama and

wax figure works, Sugimoto shows the unsettling verism of an illusion. The viewer is conditioned to believe that photography tells the “truth,” but Sugimoto shows that in shooting a fiction, only photographic “truth” remains. Sugimoto joked that he wanted to be “the first sixteenth-century photographer” and makes (re)portraits of wax effigies of “Henry VIII” (1999), and the monarch’s six wives. Sugimoto uses large-format film to capture minute details and presents them in larger-than-life prints that have the gallery “presence” of paintings (the wax figures were modeled after Renaissance paintings). In the portraits of wax figures, he uses black backdrops and high-contrast lighting to heighten the figures’ uncanniness—their human details and famous faces are familiar; yet stilted poses and patches of waxy “skin” betray their source. Wax figure portraits of contemporaries he could have photographed are even more strange—figures such as “Fidel Castro” (1999) or “Pope John Paul II” (1999) bear the same realistic details and stigmas of fakeness as the Renaissance personalities. In shooting dioramas from the American Museum of Natural History, Sugimoto seems to be the first prehistoric photographer in works depicting a seabed of the “Cambrian Period” (1992) or the Ukrainian steppes inhabited by “Cro-Magnon”

(1994). In his depictions of dioramas of extant animals such as “Stellar Sea Lions” (1992), Sugimoto notes the irony of a man-made space constructed to show nature.

Among Sugimoto’s best-known works are those from his serial investigations of movie theaters. In these photographs, Sugimoto exposes the film for the duration of a motion-picture shown on the screen. The movie provides the ambient light—the result is a brilliant rectangle on the screen and reflections that reveal the theaters’ architectural details. The emphasis on the central, bright screen reminds us that the theater is essentially a camera on an architectural scale. The blank screens also direct the eye to the photographs’ edges where one sees an ersatz architecture of fantasy in the Chinese, Islamic, or baroque styles of early twentieth-century movie palaces such as “U.A. Walker, New York” (1978), or “Akron Civic, Ohio” (1980). Since his first impressions of this subject, Sugimoto has broadened his investigations to include such spare, modern theaters as “Arcadia, Milan” (1998) and drive-ins as “South Bay Drive-In, San Diego” (1993).

Each of Sugimoto’s *Seascapes* has the same composition—equal halves of water and sky meet at a horizon. The locations are identified by their titles, but these titular differences seem arbitrary and underscore the notion that we see only similar expanses of water. Each seascape varies according to fleeting light and weather conditions. For instance, “Caribbean Sea, Jamaica” (1980) shows a clear, bright sky and well-defined waves, while “Bay of Sagami, Atami” (1997) is atmospheric, has a blurred horizon and reveals almost no detail. Sugimoto has photographed nocturnal seascapes, such as “Mirtoan Sea, Souñion” (1990) using only ambient star- and moonlight to reveal wave patterns and celestial bodies that subtly emerge from the dark silver-gelatin abyss.

The *Hall of Thirty-Three Bays* (1997) series is a study of 1,000 bodhisattva statues from the thirteenth-century Sanjusangen-do Temple in Kyoto, Japan. Sugimoto crops the temple’s architecture to show only the rows of similar golden statues in the early morning light. These photographs reveal subtle differences in carving, positioning, and wear of each bodhisattva figure—their reflective gilding makes them seem radiant—literally enlightened. These variations reveal differences among the figures and Sugimoto’s many similar photographs. From these images, Sugimoto has also created a limited-edition artist’s book, *Sea of Buddha* (1997).

In 1997, Sugimoto was commissioned by the Museum of Contemporary Art, Los Angeles to create images of modern architecture. Sugimoto’s solution was to shoot each canonical building out of

focus, eliminating details and leaving only the building’s sculptural form. Like many Sugimoto works, these images present an unfamiliar view of the familiar, icons like the “Chrysler Building—William Van Allen” (1997) and “Chapel Notre Dame du Haut—Le Corbusier” slip into barely recognizable abstraction. Because these blurred images seem to disintegrate the massive materiality of these structures, Sugimoto’s “World Trade Center—Minoru Yamasaki” (1997) seems especially poignant in light of the towers’ 2001 destruction. Since 1997, Sugimoto has continued to add to this series.

Sugimoto’s *In Praise of Shadows* works consist of images of a traditional Japanese candle, *warousoku*, burning down over several evening hours—the exposure lasts as long as the burning candle. The resulting images are varied white lines extending from the top to the bottom of the photograph. Flame brilliance, flickers, smoke, and breezes affect the shape and value of this line. This series consists of photographs, photolithographs, and installations.

Quoting a famous sixteenth-century ink painting by Tohaku Hasegawa, since 2001, Sugimoto has been photographing pine trees (Japanese symbols of intransience) from Tokyo’s Imperial Garden. As in the *Thirty-Three Bays* works, Sugimoto uses the ambient early-morning light. In works such as “Pine Landscape” (2001) Sugimoto underexposes the shot, creating a shadowy, seemingly nocturnal image. These large-scale works are each created of multiple images of different pines juxtaposed to read as a photograph of a single pine grove. The artist has used one of these pine landscapes as a backdrop for a collaborative theater production, *Noh Such Thing as Time* (2001).

WILLIAM V. GANIS

Biography

Born in Tokyo, Japan 1948. The artist lives in New York, New York, and works internationally. B.A., Saint Paul’s University, Tokyo, Japan, 1970; B.F.A. Art Center College of Design, Los Angeles, 1974. Moved to New York, New York, 1974. Creative Arts Public Service Fellowship, 1977; John S. Simon Guggenheim Memorial Foundation Fellowship, 1980; National Endowment for the Arts Grant 1982; Mainichi Art Prize, Tokyo, 1988; Citibank Private Bank Photography Prize, 1998; International Center of Photography, Fifteenth Annual Infinity Award for Art, 1999; Hasselblad Foundation International Award in Photography, 2001.

SURREALISM

Surrealism was an international intellectual movement centered in Paris between the wars. Initially a literary movement, Surrealism gave voice to a perceived crisis in Western civilization in the wake of World War I and proposed an alternative rooted in the revolutionary theories of Karl Marx and Sigmund Freud. Following Freud's descriptions of

consciousness and the structures of the mind, surrealists believed that only through illogical, automatic creative processes could the true reality of the unconscious be tapped.

At the center of their approach, first in literature and then in the visual arts, was the concept of automatism. The relinquishing of unconscious control

SURREALISM

by writers and artists led to various forms of expression, including the writing of automatic poetry, the creation of poetic objects, and the development of automatic techniques, such as Max Ernst's use of *frottage* (the lines created by rubbing graphite on paper placed on a textured surface). In painting and sculpture Surrealism took three forms: abstract, biomorphic surrealism in which shapes are placed in a barely recognizable setting, as in the work of Joan Miró and Yves Tanguy; a hallucinatory realism in which clearly recognizable forms are presented in dreamlike, fantastic manners, as in the work of Salvador Dalí and René Magritte; and the creation of surrealist constructions and assemblages known as poetic objects, in which unexpected juxtapositions of unrelated objects suggest a reality different from that of the logical world, as in the constructions of Man Ray.

The term "surrealism" was first used in the context of avant-garde artistic expression in 1917 by the poet Guillaume Apollinaire to describe the ballet *Parade* (by Erik Satie, Jean Cocteau, and Pablo Picasso) and his own play, *Les Mamelles de Tirésias*. It received wider currency when André Breton appropriated the term to identify the experiments of the poets grouped around him who moved away from the anarchism of Dada to propose an alternative in surrealism. In 1924 Breton defined surrealism in his *First Surrealist Manifesto*:

SURREALISM, n. masc. Pure psychic automatism, by which it is intended to express, verbally, in writing, or by other means, the real process of thought. Thought's dictation, in the absence of all control exercised by reason and outside all aesthetic or moral preoccupations. ENCYCL. *Philos.* Surrealism rests in the belief in the superior reality of certain forms of association neglected heretofore; in the omnipotence of the dream and in the disinterested play of thought. It tends definitely to do away with all other psychic mechanisms and to substitute itself for them in the solution of the principal problems of life.

Photography played an important role in surrealism. Although the mechanical processes and specific steps necessary to produce a photograph precluded the "pure psychic automatism" that Breton admired in automatic writing and unpremeditated painting, photographs were central to the surrealist enterprise. Photographs played an essential role as illustrations in surrealist journals, including *La Révolution Surréaliste*, *Le Surréalisme au Service de la Révolution*, *Minotaure*, and *Documents*. Indeed, the first issue of *La Révolution Surréaliste* featured on its first page an unattributed photograph by Man Ray of an unknown object covered with cloth and wrapped

with string. Titled *The Enigma of Isidore Ducasse*, this photograph pays homage to the late-nineteenth-century poet Ducasse (also known by his *nom-de-plume* "le comte de Lautréamont"), who was revered by surrealists for describing the chance encounter of an umbrella and a sewing machine on a dissecting table. Similar chance encounters appear in other photographs reproduced in *La Révolution Surréaliste*: hands appearing mysteriously on the back of an armchair, a four-breasted torso, a mannequin walking up a flight of stairs.

In addition to the photographed chance encounter, photographs illustrating the streets of Paris also appeared in the context of Surrealism. Drawing on the example of Eugène Atget, whose work was admired by Surrealists even though Atget did not share their aesthetic premises, Surrealists such as Man Ray, Raoul Ubac, and Jacques-André Boiffard placed the sidewalk in the terrain of the dream. In the Surrealist manifesto of 1924, Breton announced that the writer must no longer engage in lengthy description. Breton did so in his own writing by substituting photographs for words. He chose photographs by Boiffard for his autobiographic novel *Nadja* (1928) that at first seem nondescript, even boring: a statue in a plaza, the façade of a bookstore, a sign above a door. The photographs, however, recreate the experience of wandering, as Breton does in the novel, through the streets of Paris in search of something extraordinary. Interspersed with Boiffard's photographs are nineteenth-century postcards and view photographs, in keeping with the Surrealist delight in found images that function in ways that contradict their original intent.

Time, or rather the sense of timelessness, is a crucial element in Surrealist photographs. Often the uncanny feeling of a world outside of time is created through the choice of surrogates: statues take the place of real people, shadows of branches are simulacra for trees, lamplight casts selective rays in place of broad sunshine. A case in point is Man Ray's *Place de la Concorde*, c. 1926, which shows a worm's-eye view of Antoine Coysevox's equestrian statue of Mercury with his caduceus, lit from behind and juxtaposed with a brilliantly lit Egyptian obelisk to the left. Car lights form abstract shapes on the right. Instead of a typical view of a famous place, Man Ray exploits an unusual viewpoint and odd light effects to create a mysterious, timeless urban scene. As Salvador Dalí proclaimed with his infamous soft watches, time itself is suspended in the irrational world of the Surrealists. This is true in Surrealist photography as well, where images reject decisive moments in favor of timeless dreams.

In fact, the timelessness of Surrealism is perhaps best expressed in Ubac's photographs that present the familiar sites of Paris as fossils, printed through a special technique of sandwiching negatives that Ubac developed. Published in *Minotaure* in 1939, these photographs were part of a group of illustrations accompanying an article about ruins by Benjamin Péret. Here Paris is not just shown in a future time when these buildings might fall into ruin, but frozen in time, as fossils forever immobilized in rock relief. Ubac uses his unorthodox printing process to deny photograph's defining characteristics: tonal modulation is severely limited, replication of visual experience is bypassed, the capture of an instance of perceived reality is ignored. Instead these photographs demand a new definition of the medium by presenting an alternative to our visual knowledge of the reality of time and space.

Like Ubac, other photographers used unusual photographic techniques to produce uncanny images. Foremost among these are Man Ray's Rayographs, cameraless photograms featuring unrelated objects arranged on photographic paper, exposed to light, then printed. With their seemingly spontaneous arrangements, Man Ray's Rayographs come closest photographically to Breton's call for automatism in the creation of works of art. In an essay entitled "When Objects Dream," published as an introduction to a collection of Man Ray's Rayographs, Tristan Tzara captured the appeal of the Rayograph:

Objects to touch, to eat, to devour, to place on the eyes, on the skin, to squeeze, to lick, to smash, to crush, objects to belie, to flee, to honor, cold or warm objects, feminine or masculine, day objects or night objects that you absorb through your pores the greater part of your life, which expresses itself unperceived, that courts because it wasn't known and that dispenses itself without counting the thousand magnets poised on the edge of the unanimous route; your slumbers fixed in the butterfly box have cut the diamond beneath all the faces of the earth; in our infancies lost inside us and ineffably charged with dreams like the geological layers that we use for bed sheets.

The technique of solarization also appealed to Surrealist photographers, including Man Ray, Lee Miller, and Maurice Tabard. By overexposing a negative or a print during the process of printing, tones are reversed, causing light halos in the areas of the print where the reversal has occurred and dark edges where it has not. The uncanny effects produced by solarizing an image enabled portrait and figure studies to enter the realm of Surrealism, as figures either bleed into the ground or take on unnatural dark linear edges. Montage was also favored by Surrealists, who cut and pasted photo-

graphs in unusual combinations before re-photographing them as unified images.

Other photographers of the 1920s and 1930s who are associated with Surrealism include Dora Maar, who worked closely with painter Pablo Picasso, Umbo, Brassai, and Raoul Hausmann, whose work exemplifies the strong links between the slightly earlier European movement, Dada, and Surrealism. Members of the Czech avant-garde, particularly Karel Teige, were influenced by their French counterparts and eventually joined with them. Surrealism also had a major impact on fashion photography of the 1930s, as can be seen in the work of Cecil Beaton, Angus McBean, Erwin Blumenfeld, and the American John Rawlings.

Surrealism was a highly organized and tightly controlled movement, with publications, exhibitions, and aesthetic and political doctrines. With the outbreak of World War II, a group of Surrealists headed by Breton settled in New York. They exhibited at the Julien Levy Gallery and Peggy Guggenheim's Art of This Century Gallery, where their work had a profound impact on emerging Abstract Expressionist artists. While the initial practitioners of this genre are considered the classical surrealists and the movement did not survive its founders, the term is also generally applied to any photography that displays unreal or dream-

STEVE SZABO

American

Born July 17, 1940, Steven Szabo was a native of Berwick, Pennsylvania. As a young man he worked in the Pennsylvania steel mills. Though he attended Pennsylvania State University and the Art Center School of Design in Los Angeles, California, Szabo was basically a self-taught photographer. His multiple contributions to twentieth-century photography include work as a photojournalist, a fine art photographer, and an art educator.

Szabo was employed at the *Washington Post* as a part-time photography lab assistant in 1962. He subsequently worked as a staff photographer from 1966–1972, because of the Civil Rights movement and the unpopular war in Vietnam, a particularly turbulent time in American social and political life. His photographs won awards that include the top prize for feature photography from the White House News Photographers Association. In 1972, he took a six-month leave of absence from the hectic and sometimes hazardous world of photojournalism and went to a farm on the Eastern Shore to devote time to photographing the landscapes of Somerset County, Maryland. Using an 8 × 10-inch large-format camera, he photographed the woods and marshes, and the abandoned and decaying cars and buildings therein.

Instead of a six-month retreat, Szabo worked on the Eastern Shore from 1971 until 1976 and produced a series of fine-art platinum prints that became his

first published book of photography. Inspired by an exhibition of platinum prints by Frederick H. Evans, Szabo contacted George Tice, who willingly shared his experience with the process. These images explore the abandoned landscape, pockmarked with neglected homes, churches, boats, and overgrown weeds. The lingering traces of previous human presence and activity in Szabo's Eastern Shore photographs silently persist though natural elements steadily attack and replace them. Working with Carl Sesto at Addison House printing, Szabo produced an edition of 600 hardbound books called *The Eastern Shore*.

In the early 1970s, Szabo was one of several prominent photographers working in Washington, D.C. Others included Mark Power, Joe Cameron, Allan Appel, and John Gossage. On a trip to New York, Szabo met with Cornell Capa, director of the International Center of Photography. Capa recognized in Szabo's work qualities he expected from, in his terms, the "concerned photographer."

From 1976 until 1990, Szabo produced several bodies of work, combinations of urban and rural landscapes, in series that often reflect travels over these years. After the Eastern Shore work, he returned to Washington, D.C. and used a cumbersome 11 × 14-inch view camera to photograph street scenes. The combination of the spontaneous street activity and a bulky view camera produced his second body of work. In 1980, he was invited to teach at the *Rencontres Internationales* in Arles

France, where he both taught and completed a series on the urban and rural landscapes of the region. The next year, he produced another landscape series from Scotland. His photography began to stray from direct documentation, working at times with multiple images that convey not only a sense of place but also a sense of passing time. His 1985 photographs of U.S. Atlantic East Coast beaches received a grant from the National Endowment for the Arts in 1986. That same year, he traveled to Hungary, his family's place of origin, where he produced both landscapes and portraits. In 1988, he traveled to Hawaii researching and photographing ruins of ancient temples locally called "heiaus."

In 1990, he began working on a series of abandoned boats stuck on fence posts in Nebraska. This series of photographs followed from his explorations in Hawaii to photograph and understand something about the traces of now-forgotten rituals as well as from his first series of photographs on the Eastern Shore. With little information to start with, Szabo operated as both detective and explorer until he eventually discovered clusters of boats in various parts of Nebraska. It is unclear why the boats are there. These photographs, like the work from the Eastern Shore 20 years earlier, show man-made edifices slowly relinquishing their presence to the forces of nature that reclaim them.

As well as an accomplished fine-art photographer, Szabo was a prominent art educator. He began teaching photography at the Corcoran School of Art in Washington, D.C. in 1979. Many of his students became accomplished photographers of their own, and Szabo was a seminal figure in laying the groundwork for the photography department at the Corcoran.

His work is included in the collections of the Museum of Modern Art, New York City; The Library of Congress, Washington, D.C.; The International Museum of Photography at George Eastman House, Rochester, New York; the National Museum of American Art, Washington, D.C.; and

The Museum of Fine Arts, Boston, Massachusetts, among others.

BRUCE MCKAIG

Biography

Born July 17, 1940, in Berwick, Pennsylvania. Attended Pennsylvania State University and the Art Center School of Design in Los Angeles, California. Worked as a staff photographer from 1966 to 1972 at the *Washington Post*. Subsequently traveled, photographing urban and rural landscapes. Taught photography at the Corcoran School of Art in Washington, D.C. Diagnosed with multiple sclerosis in 1992 and retired from teaching in 1994. Died at age 59 in his home on May 18, 2000.

JOHN SZARKOWSKI

American

In 1962, John Szarkowski succeeded Edward Steichen as Director of Photography at the Museum of Modern Art (MoMA) in New York. He began his almost 30-year tenure there with extensive training both as a photographer and a teacher. From the moment he began working at MoMA, Szarkowski became a commanding voice, not only in the world of American photography, but in the larger art world as he almost single-handedly promoted a formalist approach toward photography as an autonomous art form.

Born in Ashland, Wisconsin in 1925, Szarkowski took an early interest in photography, labeling himself a professional by the age of 16. Wanting to also spend time looking at pictures, he decided to pursue a degree in art history at the University of Wisconsin at Madison. After graduating in 1948, Szarkowski spent two years in the United States Army. Upon his release, he worked for a year as a staff photographer at the Walker Art Center in Minneapolis, and in 1951, he began to teach courses in art history and photography at the Albright Art School in Buffalo, New York.

Still active as a photographer, he applied for and received a Guggenheim Fellowship in 1954 to complete a photographic project on the architecture of Louis Sullivan. *The Idea of Louis Sullivan* was published in 1956, and in it, through a series of photographs taken of Sullivan's architecture, he explores how the meaning of function changed in the architect's famous phrase, "form follows function." His second publication followed two years later. Entitled *The Face of Minnesota*, it commemorates the centennial of Minnesota's statehood and is done in a style resembling the *National Geographic*.

Although *Looking at Photographs* (1973) remains his most widely read publication, Szarkowski's influence began with *The Photographer's Eye* produced in conjunction with the 1964 opening of MoMA's permanent photography galleries. The exhibition traveled throughout the United States and was seen by many; its publication in book form in 1966 brought Szarkowski's ideas to an even larger audience. In this exhibition, Szarkowski laid the groundwork for his formalist approach to photography through his

exploration of those qualities that he understood as unique to the medium. He organized the exhibition around five characteristics: the thing itself, the detail, the frame, time, and vantage point; and, through them, he constructed the discourse of photography as one that is predominately concerned with formal issues and not with the intent of the photographer. He explains:

The Photographer's Eye was an attempt to try to define certain issues, certain fundamental issues, that might begin to offer the armature for a credible vocabulary that really has to do with photography and not with how Alfred Stieglitz felt about the smokestacks, or whatever else.

(quoted in Stange, 700)

Unlike Steichen, who believed in the social function of photography, Szarkowski redefined photography according to a modernist aesthetic. His formalist reading elevates the medium to an autonomous art form and in doing so denies the possibility of external factors such as history, economics, or ideology as informing a photograph's meaning. Interestingly, in spite of his formalist stance, Szarkowski did not exclusively promote the aesthetic value of art photography. Rather, he maintained that anonymous, news, magazine, and commercial photography held equal artistic merit. At the time, this idea was quite revolutionary, since many of the field's practitioners believed that photographers should distance themselves as far as possible from the world of commercial and amateur picture taking. Szarkowski, however, believed that if photography had certain salient qualities, then they must reside in all photographs, regardless of the intention of their makers or their historical contexts. News photography became one of the primary means through which he explored this belief, as his 1973 exhibition *From the Picture Press* attests. A number of critics heralded Szarkowski as a champion of the "vernacular tradition" of photography, although he received criticism for disregarding the original uses of certain photographs, particularly those made during the nineteenth century.

Besides theorizing on the photography's intrinsic properties, Szarkowski also helped a number of

young photographers receive institutional recognition for their work. His 1967 exhibition *New Documents* promoted Lee Friedlander, Garry Winogrand, and Diane Arbus as the “new documentarians,” and he described their work as simultaneously “personal” and “social.” In this exhibition and catalogue, Szarkowski completely redefined photography’s position with respect to the documentary tradition. As he blurred distinctions between anonymous and master photographers, Szarkowski also sought to eradicate the distinction between documentary and art photography. Szarkowski argued that while the works in *New Documents* may appear to be part of the documentary tradition, the artistic intention of their authors makes them different. The photographs seem impersonal and unmanipulated, but that is because the artist-photographer is using that style to mask his or her own presence. In other words, nobody would think of these photographs as art, and this is precisely why Szarkowski believed that audiences needed critics like himself to explain the works’ artfulness.

In 1976, Szarkowski took this system of artistic evaluation to an extreme with his exhibition of William Eggleston’s color photographs and subsequent catalogue *William Eggleston’s Guide*. Here, Szarkowski exhibited a group of color photographs that had the look of a snapshot in their random selection of visual elements. Yet, it was precisely the photographs’ lack of artfulness that aroused the greatest controversy among the critics who accused Szarkowski of selecting images that looked as if anyone could have taken them. The pictures had no clear message or intent; they appeared ordinary, as if they were color slides of someone’s relatives, or even, as Hilton Kramer said, “boring.”

Szarkowski drew further criticism with the publication of the catalogue for his exhibition *Mirror and Windows*, published in 1978. In this project, Szarkowski attempted to define American photography since 1960; and, although he claimed to provide a historical sketch of the period from 1960–1978, he really only dealt with those works that he had found appealing as a curator during that time. By the 1980s, Szarkowski’s authoritative position within the art world had begun to wane as critics increasingly found his approach too narrow. In 1991, Szarkowski retired from MoMA as director emeritus of the photography department, and, although his ideas no longer held their initial power, his eloquent writings and ideas remain a cornerstone in postwar photographic criticism.

GABOR SZILASI

Canadian

Since arriving in Canada in 1957, Gabor Szilasi has established himself as one of the most important Canadian documentary photographers, especially in Quebec, his province of residence. His work is highly respected by the artistic community for its technically impeccable rendition of culturally significant architecture, both vernacular and institutional, and his moving portraits of the ordinary people who inhabit the spaces he photographs. His black-and-white or color images, often produced with large-format cameras, have a sense of timelessness and peace, free of the tension of city life. He taught for over 25 years, making a valuable contribution to the development and sustenance of Canadian documentary photography, especially in Atlantic and Central Canada. His social interests and human approach have found favor with French-Canadian photographers in Quebec, who are committed to the preservation of French-Canadian culture and have a strong interest in socio-political issues.

Born in Budapest, Hungary, on 3 February 1928, Gabor Janos Szilasi attended the Evangélikus Gimnazium, and from 1946–1949 studied medicine at the University of Budapest. He lost his mother and siblings during World War II. His father was a forestry engineer and later the owner of a small factory producing wood chips. In October 1949, Szilasi tried to flee the country through Czechoslovakia to escape the communist regime, but was caught and spent five months in prison, bringing

an end to his medical studies. In 1950, he was a laborer on the Budapest subway, and from 1952 to 1956 he worked in his father's factory. Around that time, Szilasi began to visit the French Alliance in Budapest, where he was introduced to Russian and American magazines and discovered the work of Henri Cartier-Bresson, Richard Avedon, and Izis, a Lithuanian photographer living in France.

In 1952, he purchased his first camera, a Zorkij, a Russian copy of the Leica 111F which he had heard of through friends and magazine articles. From 15 to 25 November, he documented the Hungarian uprising in Budapest, and on 30 November he successfully fled the country to Vienna, where a few weeks later his father joined him. They applied for emigration visas to Sweden and Canada and were accepted first by Canada. Although Szilasi was deeply and personally affected by the major political changes that were shaping the world at that time, his photographic interests in this period had less to do with politics than with life in general: images of friends and of the city landscape, hiking trips in Czechoslovakia. At the same time, he developed a strong interest in the Italian and French neo-realist cinema—especially the films of Luchino Visconti, Vittorio De Sica, and the early movies of Federico Fellini. He was also very interested in music and in the work of realist writers such as Fyodor Dostoyevsky and Leo Tolstoy. His interests of the time had less to do with politics or theory than with—as the American photographer Garry Winogrand once put it—"what the world looks like on a piece of 8 by 10 inch paper."

Upon his arrival in Canada in 1957, Szilasi was diagnosed with tuberculosis. He spent the following year in a sanatorium in Nova Scotia, and then in Quebec, where his father found government work. In 1958, he met François Lafortune, a librarian with the Quebec government and an amateur photographer who encouraged his photographic work.

In 1959, Szilasi moved to Montreal to work as a photographer at the Office du film du Québec, where he stayed until 1971. Throughout the decade, he photographed a variety of subjects, including Expo 67 and the construction of the Quebec pavilion. Szilasi was largely self-taught, apart from a course at the School of Modern Photography in 1960–1961 and a workshop in 1966 on Minor White's zone system. During these years, he learned the different photographic processes and formats, and he developed his vision through readings and discussions with teachers like Ron Solomon, a photo editor with the National Film Board of Canada. He gradually became interested in large-format photography and in the social documentary approach in film and in photography, following the work of Canadian documentary filmmaker Pierre Perreault and American photographer Paul Strand. Szilasi met artist Doreen Lindsay in 1961, and their daughter Andréa was born in 1962.

Szilasi had his first exhibition in 1967. This marked the beginning of a new period with his establishment as an artist and educator. In 1968 he began photographing artworks for artists, commercial galleries, museums and art magazines, a commercial activity he kept up until 1990.

In 1971, he began to teach at the Collège du Vieux-Montréal, which offered him a good art department, dynamism, and freedom to engage in his own projects. He worked at the Collège until 1980. During this period, he established his style and fine-tuned his vision, photographing Montreal's architecture and travelling throughout agricultural Quebec in Charlevoix, La Beauce, Lotbinière, and Abitibi to document a way of life that was changing rapidly. Szilasi was strongly influenced by the American school of photography, especially the work of Walker Evans and Paul Strand, who he felt had produced an honest testimony to a world they knew well. The work of Manuel Álvarez Bravo also influenced his own work. In 1977, Gabor Szilasi was elected to the Royal Canadian Academy of Arts.

From 1980 to 1995, he taught at Concordia University in Montreal. Unlike his teaching at the Collège, his work here focused less on commercial photography and more on the social and esthetic aspects. He continued his exploration of the different regions of Quebec. This work was a way for him

to study the inhabitants of a region and to observe the way they transformed their environment. His interest in color photography after 1976 was the result of his desire to incorporate more information on their environment. He was primarily interested in photographing individuals who were poor but proud, thus echoing the approach developed by Walker Evans and James Agee in *Let us now praise famous men*. Szilasi has given workshops throughout Canada and the United States, most notably at Stanford University. He is still very active, and continues to shoot architecture and portraits.

T

MAURICE TABARD

French

Maurice Tabard's photographs are visually very complex, involving negative printing, double exposure, solarization, montage, and other modernist techniques. Many of his photographs incorporate shadows cast on or by whole or partial figures who are situated in indeterminate settings. While Tabard was not a member of the inner circle of Surrealist artists in Paris, his works share many of their same interests in altered realities and uncanny presentations of figures in dreamlike settings. His relentlessly experimental work was somewhat ahead of its time and more appreciated after his death than during his lifetime; Tabard cared more about expanding his understanding of what photography could do and be rather than establishing a signature style.

Tabard was born in Lyon, France in 1897. His father was a silk industrialist, and Tabard's first artistic experiences were as a designer of patterns for silk textiles. In 1914, he and his father left France for New York, where Tabard became a student at the Institute of Photography. Between 1916 and 1920, he continued his studies with Emile Brunel in New York. After the death of his father in 1922, Tabard became a professional portrait photographer for the Bachrach Studio in Balti-

more. He photographed many important homes and famous people, including President Calvin Coolidge and his family.

In 1928, Tabard returned to Paris to become a fashion photographer. There he encountered the Surrealist writer Philippe Soupault, who in turn put him in touch with a number of prominent magazine editors, including Lucien Vogel, Giron, and Alexey Brodovitch. Tabard worked for a variety of magazines, such as *Bifur*, *Vu*, *Jazz*, *Jardin des Modes*, and *Marie-Claire*. He made the acquaintance of the Surrealists Man Ray and René Magritte, and his work began to reflect the influence of Surrealism, particularly with the use of uncanny double exposures, which he called "simultaneous impressions." His debt to Magritte is evident in his later photograph, "*Eye-Sea*": *Hommage à Magritte* (1938). In the late 1920s, he also met Roger Parry, to whom he taught photography, and André Kertész.

Around 1932, he began systematic experimentations with the technique of solarization, in which partial reversals of tones create uncanny dark outlines and white halos around forms, creating such works as *Composition with Guitars*, of 1929 which uses the sensual shapes and flat planes of the guitars to great effect. Man Ray and Lee Miller had

begun experimenting with solarization in 1930. In 1933, Tabard published an article about the technique in *Arts et Métiers graphiques*, much to the consternation of Man Ray, who wished to keep the process to himself. During the 1930s, Tabard relentlessly experimented with montage, sandwiches negatives, multiple exposures, solarization, and collage techniques and was highly respected as an avant-garde photographer, with his work appearing in such journals as *Bifur*, *Art et Décoration*, and *Arts et Métiers graphiques*. His work was shown in *Modern European Photographers*, organized by Julien Levy in 1932, and at Galerie de la Pléiade beginning in 1933.

At the time of the outbreak of the war, Tabard worked in Lyon as the director of the photo studio for *Marie-Claire*. During the German Occupation, he worked as a still photographer for the Gaumont film studio. In 1942, he traveled to Africa as a documentary film maker; later he became a war correspondent for the French Motion Picture Service. He was voluntarily engaged as a photographer in Alsace until the end of the hostilities.

After the war, Tabard continued to do fashion photography. In 1948, Alexey Brodovitch, editor of *Harper's Bazaar*, brought him to the United States. There he met Irving Penn and Richard Avedon. Tabard began teaching at the Winona Lake School of Photography in Winona Lake, Indiana, and in 1948, he was honored for his services by the Photographer's Association of America. Between 1950 and 1955, he delivered a series of lectures in the United States on the structural composition of images, derived from his book, *La Géométrie est la fondation des arts*, published in 1948. At the same time, he continued working for a number of French fashion magazines, work that he maintained until his retirement in 1966, his astonishing contributions to avant-garde photography of the earlier era little known, as much of this material had been lost in the war. In 1975, his work was included in the exhibition, *Paris 1925–1939, capitale de la photographie*, at the Salon de la Photographie. In 1983, he received the Grand Prix National de la Photographie in Paris. After his death in 1984, he was honored with a number of exhibitions in Europe, including a retrospective exhibition at the Fondation Nationale de la Photographie in Lyon.

KAREL TEIGE

Czech

The Prager group of artists of Devětsil, founded by Karel Teige in 1920, wanted to oppose academism by viewing reality poetically, by breaking with the old forms, and by globally spreading art. The contemporary generation of artists regarded art from the time before the First World War as reactionary—its values were destroyed in the trenches of Verdun. This specifically Czech variant of Dadaism also changed photography. It connected different art domains with it: dance, music, collage, and print graphics. Another important field was books, into which photographs were integrated.

Between 1924 and 1926, Karel Teige assembled his first photos; these served mainly as book covers (*The departure to Cythera*, *Typographic Poetry*). Under the influence of the new developments of Soviet art he saw the possibility of a “*renouveau*” of the art in the achievements of constructionalism and in artistic pragmatism: The “aura” of the original, the exclusivity of vintage prints, precious presentation of works of art—these were things that Teige wanted to see exterminated from the art repertoire in the 1920s. Everyone should be an artist, everyone should have the possibility of seizing a camera. Anti-bourgeois art served a function, by making the transformation of society visible as information and documentation and as a means of education.

The “would-be artist” Karel Teige (he recognized very early he lacked talent)—who had written articles already during his art studies for German newspapers and had directly promoted himself to one of the most important art theoreticians of the young Prager avant-garde—recognized very early the possibility of using photography and photo assembly (photo-collage) in advertising. During the 1920s in particular, he moved photography in his theoretical studies into the proximity of film—photo-assembly and photo-collage replaced the canvas of the painter. Thus the poetic anthology *Život II (Life II)*, which was co-edited by him, is the first Czech example of the use of the photo-assembly in shaping the book cover.

At the end of the 1920s, Teige was one of the most important proponents of the Soviet art of photo-

assembly (from Rodchenko to Klucis to El Lissitzki), whom he regarded as exemplary. In his 1931 published article, *The Tasks of the Modern Photography*, he blamed the aesthetic view of photography as “pleasant and sentimental patterns for the pastime rich Ms, who kill the time with Kodaks and Leicas.” For him photography was a service: as an aid to science, journalism, industry, civilization, and the culture. Photo assembly resembled a poster, a handbill that agitates, recruits, communicates. In practical application as a producer of cover Teige looked for more clarity “in the whole modern visual culture” that was shaped by the cinema, advertisement, and poster art.

Only one year later, 1932, he accepted also “free photo assembly”: On one hand book illustrations with photographs—Teige particularly was fascinated by the typography of John Heartfield for Kurt Tucholsky’s, *Deutschland, Deutschland über alles (Germany, Germany over Everything)* and by the photo-illustrations for André Breton’s *Nadja*—on the other hand designs with photography (as for instance of Max Ernst, Willy Baumeister, and László Moholy-Nagy).

From 1927 to 1931 he led the magazine *Red*, held lectures on architecture at the Bauhaus in Dessau, and became editor-in-chief of the magazine *Země sovětů (The Country of the Soviet)*, which he published for six years until 1937. By 1933 he already understood the wrong way: “What happens there (in Moscow) within the range of architecture and the art, (is) a mess driving to despair...”

After several years of persistent opposition to André Breton and his Surrealist manifestos, Teige joined the Surrealist movement in 1934. The emphasis of the “*écriture automatique*,” the interpretation of dreams, the study of unconscious were to Teige as well known as the psychoanalysis of Sigmund Freud and Otto Rank. In his own literary texts Teige tested different techniques of these “*écriture automatique*.” However the painter Jindřich Štyrský (1899–1942) had a decisive influence on him, and, who as editor of the *Erotic revue* and of the *Edition 69*, published in 1933 the first Surrealist photo-collage in his book *Emilie přichází ke mně ve snu (Emilie Comes in the Dream to Me)* as well as in his vast cycle *Stěhovací kabinet (Removal Cabinet)*,

which he began in 1934. Starting in 1935, Teige himself used the same collage technique as Štyrský: He cut reproductions out of different magazines, which he coloured and occasionally also supplemented with original photographs. Unlike Štyrský, Teige experimented with different techniques but did not stress the two-dimensionality of the picture.

The photo-collage was for Teige a kind of “relaxation” after his intensive art and theoretical, editorial, and organizational work. Without doubt, practice of the study of the unconscious also supplemented his artistic horizon: Although he did not regard—as did Štyrský for instance—the dream as the only source of the pictorial and photographic activity, the “poetic” function became (as for example Roman Jakobson formulated it) after a longer technical-constructionist phase a firm component of his theoretical and practical artistic work. Teige returned to figures, which he had completely ignored over the years during his typographic book cover creation period. The book cover to Vítězslav Nezval *Pantomima* (1935) corresponds with his *Collage Nr. 1* from the same year, above all which concerns the topic choice: Torsi and fragments of the female body—breasts, feet, and arms, observing eyes, often behind a mask, hints of the passing of time—form a constant in these works. First influenced by Max Ernst, Teige played in numerous variants to the works of art of the Surrealists as well as—fragmentarily—to the great works of the history of art, reproductions of which he cut out and worked at: Magritte and Dürer, Dalí and Rembrandt, De Chirico and Goya, Bellmer and David.

This relatively unsystematic choice in the differently processed motives and forms in his photo-collages is directly connected with art-theoretical activities of Teige. It is impossible to enumerate all the influences and to point out an evolution in these 374 works. It is also not clear if Teige seized the camera in order to shoot certain photographs that he wanted to use. It seems rather that he availed himself of an existing body of photographs and let himself be inspired by momentary mood and fantasy.

The largest part of all his photo-collages, about 60%, were developed during the war between 1939 and 1942, when it was increasingly difficult to publish his theoretical work. Teige did not intend to publish these collages. The publication of some works in 1948 in the magazine *Zvěrokruh* (*Zodiac*), did not change the fact that one of the most important photocollagists of Surrealism remained completely unknown. Although Teige—mainly in his nude fragments—succeeded to reach by simplifica-

tion a nearly sculptural dimension of photo-collage, his art was hardly perceived.

In 1972 an assembly of 96 designs, water color paintings, and graphic sheets from the years 1915 to 1923 as well as 312 collages were donated to the literary archives of the National Museum for Literature in Prague. But only after the “peaceful revolution” in 1989 did the extraordinary position Karel Teige held in the domain of the Surrealist photo-collage become apparent in numerous exhibitions: Beside those of Ernst, Bellmer, Hugnet, Mallet Štyrský and Bayer, who worked only occasionally with photo-collage, the work of Karel Teige is the most extensive. It corresponds with the postulate of the Surrealists, who searched after the “unconsciousness of an internal model.”

MILAN CHLUMSKY

Biography

Born on December 13, 1900 in Prague. Studied art history at Charles University in Prague. 1920 joint founder of the group of artists of *Devětsil* (1920–1932), he was the speaker of the group and an influential theoretician. 1929 to 1935 chairman of the artist and intellectual movement *Levá Fronta* (*Left front*). 1934 entry into the Prague Surrealist group, that maintained relations with the Paris Surrealists and André Breton. In the same year, after more than 10 years of typographic practice, he began to orient himself first with cubism, later on with constructionalism, with photo-collages and photo-assemblies. Teige remained speaker of the Prague Surrealists until 1947. 1948, after the communist *putsch* in Prague, this artist movement was forbidden. He was one of the most important art theoreticians of the avant-garde in Czechoslovakia between 1925 and 1951. Died on January 10, 1951, of heart failure in Prague.

EDMUND TESKE

American

Edmund Teske was a romantic who perceived, interpreted, and lived life through emotion and intuition. Although he valued the intellect, he believed that the intellect interfered with direct experience and sensation. In the romantic tradition, he described his purpose in life as "being and becoming on earth through my art." Although well recognized in the realm of photography, Teske had an eclectic approach to the arts and used any means to communicate his ideas.

Teske was born in Chicago, Illinois on March 7, 1911, and was the eldest of three children in a German Lutheran family who had emigrated from Poland. The father was a self-employed businessman. The mother was a devout Lutheran. However, it was his elementary school teacher, Mabel A. Morehouse, who was especially influential by proclaiming that art, music, and painting were natural acts. She evoked the creative spirit in young Teske and encouraged his interest in photography. While growing up in Chicago, Teske attended classes in drawing and painting at the Huttle Art Studio and assisted the portrait photographer Ferdinand De Gelder, but was essentially a self-taught photographer. He took saxophone lessons and played piano,

becoming a protégé of the concert pianist Ida Lustgarten. Teske was also a resident in theatre at Jane Adams Hull House. This early multidisciplinary introduction to the arts was reflected in his later interdisciplinary approach.

Teske's initial inspiration in photography came from the vision of Edward Weston and the writings of Ansel Adams. He also became familiar with the photographs of László Moholy-Nagy, Gyorgy Kepes, Man Ray, and the paintings of Salvador Dali. However, much of his photographic education was informal and derived from reading *Vanity Fair* and *Vogue* magazines.

Throughout his life Teske supported himself in commercial, studio, and industrial photography and by teaching photography. During the 1930s, he taught at Frank Lloyd Wright's Taliesin, Spring Green, Wisconsin, the Institute of Design (New Bauhaus) in Chicago, and the Federal Arts Project. After moving to Los Angeles in 1943, Teske taught at Chouinard Art Institute, the University of California at Los Angeles (at the invitation of Robert Heineken, an admirer who pursued some of the same techniques that Teske pioneered), California State University at Los Angeles, and Immaculate Heart College, Los Angeles. Although he had dreams of working as a cinematographer or an actor in Holly-

wood, they never materialized. However, he knew many Hollywood film actors and in 1956 landed a brief role in the film *Lust for Life*.

His first efforts at serious photography were documents of Chicago during the years of the Great Depression, for example, *Street Car, Chicago* (1934–1940). While riding the street car with a Rolleiflex camera, he photographed a lone passenger lost in thought. As was common during this period, his photographs are darkly printed and somber in mood. In these photographs Teske predates Walker Evans subway portraits by several years. His social conscience and personal outrage were expressed in *Steel Workers' Organizing Committee* (1937) in which he combined his verse on four panels depicting the mill, police beating the strikers, and portraits of the victims who were killed during the Memorial Day Massacre in South Chicago.

While working in a documentary style, Teske also challenged the parameters of photography. During the 1940s, using the opposing sides of a *Vogue* magazine page as a negative, he printed the images onto photographic paper. During this time Teske also began combining negatives and for his “key images” varied his themes—Jane Lawrence Smith, Mono Lake, and later Jeffery Harris. Many of these photographs have become some of his best known photographs, for example, *Jane Lawrence, Composite, Los Angeles* (1947).

Teske's *tour de force* was his accidental discovery in the late 1940s of a variation of the solarization process. In the solarization process a print or negative is flashed with light during the process of development. The result is often an abstracted, otherworldly appearing image. However, Teske experimented even further and achieved spontaneous and unpredictable color effects, originating a duotone solarization process. Using high contrast paper, he placed an exposed print in full strength developer for three to thirty seconds, followed by placement of the print in the stop bath and fixer for one second. Next, he laid out the print and exposed it to light, which exposed the partially fixed print. The remaining traces of developer then continued to develop. The interaction of light and chemicals created beautiful warm and cool tones in what originally was a black and white print. When he achieved the desired effects, the print was again fixed. His striking *Mother and Child, South Chicago 1938 (Republic Steel Mill Strike and Massacre)* of this time demonstrates both this technique and his use of previously shot material.

Teske was also a pioneer in the area of homoerotic imagery in photography. Inspired by the

photographs of Edwin Boland, a Chicago photographer, Teske photographed the male nude as early as the 1930s, but then destroyed the photographs. In 1945, when he was introduced to the philosophy of Vedanta, a branch of Hinduism, he openly began to create images of the nude male. Already familiar with the writings of the founders of psychiatry, Sigmund Freud, Carl Jung, and Richard von Krafft-Ebing, the numerous graphic forms and ideas of Vedanta appealed to him, especially the Shiva-Shakti principle. Teske often used the image of the mother dancing upon the nude, prostrate form of Shiva and modernized it in his photographs, for example, his numerous combined negatives of Jeffrey Harris with various landscapes.

Always pushing the limits of photography, in 1954 Teske photographed experimental filmmaker Kenneth Anger on a bluff in Topanga Canyon in the Los Angeles area and overlaid it with an appropriated Gustave Dore engraving for Milton's *Paradise Lost*. Teske then created solarized and negative print variations further abstracting the image and suggesting an other-worldly experience. Teske collaborated with Anger on his film, the *Inauguration of the Pleasure Dome* (1954). He also photographed experimental Los Angeles-based artist George Hermes and his wife Shirley.

In *Greetings from San Francisco* (1971) Teske projected a strong light through a postcard so that the image on one side and the writing on the opposite side of the card are seen simultaneously when printed as a photograph. It served as both a document and an art object.

Edmund Teske's technical and conceptual contributions to American photography are significant; he challenged the parameters of photography during the late 1930s through the 1960s at a time when purism dominated photography. His interest in experimentation, Surrealism, and homoerotic imagery, however, made him virtually *persona non grata* within the photographic establishment, with recognition for his achievements coming only at the end of the twentieth century.

GEORGE TICE

American

George A. Tice finds the monumental in the commonplace. Primarily self-taught as a photographer, his career spans more than 50 years, and his inter-

ests in documenting the American landscape have led him to numerous towns and cities across the United States. Whether he is documenting the suburbs of New Jersey, the Amish and Mennonite communities in rural Pennsylvania, or the natural

landscapes in Maine, it is apparent that although he is a traveler at heart, he remains so deeply understanding of, and connected to a sense of place. Using a large format 8 × 10-inch camera capable of capturing fine details and a range of tonal values, he approaches his subject matter in a straight-forward manner and with a sensitivity to the ever-changing landscape of small-town America. In an interview with John Paul Caponigro for the July/August 1996 issue of *View Camera*, Tice said of the landscapes he photographs:

You can't always go back, a lot of it has been erased. The photograph is a record of it having existed. One of the things I like about the photographs I do is that they represent the history of this area...I think the photograph becomes more important in time when the reality has passed.

Most of Tice's childhood was spent in a trailer with his mother traveling from New Jersey to Florida and back up the East Coast looking for work. Though most of his early years were spent on the road, he has called New Jersey home for more than three decades and discovered the Garden State is ripe with subject matter, which not only has engaged him in an endless dialogue with the land since 1967, but also has gained him a national reputation for his treatment of the everyday, from diners to gas stations, storefront windows to parking lots. One of his most iconic photographs, *Petit's Mobil Station, Cherry Hill, NJ*, 1974 from his *Urban Landscapes* series (1976), made while on both a National Endowment for the Arts fellowship and Guggenheim fellowship, is a striking representation of the gas station located on Kresson Road, a highly trafficked street in the suburbs of Cherry Hill. Yet, he has recorded the location in the evening hours devoid of people. One is struck, not only by the stillness and solitude of the image, but by the water tower looming in the background. Tice, an observer who is sensitive to the places he photographs, records the tower in a manner that reveals its profound gravity. It is a structure that he would return to but in different towns, such as in his photograph *Water Tower, Rahway, NJ*, December 1994.

Tice remembers it was the visits to his father's house that influenced his own desire to pick up a camera. His father had albums of photographs that he had taken and would also photograph the young Tice during those visits. Tice became fascinated by this method of documentation and at the age of 14 he purchased an inexpensive Kodak Baby Brownie camera, joined the Cataret, New Jersey Camera Club, and began to focus his energies on photography. For a brief period, he studied commercial

photography at the Newark Vocational and Technical High School, but left to become a darkroom assistant. When he was 17, Tice joined the U.S. Navy and the following year was assigned to the photography department. He worked in this capacity, taking publicity photographs, until 1959. When a photograph he took of an explosion on the *U.S.S. Wasp* was published in the *New York Times*, he received significant recognition. Edward Steichen, then director of the photography department at the Museum of Modern Art (MoMA), New York, saw the photograph and acquired it for MoMA's permanent collection. Tice eventually became Steichen's master printer and continued to print for him until Steichen's death in 1973. He had gained a reputation for his technical skill in the darkroom, which led him to be hired as the printer of limited-edition portfolios for not only Steichen, but also for several other photographers, among them Francis Bruguière, Frederick H. Evans, and Edward Weston.

For some time in the early 1960s, while married and raising his children, Tice supported his family as a home portrait photographer. During this period he began to develop a strong interest in his own projects, one of the first being a documentation of the Amish and Mennonites in Lancaster, Pennsylvania. This project, which would become one of his most significant photo-essays, took more than nine years to complete. In *Two Amish Boys, Lancaster, Pennsylvania*, 1962, Tice almost effortlessly follows two young boys, their backs turned away from the camera, as they walk barefoot up a road in the farmlands of their town. A large white barn-like house sits in the distance and these boys casually make their way down a road that appears to go on forever. He published this work in 1968 as *Amish Portfolio: Twelve Original Photographs*, but later produced a complete version as a book titled *Fields of Peace: A Pennsylvania German Album*, 1970. Since publishing this first book, Tice has embraced the photography book as a medium for his ideas and has published 13 books to date. They include *Paterson* (1972); *Seacoast Maine: People and Places* (1973); *Urban Landscapes: A New Jersey Portrait* (1975); *Urban Romantic: The Photographs of George Tice* (1982); *Lincoln* (1984); *Hometowns: An American Pilgrimage* (1988); and *George Tice: Selected Photographs, 1953–1999* (2001).

In 1972, the Metropolitan Museum of Art, New York gave Tice a solo show of his work *Paterson, NJ*, a project for which he was awarded the Grand Prix du Festival d'Arles in 1973. Tice said of this work in his introduction to *Urban Romantic*, "In Paterson, 'the cradle of American industry,' I saw a

vision of America gone wrong. Her beauty was altered, her waters were poisoned.”

Tice's latest photographic project, *Ticetown*, traces the history of his Dutch ancestors who came to the United States in 1663 and eventually settled in New Jersey. A project that has consumed his energies for almost a decade, this may be one of Tice's most personal. As he traces the generations of his family's history, he discovers the long-established roots in the place he has photographed with such intensity and sensitivity for years.

Not only does Tice spend a majority of his time as a photographer and in the darkroom, but he has also taught numerous workshops, including a master class at New York's New School for Social Research and a fine print workshop at the International Center of Photography in New York. His photographs are included in many prominent collections, including the Amon Carter Museum, Fort Worth, Texas; Museum of Fine Arts, Houston, Texas; Victoria and Albert Museum, London; Whitney Museum of American Art, New York.

Biography

Born in Newark, New Jersey, 13 October 1938. Joined the Cateret, New Jersey Camera Club, 1952. Became a darkroom assistant for a portrait studio in Newark, NJ, 1954. Briefly studied commercial photography at Newark Vocational and Technical High School, 1955. Served as a photographer's mate in the U.S. Navy, 1955–1960; Served as a home portrait photographer, Americana Portraits Inc., West Orange, NJ, 1960–1969; First exhibit at the Underground Gallery, New York, 1965; Helped to establish the Lee Witkin Gallery in New York, 1968; Instructor in Photography, New School for Social Research, NY, beginning in 1970; First, major solo exhibition, *Paterson, New Jersey*, the Metropolitan Museum of Art, 1972. Received National Endowment for the Arts Photography Fellowship, 1973; John Simon Guggenheim Memorial Fellowship, 1973; Grand Prix du Festival d'Arles, France 1973; Commissioned to photograph Saplo Island by the Field Museum of Natural History, Chicago, 1974; Commissioned to photograph Liberty Park for the Museum of Modern Art, New York, 1979. Commissioned by the Museum of Fine Arts, Houston, and the Parnassus Foundation to photograph North American bank architecture for the exhibition and book *Money Matters: A Critical Look at Bank Architecture*, 1987; and *Hometowns: An American Pilgrimage*, 1988. Received Joint Fellowship in Photography at The National Museum of Photography, Film and Television, Bradford, England and Ilkley Community College, 1990–1991. Awarded the New Jersey Council for the Humanities Book Awards for *Urban Landscapes*, 2003; Granted an Honorary Doctorate from William Paterson University, 2003. Lives in Atlantic Highlands, New Jersey.

WOLFGANG TILLMANS

German

Wolfgang Tillmans is a contemporary artist who uses photography as a technical means to an aesthetic end. He has been hailed within the 1990s as one of the most important artists/photographers of his time; a "chronicler of a generation." Yet with much acclaim he is still often misunderstood in his intent.

Born in 1968 in Remscheid, Germany, Tillmans moved to Hamburg in 1987 where he first began photographing local youth culture. His images were well received when displayed in his first solo exhibition, also in Hamburg. Around this time, Tillmans was working as a commercial photographer, photographing for popular American and European magazines such as *I-D*, *Interview*, *Spex*, and *The Face*. In 1990 he moved to Bournemouth, England, to study photography in a two-year program at the Bournemouth and Poole College of Art and Design, now called the Arts Institute of Bournemouth. Afterwards, Tillmans lived and worked in New York for a brief time, eventually returning to the United Kingdom in 1996 where he continues to live in London.

Tillmans's early photographs may be among his best known. At the least, they were the catalysts for his discovery as a significant contemporary artist. He began by photographing friends and other members of his generation in various locations including night-

clubs and raves. Many of his friends would reappear as subject matter for Tillmans within these early years. The color photographs were reminiscent of rather spontaneous snapshots but were actually very well planed scenarios only giving the illusion of impulsiveness. The subjects appear casually within the space and are also very comfortable in front of the camera, a testament to Tillmans's skill as a photographer. Along with these portraits of his youth, Tillmans also explored many genres, photographing landscapes, cityscapes, and still lifes. His focus was on the ordinary, the mundane, and often, the overlooked: for example, the way a pair of jeans hangs from a hook is in his estimation enough to inspire a photograph. However, Tillmans's work presented a contradiction: the structure and discipline in the making of the image was sharply contrasted with the indifferent way the images are often presented. They have been taped and pinned to museum and gallery walls, presented in varying shapes and sizes. Often pages torn from magazines or newspapers intermingle with the color photographs. At times the images have been hung in a seemingly haphazard way, appearing more like a collage of images on a teenager's bedroom wall than an art installation. In 1995 a selection of these photographs was released in Wolfgang Tillmans's first monograph. The book was conceived and created by Tillmans for the German publishing company Taschen. The book received much praise yet encouraged Tillmans

to move away from informal images of the young generation to more formal portraiture and still life.

In 1998, 60 of Tillmans's photographs were published by *Parkett*, an international art journal out of Zurich. The book was comprised of color prints that were either accidentally spoiled in the dark-room by error or manipulated intentionally by Tillmans. The photographs contain traces of a much neater, cleaner print but are marred by streaks of light, or miscalculations in color and exposure. Many of the images had been collected by Tillmans since he first began printing in color in the early 1990s. What interested him most was the abstracted nature of the photograph, eventually forcing his interest to a less literal image. In the early part of the new millennium, Tillmans's energy was spent on these abstractions, made by manipulating light onto photographic paper. The photographs are much more painterly in quality as colors of light streak across the paper. While some of these images do include use of a negative, many are made without the camera at all.

In 2000, Tillmans was awarded the prestigious British Turner Prize, an annual award given to an outstanding British artist under the age of 50. What made the awarding of the prize to Tillmans notable was that he was the first non-British artist as well as the first photographer to be awarded the prize. Many people felt that this was a welcome change from the values normally expressed by the Turner Prize committee and by British art circles.

In 2002, Wolfgang Tillmans shifted gears again, working on his first video installation, *Lights (body)* 2002. His video piece stemmed from a collaboration and chronicles several Saturday nights at a busy nightclub. Rather than focusing on the dancers, the piece concentrates on the vivid lights in the club that flicker on and off to the pulsing electronic club music.

In this photographic work, Tillmans has been reverting back to a more literal use of the medium. One series of images came from a photo essay for the magazine *Purple*, and another series involved trips to Berlin. In both cases, the photographs recall the classic Tillmans simplicity. However, he has begun a new approach to his presentation. The images are now of the same small postcard size rather than a mix of sizes and are arranged into a large grid. It is a much more refined method, yet it adds a new complexity to the work.

Though some argue over whether Tillmans is an innovator or a documenter, there can be no question that he is one of the most prolific photographers of his time. Despite his many shifts in methods, the focus of his photographs is always

on the beauty of the mundane in the everyday and articulating a new aesthetic.

KELLY MARON

Biography

Born in Remscheid, Germany in 1968. First solo exhibition in Hamburg, Germany in 1988 prior to any formal photography training. Commercial photographer for *I-D*, *Spex*, *Interview*, and *The Face* magazines, late 1980s. Attended the Bournemouth and Poole College of Art and Design under a two year photography program from 1990–1992. In 1994 created his first monograph, published by Taschen. Began association with Daniel Buchholz Gallery, Cologne, Germany, and Andrea Rosen Gallery, New York, New York, late 1990s. Moved to London, 1996. Turner Prize, 2000. Currently lives and works in London.

Individual Exhibitions

- 1993 *Approaches*; Cafe Gnosa, Hamburg, Germany
- 1993 Buchholz + Buchholz Gallery; Cologne, Germany
Interim Art; London, England
Galerie Thaddaeus Ropac; Paris, France

TIME EXPOSURE

Exposure is the amount of light that hits the film in a conventional camera, or the digital mechanism on a digital camera. A camera's built-in meter suggests the correct exposure to capture the image in the viewfinder. Handheld light meters can also be utilized to test the scene for the correct exposure. In seeking normal exposure, by setting the camera to the manual (M) mode, the photographer meters the shadows and the highlights, then averages the two for the correct exposure.

Time exposure is a technique to extend or circumvent the pre-set limitations of the modern camera, specifically, keeping the shutter of the camera open longer than the longest shutter speed of the instrument. It also describes any exposure longer than one second, which is generally the longest exposure built into modern cameras. Most large-format or view cameras allow for several second exposures to unlimited periods of time. Many 35 mm cameras feature a bulb (B or T) setting for

selecting an extended exposure time. While the shutter release is manually triggered, light enters the camera as long as the release is held down.

Most often time exposure is utilized in scientific applications, particularly in astrophotography, where exposure time can be measured in hours rather than the normal fraction of a second. As well, photographers experiment with time exposure both to capture images in less than optimal conditions (such as dim light) or for its artistic value. A tripod can be used to steady the camera, unless the desired effect includes the “shakiness” that will inevitably result from holding the camera by hand.

Controlling the shutter speed allows the photographer to manage the scene’s outcome on the film. A quick shutter speed will freeze a moment in time; a slow shutter speed drags and blurs the moment’s action. Blurred motion is often used to create an artistic effect. For example, landscape photographers often use a slow shutter speed to create mood, such as when shooting a waterfall. Instead of snapping a shot that essentially freezes the tumbling water, the slow shutter speeds turns it into a smooth flow demonstrating the poetic aesthetics of nature and time.

The handheld time exposure shakes the entire frame, creating a recognizable effect. Mounting the camera on the tripod with a time exposure creates the “dragging” effect to light and movement, resulting in a blurred effect. For example, a camera mounted on a tripod with an open shutter will blur city traffic into streams of light while the rest of the environment remains motionless. The night sky is another popular destination to photograph and experiment with time exposure. The camera, with

the shutter left open for hours, records a motionless horizon while it captures a semicircular star trail.

Photographers also play with shutter speed and the artificial lighting of a strobe. Sports photographers often use a slow shutter speed in conjunction with flash while panning across their subject, often an athlete in motion. The result is that the subject is kept in focus while the surrounding environment becomes blurred, creating a dynamic photograph that shows motion and energy.

Time exposure is just one of many techniques to capture on film images that cannot be normally seen with the human eye.

TOKYO METROPOLITAN MUSEUM OF PHOTOGRAPHY

The first municipal art museum in Japan specializing in photography and optical imagery, including videos and films, Japanese or non-Japanese, opened in June 1990, pursuant to the Ordinance of the Tokyo Metropolitan Museum of Photography. It moved to its current facilities at the Yebisu Gar-

den Place in the Yebisu section of downtown Tokyo in January 1995. Its financier, the Tokyo Municipal Government, announced the establishment of the museum as early as November 1986, as part of the government’s Second Long-Term Plan. As a museum specializing in photography and opti-

cal imagery, its purposes and activities include: (1) to collect, exhibit, study, research, and promote photography and optical imagery; (2) to organize workshops, symposiums and film/video screenings; (3) to assist in research activities in photography and optical imagery through the museum's library, information system, and print viewing program; and (4) to conduct research on the preservation and restoration of photography and its related fields.

The museum consists of four floors and a basement floor, amounting to a total of approximately 7,500 square meters, including two photography galleries and a gallery exclusively dedicated to technology-related media called "Image & Technology Gallery," an auditorium (with approximately 200 seats), a research library, a photography print study room, a preservation and restoration laboratory, a museum shop, and a café. The museum was modeled, perhaps, after Western precedents such as New York's International Center of Photography.

The museum's fourth director, Yoshiharu Fukuhara, appointed by Governor Ishihara, is also Honorary President of the Japanese cosmetics giant Shiseido Co. Ltd. Yoshiharu is a nephew of the photographers Shinzo (1883–1948) and Roso Fukuhara (1892–1946), the sons of the company's founder Arinobu Fukuhara. The brothers established *Shashin-Geijyutsu-Sha* (Association of Photographic Art) in 1921 and later the Japan Photographic Society, significantly contributing to the development of Japanese pictorial photography while assuming management responsibilities of the company.

The museum's collection consists of 18,529 photographs, 2,156 other visual works, and 50,001 books (as of March 31, 2002). The photography collection includes William Henry Fox Talbot's early calotype print *The Open Door* (1843) from *The Pencil of Nature* series; a noted early Japanese anbrotype *Portrait of Samurai* by Hikoma Ueno (c. 1860s); *Omaha Beach, near Colleville-sur-Mer, Normandy Coast, June 6, 1944* by Robert Capa (1944); *Tokyo after Fire Bombings, September 1945* by Koji Morooka (1945); *Sentimental Journey* by Nobuyoshi Araki (1971); and Robert Mapplethorpe's *Self-Portrait (with Gun and Star)*. The museum is also known as one of the largest depositories of the photographs of W. Eugene Smith.

Since its establishment, the museum has been directly subject to the drastic shift of the cultural policies of the Tokyo Municipal Government. Upon the arrival of Shintaro Ishihara as governor in 1999, the museum became in danger of closing. The museum budget decreased steadily after the

move to the current facilities: the budget for 2003 was approximately one quarter of the budget for 1995, amounting to approximately 533 million yen. Beginning in 2000, the museum was allocated no budget to expand its photography collection and has had an extremely limited budget to organize exhibitions. As a result, the museum has focused on showing photographs from its existing collection rather than staging comprehensive exhibitions that require borrowing images. In addition, the museum curators have been forced to raise funds for their exhibitions, which is rather unusual for a public museum in Japan. The budget restraints have also made a significant impact on the museum's curatorial direction and integrity; it has rented its gallery space to such an extent that approximately half of the exhibitions at the museum began being organized by other institutions, including Japan's Agency for Cultural Affairs, the Association of Advertising Photographers, and Nikon Corporation. This shift decreased the number of well-researched scholarly exhibitions that the museum was known for earlier in its existence. Instead, the museum began consciously organizing and hosting "blockbuster" exhibitions with commercial and popular appeal. As a result, despite the drastic decrease in its financial support and other resources and the changes in its curatorial direction, the museum has doubled the number of its visitors since 1999, to more than 413,000 in 2003. This increase in traffic has overwhelmed the current facilities, which were not designed to accommodate these numbers.

The museum has organized numerous retrospectives, historical and contemporary, and thematic exhibitions, including Japanese and non-Japanese photographers, but its strength lies in exhibitions of historical Japanese photography. In particular, the exhibitions organized by the museum during its first few years are worth mentioning. The museum's inaugural exhibition *Tokyo—A City Perspective* (1990) was organized by Japan's renowned historian of photography and curator of the museum Ryuichi Kaneko, which dealt with the formation of post World War II Japanese photography through images of Tokyo risen from the ashes of the devastating war, followed by *The Rise of Japanese Photography* (1991) that dealt with early Japanese photography from the late Edo to Meiji periods, with a focus on photographs by Matsusaburo Yokoyama (1838–1884). Exhibitions such as *Shift in Japanese Photography: Expressions in the 1960s* (1991) and *Japanese Photography in the 1970s* (1991) contributed to a reevaluation of Japanese photography from these two decades. The 2000 exhibition,

titled *Documentary Age*, surveyed the history of Japanese documentary photography for 50 years beginning in the 1930s, focusing on four renowned Japanese photographers: Yonosuke Natori, Ihee Kimura, Ken Domon, and Jun Miki. The 2003 exhibition, titled *Early Photography and Pictorial Art—Samurai: Dandyism in Japan*, organized in celebration of 400 years of Tokyo (Edo) having been the nation's capital, examined images of the samurai in early photographs and traditional pictorial art. Photographers whose one-person exhibitions were organized at the museum include Ihee Kimura, Shomei Tomatsu, Jun Miki, Ikko Narahara, Shigeichi Nagano, and Nobuyoshi Araki as well as André Kertész, Fosco Maraini, Robert Capa, and W. Eugene Smith. Among them, *Traces—50 Years of Shomei Tomatsu's Works* (1999) and *Japan Through the Eyes of W. Eugene Smith* (1996) are, perhaps, some of the most comprehensive retrospectives of these photographers. In particular, the latter focused on

the three bodies of photographs Smith made in Japan between World War II and the early 1970s, in Okinawa, Hitachi, and Minamata, respectively, making a significant contribution to the scholarship on Smith. The exhibitions organized by the museum in efforts to promote contemporary photography include *Asian View—Asia in Transition* (1996), *Gender beyond Memory: The Works of Contemporary Women Artists* (1996), *Kiss in the Dark: Contemporary Japanese Photography* (2001), and *On Happiness—Contemporary Japanese Photography* (2003). The museum started the Tokyo International Photography Biennial in 1995, but it ended in 1999 due to the museum's budget constraints.

TONING

The toning of black and white photographic prints is a chemical method of either applying a colour or intensity change to the image, or it can sometimes be used to increase the print's archival qualities. A variety of toning solutions can be applied to replace the print's conventional colour with various shades of sepia, or with tones such as red, blue, yellow, or green. Some toners, such as those using gold and selenium salts can slightly change the intensity and contrast of a print often without a marked colour change, but by coating the silver within the emulsion with a more stable metal, it will in turn provide the print with longer archival permanence.

The use of toners has been common practise practically since the advent of photography. Gold chloride was used in the nineteenth century on albumen prints, to change the colour (or tone) of the print from a warm, reddish brown to a colder, purple brown. This resulting, distinctive tone was seen as preferable (as well as being more permanent), thus toning became a normal part of the photographic process. When gelatin silver papers were introduced in the 1890s toning offered a me-

thod of simulating the colours of the papers that photographers had grown accustomed to. While today it is considered normal for a monochromatic image to be seen only in black and white, in the nineteenth century, browns, reds, and even blues were all customary colours available from the photographer's palette.

The contemporary use of toning, especially the warm browns of the sepia tone, are often perceived as bringing a feeling of nostalgia towards the image. Historically this has been used by numerous photographers with intent to convey a sense of times past. Edward S. Curtis, from 1900 spent 30 years recording the lives, customs, and traditions of the remaining tribes of native North Americans. He used a variety of processes in the volumes of prints he published, especially platinum and photogravure, the latter photo-mechanically reproduced with sepia inks. His silver prints were toned to replicate the warmth of these earlier processes and to complement and dignify his subjects. Though his work was intended for editioned volumes and portfolios, Curtis sold indivi-

dual prints ornately framed, printed, and toned using the Orotone process. This very decorative process consisted of the photographic image being printed first onto glass plates, the silver then toned to a rich brown/gold tone. The glass was then backed with a dusting of fine gold pigment. Once framed, the images almost shone with warmth from the layers of gold within the photograph. The romanticism conveyed in this work had similarities to the Photo-Secessionists and Pictorialists of the turn of the century. Alfred Stieglitz, Alvin Langdon Coburn, F. Holland Day, and Edward Steichen amongst others used various processes including gum bichromate, platinum, oil pigment and photo-gravure to enhance the sense of artifice and craft within their work. Though some photographers eventually reacted to the idealistic Impressionism offered by Pictorialism by concentrating purely on “straight” photography, others were influenced enough to use toners on their prints throughout the 1920s and 1930s. The work of Edward Steichen encompasses the evolution of these techniques. Throughout his early years, around 1900, his desire to be a painter was reflected in the craft and heavy brush strokes of his gum bichromates. By 1930 his acceptance of photography over painting had moved his style to classical, straight, photographic portraiture. Between these two opposing methods of work, Steichen had used toning almost transitionally to give the colourful impressions of his earlier style but on photographs dominant with the purity of his later work.

Photographic technical books throughout the twentieth century listed methods of using different toners, which have changed very little since their discovery. There are two basic methods of toning a print. Either by the direct action of a toner; the print colour is changed by its immersion in one chemical solution (or toning bath), or indirectly when the print is bleached to remove the silver content prior to toning. The direct toners all contain formulae based on metal salts and act to change the print colour (or sometimes just its density) by accumulating the new metal onto, (or plating), the silver image. Gold, selenium, and potassium sulphide are the best known; however, uranium, nickel, iron, platinum, and tin are all metals that have in the past been used. Bleaching the image, or removing the silver content and replacing it with another chemical, is the normal method used for sepia toning. Sodium sulphide and thiocarbamide are the two main chemicals used, the former less

so today due to its unpleasant, sulphurous smell. The archival qualities of this process can be explained by considering what causes prints usually to fade, otherwise the content of sulphide within the emulsion due to inadequate fixing and washing, as well as the sulphuric content of environmental pollution. If a photographic emulsion is converted to silver sulphide, it will then not be affected (to a lesser degree at least) by the action of sulphur as it has already been converted to a sulphide compound.

Two direct toners that combine metals with a bleach in a single solution are copper and blue (which uses ferric iron salts). The red and blue tones provided by these two chemicals have been used extensively; however, due to the inclusion of bleach (potassium ferricyanide) within their content they have never been considered as offering prints of any great permanence. Toners containing coloured dyes have also been used with some success though never gaining the same popularity as the traditional metal based solutions. The process of multiple toning—using one toner after another—provides a wider range of colours such as various reds offered by gold toning a sepia toned print. However it is probably the archival use of toners such as gold and selenium that have been their biggest contribution to twentieth century photography. Popularised by photographers such as Edward Weston and Ansel Adams the practise of toning black and white photographs purely to increase the lifespan of the photographic print has enabled their work to live on and continue to be appreciated.

PATRICK TOSANI

French

Patrick Tosani is one of France's leading photographers. His career has been founded on a serial practice that abolishes borders between photography, painting, and sculpture, and since the early 1980s, Tosani has developed numerous series of large-scale color photographs. Each of these series is made up of precisely cropped, slightly varying close-ups of interesting yet mundane objects. Items including fingernails, spoons, scalps, drum skins, levels, shoe heels, circuits, and the soles of feet have served Tosani as subjects, and he documents these objects on a scale and with a typological exactitude that renders them extraordinary.

Tosani was born in 1954 at Boissy-l'Aillier. After studying architecture, and following the advice of his art teacher, Tosani took up photography, which seemed an ideal medium for his interest in investigating how to represent space. His first series reflects this concern as well as the problems of how to manipulate and create a fictional narrative by means of common, well-described objects. In an early work Tosani conceives blow-ups of ice cubes that feature small figures of sportsmen. Most often, these sportsmen seem stopped in mid-movement, inferring that the body does not move within an urban architecture but depends on an uncertain organic architecture. This idea will be used again by Tosani in his next series entitled *Palais, Forum, Arènes*. It is no longer about the body per se, but images of architecture and architectural environments cut from newspapers. These cut-outs are also encased in ice cubes, however, an essential if not existential variation occurs. Behind the ice cube, a candle flame appears, creating a dramatic and appealing image as the photographs fix the ice's melting while the architecture seems to burn from the inside. Referring to a temporal fiction and a narration about image loss, Tosani captures simultaneous acts of destruction to create his photographs.

Tosani's 1984–1985 *Portraits* emphasize the inherent paradoxes of photographic image (opacity and visibility, subject and object, the freezing of the instant within movement, and so on). They were obtained through projecting a blurred image of a

head on a surface upon which Braille characters are superimposed. The photographed signs thus lose their usefulness, and refer to an inability to read or to describe the photographed man, made all the more frustrating by the fact the work is identified as a portrait.

In his work in general Tosani weaves together reflections about appearance and surfaces. The ice cube lets us briefly see a face, but this face is blurred by the melting of ice; so-called portraits offer but a blurred vision of a face and a further impossibility of presenting Braille, which cannot be touched, as it is merely an image of Braille. Tosani elaborates his assertion about specificity of the photographic medium in comparison with painting and sculpture. In one of his first series, *Pluie (Rain)*, he focused on drops falling from a fountain, creating an equivalence with rain, not as a climatological element but as a sculpture. Photography becomes the tool that permits one to modulate forms of "rain."

The series entitled *Niveaux* and *Cuillères*, both from 1988, *Talons de chaussures*, from 1987 and *Circuits*, from 1989 respond to the same modes: accumulation, change of level, and a diversion of objects through their representation. For instance, the spoon is metamorphosed, for in the picture, the handle is not shown. Thus from a kitchen tool, the spoon is transformed into a mirror, a surface on which the light is reflected. In the series *Niveaux*, also photographed on neutral background, only a bubble can be made out. These pictures suggest the borderline between form and frame of the picture.

In the late 1980s Tosani began to focus on the human body or metaphors for the body. The series featuring drum skins, *Géographie* (1988), suggests a parallel between two kinds of skins: the skin of the instrument and the human skin. The 1990 series entitled *Ongles* gives a restricted and fragmented vision of a body through the use of close-up shots and cropped framing. Tosani raised the specter of the body as food with the very close-up works of the *Vues* series, which represent pieces of meat, or in the series *Millefeuilles* and *Bouchées* in 1992.

The 1992 series called *Têtes* depersonalizes his models through extreme angle shots that show only the hair and scalps of the subjects. Tosani then develops a parallel between his images and

titles, which consist of the subjects' initials, because they likewise reveal only a part of the model's identity (such as *P.G.*, 1992). In the 1996–1997 series *Corps et Vêtements*, the body is represented by a single position, such as sitting cross-legged (*CDD I*, 1996) or even by a pile of clothes dated with a day of the week (*Lundi* and *Jeudi*, 1997). Tosani always shoots against a white background to further enhance the distance relationships and allow the shift of the object or the body from its daily environment to Tosani's own space and imagination. Tosani's body pictures refer to a fragmentation that seems linked to the inability to establish identity. In his series *Les masques (Masks)*, 1999–2004, he twisted articles of clothing such as bermuda shorts and pants and stiffened them with glue in order to transform them into masks: the clothes are photographed from the inside, laid down on the ground or on a base, with the crotch of the pants delimiting the space for the nose, legs represent eyes, and so on. Featuring patterns of color, these

masks seem to be ready to be used in a Commedia dell'Arte play.

OLIVIERO TOSCANI

Italian

An Italian photographer connected to the world of fashion, Oliviero Toscani achieved a world-wide reputation in the 1980s and 1990s through his

advertising campaigns (many of them highly controversial) created for Benetton, an Italian clothing company. His photographic images have a strong impact, relying on a spare presentation of only the elements that are essential for the message being

conveyed. Toscani's photographs are usually created inside a studio; most of them are portraits, shot frontally, against a neutral background.

Toscani was one of the first photographers to use modern advertising to send ethical messages. Favored topics were racism and social prejudice, the fight against AIDS, the injustice of war, and capital punishment in the United States. The incursion of ethical messages in his Benetton ads have drawn opposite reactions: some accused Benetton of commercial exploitation, while some believed he was increasing public awareness of critical social issues.

Oliviero Toscani was born 28 February 1942 in Milan. His father, Fedele Toscani, was a photojournalist at the daily newspaper *Corriere della Sera*. At the age of 19, Toscani enrolled in the Kunstgewerbeschule in Zurich, where he studied photography. His education in the medium was not limited to technical matters, however, as one of his teachers was Serge Stauffer, a colleague of the French avant-garde master Marcel Duchamp.

From the end of the 1960s to the beginning of the 1980s, he worked as a fashion photographer for most of the leading international magazines in the field: *Elle*, *Vogue*, *Lei*, *G.Q.*, and *Harper's Bazaar*. He quickly became known for provocative advertisements for fashion clients such as Jesus Jeans, Prenatal, Valentino, Esprit, and Fiorucci.

In 1982 he began his collaboration with Benetton as the creative director of this worldwide clothing company, which had stores in more than 100 countries. The advertising campaign he conceived, known as "United Colors of Benetton," was meant to evoke the idea of a new tribe of young people spread all over the world, of different races or from different traditions, but equal under a Benetton sweater. The Benetton advertising campaign relied heavily on portraits. A predilection for the human subject came to Toscani via the work of August Sander and his famous *Antlitz der Zeit* project of 1929. Like Sander, who used clothing, accoutrements, and props to transmit the social status or profession of his subjects, Toscani created the meaning of his models through the use of symbols and identifying objects.

His first series portrayed groups of teenagers or children of various races and origins, embracing and kissing each other. The positive and high-spirited nature of this campaign was well received, as its message of understanding and peace was not inherently controversial and only those filled with prejudice would find it distasteful. From 1985 on

Toscani began to inject more political meaning into his message, using portraits of couples, often a man and a woman, shot in half-length, with flags in the photograph that supposedly identified their origins. Again most of these advertisements were overt in their desire for understanding, unity, and peace, such as the photograph in which a couple wearing a single sweater embraces, although one is identified through the use of flags as being from the USSR and the other from the USA. Made during the Cold War, the message was hard to argue with unless one took the position it was saccharine because of its unrealistic nature. In 1986, in order to identify his models, Toscani began to use stereotypes: in the series *Enemies* he costumes an Israeli and a Palestinian in traditional dress. They are joined by Toscani in a pacific embrace. While such depictions aroused ire in their use of confrontational images about volatile topics, they were generally well accepted.

Since 1989, the flags disappeared and the messages became more subtle, though richer with controversy, such as the campaign *Contrasts in Black & White*. For one 1990 ad he shot a detail of two wrists, a white man's and a black man's joined together by one handcuffs. No fashion is anywhere on view, and the universal messages of the earlier work are absent. The viewer is immediately challenged to identify his or her own prejudices: Which is the policeman and which the criminal? But perhaps more disturbing to many was the ad which showed a black woman suckling a white baby, as the straightforward depiction of breasts in advertising was still a taboo. His imagery became increasingly confrontational and even scandalous, especially when displayed in public on billboards. Some magazines refused to publish them, in particular the photo of a newborn child, still dirty with blood and placenta and attached to the umbilical cord. Sometimes campaigns found innocuous in certain countries and cultures were found pornographic in others, such as a picture of children sticking out their tongues, considered an obscene gesture in Arab cultures.

In 1992, Toscani took a new approach: he chose agency images from Magnum and Sygma, and transformed them into advertisements merely by applying the Benetton label to them. The most shocking image in this series was the one which portrayed David Kirby, a young American sick with AIDS, shot in the moment of death. In 1994, one of his images was used like a symbol in occasion of a series of celebrations in South Africa. The

culture of tolerance was represented with the particular of the passage of a witness: a white man passes it to a black one.

Perhaps the most disturbing campaign appeared in January 2000, dealing with the topic of capital punishment in the United States. Thirty American death row inmates were featured in Benetton's commercial catalogue with the tag over their heads: *Sentenced to Death*. This was the last advertisement Toscani created for the Benetton Company.

The real novelty in the advertising strategy of Toscani-Benetton was to publicize a brand without speaking about the product, which has become increasingly common and is often called "lifestyle advertising." In Benetton's case, however, the lifestyle they portrayed was one not so much of form, that which would be achieved by wearing the right clothes, but content: only those with the proper attitude were fashionable people.

The photographs of Toscani did not need exhibitions or museums in order to become known, as they have been hanging worldwide on the walls, so to speak, of cities for years. In 1993 Toscani was invited to the 45th Biennale of Venice, the premier international exhibition of contemporary art. In 1995, Chantal Michetti organized an exhibition of Toscani's most famous ads at the Musée d'art Contemporain in Lausanne. In the same year, an exhibition, *Toscani al muro*, that covered the most important Benetton campaigns, made a world tour, appearing in Brussels, Belgium; Salamanca, Spain; Mexico City, Mexico; Sao Paulo, Brazil; and Santiago, Chile.

The Benetton campaigns won Toscani many awards, including the "Grand Prix d'Affichage," the UNESCO Grand Prix, and the Art Directors Club of New York's Management Medal. He won four "Lion d'Or" at the Cannes Festival for television spots.

With the continuing support of Benetton, Toscani has been directing, since 1992, the internationally distributed magazine *Colors*, a monthly review of social topics from all over the world. Each issue deals with a single topic, developed through the different voices and opinions of the people photographed and interviewed in the streets.

Since the end of his partnership with Benetton, from 1993 to 2000, Toscani directed *Fabrica*, an international center for research in the arts of modern communication, realizing a new center of research for modern communication, which included the creation of a web site. From his home in Tuscany, Italy, he collaborates with *Elle* magazine

and works as a creative consultant at Talk Miramax in New York.

CHARLES TRAUB

In addition to a distinguished career as a photographer, Charles H. Traub has made numerous contributions to the field of photography through his critical writings, curatorial endeavors, and as an editor of several noted volumes on photography. He is also a respected fine arts educator, most recently as Chair of the Graduate MFA Program in Photography, Video and Related Media at the School of Visual Arts in New York City. Traub is best known for his close-up portraits of street people, and for less obtrusive observations of the subtleties of casual human behavior, both domestic and foreign. Traub's camera catches unique flashes of happenstance—life's interesting and idiosyncratic moments. His creative acknowledgement of these chance encounters and evocative surfaces lend impression and meaning to what otherwise would remain ephemeral.

Traub was born in 1945 into a professional family in Louisville, Kentucky. After receiving a Leica camera from his father, Traub decided to enroll in a photography course at the University of Illinois. There, in a hallway, hung an Illinois horizon by landscape photographer Art Sinsabaugh. The encounter with the image had a profound effect on Traub. Sinsabaugh, along with Aaron Siskind would become Traub's teachers at the renowned Institute for Design in Chicago (ID)—a place also noted for the presence and influence of László Moholy-Nagy, Harry Callahan, and Arthur Siegel. Traub, years later, edited *The New Vision: Forty Years of Photography at the Institute of Design*, which pays tribute to the brilliant work that emanated from ID, including works by the main mentors and illustrious graduates of the school.

Aaron Siskind's tutelage is most evident in Traub's early oeuvre, particularly in a body of images titled, *Early Works, 1965–1970*. In these photographs can be seen the influence of Siskind's penchant for abstraction, particularly as it highlights forms and details in nature and architecture. Representative of this period is an image of a small but brilliant triangular beam of light illuminating an otherwise tenebrous wooden interior space. And, in this same series, a wilting head of iceberg lettuce sits in the interior of a windowsill behind which is visible the exterior of a nearby window

dusted with snow. Traub also adopted Siskind's Modernist understanding of the photographic subject, namely, that each photograph acts as an object that confronts you, rather than as an aesthetic article meant for passive viewing. Whereas Siskind most often applied these notions to his abstracted views of rocks, aging graffiti, and peeling paint, Traub adopted this approach in depicting the encounters of the human subject. An equally key early influence on Traub was the artistry and personal mentorship of photographer Ralph Eugene Meatyard. The small but legendary gallery in Meatyard's optometrist shop in Kentucky housed Traub's first solo show in the late 1960s—an event that Traub credits as having catapulted him into the art world.

By the time of his *Beach* photographs in 1978, we begin to see the main thematic concerns and stylistic elements that would become emblematic of Traub's photographic practice—his interest in documenting the habits and travails of modern life, and his creative attraction to the manner in which people inhabit urban and rural spaces. The beach, a place of display, offers a particularly good opportunity for exploring the contours and details of all manner of human form—a representational preoccupation that reoccurs throughout his work. We see in this series another quality that characterizes Traub's work, the intrusion of the camera into the subject's personal space, so much so that the images provoke a sense of trespassing. This is particularly true of his *Street Portraits* series, shot between 1976–1980, in which some portraits exude a mug shot-like countenance, and in *Street Work*, 1972–1977, where subjects' limbs are often severed by the photographic frame, leaving only torsos as indicators of expression. In a more explicit group of work from 1984, *Charles Traub: The Artist and His Models*, the voyeuristic implications of the medium and intrusive qualities of the camera are even more heightened by the picturing of mostly gaunt nudes in various states of undress. The raw, visceral quality evident in this series is a recurrent trait in Traub's work; honest, rather than flattering representations are given more artistic weight. In his wide-ranging oeuvre, Traub is not solely preoccupied with intimacy and physicality. With a

nod to Sinsabaugh, he also uses panoramas to document the intersection of place and form. This is perhaps most evident in, *On the Edge, New York Waterfront*, 1988, where arrays of city denizens inhabit the same frame as New York cityscapes.

Traub has also shown significant interest in photographic composition, especially the sometimes ambiguous space between creative intent and accident—artistry, according to Traub. On view in a collection of his work titled, *In the Still Life*, is the “fly on the wall” quality apparent in many of Traub’s images. Traub seizes upon seemingly random happenings and improbable juxtapositions. Through Traub’s photographs, the viewer re-encounters the often-missed absurdities of everyday life and the surreal aspects sometimes contained within the ordinary. In this series are pictured, for example: a sleeping baby whose blanket lies on a swatch of astroturf and whose cover is provided by an appropriately sized American flag; and three women dressed head to toe in black clothing passing by a window display of three mannequins dressed in white garb.

Another salient feature in a number of Traub’s photographic projects is his interest in the artful juxtaposition of photographic image and text. In two volumes that Traub co-edited, *Italy Observed In Photography and Literature*, and *An Angler’s Album*, Traub explores the synergism that results from the pairings of quotations and photographs that are not necessarily illustrative of one another. In *Italy Observed*, images chosen by Traub (including five of his own), which alternate between gritty realism and neo-pictorialist romanticism are combined with Luigi Ballerini’s selection of textual excerpts from American and Italian writers. This original pairing of words and images and their unexpected synthesis of meaning is used to mine the accumulated mythologies of encounter surrounding Italy. Transformed by time and new associations, these photographs also comment on the ever-changing nature of what constitutes place. What Umberto Eco, in the introduction to the book, pegs as “verbal-visual poetry,” forces “the reader to think, to imagine, to recreate his or her image of the country—which could well be different for everyone” (Eco 1988, 6). One such iconoclastic image of Traub’s, *Marriage on the Rocks*, Naples, 1981, displays an awkward assemblage of disinterested and partially off frame characters, including a bride, and a groom with his back to the camera, perched on boulders.

Traub’s interest in and approach to uses of technology stem from the formative time at ID, where Moholy-Nagy’s pedagogical vision embraced new media and emergent technologies. Through his prodigious writings on the subject, Traub has intimately explored the relationship of art to technological innovation. In pieces such as, *Creative Interlocur and Multimedia Dialog* (2000) and *In The Realm Of The Circuit* (2003), Traub situates technological innovations within a long chain of historical precedents. Traub posits that technology has always been integrally connected to human expression and that “technology has always aided, rather than hindered, human expression and creativity” (Traub 2001). Traub’s technology-based writings act as primers for creative contributors in the digital world, suggesting innovative ways to connect technological practice to bodies of knowledge. Traub coined the term “creative interlocutor,” to describe an individual able to integrate seemingly disparate elements of knowledge and bring them together in previously unimagined ways. In *Metabolism of Photographic Truth in the Digital Age*, Traub examines how notions of photographic verity are challenged by the uses of digital technology.

One of Traub’s most enduring legacies is his contribution to the curatorial project, *Here is New York: A Democracy of Photographs*, 2001. Traub, along with writer Michael Shulan, photographer Gilles Peress, and editor Alice George, founded the project, which tells the story of September 11, 2001, through photographs. *Here is New York* started one day after the attacks, with a single photograph taped to the window of a downtown Manhattan storefront; the project grew to include thousands of images taken on that day by professional photographers, emergency workers, and ordinary bystanders. Each photograph was displayed anonymously, without labels or captions, thus removing any distinctions between professional and amateur contributors, and underscoring the egalitarian response to the tragedy, while also making the point that it was the content of the images rather than their makers that mattered. The photographs convey an array of different responses to the tragedy, while bearing witness to the almost unimaginable events and honoring the people who perished. *Here is New York* has traveled both across the United States and internationally and, in 2002, hundreds of the exhibition photographs were published as a book with the same name.

TRAUB, CHARLES

Traub's photographs have also appeared in a variety of magazines and journals including: *Connoisseur*, *Fortune*, *Newsweek*, *U.S. News & World Report*, *American Photographer*, *Popular Photography*, *Aperture*, and *Afterimage*.

TSENG KWONG CHI

American

Tseng Kwong Chi gained fame with his remarkable series of photographs *East Meets West* produced during the 1980s. Part self-portraiture, part landscape and tourist photography, Tseng's decade-long project investigated notions of cultural identity with its paradoxical mix of transcendent and ironic observation.

Born in 1950 in Hong Kong, Joseph Tseng was the oldest of three children in a traditional Chinese family. His father, Ronald Tseng, bought a Rolleiflex camera while he was in the Nationalist Army, and passed on a love of the photographic medium, as well as the camera, to his son. Early art classes at the St. Joseph's Art School in Hong Kong consisted primarily of painting and drawing, and Tseng was quickly identified as a young man of artistic talent. In 1966, the Tseng family left Hong Kong and settled in Vancouver, British Columbia, Canada. After a few years of high school and college in Vancouver and Montreal, Tseng moved to Paris for formal art training at L'École Supérieure d'Arts Graphiques of L'Académie Julien. Studying first painting and then photography, Tseng completed his degree with honors in 1975.

In 1978, Tseng moved to New York City where he befriended visual and performance artists in the East Village including Keith Haring, Kenny Scharf, Ann Magnuson, and John Sex. This collaborative group staged exhibitions and events outside of the traditional gallery structure at places such as Club 57 on St. Mark's Place and the Mudd Club. Tseng contributed his photographs to exhibitions as well as documented the vibrant scene around him.

Tseng's mature artistic identity first emerged in 1979 when, invited to dinner at a fancy Manhattan restaurant, he put on the only suit he owned—a Chinese Communist worker's uniform he had purchased in Montreal. The restaurant staff mistook Joseph Tseng for a visiting dignitary and proffered VIP accommodations. From that day forth, Tseng adopted his Chinese name, Kwong Chi, and the traditional form in which the given name follows the family name, and wore the Maoist suit whenever performing as an artist. Tseng added a military haircut and a small photographic identification

badge to his uniform and in 1980, crashed a reception at the Metropolitan Museum to celebrate an exhibition of Ch'ing Dynasty costumes. Tseng was again mistaken for an official representative of the Chinese government and welcomed into the event where he invited celebrities and actual dignitaries to be photographed with him. Both Henry Kissinger and Yves Saint Laurent posed with Tseng that night, and the artist discovered a way to investigate cultural knowledge and self-identity through the exploitation of a stereotype.

East Meets West consists of approximately 150 black and white photographs produced during the 1980s, initially with his Rolleiflex camera, and after 1987, with a Hasselblad camera. In his earliest work from the series Tseng visited tourist destinations in the United States such as Disneyland, the Statue of Liberty, and Mount Rushmore. In each of these works he wears his uniform, and dark sunglasses mask his eyes with a reflective surface. His photo-ID badge is clearly visible in most images, but its description of him as "SLUTFORART" in small typeface is a humorous detail known only to those familiar with his ironic strategies. Standing before postcard-perfect views of his destinations, Tseng took on the role of an anonymous foreign tourist "visiting" from a Communist nation on delicate footing with the United States in the midst of the Cold War. In 1984, he described his constructed identity as "an inquisitive traveler, a witness of my time...an ambiguous ambassador" (Houston Center for Photography, 1992, p. 22). In works such as *Disneyland, California*, 1979, Tseng poses with a cheerfully waving Mickey Mouse against a close backdrop of hedge and amusement park rides. Tseng's stiff posture, tight jaw, and left hand clenched around the shutter release cable present an ominous contrast to the diminutive stature of the wide-eyed cartoon character. The order and control of Tseng's character as he looks off into the distance seems to imply a dismissal of the chaos and frivolity of capitalist entertainment.

By 1983, Tseng was traveling internationally for his project and sites such as Notre Dame Cathedral in Paris and the Tower Bridge in London were also included in his *East Meets West* series. During these years, Tseng remained active in the

East Village art scene, and as a close friend of the artist Keith Haring, he became an important collaborator in documenting Haring's chalk drawings on empty black advertising panels in the New York subways. As Haring's drawings were considered "graffiti" by the New York police, both artists had to work quickly to avoid arrest and Tseng's photographs continue to stand in many cases as the only record of Haring's ephemeral work. In 1984, Tseng's photographs of Haring's subway drawings were published in a book, *Art in Transit*, with an accompanying essay by curator Henry Geldzhaler. After Haring ceased making drawings in the subway, Tseng continued to collaborate with him to document his work, and traveled with Haring internationally to record his projects including Haring's painting on the Berlin wall in 1986 and his painting on the body of dancer Bill T. Jones in 1983.

Tseng continued to develop his *East Meets West* series and in 1985 his work was included in the Whitney Biennial at the Whitney Museum of American Art. With the acquisition of a Hasselblad camera in 1987 and the employment of an assistant, Tseng was able to distance himself from the shutter release and move deeper into the landscape. His subject matter turned to the spectacular Western landscapes that had inspired painters such as Albert Bierstadt and photographers such as Timothy O'Sullivan and Ansel Adams. Somewhere during these years the title of his project became *The Expeditionary Series*, making explicit the shift away from the confrontational nature of the earlier photographs. Exploring the American wilderness, Tseng's later work is much less informed by capitalist tourism, and instead considers the quest for a transcendent sublime that has informed much of our national identity. As Tseng takes on contemplative postures, standing in some images with his back to the viewer as in a Caspar David Friedrich painting, the socio-political implications of his uniform diminish greatly. *Grand Canyon, Arizona*, 1987 captures an enormous view of the Colorado River winding its way through the landscape. The viewer must strain to discover the tiny figure of Tseng standing on some distant rocks in the foreground. Although Tseng still clearly wears his Maoist uniform, if one knows to look for it, its role as a signifier of the artist's identity as "foreigner" has clearly been subsumed by the grandeur of the natural world in which Tseng now stands simply as one communing with Nature.

Like so many of his generation in New York that emerged in the 1980s, Tseng died of AIDS in March 1990.

Biography

Born Joseph Tseng in Hong Kong, 6 September 1950. Attended St. Joseph's Boys Catholic School in Hong Kong. Moved with family to Vancouver, British Columbia, Canada in 1966. Attended Prince of Wales High School, Vancouver; one year at the University of British Columbia; one year at Sir George Williams University, Montréal. Studied painting, then photography at L'École Supérieure d'Arts Graphiques of L'Académie Julien in Paris and graduated with honors in 1975. Moved to New York City in 1978. Takes on Chinese name, Tseng Kwong Chi, and Maoist costume, and begins *East Meets West* series in 1979. Documents East Village arts scene and work by Keith Haring 1979–1989. Publishes *Art in Transit*, 1984. Received Yale/Brachman Award for Distinguished Cultural Contribution, Timothy Dwight College, Yale University, 1987. Received Award for Distinguished Work, Asian American Arts Institute, New York, 1990. Died in New York, New York, 10 March 1990.

DEBORAH TURBEVILLE

American

Deborah Turbeville is known for her compelling and controversial fashion images, many of which, along with personal work, have entered the fine arts market and been exhibited internationally. She was born and raised in New England and moved to New York City when she was 19, planning a career on the stage. Needing work, she began her fashion career as a model and assistant to designer Claire McCardell, who proved to be an important influence. With the experience and contacts she gained at that job she moved on to editorial positions at several magazines, including *Ladies' Home Journal*, *Harper's Bazaar*, and *Mademoiselle*. In 1972, she switched roles to that of photographer and became one of a small group of image-makers (including Helmut Newton and Guy Bourdin) who profoundly changed the aesthetics of fashion photography in the 1970s.

In Turbeville's work, the clothes were secondary to the mood, which was created by taking soft-focused, grainy images of women in empty or derelict settings. "In what kind of mood would a woman be, wearing whatever? I go into a woman's private world, where you never go. It's a moment frozen in time. I like to hear a clock ticking in my pictures" (Taylor). Eerily ambiguous situations

invited the viewer to project his or her own story onto the scenario, leading to some controversy. For instance, one series of models in swimwear, which was set in a bath-house and featured in *Vogue* in 1975, was seen by critic Gene Thornton as featuring "...ladies...writhing in agony on the floor or moping about in catatonic trances....," while Hilton Kramer felt that "its 'Marat/Sade' imagery leaves one wondering if we have not moved beyond the boundaries of fashion photography into something more pathological."

Turbeville was not the first fashion photographer to create unsettling photographs: Cecil Beaton placed a model in front of a bombed out building in 1945, and Diane Arbus perched startled-looking twin boys on the lap of their hirsute father in 1969, among other examples. However, Turbeville's degree of artistic experimentation was part of a movement away from a focus on the clothes and towards a more ambiguous, inventive, and often narrative way of engaging the fashion viewer.

Turbeville's unique approach came in part from her paucity of formal photographic training. In 1966, she took her first photographs in Yugoslavia: the images were out of focus, but compelling. She then took a six-month seminar with Richard Avedon and painter and art editor Marvin Israel, and spent time watching films for narrative inspiration

(some of her photographs have been compared to the work of filmmaker Alain Resnais), but otherwise she was an inexperienced photographer. However, her initial difficulties with focus and exposure were seen as a fresh approach to fashion imagery. Her choices of a 35-mm camera and frequent use of natural lighting were also a departure from the status quo. As she gained experience Turbeville continued to break rules, sometimes presenting scratched, taped-over and ripped prints as finished work. Her initial efforts were in color, because she lacked darkroom skills, although she has subsequently worked in both black and white and color. The color palette she chooses is typically soft and fairly monotone, resembling gentle hand coloring. Her black and white prints are toned or hand colored at times. When using Polaroid film, she may leave the prints to discolor, another way to achieve her offbeat look.

In addition to advertising and editorial fashion work, Turbeville has published a number of books, some overlapping with her fashion photography and some featuring independent projects. *Maquillage* (1975), printed as the catalogue for an early exhibition at the Rizzoli Gallery in New York, featured what would normally be the discarded Polaroid images taken to check lighting on a fashion set, combined with handwritten bits of letters to her from models. *Wallflower* (1978) featured images previously seen in Condé Nast publications along with contact sheets. *Unseen Versailles* (1981) was a personal project facilitated by her Doubleday editor, Jacqueline Onassis, in which she captured the closed rooms, back stairs, and empty gardens of the French palace. Models were used at times, but the emphasis was on the place. She used a similar approach with Rhode Island mansions in *Newport Remembered*, in which she wrote, "I like dinosaurs...whether we're speaking of the palaces of the Czars, the Venetian palaces of the Doges, or Versailles...I see lives played out against these backdrops, these now vacant halls. That's what I'm after. Their past." In Claus von Bulow's review of that book he wrote: "Ms. Turbeville's photographs are beautifully shot through fog and cheesecloth, creating partly an aura of an old family album, and partly an atmosphere of decomposition and decay."

The commercial and personal work of Deborah Turbeville flow smoothly together, and both have been embraced by the fine art establishment, as typified by a solo show at the Centre Georges Pompidou in 1986. Her photographs have been shown frequently in galleries in New York as well as in cities around the world, including Paris, Tokyo, Milan, and Mexico City. Exhibitions of

her work have been unorthodox at times. In New York in 1981, *Unseen Versailles* was presented in the form of torn prints that appeared to be randomly pinned to brown paper on the gallery walls. This approach was seen by some as distracting, while Deborah Phillips felt that the decay of Versailles "was effectively echoed in the fragmented nature of this imaginative installation." Ten years later, pictures from Latin America were presented in a similar fashion.

Deborah Turbeville has lived in New York and Paris. In the 1980s she bought a house in Mexico, and started a series of work in Mexico and Guatemala that was exhibited in 1991–1992 in the United States and in Europe. She has also been attracted to Russia. Over recent years she has photographed a number of Russian palaces, and in 2003 she taught photography in St. Petersburg through a Fulbright scholarship. She lives in New York and continues to pursue personal and commercial photographic projects.

TYOLOGY

A typology is an analytical study or classification system based on types. It is a concept often associated with theology, Jungian psychology, personality assessment, linguistics, architecture, and criminology.

The premise behind typology is that a set of similar objects can be identified by their external appearance, and that things manifesting that outer appearance will have other characteristics in com-

mon with other things that resemble it. That is, things may be grouped together by how they look, and their behavior may adhere to certain established precedents.

The use of the term typology within photography has come to refer to a methodical image-making approach that expands on the general description outlined above. The term can be used both descriptively, summarizing a group of images in retrospect, and predictably, anticipating the style a given artist will employ to record a particular subject. Furthermore, it can, by extrapolating from earlier photographs, signal a type of subject matter that a given artist would be likely to portray. Broadly speaking, typological photographs are identified by an empirical, straight-forward appearance, with great detail and clarity in the prints. They are often displayed or reproduced in series; one important element of a typological project is its open-ended quality of comparative investigation. A given image in a typology implies that there will always be another example of what you have seen, and that juxtaposing the new and the old will reveal meanings inherent in each individual image, and in the series overall.

Origins and Precedents

The Germans Bernd and Hilla Becher introduced the term “typology” to the vocabulary of photography in the subtitle of their first monograph, *Anonyme Skulpturen: Eine Typologie technischer Bauten*; the Bechers’ images of blast furnaces, water towers, frame houses, coal mine heads, and other industrial structures, begun in 1957 and usually presented in sequences or grids, are the most widely recognized examples of typological photography. But there is evidence of typological photography dating back to the beginning of the twentieth century and before. An important, often-cited model is the work of Eugène Atget, who brought the patient, passionate thoroughness of an historical cataloguer to his systematic documentation of Parisian architecture. August Sander provides what may be the definitive model for typology; his open-ended attempt in the 1910s and 1920s to record of “the face of our time”—that is, a collective portrait of all types of people inhabiting Weimar Germany—carries all the methodology, the serial, open-ended nature of the working system, and the compelling semblance of objectivity that characterize the contemporary standard-bearers of type photography. Sander was a typologist in all but the name. Also serving as typological antecedents from Germany are the photographers who worked under the *Neue Sachlichkeit*

(usually translated as “new objectivity”) banner, including Karl Blossfeldt and Albert Renger-Patzsch. Renger-Patzsch, who presented his spare, frontal esthetic in his influential book *Die Welt ist schön* (*The World is Beautiful*) (1928), Blossfeldt (see *Urformen der Kunst* [1925], published in the United States as *Art Forms in Nature* [1929]), and Sander are united in their apparent insistence on the predominance of subject matter as the principle cause for making a photograph, and the creation of straight, unmanipulated photographs to record and convey their impressions. The work of the American Walker Evans, specifically its apparent transparency or authorlessness, is also cited as a model for contemporary typologists.

Examples and Parallels

Younger artists, born in the 1940s and 1950s following the Bechers (and in many cases instructed by them in courses at the *Staatliche Kunstakademie* in Düsseldorf beginning in 1976), have carried out typological investigations into a variety of subjects. California-based painter Ed Ruscha’s 1960s book-works, collections of photographs almost completely described by their titles—*Twenty-six Gasoline Stations* (1962), *Thirty-four Parking Lots* (1967), *Every Building on the Sunset Strip* (1966), for example—are clearly in line with the goals of typology. American photographer Roger Merten recorded extensive series of trees (in both orchards and as featured players in Christmas activities), basketball backboards, and libraries, especially those funded in the United States and Canada by Andrew Carnegie. Lynne Cohen has documented interior spaces designed for scientific observation and for firearms testing. Bechers’ protégé Candida Höfer has used a hand-held camera to record impressions of large meeting halls, empty of people but full of chairs that often provide an anachronistic contrast to their surroundings. Fellow Bechers’ student Thomas Ruff’s enormous portraits of classmates at the Düsseldorf *Kunstakademie* pay homage to August Sander’s catalogue of types, while paring down his environmentally descriptive scenes to wall size approximations of passport photographs. These five artists, plus Judy Fiskin, Thomas Struth, and the Bechers, are presented by the exhibition and catalogue *Typologies* (1991), to date the most probing and definitive consideration of this mode of photographic practice. Essays by curator Marc Freidus, James Lingwood, and Rod Slemmons provide a range of perspectives on the history, meaning, and implications of typological photography.

Bernd and Hilla Becher, Blast Furnace, Hainer Hütte, Siegen Westfalia, Germany, from the portfolio "Industrial Buildings," 1975, Gelatin silver print.
[Bernd and Hilla Becher]

Other contemporary photographers whose work reflects typological inclinations include Andreas Gursky, Catherine Wagner, and Michael Schmidt. Also manifesting comparable concerns were the photographers included in the 1975 exhibition *New Topographics: Photographs of a Man-altered Landscape*, organized by the International Museum of Photography and Film at George Eastman House, Rochester, New York. The Bechers were the only non-Americans in the exhibition, which also featured work by Robert Adams, Lewis Baltz, Joe Deal, Frank Gohlke, Nicholas Nixon, John Schott, Stephen Shore, and Henry Wessel, Jr. The *New Topographics* approach was distinguished from typology in several ways, primarily in the formal execution of individual prints. Although many of the *New Topographics* photographers worked on projects that constituted extended series and made photographs with an ostensibly objective appearance, their concerns were largely social, esthetic, and humanistic, in contrast to the more austere, cataloging approach of the typologists. Typology could be considered a more postmodern approach, in contrast to the more traditionally estheticized images in *New Topographics*.

As Jonathan Green writes:

Consciousness of light is perhaps the quintessential characteristic of American photography. It is precisely the lack of luminosity that sets apart the work of the German photographers Hilla and Bernd Becher in *New Topographics*. Their work stems from a European, Teutonic demand for cataloging, and their world is seen in terms of constructions rather than illuminated objects within a luminescent landscape. Their obsessive concern with the typology of representation stands in marked contrast to the American delight in modeling sunlight. The Bechers use the medium merely to obtain a uniform sizing of disparate objects. Ironically, their work is the only work in *New Topographics* that literally records topography. For the American photographers, as Robert Adams said, 'Light still works an alchemy.'

(Green 1984, 170)

While typological photographs are not devoid of visual pleasures, they are characterized by equani-

mity of means and ends, and an interdependence with other pictures of their type. Form and content receive equal weight in these sequential pictures that imply and derive meaning from both past and future works; "The archive, not the picture, is an appropriate frame for understanding this work" (Freidus 1991, 12).

U

RAOUL UBAC

Belgian

Raoul Ubac is one of the leading figures in the Surrealist movement of the 1930s. His highly manipulated works testify to his innovative, experimental style that expanded the boundaries of what a photograph could be during a period of complex aesthetic and political turmoil. Rudolf Ubac was born in 1910 in Malmédy, Belgium, of a German father and a Belgian mother. The family's move to Cologne and Frankfurt-am-Main marked the rhythm of his childhood. He returned to Malmédy, however, to receive his secondary education from 1920 to 1928. The young man alleviated the boredom of living in this township of 6000 by taking frequent, lengthy walks through the Fagnes highlands. Ubac's affection for this region made him think of becoming a forestry engineer, but rebellion against the dominating middle class, and in particular against his own family, led him to nourish other projects, starting with several walking trips around Europe, notably in France.

After choosing French naturalization and gallicizing his name to Raoul Ubac in 1926, a first stay in Paris, in 1929, proved decisive. He met there the poet Jean Gacon, and reading the *Surrealist Manifesto* strongly impressed him. The same year,

he enrolled at the Sorbonne to study literature. A fellow student, Raymond Michelet, introduced him to poet and writer André Breton. Frequent visits to the Montparnasse Studios, then meeting the German painter Otto Freundlich, induced Ubac to forsake his literature studies and turn his attention to the visual arts. As a member of the Group of Progressive Artists in Cologne, Freundlich invited Ubac to stay in the German city, where Ubac first practiced photography in 1930, initially making a living from it. That enabled him to carry on with his frequent travels. Ubac enrolled at the Cologne Werkschule in 1932, where he received professional instruction, along with training in other artistic techniques.

Ubac produced his first significant series of works during a trip to Dalmacy. On Hvar island (part of present-day Croatia), inspired by the landscape of the shores, he assembled eroded stones that he photographed, drew, and painted. Evoking strange human silhouettes, these *Stones of Dalmacy* photographs expressed the artist's interest not only in the rendering of materials, but also in the imaginary association between the animate and the inanimate that became hallmarks of his work.

Ubac met Man Ray in 1933, who gave him confidence in his choice of photography as a medium and

encouraged him to experiment with various techniques, including the recently rediscovered technique of solarization. Ubac's wife, Agathe Schmidt ("Agui"), whom he had met two years before in Cologne, posed for numerous portraits and nude studies that seem to be irradiated from within by light. Using superimposition, Ubac made a portrait titled *Agui dans le miroir au tain endommagé* (*Agui with the Damaged Mirror Silvering*), which was reproduced in the surrealist review, *Minotaure*, in 1938.

By 1934, Ubac was permanently established in Paris. That year, Ubac took part in the illustration of painter and sculptor Camille Bryen's book of poems, *Actuation poétique*. At the same time, both artists joined in a billboard campaign: *Affichez vos poèmes, affichez vos images!* (*Post up your poems, post up your images!*). One of Ubac's pictures, showing a slice of liver escaping from the open mouth of a young woman, echoes French philosopher Georges Bataille's famous notion of "unformed." Refusing the conventional formal categories considered proper to each object, the photographer transgressed them, as a sort of manifesto.

But it is essentially between 1936 and 1939 that Ubac's work fully fits in Surrealism, for instance, with visual quotations of the surrealist painters like René Magritte (*La Chambre* (*The Sleeping Room*, 1936), or Giorgio de Chirico (*La rue derrière la gare/Hommage à Chirico*, (*The Street behind the Station/Homage to Chirico*, 1936). In these pictures, photomontage tends to create strangeness by opening a bedroom door onto the sky or by crowding a desert street with antique sculptures. But it is mainly from the creation of his major series, *Penthesilea*, that Ubac was associated with the surrealist movement. Produced between 1937 and 1939, this series, inspired by Heinrich von Kleist's eponymous play, re-examines the mythic story of Penthesilea, queen of the Amazons. It is present in a series of collages that show fighting women, made of nude photographs Ubac had taken of Agui in the 1930s. Transformed by several techniques like superimposition, solarization, and montage, these pictures form virtual frescoes.

Other techniques explored by Ubac also allowed him to introduce a distancing, which is essential to "surreality." One technique, explored in 1938, is *paraglyphe*, wherein the illusion of low relief is created by using the negative image to mask the positive image. This process gave rise to what Ubac called "fossils," images giving the impression that what they show has been petrified. In 1939, he created what he dubbed "*brûlages*" (burnings), obtained by progressively melting a negative that is then printed out by placing it under a heat source.

In both cases, the photographic image essentially becomes a material manipulated by the artist to its own limits.

By its nature, Ubac's work was strongly related to the Surrealists, in particular to Hans Bellmer, poet Benjamin Péret, and painter Victor Brauner, and Ubac became officially affiliated to this movement with the publication of his works in the seminal Surrealist magazine *Minotaure* between 1937 and 1939.

With the outbreak of World War II, the Surrealists were scattered; Ubac initially took refuge in Carcassonne in southern France with Magritte and his wife, in 1940. After the Nazi occupation, Ubac and Magritte were repatriated to Brussels, where they published together two editions of *L'invention collective*. In the second edition, Ubac published the text *Les pièges à lumière* (*The Light Traps*), in which he insisted on the transformation of visual perception by photography. His importance as one of the Belgian Surrealists is made clear in Paul Nougé's preface for Ubac's 1941 exhibition catalogue. In Paris again in 1942, Ubac associated with the "Messages" group, led by Jean Lescuré, as well as with the "Main à la plume" association, which both manifested Surrealist tendencies. Ubac illustrated Lescuré's text, *L'exercice de la pureté* (*The Exercise of Purity*). Although he continued his own research on spatiality and relations between objects as in the series *Objets reliés* (*Related Objects*) of 1942, Ubac began to turn away from photography, abandoning it completely in 1945. Although he continued to create paintings, sculptures, etchings, and drawings, his photographic work largely sank into oblivion until a resurgence of interest in Surrealism in general and Surrealist photography in particular brought renewed attention to his accomplishments as a photographer at the end of the 1970s. Raoul Ubac died in Dieudonné, France on March 22, 1985.

JERRY UELSMANN

American

Influenced by Surrealist ideology about dreams and the subconscious, Jerry Uelsmann is considered a master of the photomontage creating his private metaphoric statements in universes of his imagination. Initially experimenting with combination printing as early as 1959, in the 1990s Uelsmann mastered working with the digital computer to continue producing photographs in which reality and fantasy seamlessly merge into complex visual poetry. Process and idea remained simultaneously integral to the success of the final image, as he always stressed.

Born in Detroit, Uelsmann developed an interest in photography at the age of 14, with the encouragement of his father. He later went on to study photography under Minor White and Ralph Hattersley at the Rochester Institute of Technology, New York, where he received his BFA in 1957. While the purist or straight approach dominated the aesthetics of image making at the time, both White and Hattersley suggested to their students the possibility of creating work as metaphors for ideas and feelings. Uelsmann's fascination with "those dark and evocative images that emerge from just beyond the threshold of conscious understanding" began during an assignment for White's

class for which students were to photograph doorways of “ominous portent.” Taking a cue from White’s theory about the camera as a metamorphosing machine, Uelsmann began creating images meant to be metaphors of expression. His first published photographs appeared in the 1957 annual edition of *Popular Photography*. At the University of Indiana in Bloomington, he received an MS in Audio-Visual Communications in 1958 and then, after studying with Henry Holmes Smith, an MFA in photography in 1960. As Uelsmann’s mentor and an advocate of the experimental potential of the photographic process, Smith reinforced Uelsmann’s understanding of the expressive qualities of the medium rather than the technical aspects. Later that same year, with the help of Van Deren Coke, he became an instructor in the Department of Art at the University of Florida, Gainesville. Uelsmann was appointed Assistant Professor in 1964 and became Associate Professor in 1966. As an artist/educator in the 1960s and 1970s, he was among a select group who developed photographic education within the college level curriculum. Concerned with providing a support system for teachers of photography, Uelsmann was also a founding member of the Society for Photographic Education in 1962 and later served on the Board of Directors.

Producing multiple imagery through combination printing since 1959, Uelsmann refined the process by 1963, employing it as an integral element in his art making, using as many as eight enlargers to produce one combination print. Uelsmann’s use of the combination printing method was derived from the process once employed in the nineteenth century by Oscar Gustav Rejlander and Henry Peach Robinson. In homage to his predecessors is Uelsmann’s *Self-Portrait as Robinson & Rejlander*. His early photographs, influenced by Surrealist art, contained figures in illogical landscapes and settings in images with suggestive titles. Symbolism of the pictorial elements was further emphasized by placement within the surreal photo-montaged compositions. A common motif was the hand, symbolizing creativity. Themes centered around the forces of birth, rebirth, renewal, and self discovery. As his working process developed, Uelsmann once stated that the seeds of his images were within his contact sheets, enabling him to free associate and to see the possibilities between seemingly quite different images. His poetic allusions shared the same inspired mindset of earlier Surrealists, most notably painter René Magritte. The Guggenheim Fellowship he received in 1967 enabled him to continue his exploration of multiple printing techniques and to further explore what he began to

refer to as post-visualizations. Psychological emphasis, blended with Uelsmann’s private visions, enhanced the synthetic universes. One of his most renowned images, *Small Woods Where I Met Myself*, was made in 1967 employing positive/negative combinations and signifying the psychic intersection of spirit and self. Ghostly figures move above, below, and across the landscape of the mind as if in a waking dream.

In 1969, Uelsmann was appointed a Professor of Art and, in 1974, as the Graduate Research Professor at the University of Florida-Gainesville. He was awarded a National Endowment for the Arts fellowship in 1972. The University of Florida recognized his teaching abilities in 1975 by naming him the Teacher Scholar of the Year. That same year Uelsmann became a trustee for the Friends of Photography in Carmel, California.

It was during the 1970s when his technique expanded to include color processes. Imbued with subtle colors, simple elements metamorphosed into powerful, magical icons of intuition. Then, in the late 1970s and early 1980s, the subject matter of his work moved to include juxtapositions of nature to geometrical and architectural elements. Recurring elements were hands, eyes, the nude, rocks, mirrors, trees, and water, as seen in one of his best-known images, *Floating Tree*, 1969, weaving into the enigmatic, impossible spaces and places. Works were finished as “untitled,” thereby reinforcing the open-endedness of the mythical images. Disquieting ambivalence was sought. Amazement and revelation were sought, redefining the possibilities of the process to synthetically fuse reality and fantasy, such as cracked, parched ground seen below sun reflected waters. The familiar and unfamiliar together became the uncanny. Each work was a unique visual representation of inner dreams, even with “reprints,” which were essentially original recreations and not copies.

As his photographic works and his teaching style earned him the respect of his peers beyond the United States, Uelsmann became a Fellow of the Royal Photographic Society of Great Britain in 1973. Between 1975 and 2000, more than 10 books were published of Uelsmann’s work. In 1997, Uelsmann retired from his faculty position at The University of Florida. With more time at his disposal and with the encouragement of his wife, Maggie Taylor, who was proficient in manipulating imagery digitally, Uelsmann pursued his interest in learning the subtle capabilities of the digital process.

Even so, Uelsmann found proficiency with digital tools also required an adeptness that precluded technical overkill and yet permitted him to con-

UELSMANN, JERRY

tinue to create his seamless enigmatic spaces. Balancing a schedule of lectures and workshops from his home in Gainesville, Florida, Uelsmann continued to produce books and exhibit new work around the world.

DORIS ULMANN

American

Although her own background was one of upper-class privilege, Doris Ulmann used her photographs to record the vanishing customs, trades, and traditions in some of the poorest regions in the United States. Yet poverty was not the primary subject of her photographs. Ulmann was instead attempting to document a way of life and a culture that was slowly disappearing. Her portraits of people of the rural South are Ulmann's primary legacy to the history of photography.

Born Doris May Ulmann to Gertrude Maas and Bernhard Ulmann on May 29, 1882 in New York City, her father was originally from Germany and the owner of a successful textile company. Her mother, an American, died while Ulmann and her younger sister Edna were still children. A delicate child who suffered stomach problems, she spent some of her childhood traveling in Europe with her family. For her secondary education, Ulmann attended the teacher training program at the progressive Ethical Culture (Fieldston) School where her botany professor was the photographer Lewis Hine. From 1907 to 1910 Ulmann attended Columbia University where she studied law and psychology. It was at this time that she also began taking courses in photography with the photographer, Clarence White. For several

years White taught courses on photographic portraiture and Ulmann, along with other students (including Margaret Bourke-White and Laura Gilpin) learned to combine a Pictorialist technique of soft focus and extended tonal ranges with a modernist use of form and composition.

While at the Clarence White school she met and married a fellow student, Dr. Charles H. Jaeger. Ulmann and her husband would often take trips to picturesque places such as Quebec City, Canada, or Gloucester Bay, Massachusetts, in order to photograph the landscapes and the people until their divorce in 1925. In the early part of her career Ulmann toled her large, 5 × 7-inch view camera around New York, photographing various tradespeople at work. It was this body of work that first established her reputation as a photographer. The workers are usually posed with a tool or other object that indicated their trade—a street vendor, for example, leans over a truck full of garlic or a cooper is shown surrounded by barrels.

Ulmann became one of the first members of the Pictorial Photographers of America when it was founded in 1917. In 1919, her first photographic portfolio, 24 portraits of the Faculty of the College of Physicians and Surgeons of Columbian University, was published. One year later her photograph *Portrait of a Child* was published in the first issue of

Pictorial Photography in America and in the journal *Photo-Era*.

A lover of the theater and an avid reader, Ulmann often sought out actors and writers and other personalities whose work impressed her and invited them back to her Park Avenue apartment in order to make their portraits. Thus she is also known for her portraits of celebrities, especially writers and poets, including Sinclair Lewis, Robert Frost, and Edna St. Vincent Millay and actors Lillian Gish and Paul Robeson.

In 1925, Ulmann began a series of photographs of Shaker and Mennonite communities in Virginia. It was around this time that she first met John Jacob Niles, a musician and folklorist from Kentucky. Ulmann eventually hired Niles to work as her assistant when she began the project of documenting the social and religious customs of people of the backwoods of the Appalachian Highlands. In the summers of 1933 and 1934, the year of her premature death, she shot thousands of negatives of people, crafts, and landscapes to illustrate Allen Eaton's landmark book on crafts of the southern highlands.

Besides her Appalachian photographs, Ulmann is perhaps best known for her work documenting the descendents of slaves, who isolated on South Carolina's coastal islands, had developed a unique culture, called Gullah. In 1929, Ulmann met the writer Julia Peterkin, who invited Ulmann to come to her family plantation in South Carolina with the idea of making photographs for her book about the Gullah culture titled *Roll, Jordan, Roll*. This work became a classic of ethnographic documentary photography.

Ulmann usually contact-printed her negatives and made platinum prints, which provided the rich shadows and soft, graduated tonalities that are typical features of her work. At the time of her death in 1934, however, thousands of negatives were left unprinted, but the Doris Ulmann Foundation, established through her estate, hired a photographer, S.H. Lifshy, to make proof prints in order that her work be preserved for future generations. Her work is now housed at Berea College in Kentucky.

Major holdings of Ulmann's photographs can be found in numerous institutions including: The New York Historical Society, The University of Oregon Library (Eugene), The Los Angeles County Museum of Art, The Art Institute of Chicago, The University of Kentucky Library (Lexington), the Historic New Orleans Collection, The Museum of Fine Arts (Boston), The Schomburg Center for Research in Black Culture of the New York Public Library, Duke University Library (Durham, North

Carolina), the North Carolina Division of Archives and History, and the International Museum of Photography at the George Eastman House (Rochester, New York).

UMBO (OTTO UMBEHR)

German

The career path of Umbo, one of the most influential photo journalists of the Weimarer Republik (German Republic from 1918–1933)—besides Erich Salomon and Felix H. Man—did not progress in a straight line. Even his stay at the Bauhaus in Weimar from 1921–1923 was unexpectedly shortened. Umbo took general courses “*Vorkurs*” from Johannes Itten

in 1921 and 1922. Thereafter he switched to the metal workshop, but was already expelled from further studies in December 1922, on the official grounds of “a lack of interest.” Umbo entered photography as a self-taught person. His work for films and his designs for billboards probably played a key roll in the development of his photographic style, and included concrete contracts such as his work with Sasha Stone on the completion of photo montages

for the theater promotions of the film, *Berlin, Symphonie einer Großstadt* (Berlin, Symphony of a Big City) by Walther Ruttmann, 1926.

From 1926 on, Umbo was supported significantly by his friend, Paul Citroen, who encouraged him to devote himself entirely to photography. Umbo proved to be an important promoter of the ideas of the *Neues Sehen* (New Vision) in Germany. Through his reportages and solitary shots he became a pioneer for modern photojournalism and the prevalence of the new “photo-language.” Together with Simon Buttman he founded the photo agency Dephot (*Deutscher Photodienst GmbH*) in 1928. It was here that the first combined text and photo reportages appeared—to include Umbo’s famous “photo-typographies” (a combination of photography and typography). Until a state enforced closure in 1933, Dephot was responsible for studio photography and reportage photography. Its specialties included dance, vaudeville, theater, and movie theater. The pictures were published in numerous German magazines such as *Berliner Illustrierte Zeitung*, *Münchener Illustrierte Presse*, *Kölnerische Illustrierte Zeitung*, *Das Illustrierte Blatt* (Frankfurt), *Uhu*, *Dame*, *Neue Linie*, *Scherl’s Magazin*, and *Koralle*. Umbo combined experimental and artistic trends of the avant-garde with an established documentary reportage as well as unusual portraits.

Not only in contract work, but also with personal shots during the 1920s and 1930s, Umbo used lighting to demonstrate two different principles of formation: as appropriate he used either strong contrast between light and shadow or well-balanced lighting. Above all he understood how to playfully employ perspectives, photo clippings, and shadows to cause optical confusion for the viewer through the use of simple motives. One of the best examples is the photograph from the bird’s-eye perspective, *Die unruhige Straße* (The Restless Street), 1928, with its “uncanny shadows,” which also catches one of the substantial design elements of expressionistic films in Germany. This photo’s special charm is that it sways the viewer to concentrate on the long, life-like shadows, rather than on the objects that make the shadows. The effect of combining real elements with fantasy abstractions is occasionally suggestive of surrealist techniques, such as those in Salvador Dalí’s paintings.

In 1935, Umbo was still experimenting with perspectives when he used a fisheye lens with a 180° field of vision—originally developed for meteorological purposes—for his series: *Die Wolkenkamera sieht sich auf der Erde um* (The camera in the clouds takes a look around the earth). The art of visual

deception can also be found in a completely different manner in Umbo’s photo report about the unheeded life of store-window mannequins. A selection appeared in the Frankfurt magazine, *Das Illustrierte Blatt*, 1929. The mainly unclothed figures—see *Drei Mannekins* (Three Mannequins) or *Schaufensterpuppen* (Store-window Dolls), all from 1928/1929—are stored in a semi-private area of a warehouse and appear life-like despite their doll-like positions. Umbo continued his project of “Life in Dead Things” in further photographs of store-window mannequins, such as *Träumende* (Dreamers) or *Pantoffeln* (Slippers) as well as in the line-up of male heads in *Menjou en gros* (Menjou in large scale) (all from 1928/1929).

This concept of visually staging spontaneously found objects also continues in object photography such as *Kragen* (Collar), 1930, and nude photography such as *Akt*, 1930, where Umbo uses brief clips to show the partial profile of an object-like upper torso of a female. The photo, which technically is suggestive of Imogen Cunningham’s well-known photograph, *Triangles*, 1928, reduces the human body to a largely abstract composition of parts. The combination of realism and abstraction is also applied in the startling female portraits of around 1927. Typical for these is the close-up-effect and an often used harsh light-dark contrast such as in the portrait *Ruth*, 1927, which comes from a series of images of the actress, Ruth Landshoff; as well as film-inspired overlapping forms that were produced by multiple lightings as in *Simultanporträt Gaby Meyer* (Simultaneous Portrait of Gaby Meyer), 1927. The beauty of the countenance is reduced to the essential elements. The results are technically constructed pictures of the extolled “modern woman” as determined by contemporaries of the 1920s. His photograms, simultaneous shots, work with X-ray film (to subdue half-tones), as well as experiments with negatives, photo montages, and collages shaped further development of abstractionism.

The magnitude of Umbo’s impact on the development of contemporary photography at the end of the 1920s and beginning of the 1930s is clear from the extensive presentation platform that was granted him at the famous international exhibition *Film und Foto* in Stuttgart, Germany, 1929. However Umbo’s significance as one of the pioneers of modern photography remained long unappreciated, because all his archives (50,000–60,000 negatives) were lost during World War II. It was not until the 1970s that he was rediscovered.

Biography

Born Otto Umbehr, in Dusseldorf, Germany on 18 January, 1902. Attended school in Saarland, Stuttgart, Duisburg, Aachen, and Dusseldorf (Germany), 1908–1916. Active in the “Wandervogel” youth movement, 1916–1917. Worked as a miner in Essen, Germany; worked in a pottery belonging to Kuno Jaschinsky in Goslar, Germany, 1920; actor during a German tour of Maria Heide’s *Mysterienspiel*; took sculpture courses from Muck Lamberty in Naumburg, Germany, 1921. Higher education at the *Bauhaus* in Weimar under Johannes Itten, Walter Gropius, Wassily Kandinsky, Paul Klee, etc. October 1921–February 1923. Studied with Friedel Dicker and Franz Singer in the *Werkstätten Bildender Kunst* (art workshops), Berlin, for the theater of Berthold Viertel, 1923–1924, where responsibilities included stage design. Assumed the pseudonym, Umbo, 1924. Worked as a building painter, movie theater placard painter, a clown, and a production and camera assistant on films under Kurt Bernhardt and Walter Ruttmann, 1923–1926. As a self-educated photographer he acquired photography and dark-room equipment, 1926. Under Paul Citroën’s support, worked as an independent portrait photographer, 1926–1928. Co-founder of and photographer for the photography agency, Dephot, 1928–1933. Thereafter, independent photo journalist. Photography work for the Ullstein publishing house in Berlin, 1938–1943. Special reporter at “Signal,” 1940. Photography contracts for Ullstein in North Africa (1941) and Italy (1942). Soldier, 1943–1945. Married Irmgard Hirz, 1943 (divorced, 1950); one daughter, Phyllis. Lost all archives in WWII. Moved to Hannover, Germany, 1945. Advertisement and industrial photographer; press photographer for the *Hannoverschen Presse*. Employed at the magazines *Der Spiegel* and *Picture Post*, 1947–1951. House photographer for the Kestner-Gesellschaft (Kestner Society) in Hannover, 1948–1949. USA trip, 1952. Instructor of photography at the *Landesversehrtenberufsschule* (State vocational college) in Bad Pyrmont, Germany, 1957–1972 and at schools of applied art in Hildesheim and Hannover (Germany), 1965–1974. Member of the “Gilde Deutscher Lichtbildner” (GDL) (Guild of German Photographers), 1977–1980. Died in poverty in Hannover, Germany, on 13 May, 1980.

UNDERWATER PHOTOGRAPHY

Since the 1950s, underwater photography has grown increasingly popular. Yet, the history of underwater photography actually began 100 years earlier when, in 1856, the British engineer William Thompson attempted to photograph the submerged structure of a bridge spanning the Wey River. To protect the camera from the surging water, he constructed a watertight box with one plate glass side covered by a wooden string-operated shutter. Once the apparatus was lowered from a row boat down to the river bed, Thompson opened the shutter. While the box itself flooded, Thompson did manage to capture a vague image of the weed-covered river bottom. Additional experiments in underwater photography occurred in the 1860s and 1870s when the French photographer Ernest Bazin attempted without success to take photographs from the porthole of a diving

bell. Meanwhile, in the United States, the British photographer Eadweard Muybridge, responsible for the first series of fast motion photographs, conducted his own trials in underwater photography with a camera in a watertight casing lowered into the San Francisco Bay. However, the French scientist Louis Boutan is credited with producing the first true underwater photograph in 1893. To assist his study of aquatic creatures off the coast of southern France, Boutan set out to photographically record his subjects. Like his predecessors, Boutan recognized the need to construct a watertight container for the camera to counteract the corrosive effects of water and amplified atmospheric pressure. Boutan's preferred housing weighed several hundred pounds and, despite the buoying tendencies of water, required an attached floatation device for underwater maneuvering. During the

UNDERWATER PHOTOGRAPHY

course of his investigations, Boutan quickly realized that successful underwater photography would depend not only on the encasing of the camera, but also on the photographer's ability to overcome the scarcity of light encountered just a few feet below the surface. With this in mind, Boutan engaged the assistance of an electrical engineer to create submersible lights, inventing a "flash" dependent on magnesium powder. In the late 1920s, using a similar but more advanced lighting system, the American ichthyologist Dr. William H. Longley and the photographer Charles Martin took the first color underwater photographs. While the magnesium-charged lighting system was prone to unexpected explosions, almost proving fatal for Longley, the duo's underwater images, captured on Autochrome film, were published in 1927 in the magazine *National Geographic*. Throughout the 1930s, such pictures of the underwater world continued to appear in various publications, increasing interest in both the oceanic realm and its photographic representation.

This trend continued with the publications, films, and lectures of the Austrian diving pioneer and oceanographer Hans Hass. Some assert that modern underwater photography began with Haas when, in 1938, he devised an underwater camera housing to create a photographic record of his adventures. Hass continued his aquatic documentation and, by the early 1950s, he had gained worldwide recognition, in large part due to his photographically illustrated text, *Diving to Adventure* (published in German in 1947, English in 1951, and French in 1956).

Another world-famous diver, the French Naval officer Jacques-Yves Cousteau, also played a formative role in the development of underwater photography, along with the technical innovator Harold E. Edgerton. In 1942–1943, along with the engineer Emile Gagnan, Cousteau devised what would be patented and marketed as the Aqua-Lung, the first self-contained underwater breathing apparatus to be commercially available to the public. With the appearance of the Aqua-Lung, recreational scuba diving became a viable sport and quickly grew in popularity, due in part to various publications lauding underwater adventures and the appeal of the aquatic world. *The Silent Sea* (1952), Cousteau's account of his diving activities in the Indian Ocean and the Red Sea, was particularly influential. The book and the subsequent movie (1956) depicted fantastic underwater images that intrigued and enthralled a wide audience.

Meanwhile, a generation of underwater photographers were coming into their own, designing and

crafting camera housings and flashes to be used in their underwater exploits. In terms of equipment, underwater photographers were initially limited to a housing system based on principles similar to those employed by Louis Boutan. Even today, an underwater camera housing is basically an aluminum or plastic water-tight box that encloses a top-side camera, securing the camera against the intrusion of water and the crushing effects of increased atmospheric pressure. The front of the housing is equipped with a port, a transparent glass, or acrylic screen through which the lens peers. Typically, the housing allows the photographer to manipulate the camera settings, for example, adjusting aperture and focus, while more advanced systems allow for the synchronization of an electric light source with the camera shutter. With a properly fitted housing, almost any camera outfitted with any number of lenses may be used underwater. Thus, an obvious advantage of housing systems is the photographer's ability to use his or her favorite camera and a variety of lenses underwater. Yet, camera housings present a number of problems, as well. First, housing systems are often bulky and cumbersome both during surface transport and underwater. In addition, they can be quite complex to operate. Finally, quality housing systems can be prohibitively expensive. These drawbacks make underwater camera housing systems rather impractical for recreational use.

In 1961, an alternative to the housing system appeared. A joint venture between the Japanese camera manufacturer Nikon and Jacques Cousteau produced the world's first self-contained underwater camera, marketed in France as the Calypso-phot (or Calypso). In 1963, Nikon purchased the rights to the amphibious camera, changing its name to Nikonos I. Small and compact, the Nikonos presented an attractive option to large and ungainly underwater housing systems. Less expensive, easier to operate, and able to be used with a number of different lenses, the Nikonos I (as well as its four subsequent incarnations) has made underwater photography feasible for the amateur photographer. Yet, a potential drawback is that, as a range finder camera, the Nikonos requires an accessory viewfinder to compose the picture. This is not a concern when using a housed single lens reflex camera, which uses a mirror to allow the photographer to see exactly what the lens sees. With a range finder camera, the photographer looks through a small window *adjacent* to the lens, not through the lens itself. For photographs taken at a distance of several feet or more, this does not cause a major problem. Yet, as the subject gets

closer to the camera, parallax—the difference in the views seen by the photographer and the lens—can easily lead to the improper framing of the picture. The use of a viewfinder or a framer can help prevent these errors by literally framing the view as seen by the lens. Another way to avoid the effects of parallax with a range-finder camera is to use a wide-angle lens. This is most effective when photographing large subjects, and allows the inclusion of a wider field of vision. In the past decade, Nikon introduced the first auto-focusing SLR underwater camera, the Nikonos RS, illuminating the need for an accessory viewfinder. Cost factors and personal preference lead many to still opt for the range finder camera, Nikonos V.

Each photographer, professional or recreational, has an individual predilection for underwater camera systems. Amphibious Nikonos-type cameras are often the choice of the fledgling aquatic photographer, due to their ease of use and lower cost. Alongside competing cameras, such as the Sea & See Motormarine, the Nikonos continues today to be a favorite camera for many underwater photographers, as well as adventurers or others in need of a rugged, weather-proof camera. Amphibious cameras are utilized by amateurs and professionals alike, sometimes in combination with a housed camera system. Frequently, experienced underwater photographers take two cameras on a dive, each prepared for different sized subjects; after all, one never knows when a whale shark will glide by, or a tiny cleaner shrimp will pose for the perfect portrait. And with the use of a digital camera in an underwater housing, the photographer can now view the images captured without the delay of processing time. Mistakes can be caught and corrected during the next dive.

Despite the importance of reliable and suitable equipment, a good camera system alone does not guarantee quality pictures. The successful underwater photographer recognizes that the rules of topside photography do not necessarily hold during submersion. Of utmost importance for the underwater photographer is the behavior of light in the medium of water, as well as certain properties of water itself. Light rays travel differently through water than through air, and a certain percentage of the natural light present at any given time will reflect off the surface of the water. The amount of light that penetrates the surface is dependent upon the angle at which light hits the water, and the surface conditions of the water; in general, a maximum amount of light will derive from light striking a calm surface at a 90 degree angle. Yet, even in an ideal situation with minimum reflection, two other phenomena must be taken into account: refraction

and scattering. Light rays that do enter the water refract, or bend, as they travel from the air into the denser medium of water. Because water is 800 times denser, the light rays do not travel as far as they would in air. Thus, the strength of the light quickly decreases as depth increases. In addition, as a result of refraction, objects underwater appear 33 percent larger and 25 percent closer than on land. In terms of photography, this leads to a reduced angle of coverage by a given lens (a topside 35 mm lens behaves as a 28 mm lens underwater). Light quality is further compromised by minute suspended particles in the water. Even the clearest of water contains particulate matter that scatters the penetrating light, weakening its intensity. Greater concentrations of suspended particles decrease the clarity of the water and increase the instances of scattering. In the presence of a flash bulb or strobe light, suspended particles can capture and reflect the artificial light; this phenomenon, called backscattering, leads to an image obscured by white or bright specks, as though the picture were taken in the midst of a snowstorm.

Color is also greatly affected by the medium of water, which in effect acts as a blue filter. The component rays of the white light spectrum are absorbed by the water at varying depths: red loses its intensity at a depth of 15 feet; orange vanishes at 30 feet; yellow fades around 60 feet; and green disappears by 80 feet. Everything below 90 feet appears blue, and, depending on surface light conditions and water clarity, begins fading to black soon thereafter. To counter loss of color, photographers must work in very shallow depths on bright sunny days, or use an artificial light source. In the days of the Calypsophot, magnesium based flash bulbs were most commonly used to provide artificial lighting. Yet, flash bulbs were quite unreliable and even dangerous; they often misfired and sometimes exploded. In addition, a bulb was good for only one flash and had to be changed before each picture was taken. These factors combined to make the battery-run electronic flashgun, or strobe light, a welcome improvement and the artificial light source of choice. A strobe light, connected via a cord to the camera or the housing, can be synchronized with the camera shutter. As the picture is taken, the strobe emits a bright flash and illuminates the subject. In addition to artificial light, colored filters may be layered over the lens or employed during the developing process to counteract the color distortion. Thus, with the proper use of lighting equipment and corrective filters, color can be restored to objects photographed at any recreational diving depth.

UNDERWATER PHOTOGRAPHY

While a photographer need not be a scuba diver to take underwater pictures, diving appears to be the preferred method of accessing the underwater environment. The self-contained nature of scuba equipment allows the photographer a vast amount of freedom to maneuver underwater. Unlike those dependent on a snorkel or air from the surface, the diving photographer can remain underwater for extended periods of time, depending on the depth reached. Depths beyond 140 feet require special training and particular mixes of compressed gases; as such, they are out of the reach of recreational divers. Nevertheless, a wealth of photographic material exists within the range of recreational depths. It is crucial, however, that the diver be completely comfortable underwater *before* occupying him or herself with aquatic photography. Once the mechanics of diving become second nature, the diver is free to concentrate on the development of photographic skills. Only an experienced diver will be able to safely and successfully produce masterful underwater photographs. Such images, like their predecessors, will

continue to enchant and captivate a willing audience for years to come.

PHOTOGRAPHY IN THE UNITED STATES: THE MIDWEST

Although the broad outlines of photography in the Midwest conform to the larger trends and developments that shaped twentieth century photography in the United States, during the past 100 years photographers have discovered that the ever changing landscape of the American Midwest offered a unique and verdant place to document. Inspired by its characteristically flat topography, stoic and hearty people, and continually modernizing urban spaces, these photographers captured the spirit, events, and identity of America's heartland.

Whether recording the built environment—ranging from the most humble dwellings to landmark architectural structures and industrial complexes, as did many documentary and architectural photographers, or seeking inspiration in the faces of its people during hard times, in celebration, or at rest, as registered by portrait photographers, and others,

photographers working in the Midwestern region found ever fruitful subjects for their camera. Two photographic genres, however, can be said to have developed or made significant aesthetic advances in the Midwest: the so-called "Chicago School" featuring the street works of Harry Callahan and those associated with the Institute of Design, and architectural photography.

1910s

The first major figure in photography to work in the Midwest was Clarence H. White. Although associated with New York and the Photo-Secession, it was White's founding of the Newark, Ohio Camera Club that launched his career and spread the prevailing Pictorialist style throughout that state and eventually, through the production of a catalogue, across

the United States and abroad. White was active in Ohio in the late years of the nineteenth century until he relocated to New York in 1906.

The 1904 World's Fair held in St. Louis, Missouri, served as a magnet for photojournalists and amateur photographers alike. Many, including Frances Benjamin Johnston and Jessie Tarbox Beals, had honed their photographic skills just a decade earlier at the 1893 World's Columbian Exposition in Chicago. Like the fair in Chicago, the St. Louis Fair was another opportunity for the city and the country to showcase U.S. technological advancements and triumphs of imperialistic power. America's recent conquest of the Philippines in the war with Spain was highlighted in the reconstructed Philippines reservation with 1,200 inhabitants. Likewise to satiate fairgoers curiosity of mysterious foreign peoples, the Fair's organizers recreated ethnic villages in a world bazaar.

The Anthropology Department organized the ethnological displays showing the cultural-graded progress from the most primitive types to the "enlightened and civilized peoples." The Gerhard sisters—Emme and Mamie Gerhard—photographers who lived in St. Louis, had made arrangements with the Fair administrators to make and sell photographs of the lower "culture grades" of people on exhibition. Their work operated to support the ideology of the fair to construct racial differences between white Americans and "other" peoples.

A veteran of the Chicago Fair, and renowned in her own right by then, Frances Benjamin Johnston was active as a photographer and an official judge for the photography awards at the St. Louis Fair. Johnston concentrated on trade exhibitions and on ceremonial openings, such as the dedication of the Siam pavilion. Johnston also took a number of photographs of the official performances put on in the ethnic villages. These "staged ceremonies" objectified the native peoples and exonerated the United States' imperialistic aims, showing how uncivilized their lives had been before colonization and democratization.

Although Jessie Tarbox Beals arrived in St. Louis with credentials as a staff photographer with the *Buffalo Courier*, she still found it impossible to gain comparable access to photograph the fair as had the Gerhard Sisters and Johnston. Undaunted by the regulations, Beals acquired a "pre-exhibition permit," which allowed her to make photographs prior to the opening of the fair but prevented her from selling her photographs. Wandering the fairgrounds, Beals was drawn to little-known peoples in their native habitats, docu-

menting their daily lives and unofficial occurrences. She photographed the Igorots, the Bogobos, the Zulus, the Hottentots, the Eskimos, the Filipinos, and other exotic cultures. Her big break came when she happened on a scene of a "Patagonian Giant" of South America standing next to a "Pygmy" and got the exclusive image. The comparison picture of the "evolutionary model" was lauded by the Fair officials and secured Beals the license she originally sought to photograph officially at the fair.

1920s

In 1927, Precisionist artist and photographer Charles Sheeler was hired to document the new Ford Motor Company manufacturing facility southwest of Dearborn, Michigan, about ten miles from Detroit. The plant lay near the River Rouge giving it access to the Great Lakes and the Atlantic via the St. Lawrence seaways. Often referred to as River Rouge or "the Rouge," the plant, designed to produce the new Model A, was at the time the largest industrial complex in the world.

As Ford Motor Company had recently lost market share with the decline of sales of the Model T, consumer acceptance of the new Model A was vital. Ford hired Vaughn Flannery, head of the advertising firm N. W. Ayer & Son, to promote the new automobile. Sheeler's commission to photograph the River Rouge plant was a small part of a huge promotional and advertising campaign that Flannery and his firm organized during 1927. Sheeler's mandate was to photograph "details of the plants and portraits of machinery," which he did with an objectifying eye.

Orienting his pictures along a vertical axis, Sheeler applied strong formal qualities to exterior and interior shots and the details of the plants and the portraits of machines. Industrial and architectonic forms coalesce in bold abstract compositions to represent the might and genius of Ford. Sheeler made two trips to Dearborn, presenting Ford with a collection of 32 Rouge photographs.

In his exterior views, Sheeler concentrated on the early stages of the auto-making process, all of which had to do with steel making—the transformation of raw material, crisscrossing conveyors of coke and coal, into industrial goods. Other exterior shots showed huge cranes near the boat slips or the salvage ships before being broken up for their steel. Inside he followed a similar strategy concentrating on the heavy machinery and blast furnaces, the more sublime aspects of industry and ending with an image of abstract beauty. The close-up "portraits" of machinery objectified the simplicity and

strength of their magnificent form. Evidence of the dense crowded assembly lines was noticeably missing from his project. Most of Sheeler's images were void of human presence.

Sheeler's new vision of the Ford plant at River Rouge—the exquisite balance of palpable structure, complex machinery, and high contrast of lights and darks—gave profound meaning to the machine age and subsequently influenced the way photographers and painters represented American industry for the next two generations.

1930s

The desire to unite the mind of the architect and the mind of the photographer to capture a real life building as it has been brought to completion in the spirit that gave rise to its creation was what motivated the photography firm of Hedrich-Blessing. In a city like Chicago, known since the late nineteenth century for its innovative architecture, photographers wishing to document its structures had to be equally creative in recording it. The Hedrich-Blessing Architectural Photographers firm, founded in 1929, has maintained a continuous position as preeminent photographers for architects in Chicago and elsewhere in the country. In over 70 years the firm has taken 500,000 photographs by 19 photographers, mostly members of the Hedrich family.

Begun by Ken Hedrich, a 21-year old photographer who opened his own commercial studio in downtown Chicago with managing partner Henry Blessing, the firm always maintained the name Hedrich-Blessing despite the fact that Blessing left in 1931. At the time, they did not want to change the name on the stationary. Ken Hedrich was joined by his brothers Bill and Ed, who took over as managing partners in 1931. Their recognition by Chicago architects came when they received commissions to record structures at Chicago's A Century of Progress Exposition International Exposition, 1933–1934. At the fair, Ken Hedrich shot on speculation and offered potential clients creative interpretations and technically proficient images.

Their photographs revolutionized the way buildings are represented, raising the commercial and documentary nature of architectural photography to a high art form. Not satisfied with a straight-documentary style made to show every element and detail, the Hedrich-Blessing images highlighted dramatic shadows, bold juxtapositions, and handsome detailing revealing more than the whole. Work at the fair kept the firm busy and solvent during the middle of the depression.

Hedrich's early motto was "Don't make photographs, think them." An early client was John Wellborn Root, Jr. whose architectural firm built the Chicago Board of Trade, Palmolive Building, and other progressive structures. Hedrich-Blessing's success in capturing the dramatic space, form, and light of these buildings soon led to other commissions including the post of official photographer to the prestigious journal *Architectural Forum*.

Throughout the years, Hedrich-Blessing has documented a wide range of styles and building types created by famous architects. Their list of clients include: Frank Lloyd Wright, Mies van der Rohe, Albert Kahn, Eliel Saarinen, Skidmore Owings and Merrill, Holabird & Root, and Gensler & Associates, to list just a few. Each photographer works with an assistant as a team in the creation of the photographs. Hedrich-Blessing Architectural Photographers' blending of art and commerce became a model for budding photographers; the firm supported upcoming Chicago photographers by staging exhibits in their headquarters as early as 1935. A lesser known aspect of the firm's business is the non-architectural commercial work, primarily advertising photography.

The Hedrich-Blessing photography collection, prints, negatives, and transparencies from 1929–1979, is owned and preserved by the Chicago Historical Society.

From 1935–1943, photographers working for the Historical Section of the Farm Securities Administration (FSA) under the direction of Roy Stryker documented Depression-era conditions in the Midwest, as in other U.S. regions. Midwestern born and raised Russell Lee had a natural affiliation with the rural life and was able to move comfortably among its people. The Lee family owned farm land outside of Ottawa, Illinois; as a consequence Lee understood the plight of farmers whose lands were subjugated to drought, tornadoes, and insect plagues. Beginning in the fall of 1936, Lee traveled in the Midwest, living in hotels and boarding houses, moving from one small town to another as dictated by the agency. Most of his early works documented the problems of the rural farmers in Iowa, but Lee found similar stories to record in Illinois, Wisconsin, and Minnesota as well as parts of Michigan. His photographs had a "family album" quality that expressed his acceptance as a member of the community.

The FSA survey team's saturated coverage of Ohio featured in an exhibition and catalogue titled *Ohio: A Photographic Portrait 1935–1941: Farm Security Administration Photographs* reveal a di-

verse narrative. Stryker gave each photographer a specific assignment. Carl Mydans photographed Cincinnati slums; Theodor Jung, the rural hill people in Jackson and Ross counties; John Vachon documented Cincinnati urban and suburban street life; Arthur Rothstein, the changing seasons; Ben Shahn, the harvest in central Ohio; Russell Lee, construction views of Greenhills, a planned community; and Marion Post Wolcott, farms surrounding Dayton. Although sent to document the rural problems, what these images confirmed was that people living in Ohio industrial towns—were harder hit by the Great Depression than its rural people. The pictures of tired and strained faces underscore the resigned yet shared suffering.

Pete Wettach in Iowa was a hobby photographer who also just happened to work for the FSA. From the Great Depression through World War II and into the post-war years, Arthur Melville “Pete” Wettach recorded the everyday lives of Midwestern farmers and their families, documenting the profession of farming during a period of great change. Born on the east coast, Wettach was always fascinated with rural life. In 1919, he was drawn to Iowa as a student of agriculture at Iowa State University in Ames. Wettach married his college sweetheart, the daughter of a farmer, and after a period of teaching vocational agriculture, tried his hand at farming but failed. By mid-1935 Wettach took a position with the Resettlement Administration soon to be renamed the Farm Securities Administration. During the 1930s and 1940s he worked as a county supervisor for the FSA attempting to help struggling farm families. He also happened to be a self-taught photographer.

Using a Graflex 5 × 7 camera that produced large-format negatives and images with great detail and quality, Wettach’s pictures examine subjects he knew well: friends, neighbors, family members, and clients. His images document farming in Iowa, showing how diversified Midwestern farms once were and how it was a very social and community-oriented way of life—every member of the family participated in the work. Initially, he photographed the southeast corner of Iowa but eventually included the whole state and other Midwestern states.

Wettach’s images reveal how people helped each other—for example, after the Rural Electrification Act was passed in 1936, the all-volunteer cooperative enabled rural communities to have electricity. Wettach showed how the shift to electric power transformed farm life.

Many of his photographs underscore the complementary partnership and responsibility of women and men for existence. He shows women participa-

tion in soapmaking, grape harvest, canning, making clothes, and collecting rainwater as well as feeding the workers. The subject of the harvest and activities surrounding the harvest emphasize how it was a group effort (and how new agricultural technology changed this process).

By 1949, Wettach was established as a freelance photographer producing stock photographs for agricultural magazines such as *Wallace’s Farmer*, *Farm Journal*, and the *Country Gentleman* to name a few, and general-interest publications *Look* and *U.S. News & World Report* among others. His works invoke the idea of community and the importance of place and how these influence our values and the way we see ourselves.

1940s onward

Founded in Chicago in 1937 under the direction of László Moholy-Nagy, the New Bauhaus and its later incarnations as the School of Design in Chicago (1939–1944) and ultimately as the Institute of Design (1944–present; in 1949 it joined the Illinois Institute of Design) offered the most important photography program in the United States and distinguished Chicago as the place for education for the modern artist-photographer from 1937 through the 1960s. From its beginnings in the former mansion of Marshall Field on Chicago’s South Side, Moholy promoted teaching based upon objective, abstract seeing and technical experimentation.

A former instructor at the German Bauhaus in Dessau where his principle responsibilities had been to integrate disciplines in his Foundations Program, Moholy-Nagy intended to operate the Chicago design school in much the same pattern. The first-year program for all students consisted of the obligatory Foundation Course, design workshops investigating the properties of various materials. Photography was envisioned as one of six specialized workshops. The students were expected to learn to work in as many mediums as possible. Moholy-Nagy nurtured an environment of collaboration rather than competition.

Initially, photography was not offered as a separate discipline but as part of an integrated design program. Moholy-Nagy had intended for Georgy Kepes to teach the first photography class but as Kepes had not arrived in Chicago when the semester opened, Moholy-Nagy hired Henry Holmes Smith, a practicing commercial photographer to take over. The first day, Smith had the students make an assemblage of objects available in the studio and the instructor took a picture of their work. The exercise was one of the preparatory steps for

making photograms. As the dark rooms weren't ready at the beginning of the semester, it also gave Smith an opportunity to show the students how to make a camera-less image using only bright light sources and printing-out-paper without the use of developers.

Under Moholy-Nagy's tutelage, photography was taught as a basic property of the manipulation of light. It was integrated into an art and design curriculum and was taught experimentally. Most importantly, it was considered central to a vocabulary of modernism. In Moholy-Nagy's New Bauhaus foundation courses on the subject of light, students not only learned to make photograms, but also experimented with solarization, a halo effect obtained by interrupting development and giving the film a second but short exposure; and light-modulator exercises. Introduced by Kepes, head of the Light Workshop, these experimentations required students to design objects from a single piece of white paper and to apply a single light source; the resulting light play may be translated by photography into a series of tonal ranges.

The Department of Photography at the Institute of Design was established when the school was reorganized just prior to Moholy-Nagy's death in 1946. Over the years, the instructors in this department, which include Harry Callahan (head of the Department of Photography 1949–1961), Arthur Siegel (program head 1946–1949, part-time instructor in the 1950s and 1960s, and chairman Department of Photography from 1971–1978), and Aaron Siskind (faculty 1951–1971; program head in 1961) shared with their students a concern with photographic process and craftsmanship, an approach that determined a particular style of photography that is both expressive and rigorously formal. The images produced at the school—whether they are Moholy's photograms, Callahan's high-contrast landscapes, or Siskind's wall abstractions—set new standards for photographic experimentation.

Graduates from the ID had many options; some found successful careers in commercial fields, journalism, and social reform. Others went on to teach at colleges and universities throughout the country: Harold Allen, Barbara Crane, and Kenneth Josephson have had distinguished teaching careers at the School of the Art Institute of Chicago. One of the 33 initial students in 1937, Nathan Lerner graduated in 1941 and went on to head the school's photography department and eventually became the head of production design. Upon graduation in 1949, Art Sinsabaugh remained for a decade to head the ID's evening photography program until 1959 when he was appointed the director of the photography and cinematography department at the University of

Illinois Urbana-Champaign. After Callahan's departure in 1961, Joseph Jachna taught alongside Siskind at the ID until 1969 when he joined the faculty at the University of Illinois at Chicago.

The city of Chicago and surrounding countryside provided abundant subject matter for ID students intending to document the form, figures, or built environment of the urban spaces. In their graduate thesis projects, many students chose to emphasize social commentary over formalism. A model for some of the documentary work of the ID was the impressive record compiled by the photographers who worked for the Farm Security Administration (FSA) and its successor, the Office of War Information (OWI). In the late 1930s and early 1940s, the FSA/OWI sent several of its staff, in particular, Jack Delano, Russell Lee, and John Vachon to photograph the Chicago area, during the years when the ID was establishing itself. These images were available in academic studies and the popular press. Adopting a documentary stance, during 1935–1940, Nathan Lerner availed himself of opportunities to photograph around Chicago's Maxwell Street recording the inhabitants and rundown storefronts. Yasuhiro Ishimoto and Marvin Newman followed the Maxwell traditions in the late 1940s and early 1950s.

Photographing the city's architecture was a natural outcome of the school's involvement with architecture design. Arthur Siegel made a contribution to documenting Chicago architecture when he challenged his students with an assignment to produce Chicago's *Famous Buildings* (1965). Some students, in particular Richard Nickel, who made Louis Sullivan the subject of his senior thesis, continued to photograph architecture in Chicago and elsewhere around the country for years.

Nickel's unpublished master's thesis of 1957, *A Photographic Documentation of the Architecture of Adler and Sullivan*, explains his search for Adler and Sullivan buildings. Assiduously recording every detail of the buildings in photographs and in written notes, Nickel's documentary search evolved into an obsession to save Adler and Sullivan buildings from being torn down. He found himself enmeshed with preservationists in efforts to obtain landmark status for among others the Garrick Theater and the Chicago Stock Exchange Building. When these preservation goals failed, Nickels attempted to save architectural remnants of the buildings that were destined to be torn down. Nickels saved hundreds of pieces of Adler and Sullivan ornament from the first fretwork at the Albert Sullivan house during the 1950s to the Stock Exchange column he saved in 1972, the day before his acci-

dental death among the wreckage of the Exchange. The Stock Exchange room was reconstructed five years later within The Art Institute of Chicago relying on Nickels photographs.

Chicago-based photographer Victor Skrebneski is known for his highly dramatic and glamorous advertising photography, for sensuous and sculptural nude studies, and for casually elegant portraits of friends and celebrities. His images have been replicated many times and have motivated luxury goods, cosmetics, jewelry, furs, automobiles, and high fashion apparel. The son of a Polish steelworker, Skrebneski attended The School of the Art Institute of Chicago as a student of painting and sculpture in 1943, and took up photography at the Institute of Design, from 1947–1949. Moholy and the other instructors at the ID—Callahan, Siegel, and Siskind promoted the idea of commercial work and worked in the business themselves at least part-time. Inspired by the example of his instructors, by 1952 Skrebneski had opened his own studio specializing in the fashion photography. In the 1950s, the largest employers of commercial photographers were the studios that catered to the needs of Chicago's retail stores and mail-order catalog giants like Sears Roebuck, Montgomery Wards, Aldens, and Spiegel's. Skrebneski's commercial images widely published in both fashion and general magazine advertisements helped to define a Chicago fashion photography style.

In 1963, the cosmetic firm Estée Lauder selected Skrebneski to launch its first national advertising campaign, which marked the beginning of a long productive client-photographer relationship. In addition to his commercial work for Estée Lauder, Skrebneski has also photographed for *Town & Country* and *Fitness* magazines, and for Chanel, Kohler, Northwestern Mutual Life Insurance, and Saks Fifth Avenue, among many other clients. A master of studio lighting, Skrebneski's light and dark contrasts render his nude studies, male or female, a sculpted appearance like Roman or Greek gods and goddesses. Images of singular or multiple models in contorted poses against the most minimalist background function to further confirm his obsessive interest in the human figure. Skrebneski's portraiture, often of public people examines the persona of celebrity with the likes of Orson Welles, Vanessa Redgrave, Andy Warhol, and Raquel Welch. In 1999 a major 50-year retrospective of his work was held at The Museum of Contemporary Photography in Chicago.

1960s and 1970s

Tom Arndt in Chicago is best known for his images of "everyman," taken in bars, on sidewalks and

prairies, in parades, and at state fairs. Arndt has spent the last several decades navigating the Midwest terrain in his over 30-year quest to document its people and places. There is a timelessness quality to the people in his photographs, and a sense of American community that is both sentimental and cynical. Arndt manages to capture the human condition with subtle visual metaphors for un-named emotions, like the feeling of being alone in a crowd.

Arndt's career has been sustained by his roots in the community—the working-class values and politics he inherited from his parents, and his love of the Midwest, particularly his native Minnesota. This sense of community values is shared in his 1995 book *Men in America* and video production *The Documentary Urge: Tom Arndt* narrated by Garrison Keillor. The award-winning documentary shows Arndt in action: tracking down his subjects at the Minnesota State Fair, printing his film in the quiet of his warehouse darkroom, and preparing for a retrospective of his work. Arndt professes to be a common man who photographs common people. But there is nothing common about Arndt's compelling black-and-white images. As a photographer of the American scene, Arndt follows in the tradition of Walker Evans and Robert Frank, his acknowledged heroes. But as the video documentary intimately reveals, he is also an artist of deep compassion and humility, whose powerfully simple and direct photographs seek to record both the confidence and vulnerability of the American people.

1980s onward

Established in 1982, the Midwest Photographers Project organized by The Museum of Contemporary Photography at Columbia College in Chicago is the premier repository for photographic works and biographical materials on contemporary Midwest photographers. The project is designed to introduce students, educators, collectors, curators, scholars, research specialists, and the general public to current work by both prominent and emerging area artists. The archive operates as a rotating collection of works by photographers from Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Ohio, and Wisconsin. The artists are represented in the museum's Print Study Room by a body of work from a current project loaned to the institute for a two-year period. Included with these photographers are extensive artists' files with slides of other projects and biographical material. The project allows the museum opportunities to highlight works by selected Midwest photographers in their thematic exhibitions.

Such recent exhibitions have highlighted works by Andrew Borowiec of Akron, Ohio in which the photographer formalizes in black and white panoramic studies the industrial landscape—showing the ever-increasing proliferation of American refineries and their mass production of power and consumer goods. Borowiec's abstract yet complex compositions bring to mind the antecedent works by Sheeler at the Ford River Rouge plant.

In his photographs of institutional spaces, Chicago police officer and photographer Scott Fortino investigates the psychological concept of confinement and protection. Observed with an almost scientific formality, Fortino's saturated colored images of Chicago public school classrooms and police stations' holding cells are formally beautiful, suggestive of their methodical precision yet absent of human narrative.

Equally compelling are the images exhibited together by Midwest landscape photographers, Tom Bamberger, Paul J. Clark, and Terry Evans. Milwaukee-based Tom Bamberger's digitally manipulated work challenges the viewer to reconsider the natural and man-made alternations that occur in many familiar landscapes. Bamberger's digitally created panoramas obsessively accentuate the horizontality of the Midwestern prairie. His process involved extending and repeating the information from a single negative to create a new landscape reality.

Initially, the elongated images appear to be an exercise to see how far the horizon line can be convincingly extended. Attracted to inherently repetitious scenery—housing developments, farmland, highways, vineyards—Bamberger creates a virtual landscape by scanning information from 35 mm negatives and assembling it according to his own system of erasure and replication. Each view is, in fact, a compilation of images, some repeated, some not.

Bamberger likens the process to cultivating a virus, explaining that, "in either a computer or a Petri dish, something reproduces itself until it reaches a critical mass where you can see it with greater clarity" (Brochure from the Museum of Contemporary Photography). As the landscapes grow and the repetition becomes more easily identifiable, his process becomes more complex. How natural or artificial are these images when repetition is intrinsic to these subjects to begin with? By blurring the line between his digital alterations and the existing shape of the landscape, Bamberger questions the nature of repetition, arguing that there is little difference between, for example, DNA's reproductive process

in a forest or field and the computer cloning that his work depends on.

Paul J. Clark takes a much closer look at nature in his images of urban and suburban community gardens. Revisiting the same places and capturing the changing connection between nature and man, Clark draws attention to the patterns and rhythms that naturally occur in these spaces. Terry Evans distances herself from her subject in order to explore it more deeply.

Since 1978, the subject of the Midwest prairie has engaged photographer Terry Evans, a former resident of Salina, Kansas. Evans turned to the prairie when some friends asked her to photograph some survey work they were doing on a prairie near Salina. Initially, she began taking "portraits" of the different forms of prairie grasses and flowers, photographing the complex patterns of the different prairie specimens from a waist-high distance from the ground. Evans found it impossible to discern any visual order or pattern of organization as she observed the ground, but she was convinced that a pattern must be there.

After eight years of photographing fragmentary but still extant unspoiled prairie, Evans felt she had exhausted the limits of her vision. It was not until she saw some aerial photographs of abandoned bomb test sites, that she realized with the aid of aeronautics she could expand her vision to include the rest of the prairie. Since then, Evans has photographed the Midwest prairie from its northern most boundaries south to Texas, capturing spectacular views of the pristine prairie and likewise—the "inhabited prairie" that which showed man's mark on the land.

Evans' engagement with the "inhabited" Midwest prairie lands constitutes a 1995 collaboration with the U.S. Forest Service and Openlands Project. She documented the land surrounding the Joliet Arsenal, southwest of Chicago, land formerly occupied by the world's largest munitions plant before its restoration into a national prairie park, the centerpiece of a 40,000 acres ecosystem that links other nearby wildlife refuges. Evans' photographic records culminated in her 1998 book, *Disarming the Prairie*. A second photographic book project, *The Inhabited Prairie*, illustrates specific places and the way man lives on the prairie. Shown are multiple uses of the prairie land in a 25-mile radius around Salina, Kansas, including the National Guard's Smoky Hill Weapons Range. Evans' aerial photographs document responsible land use and maintenance, such as terraced plowing and cattle rotation

as well as the willful neglect of industrial pollution and over-farming.

Exploring and recording the Midwest prairie lands while appearing to dominate Evans' oeuvre is an adjunct to her earliest work, intimate portrait photographs made of residents of her native Kansas. Evans was exposed at an early age to the world of portrait photography as she helped process film at her parents' portrait studio. Her early documentary works featuring family and friends of Salina, Kansas, appear in a book titled *Kansas Album*. Her personal images reveal a glimpse into the lifestyles, emotions, and attitudes of very individual people. Originator and director of the 1976 project aimed at apprehending the spirit of the state as well as recording its exterior image, Evans selected eight photographers—Terry Alinder, Mark Goodman, Robert Grier, Earl Iversen, Lawrence McFarland, Jim Richardson, Larry Schwarm, and Garry Winogrand—to document the people of Kansas in a five-month period during the United State's bicentennial year. *Kansas Album* features an equitable representation of the people of Kansas through the wide variety of documentary styles from close-up portraiture to urban street views to landscape void of the evidence of man.

Each photographer worked alone and chose his or her subjects according to personal insights and empathy. As their photographs attest, these documentary studies reflect the attitude of the photographer towards Kansas ranging from deep emotional attachments to formal aesthetic assessments.

PHOTOGRAPHY IN THE UNITED STATES: THE SOUTH

Southern photography has been, by its own desire, rooted in the past. Photographers have endeavored to capture a sense of the Southern experience and primacy of place, whether familiar or strange, and a consciousness of time. A rich, strong narrative voice emanates from all of the Southern arts, most profoundly from the reality of the photographic medium. In the twentieth century, photography in

the South went from being largely confined to early small town portrait and commercial studios to the influx of educated Southerners and outsiders seeking to redefine and rethink what the Southern identity was in the camera's eye.

In the early 1900s, there were several ways in the South in which a photographer could make a living: portraiture, commercial documentary, or

industrial work. Fine art photography was practiced as a hobby. Due to proximity to well-established trade routes and ports, a few Southern cities were able to provide enough activity to support the business of photography, particularly in Alabama, Louisiana, and Georgia. Oscar V. Hunt (1881–1962) in Birmingham, Alabama, documented the city's building spurts, while also experimenting with aerial photography. The Russell Brothers (William and Samuel) operated a portrait business in Anniston from 1883 to 1940, creating some of the most telling images of life at that time. Supporting themselves with business from the wealthier clientele, the brothers were able to also provide portraiture for the middle and working classes. In Mobile, Erik Overbey (1882–1977), apart from his portrait business, did panoramic views of quietly composed landscapes. An amateur photographer, Robert Hudson (1885–1973) used his skills to make views of his town, Demopolis, and the community events. Having studied the light upon subject matter and modernist compositions in photographs by the “masters” featured in mail order magazines, Draffus Lamar Hightower (1899–1993) practiced what he learned by photographing life in Clayton, Alabama, and the surrounding Barbour County.

A growing national curiosity in the regional character of the South led Rudolph Eickemeyer, Jr. (1862–1932) to travel from Pennsylvania to Montgomery County to photograph rural life in Alabama, 40 of which were published in 1900 in the book, *Down South*.

Working as a commercial photographer in New Orleans, Louisiana, from about 1895 to 1940, E. J. Bellocq (1873–1949) spent his free time creating compelling portraits of the prostitutes in the red light district, Storeyville. Not much is known about Bellocq nor why he did this work. He was also rumored to have made photographs of the inhabitants of the opium dens in the city's Chinatown, of which there are no known prints. Eighty-nine gelatin dry-plate glass negatives of the prostitutes were found in an antique desk in the 1960s and purchased by photographer Lee Friedlander. Friedlander preserved the badly damaged negatives, created platinum palladium prints from them, and in 1970, produced a book of Bellocq's images.

Another of the early fine art photographers was Edgerton Garvin, working in Georgia between 1910–1940. His soft-focus, pictorially influenced platinum prints showed the untouched beauty of the nature and landscape in the coastal areas of Savannah, Georgia, and northern Florida.

For African Americans living in the South where there was no written history, after the Civil War

photography emerged as an important supplement to oral traditions. And because obtaining equality in educational opportunities was still a struggle, mentorship for African Americans became a way to help each other. As the century progressed, the Tuskegee Institute's photography division in Alabama played a significant part in the early photographic identity of the South. Following in the steps of his mentor, photographer Cornelius M. Battey (1873–1927), Prentice H. Polk (1898–1985) photographed in and around Tuskegee Institute for over 60 years. He began as a student in painting, left briefly, and then returned to open his studio nearby. The following year he joined the Institute's faculty and from 1939 until his death in 1985 served as the Tuskegee Institute's official photographer. His photographs, portraits of both his professional colleagues including his famous images of George Washington Carver and what constituted the black rural community around the Institute, documented the emerging black middle class with respect and sensitivity.

Other African American photographers, like Richard S. Roberts (1881–1936) in Columbia, South Carolina, quietly worked in isolation, documenting a life of segregation and leaving evidence of the failures of Reconstruction and Progressive reforms.

For reasons other than fine art photographic practice, photographers came to the South to photograph, particularly on behalf of Progressive reforms, in the early 1900s. In 1903 and in 1906, the president of Tuskegee, Booker T. Washington, invited Frances Benjamin Johnston (1864–1952) in Washington, D.C. to document the school's progress and exhibitions. From 1911–1914, on behalf of the National Child Labor Committee, Lewis Hine (1874–1940) visited and photographed the working children in Alabama's factories and cotton fields.

Still recovering from the trauma of the Civil War, the Southern arts culture, once called the “Sahara of the Beaux Arts” by H.L. Mencken, did not really begin to thrive until the Southern literary renaissance in the 1920s, producing what was probably the most significant body of literature in American history. The influential tie-in is strong between the works of writers, such as Flannery O'Connor, William Faulkner, Carson McCullers, and Eudora Welty, and the photographic arts. Written descriptions of Southern life and social customs were rooted in the past. Literary themes of loss, nostalgia, ruin, and remembrance have since been translated and constructed into the visual photographic perception of the South.

Interest in Southern life grew after the literary renaissance. After 1927 and in the early 1930s,

Doris Ulmann (1884–1934) traveled with singer and traditional folksong collector John Jacob Niles from New York to Kentucky, Tennessee, and North Carolina to photograph the people living in the Appalachian Mountains. She then went on to the South Carolina coast to photograph the Gullah people living on Pulitzer Prize-winning author Julia Peterkin's Lang Syne Plantation. Combining the platinum process of the Pictorial style with an honest documentary approach, Ulmann sought to photographically preserve the culture, originally from Liberia, whose world was fast vanishing with growing urbanization. In 1933, a year before Ulmann's death, a collection of these images was included in Peterkin's book *Roll, Jordan, Roll*.

A romanticized view of the South was also seen in the work of Bayard Morgan Wooten (1875–1959). Wooten ventured into the Appalachian Mountains in North Carolina, choosing to focus on the mountain people, log cabins, their handicrafts, and idyllic way of life. Two of the six books published with Wooten's images are *Backwoods America* (1934) and *Cabins in the Laurel* (1935, reprint 1991). *Backwoods America* contains photographs taken in North Carolina with the text written by Charles Morrow Wilson about Arkansas and Missouri. Muriel Sheppard's words in *Cabins in the Laurel* more directly correlate to Wooten's North Carolina images.

Images of the South made in the 1930s, primarily the vernacular representations of the region in books such as Erskine Caldwell's book, *Tobacco Road* (1932) and Margaret Mitchell's (and movie), *Gone With the Wind*, became what shaped the national perception of the South in the twentieth century. The South of popular imagination as a place of abandoned homes, neglected homesteads, and rural poverty shaped a lasting impression of Southern life. Contributing to these common perceptions as well were the visual constructs of the published documentary photographs made by the United States government's Farm Security Administration (FSA) and Works Progress Administration (WPA) in the 1930s. The classic work of Walker Evans, Dorothea Lange, Marion Post Wolcott, Ben Shahn, Russell Lee, Carl Mydans, and Jack Delano visually reinforced the popular Southern literary themes. From 1935–1938 under the FSA, Evans recorded the effect of the Great Depression on Southern farms and on industrial towns in West Virginia. His best known images were produced in James Agee's *Let Us Now Praise Famous Men* (1941), a study of three sharecropper families in Hale County, the heart of Alabama's

rich cotton land. Wolcott, also working under the FSA (1938–1941), sought to use photography in a more socially influential way by focusing upon rural life, the migrant labor conditions, such as overcrowding and the children, and contrasts between the affluent and the poor. Mydans, assigned to photograph the Alabama cotton fields (1935–1936), documented the rural agrarian poverty. Working with sociologist Arthur Raper in 1941, Jack Delano's telling photographs of the black people in Green County, Georgia, were published in *Tenants of the Allmighty*.

Throughout this time a few Southern photographers were working for the government in the South. For the WPA, Eudora Welty traveled her home state of Mississippi (1935–1936) as a publicity agent, discovering the poverty she had not seen before. Calling her visual work "snapshots," Welty saw her subjects with a simple, gentle eye, recording the moment or emotion in a manner similar to her Pulitzer Prize-winning fiction. In the late 1930s on behalf of the Federal Writers' Project, Robert McNeil (b. 1918) spent time documenting the lives of African Americans in Virginia.

The government's photographs of the South during the 1930s became, for most Americans, how the South "looked." It has been proposed that the underlying reason for the success of these Depression Era views is the reassurance felt by those outside the South during a difficult and uncertain time. Nostalgic images of a simpler time in an agrarian culture provided refuge from economic disparity.

There were, however, other projects outside of the government programs, which also left lasting cultural assumptions about the South. Independent of any government controlled projects, Margaret Bourke-White together with her future husband, writer Erskine Caldwell, created a pioneer study into rural poverty in the southern United States. Her images and his words culminated in the book, *You Have Seen Their Faces* (1937).

During the Depression, commercial and portrait studios did not fare well. Barely able to support himself, Michael Disfarmer (1884–1959) set up a makeshift studio in Heber Springs, Arkansas, doing full length simple portraits of the local small town people.

After the Great Depression and World War II, photographers began to see the region as both a place to make their art and to document. Working in New Orleans since 1936, and after World War II supporting himself as a freelance architectural photographer, native Louisianan Clarence John Laughlin dwelt upon the history and mythology of the South for nearly 50 years in his personal work.

Influenced by the writings of poet-critic Charles Baudelaire, the French Symbolists, and the art of Surrealism, Laughlin manipulated the photographic process and created dramatic tableaux set against cemetery statues, antebellum plantations, mansions, and other “lost in time” Southern places. His work went largely unrecognized outside of the South until after his death in 1985.

In the 1940s, black life in the South was becoming of interest to photographers. Rosalie Gwathmey (1909–2001) came back to Charlotte, North Carolina, after studying in New York to photograph the people in her hometown and in nearby Rocky Mount. Her graceful, unaffected images were straightforward documentations, rather than art. Another photographer working in the South was Reverend Lonzie Odie Taylor, whose work centered on the realities of black life in Memphis, Tennessee.

With the growth of photographic education at the college and university level in the 1940s and 1950s in the United States, thus began an exchange of artists and ideas. While many Southerners traveled outside of the region to learn the technical skills from well-known photographers and artists, other artists came to the South after attending school, most notably was Ralph Eugene Meatyard. Originally from Illinois, Ralph Eugene Meatyard settled in Lexington, Kentucky, after studying under Van Deren Coke, Henry Holmes Smith, and Minor White. Working outside of the known art circles, Meatyard began staging pictures of his family and friends in tableaux of masked people in seemingly normal situations. The mask became a potent, disquieting symbol within ambiguous and bizarre imagery interpreted as the dark Southern Gothic tradition. The idea and name for his character Lucybelle Crater, featured in his posthumous book, *The Family Album of Lucybelle Crater* (1974), was derived from the literature of Flannery O’Connor.

During the two years of his photographic sojourn (1955–1957) around the United States, Robert Frank went to various Southern cities, such as Miami, Savannah, Memphis, Charleston, New Orleans, and Nashville. His sharply insightful observations documented the disquieting realities of race, class, and income, later published in his book, *The Americans* (1959).

In 1957, a short ten years before he became known as a “social landscape” photographer, Lee Friedlander came from New York to the South to pursue his personal interest in jazz and to do what became his first major body of work, a series of portraits of New Orleans jazz musicians. During this same time, Fonville Winans began his 20 year

project of documenting the Cajun culture in Baton Rouge, Louisiana.

The increasing volatile social events of the Civil Rights Era in the 1950s and 1960s drew many photographers to the South on behalf of various news agencies and publications. Shooting for *Life* magazine, Flip Schulke (b. 1931) was dedicated to the ideal of a just society. Schulke’s friendship with Martin Luther King enabled him to closely record the plight of Southern blacks. Working for the black picture magazines, one of the few black photojournalists present was former Kentuckian Moneta Sleet, Jr. Sleet, whose earlier photo essays in the 1950s centered on the people and family life in black America, came south to document the humanism as well as the social and political issues. His 1968 portrait of Mrs. Coretta Scott King and her daughter Bernice at the funeral of Martin Luther King, Jr. won the Pulitzer Prize in 1969. Another black photojournalist, Charles Moore (b. 1931), photographed for *Life* the turbulence and violent demonstrations in Birmingham and Montgomery. Moore, like Sleet, realized the power of photography to the black cause.

In Memphis, the center of the Civil Rights Movement, Ernest C. Withers (b. 1922) used his camera to document the day-to-day struggles and newsworthy activities, including Martin Luther King’s last march, “I Am A Man,” and the aftermath of King’s assassination. Calling his Beal Street studio, “Pictures Tell The Story,” Withers shot over five million pictures between the 1940s and the 1970s of African American life in and around him, producing rare images of The Negro National Baseball League and the birth of blues, jazz, and rock ‘n roll.

Up until this period, there had been many talented black artists emerging from the South. Some stayed. Many left. Some came back to revisit and document. Others used their memories in their work. In the late 1960s, Chester Higgins, Jr. (b. 1947) came back to his home state of Alabama to document its character and life. A former student of Prentice H. Polk at Tuskegee Institute, Higgins endeavored to sensitively handle the self-respect and unification of people of African descent. The project evolved into what became a lifelong vision expanding beyond the American borders into the African diaspora.

There were, in addition, a growing number of Southern photographers learning the medium and working in isolation. Self taught in photography, Paul Kwilecki (b. 1928) decided to begin documenting what he knew best—Bainbridge, Georgia and the surrounding Decatur County—where he lived. Devoid of any pretentiousness, Kwilecki’s

photographs, published in *Understandings* (1981) are about the middle class, those whom Flannery O'Connor described as "having ordinary lives." Each of Kwilecki's series was the result of six months to a year spent visually noting the characteristics of a specific function, group, or place.

The 1960s was a time of transition for Southern artists. A growing awareness, through magazines and journals, of the value of upper education pushed many Southerners to leave the region to study under known masters of photography. While earning his M.F.A. at the Rhode Island School of Design under the guidance of Harry Callahan and Aaron Siskind, Emmet Gowin often returned to his birthplace in Danville, West Virginia. Looking inward toward his own personal iconography, Gowin's extended portraits of his wife, Edith, and later of their children, have been positioned within the tradition of Southern domestic irony.

The printmaking tradition was thriving in Florida in the work of Evon Streetman (b. 1932) and Jerry Uelsmann. Uelsmann, after having studied with Minor White, Ralph Hattersley, and Henry Holmes Smith, returned to the South to teach at the University of Florida—Gainesville. Fusing reality and fantasy by combination printing, later through the computer, Uelsmann's images display the same Surrealistic tendencies seen in the work of Clarence John Laughlin, one of the influences on Uelsmann's work.

Born in Tuscaloosa, Alabama, William Christenberry did not discover until 1960—nearly two years after he first picked up a camera—that in 1936, Walker Evans had photographed some of his most famous images in nearby Hale County. Christenberry began re-photographing those same buildings and sites, using Agee's words as descriptive guides. As William Faulkner once proposed about seeking one's own "little postage stamp of nature soil," Christenberry's images captured the unique character and passage of time, the strange and the beautiful, of a small specific Southern place, whether it be an old mailbox, an abandoned house nearly submerged in kudzu, a peculiar handmade grave marker, or the continued presence of Confederate icons.

During the time of the 1970s when photography was becoming acknowledged as an art form, and simultaneously more collectible, the attention of the world was drawn to an exhibition of William Eggleston's color work at the Museum of Modern Art in New York in 1976. Not only was this work at the forefront of color photography as being aesthetically acceptable, his images of the South portrayed an ordinariness with richness and depth beyond the predominant mythology about the

South. The realness of the South came through Eggleston's lens, with everyday life in the Mississippi Delta, Memphis, and other commonplace areas held together with history, memory, and romance. The fact that he was a Southerner by birth and chose to continue to live in Memphis was irrelevant to the acclaim due him. Eggleston's cool, descriptive color combined with the un-extraordinary subject matter influenced generations of new photographers, inside and outside the South. His approach segued aesthetic discussions about color, rather than about the subject matter, the South. New attention was given to the potential of photography created by those working in the South and to the place.

With the entrance of color photography into the visual vocabulary of artists, young photographers, like Stephen Shore, now looked with new eyes at places in the South. Shore, inspired by the postcard genre, in 1971 went to Amarillo, Texas, choosing principal places of interest to become his *Tall in Texas* project.

While interest in the Southern landscape grew, some of the newly educated photographers sought out the New South; others sought out the Old South. Danny Lyon documented the social marginalization and wasted lives of the male prisoners in Texas prisons. In Tulsa, Larry Clark used his camera to tell the stories of his friends whose lives were caught up in the mindless destruction of drugs. Shelby Lee Adams (b. 1950), a native of Howard, Kentucky, during his summer breaks from teaching, wandered the mountains of Appalachia to document the isolated communities living in poverty. In the late 1970s, Ron Ambrey discovered and began documenting the rural mountain culture of Madison County, North Carolina, noting its way of life and the impact of rapidly built superhighways.

Throughout the South, small groups of photographers formed support systems. Encouraged by the growing acquisition of photography by regional museums, in 1973 a non-profit photographic gallery, Nexus, was formed in Atlanta by a group of local student photographers (Bill Brown, Jim Frazer, Jack Frost, Deidre Murphy, and Michael Reagan), under the tutelage of their instructor at Georgia State University, John McWilliams. The following year Nexus organized *The Southern Ethic Show*, a juried exhibition designed to present the "Southern School" photographic visions of those living and working in the Southern states, accompanied by a catalogue written by A.D. Coleman, who at that time was the art critic for the *The New York Times* and *Village Voice*. The cooperative then created Nexus Press, an artmaking tool for the organization.

A former student of Harry Callahan, John McWilliams (b. 1941), had accepted a position to teach in Atlanta at Georgia State University. Several years earlier McWilliams happened upon McClellanville, South Carolina, the site of one of the places Robert Frank portrayed in *The Americans*. McWilliams' fascination with the nearby marshes, the Santee River, and the hidden beauties of the Southern environment was mixed with his awareness of the gradual abuse and destruction of the same land. Man's omnipresence creeps into each of his moody, romantic views published in *Land of Deepest Shape* (1989).

Another Nexus member, Lucinda Bunnan (b. 1930), originally from New York, documented prominent Georgians in a sociological manner in her book *Movers and Shakers in Georgia* (1978). Power and influence fell under the scrutiny of her camera lens as she moved through the same social circles. With Virginia Warren Smith (1945–1999), from Atlanta, the two collaborated to produce a survey project of Sunbelt graves, what people make or buy to place on graves. Covering 26,000 miles and 677 cemeteries while living out of a van, Smith and Bunnan discovered the deep, often quirky and eccentric private connections between the living and the dead. Underlying the physicality of each grave was the subtext of death and loss. Their photographs, many hand painted, were published in *Scoring in Heaven: Gravestones and Cemetery Art of the American Sunbelt States* (1980).

In the 1980s there was a burst of artistic energy coming from within the South, separate from any other contemporaneous artistic pulse outside the region. Native-born artists working in the South found greater appreciation of the authenticity of the Southern indigenous experience, both urban and rural. Known as "The Picture Man," Oraien Catledge began photographing the forgotten people in Cabbagetown, an area around a once successful, later abandoned flourmill in Atlanta. It was there also where Ray Herbert ("Panorama Ray") created his numerous, scrapbook-like panoramic views of the community activities.

Birney Imes (b. 1951) photographed the Mississippi Delta region where he was born and lived. Called a folklorist, Imes conveyed the Delta's rapidly vanishing way of life in several quite different books: *Partial to Home* (1990), *Juke Joints* (1990), and *Whispering Pines* (1994). Tightly framed images in *Partial to Home* tell about the people in the rural black communities. The photographs of the bright exotic colors, hand-printed signs and battered furniture of the interiors of *Juke Joints* are without drama, allowing the viewer to have a sense of place. In a compelling, revealing manner, *Whispering*

Pines expresses the life of the late Blume Triplett, a restaurant proprietor during the years the South moved from segregation to integration.

Roaming the back roads of his native East Texas, Keith Carter (b. 1948) sees himself as a photographer working in equal parts of "storytelling, poetry and spirituality." Mojo music soundlessly permeates his images as does the descriptive writing of Flannery O'Connor and Eudora Welty. His lush, naturally lit photographs are meant to be figurative, with scenes that seem as if extracted from one's memories. Beginning with *From Uncertain to Blue* in 1988, his work has been widely published, including *Keith Carter Photographs: Twenty Five Years* in 1997.

After attending Rice University and the San Francisco Art Institute, Debbie Fleming Caffery (b. 1950) returned to New Iberia, Louisiana, to continue her image making there. Recalling a South of an earlier era, Debbie Fleming Caffery's images of the workers on her family's sugarcane plantation are moody and shadowy. The soft focus style echoes with a nostalgic, romanticized yearning for the past. The 20-year project was published in *Carry Me Home: Louisiana Sugar Country Photographs* (1990).

Influenced by Emmet Gowin's aesthetic approach and E. J. Bellocq's sensitive portraiture treatment, Sally Mann (b. 1951) also engaged her family as the subject of her images, set against the dark, ambiguous landscape of her home in Lexington, Virginia. Her large format pictures were carefully planned, with written notes and preliminary shots. Each title reads like a short story title, inviting narrative interpretation. The photographic, often intimate, fragments of her children's languid summer days in the misty, lush countryside became the subject of heated debate about sexual imagery, child pornography, and artistic expression. And while Mann has frequently returned to the first subject of her camera lens, the Southern landscape, the published images, *Immediate Family* (1992), *Second Sight* (1994), and *Still Time* (1994), of her family continued to draw attention.

As the Southern art communities continued to thrive, more photographers came to experience the uniqueness of the Southern culture. In 1983 Harry Callahan, retired from teaching at RISD, moved to Atlanta, where his daughter and her family as well as several of his former students resided. Callahan's position as an acknowledged master in photography and his proximity to photographers working in the South was encouraging to the legitimacy of their art. Additionally, there was recognition of the increasing contributions made by photogra-

phers working in the South by *Aperture* magazine in their issue, *New Southern Photography: Between Myth and Reality* in 1989.

By this time, the region moved from being referred to as the New South to becoming the Contemporary South. There were artists coming from the outside whose work addressed the passionate issues around race relations and how the shadow of racism was still cast over the region. Christian Walker (b. 1954) moved to Atlanta in 1983 after studying at the School of the Museum of Fine Arts, Boston. Very articulate and vocal about the issues of racism, segregation, and power, Walker set out to visually address the half truths found in the Southern social and cultural environment through incorporation of W.E.B. DuBois' color separation theory and post-modernist hybrid techniques. Carrie Mae Weems traveled south to create a personal and visual reinterpretation of the history of the landscape, slavery, and the inhabitants of Sea Islands, off the coast of Georgia. Digging into oral and written traditions, Weems then synthesized what she learned with archival images to bring forth the internal meanings and limitations of historical records.

Weaving her own private narratives and creating fictional stories into her work, Lynn Marshall-Linnemeier is known for her "illuminated photographs," handpainted black and white images. Originally from Southern Pines, North Carolina, Linnemeier (b. 1955) uses her art and her knowledge of rich oral traditions to create magical visions of people who have risen above the hardships of their lives. A fellowship in 1994 enabled her to spiritually link the residents of Reynoldstown, a historic neighborhood in east Atlanta where freed slaves first settled, to the aboriginal community in Point Pearce in South Australia, a project entitled *A Rendezvous With Time*.

The 1990s became a time to showcase the work of photographers in the South. As their work was published and received critical attention, photographers were encouraged to continue their exploration of their surroundings with renewed interest, finding new ways to view the land, its people, history, and mythology. For many, photography became a medium to express the diversification of the New Contemporary South, with a distinctly Southern narrative impulse. Blending present observations and individuals, new work became about going beyond the contemporary clichés of rednecks, stock car racing, and Confederate flag bumper stickers. The changing state of mind became represented by race, religion, and politics. Urban and suburban development went side by side with rural enclaves. Irony, fantasy, and satire reigned.

Where one came from became less relevant. What mattered was the ability to "see."

Support for the photographic arts expanded to encompass community and regional organized events. Founded in 1983 by Wendy Watriss and Fred Baldwin, FotoFest in Houston, Texas, was thriving as a biennial, month-long comprehensive site for exhibitions and educational programs each March. A nonprofit organization whose goals are to educate and to support the arts, the event had become internationally known and drew portfolio reviewers from around the world. A similar support organization was started in Del Ray Beach, Florida in 1994. FotoFusion, established by Art and Fatima NeJame, became an annual three-to-four day conference of lectures, portfolio reviews, workshops, and exhibitions, usually taking place the third weekend in January. Atlanta Celebrates Photography, another nonprofit organization with community-wide educational objectives, began in 1999 in Atlanta, Georgia. Held annually each fall, programming was dedicated to providing an environment for educating, networking, and promotion of the photographic arts in the community.

The first museum in the South to be devoted to photography, The Southeast Museum of Photography, opened in 1992 as part of the Daytona Beach Community College in Florida. Alison Devine Nordstrom, a professor in interdisciplinary cultural studies, became its director and senior curator.

A highpoint in the 1990s in the South was the occasion of the 1996 Olympics in Atlanta. The High Museum of Art presented the expansive exhibition, *Picturing the South: 1860 to the Present*. Curated by Ellen Dugan, *Picturing the South* brought forth to the global forum a discussion of how the South has been interpreted and understood through photography. The following year, the Southeast Museum of Photography continued the dialogue about photographic work in the South in its exhibit, *(Re)Presenting the South: Six Contemporary Photography*, organized by Nordstrom. Both exhibitions succeeded in stimulating an open discussion about what Southern photography once was and what it was becoming. Where in the past its art was determined as a regional style, the South was becoming a region with many distinctive, simultaneous styles.

There were photographers who continued to seek the hidden back roads of the Southern landscape, to find the remote places where the Old South still thrived. Nostalgic memories about the land and its people remained a source of interpretation and inspiration. The reasons why varied from curiosity to a yearning to go back to one's

roots or for a simpler time and place. Employing nineteenth century photographic processes, Willie Ann Wright recontextualized the historical South into the present by looking at the increasing phenomena of those seeking to recreate an ideal past in Civil War reenactments. Discovering forgotten or abandoned landscapes, Nancy Marshall enhanced the mystery of each place through the platinum-palladium process. Set against the indigenous vegetation of her garden in coastal South Carolina, Elizabeth Turk's portraits investigate the transformative aspect of time upon her family and friends. Nic Nicosia's balanced portrait commissions in Dallas and Houston manifest the middle ground between the old and new South. Studying a group of ladies at a Baptist church in Birmingham, Julie Moos discovered the paradoxical beauty of their passion for large decorative hats. Karekin Goekjian has looked deeply into the spiritual aspects of Southern "outsider" artists to visually translate his findings in their portraits. Inspired by contemporary Southern literature and the tintype process, Deborah Luster lends a timeless quality to the portraits of inmates at three Louisiana prisons.

Planning and developing visual projects, photographers such as William Greiner (*Homefront* series, 1994), Mark Steinmetz (*At the Edge of the City* series, 1992), Eric Breitenbach (*Photographs from Florida* series, 1989–1994), Thomas Tulis (*Construction of, Suburbia and Aspects of New Roads Chattanooga* series, 1991–1995), Ruth Dusseault (*The Atlantic Steel Project*, ongoing series), Benita Carr (*Gretch*, 1999), and Mitch Epstein (*Vietnam in Versailles* series, 1992–1995) have looked closely at the culture of the Contemporary South. In a similar documentary style, Melissa Springer has realistically depicted the difficult lives of mothers in a prison in Alabama. Ken Hassell, in North Carolina, photographed the diminishing use of human labor as the industrial South rapidly moved toward the electronic and service-oriented age. David Najjab, an Arab Muslim born in Dallas, has photographed a dimension of the South's changing ethnicity. Through his documentary books on children with cancer, people with AIDS, and those who are physically challenged, Billy Howard wants to be a visual voice for those without a voice.

Focusing on the sociological implications, photographer and writer, Alex Harris, worked with Robert Coles on several books. Together in 1995, Harris and Coles founded DoubleTake, a photographic and literary journal, with the support of the Center for Documentary Studies at Duke University, Chapel Hill, North Carolina. More academic in approach, the periodical used image/text

combinations, alongside literature, to look at the deeper significance of the visuals.

There have been those who have followed in the aesthetic footsteps of earlier Southern photographers. Richard Sexton, an architectural photographer in New Orleans, has studied the design elements in Clarence John Laughlin's antebellum world. In Tennessee, Mike Smith photographed with a comparable poetic vision to the beauty within William Christenberry's Hale County work.

For others, life in states, such as Mississippi, Alabama, and Louisiana, exemplify the true richness of the Southern landscape. In and around Charleston has been the subject of Bill Weems's works. John D. Lawrence's photographic book on William Faulkner's home, Rowan Oak, transcended time and takes the viewer back. Likewise, Tom Rankin saw himself as a folklorist/ethnographer as he traveled the Mississippi Delta and visually explored the religious sacred spaces from the past. The connection between his native soil in the Delta region and its people continued to fascinate photographers such as Jack Spencer. Concentrating on the larger spiritual truths about life and death, Conne Thalken has documented alligator harvesting in the remote coastal areas of southwestern Louisiana.

Sites of leisure permit the photographer and viewer to take refuge from the fast pace of contemporary times. Sentimentality and the game of baseball as it prides itself on past events was the subject of Charlie McCuller's work. Spending her nights in jazz clubs, Atlantan Shelia Turner documented the smoky, dark spaces where the music moves until the early morning hours.

Working as freelance photographers, many dedicated themselves to the discourse on environmental issues in the South, centering upon the dichotomy inherent in a culture where the land is seen as both cherished and expendable. Kathryn Kolb devotes her personal work to help two environmental groups devoted to halting the deforestation of Georgia. Concerned also with our treatment of the land, Tom Meyer in Atlanta sees his work as a record of the sorrow in places once worthy of being a postcard. Commissioned by the High Museum of Art in 1996, Richard Misrach risked his health while documenting the toxic effects of the industry along the Mississippi River in the series *Cancer Alley*.

New to the Southern art scene has been the influx of Hispanic artists, many of them Cuban exiles, living and working in the region. Seeing with new eyes a land they now call home, many noted the artistic influences as well as the fast pace

William Eggleston, *Untitled [Memphis]*, 1970, Vintage Dye Transfer Print, 16 × 20", 40.6 × 50.8 cm, Ed. 20. Original in color.
 [Courtesy Cheim & Read, New York]

of the Contemporary South. Maria Martinez-Canas employed post-modernist methods to incorporate photography into her abstractions. Rogelio Lopez Marin, better known as Gory, was simultaneously a painter and photographer. Manuel Llaneras, in his *MARTA* series (1994–1995), conveyed the sense of isolation among the lone passengers of urban mass transit. Using her “theatre of memory,” Silvia Lizama documented the building of Interstate 95 in southern Florida.

Connecting on a broader artistic level to a global aesthetic, without alignment to any particular regional influence, non-traditional artists were using photography in new and different ways. *MANUAL*, the husband and wife team of Suzanne Bloom and Ed Hill at the University of Houston, were among the first to see and use the potential of the computer. Utilizing digital printmaking capabilities, Maggie Taylor created and built up stages out of her own paintings, working in photography in new, surreal assemblages. Jamie Cook completely discarded having a large studio and instead his computer became

the studio within which he transformed landscape views into dreamscapes. Painting on her own photographs, Corinne Adams used photography to explore the subconscious and the shadow concepts of Carl Jung. Cecelia Kane became the subject of her work, a combination of performance, film, and photography. Mapping and how space is delineated in different cultures describes the conceptual installation work of Gregor Turk.

Since the onset of feminist issues, there has been a growing strong contingent of women photographers dealing specifically with women’s issues. Jeanne Collins visually examined her own experience with breast cancer in *Chemo Savvy or Where is Tonto When You Really Need Her*. In her large scale assemblage *Heavy* series, Jenny Clifton represented the cultural commodification of the body and the other side of the diet/weight controversy. Engaged in an ongoing collaboration with Melanie Pavich-Lindsay, Lisa Tuttle created installations of old photographs, text, and illustrations about race and women, the past and the present. Nancy Floyd

continued her portrait studies of women gun owners, looking at the social, cultural, and personal implications. Pinky/MM Bass used the pinhole process to look at herself and the life around her.

Public art in the 1990s became an important arena for photographers working in the South. Understanding the need for visible integration of art and public spaces, cities such as Atlanta and Miami regularly funded public projects including the photographic arts. They spotlighted the mixed media constructions of Maria Martinez-Canas, Radcliffe Bailey, Amalia Amaki, Gregor Turk, Deborah Whitehouse, Vicki Ragan, and Lynn Linnemeier.

At the end of the twentieth century, photographic artists working in the South saw themselves as a diverse group of artists, with various ethnicities and influences. The visual canons of the South as a place of ruin and remembrance, once prominent in and outside of the South, were being displaced. Yet, underlying Southern determinants remain, even as the region moves into a new artistic identity within globalization and into the twenty-first century.

BURT UZZLE

American

Burt Uzzle, self-taught American photographer, photographs the ordinary and makes it special, always striving to catch the moment when the ordinary reveals itself to be epic. To Uzzle, to be

alive and to use his camera helps him to truly see. Concentrating on pictures of everyday Americans going about their lives, his work is both contradictory and harmonious, recording and interpreting every detail, and is always searching to express meaning, order, and beauty.

As Martha Charoudi, curator at the Philadelphia Museum of Art has noted:

The subjects of Uzzle's photographs range from joggers in Central Park, New York, to a family dressed in Mickey Mouse sweatshirts shopping in a department store in Daytona Beach, Florida, to students recreating a Civil War battle in Annapolis, Maryland. For many years he has photographed the Mummer's Parade on New Year's Day in Philadelphia and the Daytona Beach Motorcycle week. He interprets these annual events not only as public displays of audacious behavior and appearance, but as a kind of unrecognized folk art. The Mummer's with their elaborate costumes and make up and the bikers with their equally elaborate tattoos and custom-made motorcycles both perform in skilled rituals of freedom. Uzzle's photographs celebrate the amusing quirks and exaggerated eccentricities of American life; but like all great works of art, they grapple with the paradoxes of the human situation.

Born in Raleigh, North Carolina in 1938, Uzzle in his early teen years taught himself photography while attending high school. His first job in photography was as a staff photographer for the *Raleigh News and Observer* from 1955–1956 at age 17. From 1957 until 1962, he was a contract photographer in Atlanta, Houston, and Chicago for the Black Star Agency of New York. In 1962 through 1968, Uzzle became *Life* magazine's youngest contract photographer, in Chicago and New York. Enjoying the freedom that came with these contract relationships, Uzzle developed his preference for wandering freely and "blowing in the wind," traveling across the United States at will. When a subject caught his interest, however, he stopped, became very involved with the subject and photographed tenaciously, sometimes for days and weeks, as he did with Wyoming sheep ranchers. It is during this period that Uzzle developed his aversion to photographing celebrities (because they are not "real"), even though he did complete a well-known photograph of *Playboy* magazine founder Hugh Hefner.

Beginning in 1967, Uzzle spent 15 years as a full member of Magnum Photos, a photography collective and cooperative, with offices in New York and Paris. During this period, he served two terms as Magnum president in New York. Uzzle described this job as "wild and wacky, keeping members happy, striving to provide a measure of equilibrium and leadership" (author interview). To Uzzle this service was an extreme honor and was a great pleasure. In 1970, Uzzle received the Page One Award from the Newspaper Guild of New York and in 1975, the National Endowment for the Arts Photography Fellowship. He also photographed the *Newsweek* cover documenting the assassination of civil

rights leader Martin Luther King. After his involvement with Magnum, Uzzle remained in New York, and worked independently from 1984 until 1997.

Magnum published Uzzle's first book in 1973, titled *Landscapes*. Two other books were produced by other publishers: one in 1984 named *All American* (often used as a catch-phrase to describe Uzzle's life), and *Progress Report on Civilization*, published by The Chrysler Museum in 1992. These books demonstrate the eclectic bent of his photography, where reality is often depicted through bizarre juxtapositions of common items.

As an avid motorcyclist, Uzzle has participated in and photographed Florida's Daytona Bike Week, a large motorcycle rally, for over 25 years. A large group of his photographs were recorded during this annual event, portraying the people and machines they have "decorated" to express themselves. Uzzle's urge is to capture this uniqueness and aid in expressing his subjects' individuality, and more specifically, their "Americanness," through his photographs. One technique he uses is to position his subjects in relation to the ordinary (a wall, a tree, etc.), which further emphasizes their unusual appearance. His ability to capture this subculture is assisted by his own interest in motorcycling, which includes competing in various enduro (long dirt-bike races) at Bike Week and across the country.

Uzzle has traveled throughout Europe and Southeast Asia (where he photographed the surrender of the Khmer Rouge), parts of South America and Africa, and has said: "America is the most exotic country in the world. It is also the loneliest." These trips caused Uzzle to better define and concentrate on the unique American experience, usually from his quirky and idiosyncratic Southern perspective. Uzzle's portraits do not attempt to document where people came from or cultural activities unique to their country of origin. To Uzzle, they are only American—an "Americanism," which obscures their specific origins. Many of his photographs focus on individuals looking vulnerable while in large crowds. These individuals appear disconnected, self absorbed, and isolated. Yet Uzzle rejoices when he observes people breaking free from routine and openly seeking their own paths and expressing what makes them different. In these photographs his subjects are often framed with icons like the American flag.

Uzzle's many major solo exhibitions have included two shows at the International Center of Photography, New York, the Philadelphia Museum of Art, the Art Institute of Chicago, Gallerie Agathe Gaillard in Paris, the opening exhibition at the Witkin Gallery in New York, and The Chrysler

UZZLE, BURT

Museum in Norfolk, Virginia. Uzzle has often collaborated at various venues with Leslie Fry, multimedia artist sculpture, to exhibit his photographs and her sculpture, including at the Allyn Gallup Gallery in Sarasota, Florida. Uzzle described Fry as a wonderful friend and great artist, who has helped him shape his photographic aesthetic (author interview).

From 1997 until the present, Uzzle worked as an independent photographer based in St. Petersburg, Florida, and has produced work for *The New York Times Magazine*, *Fast Company*, *Fortune*, *Sports Illustrated*, *Newsweek*, and *US News & World Report*.

In 2004, Art Chicago presented the world premiere of Uzzle's large, nearly abstract panoramic typologies of shredded papers from the waste baskets of various professionals, including an accountant, a pornographer, a sculptor, and a dentist. Uzzle continued to actively create and produce photographs and prepare for upcoming exhibitions and says, "Some who have seen what I am doing lately say this is some of my best work ever" (author interview).

Outspoken, with a lively sense of humor and straightforward opinions, Uzzle has written to the director of photography of *Newsweek*, expressing discontent over *Newsweek's* standard day rate for photographers, a rate he considered unfairly low and which has not changed for over three decades.

Perhaps Uzzle can express his photographs, his "visual music" best:

America is my home; it's what formed me, and it's those values I take every place I go. My life is a swirl of parts that are both accidental/circumstantial and personally controlled. I use them all: I put them together. They are me, they are my pictures. My work is my visible love.

CARL VAN VECHTEN

American

Carl Van Vechten was in his fifties when he began his career as a photographer. His photographic work consists almost entirely of black-and-white portraits, mostly of celebrities and prominent African-Americans. His previous careers as an art critic and novelist brought him into contact with the creative people who would become the subjects of his photographs. He was a major force in bringing recognition to the Harlem Renaissance. Although he rarely showed his work and never accepted a fee for a sitting, his many gifts to various libraries have become a valuable pictorial record of twentieth-century culture.

Van Vechten was born in Cedar Rapids, Iowa in 1880. He grew up in an upper-middle-class family that valued education, the arts, and social reform. His father helped found the Piney Woods School, a primary and secondary school for African-American children in rural Mississippi. Van Vechten himself would later support the school. In his youth, he experimented with a box camera, but his artistic interests gravitated more towards music and theater. He pursued these interests as a student at the University of Chicago, where he published fiction, produced plays, and volunteered as an extra for traveling opera companies. He also frequented the Chicago

Symphony Orchestra, whose conductor, Theodore Thomas, performed contemporary orchestral music long before most other American conductors.

After graduation, Van Vechten remained in Chicago for three years as a beat reporter for William Randolph Hearst's *Chicago American*. Among his duties there was to collect photographs for the newspaper; his professional career before age 50 offers no other hint of his future occupation. In 1906, he moved to New York, where *The New York Times* soon hired him as an assistant to music critic Richard Aldrich. Van Vechten's background in contemporary music and theater nicely complemented the interests of Aldrich, whose tastes were quite traditional and conservative. Aldrich happily relegated to Van Vechten all reviews of performances that did not interest him; as a result, Van Vechten soon met most of the important figures in avant-garde opera and music. During his seven years at *The New York Times*, Van Vechten gradually expanded his critical range. He renewed his interest in theater, and became the first dance critic writing for an American newspaper. He also served a year (1908–1909) as the *Times's* Paris correspondent, a position which required him to cover all beats and exposed him to post-impressionist painting.

Van Vechten's career changed course in 1913. That February, the Armory Show introduced avant-garde European painting to America. It also introduced Van Vechten to another quarter of the New York arts community. At this time, he became aware of Alfred Stieglitz's Photo-Secessionists, who urged the acceptance of photography as an art form. Soon thereafter, he resigned from the *Times* and returned to Paris, where that May he met Gertrude Stein. His intimate friendship with Stein brought him in contact with the work of photographers like Man Ray, Cecil Beaton, and Alvin Langdon Curn. Stein's writing and her symbiotic relationships with artists provided Van Vechten with a model for his career as a writer and photographer.

Over the next several years, Van Vechten continued to write for various publications, expanding into literary criticism and even collecting his essays in several volumes. From 1922 to 1930, he published seven novels, most of which were quite successful. His novels, like his photographs, sought to capture the personalities of New York. His best-known book, *Nigger Heaven*, was the first exploration by a White author of Harlem cultural life. Although many black intellectuals bridled at the book's title and its primitivism, even Van Vechten's detractors acknowledge his vital promotion and support of the Harlem Renaissance.

In 1928, Van Vechten's older brother Ralph died, leaving him a sizeable fortune. Shortly thereafter, the caricaturist Miguel Covarrubias introduced him to the Leica, the first successful 35 mm camera. Freed from the need to support himself by writing fiction and intrigued by the possibilities of the Leica, Van Vechten soon abandoned literature and devoted the rest of his life to photography. Starting in 1932, at age 52, Van Vechten invited acquaintances in the arts to pose for him. For the rest of his life he chose his own subjects and never worked for hire.

As Van Vechten was himself a well-known writer and critic, he approached his subjects as a peer and an insider. His friendships with his subjects afforded him an understanding of their personalities, an intimacy rarely seen in celebrity photographs. He preserved this intimacy by keeping his portraits simple, avoiding elaborate costumes and special effects. Occasionally he would incorporate an elaborate backdrop or a prop; sometimes he would use raking light, but little more. Sometimes he would draw out his subjects by having them narrate their life stories

as he photographed them; Billie Holiday's story moved him to tears. Elsewhere, he tried to return them to happier times in their lives, as he did—with only partial success—with Bessie Smith.

From very early in his career as a photographer, Van Vechten realized the value of his work to historians and scholars. A large percentage of his work depicts prominent African-Americans; some of these portraits, like those of Nella Larsen and Zora Neale Hurston, are among the only extant images of these important writers. He conferred on African-American artists and intellectuals a formal dignity that others reserved for political and commercial leaders. By preserving the personalities of African-American culture, he sought to encourage the future study and appreciation of their deeds. To this end, he established many large collections of photographs, literature, and art at Yale University, Fisk University, the New York Public Library, and several other institutions across the United States.

From beginning to end, Van Vechten's career is remarkable for its consistency: almost all of his photographs were black-and-white portraits of celebrities. He was not known for technical or artistic innovations, nor was he the first photographer to specialize in celebrities. Within his narrow range, though, Van Vechten produced remarkable images that memorialized his subjects and evoked their personalities.

JAMES VANDERZEE

American

James VanDerZee was one of the great portraitists of the twentieth century. Born in 1886 in Lenox, Massachusetts, he came of age as the photographic medium gained credibility as an art form, and he used the camera to imbue representations of his New York Harlem community with elegance and dignity.

VanDerZee first acquired a camera as a teenager and quickly built his own darkroom to pursue the photographic process. He married Kate Brown in 1907 and soon had two young children. After several years with his family in Massachusetts and Virginia, VanDerZee moved his family to New York to join his siblings as well as to explore his interest in music. Although he performed with the Harlem Orchestra and often sat in with the Fletcher Henderson Orchestra, VanDerZee's youthful hobby of photography recaptured his attention. He first worked as a darkroom technician at a photographic studio in Newark, New Jersey, and then opened a portrait studio at his sister's Toussaint Conservatory of Art and Music in 1912. A few years later in 1917, VanDerZee opened the Guarantee Photo Studio on West 135th Street in Harlem, which would eventually be known as the G.G.G. Studio. Over the next two decades, VanDerZee rose to become the preeminent portraitist of his Harlem neighborhood, and contributed an important range of images to the intellectual and artistic development during the years that have come to be known as the Harlem Renaissance.

VanDerZee is best known for his portraits of both large groups and single sitters. In the studio he used a variety of painted backdrops to locate his subjects in an atmosphere of domestic elegance or contemplative nature. *Wedding Portrait: 'Future Expectations'* (1926) features a young couple in fashionable wedding attire seated before a *trompe l'oeil* fireplace. The groom looks gently at his bride, and she holds a lush bouquet of flowers and looks out at the viewer. In this photograph VanDerZee also added a narrative component through the use of a second negative—a “ghost” image of a young child playing with a doll at the feet of the newlyweds implies the couple's hope for a family. Without sacrificing the formality of a standard wedding portrait, VanDerZee introduced creative elements in the staging and print-

ing of his studio portraits to generate unique and personal commemorative images for his sitters.

During the 1920s, VanDerZee also became the official photographer for the activities of the United Negro Improvement Association (UNIA) in New York. He produced a number of images that document the pageantry and power of UNIA's military-style events, as well as strong portraits of the movement's leader, Marcus Garvey. Perhaps VanDerZee's best-known image is *Couple in Raccoon Coats* (1932), which depicts a man and a woman in luxurious raccoon coats before a shiny Cadillac stretched across the horizontal composition. The man sits inside the car and both figures gaze back at the camera with ease. The open car door and the rising stairs of the residential buildings behind the car contribute to an overall sense of growing socio-economic power and possibility among young African Americans during this era.

With their overtly contrived settings and darkroom tricks, and their modern, confident sitters, VanDerZee's photographs look simultaneously old fashioned and contemporary. They seem to suggest the possibility of creating a visual history for African Americans that refers to the nineteenth century—a time when the few photographic portraits of African Americans would have been made largely to document slaves as property—even as they assertively claim a modern identity for a growing middle class of African Americans in the twentieth century. Through his portraits VanDerZee generated both a visual past and future for his African American community.

VanDerZee continued his studio practice for many decades, but by mid-century his portraits had become increasingly outdated and his clientele diminished. G.G.G. Studio finally closed its doors in 1969 and at age 82, VanDerZee and his second wife, Gaynella, found themselves living in poverty. That same year, however, VanDerZee's earlier work was featured in the controversial exhibition *Harlem on My Mind* at the Metropolitan Museum of Art, New York, and his career experienced a rediscovery as many museums, eager to develop their attention to photography as a fine art, sought out VanDerZee as an exemplar of artistic portrait photography in the early twentieth century. More-

over, in the midst of the Civil Rights era, scholars were investigating the significant contributions of Harlem Renaissance artists and writers, and VanDerZee's images were held up as both documents of the people and social scene of that earlier time, as well as artistic contributions in their own right.

VanDerZee enjoyed his first solo retrospective in 1970, traveling exhibition, and throughout the 1970s and into the 1980s he enjoyed renewed attention to his career with a variety of awards, honorary doctorates, exhibitions, and new publications on his work. Perhaps most important, his role as a portraitist was reinvigorated as celebrities, artists, and athletes sought him out for sittings. Boxer Muhammed Ali, actor Bill Cosby, artist Romare Bearden, and singer Lou Rawls all had their portraits taken by VanDerZee during these final years. These late portraits feature a reduced, but not absent, use of the painted backdrops, and bring to the forefront the dynamic power of his well-known sitters. The existence of these late portraits confirms the range and continuity of VanDerZee's talent as an optimistic observer of African-American identity throughout the twentieth century.

After a career in photography that spanned 80 years, VanDerZee died at age 97 in Washington, D.C.

RACHEL ARAUZ

Biography

Born in Lenox, Massachusetts, 29 June 1886. Works with father at Knickerbocker Trust Dining Rooms, New York City in 1905. Marries Kate Brown in 1907 and moves to Virginia. Moves back to Lenox in 1908. Moves to New York City in 1910 and begins work as darkroom technician at Charles Gertz Studio in a department store in Newark, New Jersey. Opens portrait studio in conjunction with his sister's Toussaint Conservatory of Art and Music in 1912. Divorces Kate Brown in 1914. Opens Guarantee Photo Studio in New York in 1917. Marries Gaynella Greenlee in 1918. Featured in *Harlem on My Mind* exhibition at the Metropolitan Museum of Art in 1969, and closes his declining studio. James VanDerZee Institute founded in New York in 1970, and he receives his first solo exhibition at the Lenox Public Library in Massachusetts. Documentary film *Uncommon Images* features VanDerZee as its subject in 1975. Wife Gaynella dies in 1976 and VanDerZee receives honorary doctorate from Seton Hall University, South Orange, New Jersey. Marries Donna Mussenden in 1978 and receives Living Legacy Award from President Jimmy Carter; also awarded first annual Pierre Toussaint Award in New York City and is subject of "Black Heritage Covers" postage stamp. Receives New York City Mayor's Award of Honor for Arts and Cul-

ture and honorary doctorate from Columbia College, Chicago. Awarded honorary doctorate by Howard University, Washington, D.C., and dies 15 May 1983 in Washington, DC.

Individual Exhibitions

- 1970 Lenox Public Library; Lenox, Massachusetts
- 1979 *The Legacy of James VanDerZee: A Portrait of Black Americans*; Alternative Center for the Arts, New York, New York
- 1989 *Roots in Harlem: Photographs by James VanDerZee from the Collection of Regina A. Perry*; Memphis Memorial Art Gallery, Memphis, Tennessee
- 1993 *VanDerZee: Photographer, 1886–1983*; National Portrait Gallery, Smithsonian Institution, Washington, D.C.
- 2002 *James VanDerZee: Harlem Guaranteed*; Michael Rosenfeld Gallery, New York, New York
- 2004 *The James VanDerZee Studio*; Art Institute of Chicago, Chicago, Illinois

Selected Group Exhibitions

- 1969 *Harlem on My Mind: Cultural Capital of Black America 1900–1968*; The Metropolitan Museum of Art, New York, New York
- 1983 *A Century of Black Photographers: 1840–1960*; Museum of Art, Rhode Island School of Design, Providence, Rhode Island
- 1991 *Eclectic Lens: Photographs from The Paul Jones Collection*; Beach Institute, Savannah, Georgia
- 1994 *Empowerment: The Art of African American Artists*; Krasdale Gallery, White Plains, New York
- 1997 *Rhapsodies in Black: Art of the Harlem Renaissance*; Hayward Gallery, London, England, and traveled to Mead Gallery, University of Warwick, England; M.H. de Young Memorial Museum, San Francisco, California; The Corcoran Gallery of Art, Washington, D.C.
- Centurions: 101 Visions*; Savannah College of Art and Design, Savannah, Georgia
- 1998 *Tradition & Conflict: A Visual History of African-Americans in Art, 19th and Early 20th Centuries*; Ledbetter Lusk Gallery, Memphis, Tennessee

Selected Works

- Self-portrait*, 1918
- Nude by Fireplace*, 1923
- Marcus Garvey in Regalia*, 1924
- Alpha Phi Alpha Basketball Team*, 1926
- Barefoot Prophet*, 1929
- Couple in Raccoon Coats*, 1932
- My Corsage*, 1933
- Jean-Michel Basquiat*, 1982

VERNACULAR PHOTOGRAPHY

At the close of the twentieth century, the definition of vernacular photography was hotly contested. The term suggests a common and casual visual rhetoric, the everyday speech of the photographic image. And by definition, it seems vernacular photographs would most often be made by ordinary people—unskilled amateurs instead of professional photographers—and serve primarily utilitarian, social, or communicative functions. And yet when it comes to deciding which images, even which genres, fall into this category, the issue becomes thornier than it initially appears. Many have taken the approach of defining vernacular photography in terms of what it is not. At its broadest point, for example, vernacular photography is an art historical term that sets vernacular photography in opposition to art photography, as comprising any photographic image that does not qualify as art. This distinction is complicated, however, when vernacular photography is refashioned as a form of outsider art and is exhibited in museums or sold in galleries on the basis of its vernacular quality. One of the premiere scholars on the subject, Geoffrey Batchen, has tried to further define vernacular photography as a perceived absence of such traditional markers of photographic value as aesthetic merit, creditable authorship, intellectual weight, clarity of meaning, and good taste regardless of the status of its maker. This negative construction then raises questions about the limiting and arbitrary nature of assumedly positive distinctions like “aesthetic value” or “good taste,” perhaps leading toward a more vernacular-oriented history of photography rather than tracing this history through a canon of master professionals. Yet constructing vernacular photography as an absence leaves the distinction of what the term actually signifies frustratingly open ended.

Part of the confusion surrounding the term stems from a difference of opinion as to what actually determines a photograph’s vernacular status. Some place emphasis on the photographer. If the photograph is made by an amateur, it may claim vernacu-

lar status. This distinction would rule out a wide variety of non-aesthetic genres, including scientific imaging, photojournalism, and fashion photography, but include the artistically-inclined work of many skilled hobbyists. Others read the aesthetic of the photograph as the determining factor; vernacular photography is signified by a particularly naïve visual style. But this distinction is highly subjective and the wealth of visually arresting vernacular photographs that have been canonized in private art collections and museum exhibitions make a clear distinction difficult to maintain. Perhaps the most useful approach, and that taken by scholars like Batchen and Elizabeth Hutchinson is to focus on the ways that photographs are used, the codes of practice that surround them, and their clusters of meanings within quotidian contexts. This practical approach is not without its complexities; it allows for the inclusion of images being used “against the grain” or against the genre codes and, as we will see, encounters particular problems when used to analyze vernacular photographs in high art contexts. But it also places valuable emphasis on the practice of everyday life and the way that photography has become a vital part of that practice since its very invention. By drawing attention to the depth and breadth of photographic practice outside of the institution of art (or for that matter science, advertising, journalism, fashion, etc.) this practically-oriented approach points to the dramatic absence of vernacular studies within the history of photography while at the same time affirming the positive qualities of photographic culture in vernacular modes.

How, then, might one define vernacular photographic practice? The origin of the term “vernacular” is linguistic, referring to a local or regional dialect or idiom. The first systemic use of the term in relation to the visual arts emerges in the mid-twentieth century to describe regional architectural styles born out of practical sensibilities rather than aesthetic traditions. In his seminal text *Arts in Mod-*

ern American Civilization (1948), John A. Kouwenhoven offers this succinct definition of the vernacular style: “the unself-conscious efforts of common people...to create satisfying patterns out of the elements of a new and culturally unassimilated environment” (Kouwenhoven 1948, 13). Kouwenhoven’s vernacular is democratic, utilitarian, and quotidian. It resists tradition, looking instead to the practical conditions of the modern world, and yet it creates new habits that fall neatly into daily routines and establish resonant cultural meanings. Thus, the term vernacular itself emphasizes the lessons of practical experience as a defining characteristic over the more superficial concerns of style and authorship. Within the context of photographic production and consumption, the vernacular suggests the organic formation of a practical, utilitarian culture around new visual technologies. The scope of this practical engagement with photography is vast. Comprising images as diverse as picture postcards, snapshots, daguerreotype portraits, and scrap-booked newspaper clippings, the category of vernacular photography draws from a variety of photographic images and objects, made by both professionals and amateurs, in a variety of different styles and genres. But it also unites these disparate elements in their function to negotiate individual needs and desires within the private (often domestic) sphere.

Because vernacular photography is comprised almost exclusively of photographs in private contexts, once defined, this large body of photographic material proves resistant to comprehensive analysis. Within the academy, vernacular photography has historically been dismissed as heterogeneous, individual, and sentimental, at once difficult to define properly and too incidental to merit real scrutiny. What has been written on the subject employs a variety of different strategies to understand various facets of this ubiquitous but somewhat impenetrable genre. Richard Chalfen’s *Snapshot Versions of Life* (1987), for example, takes an anthropological tack, using field research and statistics to describe photographic practices “in the home mode.” Nancy Martha West’s *Kodak and the Lens of Nostalgia* (2000) takes a Marxist cultural studies approach, reading photography through the commodity culture of Kodak and exploring the ways that commerce has shaped our everyday relations to photography and nostalgia. Marianne Hirsch’s *Family Frames: Photography, Narrative, and Postmemory* (1997) and the essays compiled in Jo Spence and Patricia Holland’s anthology *Family Snaps: The Meaning of Domestic Photography* (1991) stitch together art history, social history, critical theory, and autobiographical accounts of the authors’ own

personal relationships to photography to suggest broader cultural currents in our psychological attachment to vernacular images. But each of these authors also acknowledges the inherently difficult nature of their project. At once highly individualistic and thoroughly homogeneous, deeply personal and culturally constructed, vernacular photography is inherently paradoxical. And because of its slippery public/private nature, it eludes any single methodological approach.

Of the two competing halves of vernacular photography’s paradoxical nature the more overt centers on the democratic nature of vernacular practice. Vernacular photography is coded as the instinctual and untrained photographic actions of everyday people. Available to anyone who would pick up a camera and free from complex and ossified cultural traditions, the vernacular is seen to be a truly egalitarian form of visual culture, springing fully formed from vital, experiential concerns with contemporary life. To be truly democratic, vernacular photography requires that both the means of technological production and the visual rhetoric of the image be universally accessible. On this first point, as discussed below, Kodak has, since 1900, marketed cameras so simple and inexpensive that even a child could operate them. As to the egalitarian visual rhetoric of the vernacular image, vernacular photography seems to elude visual hierarchies of taste and aesthetic quality by operating on the guiding principle of an emotional over an intellectual response to the image. As numerous theorists of vernacular photography have noted, the personal photograph seems to tap into some essential desire for and affective attachment to the image of another human being. This sentimental weight of the vernacular photograph is at once the reason for its marginalized presence within scholarly histories, and its most fascinating and under-analyzed feature. The highly subjective and illogical nature of photographic affect is difficult to codify (and to many scholars, not worth the effort), yet affective forces are central to the way vernacular photographs are created and consumed. Within the quotidian framework, photography is often simple and straightforward, placing legibility over style, aesthetic, or precision. Vernacular photography is the ideal example of what Roland Barthes described in *Camera Lucida* (1982) as the invisible or tautological nature of the photograph. The vernacular photograph provides a literal conduit to the referent and as such, carries with it the sentimental specificity of that referent. This naïve relationship to the photographic image imprints documentary visual histories, family portraits, and photographic souvenirs and mementos with the arresting presence of a distant

memory or a far away loved one. Without a real interpersonal connection between viewer and subject, the vernacular photograph holds little visual interest for the casual observer and is easily dismissed as banal cliché. But within its discrete frame of personal reference, the vernacular photograph is charged with mysterious but potent sentimental meaning.

But characterizations of the vernacular as the sentimental degree zero of photographic representation are only half the story. As fueled as vernacular photography may be by emotion and an instinctual approach to image making, the vernacular is also undoubtedly influenced by cultural constructions of photographic meaning. As Hirsch and West recognize, while vernacular photography, or more specifically, snapshot photography (on which, more below), trades on notions of innocence and essential humanity, this emphasis on photographic naïveté is itself a cultural construction. Indeed, as Pierre Bourdieu suggests in *Photography: A Middle-Brow Art*:

...taking the effect for the cause, photographic practice, subject to social rules, invested with social functions, and therefore experienced as a 'need', is explained with reference to something that is actually its consequence, namely the psychological satisfaction it produces.

(Bourdieu 1990, 15)

The production and consumption of vernacular photographs has been driven since its origin by an increasingly vast commercial and cultural industry. In the marketing of film, cameras, albums, frames, and a host of other photographic paraphernalia, commercial interests have defined and honed the ways in which photography fits into daily practice. And in the symbolic use of vernacular-style images in film, television, and print media, the culture industry forges links between individual photographic practice and public morality. While we may embrace photography as a spontaneous and essential element of our relations to the world and the people we love, Hirsch and others have provocatively suggested that the visual codes of vernacular photography are ultimately hegemonic. And the homogeneity of vernacular photographic production and consumption has as much to do with commercial and cultural models of photographic practice as it does with any essential human relation to camera or image. Does this photographic hegemony cancel out the visceral response that so many individuals have come to associate with vernacular photography? Not entirely, but it does provide an important caveat to the elemental rhetoric that casts vernacular photography as instinctual, innocent, and pure. For this reason, most comprehensive analyses of vernacular photography wrestle

with this paradox in an attempt to reconcile the Barthesian fascination of the photograph to the individual, and the rigid influence of cultural coding.

The Snapshot

Of the wide variety of photographic genres that might qualify as vernacular, the most paradigmatic example is probably the snapshot. While the origins of the term “snapshot”—a style of hunting where shots are taken with no particular aim—suggests spontaneity, the snapshot photograph has since come to signify a far more complex form of photographic practice. And in its various nuances, the snapshot genre provides insight into the larger category of vernacular photography as a whole. Whether of friends or family, archived in albums, displayed in frames, or tucked away in shoeboxes under the bed, snapshots are powerful personal mementos: nostalgic traces of people or moments past and testaments to personal intimacy or familial accord. Snapshots are generally made not by professional photographers, but by friends, family members, or anonymous bystanders drafted into the task, and as such, the images are often technically uninteresting and simply composed. Yet since the visual pleasure of the image depends more on sentimental, subjective concerns rather than aesthetic ones, the straightforward visual style, as long as it is legible, does not hamper the image's affective power. Indeed, despite the uniformity and visual banality of the snapshot, the image, within a particular context of personal interaction, possesses a deep emotional significance.

Central to the affective quality of the snapshot is the complexity of meanings present in a single image. The snapshot is far more than just a personal record of things past. Rather the snapshot is a key tool in the establishment of memory and identity. Drawing on the essential truth claim of photography or what Barthes has called the trace of “that-has-been,” the snapshot establishes its subject, no matter how posed or contrived, as “real.” By depicting a child at its most adorable, a vacation vista at its most spectacular, or a family group at its most connected and harmonious, snapshot images preserve an idealized facet of experience while letting other, less pleasurable aspects of that experience slip away. This intense visual power has made the snapshot a vital part of daily life. And like all vernacular modes, the snapshot has developed its own cultural routines. Certain events today would be incomplete without photographic documentation. The act of taking a photograph (or smiling for the camera when a

photograph is taken of you) has become essential to the celebration of holidays, birthdays, weddings, and vacations. And the snapshot that marked a significant event and a bond among its participants in the moment of its production, later circulated through a defined network of friends or family, further emphasizes the intimacy between those individuals. As an image that derives meaning from the quotidian cultural rituals that surround its production and consumption, the snapshot is not only the largest single vernacular genre, but it also epitomizes the nature of the photograph in vernacular modes.

While the desire to produce likenesses of family members and loved ones predates the invention of photography, the origin of the snapshot is generally agreed to have occurred in 1888, when George Eastman first introduced his Kodak No. 1 camera. And while vernacular photographic traditions go back to early daguerreotype, the Kodak camera revolutionized the relation of the general public to photography. This small box camera was easy to use, requiring no photographic expertise. It was also lightweight and the fast lens and high film speed did not require the use of a tripod, making the camera highly portable. And Eastman made the camera inexpensive enough to tempt a general user-ship far broader than the customary demographic of professionals, camera hobbyists, and skilled amateurs. But perhaps the most important selling point for the Kodak No. 1 is epitomized in the famous slogan "You press the button, we do the rest." Each Kodak No. 1 came preloaded with a roll of paper film containing 100 exposures. Once the roll was exposed, the entire camera was sent to the factory for processing and was returned loaded with a fresh roll of film and 100 two-and-a-half-inch circular prints. By separating the act of taking a picture from the more complicated chemical processes of developing and printing film, Eastman made possible a truly vernacular form of photographic production. Over the next 12 years, Eastman's refinements on the Kodak camera design, from the introduction of celluloid roll film and daylight loading film cartridges, to larger prints and smaller camera sizes, helped to popularize vernacular photographic practices in the United States and Great Britain.

But perhaps no camera better epitomized the transformation in attitudes towards photographic practice in the early days of this emerging genre than the Brownie camera, first introduced in 1900. With a cost of one dollar and a design so simple a child could use it, the Brownie is often hailed as the camera that made photography a truly democratic medium. The childlike simplicity of the camera mechanism seemed to reflect a new degree of honesty

and purity in photographic expression (and played a formative role in the association of the snapshot with a form of photographic innocence as discussed above). In its first year alone, over 100,000 Brownie cameras were sold, adding to the estimated 1.5 million roll film cameras already in use at that time. With inexpensive cameras available to practically any man, woman, or child who might want one, photography found a new role in the domain of the everyday. Early snapshot cameras allowed a new breed of photographers to experiment with their own individual approaches to photography, capturing scenes of daily life for no other reason than personal significance or whim. No longer limited to the confines and formalities of the portrait studio, these early technologies put cameras into the hands of wholly unskilled photographers and provided them with the agency to create exploratory, spontaneous, and frivolous photographic images. Thus while the history of image making from the earliest portrait points to desire as a contributing factor in the generation of vernacular photographic culture, it would be difficult to imagine the existence of vernacular photography today without the influence of Kodak's technological innovations. So often defined by its carefree, intimate, and impulsive nature, the snapshot would have been impossible if the photographer had not been freed from the cumbersome camera and tripod, the lengthy exposure, and the technical and chemical complexity of developing and printing film.

Kodak's influence in the formative years of the snapshot genre extends beyond the production of camera equipment and the processing of film. As West argues, Kodak advertising played an important role in defining how snapshot cameras could and should be used. By tying the activity of "Kodaking" into popular industries such as leisure, toys, and fashion, the company made the Kodak camera an essential appliance for every home. But beyond increasing the popularity of their products, West argues, Kodak revised basic cultural perceptions of photographic meaning by injecting the cachet of nostalgia into the personal photographic image. In marked contrast to the longstanding tradition of postmortem photography and even to earlier Kodak marketing campaigns that billed the snapshot camera as a necessary accessory to outdoor leisure activities, Kodak's marketing breakthrough recast the photograph as a vital, sentimental record of the past. This new photographic ideal encouraged the erasure of anything negative (death, sorrow) and the affirmation of the positive through representation and reproduction. Thus, Kodak is largely responsible for the present culture of snapshot photography that

values the idealized image of posed and performed familial harmony within the domestic sphere over the documentary reality of people “in the world” favored in earlier vernacular styles. And, West suggests, by resituating the photograph from an activity of the present to a trace of the past, Kodak established photography as a form of historical narrative. Through print advertising, the marketing of family albums, and ingenious technological innovations like the Autographic Kodak—which allowed the photographer to caption the negative while still in the camera—Kodak pitched amateur photography as *the* form of personal and familial record keeping. By defining vernacular photography as a narrative mode, Kodak ensured the perpetuation of photographic consumption over time, and West suggests, fundamentally altered the cultural perception of personal photographs.

Other Vernacular Forms

With the growing accessibility of easy-to-use cameras and the preponderance of snapshot oriented accessories (like albums and frames), the photograph has become a ubiquitous feature in most homes in the developed world, and an essential household item even in the less-developed nations. But the vernacular consumption of photographs is not limited to those produced by amateur, everyday photographers. Professional portraits taken at weddings, for holiday greeting cards, and on school picture day routinely stand alongside snapshots in family albums and frames on the mantelpiece. Photo-postcards inscribed with personal missives make their way from far away places and onto refrigerator doors or bulletin boards. Novelty photographic technologies like photobooths and neoprint photo-sticker machines provide photographic souvenirs of a day out with friends to be pasted into scrapbooks, tucked into the corners of mirrors, or stuck on the back of cell phones. Thus, just as the taking of a snapshot defines vernacular photography through everyday photographic production, so the use and display of photographs in quotidian modes, regardless of their author, define vernacular photographic consumption. In this vein, scholars of vernacular photography have also been drawn attention to the long history of incorporating personally significant (if not personally authored) photographs into everyday objects. As evidenced by Geoffrey Batchen’s work on the morphology of vernacular photography and photographic jewelry, and the recent *Pop Photographica* exhibition at the Art Gallery of Ontario (2003), the totemic nature of the personal photograph as a physical trace of the

past has lent itself to the creation of objects that incorporate photographs into their design. The origin of this practice may lie in the custom of keeping early daguerreotype portraits in ornate cases to preserve the fragile, mirror-like surface of the image. These ornamented, portable daguerreotypes were part image and part treasured keepsake, at home either on a mantelpiece or tucked into a breast pocket and carried around like a lucky charm. Over time, the desire for photographic mementos and the increasing availability of inexpensive photographic processes (in the form of tintypes, ambrotypes, and cartes-des-visites) gave birth to the Victorian obsession with photograph-adorned domestic objects. Chess sets, pillows, furniture, china, sewing kits, jewelry, and handbags (to name only a few examples) became vehicles for further integrating the photograph into the everyday life of the home. And while they may not have the same vintage aesthetic as Victorian era photo-objects, more contemporary examples, like the mantelpiece shrine comprising framed photo and bronzed booties and the mug or T-shirt custom-emblazoned with a family photo at the mall keep this photo-object tradition alive and well even today.

While such vernacular photo-objects more often than not use professionally made photographs, they carry with them many of the same qualities associated with the snapshot. Photo-objects represent a bond between the viewer and the subject. They are implicated in the creation and preservation of memory, personal history, and identity. The images incorporated into these objects are iconic and idealizing, rarely concerned with documentary realism. Perhaps more dramatically than in the case of snapshots, photo-objects also emphasize the quotidian presence of photography in domestic spaces and emotional lives. The images framed, decoupage, silkscreened, or stitched into everyday objects make photography a literal part of everyday actions like eating, sleeping, and playing. The insistent presence of the image in these objects is such that the owner need not really look at it, so much as use the object, touch it or have it nearby. This construction of the photograph-as-object—a souvenir, a memento, or a touchstone for memory—goes hand in hand with the lack of concern for visual aesthetics so common to vernacular photography. The presence of the image in the private sphere, either in a frame or as a photo-object, functions first and foremost to make the photographic subject present within the everyday life of the home. Amateurish or professional, formal portrait or casual snapshot, Polaroid or silver gelatin print, as long as the image can be incorporated into

the quotidian space and practice of the home, the vernacular photograph produces depth of meaning. Thus, the aesthetic quality of the image, its formal characteristics and its visual style, are secondary if not superfluous to its critical function.

Collecting Vernacular Photographs

But this does not mean that vernacular photography is without aesthetic merit. As an increasingly popular item for collectors, vernacular photography has taken on a whole new, and somewhat more complicated, raft of characteristics. What was once the pastime of a few individuals, sifting through boxes of papers and old albums at garage and estate sales is fast becoming a major collecting industry. Flea markets dedicated to old photographs, vintage photography experts on the American public television program *Antiques Roadshow*, and major museum exhibitions such as the San Francisco Museum of Modern Art's *Snapshots: The Photography of Everyday Life, 1888 to the Present* (1998) and the Metropolitan Museum of Art's *Other Pictures: Anonymous Pictures from the Thomas Walther Collection* (2000), suggest that the search for aesthetic content within the vernacular photographic tradition is on the rise. As aesthetic objects these photographs combine the intimacy of the personal snapshot, the conceptual challenge of found object art, and the cultivated mystery of the museum artifact detached from its original context. But whether or not these images still qualify as vernacular photography once they are aestheticized in a museum context is again a subject for debate. Almost always divested of any reference to the photographer, the subject, or the specific time and place in which the image was taken, the vernacular photograph in these aesthetic contexts is stripped bare of the practical origin from which it gained its vernacular meaning. Furthermore, the qualities that signify value in vernacular contexts are quite distinct from those that provide aesthetic intrigue (and value) to the collector or curator. Pricked by what she defines as the "successful failures [and] fortuitous misfires" of vernacular photography, Mia Fineman champions precisely those photographic mistakes that are edited out of the domestic photographic narrative (Fineman, 2000, not paginated). While such curators' and scholars' efforts direct new attention to a vast and understudied area of photography, the canonization of vernacular photography as art or aesthetic artifact also undercuts the focus on everyday practice that is so lacking within histories of photography in the first place. This issue has prompted Batchen to question

the very underpinnings of the photographic canon: "Why not...insist on the vernacularity of the art photograph (its specificity to a particular regional culture) and include it in our historical discussions as but one type of vernacular photograph among many?" (Batchen, 2001, 76). As a valuable and growing commercial industry however, the intellectual conflicts surrounding the aestheticization of the vernacular photograph are not likely to be resolved any time soon.

Vernacular Photography as Fine Art

The vernacular photograph plays another, albeit less controversial, role in the realm of the aesthetic as a cultural artifact in the work of a number of postmodern artists. The prototypical example of this subgenre (of sorts) is Andy Warhol's use of a wide variety of vernacular photographs as maquettes for his silkscreen paintings. Notorious for his slippery and often indistinct separation of art and life, Warhol surrounded himself with images of all kinds. In addition to being an avid collector of newspaper clippings, mug shots, and Hollywood publicity stills, Warhol was also an obsessive snapshooter. Many of his photographs of friends and celebrities collected with other vernacular images in his monthly "time capsules" (now in the archives at the Andy Warhol Museum) illustrate Warhol's fascination with photography in truly vernacular modes. In contrast to the vintage beauty of the vernacular images in the *Snapshots* and *Other Pictures* exhibitions, Warhol's engagement with photography seems defiantly anti-aesthetic, raising questions about how far one can or should push the boundary between art and the vernacular. Other leading contemporary artists who commonly use photographs from vernacular sources include German painter Gerhardt Richter, Christian Boltanski, and Hans-Peter Feldmann.

More recently, Korean-American photographer Nikki S. Lee has made a career of questioning and often parodying the cultural constructions of snapshot photography. Her early "projects" are snapshot-style images of herself performing as part of various communities (lesbians, yuppies, school-girls, tourists). Indistinguishable from the most mundane snapshots but for the reappearance of Lee in every image, these images call attention to the sameness of images in the vernacular mode despite the cultural difference of these groups. And by shifting so dramatically from one identity to the next, she raises questions about the authenticity of the snapshot image. In her later "parts" series, the artist again poses for her own camera in

VERNACULAR PHOTOGRAPHY

different guises alongside a series of men who are abruptly cut out of the final prints. The “parts” series again exposes the tacit cultural assumptions that undergird snapshot meaning, citing not only the unifying function of vernacular photography as a form of interpersonal intimacy, but also the disconnect that often occurs between photographic representation and reality and the ominous subtext of that which is edited out, unseen in the chronicles of contemporary snapshots.

Finally, and building on the growing cultural fascination with the anonymous, vintage snapshot, Lorie Novak uses vernacular photography as the basis for her ongoing web project *Collected Visions* (<http://cvisions.cat.nyu.edu/mantle>). Novak’s web project is an archive of vernacular images and accompanying narratives. Visitors may submit an image, they may search the archive for certain types of images, or they may add a story (real or fictional) to an image (either their own or someone else’s). By using the internet as a forum for people to display their own photographs and narrate their reactions to others’ photographs, Novak wrestles with the problem of making private photographs public. By refusing both private specificity and aesthetic detachment, Novak uses the culture of vernacular photography in both its uniformity and its singularity to create a communal, virtual photographic experience. And by exhibiting both the individual anomaly of real snapshots and the cultural currents that guide their production, she invites the viewer to recognize the paradoxical nature of vernacular photography as a whole.

VICTORIA AND ALBERT MUSEUM

The Word & Image Department, Photographs Section at the Victoria and Albert Museum (V&A) in London is one of the museum’s 14 areas of collecting

and holds the national collection of the United Kingdom of the art of photography. A changing selection of nineteenth and twentieth century and contempor-

ary photographs, drawn from the Collection, forms special exhibitions and illustrates a history of photography in the Photography Gallery. The Photography Collection is one of the largest and most important in the world. It is international and ranges from the beginnings of photography in 1839 to the present. The V&A's collection began in 1856, in the museum's library, later the National Art Library. The first acquisitions of photographic art were made by Sir Henry Cole, the founding director, from the annual exhibition of the Photographic Society of London. Two years later, an international exhibition of photography was held—the first at any museum.

In the 1850s, acquisitions were made direct from major creative photographers, and the collection grew into one of the richest in the world. By 1859 the Library had acquired over 8,000 prints including work by Roger Fenton and Edouard Baldus. The V&A was the first to buy and exhibit the then-radical photographs of Julia Margaret Cameron in 1865, and in 1868 received by bequest one of the finest early private collections of photography, the Townshend collection, which includes an outstanding collection of photographs by Gustave Le Gray. To solidify the nineteenth century collection, the V&A retrospectively began collecting classic early photography in the 1930s. In-depth collecting of contemporary photographic art was undertaken in the 1960s.

The collection was transferred from the Library to the Department of Prints and Drawings in 1977 to become the nucleus of the “national collection of the art of photography in the United Kingdom.” Since that date it has rapidly expanded to represent classic photography of the nineteenth century and the twentieth century, and to take a leading role in the collection of contemporary photography, holding, at the end of the twentieth century, over 300,000 prints. Genre concentrations include photojournalism and fashion photography. Photographers represented in-depth include Henri Cartier-Bresson, Bill Brandt, Isle Bing, Guy Bourdin, and many others. An index to the photographers represented is in the Print Room.

A major reference collection of publications on photography is available in the National Art Library, including William Henry Fox Talbot's *The Pencil of Nature* (1844–1846) and Peter Henry Emerson's *Life and Landscape on the Norfolk Broads* (1886). Since 1977 the Library has acquired substantially in the field of photography publications, including key journals, monographs, early texts, exhibition catalogues, and experimental publica-

tions. These are supplemented by ‘Information Files’ on photographers and institutions, containing such materials as press cuttings, exhibition announcements, and sometimes correspondence. The Victoria and Albert's Theatre Museum, and the Indian and South East Asian department also hold photographic archives. The Photography Collection is distinct from the Victoria and Albert Picture Library where reproductions of works of art in the museum are available. Most photographs in the Photography Collection within the Department of Prints, Drawings, Paintings, and Photographs that are not currently on display are available to visitors through the Print Room.

From the very beginning the V&A has recognized the importance of the museum as a research institution, and through their activities, the knowledge in the field of the history of photography is enriched. The photography collections of the V&A recognize that one of the most fascinating aspects of photography is its multi-faceted nature, which renders difficult an attempt to fit it into an organized system of human knowledge. If the founders of the Universal Decimal Classification are to be followed, photography is related to music, art, arts and crafts, and sports, since all of these particular domains belong to “Class Seven.” This classification dilemma would be less disturbing if a definitive answer could be given to the question “what is photography?” Photography can exist as an immaterial idea or in a material form. As an idea, photography expresses itself as information, as communication, as art, or as a scientific thought collective with an academic tradition of its own.

As a material expression, photography is a record of the physical world, a technique, or a system composed of a light sensitive element, a registering device, and a processing cycle. A study of the photographs held by the Victoria and Albert reminds us that photography is also an industry. The recent successor of the long-time curator Mark Haworth-Booth, Martin Barnes as new Head of Photography and Curator, Word & Image Department provides the best proof of this statement.

PAUL VIRILIO

French

Paul Virilio is one of the most influential theorists working today in terms of his writings on aesthetics, politics, technology, and war. A highly unconventional and idiosyncratic thinker, his background lies in the interrelated fields of architecture and urban planning, but his work often involves a panoramic sweep, displaying references to cinema, literature, history, philosophy, and photography.

Born in Paris in 1932 to a French mother and Italian father, Virilio was raised in the port city of Nantes. In 1939 he witnessed the German *Blitzkrieg* firsthand and the traumatic effects of war have become an insistent theme throughout his work. His first major book, *Bunker Archeology* (1975/1994), was a lengthy photo-essay (published to accompany an exhibition) that documented the imposing fortified structures left behind after the war along the northern coast of France. Virilio took these photos between 1958 and 1965, and the text combines aspects of military history, poetic description, and critical treatise.

Virilio dreamt of becoming a painter when he was young, and in the aftermath of the Second World War he attended the renowned art studios of Montparnasse, and befriended many artists during this period. In addition, Virilio assisted in transforming the works of several Modern artists—including those of Henri Matisse—into stained glass after a period of studies at L'École des métiers d'art. Toward the end of the 1950s Virilio also undertook studies at the Sorbonne under the philosopher Maurice Merleau-Ponty, and thus became influenced by phenomenology. In 1950 Virilio became a Christian convert, and influenced by such priests such as the Abbé Pierre, who spoke up for the poor he began working on behalf of the homeless, a cause to which he still devotes much of his time.

Virilio went on to study architecture, and in 1963 formed the group (with Claude Parent) called Architecture Principe, and became president and editor of their journal. Virilio's architectural proposals involved the unconventional premise of the "oblique function," or to quote the author, "the end of the vertical as an axis of elevation, the end of the horizontal as permanent plane, in favor of the oblique axis and the

inclined plane." The sole structure which in its realization corresponded to these notions was the church of Sainte-Bernadette in Nevers (1963–1966). Following the events of May 1968 in Paris, Virilio became Professor at the École Speciale d'Architecture, and later its Director (1975) and President (1990).

Virilio records his ideas in a highly evocative and deceptively straightforward manner, often camouflaging the depth and intensity of his thought. Particularly in recent writings, Virilio tends as much toward the poetic as the analytical. He has commented, "My books are very visual...if I can't see it, I can't write about it." A self-described "art critic of technology," Virilio frequently envisions a future nearly overwhelmed by the mediated image, and his is a much darker, dystopian vision than that of say, the influential media theorist Marshall McLuhan.

In a 1987 interview Virilio remarked "images have become munitions. Their delivery and their impact have the same speeds as the impact of a bullet. The arms of the future will resemble a TV more than a mortar." Much of Virilio's work retains an apocalyptic tone, and certain aspects more closely resemble that of literary iconoclasts such as William S. Burroughs or J.G. Ballard. Moreover, in marked contrast to the post-structural thinkers of his generation with whom he is often too easily associated, Virilio's work is generally more concerned with visual imagery than linguistic phenomena.

One of Virilio's primary interests is in "dromology," or the study of speed, addressed in his *Speed and Politics* (1977/1986). In this text Virilio presents a compelling historical narrative of how military strategies became shaped by the development of transportable weaponry, eroding the significance of fortified cities. He comments "the violence of speed has become both the location and the law, the world's destiny and its destination." Virilio's ongoing explorations of the conditions of violence, destruction, and militarism characteristic of the twentieth century have recently gained renewed currency as the events of September 11, 2001, have made many of the discussions in his previous works seem eerily prescient.

In the *Aesthetics of Disappearance* (1980/1991) Virilio writes of the significance of developments in chronophotography and the cinema in shaping mod-

ern perception. In an unusual and engaging turn, however, Virilio not only compellingly conjures Etienne Jules Marey's nineteenth century experiments: "The whiteness of birds or that of horses, the brilliant strips pasted on the clothes of experimental subjects, make the body disappear in favor of an instantaneous blend of givens under the indirect light of motors and other propagators of the real," but also spends much time discussing the reclusive twentieth century billionaire Howard Hughes: "Suppressing all uncertainty, Hughes could believe himself everywhere and nowhere, yesterday and tomorrow, since all points of reference to astronomical space and time were eliminated."

Although his ideas have made influential and intriguing reading for many artists, in recent years Virilio has been increasingly critical of contemporary art. This becomes apparent in the stark polemic *Art and Fear* (2000/2003). It contains two short but intricately tangled essays lamenting the decline of art in the last decades as conformist, nihilistic, and profane in its character. Perhaps Virilio is also indulging his nostalgia for the possibilities he once envisioned for modern art, but his more recent thoughts are colored by his writings on the horrors of wars and the ethical questions raised by contemporary technology such as genetic research.

Virilio's particular mixture of fascination with the current state of things and apprehension for the future was recorded in the exhibition entitled *Unknown Quantity* (2003), which he curated for the Fondation Cartier in Paris. In the catalogue to accompany the exhibition, which featured a lavish assortment of photographs of disastrous accidents: plane crashes, bombings, earthquakes, and floods, Virilio characterizes differing varieties of accident, and states that "Daily life is becoming a kaleidoscope of incidents and accidents, catastrophes and cataclysms, in which we are endlessly running up against the unexpected." His interest (and ours) lies

then in examining and learning from these accidents to better understand our present moment.

Biography

Born in Paris, France, 1932. Currently Professor Emeritus at the École Spéciale d'Architecture, Paris, of which he was Director, 1968–1998. Trained at the Ecole des Metiers d'Art, Paris. Conscripted into the Colonial army during Algerian war of independence. Founding member of *Architecture principe* group, 1963–1968. Editor of *Espace Critique*, Editions Galilée, 1973. Awarded National Grand Prize for Architectural Criticism, 1987. Program Director, College International de Philosophie, 1990. Has served as a member of the High Committee for the Housing of the Disadvantaged in France since 1992. He has written for the journals *Esprit*, *Cause commune*, *Critique*, *Traverses*, and *Urbanisme*. Lives in La Rochelle, France.

VIRTUAL REALITY

Virtual Reality (VR) is anything pretending to be real while not existing by proof. The pretext can relate to a person, an animal, a place, a time, or any situation one can think of. Although the term VR became commonplace at the end of the twentieth century by its usage within computer imaging, and is generally defined as the creation of “realities” by digital means, it also denominates an old practice in all forms of imaging. In principle, each visual image presents a reality of itself, which is not congruent with any given reality that can be perceived by human eyes. But within technical media as photography and computer imagery, VR shows realities that are relatively easily proven not to be existing in spaces accessible by human bodies.

The word virtual is drawn from the Latin *vir* meaning man. Erasmus of Rotterdam introduced *virtus* in 1531 as man’s honour to be acquired by learning. Later, the French *virtue* simply meant the pretention of being an honourable man and thus the word gained its connotation of fraudulence. Early art historians started to use virtual as a description of spaces not to be entered, i.e., the depth of a painting. VR in this sense is a pleonasm, doubly coding both the method of transforming visible space as well as the result in its metaphorical meaning. Thus VR refers to the fabrication of any staged technology in images, be they photographic or made by computers.

VR in photography as well as in computer imagery contains three discernable elements, and normally two out of these three are combined in any one picture: staging, alteration, and montage. Staging means the preparation of an image by setting the scene, putting actors into costumes, and placing lights in specific ways. Altering images is any effort taken after exposure, including darkroom techniques and software effects. Mounting part of different images into one picture is a method well known to photographic history from the start and has attained its own history as artistic method from the 1920s onwards.

Staging surely is the oldest method of achieving VR effects in theater, art, and photography. Used well from the start of the medium, it reached its height around 1900 in vernacular photography: painted backgrounds, columns and balustrades

made of *papier maché*, and costumes for the sitters were a common treatment in studio portrait photography, which gradually fell out of practice after World War I. The often self-ironic game with what could be one’s social role and what is not was pursued in countries with great social differences and traditional rites, particularly in Latin America, Africa, and South East Asia. Painted backgrounds with efficacious lighting were still present at the end of the twentieth century in all studio portraiture, although their use is diminishing.

Staging, of course, is the basis of film. From Georges Méliès’ *Voyage Dans La Lune* to Fritz Lang’s *Metropolis* to Merian C. Cooper and Ernest B. Schoedsack’s *King Kong* runs a long line of movies more famous for their staging and effects than for their direction or screenplay. These films directly influenced advertising photography. Advertising is not only product presentation but VR as well, thus the vicinity of film staging to setting the scene for photographs is given quasi naturally. Fashion photography is directly linked to film as the worlds and lifestyles presented have to be a dream for the majority of those looking at the pictures. Edward Steichen and Baron Adolph de Meyer plied this trade for *Vanity Fair* and *Harper’s Bazaar* but their work only laid the ground for more complicated arrangements like in the work of Lejaren à Hiller and George Hoyningen-Huene. A continuation of this line in the late twentieth century is marked by Cindy Sherman as she switches the roles of stage and reality: the artist no longer plays a role but is presented in acquired identities.

The method of altering images after exposure is more subtle but has a powerful impact on the suspension of disbelief that can dictate how a viewer perceives what is real in a photograph and what is not. Fine art photographers, as exemplified by the Pictorialists at the turn of the nineteenth century, wanted to give their pictures the feeling and metaphorical qualities of paintings or classical prints as part of their struggle towards acceptance for their art. In a similar attempt, the exponents of Straight Photography expected their prints to be fine art in themselves—and put enormous emphasis on details of light and shadow as well as on a glossy surface. Ansel Adams’ Zone System can

be described as a method of setting up for alterations that are to be made in printing when determining the exposure. In other words, the photographer plans for an outcome by deep immersion in the technical realities of the black-and-white photographic process at the expense of adhering to a more organic and subjective sense of the creative process, which had long characterized the fine arts in general.

Altering images helped establish photography in art throughout the 1930s and 1960s. In the 1930s, artists like Man Ray introduced solarization as a method of darkroom alteration to create one-of-a-kind images, especially in a number of his portraits of painters, sculptors, and writers of the Surrealist movement. Methods of altering photographs and thus the results of this manipulation changed completely in the 1960s: whether Pop artists like Richard Hamilton, Robert Rauschenberg, and Andy Warhol utilized photographs by means of silk screen prints, or whether painters like Jasper Johns, Gerhard Richter, Sigmar Polke, and others began to paint after photographic images in free stylistic interpretations, whether other painters like Richard Estes, Malcolm Morley, or Franz Gertsch projected slides onto screens to paint the results by airbrush and other techniques, all started with a photograph or a photographic reproduction and altered it by changing its medium of appearance.

The third method of practising VR in photography is photomontage. The word was first used to describe the practice of cutting out photographic fragments and re-arranging them on a given or drawn surface, as in the work of John Heartfield, El Lissitzky, Kurt Schwitters, Mieczeslaw Berman, and a number of others who were not only active in applying this method to art but to political expression as well. Another form of photomontage has created the paradigmata for VR. That is the melting of images into each other, often named by its manner *negative montage*. It was practiced in the preliminary courses of photography at nearly any art school of the 1920s.

The collage of photographic and graphic fragments had been a common practice with the Dadaists and Surrealists of the 1920s, especially in the work of Hannah Höch and Raoul Hausmann, and painters Max Ernst, Salvador Dalí, and René Magritte. The negative montage—under Man Ray's influence—came into wide use in the 1930s among these artists. Pablo Picasso mixed the nineteenth century practice of the *cliché verre* (creating an image on glass that is then used like a photographic negative) with the montage of images and texts into pictures, and his friend Dora Maar worked on a series of photomon-

tages with melted columns, deep tunnels, and hard to discern elements that create an overall feeling of fear. An interesting development was taken by the Czech Surrealist movement with Karel Teige, Jindřich Štyrský, and others. They began to melt all three elements of VR by staging small table-top arrangements that were used in combination with texts and collages or combined by printing.

With the strong influence of the 1930s, Surrealism on American advertising, staged realities found their way into everyday life. Lejaren Hiller and Edward Steichen composed pictures from large groups of people by both staging them and mounting smaller groups into one larger image. The American influence quickly returned to Europe and even determined advertising in the Third Reich: Herbert Bayer's work for the (Germanized) Dorland agency included mixtures of table-top photography, drawings, typographic elements, and all sorts of grids. The same can be said about modern advertising in Italy as can be seen in the work of Xanti Schawinsky, or in Switzerland in the work of Herbert Matter or Josef Müller-Brockmann. All of these works created spaces that obviously did not exist, and they played with the perspective—large faces or objects in the foreground, no middle ground in the image, and a prominent background for presenting the written message.

These stagings and montages often resulted in posters and magazine ads, which were extremely popular and well accepted by the public. Thus one consequence was that similar forms of VR were used for military propaganda during World War II. The zenith of VR in photography was reached, however, in the 1950s, mainly in advertising and fashion photography. The Americans Richard Avedon and Irving Penn and the Britons Cecil Beaton and Angus McBean decorated their elegant models and beautiful women with VR, mostly by combining elaborated constructed sets and montage techniques. And VR returned to fine art photography in the 1950s and 1960s in the form of combination printing, as seen in the German fotoform group as well as in Japanese photography, as in the work of Shoji Ueda or Ei-Q. French photographers like Daniel Masclet did not follow the call for abstraction and set about creating spaces that were conceivable but not real. Similar impulses were followed by Americans like Wynn Bullock, Clarence John Laughlin, and Minor White.

The influence of Bullock, Laughlin, and White formed a movement in the 1960s closely related to VR, the vision of private realities as a successful exhibition named it in 1974. Chief among the proponents of this type of expression are Jerry Uelsmann and Ralph Meatyard, who were later followed by Linda Connor, Ralph Gibson, Les Krims, Duane

Michals, Arthur Tress, and Joel-Peter Witkin. A similar development can be traced in Japan, with photographic artists like Hatsutarō Horiuchi, Yoichi Midorikawa, Akira Sato, and Shisui Tanahashi who in their VR work pay tribute to the prints of the late seventeenth century master Katsushika Hokusai. German and Austrian artists like Bernhard and Anna Blume, Sigmar Polke, and Arnulf Rainer introduced parapsychological effects into VR through their work. William Wegman transferred human behavior to his Weimaraner dogs, and Cindy Sherman depicted herself in roles conventionalized by movie stills and female stereotypes, both utilizing a good deal of VR to make real their imaginations.

The late 1970s saw a specific Dutch tradition evolving from the works of Paul de Nooijer who had begun with hand-coloured photomontages of overstretched rooms taken with extreme wide-angle lenses. Rommert Boonstra, Teun Hocks, Gerald van der Kaap, and Henk Tas were exhibited under the brand *fotografia buffa*, which perfectly describes their witty scenes. All of them were intrigued by the commercial photography of that era with its use of projected background screens, as in wedding photography or in portraiture. Also in the 1970s, baby boomers seemed to remember their childhood pleasures in creating model railroad landscapes or doll houses, and table-top photography began to form a new base of VR. Mac Adams, Jo Ann Callis, James Casebere, Benno Friedman, Barbara Kasten, Frank Majore, Laurie Simmons, and others mixed all forms of VR constructions to re-integrate their private memories and obsessions in their artistic practice. Their fabrications were successful transformations of the routines of everyday life into virtual, inaccessible spaces. A final example of this tradition is the work of the German artist Thomas Demand who takes images from television shows or newspapers and reconstructs the spaces in full-scale models made of wood and paper, has them photographed, and exhibits these photographs in 1:1 print size.

The 1980s saw the use of computers to create or alter photographic imagery and explode the myth of the medium's ability to capture the "truth" once and for all. Nancy Burson melted portraits of politicians into each other, thus dissolving their differences. Lynn Hershman had her head changed into a camera, Matthias Wähner copied himself into famous newspaper photographs, and Alba d'Urbano had her skin transferred onto a suit. Most of these artists came from video backgrounds and used still photography in combination with computer imagery for a movie-like VR that set the framework in the 1990s for manipulation of the human body: Inez van Lamsweerde exchanged front and rear parts of the

body whereas Anthony Aziz and Sammy Cucher closed all bodily orifices, thus explaining the new media universe within humans. Parallel to the theories of Marvin Minsky and Hans Moravec that postulate sending the human species into retirement by having extremely intelligent robots do all the work, these artists transmute the human body into god-like entities that no longer need to communicate. Foreshadowing the cloning of human beings, Keith Cottingham had his beautiful, identical boys fixed photographically in his series *Fictitious Portraits*.

The works shown in the seminal 1996 exhibition of VR in photography such as Cottingham's, *Photography After Photography*, relied heavily on a development that had been parallel to the fabrication and the human transformation as well. With the advent of the personal computer, the worlds of movies and games began to merge and form a continuum. Special effects were used in film production, and any successful movie was accompanied by a computer game. In the 1990s, this development reversed itself by having movies made after successful games. This development spread rapidly with the increasing use of the internet from the mid-1990s on, creating new forms of VR and thus influencing the arts—photography among them. Semi-robotic figures with mythical or superheroic character attributes were dubbed Avatars after the Indian goddesses, and their physical appearance reflected fantasies that had been promulgated by Pop Art and Pop music alike.

The spaces of VR games and settings had their own genealogies in either science fiction literature or film and advertising photography. Be it arcade or computer games, the backgrounds of rallies and races, of combat scenes, or jump-and-run joys always refer to reality by dint of a certain amount of photographic realism. Simulation games like SimCity or 1602 rely on aerial views as captured in military photography, and mystery games use the effects of landscape photography. Best-selling games of the 1990s like *Myst*, *The 7th Guest*, or *The 11th Hour* would not be possible without American landscape photography and its VR use as seen in the work of Jerry Uelsmann or Emmet Gowin. Performance and music groups like The Residents create a complete virtual world in their work by a mixture of characters, stages, musical pieces, and dramatic effects; when the listener is in the midst of their CD-ROM appearances he has nearly no trace back to reality except for pinching his own arm.

VR has become a realm of the internet by the creation of digital cities, interactive online games, and similar activities. Meanwhile, these developments have returned to everyday life in form of architectural designs and object shapes; little is

industrially produced without Computer Aided Design (CAD), which leads directly to Computer Aided Manufacturing. This evolution has had an impact on photographic fine art as well. In the early 1990s, Thomas Ruff began to change the look of the dreary buildings that he photographed by retouching them heavily on the computer: adding another axis of windows to give a facade a classical proportion, melting two frontal views of a very long industrial park into one image, and so on. Andreas Gursky did the same with the Shanghai stock exchange and a huge Parisian edifice; Josef Schulz with long roads in the French *banlieue*. The importance of these works does not lie in their use of a computerized photo-montage but in the diminishing difference between VR and sensual experience. Photography can no longer guarantee the latter within the act of exposure as all means of VR crawl into even the most common and mundane productions of digital imagery. Thus photography finally refers to its origin in the fine arts as all art is virtual.

ROMAN VISHNIAC

Russian

Roman Vishniac, a modern Renaissance Man who was described by historian Cornell Capa as the ultimate "concerned" photographer, was concerned with all dimensions of life from the most evil qualities of man's inhumanity to man to what he considered the beautiful, nigh-invisible details in the world of nature. Remembered mainly for works that compassionately recorded Eastern European Jewish ghettos before the Holocaust obliterated them, works that Edward Steichen called "among photography's finest documents of a time and place," Vishniac also achieved extraordinary color microphotographic images of life forms unseen by the unaided human eye.

Born on August 19, 1897 in Pavlask near St. Petersburg, Russia at the dacha or country house of his mother's parents, Vishniac's father Solomon was son of one of the first Jews to be granted the legal right to live and work in Moscow, and was a leading manufacturer of umbrellas and parasols. His family's comfortable life contrasted with that of most Russian Jews, who were routinely denied access to cities and rights under the law. Solomon Vishniac often aided fugitive Jews, whose singular circumstances haunted Vishniac throughout his life. "They were like hunted animals—a terrible thing to be. I can never forget them," he remembered.

Vishniac's lifelong fascination with nature began as a boy summering in the Russian countryside. Fascinated by the microscope, at the tender age of

seven, he photographed the leg of a cockroach magnified 150 times. In 1914, Vishniac entered Shanyavsky University in Moscow where he specialized in biology and earned his doctorate in zoology. He became an assistant professor of biology there and did graduate work in endocrinology but soon enrolled in a three-year medical course that the Russian government sponsored to relieve the shortage of doctors as a result of World War I. During that time, he joined political protests and was arrested and sentenced to death for treason. In what Vishniac always called a miracle, his life was spared by the climactic events of the Russian Revolution in 1917. However, after the Bolsheviks overthrew the government, the Vishniac family suffered. By 1918 his parents and sister headed for Constantinople. In what would foreshadow later bravery in Nazi Berlin and throughout Eastern Europe, Vishniac, disguised as a Bolshevik, gained safe passage for his family. In 1920 he finished his medical studies and was awarded the M.D. degree. His family meanwhile had traveled from Constantinople through Italy to Berlin where, making the trip by way of newly-independent Latvia, he joined them. There he obtained a Latvian passport, which he held until 1946 when he became an American citizen.

Vishniac spent 19 years in Berlin where he married in 1921 and had two children, a son, born in 1922, and a daughter, born in 1926. Caring for his extended family, he performed numerous unskilled jobs including working in a dairy store and an automobile factory. He completed the Ph.D. work in Oriental Art at the University of Berlin, but the Nazis withheld the diploma. With other physicians, he carried on a program of biological research, specializing in the study of optics and the behavior of light, which ultimately enabled him to work out a system for using polarized light to reveal the internal structure of living creatures under the microscope. Meanwhile, he supplemented his income as both a portrait and a news photographer.

As the political climate in Germany was changing, in 1936, Vishniac began an extraordinary life journey—a series of travels from the Baltic Sea to the Carpathian Mountains, during which he covered 5,000 miles to photograph what was to be the last pictorial record of the Jews in Eastern Europe. “I decided that, as a Jew, it was my duty to my ancestors, who grew up among the very people who were being threatened, to preserve—in pictures, at least—a world that might soon cease to exist.” Carrying a Leica for interior shots and a Rolleiflex for exteriors, Vishniac journeyed through Poland, Lithuania, Latvia, Hungary, and Czechoslovakia, speaking Yiddish and taking thousands of pictures, always

when his subjects were unaware that he was doing so. Posing as a fabric salesman to explain his presence and the suitcases in which he kept equipment, he was befriended by people he met along the way. When he ran out of money, he returned to work in Berlin and then began the cycle over again. The authorities tried their best to prevent anyone with a camera from photographing so, under constant threat, he was arrested multiple times, his cameras confiscated, and films destroyed. He learned to carry a hidden camera and a larger one as a decoy. Out of 16,000 photographs, he estimated all but 2,000 were lost. When he later traveled to America, Vishniac sewed negatives into his clothing, but most of his remaining body of work was left behind with his father who was hiding from the Nazis in Clermont-Ferrand, France. Kept under floorboards or behind picture frames on walls, these photographs were eventually saved and brought to America. These images allow today’s public to glimpse the world of the shtetl, a world that is gone forever. In vibrant communities throughout Europe, we see ordinary people—a learned tzaddik (holy man) wearing a tallis (prayer shawl) and praying, Yeshiva students endlessly discussing the Talmud, and innocent children at play. In a *New York Times* interview in 1983, Vishniac remembered:

In the 1930s I am living in Berlin and I say that Hitler will destroy the Jews. I am told it will not happen. Maybe a few hundred. Not more. But I know that I am right. So I do this...and when I’m taking these pictures, I feel that I am the witness who has to tell the next generation the truth.

On November 10, 1938, Vishniac marched in a Nazi uniform to record the events of Kristallnacht (Night of Broken Glass), after which Jewish life as all knew it came to a swift termination. With anti-Semitism raging in Germany, Vishniac sent his wife and children to Sweden where Mrs. Vishniac’s parents settled after fleeing from Riga. By 1924 his sister had married and moved to France. When France fell to the Nazis, Vishniac was there with his parents. The police arrested him as a stateless person on the grounds that Latvia had been absorbed by Russia and therefore did not exist. He spent three months in Du Richard concentration camp in the Loire Valley. In all, he was imprisoned 11 times. Soon afterward, Vishniac arranged for his wife and children to meet him in Lisbon from where they sailed in December 1940 for New York. A polyglot with eight languages, Vishniac, however, spoke no English. Getting a steady job was difficult. He turned to freelance portrait photography, with his clientele mostly Russian immigrants. Able to eke out only a meager living, one day he decided to visit Albert Einstein at Princeton to

offer greetings from mutual friends in Berlin. Uninvited, he hoped Einstein would pose for a portrait, but Einstein had little interest. Vishniac recalled:

It was a singular experience. An idea had suddenly come to him, and the room was filled with the movement of the great man's thought. I waited several minutes, and then when I saw that he did not intend to say anything more to me and that he was off in a world of his own, I started taking pictures.

Einstein later admitted that a Vishniac photograph taken that day was his favorite portrait. In 1942, after Vishniac sold a series of photographs of the may fly to *Nature* magazine, he gave up portrait photography to freelance nature studies. His apartment studio became half zoo, half laboratory as he worked with live insects, fish, and assorted creatures. Scorning all that was not real life, he spent countless hours observing and taking close-up shots of everything from an aphid to an amoeba. He found beauty in the detail under the microscope of commonplace animal and plant life, such as one-celled protozoa, or "the jewels in the mud." He said:

Everything made by human hands looks terrible under magnification—crude, rough, and unsymmetrical. But in nature, every bit of life is lovely. The more magnification that we can use, the more details are brought out, perfectly formed.

Vishniac's quest for sharing knowledge led him to teach and lecture as well as to produce numerous scientific achievements, such as work in time-lapse photomicroscopy, pioneering in the field of cytoplasmic circulation as connected with photosynthesis, and research in marine biology. He taught at several universities, including Albert Einstein College of Medicine, Yeshiva University, City University of New York, and Pratt Institute. As both a humanist and a scientist, his contributions to man's understanding of the relationship among nature, man, and the arts cannot be underestimated. However, it was his fascination and sensitivity toward life in all its forms that was Vishniac's great strength. "I am in the business of discovery," he liked to say. With a fervent devotion to his fellow Jews and his scientific pursuits, Vishniac left behind images of subjects that are impossible to see with the naked eye—both the beauty and the mystery—whether they be tiny organisms or the depravity of evil. Cornell Capa wrote, "It's hard to encompass the totality of his range. He is a universal man, a man of great dreams. His work is a kind of wonderfully endless contribution to what a concerned human being and photographer is."

Biography

Born near St. Petersburg, Russia, 19 August 1897. Raised and attended schools in Moscow. Attended Shanyavsky University in Moscow, 1914–1920. Received M.D. degree, 1920. Attended University of Berlin and completed Ph.D. work in Oriental Art Studies, 1928–1933. Photographed European Jews, 1936–1939; Portrait photographer in New York, 1941–1950. Appointed Research Associate at the Albert Einstein College of Medicine, Dept. of Anatomy, 1957–1963; Project Director and filmmaker for the Living Biology Series for the National Science Foundation, 1960–1972; Appointed Professor of Biological Education, Yeshiva University, 1961; Best of-the-Show Awards, annual exhibitions of the New York chapter of the Biological Photographic Association, 1952, 1953, 1954; American Society of Magazine Photographers Memorial Award, 1956; subject of documentary film produced by Craig Fisher and John Martin, "Roman's Legions," 1971; Delivered William A. Reedy Memorial Lecture in Photography, "Vishniac's Vision: A Veneration of Life," Rochester Institute of Technology, 1982; Died in New York City, 22 January 1990.

Individual Exhibitions

1939 Louvre Museum; Paris, France
 1962 *Through the Looking Glass*; IBM Gallery, New York
 1971 *The Concerns of Roman Vishniac: Man, Nature and Science*; The Jewish Museum, New York, New York
 1973 *The Concerned Photographer*; The Israel Museum, Jerusalem, Israel
 1983 *Roman Vishniac: A Vanished World*; International Center of Photography, New York, New York
 1984 *Roman Vishniac: A Vanished World*; Museum of Photographic Arts, San Francisco, California

Selected Group Exhibitions

1950 *American Photographers*; Museum of Modern Art, New York, New York
 1955 *The Family of Man*; Museum of Modern Art, New York, New York, and traveling
 1959 *Photography at Mid-Century: 10th Anniversary Exhibition*; George Eastman House, Rochester, New York
 1960 *The Sense of Abstraction in Contemporary Photography*; Museum of Modern Art, New York, New York
 1962 *Photography-USA: National Invitational Photography Exhibition*; DeCordova Museum and Sculpture Garden, Lincoln, Massachusetts
 1974 *Classics of Documentary Photography*; International Center of Photography, New York, New York
 1975 *In Just Seconds: A Survey of Polaroid Color Photography*; International Center of Photography, New York, New York
 1979 *Life: The First Decade 1936–1945*; Grey Art Gallery, New York, New York
 1982 *International Photography 1920–1945*; National Gallery of Australia, Canberra, Australia

Selected Works

Schoolboy with a toothache, Slonim, Poland, 1937
Morning prayers, Lask, 1937
Hoping for a loan from the credit union, Warsaw, 1938
Isaac Street, Kazimierz (old ghetto), Cracow, 1938
Man praying, Germany, 1947
Human skin, 200 x, 1971
Anthrax bacillus, 2250 x, 1971

VISUAL ANTHROPOLOGY

Visual anthropology can, in essence, be defined as both the study of, and the search for, ways of representing the visible social world. It is based on the assumption that this world is an important source of information about forms of social organization and social relations, and furthermore, that some kinds of cultural knowledge are only encoded in visual systems. It also investigates the extent to which the processing of information carried from the eye to the brain is culturally differentiated.

The anthropology of art, the study of visual culture, cultural studies, and the work of some very diverse visual artists and film and video makers, bring different histories and different perspectives to the broad and loosely defined “field” of visual anthropology. Over the past 20 years, its own history has been different on both sides of the Atlantic as it has attended to an increasingly wide range of representational practices and technologies of vision. This includes photography and the investigation into the significance of any camera-derived image. Visual anthropology is an endeavor in which the work of theorists and artists comes together in revealing ways.

In academic anthropology in North America the term has come to refer predominantly to the use of visual media, particularly film and video, and the history of its use, in the study of the visible social world. Here the history of visual anthropology is thought of as the history of anthropology’s relationship with the camera: the history of the deployment of the camera in research situations, its use as a recording

method, and as an analytical tool, its role in filmed and published ethnographies, popular and scholarly.

Underlying the notion of visual anthropology, both its most inclusive, and when it is focused on film, lies the debate about how to interpret the visual record. As such it is the most recent problematising of the claim to objectivity of the documentary impulse. The camera, it has often been claimed, can indeed record, in the sense of fixing an action or event in a neutral image that is then available in perpetuity for any subsequent analysis. The American anthropologist Margaret Mead was a pioneer of this use of photography in her fieldwork in the 1930s. It has, however, become increasingly clear that the image is never neutral, and cannot in itself provide an analysis or understanding of what it records. At best it provides what Roland Barthes has called “fugitive testimony.” Any value or meaning that could be discovered in the image would depend on such contingencies as the identity of the photographer, the circumstances of its taking, the identity of the viewer and the circumstances of their looking. Mead’s husband, the anthropologist Geoffrey Bateson, who acknowledged a debt to psychoanalysis rather than neutrality in his own approach to Balinese visual imagery, made this point forcibly and synoptically to Mead in a debate in the 1970s: “I’m talking about having control of a camera. You’re talking about putting a dead camera on top of a bloody tripod. It sees nothing” (Bateson 1977, 79).

As the modernist paradigm faded and with it a focus on the autonomy of specific media, artists who

may not identify themselves as photographers, though the camera and the photograph are integral to their practice, have submitted photography to the most rigorous scrutiny. In doing so they have helped to redefine art, even though there is little consensus on what that means in the conditions of postmodernism. In consequence, the boundaries between art and other modes of enquiry became more porous. Thus just as, in the 1960s, anthropologists were asking how the objects of their study were constituted, and how brought to their attention, so the NETHing Company, in Vancouver, B.C., photographed the way in which matter of all kinds is brought to our attention—in piles. This ‘found’ way of structuring the world was presented in *Portfolio of Piles* (1967) mimicking a business company’s mode of presentation. This seminal photographic work related to Ed Ruscha’s influential serial works such as *Thirty-Four Parking Lots in Los Angeles* (1967) and *Every Building on the Sunset Strip* (1966), combined the analytical remove of influential avant-garde artist Marcel Duchamp with extreme self-awareness and parody. With other conceptual artists such as Ruscha and Douglas Huebler, the NETHing Company was pushing at the limits of neutral visual information-gathering about the observable world and observable social behaviour.

The social behaviour in question in these works is, either explicitly or implicitly, that of the person whose eye is at the viewfinder. The role of the observer, just like that of the anthropologist, is understood to be constructing as much as finding what is observed. Allan Sekula has been exploring the ideological implications of this position in his photographic work since the 1960s and through his influential theoretical and critical writing.

Increasingly, the empiricist approach to the objectivity of knowledge acquired by ‘just looking’ came to be understood as privileging looking as an instrument of knowledge making, and thus of control and surveillance. The work of the French philosopher Michel Foucault, investigating the inseparability of the control of knowledge from the exercise of power, has wide currency in this field as in others. Hans Haake is well known for his determined pursuit of this notion in photo and text works that have interrogated the structures of power determining what, where, and how art is shown. He reveals the art world as a system of power relations. Victor Burgin, like Haake, sets ‘art’ in the broader field of cultural representation, which he shows to be controlled by a politics of looking, and the gender of the gaze. Their work is interdependent with that of theorists such as Laura Mulvey and John Tagg, of contributors to *Visual Anthropology Review*, and of anthropologists such as George Marcus on the Getty Museum in Los

Angeles and Christopher Steiner on the African art market and Barbara Kirshenblatt-Gimblet on popular culture and mass media.

Photo-based art works combining didacticism with display have contributed to the analysis of post-colonial relations widespread through the humanities and sciences since the early 1980s. In particular they have led to an increased awareness of western forms of knowledge as biased towards the occularcentric. Its name notwithstanding, visual anthropology tries to self-correct for this bias. It participates in a wider anthropology’s self-critique and greater openness to the multitude of ways in which cultures represent themselves. Thus anthropology is being taken over, for example in the work of Marcia Langton and Zacharias Kunuk, and reconfigured in those parts of the world that have been traditionally othered by it. Now, with camera in hand as a sign of power, the former object of anthropological study becomes a subject in her own right, constructing knowledge for and about herself, determining how she is known by others. Her use of western technology to do so shows the complex and entangled nature of cross-cultural relations.

Through its understanding of photographs as in themselves cultural representations, anthropology, with aesthetics and psychology, is able to make its contribution to the investigation of what makes an image, a photograph, compelling, troubling, or transcendent in a given cultural context. These issues are debated and expanded in professional journals, in the academy, in leading museums, and in art galleries. Paradoxically however, on a more populist level, anthropology is still linked to the kind of images that promote the very positions towards a cultural other that anthropology itself works to discredit. These images have currency in travelogues, *National Geographic*, tourist postcards, with certain groups of people designated as colourful ethnic minorities, providing a visual spectacle for others. A post-colonial analysis, as in the work of Faye Ginsburg and David McDougall, leading exponents of visual anthropology, shows that images framed in this way represent unequal “looking relations.”

A selective list of subjects to which visual anthropology has attended includes: the response of Balinese people to the way in which they are represented on television, experiments with narrative in ethnographic film, critical analyses of computer software, body painting, gesture, facial expression and spatial aspects of behaviour and social interaction, a comparison between the bodily representation of Jains and Indian Buddhism and Japanese gardens as a mode of international communication. Important amongst methodological debates animating this

field is that surrounding the influence of linguistic semiotics on the “reading” of the pictorial sign, widely disseminated through the writings of Roland Barthes. Martha Rosler’s widely-reproduced work *The Bowery in Two Inadequate Descriptive Systems* (1974) is one of the most effective expositions of the relationship between visual and verbal signs.

Also important has been the interest, in both theory and practice, in photographic archives, systematic or haphazard. Archives present vast epistemological puzzles over the relationship between original meaning and meaning discovered or imposed subsequently. Christian Boltanski’s works have drawn on the photographic archives of concentration camps. These overwhelming memorial displays rescue individuals from archival anonymity. Memorial museums also knowingly restore human values suppressed by the inhuman surveillance regimes that formed such archives: Tuol Sleng, the former prison in Pnom Penh, displays photographs of thousands of victims of Pol Pot’s Khmer Rouge taken by those who were going to take their lives.

Lothar Baumgarten critiques the classifying obsession, inseparable from the natural history roots of anthropology, in one of its classic manifestations, the typological and functional display of objects in the Pitt Rivers Museum in Oxford. His photographs of its spectacle of culturally disembodied objects classified by type and function are overprinted with words implying how the sorting and interpreting far from being neutral and objective is inevitably driven.

Jeff Wall’s staged cibachrome dramas provide critical updates of Mead’s idea that photographs of social behaviour, body language, and gesture provide a timeless record by demonstrating with penetrating clarity that seeing and understanding are shaped through social conventions, including the conventions of art history. Equally, Nan Goldin’s photographs may appear to record the dress and demeanour of sub-groups, but the extent to which she alerts the viewer to the dialogue between her subjects and her camera is the extent to which they exceed, by puncturing its delusion, the objectivist account called for by Mead, and participate in a new ethnography.

Feminist scholarship has done much to explain the interiority of the construction of the female point of view—from within. Susan Macheachern is amongst the photographers whose work, depicting the care and maintenance of the domestic interior, has illumined this understanding while keeping open the question of its accuracy or its over-determinism. One of anthropology’s enduring projects is the deconstruction of gender and racial stereotypes. It is ironically inverted in Richard Ray Whitman’s

serial work *Street Chiefs*, which turns the honouring gaze of the portrait mode on to the remarkable faces of native people as seen drunk or destitute on urban sidewalks. In a related project, Mark Goodman’s *A Kind of History* publishes the 20 year record, from 1971–1991 of photographing the children and young adults encountered on the Main Street of Millerton, New York. It serves as a reminder that anthropology has as much to do with the apparently unremarkable and close-to-home as with the supposed exotic cultural other.

Debates within contemporary visual anthropology around this issue make it an important sub-discipline with much to contribute to the broader field’s understanding of its own epistemological foundation. It is also this history which makes anthropology’s self-critique and open borders a compelling site for self-reflexive debate of the human and social consequences of the technologies of vision. Photography is being deployed in an unprecedented variety of ways making visual anthropology one of the most far reaching and revealing modes of inquiry currently available.

W

JEFF WALL

Canadian

With his characteristic large-scale color transparencies presented in light boxes, Jeff Wall has been a pioneer of postmodern photography. Presenting elaborate set-up situations, through the use of “actors,” costumes, make-up, lighting effects, and more recently, digital manipulation, Wall’s photographs present imagined truths—scenes that seem real because all the details seem authentic. His role as an educator has made Canadian photography a force in the late twentieth century.

Jeff Wall was born in Vancouver, British Columbia in 1946. From the beginning, Wall had a strong interest in art history and classical painting, and devoted long hours to study. In 1962, Wall attended the American art exhibition at the Seattle World’s Fair, when he saw the work of painters such as Mark Rothko, Robert Motherwell, and Barnett Newman. This experience inspired Wall to adopt an Abstract Expressionist approach in his own work. He later was attracted to the possibilities offered by Conceptual art while he studied fine arts at the University of British Columbia, and shifted away from painting in favor of textual work, and ultimately, photography. Wall received

a B.A. Honours in 1968, and an M.A. in Art History in 1970.

While still a student, his work was shown in a number of group exhibitions including *955,000* at the Vancouver Art Gallery, curated by Lucy Lippard, and *Photo Show*, at the S.U.B. Gallery of the University of British Columbia, curated by Christos Dikeakos, both in 1969. *Photo Show* presented the work of Vancouver artists such as Duane Lunden, Ian Wallace, and Wall in juxtaposition with that of Dan Graham, Bruce Nauman, and Douglas Huebler. Wall and Graham in particular had similar interests. They would become friends and had occasion to collaborate in later years. In 1970, Wall left Canada to pursue doctoral research at the Courtauld Institute of Art, University of London. For his master’s thesis, Wall concentrated on Dadaism. In London, his doctoral studies addressed the work of John Heartfield and Marcel Duchamp, and during this time, he also studied Eugène Atget and Paul Strand. Wall continued to explore his lifelong interest in the cinema, and for a while he was interested in a career as a film maker. He stayed in London for three years, returning first to Vancouver, and then taking a position in Halifax, Nova Scotia, as Assistant Professor in the

Department of Art History at the Nova Scotia College of Art and Design from 1974–1975. Wall returned to Vancouver in 1976, and was engaged as an Associate Professor in the Centre for the Arts, Simon Fraser University until 1987.

During his tenure at Simon Fraser University, Wall actively pursued his own art practice and began to experiment with back-lit Cibachrome transparencies, creating images such as *Faking Death* in 1977. The following year, he produced an image that would be a watershed to his mature work, entitled *The Destroyed Room* (1978). It was exhibited in the window of Nova Gallery in Vancouver, in Wall's first solo exhibition. As a number of Wall's photographs have strong connections to classical painting and to art history, this photograph can be viewed as a contemporary tale of the moments following the action in *The Death of Sardanapalus* (1827) by Eugène Delacroix. The image of a bright red room with an overturned, torn mattress, clothes strewn on the floor, and smashed furniture is evocative of an establishing shot in the opening of a film, where the viewer sees the aftermath of events, and later the story is developed through flashbacks. It is clear from the wreckage that something has occurred, but exactly what is left ambiguous. Furthermore, there are clues that the scene is staged, such as the porcelain figure of a woman that is carefully placed on top of the dresser, and the fact that the room is actually part of a set.

An equally important work from this early period is *Picture for Women* (1979). As Wall had done with *The Destroyed Room*, this second photograph quotes a painting, in this case, Edouard Manet's *A Bar at the Folies-Bergères* (1882). The painting is held in the collection of the Courtauld, which Wall would have had the opportunity to study in depth while he was a student. The woman in Wall's photograph echoes the pose of the barmaid in Manet's painting; however, instead of seeing her back in the mirror behind the bar, the viewer sees Wall and his camera. Wall has figured as the subject in other works such as *Double Self-Portrait* (1979), but in *Picture for Women*, he clearly problematises the position of the artist in relation to the model and to the viewer, and furthermore engages with the feminist debate that these positions historically have been gendered.

Following his breakthroughs with *The Destroyed Room* and *Picture for Women*, Wall produced a body of large-format "staged" photographs, sumptuously presented in lightboxes. The origins of the staged photograph can be traced to the nineteenth-century, such as the allegorical subjects employed

by Oscar Gustav Rejlander and Julia Margaret Cameron. The photographic representation of a tableau vivant stems not only from the related traditions in genre and in history painting, but also from the Victorian love of theatrical performances and poetry recitals. Wall's photographs bear witness to this historical legacy, certainly, but more significantly, his photographs reflect his own investigations of the evocative powers of cinematography, as well as the persuasive authority and pervasiveness of commercial advertisements.

The physical scale and luminosity emanating from Wall's lightbox photographs is reminiscent of a movie screen. In keeping with this relationship to film, it is interesting to note that Wall's working method involves hiring a cast of actors or models. While the inspiration for the images is very often something Wall has experienced or witnessed on the street, the finished photograph itself is not documentary in nature. The depicted scenes are carefully scripted and rehearsed. Wall will make the actors run through the actions over and over, until he achieves the desired effect. In this sense, his photographs can be read as even better versions of the "real" sequence of events, because the viewer is given the benefit of Wall's introspection. This blurring of the lines between fact and fiction is what makes his photographs so compelling, in the same way that one can be completely drawn in to actions that transpire on film.

In 1987, Wall returned to his alma mater as a Professor in the Department of Fine Arts at the University of British Columbia. The end of the 1980s and beginning of the 1990s saw shifts in Wall's choices of subject matter. In this period, he would focus less often on incidents from real life, and instead find sources in his own dreams and imagination. At this time, he produced important photographs such as the nightmarish bacchanalia of *The Vampires' Picnic* (1991). The theatricality of this image is accentuated by the dramatically lit figures emerging from the darkness of the forest. As with many of Wall's photographs, the viewer expects to hear sound, and though the moment had been lifted out of time, more like a film still than a photograph, more like a Greek tragedy than an historical painting, or more precisely, a combination of all these things.

The Stumbling Block (1991) marks the introduction of computer-aided imagery in Wall's photographs. *The Stumbling Block* is a busy street scene in which a passerby turns to witness a young woman tumbling over an obstacle, in the form of a man dressed in protective padding. A man in business attire, who appears to have already taken

a turn, sits resting on the pavement to the right. For this piece, Wall photographed the sidewalk and people in the distance first and then photographed the foreground action in the studio. The results were then blended together. It is an imagined event that appears to be based on reality because it looks so completely real. It is a postmodern allegory that Wall has described as a “philosophical comedy”:

In my fantasy, *The Stumbling Block* helps people change. He is there so that ambivalent people can express their ambivalence by interrupting themselves in their habitual activities. He is an employee of the city, as you can tell from the badges on his uniform. There are many Stumbling Blocks deployed on the streets of the city, wherever surveys have shown the need for one. He is passive, gentle, and indifferent: this was my image of the perfect “bureaucrat of therapy.”

(de Duve 1996, 21–22)

In spite of the wide range of special effects made possible through new technology, Wall continues to produce photographs in which the completely impossible seems altogether realistic and reasonable, such as in *Dead Troops Talk (A Vision after an Ambush of a Red Army Patrol Near Moquor, Afghanistan, Winter 1986)* (1992). This photograph is one of his most complex, with a large group of players in full makeup that provides the gruesome embellishments of their mortal injuries:

Wall and his crew constructed the barren hill in the studio, then shot each group of soldiers separately, later combining them into one picture through digitalization. This total control brings the picture fully into the realm of painting and film making, two disciplines in which the artist is more or less completely in control of the image. The scene Wall presents here not only recalls the *grandes machines* of artists such as Théodore Géricault, it also alludes to the overtly grotesque and uncanny in art history, to Bosch, Grünewald, and Goya, and also to George Romero, Dario Argento, and Hammer horror films.

(Brougher 1997, 39)

The image draws on the full range of Wall’s pre-occupations—art history, film, and the seductive powers of advertising campaigns such as those recently produced by Benetton. *Dead Troops Talk* illustrates the horrors of war while at the same time fictionalizing this experience. In spite of the fact that the photograph borrows the conventions of classical history painting, in Wall’s world, suffering is not sacred and unifying, it is pointless and ridiculous.

While undoubtedly Wall is best known for his large format color work, his investigations in black and white have enabled him to confront the legacy

of the documentary form in photography. In 1996, Wall produced a series of photographs of menial workers, seen working in a hotel room or mopping the floors in a lobby. These solitary figures do not engage directly with the viewer. Always fundamentally rooted in his strong theoretical and art historical background, there are undeniable traces of the documentary projects of photographers such as Robert Frank and Walker Evans in these images. Still monumental in scale and staged, photographs such as *The Volunteer* (1996) and *Citizen* (1996) have a distinctly quieter, and almost introspective quality than the color tableaux vivants. Likewise in this period, Wall resumed his explorations of the landscape and nature, and produced beautifully rendered photographic studies such as *A Sunflower* (1995) and views of the city of his birth and the surrounding areas.

Wall has exhibited exhaustively in Canada and internationally since 1969, and has had multiple solo shows every year for the past 20 years. Likewise, he has been invited to participate in almost all of the principal contemporary art exhibitions of the past two decades, including the Whitney Biennial in 1995, *Documenta X* in Kassel in 1997, the São Paulo Biennial in 1998, the Carnegie International in 1998, and the Sydney Biennial in 2000. His photographs are highly sought after, and are held in private collections and public collections, including the Tate Gallery, London; the National Gallery of Canada; the De Pont Foundation for Contemporary Art, Tilburg, Netherlands; the Carnegie Museum of Art, Pittsburgh; Musée national d’Art Moderne, Centre Georges Pompidou, Paris; the Kunstmuseum Luzern, Switzerland; and the Vancouver Art Gallery.

Following a two year sabbatical, Wall resigned in 1999 from the University of British Columbia to devote himself to the demands of his ever increasing exhibition schedule and to the production of his own work. In 2000, Wall was invited to take a senior position at the Kunstakademie in Düsseldorf, Germany, a prestigious honor awarded in the past to artists such as Josef Beuys, Gerhard Richter, and Bernd and Hilla Becher.

Biography

Born in Vancouver, British Columbia, 1946. Earned a B.A. Honours from the Department of Fine Arts at the Uni-

versity of British Columbia in 1968, and an M.A. Art History from the same institution in 1970. From 1970 to 1973, he pursued doctoral research at the Courtauld Institute, University of London. Assistant Professor, Nova Scotia College of Art and Design, from 1974 to 1976. Associate Professor of the Centre for the Arts, Simon Fraser University, from 1976 to 1987. Associate Professor of Fine Arts at the University of British Columbia from 1987, and held the rank of Professor until he resigned in 1999. Accepted a senior position at the Kunstacademie in Dusseldorf, Germany. Exhibited extensively since 1969, and had his first solo show at Nova Gallery in Vancouver in 1978; associated with Galerie Jöhnen & Schöttle, Cologne, 1986, and Marian Goodman Gallery, New York, 1989. Has been featured in key transcontinental contemporary art exhibitions, such as *Documenta X* in Kassel in 1997, the São Paulo Biennial in 1998, and the Sydney Biennial in 2000. In 2001, Wall was awarded The Paul de Hueck and Norman Walford Career Achievement Award for Art Photography.

Individual Exhibitions

- 1978 *Jeff Wall*; Nova Gallery, Vancouver, British Columbia
 1979 *Installation of Faking Death, The Destroyed Room, Young Workers, Picture for Women*; The Art Gallery of Greater Vancouver, Vancouver, British Columbia
 1982 *Jeff Wall*; David Bellman Gallery, Toronto, Ontario
 1983 *Jeff Wall*; The Renaissance Society, University of Chicago, Chicago, Illinois
 1984 *Jeff Wall: Transparencies*; Institute of Contemporary Arts, London, England; and Kunsthalle, Basel, Switzerland
 1988 *Jeff Wall*; Le Nouveau Musée, Villeurbanne, France
Jeff Wall; Westfälischer Kunstverein, Münster, Germany
 1989–1990 *The Children's Pavilion* (a collaborative project with Dan Graham); Marian Goodman Gallery, New York, New York, and traveling
 1990 *Jeff Wall 1990*; Vancouver Art Gallery, Vancouver, British Columbia, and traveling
 1991 *Jeff Wall*; San Diego Museum of Contemporary Art, San Diego, California
 1992 *Jeff Wall*; Louisiana Museum, Humlebaek, Denmark
Jeff Wall; Palais des Beaux-Arts, Brussels, Belgium
 1993 *Jeff Wall*; Fondation Cartier pour l'art contemporain, Jouy-en-Josas, France
Jeff Wall; Kunstmuseum Luzern, Lucerne, Switzerland, and traveling
 1994 *Jeff Wall*; Städtische Kunsthalle, Düsseldorf, Germany
Jeff Wall; The White Cube, London, England
Jeff Wall; De Pont Foundation for Contemporary Art, Tilburg, The Netherlands
Jeff Wall; Deichtorhallen, Hamburg, Germany
Jeff Wall; Museo Nacional Centro de Arte, Reina Sofia, Madrid, Spain
 1995 *Jeff Wall*; Jeu de Paume, Paris, France
 1995 *Jeff Wall*; Museum of Contemporary Art, Chicago, Illinois
 1996 *Jeff Wall: Landscapes*; Kunstmuseum Wolfsburg, Wolfsburg, Germany, and traveling

- Jeff Wall*; Museum of Contemporary Art, Helsinki, Finland
 1997 *Jeff Wall*; The Museum of Contemporary Art, Los Angeles, California, and traveling
 1998 *Jeff Wall: Photographs of Modern Life*; Museum für Gegenwartskunst, Basel, Switzerland
 1998 *Here and Now II: Jeff Wall*; Henry Moore Institute, Leeds, England
 1999 *Jeff Wall*; Mies van der Rohe Foundation, Barcelona, Spain
Jeff Wall: Oeuvres 1990–1998; Musée d'Art Contemporain, Montreal, Quebec

Group Exhibitions

- 1969 557,087; Seattle Art Museum, Seattle, Washington
 955,000; Vancouver Art Gallery, Vancouver, British Columbia
Photo Show; S.U.B. Art Gallery, University of British Columbia, Vancouver, British Columbia
 1970 *3 to Infinity: New Multiple Art*; Whitechapel Art Gallery, London, England
Information; Museum of Modern Art, New York, New York
Art in the Mind; Allen Memorial Art Museum, Oberlin College, Oberlin, Ohio
Four Artists: Tom Burrows, Duane Lunden, Jeff Wall, Ian Wallace; Fine Arts Gallery, University of British Columbia, Vancouver
 1971 *New Art*; Prague, Czechoslovakia
 45° 30' N - 73° 36' W; Sir George Williams University and the Saidye Bronfman Centre, Montreal, Quebec
 1981 *Westkunst: Zeitgenössische Kunst seit 1939*; Rheinhalten Messegeleände, Cologne, Germany
Directions 1981; Hirshhorn Museum and Sculpture Garden, Washington, D.C., and traveling
 1982 *Documenta 7*; Museum Fridericianum, Kassel, Germany
 1984 *Difference: On Representation and Sexuality*; New Museum of Contemporary Art, New York, and traveling
 1985 *Rodney Graham, Ken Lum, Jeff Wall, Ian Wallace*; 49th Parallel Center for Contemporary Canadian Art, New York, New York
Visual Facts: Photography and Video by Eight Artists in Canada; Third Eye Centre, Glasgow, Scotland, and traveling
La Nouvelle Biennale de Paris; Grand Halle du Parc de la Villette, Paris, France
Aurora Borealis; Centre International d'Art Contemporain de Montréal, Montreal, Quebec
Günther Förg & Jeff Wall: Photoworks; Stedelijk Museum, Amsterdam, The Netherlands
 1987 *Documenta 8*, Museum Fridericianum, Kassel, Germany
 1989 *Tenir l'Image à Distance*; Musée d'Art Contemporain, Montreal, Quebec
What is Contemporary Art?; Rooseum, Malmö, Sweden
Les Magiciens de la Terre; Centre Georges Pompidou/La Grand Halle de la Villette, Paris, France
 1990 *Life Size: A Sense of the Real in Recent Art*; The Israel Museum, Jerusalem, Israel
Passages de l'image; Centre Georges Pompidou, Paris, France, and traveling

- Culture and Commentary: An Eighties Perspective*; Hirshhorn Museum and Sculpture Garden, Washington, D.C.
- 1991 *Metropolis*; Martin-Gropius-Bau, Berlin, Germany
- 1992 *Avantgarde & Kampagne*; Stadtische Kunsthalle, Düsseldorf, Germany
- 1993 *Post-Human*; Deichtorhallen, Hamburg, Germany
The Sublime Void: An Exhibition on the Memory of the Imagination; Palais Royale des Beaux-Arts, Anwerp, Belgium
Canada: Une nouvelle generation; Fonds Régional d'Art Contemporain Pays de la Loire, Clisson, France, and traveling
- 1994 *The Ghost in the Machine*; List Visual Arts Center, Massachusetts Institute of Technology, Cambridge, Massachusetts
- 1994 *The Epic and the Everyday: Contemporary Photographic Art*; Hayward Gallery, London, England
- 1995 *Public Information: Desire, Disaster, Document*; San Francisco Museum of Modern Art, San Francisco, California
Spirits on the Crossing, Travellers to/from Nowhere: Contemporary Art in Canada 1980–1994; Setagaya Museum, Tokyo, Japan, and traveling
About Place: Recent Art of the Americas; Art Institute of Chicago, Chicago, Illinois
Projections: Alfred Stieglitz, Walker Evans, Brassai, Weegee, Cindy Sherman, Jeff Wall; The Ydessa Hendeles Art Foundation, Toronto, Ontario
- Notion of Conflict: A Selection of Contemporary Canadian Art*; Stedelijk Museum, Amsterdam, The Netherlands
- 1996 *Face à l'Histoire 1933–1996: L'artiste moderne face à l'événement historique*; Centre Georges Pompidou, Paris, France
Hall of Mirrors: Art & Film Since 1945; Museum of Contemporary Art, Los Angeles, California, and traveling
- 1997 *Die Epoche der Moderne: Kunst in 20 Jahrhundert/The Age of Modernism: Art in the 20th Century*; Zeitgeist-Gesellschaft zur Förderung der Künste in Berlin, Martin-Gropius-Bau, Berlin, Germany
- 1999 *The Museum as Muse: Artists Reflect*; Museum of Modern Art, New York, New York
Jeff Wall-Pepe Espaliü: Suspended Time; Castellon Contemporary Arts Centre (EAC), Castellón, Spain
August Sander: Landschafts-photographien/Jeff Wall: Bilder von Landschaften; Die Fotografische Sammlung/SK Stiftung Kultur, Cologne, Germany, and traveling
- 2001 *Open City: Aspects of Street Photography 1950–2000*; Hirshhorn Museum and Sculpture Garden, Washington, D.C., and the Museum of Modern Art, Oxford, England

WAR PHOTOGRAPHY

The twentieth century is unarguably the bloodiest century in human history, with death tolls from politically motivated conflicts between 175 and 200 million worldwide. Over the course of the century, the nature of war blurred and then wrecked older distinctions between battlefield and city, soldier and civilian, peacetime and wartime, civilization and barbarism. Technologically advanced weapons of incalculably great destructive force abetted (and did not eclipse) older forms of killing, while science, industry, and bureaucratic management came to define "modern" warfare. While the severity of war in the twentieth century had profound cultural and indeed, epistemic reach, at the same time, war became foundational to the econo-

mies of industrially advanced states, and central to political ideologies of all stripes.

A critical examination of war photography demands that we accept war photographs as mediated records and recorded mediations in equal measure, by turns repositories of information and vaults of testimony, aesthetic productions that alternately magnify and diffuse acts of war, dramatize and deflect them. A critical approach demands that we register the complexity of the mandates to make photographs of war, and that we not reduce war photographs to overdetermined messages, illustrated propaganda or self-reconciled rhetoric—much as these are in evidence—or the opposite, innocent guides through suffering. As aspects of visual culture,

photographs of war are imperfect analogues of their constitutive elements: the physical world of war itself, individual photographers' perceptions, and the institutional and discursive practices in which photographs are enmeshed from their origin, and on which they depend for their meanings. A critical examination demands at least three discrete, simultaneous lines of inquiry: first, to determine what photographs were actually made of any given war, by whom and under what circumstances; second, to specify which of these were published and circulated contemporaneously, and in what forms; third, to delineate the ways that photographs subsequently appeared or disappeared from public view, in what contexts and with what impact.

Building on improvements in camera technologies and the development of the halftone reproduction process, by the turn of the twentieth century photography was ascendant as a journalistic aid, illustrating news of the Spanish American War (1898), the Anglo-Boer war (1899–1902), the Russo-Japanese War (1904–1905), and other wars of empire. The sustained use of photographs as visual media began in earnest during the First World War (1914–1918), with photography cautiously but concerted integrated into the war effort, both for military purposes and to discipline public opinion. From the outset, Allied military officials considered a free press a security risk, and photographs of the war were subject to direct military censorship. Civilian journalists, including photographers, were banned from the Western Front, the pivotal conflict area, and official photographers were exceedingly few: the British government, for example, accredited only two between 1916–1918, Ernest Brooks and John Warwick Brooke.

Nonetheless, several illustrated publications brought photographs of the conflict to the public more or less as it happened: in Britain *The Daily Mirror*, *The Illustrated London News*, *The Sphere*, *The Daily Graphic*, and *The War Illustrated*; in France *Excelsior*, *Le Miroir*, and *L'Illustration*; in the United States *The New York Times Mid-Week Pictorial*, *Collier's Weekly*, *Leslie's Weekly*; in Germany *Das Illustrierte Blatt*, the *Berliner Illustrierte Zeitung*, and the *Illustrierte Kriegs-Zeitung*. The majority of pictures in these publications show war materiel, the landscape of the battlefields, damaged property and ruins, troop formations, posed and candid images of soldiers and officers at rest, and the provision of medical care. Illustrated battlefield tour guides appeared as early as 1916 in virtually every European country. The tasks with which these photographs were charged have remained central imperatives of war photography ever since:

to solicit public support without unduly registering war's contradictions, and to validate the state's insistent appeal to duty and service while mitigating war's ugliness.

Altogether, comparatively few of the illustrated periodicals' photographs depict the staggering human costs of a war that "used up words," in Henry James' phrase, or its signature elements: the waves of soldiers going "over the top" only to be mowed down by automatic weapons, the extensive use of poison gasses, the heavy toll of cholera, typhoid, dysentery, and other diseases, and the psychological stress of long contests of attrition and endurance in stinking, pestilence ridden trenches. At the battles of Passchendaele in 1917 and Arras in 1918, the official Canadian photographer, William Rider-Rider photographed lone soldiers in nondescript landscapes, suggesting the arduousness, if not the gruesomeness of their experience. At the battle of the Somme, the most intensively photographed battle of the war, Brooks and the British Royal Engineers photographed the forward trench preparations, the great mine explosions prior to the initial assault on July 1, 1916, and the first waves of troops going forward. Their photographs, however, failed to depict what was eventually recognized as one of the worst debacles of the war: 60,000 dead in the first day and 30,000 in the first half hour alone, and 1.3 million by October 1916. Likewise, in *Collier's Photographic History of the European War*, a lavish book of photographs published in 1917 to rally American public support as the United States entered the conflict, only 9 of 376 photographs show dead soldiers in any form, most of these distanced views of corpses in large battlefield expanses. Viewers of this book would not guess the war's unprecedented carnage, with combined military casualties by 1918 totaling more than 37 million, some 57% of all mobilized forces.

Exceptions to the omissions in official photography of the war do exist, most importantly the photographs of anonymous officers and soldiers who carried private cameras despite the press prohibitions, for example, British Private F.A. Fyfe, French soldier Marcel Felser, Australian Captain Charles Bean, who photographed the 1915 Battle of Gallipoli, and the soldiers in the London Rifle Brigade stationed near Armentières, France, who photographed the December 1914 Christmas truce in which soldiers from both sides fraternized in no man's land. A once influential, now obscure reclaiming of the war's photographs is Ernst Friedrich's 1924 anti-war invective, *Krieg dem Krieg!* (*War against War!*), presenting nearly 200 photographs from German archives, many previously

WAR PHOTOGRAPHY

censored by the military. In sequences of careful pictorial juxtapositions and short, impassioned texts, the book takes the viewer on a relentless tour of slaughter and ruin, culminating in a series of close-ups of veterans' horrific facial wounds.

The principal uses of photography during the Second World War issued from those of the First World War, supplemented by an expanded practice of the photo-reporter developed in the Spanish Civil War (1936–1939), particularly in the work of the Hungarian-born American photographer, Robert Capa, and the Polish-born photographer, David Seymour (“Chim”). The Second World War, which effectively began with Japan's invasion of China in 1937, followed by Germany's invasion of Poland in 1939, engulfed the planet by its conclusion in 1945, comprising diverse theatres of conflict across the globe and a vast spectrum of participants. On all sides the conflict saw a massively expanded official use of photography, with photographers thoroughly harnessed to the prosecution of the war, both as a part of the armed forces themselves and as civilians integrated into the military. As disseminated in newspapers and especially the picture magazines that had proliferated in the interwar years, photographs became a primary and uniquely powerful form of media widely recognized as crucial to the war effort. “Fundamentally,” stated the American General Dwight D. Eisenhower, “public opinion wins wars.” Building on innovations in design and graphic arts in the interwar period, particularly in Germany, by the outbreak of the war, the picture magazines had developed a sophisticated use of the visual page that proved highly effective as public relations—dynamic layouts, active narrative associations between pictures of varying types and sizes, potent picture-text combinations, an enticing interplay of visual sequences, montages, and symbols. Neither the term “news” nor “propaganda” on its own quite describes the visual experience of the war in the pages of the French *Vu*, *Regards*, and *Paris-Soir*, the British *Picture Post*, *Match*, and the *Illustrated London News*, the American *Life* and *Look*, and the *Berliner Illustrierte Zeitung* and the *Illustrierte Beobachter*: propaganda infused with the timeliness and urgency of news, and news girded by propaganda's certainty and sense of destiny.

Life magazine, to consider one example, had by the 1941 American entry into the war, arrived at a potent combination of an oversized format, a lively layout, an abundant use of pictures, and an upbeat integration of advertising, feature stories, and news—all war news having been cleared by military censors. Within the picture magazine idiom, *Life's* photographic presentation of the war effectively

adapted the form of empathic “documentary” photography ascendant in the 1930s (associated in the United States with government sponsored photography of the Great Depression by the Resettlement Administration/Farm Security Administration), and so succeeded in positioning sacrifice and tribulation within the rhetoric of moral activism on the part of the American state. *Life's* photographs glamorized the war partly by rendering it hale, vital, and seductive—following the lead of the influential Nazi propaganda magazine, *Signal*—and partly by harnessing the prestige of the emergent practice of concerned photojournalism to the goals of the Allied war effort. Typically *Life's* photographic spreads on the war included a modicum of ground-level combat photographs (often shot at middle distance), together with candid photographs of soldiers, officers, and periodically impacted civilians, healthy doses of aerial pictures, battle landscapes and seascapes, maps, and occasionally drawings and pictures of scale models of battle. The effectiveness of this approach required comparatively limited photographic coverage of the war: only about 10% of a typical weekly edition offered reportorial photographs of the war in any form, while another 15% of the magazine referred to the war in advertisements. Altogether, *Life's* portrayal of the war was more a matter of ethos than information: it exuded the war more than “covered” it, and so naturalized its presence in American life.

In subsequent decades, much of the material originally published in *Life* was reorganized and republished. Stripping the photographs of the idiom of the periodical, and securing their place as the images of the victors, later books present more concentrated (and so seemingly more exhaustive) representation of the war, and particularly of battle—from the invasion of Poland and the occupation of Europe to the war in the North African desert, the Russian front, the great battles in the Pacific, the invasion of Normandy, and the liberation of Europe from the west and the east. The recombinant archive of World War II pictures helped to fix the central conceits of combat photography: the viewer, distanced in place and time from the fighting, is brought vicariously into the contingencies of battle, given to feel its excitement but not quite its danger, and offered valor as the face of justice. In time, the aggregation of recirculated ex-magazine photographs have become nearly co-extensive with the image of the war itself: what began as publicity has been transformed into popular memory.

Subsequent publications also emphasized the auteurship of individual Second World War pho-

tographers. The American photographer, W. Eugene Smith epitomizes the figure of the World War II photographer as brave humanist. While other accomplished photographers in the European and Pacific theatres made clear, empathic records of events (notably the British photographers Burt Hardy, Bill Brandt, and George Rodger; the Americans Lee Miller, Constance Stuart Larrabee, George Strock, Peter Stackpole, and Carl Mydans), Smith attempted, in his own words, “to call out as teacher and surgeon and entertainer” an “indictment of war.” In his photographs at sea and at the Pacific battles on Guam, Saipan, Iwo Jima, Tinian, and Okinawa, where he was seriously wounded, Smith undertakes a disciplined observational practice that resolves bitter, highly geographically focused battles into muscular statements, and that assiduously locates moments of tenderness in the midst of brutality. A master of design, he renders appallingly bloody events with a certain demanding elegance, unleashing the sensory totality of battle under the sign of the symphonic.

By contrast, Robert Capa may be credited with an alternate form of engaged war photography. Capa began his career during the Spanish Civil War as a partisan freelancer, a roaming photographer working to publicize the Loyalist resistance to fascism. Publishing in *Vu*, *Life*, and other periodicals, Capa became famous for his bravery and élan, and his photographs for their frankness and passion. In perhaps the most famous war photograph in history, Capa’s 1936 “The Falling Soldier,” shows a Spanish Republican militiaman, Federico Borrell García at the moment of his death, falling backward from the impact of a bullet at Cerro Muriano on the Córdoba front. Debate over the picture’s authenticity has long accompanied its notoriety (largely a baseless debate: soldiers agreeing to stage their own deaths as a publicity stunt would have been patently stupid and self-defeating), but the photograph’s deeper accomplishment is the way it handles death as both fact and enigma. If Capa’s pictures as they appeared during his lifetime reveal him to be a trenchant spot news photographer, the volumes of his work published since his death in 1954 reveal him to be a photographer of remarkable depth. These later books are not honorific compilations, but essential to an understanding of Capa’s vision in North Africa, Sicily, Italy, the Normandy invasion, France and Belgium during the Second World War, later in Israel, and in Indochina. Specifically, they show the ways that Capa in fact resists the idiom of the totemic, iconic image, instead picturing war as an encompassing but disaggregated phenomenon, an opaque commitment spread between soldier and civilian, a destructive

force to be approached multiple times, in multiple passes. His photographs place the viewer “beside war,” in John Steinbeck’s able phrase, registering and testing its emotional reality.

On all fronts, the Second World War legitimated the targeting of civilians and the ruination of cities to an unprecedented degree, and indeed, victory came to depend on the destruction of civilian life. The empathic photoreportorial mode lent itself naturally to a number of projects concentrating on the effect of the fighting on civilian populations, undeniably compassionate projects that, at the same time, fell short of exposing the universal lies about civilian casualties: namely that the targeting of civilians is always perpetrated as the crime of the “other” side, and that such damage is not central to military objectives. In August 1944, *Life* published pictures by the German-born American photographer, Alfred Eisenstadt on the plight of Jewish refugees, and in October 1945, published Leonard McComb’s sympathetic photographs of displaced Germans. The Swiss photographer Werner Bischof extensively photographed postwar Germany for European and American magazines, while the American photographer, John Vachon photographed postwar Poland under the sponsorship of the United Nations. The American photographer, Thérèse Bonney’s 1940 work, *War Comes to the People: The First Camera Record Ever Made of the Death of Peace* remains an inventive, ambitious look at the civilian effort to cope with the war in Finland and France (that is, on both sides of the Allied-Axis split, a divide the book does not recognize), while her 1943 book on orphans and children refugees, *Europe’s Children* anticipates David Seymour’s 1949 *Children of Europe*. Seymour, joining with Capa, Rodger, and the French photographer, Henri Cartier-Bresson, founded Magnum Photos in 1947, which remains the most prestigious photographic agency dedicated to humanistic reportage that treats war and peace as a single, interdependent subject.

Soviet photographers of the Second World War have been considerably less well known outside of the former Soviet Union. The important work of photographers on the grueling battlefields of the Russian front was virtually unpublished in the West until after the Cold War: Dmitri Baltermants, Mikhail Trakhman, Max Alpert, Galina Sankova, Olga Lander, Emanuel Evzerikhin, Mark Markov-Grinberg, as well as Boris Kudoyarov’s pictures of the siege of Leningrad, and Georgi Zelma’s of Stalingrad. Most of these photographers remain obscure in the west, with the exception of the Russian-Jewish photographer, Yevgeny Khaldei, whose

photograph of the Soviet flag over the Reichstag on August 30, 1945, became the leading symbol of Soviet victory. Khaldei conceived and deliberately staged his picture on the model of American photographer, Joe Rosenthal's photograph of the American flag being raised on Iwo Jima on February 23, 1945 (itself not a singular picture innocently found). Khaldei's conception of photographic truth as a matter of conviction before documentary "fact" is the direct inheritance of the history of photography in Russia and the vigorous debates on photography in the years following the revolution; at the end of the twentieth century it found itself compatible with Western notions of artistic inventiveness, and so conducive to Khaldei's canonization as a war artiste, a photographer whose subject happens to be war but whose images are deemed to have "aesthetic surplus," in the words of the artist and critic, Martha Rosler.

Photographs of atrocity remain one of the central and most difficult bodies of Second World War photography—pictures that announce abysses to the point of "negative epiphany," in Susan Sontag's pithy phrase. The prototypical examples of atrocity remain the dropping of atomic bombs on Hiroshima and Nagasaki in August 1945, and the Shoah, the murder of some six million European Jews by the Nazis and their collaborators in various countries. Photography has brought these atrocities to partial legibility, proffering visual testimony that is as incomplete and at times as indeterminate as it is direct and incontrovertible—in effect, testimony that has prevailed against the efforts of governments, including the American and the Nazi governments, to prevent the creation of pictorial evidence of their crimes, and to repress and to bowdlerize this evidence when it does appear.

Initial media coverage in the American press of Hiroshima and Nagasaki rendered the use of the atomic bomb continuous with other acts of war, presenting it as a scientific and military triumph, withholding not only images of obliteration, but initially even distant views of the explosions. The image of the bomb's euphemistically named "mushroom cloud" later became an emblem of destructiveness triumphant (an image elaborated in subsequent decades of nuclear testing), quite unlike the views made from below by Toshio Fukada in Hiroshima some 20 minutes after the bomb exploded. Japanese army staff photographer Yosuke Yamahata's photographs of Nagasaki made on August 10, 1945, the day after the bombing, depict a cityscape so devastated that it is at once utterly plain and inscrutable, an accusatory ruin at the very limits of representation. By contrast, the American photographer,

Wayne Miller, a member of Edward Steichen's U.S. Navy photographic unit, photographed victims of the Hiroshima bomb in September 1945, making dramatically lit compositions whose figures are introspective but not visibly distraught, victims who are cared for, nursed, looked after—who abide under the watchful gaze of now compassionate perpetrators. A similarly contemplative approach, but without the sanguine political implications, is evident in *Hiroshima-Nagasaki '61*, by the Japanese photographers, Shomei Tomatsu and Ken Domon, the latter also a member of the sophisticated collaborative that produced the powerful photographic elegy, *document 1961*.

The discrepancy between seeing and knowing also figures as a key trope of the photography of the destruction of European Jewry. Photography of the ghetto at Warsaw, forming perhaps the most extensive pictorial archive of any of the multiple events that comprise the Shoah, comes from several sources. Joseph Goebbels' propaganda ministry made photographs and films of the ghetto falsely depicting it as a thriving, habitable place, while pictures of ill, starving Jews in the ghetto's streets, made under the auspices of military press units, were published in popular magazines. The pictures of Jewish misery on the streets of the Warsaw Ghetto provide a clear example of the ways that the meanings of war photographs change depending on the discourse in which they are embedded: Nazi propaganda construed such pictures as evidence of the degradation and subhumanity of Jews, while subsequent generations see in them the effects of Nazi brutality. Decades after the war, collections of pictures of the Warsaw Ghetto by discrete Nazi soldiers such as Heinrich Jöst and Willy Georg have come to light, as well as by anonymous German soldiers, in each case begging the question of how Nazi eyes structured and encoded the image of what and how Jewish victims suffered.

Virtually unique in the history of twentieth century war photography is the work of the Polish-Jewish artist and photographer, Mendel Grossman, who intensively photographed the prison enclave for Jews in Lodz as a captive between 1940 and 1944 (a more protracted but analogous case might be the South African photographer, Peter Magubane's work from the 1950s–1990s in resistance to the South African apartheid regime). Employed by the ghetto administration and undertaking a documentary project on his own initiative, Grossman photographed the daily labors of Jewish self help—from cottage industries to the hauling of excrement and the distribution of food. Surveilling his captors, he clandestinely photographed German troop movements

and executions. In the ghetto's morgue he secretly photographed the corpses of the dead in the hope of aiding in their identification; in the streets and at the gates of the ghetto he photographed the continual deportations of those condemned to the death camps of Chelmno and Auschwitz-Birkenau. Grossman's project survived the war intact, hidden in a wall in his apartment (Grossman himself died in a death march from Lodz in 1944), and was transported to Palestine, only to be largely destroyed in the Israeli war of independence in 1948.

Virtually no photographs exist of any of the six death camps in operation (Auschwitz-Birkenau, Belzec, Chelmno, Majdanek, Sobibor, Treblinka). *The Auschwitz Album*, a collection of pictures made by an unknown German officer during the "selection" process on the Birkenau train platform, remains a notable exception. On the other hand, several collections of photographs made during the 1941 Nazi execution campaigns across the western parts of the Soviet Union reveal not only the extent to which ordinary German soldiers (not the SS alone) participated in atrocities, but also the desire of Nazis, despite official prohibitions, informally to represent their crimes, and sometimes to use photography to humiliate victims. The Wehrmacht photographs prefigure cases in subsequent wars in which pictures of war crimes were made gratuitously and not intentionally as indictment. Two telling later examples in this connection are the pictures by the American photographer, Ron Haerberlee just prior to the massacre of 347 innocents by American troops in the Vietnamese village of My Lai on March 16, 1968, and the photographs made by occupying U.S. soldiers while torturing detainees in the Iraqi prison of Abu Ghraib in 2003. In the first case, the photographs act as a threshold into the (imagined) confluence of individual madness and official prerogative, and in the second case, as tokens of imbecilic torturers' perceived impunity.

For many viewers, the photography of atrocity stands as the paradigmatic example of war photography that indicts war itself. Specifically, the photography of the atomic bomb and Nazi genocide is understood to stand not just for the mass murder of targeted victims, but for distinctly twentieth century ambitions in warfare—the effort to kill “scientifically,” and the effort to kill totally, not just to kill but to kill off, not just to defeat but to annihilate. Still, the cultural logic that endows photography with the capacity to confirm evil infrequently looks to photography to irrupt (much less to lead) political imagination. The photography of atrocity generally testifies retrospectively, often as a contest

between metonym and symbol, and only occasionally in an effort to detail crimes against humanity, crimes considered “necessary” to look at. Which corpses represent “humanity” is, of course, not a question photographs answer. The German photographer, Armin T. Wegner's photographs of Armenians murdered during the First World War, or the thousands of remorseless mug shots made of condemned Cambodians just prior to their murders in the Tuol Sleng prison between 1975–1979, or the French photographer, Gilles Peress' photographs of the fratricide in Bosnia in his 1994 book, *Farewell to Bosnia*, and in Rwanda in his 1994 book, *The Silence*, all show a choice of victim, but all depend on a solvency of political discourse to reveal the genocidal crime they show.

The Cold War between the United States and the Soviet Union, which formed the chassis of global geopolitics from 1945 until the collapse of the Soviet Union in 1991 and fuelled proxy wars on every continent, ensured steady work for photographers drawn to conflict areas, and the creation of a veritable industry of war imagery. The war in Korea (1950–1953) was extensively photographed by civilians and photographers attached to the American military, though publication was limited from the beginning, and severely so after the first six months. The limited visibility of the war meant suppressed recognition of its signal complications, many of which became central to the wars of subsequent decades in Southeast Asia, Central America, Afghanistan, and Iraq: the ill-preparedness of U.S. troops, the crimes of armies allied with and under the guidance of the United States, the struggle of soldiers to distinguish civilians from enemy combatants, and the extent of the death and carnage visited upon civilians. The upshot was a distancing effect well suited to the emergent ideology of U.S. postwar hegemony: “Mr. Public,” wrote *US Camera* in 1951 with unselfconscious prescience, “likes to sit back in his chair and have things done for him without having to expend more than a minimum of energy and that, minus danger.” At the same time, the comfortable remoteness of the war was set off against a decidedly more psychological portrayal of combat in the pictures that did appear in the work of Max Desfor, Carl Mydans, Bert Hardy (whose pictures of South Korean war crimes were explicitly censored), and especially the American photographer, David Douglas Duncan. Duncan's photographs in *Life*, *U.S. Camera*, and particularly his 1951 book, *This Is War!* established him as the prototypical post World War II combat photographer, at once perceptive and macho, independent-minded and identified with (if not implicated in) the

WAR PHOTOGRAPHY

prerogatives of the military. *This Is War!*, subtitled, *A Photo-Narrative in Three Parts*, also remains a masterpiece of visual sequencing, a sophisticated statement of the differences between linguistic and visual narrative, and of the complexities of photographic truth-telling.

The two decades of bitter conflict in Vietnam—the war against the French (1946–1954) and then the Americans (1959–1975)—prompted the maturation of “concerned” war photography, and the heightening of its internal contradictions. Unique in the history of twentieth century wars, the American government not only welcomed but actively facilitated photography to a great extent. In a climate of official openness and permissiveness, freelance photographers from around the world descended on the country to work virtually at will. War photographs accordingly became commodities as they had not been before. The result was the proliferation of a range of war photographs, from dispassionate documents of military operations to predatory, voyeuristic images of misery, to incisive photojournalism and introspective, critical pictures that become touchstones for the cultural upheaval that eventually accompanied the war.

At the same time, photographs for the first time took their place in the mist of extensive television coverage. On balance, photography accounted for a comparatively small part of the public’s contemporaneous exposure to the Indochinese war, notwithstanding the great volume of photographs made. (*Life’s* photographic coverage of the war was particularly paltry at the height of the war between 1967 and 1971, censoring the war’s escalating toll and its unpopularity in favor of the illusion of a morally untroubled good life occasionally beset by news from afar.) War photography in the age of television also became synoptic, a distillation of the river of television pictures that followed the conflict as it progressed from the ineffectual American attempt to win Vietnamese “hearts and minds,” to increasing American aggression, and ultimately the obscenity of blind killing on the pretext, as the historian Jorge Lewinski observes, that the communist evil was worse than napalm.

A heightened sense of the throes of combat was the major topos of the war’s photography, with many photographers astutely portraying the misery, the pain, and the confusion of jungle and city warfare, notably the American photographers, Catherine Leroy, Robert J. Ellison, and Oliver Noonan; the French photographers, Henri Huet, Christine Spengler, and Gilles Caron; the Japanese photographer, Kyoichi Sawada; and the Singaporean photo-

grapher, Terrence Khoo. David Douglas Duncan used Vietnam to elaborate his lyrical and hawkish vision of the combat experience, while the British photographers, Larry Burrows, Donald McCullin, and Philip Jones Griffiths articulated different degrees of liberal response. Reflecting a personal shift from support of the war to disillusionment before his 1971 death in combat, Burrows’ photographs are simultaneously unsentimental and profoundly elegiac—many exploiting a distinctly monochromatic use of color, dominated by grayish greens and pale browns—showing a war made equally of determination and grief. McCullin’s black and white photographs, by contrast, relentlessly locate the meaning of the war in the human body itself—pained, mangled, deranged with suffering—and so wrest the chief symbol of war from the grip of flags, explosions, and guns. McCullin’s 1974 book, *Is Anyone Taking Any Notice?* collects photographs from Vietnam and other conflicts, rendering distinct victims and distinct conflicts as matter of undifferentiated agony (an approach later repeated in James Nachtwey’s 1989 *Deeds of War*, and particularly his 1999 globetrotting cenotaph, *Inferno*.) Jones Griffiths, by contrast, offers a relentless critique of the war in his 1971 book, *Vietnam Inc.*, which astutely moves the viewer between the military and civilian realms of loss, educating the viewer without indulging a Western-centric bias.

Prototypical cases of photographs taken for metonyms of the entire war are the Pulitzer Prize winning photographs by Vietnamese-born photographer, Nick Ut, who photographed a naked Phan Thi Kim screaming in pain with other children on a highway, after her home was struck by napalm on June 8, 1972, and by the American photographer, Eddie Adams, who photographed Brigadier General Nguyen Ngoc Loan, chief of the South Vietnamese National Police and head of the South Vietnamese Central Intelligence Organization, executing Bay Hop, a captured Viet Cong soldier, on February 1, 1968 in Saigon. In Adams’s photograph, we see Loan firing a bullet point blank into Hop’s head; Hop, wincing, appears to be receiving the bullet, though has not yet collapsed in death. The photograph presents us not with a story but only a terse, unsparing, intensely violent ending—if not as graphically violent an ending as shown by the television footage of the same incident. For many viewers, the picture was also climactic, proclaiming the horror and immorality of the war, signifying its barbarity and its incoherence. That the image should have functioned—or more properly, performed—in this way is typically

credited to the photograph, but is due more properly to the discourses in which the photograph found itself.

A fuller account of this discourse, as offered for example by the cultural anthropologist, David D. Perlmutter, would attempt to explain the specific context in which the picture was made, namely the 1968 Tet offensive by the Communist North Vietnamese, which already represented a watershed in American public debate on the war, and, importantly, coincided with peak levels of U.S. mortalities. Further, it would elaborate the suppression of the identity of both men, and how this suppression aided the image's iconicity. It would investigate the ways that the picture's meanings change with other information appended to it, and indeed, how it might have been used to support the war effort.

If it is rare that even popularly known war photographs such as Adams's receive careful attention to the constructedness of their meanings, the photography of the war in Indochina as disseminated in subsequent decades has expanded and challenged the original image of the war. Particularly noteworthy is the publication of work by North Vietnamese photographers, including Luong Nghia Dung, Nguyen Dinh Uu, Mai Nam, Le Minh Truong, Duong Tranh Phong, Dinh Dang Dinh, and many others. Originally made to depict the resilience and ingenuity of the Vietnamese nationalist/communist resistance (both in print and even in the jungle, where pictures were hung from trees along the Ho Chi Minh trail), the photographs humanize the North Vietnamese in ways unseen during the war itself (with the exception of the French photographer, Marc Riboud's palliative 1970 book, *The Face of North Vietnam*), showing their resilience in the face of Western aggression that claimed more than 3.5 million Vietnamese lives from 1946–1975. The North Vietnamese photographs also illuminate the priorities of most non-Vietnamese photographers in showing the war, namely to endorse tacitly the morality of the war, if not its impact or its tactics.

The numerous regional conflicts across the Middle East, Asia, Africa, and South and Central America from the 1960s through the beginning of the twenty-first century have drawn plentiful, if uneven coverage by professional war photographers, while coverage of American wars has veered from World War I levels of censorship (the 1991 Gulf War) to World War II style "embedded" reporting (Iraq, 2003). "Professional" war photography has come largely to consist of conventionalized visual figurations using the stock tropes of combat developed over the previous century: smoke and debris, blasted architecture, menacing weapons, clamoring action,

contorted faces, sometimes mutilated bodies. The most venal of this imagery is something close to a mimicry of pain: by the inverted logic of news under the sign of entertainment, the more implausible the photograph, the more "authentic" its depiction. Such a climate encourages photographers to treat war photography as bounty hunting, and indeed, encourages acts of war themselves, as combatants play to the camera, certain that the photographs will appear in print and online. Often such "professional" coverage in Africa, South America, and Asia unwittingly rehearses older, resilient stereotypes of exotic primitivism among the peoples of the postcolonial world.

Still, the public interest in (read: market for) war photography does include a place for more discriminating photographers and for thoughtful, responsive work. The American photographer, Susan Meiselas's 1981 *Nicaragua* reflects on the impact of wars of liberation on those who fight them, while her 1997 *Kurdistan: In the Shadow of History* interrogates an orphaned history through an innovative combination of texts and photographs. A series of works on Afghanistan, including the American photographer, Fazal Sheikh's 1999 *The Victor Weeps—Afghanistan*, the British photographer, Simon Norfolk's 2002 *Afghanistan Chronotopia*, and the ambitious 2003 work, *War* by the collective VII (Christopher Anderson, Alexandra Boulat, Lauren Greenfield, Ron Haviv, Gary Knight, Antonin Kratochvil, Christopher Morris, James Nachtwey, and John Stanmeyer) together form a complex consideration of the American-instigated "War on Terrorism" that followed the September 11, 2001 attacks on the United States.

If photographs of war in the twentieth century both present history and are present in history, their own history is one not of forms but of functions, and functions renewed, to paraphrase the critic, Michel Frizot. Photographs of war are, in short, working cultural objects, deployed alternately to expose and to recall, to plead and to deliberate, to sanitize and to shock, to register the realities of war as well as to critique the imagination of those realities. They become evidence of what they show in relation to the questions put to them.

War photography has been extensively collected by American and European institutions including the Library of Congress, Washington, D.C., which holds the Farm Security Administration-Office of War Information (FSA-OWI) collection, the Imperial War Museum and Victoria and Albert Museum, London, and the photography department of the Musée de l'Armée, Paris.

YOSHIO WATANABE

Japanese

Yoshio Watanabe is considered a great master of architectural photography. He began his career in photojournalism but began to specialize in photographing architecture after 1945 and the huge social changes and physical destruction wrought by World War II. Watanabe's architectural photography, centered around his documentations of the reconstruction of the ancient Ise Shrine, however, goes far beyond mere renderings of the built environment. The social, spiritual, and historical all come into play, and through his photography Watanabe captured the core of the Japanese people and their ancient culture. Watanabe was also a major figure in Japanese photography, and served as the first director of the Tokyo Metropolitan Museum of Photography.

Born on April 21, 1907 in Sanj, Niigata Prefecture, Watanabe studied at the Konishi College of Photography, Tokyo from 1925 to 1928. Upon completion of his studies, he joined the New Photography Research Society, which ranked among its members the famous photographer Ihee Kimura, a leading figure of the era who had been exposed to such Western influences as the German movement *Neue Sachlichkeit* (New Objectivity) and the teachings of the Bauhaus schools in Dessau and Berlin. Watanabe established his own studio in the Ginza district of Tokyo in 1935 and worked largely for such government agencies as the Foreign Ministry Intelligence Bureau and the Tourist Bureau. At this time he also joined the International Report Photographers Society (IRP). Unfortunately, most of Watanabe's pre-war period negatives and pictures disappeared in the bombing during World War II. What is known of this period is not limited to architecture. He worked as a theater photographer and made several photojournalistic reports. His haunting *Portrait of a Girl*, in which Watanabe offers the portrait of his sister, attempts to capture the essence of feminine sensuality through its composition, framing, and positioning of the body.

From 1928 to 1942, Watanabe had also completed assignments for the magazines *Photo-Times* and *Oriental News*. Immersed in the effervescence of new techniques and photographic avant-garde,

in 1934 he published in *Photo-Times* a collection called *Camera Works*, studies on graphic composition. In this collection, inspired by the New Objectivity style and Western photographers who were in fashion in Japan in those years, he focused on night birds that stroll through the streets and cafés. It was through this series that Watanabe came to a turning point in his career, with his pictures of the Ochanomizu Station, his first foray into photographing architecture. He then photographed a modern building erected by Shigeru Ito; these pictures appeared in a collection of the same name. He took an innovative approach, concentrating on lighting effects as they were reflected on the white walls of the building. He also chose an innovative point of view that considered the architecture and other three-dimensional elements as sculptural objects. In this manner he created an atmosphere enveloping the building while respecting the architecture. In brief, Watanabe's pictures transcribe the space much as would a person walking inside and around the building, bringing out the architectural specificity of each place. He adopted a method of photographing, with minor changes, for his entire subsequent production.

In 1937, Watanabe joined Ihee Kimura and Kyoshi Koichi at the International Tourism Bureau of the Ministry of Railroads in order to create photographic murals for the pavilion of Japan at the World Fair of Paris. The same year, he published *Snappu shashin no neraikata/utu* (*How to Compose and Shoot Snapshots*), where he reflected on the attitude to adopt when shooting photographs. In 1949, he published *The Imperial Palace (Kokyo)* and in 1951, another collection entitled *Tenno to kokyo* (*The Emperor and the Imperial Palace*).

In 1953, Watanabe became the first photographer authorized to take pictures of the Ise Jingu at the time of the 59th reconstruction of the Shrine. The Ise shrine is an ancient Shinto Shrine, located in the Mie Prefecture, made entirely of wood. The ceremony, which happens every 20 years, consists of razing and then rebuilding the temple using the same ancestral techniques and the same materials. This site remains emblematic; its architecture symbolizes, on the one hand, the essence of all Japanese architectural creation and, on the other hand, a

communion, a spiritual dialogue between human being and divine spirits. Watanabe's pictures play with the idea of a past updated by the present construction and respect the particular temporality of this unique site. In these pictures, no extraneous detail disturbs the eye from contemplation of the temple and its timeless links to the ancient practice of Shintoism.

Watanabe photographed this sacred ceremony three times: in 1953, in 1973, and again in 1993, when he was 86. In each of these series, his technique stays the same. He composes his image in order to let the viewer enter the place. The effect of the light and shadows with the sky, slightly dimmed along with other elements, invite the viewer to occupy the site and feel the architectural material. Watanabe does not focus upon the general look of the building; he gives instead an illustrated walk that observes various details of the structure. That same year, then in 1954, Watanabe published in *Asahi Camera* his work on historic monuments, including various Buddhist temples. The first feature was devoted to monuments of Kyoto city and the second to the ancient architecture of Nara. In 1956, after participating in the World Council on Peace in Colombo, Watanabe traveled to Europe, China, Egypt, and the Soviet Union. He shot a number of series on his experiences in each country, which were shown in exhibitions and publications (*The Faces of Asia, Moscow, A Trip to Italy, Voice of Colombo*) where Watanabe grasps the differences and the relations between Japan and the Occident. Among others, these travels allowed him to measure the differences in his method from those of Western photographers and distance himself from the great names of Western photography. Among some of the images from this period are those of many historic sites: the Izumo Shrine, the Tohu Goshō, (the residence of Crown Prince in Tokyo), the Imperial Palace, the Imperial Guest House, and Frank Lloyd Wright's Imperial Hotel.

As one of Japan's most distinguished photographers, Watanabe was awarded many prizes (such as the Photographic Society of Japan annual in 1957) and medals (including one from the Third Order of Merit and Order of the Sacred Treasure in Tokyo, in 1978; and one from the Order of Culture, in 1990). Watanabe has played an important role in Japanese cultural institutions and at the university level (he was Professor of Art from 1958 at Nihon University in Tokyo). In 1978, he was director of Tokyo Polytechnic Institute, worked tirelessly for the promotion of copyright laws in Japan, and contributed to the creation of Tokyo Metropolitan

Museum of Photography in Ebisu, at which he was the first director between 1990 and 1995.

Biography

Born in 21 April 1907 in Sanj, Niigata Prefecture. Studied at the Konishi Photography College in Tokyo, 1925–1928. Worked in the Oriental Photographic Industries, and as editor of *Photo Times* monthly magazine, 1930–1934. Established the Watanabe Studio in Ginza, Tokyo, 1935–1936. Completed assignments for government agencies such as the International Tourist Bureau (Ministry of Transportation), International Culture Promotion Organization, and the Foreign Ministry Intelligence Bureau; 1935–1936. Member International Report Photographers Society (IRP), Tokyo, 1936–1940. Freelance photographer, 1940 onward. Co-founder International Press Photography Association, 1941, Lecturer, 1950–1952, Assistant Professor, 1952–1958, and Professor of Art at Nihon University in Tokyo, 1958–1978. Begins life-long project of photographing the Ise Shrine, 1953. Vice-Chairman of the Photographic Society of Japan in Tokyo, 1973. First director of the Tokyo Metropolitan Museum of Photography, 1990–1995. Honorary Chairman, Tokyo Institute of Technology, 1981–2000. Prizes include: Annual Prize of the Japanese Photographers Association and the prize of the Minister of the Agency for Cultural Affairs, 1957; Art Encouragement Award, Ministry of Education of Tokyo, 1958. Merit of Japanese Photographers Society, 1970; Mainichi Art Award, 1972; Third Order of Merit and Order of the Sacred Treasure, 1978 and the Order of Culture, 1990. Died at age 93 on 21 July, 2000.

BOYD WEBB

New Zealand

Boyd Webb is one of New Zealand's most internationally successful expatriate artists, best known for his large scale, fantastical tableaux that suggest the surreal and the science fictional. Webb should also be recognized for his capacity to push analogue photography into the realm of the illusory through sheer technical virtuosity, particularly in light of the ubiquity of computer-manipulated photographs today. As he has stated:

I have tried to make work on the scale of domestic doors, hoping the viewer could metaphorically walk into the picture, be sucked in and not notice the edges. What I have wanted all along is to make images that resonate with a universal appeal.

(Webb 1997, 66)

While at the University of Canterbury School of Fine Art, Christchurch, Webb studied sculpture, but used photography as a way to document a range of his over-sized, outdoor, and performance works. Webb's final year submission has been described by Jenny Harper as establishing the *modus operandi* of

his work to come, as the assessment situation was turned into a performance. Rather than presenting the work himself, Webb hired a secretary who took appointments for viewings and later submitted the work—which had been locked in the artist's "office"—inside a briefcase. After his graduation in 1972, Webb moved to London and attended the Royal College of Art, following a long line of New Zealand artists, and was influenced by the work of Richard Long, performance and media artist Stuart Brisley (1933–), and conceptual photographer Hamish Fulton (1946–). The Robert Self Gallery, London, hosted Webb's Masters exhibition in 1975, as part of a group show, as well as his first solo exhibition the following year. In 1978, Webb began to exhibit his work internationally and further afield in England. Webb's photographs of performances and installations soon evolved into works of art in their own right and are characterized by sharp social observations and a sense of satire and the absurd. Webb's photographic fabrications from the early 1970s often took the form of diptychs and were heavily reliant on text. From the late 1970s, however, Webb worked almost entirely from his East London

studio and created photographs such as *The Conservationist* (1978) and *River Crossing* (1979) using a limited number of props—including friends, colleagues, and neighbors—rather than staging his works at real locations as had been the case in *Herbert Groves* (1973) and *Mrs. Barnes* (1976) in previous years. During the 1970s, many artists, including Jeff Wall and Cindy Sherman, also began to produce constructed or staged photographs.

The images for which Webb has become best known were developed during the 1980s and investigate the clash between nature and technology that often results in a sense of helplessness and isolation. These works are purely theatrical, witty visions using actors and props, without darkroom tricks and prior computerized effects, and include works such as *Lung* (1983) and *Abyssogramme* (1983). Webb's cast, chosen according to their physique and demeanor, are without defining characteristics. Their anonymity symbolizes broader humankind as they are juxtaposed with everyday and found objects such as knitting needles, toasters, telephones, old strips of carpet, and plastic sheeting so that subject and object, nature and culture are blurred. In creating these tableaux, Webb takes on the role of director and utilizes dramatic, shadowless lighting, exaggerated color, and a grand scale to create fantastical scenes where viewers are urged to suspend their disbelief.

From the mid-1980s, Webb began to move away from using real people in his work and instead employed materials that suggested his ideas more obliquely. In particular, blow-up (but often deflated) plastic animals became the protagonists of his works toward the end of the decade in works such as *Plant* (1989). While Webb also exhibited installations, sculptural works, and films, still photography became his primary focus from the mid to late 1980s, while continuing to use sculptural and conceptual strategies. Also at this time, Webb's use of humor and absurdity became increasingly bleak and the already artificial quality of his nature tableaux took on environmental and humanitarian subtexts. Many of Webb's photographs probe human anxieties associated with genetic engineering and those challenges to popularly held concepts of life, identity, and nature. For Webb, there exists a parallel between the manipulation of the image in photography and of gene modification in plants and animals. Many of Webb's photographs examine the adverse effects of technology and the threat of human exploitation by constructing futuristic, though often dystopian worlds. While these works are rarely overtly political, they reveal the powerful forces of metaphor and humor. Webb's photographs and their qualities

of a strange, often uncanny, familiarity have also been compared with the sculptures of Americans Eva Hesse and Louise Bourgeois.

From the early to mid-1990s, Webb's interests shifted toward human biology, fertility, and sex, as well as the general, and sometimes abhorrent, interior workings of the human body. Webb's lens also moved from views of the cosmos to microscopic slices of life in photographs such as *Zygote* (1993) and *Nonage* (1995) where scientific photography and microscopy show fetal shapes being nurtured in a pretend laboratory. Rather than studying scientific documents, Webb instead imagines what lies immediately behind observable reality, as in *Entomb* (1993) and *Corona* (1994), where wallpaper, latex, and plasticine are used to fashion blood vessels, vulvas, and spermatozoa at the scene of conception. To date, Webb has only exhibited one image using digital manipulation, *Asteroid and Kidney Stone* (1996), which was made as a backdrop to accompany the artist's film *Love Story* (1996). The photographs that Webb has created since the late 1990s, such as *Wrack Wring* (1997), remain richly colored, large scale in format, and evoke a dystopian perspective on nature and biotechnological progress. A retrospective of Webb's photographic and film work toured Australia, Asia, and Europe from 1997 until 2000. Webb lives and works in London, England.

BRUCE WEBER

American

Bruce Weber has made considerable contributions to the categories of portrait and fashion photography. His signature black and white photographs of young men and women are formally beautiful works that have achieved widespread popularity through their use in the campaigns of Calvin Klein, Ralph Lauren, Gianni Versace, Abercrombie and Fitch, and others. Weber also works in color photography, and as a film and video director, for which he has received numerous awards, including a nomination from the Academy of Motion Picture Arts and Sciences.

Weber was born and raised in Pennsylvania. He trained in photography and film at various institutions in the New York City area. By the mid 1970s, he was producing a great number of black and white photographs of the nude male figure and portraits of individuals in the music industry. He was influenced by photographers Diane Arbus, whom he met on several occasions, and Richard Avedon, for whom he modeled. By the end of the 1970s he was exhibiting his work in several major galleries.

Weber's exhibitions led to the interest of Calvin Klein, in the mid to late 1980s, who employed him as his primary photographer for his clothing and fragrance lines. The Calvin Klein advertisements that Weber produced were some of the most sophisticated advertisement photography but also highly controversial. In an early set of images for Calvin Klein underwear, Weber used his characteristic black and white photography to show young males, in underwear alone, standing in provocative poses. The photographs were posted at widely visible venues such as Times Square in New York City, resulting in publicity for both Calvin Klein and Weber. Weber's photographs were celebrating the male form, not unlike Michelangelo's sculptures, but their release coincided with the debate over the homoerotic photographs of Robert Mapplethorpe. As a result of this timing, similar accusations were put upon Weber's work. Despite the controversy, Weber continued to be selected by Klein for other advertisements for his company, including a mid-1990s layout and television commercial for the fragrance line Eternity.

Weber has also been sought after for his portraiture. Almost every major magazine, including

Vogue, *Vanity Fair*, and *Rolling Stone*, has employed him for editorials on eminent figures in fashion, film, music, and the arts. Celebrities such as Aretha Franklin, Robert De Niro, Georgia O'Keeffe, and Brad Pitt, among many others, have commissioned him for private sessions. The portraits are some of the most intimate reflections of how seemingly untouchable figures appear inside their own homes or within natural settings.

Formally, Weber prefers the use of black and white film and natural light. The result is subtly shaded human forms. The look compares to that of portraits by fellow fashion photographer Irving Penn, but with a much greater degree of realism. Bruce Davidson's straightforward shots of anonymous people are perhaps the closest parallel to Weber's portraits, except that Weber's subjects are rarely posing. Weber gives his subjects a sort of ultimate freedom of movement and then catches them, famous and anonymous, in action. He prefers natural settings, or location shoots, that show the subjects outdoors. He also likes to show subjects in groups, typically many young people, gathered and involved in recreation.

Weber's work has a casual unplanned realism but is also technically acute with formally advanced compositions and focus that allows the entire scene to be in clear view. Occasionally, cropping occurs when a group of subjects may be too large to fit into a single frame. In these instances, Weber frequently focuses in on an exchange between two of the subjects. He creates the sense that his subjects are intimately involved, even though they may be virtual strangers. In this way, Weber successfully fictionalizes scenes with anonymous models, advancing the great fantasy of fashion photography.

Perhaps one of the reasons that Weber's photography was such a critical component to late twentieth century fashion advertisements was his use of intimate lifestyle-like settings that coordinated with the increase in lifestyle marketing. Weber does not show only clothes or underwear in his photographs. He shows the individuals wearing the clothes and underwear in glamorous, fun, social, and intimate activities, ultimately selling the idea that a certain brand of clothes is the key to an ideal lifestyle. This is particularly the case in his work for Abercrombie and Fitch. For this outdoor

gear and casual clothing line, Weber shows the all American type, young subjects fishing, surfing, playing on farms, riding bikes, and barbecuing while wearing the Abercrombie and Fitch clothing. He photographs a version of the American dream, of liberated carefree youths who also happen to be stylishly dressed.

Because Weber habitually shoots out-of-doors, some of his work can also be seen as landscape photography. Weber has shot consistently on location in upstate New York, southern Florida, and Montana, to provide a diverse mix of vegetation and architecture. Examples of this are perhaps best seen in Weber's work, *Roadside America*, for which he drove cross-country with a group of young models. Weber also occasionally includes photographs of his golden retrievers within the nature. He has produced two books of his photographs of dogs in nature, *Gentle Giants* and *Bear Pond*.

Weber's film career is also an important part of his artistic production. His films are often dark and realist takes made in black and white. In *Let's Get Lost*, Weber focuses on the struggle of a young male protagonist in short dramatic documentary style feature. Weber has also directed videos for Chris Isaak and the Pet Shop Boys and created a total of 11 books of photographs and writing.

WOLFGANG WEBER

German

Wolfgang Weber is one of the pioneers of the so called modern photojournalism, established in Germany from the late 1920s. He was not just a photographer for magazines, but also the author of the texts and captions published with the pictures. He had influenced the selection of the pictures and the design of the pages, too. Most of his reportages were about Germany and foreign countries and their social, political, or economical situations and conditions, subjects on which he was conversant given his education as ethnologist.

He was born in 1902 to a wealthy family in Leipzig. With his father, an industrialist and ethnologist, and his mother, a painter, he moved to Munich around 1910. There he finished school and started to study ethnology, philosophy, and music in 1920. He was very interested in music and decided to be trained as a conductor as well. Because of his academic training he got the opportunity to do research for the Phonetic Institute of the University of Berlin. In 1925, he traveled to East Africa and recorded the songs of the Vadjaggas tribe living near Mt. Kilimanjaro. Besides the equipment for sound recording, he brought a camera for stereo-pictures. After his return, a few pictures accompanied by Weber's short texts were published in German magazines. This was his first appearance as a photo reporter, although he was not a trained photographer. Like many other photojournalists in the late 1920s and early 1930s, he was a non-professional, educated more in intellectual, then photo-technical terms. Weber as an ethnologist had a strong background for his reports dealing with situations, conditions, or changes in foreign regions like Africa, South America, or Asia.

As a photographer as well as an author, Weber also did illustrated books always related to his travels. In 1927, he was commissioned to create a photo-portrait of Barcelona, Spain. The Albertus-Verlag, Berlin published it in 1928 with 224 photographs, each on a single page. This book belonged to a series called *Das Gesicht der Städte (Face of the Cities)*, in which, for example, Germaine Krull, one of the most important female avant-garde photographers of the 1920s and 1930s did the portrait about Paris. As a whole, these pictures are special within Weber's work. They are quiet and peaceful, often without people, like the pictures of Paris by the French photographer Eugène Atget.

In 1929, he made his first trip to the United States. Different articles were published in *Münchener Illustrierte Presse (MIP)* with over 70 pictures. Besides his traveling, he also took assignments for other subjects. Some of his great reportages of the early years are *Dorf ohne Arbeit* (1931), showing the situation of unemployed people in the German countryside, *Der Prozeß, dem die Welt zuhört* (1933) about the trial against the Dutch van der Lubbe, who was accused of burning the Reichstag and *Das Olympiastadion füllt sich* (1936), an impressive example for a photo sequence in magazines and how pictures could produce a content of meaning without many words. They all were published in *Berliner Illustrierte Zeitung (BIZ)*.

After seven years as a freelancer, Weber became a staff member of the Ullstein Verlag, Berlin in 1932 and mainly worked for the *BIZ*, one of several newspapers, like *Die Dame* or *Vossische Zeitung*, published by Ullstein. When many of the photojournalists left Germany at the beginning of the 1930s and the founder of Ullstein Verlag was ex-

pelled from Germany in August 1934, Weber kept on doing photographs for the German papers, chiefly *BIZ*, after leaving *MIP* in 1932. The following years he went to Africa, Asia, and the Near East. In 1943 and 1944, he photographed in different European countries, recording the situations there. In January 1946, after nearly 200 reportages with over 1,300 pictures, Weber's photos were published in *BIZ* for the last time. The magazine had decreased to only eight pages by the end of the war and went out of print. In 1945 and 1946, Weber worked for an American army magazine. At the end of 1946 he became chief reporter of the *Neue Illustrierte (NI)*, the first German magazine after the Second World War, published in Cologne. From 1946 to 1948 he took pictures in Germany, made portraits of cities like Munich, Hamburg, and Frankfurt in and after the war and traveled to England and Italy. In 1949, he was one of the first photojournalists who entered the United States after the war. The following years he traveled to the United States many times and in various reports drew a detailed picture of this country. In this context he produced *New York—Moskau*, a visual comparison of the two cities published in 1956 in four issues of the *NI*.

In 1963, he left *NI*, which now belonged to the Baur Verlag and had become less trivial. Television became Weber's new medium. He produced portraits of different nations, often hotspots (Cuba, China, Mozambique), and political personalities (Yassar Arafat, Ben Gurion). In 1964, he was one of the first Western journalists who was allowed to enter China. Until 1981 he worked on documentary projects there, showing its culture, education, industry, and more.

Throughout his career, Weber was looking for something foreign, something unusual or new. Although his pictures have no overriding, unique aesthetic and his way of telling things is quite simple, he always concentrates on the essential point. Therefore he was often putting the photos in sequences (three or four pictures), comparisons (juxtapositions of two pictures) or a combination of several pictures telling a story.

There has not been much written about Wolfgang Weber, nor have his photographs been widely exhibited. Yet his work is considerable, consisting of 40 years of photographing and nearly 20 years of filmmaking. He did over 900 reportages for magazines between 1925 and 1966, publishing about 3,000 of his photographs and over 20 documentary films, which required a great deal of preparation time and were often made under difficult conditions. The Weber estate, located in the Department of Photo-

graphy at the Museum Folkwang in Essen, Germany, encompasses more than 100,000 negatives, thousands of study prints, and a great number of film sequences and reels.

Weber traveled and worked his whole life. Whether for publishers or film institutions, he was always organizing his next assignment and planning his next trip. As a result, he did not spend much time putting his materials into structured order. Although it is now nearly organized, it will take time to prepare a presentation of Weber's pictures and his unique way of reportage.

WEDDING PHOTOGRAPHY

The history of wedding photography is intimately tied to the history of photography since 1840. From stiffly posed daguerreotypes, to dynamic color snapshots, to the filmic flow of video, this genre's styles and expressions have evolved with changing technology and taste. Wedding photographs endure as material artifacts of human ritual that vary considerably according to global traditions and ceremonies. Whether Buddhist, Christian, Hindu, or Muslim, wedding photography reflects a culture's most deeply felt rituals and customs. Popular wedding movies and media coverage of famous weddings have spread western customs globally; today, many non-western cultures have adopted new ways of blending traditions and culturally-specific rituals.

Throughout the nineteenth century most newlyweds went to professional portrait studios to document their marriages. Commercial cabinet photographs (popular through World War I) came in a variety of sizes and prices. Depending on a couple's taste and budget, wedding portraits could be retouched, hand-colored, given backgrounds and props, or otherwise individually adorned. The poses in wedding photographs, from then to now, often mimic those found in conventional painted portraits of the past.

In the twentieth century, wedding photographers gradually broke free of past limitations, becoming more adaptive to individual couples' needs. On-location photography flourished with the availability of sheet film, flashbulb lighting, portable and faster cameras. Candid images of marriage emerged with these new technologies, making it possible to record spontaneous moments. A post-war marriage boom encouraged a profitable and competitive opportunity for American photographers; it was

not unusual for multiple photographers to converge on a wedding and shoot on speculation.

Over the decades, photographers standardized formal and candid poses that couples came to expect. Creativity and imagination were enhanced with the development of interchangeable lenses, improved color film, and electronic flash. Photography of the past gave way to stylistic variety including the use of abstract effects, montage, off-focus "romantic" portraits, alongside candid. By the 1960s wedding photography became more informal and economically accessible. However, Barbara Norfleet laments a loss of quality by 1965 when most studios starting using color film and smaller negatives exclusively.

Trade terms indicate predominant styles today. "Traditional wedding photography" implies an aesthetic of elegantly formal and flattering poses with studio-quality lighting and the use of larger-format cameras. As Monte Zucker, an American leader of this romantic style writes, "show our clients not *how* they look, but how they *want* to look." Some photographers and clients, however, wary of artificiality, prefer what is called "photojournalistic" wedding photography, which is less posed, less intrusive, and perceived of as more "realistic." Most couples seek a mix of tradition and informality that reflects a variety of moods.

Alongside the growth of the wedding photography industry, professional organizations developed (such as the Professional Photographers of America and Wedding Photographers International) that help advance the field by providing publications, conventions, and ethics codes. Industry leaders such as Zucker and Denis Reggie (who advocates photojournalism) have also fostered increased professionalism with seminars, essays,

WEDDING PHOTOGRAPHY

and websites. Organizations for wedding videographers appeared in synch with the technology—the first Wedding Video Exposition was held in 1991 and the Wedding and Event Videographers Association was organized in 1994.

Today the wedding photography industry faces new challenges such as digital processes that may replace traditional technologies. With the increasing use and availability of home VCRs, video cameras, and computers, wedding videos have become a standard expectation for many couples. Video and computer technologies have altered traditional practice making it possible for couples to select images and design albums on the computer.

The professional responsibilities of wedding photographers are complex and serious given the symbolic enormity of the marriage rite to most couples. Not only must these images meet all expectations in terms of technical achievement, they must also capture more indefinable realms such as “romance” and “beauty.” The wedding photographer must work in various locations, keep to budget, allow for the busy schedules of the couples, all while negotiating the relationships between couples’ family and friends. A sensitivity to the dynamics of human psychology can be as valuable as technical knowledge.

Wedding photography is far more than a history of photographic technologies; it is also intimately tied to social history and change, ethnicity, gender, and economics. Despite rising divorce rates, the ritual of marriage endures as one of the most central rites of passage in a person’s life. And while ritual may be more secular in today’s world, many couples still pay photographers hundreds or thousands of dollars to package and codify this rite. Clients are told in industry publications to spend about 10% of their total wedding costs on photography. At the end of the twentieth century in the United States, the average costs of wedding photography and videography are at about \$2,000. Across the globe, wedding costs, including those for photography and video, have generally increased. Average middle class weddings in the United Arab Emirates can cost more than 50,000 pounds; in fact, a state Marriage Fund was instituted to help offset expenses while discouraging mixed marriages (men applying for these funds must marry Emirati women).

Wedding photographers must also contemplate each shot within the totality of a final (and often lucrative) product—the wedding album. Each wedding photographer’s success depends on capturing a succession of expected images that create a filmic totality from the day’s beginning to end. Wedding photographers typically maintain rights

to the negatives and oversee the processing of each image, providing “proofs” to their clients.

Most albums enshrine approximately 20 to 40 images that relay the loosely-scripted “story” and highlights of the marriage day. Stages in the rite of passage are typically documented in images of preparations for the event, to the solemn taking of vows, to the celebratory reception with its symbolic events (such as cutting and eating the cake, throwing the bouquet, etc.). Given the plethora of individual expectations, religious proscriptions, economic and social or ethnic factors, tremendous variety exists in wedding albums since all weddings vary depending on the country and individual cultural practices. In India, rituals and customs shift considerably between Hindu, Gujaraty, Punjabi, or Tamil weddings. Some Muslim weddings forbid the use of photography and video altogether, while others do not. Increasing numbers of Japanese couples seek “western-style” weddings (versus the traditional Shinto ceremony); however, they often reject the rituals of garter throwing and wedded couple’s kiss so common in American wedding albums.

The wedding photographer’s role, in any culture, is to make our ritualized behaviors and beliefs observable in tangible form. They capture the material culture of marriage (attire, food, rings, etc.) while attempting, at their best, to create visual metaphors affirming the institutions of marriage and family. Wedding photography also functions at mnemonic and sociological levels since ritual behaviors and values are reaffirmed in subsequent viewings.

Given the enormous difficulties faced by successful wedding photographers (negotiating family members, creating visual ideas, and mastering complex technologies), it is surprising that they have occupied a rather low place in photographic hierarchies and that little academic attention has been paid to their work. Even so, their images occupy a special place in many homes across the world.

WEEGEE

American

Though a dedicated student, Usher H. Fellig (Weegee) left school at the age of 14 in order to help support his family. After numerous odd jobs including tintype operator, passport photographer, and street photographer—photographing children in the park on a rented pony named Hypo—he eventually found his way into the darkrooms of the *New York Times* in 1921. In 1924, he joined ACME News Pictures (which became UPI Photos) and after several years as a darkroom technician, he began filling in on photographic assignments when other staff photographers were unavailable. It was during his time with ACME that he left home in order to free himself of his family's orthodox ways and a great deal of the time he was reduced to living in missions, flophouses, public parks, and even Pennsylvania Railroad Station. In 1935 he left ACME, deciding to freelance in an effort to become a news photographer in his own right. Over the course of the next 12 years Weegee would shoot some of the most memorable images ever taken of Manhattan and in doing so, ensured that his name would be forever synonymous with the seedier side of New York City.

Weegee instinctively understood the lives of the impoverished, and he photographed them with an insider's perspective and a great deal of compassion. Perhaps more importantly he was trusted by his "subjects" and with his trademark 4 × 5 Speed Graphic he managed to capture in detail both the ordinary and the extraordinary in a city he clearly loved and understood. He soon developed a standard set up when shooting which gave his images maximum tonality and magnified sharpness—shutting down the lens aperture to f/16, setting the speed

of exposure to $\frac{1}{200}$ of a second and placing himself at a distance of 10 feet from his subject. Being an "insider" the good, the bad, and in particular the ugly were captured with remarkable sensitivity and his gritty shots of New York life are in stark contrast to many of his contemporaries whose style would tend to romanticize the hard times Weegee's people endured. While sympathizing with the lower classes, his contempt for the affluent upper classes was obvious and is captured perfectly in probably his most famous image *The Critic* taken in 1943 that shows two fur-draped, tiara-ed matrons playing to Weegee's camera while a scruffy, disturbed-looking woman stands in profile on the side.

It is a matter of conjecture as to how and when Arthur H. Fellig became known as Weegee, though it is generally accepted as being around 1938; some say after the Ouija board due to his uncanny, almost clairvoyant ability to be in the right place at the right time. Others claim it came from his job as a "Squeegie Boy" while working at the *New York Times*. However, it would not be surprising to learn that it was Fellig alone who "dubbed" himself Weegee simply as an act of self-promotion. In another typical act of self-publicity, around 1940 he began stamping many of his prints "Weegee the Famous." In 1941 his first exhibition, "Weegee: Murder Is My Business," opened at The Photo League, New York and it was at this time that he first started to experiment with moving film with a hand held 16 mm movie camera. In 1943, five photographs were acquired by the Museum of Modern Art (MoMA) and included in their *Action Photography* exhibition.

Very much an innovator, even in his early days, Weegee was an early proponent of the use of infrared photography and captured scenes never before photographed using this type of technique. Images

of couples embracing at the movies, children in theatres and at the circus, and lovers on the beach at Coney Island at night became part of his stock-in-trade. Another innovation included the acquisition of a short wave police radio which, when it wasn't in his car, was stationed by his bedside. Sanctioned by the New York Police Department, Weegee would listen day and night to the emergency calls being reported over the radio by the NYPD and if any potential drama piqued his interest Weegee would immediately jump into his 1938 Chevy and make his way to the scene. Needless to say, Weegee would usually be the first photographer to arrive at any newsworthy incident and would, in the process, often beat the NYPD to the scene of the crime. For some reason, and much to the chagrin of his fellow news photographers, Weegee was the only press photographer permitted the privilege of a police radio. In the 12 year period between 1936 and 1948, Weegee covered over 5,000 murders, had worn out 10 plate cameras and had gone through five cars. Ironically, given his speciality for shooting gruesome and often bloody, murder scenes, Weegee was a rather squeamish individual and hated the sight of blood but, as he once remarked, was "spellbound by the mystery of murder".

Weegee's rise to celebrity status came about shortly after the release of his first book *Naked City*, which was published in 1945. *Naked City* covered the full gamut of Weegee's work and, in turn, quickly turned him into a media star. *Naked City* the book spawned Mark Hellinger's Universal Pictures feature film *The Naked City*, and later a television show. Shortly afterwards Weegee abandoned his crime photos and concentrated on a more lucrative side of the photography business shooting advertising assignments for *Vogue*, *Holiday*, *Life*, *Look*, and *Fortune*. He relocated from his beloved New York to the west coast and lived in Hollywood from 1947 to 1952, primarily working as a film consultant but also playing a number of cameo roles in films such as *Every Girl Should be Married* (1948), *The Set Up* (1949), *The Yellow Cab Man* (1950), and *Journey into Light* (1951). His most famous part, essentially playing himself, was as a street photographer in Hellinger's *The Naked City* (1948). Weegee's last major Hollywood assignment came in 1958 where he was employed as a consultant on the set of Stanley Kubrick's *Dr. Strangelove, or How I Learned to Stop Worrying and Love the Bomb*.

Whilst in Hollywood, he began a series of photo-caricatures and photo-distortions of celebrities and politicians using a variety of home made kaleido-

scopic lenses, mirrors, and other distorting apparatus. His subjects, or perhaps victims, included Nikita Krushchev, John F. Kennedy, Marilyn Monroe, Pablo Picasso, and Charles de Gaulle, amongst others. In later years, Weegee continued with his experimental work with manipulated and abstract photography and also completed several short films such as *Manhattan Moods* (1946), *Weegee's New York* (1948), *Cocktail Party* (1950), and *The Idiot Box* (1965). He also shot a number of straight color portraits of celebrities though this work is rarely published and largely unknown. Though Weegee returned to New York in 1952, he spent the majority of his latter years working extensively in Europe as both a freelance photographer and lecturer.

Weegee published several books during his lifetime. After the huge success of *Naked City* in 1945, he quickly followed up a year later with *Weegee's People*, which was greeted with great enthusiasm. However *Weegee's People* was not nearly as successful as *Naked City* since it lacked the first book's grimness and stark realism. Though *Weegee's People* was the book he claimed he really wanted to make, it was fast becoming apparent that the dozen years 'on the road' as a news photographer were starting to take their toll on Weegee—he no longer seemed to possess the hunger and desire to shoot murders, accidents, fires, and daily scenes of metropolitan disorder as he once had. It would be another seven years before his third publication, *Naked Hollywood*, hit the bookstands in 1953. *Naked Hollywood* was met with a degree of derision by both the critics and the public alike since it contained many of his photo-caricatures and distortions, a style of photography the world was obviously not ready for. Opinion on his experimental work softened a little several years later when *Vogue* published a number of his abstract portraits in 1955 but Weegee was primarily associated with his images of New York in the 1930s and 1940s.

Weegee would be the first to admit he was never a great artist in the truest sense of the word. His images have a certain naiveté and innocence about them but with his penchant for harsh light and saturated black backgrounds, which he termed as "Rembrandt light," Weegee's style is instantly recognizable—as is the subject matter. Usually working without a preconceived idea of composition, the use of flash was a key element of Weegee's technique—the flash tended to frame the subject for him and eliminated unwanted background detail. This way of working produced images with a certain immediacy and voyeurism about them, which is arguably unique to Weegee.

Though one of the great characters of the world of photography, Weegee was never one to mix much with fellow photographers and he rarely mentioned others who may have influenced him during his career. There are only two contemporary photographers whom he had any time for—Lewis Hine and Alfred Stieglitz. In particular, Hine's images of destitute children in New York would certainly have struck a chord with Weegee.

A disheveled, unshaven figure at the best of times, Weegee—with his trademark stogie cigar—was a well known character around the news and magazine offices of New York, although he was never an easy man to deal with according to those that knew him professionally. Weegee only really felt totally at ease among his 'own people'—usually down at Sammy's in the Bowery which was one of his favourite haunts. Many of the images taken at Sammy's—or "a poor man's Stork Club" as he used to refer to the bar—illustrate another side of Weegee, and the majority of his light-hearted and humanistic photographs were captured at Sammy's. More a technician than a great photographer in the classic sense, Weegee's real talent lay in his ability to 'connect' with his subjects, particularly with those from a similar poor background, and he was often emotionally affected by the scene he was confronted with. Very much a one-off, Weegee will be chiefly remembered for the material he shot in New York, and his photographic legacy is predominantly one of raw emotion giving the viewer a unique insight into the lives of both rich and poor in New York during that period.

Biography

Born in Lemberg (Lvov), Austria (now in the Ukraine) of Jewish descent on 12 June 1899, Usher H. Fellig was the second of seven children and arrived with his family in New York in 1910. As part of the great wave of immigrants flooding into New York's Lower East Side at the time, Usher immediately became Arthur—his name having been anglicised upon his arrival at Ellis Island. Though Weegee married Margaret Atwood in 1946, they separated three years later and in 1950 divorced. Although he never remarried his long time friend Wilma Wilcox, whom he had known since the early 1940s, remained his constant companion until his death. Diagnosed with diabetes in 1957, Weegee's final years were somewhat melancholy and he died in New York on 26 December 1968 at the age of 69. After his death Wilma

continued to promote Weegee's work and was chiefly responsible for continuing his spirit, tradition, and memory. In 1976, Wilma was introduced to Cornell Capa, founding Director of the International Center of Photography in New York and, upon her death in 1993, she bequeathed her entire collection of original prints, negatives, letters, and Weegee's personal effects to ICP.

Capsule Biography

Born in Lemberg, Austria (now part of Ukraine), 1899 as Usher H. Fellig. Emigrated to USA 1910. On arrival in New York, changed name to Arthur H. Fellig. Left school at age fourteen. Joins Duckert and Alder photography studio in 1918 as assistant. Joins *New York Times* as a darkroom assistant in 1921. Joins Acme Newspapers (later UPI) as darkroom technician in 1924. Becomes freelance photographer in 1935, first pictures published. Changes name to Weegee around 1938 and installs police radio in car, starts stamping prints "Weegee the Famous" around 1940. First one-man exhibition "Weegee: Murder Is My Business" in 1941 at The Photo League, New York. Publication of first book, *Naked City* in 1945. Publication of second book *Weegee's People* in 1946. Marries Margaret Atwood in 1946, moves to Hollywood, California. First appearance as extra in Universal Pictures *The Naked City* in 1948. Represented at Museum of Modern Art, New York, *50 Photographs by 50 Photographers* exhibition, organised by Edward Steichen. Starts to experiment with abstract photography with home made lenses 1947. Various technical consultant jobs and small film roles between 1947 and 1952 in Hollywood. Separated from Margaret Atwood in 1949,

divorced in 1950. Produces first short black and white film *Cocktail Party* 1950. Returns to New York 1952 and begins to create his distortions portraits. Publication of third book *Naked Hollywood* 1953. First distortions published in *Vogue* 1955. Diagnosed with diabetes 1957. Final film consultant role on Kubrick's *Dr. Strangelove, or How I Learned To Stop Worrying and Love The Bomb* 1958. 1958 to 1968; traveled extensively in Europe lecturing, filming, holding exhibitions, and freelancing in photography. Lecture tour and several exhibitions in USSR 1959. Publication of autobiography *Weegee by Weegee* 1961. Publication of *Weegee's Creative Photography* 1964. Makes final short film *The Idiot Box* 1965. Dies in New York, 26 December 1968.

CARRIE MAE WEEMS

American

Carrie Mae Weems's devotion to activism in the 1970s launched her career in photography during the 1980s. When the Museum of Modern Art included her in the exhibition *Pleasures and Terrors of Domestic Comfort* in 1991, Weems's work was already bridging issues of domestic space, constructed identity, and the irreconcilable place called home. Her work relates to the African Diaspora in a manner that is personal, but not necessarily autobiographical. By using image and text and producing work in series, Weems continually challenges herself and her audience. Since 1991, her work includes room-sized installations, involving a complex array of mixed media that confront preconceived notions of what a photograph can convey.

Her artistic aspirations began as a dancer with Anna Halpern in San Francisco during the 1970s. While participating in political demonstrations, she realized that photography, rather than dance, documented best the social issues that were mounting for African Americans and for women's civil rights. On her 21st birthday a friend bought her a camera and shortly afterwards, she came into contact with *The Black Photographer's Annual*, a book that was published intermittently between 1972 and 1980 by Joseph Crawford, which introduced her to Roy DeCarava. His street photography that chronicled the African-American urban experience inspired Weems. She has since talked in multiple interviews about documentary influence in her earlier work.

I was very much interested in documentary photography as a vehicle for expression, as a political tool. It was a way of capturing the human condition. Documentary is a very potent vehicle. But a photograph can be slanted. How do you ensure that a photograph is understood with your intended context?...All of it is open to interpretations, assumptions, and opinions.

(Tarlow 1991, 11)

In her late 20s, Weems enrolled in photography at the California Institute of the Arts (CalArts), earning a Bachelor of Fine Arts in 1981. Courses in literature, folklore, and writing had the greatest influence. When she arrived at the University of California (UC), San Diego, for her M.F.A., she gra-

vitated towards photography professors who challenged her to deal with issues of authorship, subject, context, and audience, which became foundational to her training. From 1984 to 1987, her interest in African-American folklore brought her to the Graduate Program in Folklore at UC Berkeley. Weems compares her work to Zora Neale Hurston, whose degree in anthropology greatly informed her literary portrayals of African Americans and the human experience. Weems's academic training has resulted in her own anthropological treatment of photography to reveal how the dominant views of the time influences a photograph's meaning. Nineteenth-century practices, particularly in the human sciences of ethnography and physiognomy, are thematic departures and points of recovery for many of Weems's photographic series.

From Here I Saw What Happened and I Cried (1995) was a commission from the J. Paul Getty Museum, Los Angeles, to respond to their nineteenth-century photography exhibition, *The Hidden Witness: African Americans in Early Photography*. The commission occurred during a time of continued healing after the Rodney King riots in Los Angeles. Weems rephotographed select images from the exhibition, such as J. T. Zealy's ethnographic daguerreotypes from 1850, and printed them as red c-prints with sandblasted text on glass placed over the images. The series declared a place of physical and historical distance, but with strong emotional ties to the people of African descent objectified by photography's historical practices.

Although Weems's documentary foundations are particularly evident in the earliest series, *Environment Portraits* (1978), her folklore style was first introduced in *Family Pictures and Stories* (1978–1984). The series of nearly 30 photographs depicted her family in everyday environments and activities, but the text and audio tapes extended interpretations from an autobiographical narrative to include discussions on the complex and often violent interrelationships that can occur within families. *Family Pictures and Stories* endures as a mature series because it marks Weems's ability to reconceptualize cultural staples, such as the family album, to emphasize a unified cultural character or condi-

tion. After this series, text and audio would become increasingly important to her style.

By examining and reinterpreting the production of visual and written language systems, from the late 1980s to the early 1990s, Weems was among many artists who used the conceptual approaches of post-modernism to deconstruct issues of gender, race, class, and sexuality. *Ain't Jokin'* (1987–1988), *American Icons* (1988–1989), and *Colored People* (1989–1990) are her most controversial series in how they oscillate between documentary practice and the conceptual fronts of contemporary art. Particularly with *Ain't Jokin'*, Weems directly confronts the effect of racial stereotypes and kitsch fascinations, reproaching popular culture for adapting the various language systems that reinforce racial categorizations and inequality.

Much of Weems's discussions revolve around displacement, using the African Diaspora as a means to address cultural displacement. *Sea Islands Series* (1991–1992) is a point of stylistic intersection, starting from *Family Pictures* and continuing through to more recent work, *Africa Series* (1991–1992), *Ritual and Revolution* (1998), *The Jefferson Suite* (1999), and *The Hampton Project* (2000). The *Sea Islands* photographs and text sympathized with the legacy of the Gullah of the Southeastern coastal regions, who during the nineteenth-century were a surviving community of previously enslaved Ibo people continuing African traditions in isolation from dominant American culture, which had been documented in an important series of work by Doris Ulmann in the 1920s. This series included other mediums, such as collectable china plates, printed with text that began with the phrase "Went Looking for Africa." The text presents an omnipresent voice that locates the African Diaspora in American culture, a pervasive exchange of influence between the two. *Sea Islands* establishes Weems's interdisciplinary approach to photography as a means to insert the individual experience within the communal search for cultural identity. Her most recent series, *The Jefferson Suite* and *The Hampton Project*, are room-sized installations that combine photo-silkscreened banners, text, recorded sound, and photography to pursue the connections of people within cultures. Nineteenth-century issues resurface in these series, questioning advancements in genetic science and historical roles in education.

In an earlier landmark work, Weems examined the complexity of modern life by focusing on the prescribed feminine space of the home. *Kitchen Table Series* (1990) positioned the audience at the end of a table, a potential on-looker of complex scenes that revealed the taught relationships between

a woman, played by Weems, and her husband and her children. The composition used a cinematic approach, demanding direct engagement with Weems's character to offer an alternative to the feminist gaze theories of Laura Mulvey that became instrumental for artists such as Cindy Sherman. Weems's poetic and witty text frustrated a simple reading of the scenes as a woman's dilemma and interjected instead an existential stance on the collective search between man, woman, and child for the keys to life. *Kitchen Table Series* drew significant critical attention, motivating inclusion with group exhibitions such as *Urban Home* (1990) at the Studio Museum in Harlem, *Pleasures and Terrors* at MoMA, and the Whitney Biennial (1991). A similar format was used for *Jim, If You Choose...* (1990), which addressed the predicament of the Black male and the individual responsibility in the determination of one's fate; it proved vital to the Whitney Museum of American Art's exhibition *Black Male: Representations of Masculinity in Contemporary American Art* (1994).

As a folklorist, photographer, writer, historian, and performer, artist-in-residence awards and visiting professorships have brought Weems to different corners of the United States: from California to Washington State, to Chicago, to New York, to Massachusetts, and to Florida. In 1996, she received the distinguished Alpert Award in the Arts, which allowed her to travel to Germany for a year's residency. By then, Weems had shown in international exhibitions in Austria, Germany, and Korea. In 1993, The National Museum of Women in the Arts organized a solo exhibition that traveled to distinguished American contemporary arts institutions, such as the Walker Art Center in Minneapolis and the San Francisco Museum of Modern Art. Since then, Weems has been included in global art initiatives with work showing at the 2nd Johannesburg Biennale in South Africa (1997) and the Dak'Art '98: Biennale of Contemporary Art in Senegal (1998).

WILLIAM WEGMAN

American

William Wegman is prolific and multifaceted with career achievements as a conceptual artist, pioneer video artist, filmmaker, creator of books, painter, draftsman, and collagist. He is best known, however, for critically and commercially successful photographs of his Weimaraner dogs.

Wegman acquired his first Weimaraner in 1970 and named him Man Ray, after the seminal expatriate American photographer. Ever loyal and in need of attention, Man Ray repeatedly walked into the artist's photo or video shoots; realizing the dog had tremendous camera presence, Wegman began to incorporate the canine into his projects including the *Man Ray Portfolio* (1982). Man Ray was his favorite subject until the dog's death in 1982 (*The Village Voice* named Man Ray 1982's "Man of the Year"). Throughout the 1970s and early 1980s, Wegman was ambivalent about the commercial success of the Man Ray photographs, feeling that he was not considered a serious artist, "nailed on the dog cross" and known only as "the dog guy." He later embraced this success realizing that the animal works offered endless opportunity for expression and enabled him to explore many other types of projects. In 1986, when Wegman felt again ready to work with Weimaraners, he bought Fay Ray, with whom he would work until 1995 and who would give birth in 1989 to another generation of Wegman models, Battina, Crooky, and Chundo. Wegman photographed the pups growing up in order to train them as models—resulting works include *Puppy Planter* (1989) and *Young Chundo* (1990). From Batty came Chip, Wegman's primary subject in the new century.

The breed's ability to stand on point makes the dogs excellent models as they can hold poses for a long time. Wegman often dresses up his dogs and

constructs absurd realities through makeup, props, and elaborate sets and costumes. The Weimaraners are incredibly expressive and capable of conveying a wide range of emotions. For example, in the 28 headshots comprising *Fay Day* (1995) the dog seems to convey among other distinctive "feelings": alertness, sadness, fear, and bemusement. Recognizing differences in the dogs' personalities and ranges of expressions, (he called Man Ray "stoic, passive, noble, and wise" and Fay Ray "part Greta Garbo and part Joan Crawford"). Wegman casts his dogs for different photographic "roles."

Though his works with dogs are his best-known, Wegman has always made many other types of works. His photography runs the gamut of genres, from magazine covers of celebrities to conceptual works. An early example of his conceptual investigations is *Family Combinations* (1972), a set of six photographs including portraits of Wegman, his mother and father, and three superimposed combinations that is a pseudoscientific, physiognomic study that is simultaneously compelling and absurd. *Reduce/Increase* (1977) is a similarly silly drag portrait of the artist that is superimposed with inked notes (as if to a photo-lab) to "increase" feminine hips and bust and "reduce" his neck, shoulders, and waist—a note to "shave" the legs is the droll punch line.

Maintaining the conceptualist vein in his oeuvre, since the 1970s Wegman has incorporated found photographs and postcards into many paintings and drawings to critique the tenets of photographic looking. In these works, he extends landscapes and objects or creates fictional situations beyond the photographs' edges. In *Our Forefathers, Etc.* (1996) he broadens the photographed space of the Lincoln Memorial to include a hand-drawn, ink-washed extended horizon and a female tourist reflexively "photographing" the statue/postcard.

The popularity of Wegman's photographs is largely attributable to the deadpan and idiosyncratic humor of these works that the artist calls "pathetic irony." While the humor has allowed broad audiences (including those for televised video screenings on Saturday Night Live and The Tonight Show) access to his works, this wittiness often involves visual and verbal puns that undermine the "seriousness" of conceptual art and postmodern theory. *Building a Box* (1971) is a series of nine images that show Wegman "hammering" and "sawing" wood and a finished box, but constructing nothing in the sequence. This work pokes fun at Robert Morris's conceptual masterpiece, *Box with the Sound of Its Own Making* (1961), while requiring deep looking from the viewer to figure out this pictorial pun.

Humor is evoked in Wegman's works with dogs through gentle humiliation of his subjects, the transformation of his dogs into other animals or clever anthropomorphism. For instance, *Frog/frog II* (1982) features Man Ray posed in green snorkeling flippers, green makeup on his fur, and googly ping-pong ball eyes, opposite an anatomically correct prop frog. *Blue Period* (1981) mocks the gravity of Picasso's depressive works as a seemingly forlorn Man Ray is posed against a blue backdrop, and along with an acoustic guitar and framed reproduction of the master painter's *The Old Guitarist* (1903). *Frog/frog II* and *Blue Period* are also examples of Wegman's favorite photographic medium—liking the instantaneity, rich colors, and remarkable details, since 1979, Wegman has been using the large-scale, 20 × 24-inch Polaroid to create many of his images.

Since 1989, Wegman has juxtaposed the heads of his dogs on the bodies of human actors through creative use of costumes and props. This device is used to great effect in his later videos and "fashion" photographs—for instance, *Trainer* (1999) in which the heads of models wearing haute couture are replaced by "pouting" bewigged canines. *Becoming* (1991) is a hilarious sequence of three large-format Polaroids showing a human woman holding and donning a dog head in exchange for her own. Other "fashion" works, such as *Feather Foot* (1999), which shows a leg and paw in a high-heeled shoe, focus on the incommensurability of human clothes and animal bodies.

Wegman's work with dogs has been enormously popular with children; the artist has responded by creating many photographic monographs; for example, *William Wegman Puppies* (1997), and storybooks, comprised of many narrative photographs for example, *Cinderella* (1993), for younger viewers. Other works for children include video segments for

Sesame Street (1989–present), releases for home video, a feature film, *The Hardly Boys in Hardly Gold* (1994), and even an installation in the Children's Museum of Manhattan (2002).

WILLIAM V. GANIS

Biography

Born in Holyoke, Massachusetts, 2 December 1943. The artist lives and works in New York, New York, and western Maine. B.F.A. in painting Massachusetts College of Art, Boston, 1964; M.F.A. painting and printmaking University of Illinois, Champaign-Urbana, 1967. Instructor at University of Wisconsin, Wausau, Waukesha, and Madison, 1967–1969. Instructor at California State College, Long Beach, 1970–1971. Moved to New York, 1972. Acquired Weimaraners, Man Ray, 1970; Fay Ray, 1986, Battina, Crooky, Chundo, 1989; Chip, 1995. Bailey House Key Honor, 1999; New York Foundation for the Arts Honor, 1987; John Simon Guggenheim Memorial Fellowship, 1975; National Endowment for the Arts Grant, 1982; Creative Artists Public Service Grant (video), 1979.

JACK WELPOTT

American

Jack Welpott was one of the pioneers in photographic education, and a gifted photographer. In a time of specialization in photography, Welpott's photographic interests are diverse. He has photographed the nude, landscape, both natural and urban, and made portraits.

Welpott's approach to education was to provide a solid basis in technique and an appreciation of the masters of the medium. He offered one of the first histories of photography surveys on a college campus. He was also interested in psychology, especially the ideas of Carl G. Jung, and integrated Jung's ideas into the reading of photographs. His aim was to determine the needs of the student and provide guidance for the students in fulfilling those needs. Welpott allowed students to find their voice but provided a nudge when needed. He never imposed his vision on his students, but rather preferred to dialogue. He continued and passed on the teaching methods of his mentor, Henry Homes Smith.

Jack Welpott was born in Kansas City, Kansas on April 27, 1923, but grew up and was educated in Bloomington, Indiana. At age ten, a Brownie camera sparked his interest in photography. He then purchased an Argus 35 mm at the local drugstore

when 12, and two years later an uncle gave him a 2¼ × 3¼ German view camera. Welpott soon had a darkroom and began a lifelong involvement with the medium.

After high school, he enrolled at the University of Indiana, but after a semester he was drafted into the U.S. Army Air Corps in 1943. He served in the South Pacific as a radio intercept operator with the 13th Intelligence Unit until his discharge in 1946. He rose to the rank of Staff Sergeant and was awarded three combat stars.

Upon discharge from the Air Force, Welpott took advantage of the G.I. Bill and enrolled at the University of Indiana, Bloomington. He graduated with a B.S. in business and an M.S. in 1955 in Visual Communication. From 1949 to 1959 Welpott was the Production Supervisor of the Audio-Visual Center at Indiana University. His interest in photography was rekindled when he enrolled in a photography class with Henry Holmes Smith, a former faculty member at the New Bauhaus in Chicago. In 1959, he completed the M.F.A. degree. Smith was a major influence on Welpott's thinking about photography and photographic education. Welpott and Jerry Uelsmann were the first M.F.A. graduates in photography. In addition, Welpott became acquainted with Harry Callahan, Aaron

Siskind, Minor White, and Van Deren Coke among others. In addition to photography, Welpott studied painting with Leon Golub and Harry Engle and design with sculptor George Rickey, bridging the diverse media. After completing the M.F.A. degree, Welpott was hired by John Gutmann to found a formal photography program at San Francisco State College, now San Francisco State University. There were almost no photography courses offered at the university level anywhere in America at the time and graduate programs in photography were almost nonexistent. Although the Beat Generation was winding down in San Francisco's Northbeach, when he arrived in the City he took advantage of the local poetry, jazz, art, and culture. Equally enticing was the availability of photographers such as Ansel Adams, Ruth Bernhard, Imogen Cunningham, Oliver Gagliani, and Dorothea Lange. After growing up in Indiana, San Francisco in the late 1950s was a cultural mecca, and he integrated this cornucopia of culture into his classes. Preferring the large format camera and the gelatin silver print, he has also photographed in color and even combined photography with painting and drawing.

Formal problems are a major concern in Welpott's thinking about photography, but the viewer can easily be misled by the subject matter. This is especially true when viewing his forte, his nudes. They are admittedly erotic and sensual interpretations of the female figure. His subjects, Judy, Sherry, Thea, and Sabine, are now all well known and appeal to the viewer because of their sexuality. However, to stop there would be a gross misreading of these photographs. They are equally appealing to the eye because of the skillful integration of subject matter and technique. Composition (the positioning of the figure within the photograph) and his sensitivity to light are essential ingredients of his photographs. During the early 1970s, Welpott and Judy Dater, his former wife, collaborated on portraits, frequently photographing women. They sometimes photographed the same subject to bring out the differences between the subject and their interaction with the male or female photographer. The subjects were strangers whom they found in various locations in the San Francisco area; for example, *Sherry* (1980) and *Kathleen* (1972).

In addition to his nudes and portraits, Welpott has also focused his lens on the landscape. In *Near Sacramento* (1975) he reminds us with a fragment of the newly ploughed earth, a grassy hill, and a hint of sky that the camera's relation to the land seems innate. Also, in his photograph, *White Sands, New Mexico* (1977) the full moon hovers

behind the clouds above a fragment of the sandy landscape. The allusion to Pictorialism is obvious, yet the overall effect is quite contemporary.

Welpott also photographed the cityscape. In 1980 and 1981, Welpott began exploring San Francisco's financial district, resulting in some unique and, at times, critical views of the world of business. Although Welpott has established his career as a black and white photographer, during the 1980s he photographed in color, but always with restraint. In *Shiny Stocking* (1987) the woman's leg, her red shoe, and the other figure's green dress are all controlled. Similarly, the dress, reflections and color are all skillfully integrated in *San Francisco, Ca.* (1986). And in such images as *Dancer* (c. 1994) he combines a photogram of a projected seed pod with pen and ink drawing and hand coloring.

EDWARD WESTON

American

“Edward had come to be viewed as chief among the so-called purists,” wrote Charis Wilson, Edward Weston’s second wife, traveling companion, and collaborator. As a photographer, Weston was indeed a purist. Foremost, he was an advocate for photography as its own genre, not as one that attempted to imitate painting. In this regard, Weston is philosophically linked to Alfred Stieglitz’s Photo-Secession movement. Weston’s prints were always “straight”—he did not manipulate negatives or prints, and chose to use large cameras that allowed him to make 5 × 7 and 8 × 10 contact prints.

Edward Weston was born March 24, 1886 in Highland Park, Illinois. Weston’s mother died when he was five years old, and his older sister May played a formidable role in his upbringing. Weston shot his first photographs with a Kodak Bulls-Eye #2, a gift from his father, in 1902. The Bulls-Eye took 3½ × 3½-inch photos and Weston, enthused by his successful photographs, soon saved money to buy a second-hand 5 × 7 format camera with a ground glass and tripod. Quitting high school the following year, Wes-

ton went to work at Marshall Field & Co. in Chicago. He continued to make photographs in his spare time. That same year Weston visited the Ninth American Salon at the Chicago Art Institute. Although no well-known photographers were represented at the Salon, the work he saw there left a strong impression.

Weston’s sister May had married John Seaman and moved to Tropic (now Glendale), California near Los Angeles. He visited the Seamans in 1906 and decided to stay on in California. Weston’s brother-in-law found him work as a surveyor’s helper. With his earnings, Weston purchased a postcard camera and made some extra money, often photographing the funerals of infant immigrant children. Weston’s spare time was also occupied by a budding romance with his sister’s friend, Flora May Chandler. Concerned with his prospects as a breadwinner, Weston returned to Chicago to attend the Illinois College of Photography. He studied there for nearly a year, learning techniques for portrait photography. Uninspired by the college, Weston left Chicago without completing his degree. He and Flora were married in January 1909 and their first son, Edward Chandler, was born the following

year. Flora bore him three more sons: Theodore Brett in 1911, Neil in 1914, and Cole in 1919.

To support his growing family, Weston worked as an assistant in portrait studios. He soon built his own photographic studio in 1911 on land in Tropic owned by Flora's family, who had vast real estate holdings. For Weston, the work of portrait photography was painstaking—particularly the delicate retouching expected by patrons—and was largely unrewarding artistically. Nonetheless, the next few years saw burgeoning success, as Weston persistently submitted artistic photographs to publications and competitions. His soft-focus, pictorialist work was included in a handful of exhibits and he received many accolades and awards, including his election to the London Salon of Photography in 1917. Weston also began publishing articles in photographic magazines, primarily choosing aesthetics as his subject matter.

The circle of artists who would populate Weston's world and help shape his aesthetic began to take form. In 1912, Weston met Margarethe Mather, who modeled for him and became his student and eventual partner in the Tropic studio. Weston met another photographer, Johan Hagemeyer, in 1917, and the two quickly became close friends. Hagemeyer lived with the Weston family for a short time, perhaps a sign of the growing distance between Edward and Flora, who was not a part of her husband's social circle. It was through the dancer Ramiel McGehee that Weston met Tina Modotti in 1921. Weston was immediately enamored with the Italian-born silent film star and model. They soon became lovers. Weston's circle now included Modotti and her husband, Roubai "Robo" de l'Abrie Richey. When de Richey went to Mexico in 1922, he arranged for a showing of work by American artists and photographers, including Weston, with the chief of the Department of Fine Arts at Academia de Bellas Artes in Mexico City. De Richey hoped that Weston and Modotti would both join him in Mexico. Modotti was preparing to leave for Mexico City when she got word that her husband had contracted cholera. He died before she arrived in Mexico. Despite her husband's death, Modotti decided to stay on in Mexico. She brought 100 of Weston's prints with her, some of which comprised a one-man show at Academia de Bellas Artes. Weston's work was received by the public with an extraordinarily positive response.

Weston set off for a trip east in October 1922. He visited his sister May and her family at their new home in Ohio. There, Weston shot his first industrial landscapes, marking a significant shift away for the pictorialism that had previously dominated his work. The industrial, modern city demanded a

new kind of photograph, sharply focused. At the ARMCO factory, he stood below the mills and pointed his camera up so the immense stacks of the mill loomed above the lens, giving a sense of their enormity. With the ARMCO photographs, Weston took his first step into Modernism.

Traveling on to New York City, Weston met with Alfred Stieglitz. It was a somewhat disappointing interview with the great founder of *Camera Work*, which had been so important to Weston's development as a photographer. Weston wrote in his daybook, the journal he kept for many years:

I took my work to show Stieglitz. He laid it open to attack, and then discarded print after print, prints that I loved. Yet I am happy, for I gained in strength, in fact strengthened my own opinion...But I feel I was well received by Stieglitz; I could sense his interest and he did give me some praise.

After a visit with family in Chicago, Weston returned to California in time for Christmas. Modotti had returned from Mexico, and their affair resumed with great passion. In the first half of 1923, Weston made 11 nudes of Margarethe Mather. These photographs mark another important advancement in Weston's work. The images are concerned not only with the nude form but also with the juxtaposition of the body with its surroundings—sand, wood, shadow. The starkness of these nudes also shows a true break with pictorialism. Seeking a new environment for his new artistic endeavors, Weston made a decision that would change his life and expand his work as a photographer. On July 30, 1923, Weston, Tina Modotti, and Weston's 13-year-old son Chandler boarded the SS *Colima*, bound for Mazatlan, Mexico. Weston and Modotti had made an agreement: she would serve as a translator and he would teach her photography.

In Mexico Weston began to accept photography on purely aesthetic terms, continuing his turn away from pictorialism. Textures, surfaces, and the play of light became increasingly important and his subject matter broadened. Nudes of Modotti, portraits of notable friends, and photographs of city life dominate this period. Weston became acquainted with painter Diego Rivera and other artists of the Mexican Renaissance who received him warmly and praised his work. An exhibition of 100 Weston photographs was installed at the Aztec Land gallery in Mexico City in October 1923 to resounding reviews from the press and visitors to the exhibition. "I have done what I expected to do, created a sensation in Mexico City," Weston wrote in his daybook. "I have never before had such an intense and understanding appreciation." This apprecia-

tion was a mainstay of Weston's experience in Mexico, where he lived until late 1926, save for a six-month respite in California in 1925.

Returning to California permanently in 1927, Weston took up an intense study of organic subject matter, focusing primarily on fruits and vegetables and shells, isolated and in sharp focus. This set of subjects is one of the hallmarks of Weston's work, along with his female nudes and California landscapes. It was the form itself, not the objects, which Weston found compelling. He sent prints to Modotti in Mexico, and she showed them to several of their friends in the artistic community. All were struck by the sensuality of the photographs, which elicited a strong physical response. Between 1929 and 1930, Weston made 43 exposures of peppers as well as his first landscapes at Point Lobos, California. It was a particularly fruitful time for Weston, who maintained a Spartan lifestyle in order to leave as much time as possible for photography.

Weston's reputation was growing. More than 30 exhibits featured his work between 1930 and 1932, most notably his first one-man show at the Delphic Gallery in New York City. The first monograph of his work, *The Art of Edward Weston*, was published in 1932, largely due to the efforts of the impresario Merle Armitage. The short-lived Group f/64 was formed in 1932 and included Weston, Ansel Adams, Imogen Cunningham, Willard Van Dyke, and Weston's protégé Sonya Noskowiak, among others. The group's name was drawn from the aperture setting of the lens that allowed for maximum detail in both foreground and background. The tenets of Group f/64 were based on Weston's purist doctrines, namely that the final image of a photograph is envisioned in the moment of its making. Weston only made contact prints, never resizing, retouching, or manipulating an image.

Weston met Charis Wilson in 1934 in Carmel, California, where he had a studio for portraiture and also sold his prints. His initial subject matter in Carmel was primarily seascapes, trees, and rocks, then the surrounding cliffs. These naturalist photographs—which include some of Weston's best known images—set him apart from other photographers who espoused Modernism and chose the cityscape as their primary subject matter. With sales waning during the Depression, Weston closed the Carmel studio the following year and accepted a job with the Federal Art Project under the Works Progress Administration (WPA). The new post took Weston to Santa Monica, and Wilson soon joined him there, setting up house together.

Weston was the first photographer to be awarded a Guggenheim Fellowship. In 1937, he received a

one-year fellowship for \$2,000, to continue his series of photographs of the West. For the first time in his life, Weston was able to earn his living doing artistic photography, rather than the portraiture which had been his mainstay. Phil Hanna, the editor of *Westways*, the magazine of the Southern California Auto Club, helped organize the itinerary for the Guggenheim trips. Weston and Wilson signed a contract with *Westways* for eight to ten Weston prints for each monthly issue, with captions from Wilson. The Guggenheim trips took Weston and Wilson throughout California, including a jaunt through Yosemite National Park with Ansel Adams. Weston received a second Guggenheim Fellowship in 1938. With financial support from the fellowship, Weston began preparing 100 prints in 1939 for an installation at the Huntington Library near Pasadena, California. Edward Weston and Charis Wilson, already longtime collaborators, were married in 1939, following Weston's divorce from Flora. *California and the West*, the book resulting from the Guggenheim travels, was published in 1940.

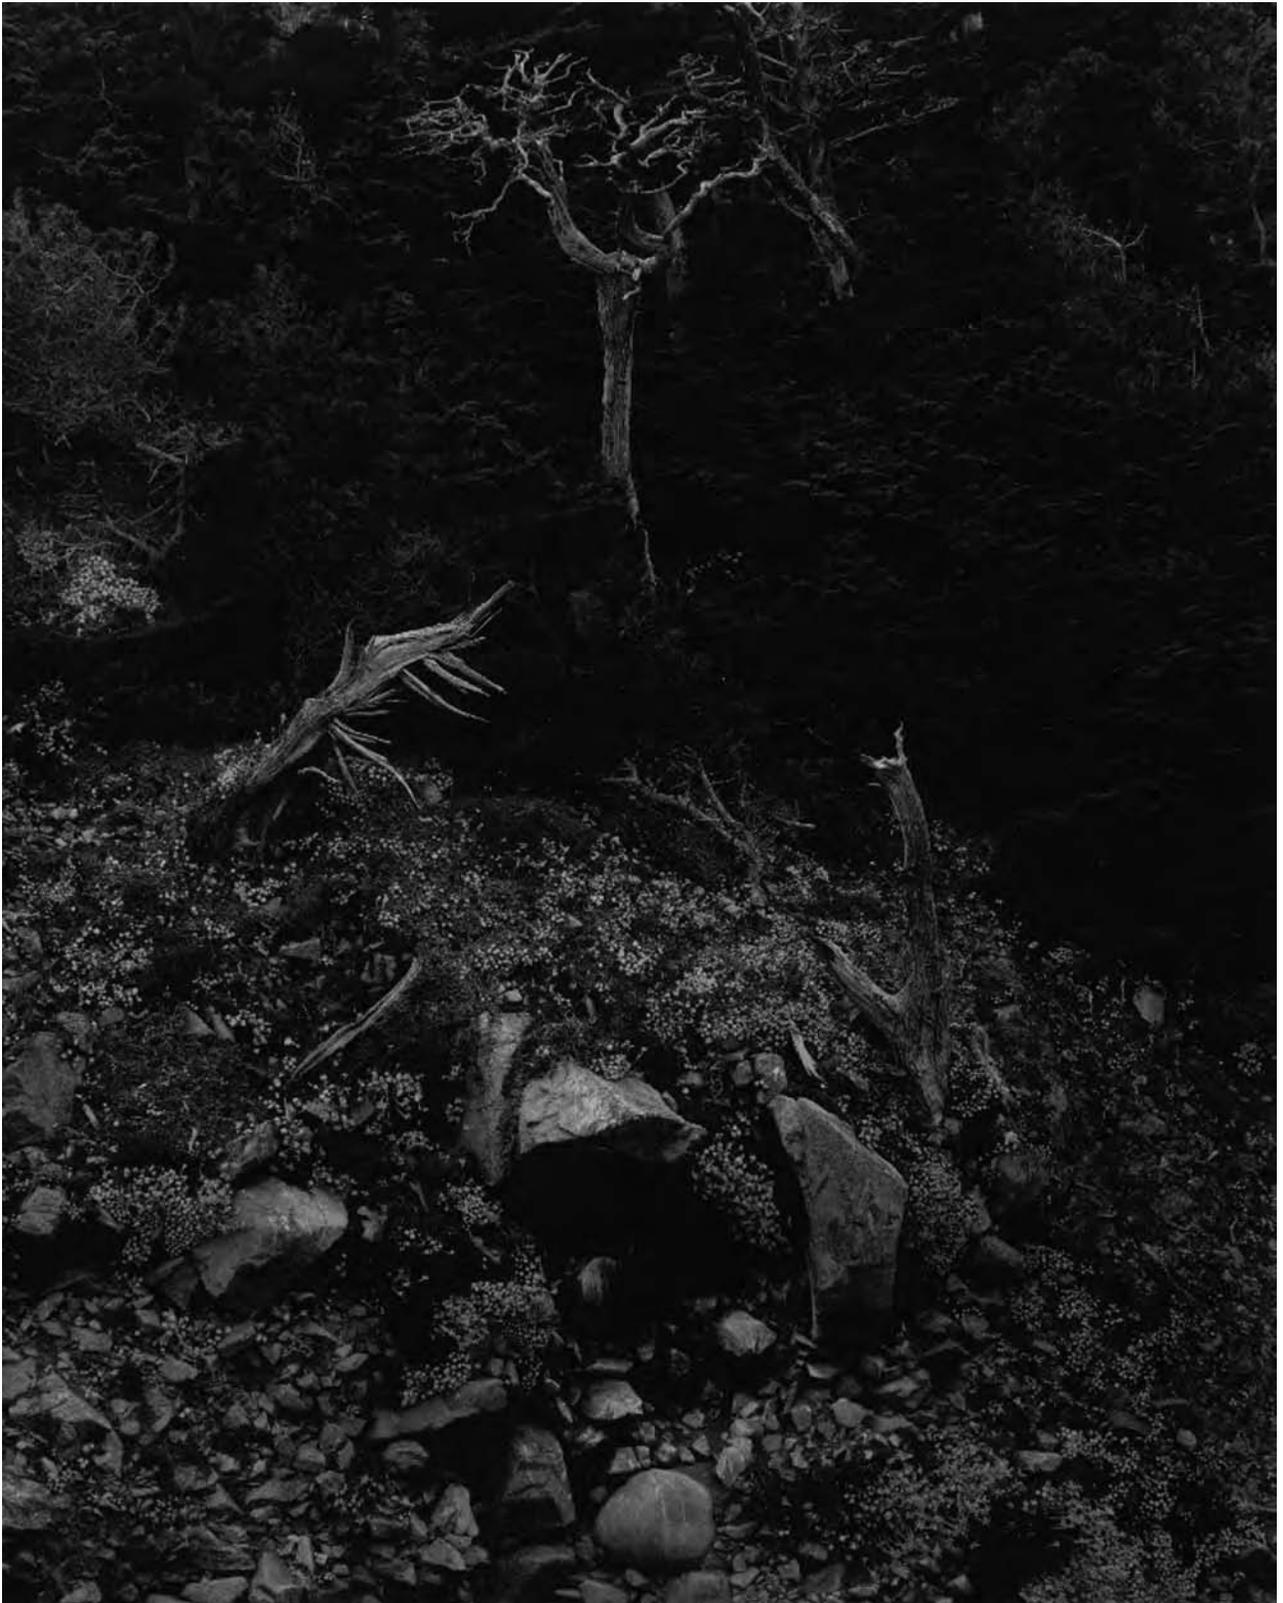

The Limited Editions Club commissioned Weston to illustrate an edition of Walt Whitman's *Leaves of Grass*, and in 1941, Weston and Wilson began traveling through 38 U.S. states to photograph for the book. Their travels were cut short by World War II, and they settled at Wildcat Hill, a house in Carmel built by Weston's son Neil. Weston would live out his years at Wildcat Hill, succumbing to the ravages of Parkinson's disease. Weston made his last photograph, *Eroded Rocks, South Shore, Point Lobos*, in 1948. Although his motor skills were compromised by Parkinson's, Weston continued to work, printing negatives with the help of his son, Brett. The last decade of Weston's life saw a major retrospective in Paris in 1950 and *The World of Edward Weston*, which Beaumont and Nancy Newhall organized for the Smithsonian Institution. Weston died January 1, 1958, at his home. He continues to be an icon of the world of photography and has had several significant posthumous showings, including an exhibition comparing his photographs with the work of Robert Mapplethorpe at the University of California at Riverside/California Museum of Photography in 1995.

CLARENCE WHITE

American

Clarence H. White, one of the founders of the Photo-Secession, is now known chiefly as an educator who founded an important center for photographic training at Columbia University in New

York. His achievements as a photographer, however, continue to be of interest, exemplifying the pure currents of Pictorialism as it developed at the turn of the twentieth century in the United States. His photographs of gentle, domestic subjects were realized in beautifully modulated platinum and gra-

vure prints, and his association with Alfred Stieglitz not only produced a seminal professional association, but a pioneering series of sensual nudes that remain extraordinarily modern and vital.

Early life in Ohio for Clarence Hudson White (1871–1925) centered on his birthplace of West Carlisle and nearby Newark, where he graduated from high school and then became a bookkeeper for a wholesale grocery firm. The scenery was picturesque, the workday was long, the family, Presbyterian and Republican. This milieu shaped his vision which, in turn, would have a major impact on photography.

Only a year into his marriage to Jane Felix in 1893, White carefully budgeted for a Premo 6½ × 8½ view camera with a 13-inch portrait lens. Such lenses were ground to produce soft effects, but White's typically misty images were often from having to photograph during free time shortly after dawn or before sunset. Lacking both academic art and photographic training, he was not rule bound, so he experimented with light and form, and was restricted only by his limited means.

By 1898, White was accepted in the Philadelphia Salon where the noted photographer Alfred Stieglitz was a jury member. The next year, White and Stieglitz served on the Philadelphia Salon jury, where White was impressed with Edward Steichen's work. Though White was now represented in the London Salon, he did not neglect the local scene and co-founded with Emma Spence, the Newark Camera Club, a group which attracted national attention and brought noted photographers to the small Ohio town. The Newark Camera Club was also the first such organization to print a catalogue of their annual show, which served as a model for other clubs and organizations.

Through these activities and images such as *Ring Toss* of 1899, a dynamically composed scene of a languid game played by three girls, White's international credentials were firmly established when he and New York portrait photographer Gertrude Käsebier were elected to the Linked Ring Brotherhood in 1900. This secession group from the Photographic Society of London, derived its name from the Pre-Raphaelite Brotherhood and tried to present new approaches including Impressionism, naturalism, and gum bichromate printing.

Alfred Stieglitz, however, led the battle for photography as art, and in 1902, he launched the Photo-Secession with a show at the National Arts Club followed by the publication of *Camera Work* dated January 1903. Clarence White was a founding member of this organization, and his work was frequently featured in this first American journal of modern-

ism. Sadakichi Hartmann, an art critic closely associated with the Photo-Secession, had praised White's figure photography as early as 1900 and hailed his *Spring* (1898) an "American masterpiece." Pictorialism had ties to the Arts and Crafts Movement, and George Bicknell, writing in *The Craftsman* (January 1906, p. 495), "ranked White with Stieglitz and Edward J. Steichen".

White typically photographed his wife or her sisters in long flowing gowns as they gracefully posed in a bucolic setting. The images lack the sophistication of John Singer Sargent's women, as White's soft platinum prints reflect an ethos untouched by the "Gilded Age" or middle class work. White often seems to relate to the Pre-Raphaelite dream world of Edward Burne-Jones, and, indeed, the Photo-Secessionists recognized Julia Margaret Cameron's photographs, many of which are precursors to White's work.

James McNeil Whistler, the American expatriate artist in London, was a major influence on White's work such as *Miss Grace* (1898). Whistler's atmospheric effects, emphasis on bold forms, and flat, Japanese-style designs show relationships with photographs such as White's *Morning* (1905). White said little about his photographs and was no theorist, so it is uncertain whether he intended specific meaning for the frequently used glass globe.

In 1904, White left bookkeeping for commercial photography, which took him throughout the midwest usually making portraits. In Terre Haute, Indiana, he photographed an attorney who was associated with Socialist leader Eugene V. Debs. White, who embraced Socialism, again showed a link to Pre-Raphaelitism, for both John Ruskin and William Morris were leaders of a Christian Socialist movement in England. White's politics were idealistic, however, and were never evident in his photographs or teaching.

New York was surpassing London as the art photography center, and so in 1906, White moved to the city, where he and Gertrude Käsebier showed at the Little Galleries of the Photo-Secession. The following year, White and Stieglitz collaborated in making nude studies, but more significant for White's future was Arthur Wesley Dow's offer of a photography position at Teachers College, Columbia University. An added assignment at the Brooklyn Institute of Arts and Sciences further shifted White's prime activity from that of photographer to teacher.

The aims of the Photo-Secession to gain recognition of photography as art seemed to be fulfilled with the international exhibition at Buffalo's Albright Art Gallery in 1910. Differences between Stieglitz and White developed, and these issues led

to a break in 1912, which would not be patched until 1924.

While other photographers, such as White's famous student Karl Struss, responded to the city, especially New York, the Ohio photographer's eye stayed focused on the natural world. He and his family accepted several invitations to visit the noted photographer and publisher F. Holland Day at his summer retreat on Georgetown Island, Maine. White then purchased a dilapidated farmhouse there and started the Seguinland School of Photography for summer classes. Day, Käsebier, and modernist painter Max Weber were among the visiting lecturers. To be more accessible to New York, White moved the summer school to Canaan, Connecticut, in 1919, where it continued until his death.

Nearly all former students agreed that White was a great teacher, and those reflections came from a roster that included Dorothea Lange, Margaret Bourke-White, Laura Gilpin, and Doris Ulmann, to cite some of the many women whose careers he furthered. An openness to many approaches, and an aim to bring together commercial and art photography so students could find employment as artists was in sharp contrast to the anti-commercial, elitist philosophy of Stieglitz. Such students as Paul Outerbridge, Anton Bruehl, and Ralph Steiner, however, achieved fame with bold photo illustrations.

White recognized that time devoted to teaching had taken its toll on his personal photography, and when the opportunity to hold a summer session in Mexico developed in 1925, he envisioned that the new environment might ignite his own work. Instead, he suffered a fatal aneurysm on 6 July 1925.

Jane White, devoted students, and many famous lecturers maintained the White School of Photography, though the master's prints sometimes substituted for pay. Her youngest son, Clarence H. White, Jr., had studied at the School and also taught there. By 1940, he was Director, but, with World War II and an ill-timed expansion, the school was forced to close in 1942. Jane Felix White, a collaborator throughout White's career, died the following year.

MINOR WHITE

American

Minor (Martin) White is best known for his faith in the spiritual and subjective aspects of photography. Greatly influenced by Alfred Stieglitz's idea of equivalence and inspired by a large array of philosophical and religious ideas such as Catholicism, Zen, Tao, astrology, the teachings of the Russian mystic G.I. Gurdjieff (1870s–1949), and Jungian psychology, White approached photography as a means of self-discovery and self-growth. He believed that the mythical quality of reality and of self could be accessed through photography.

White's contribution to photography extends well beyond his own work as a photographer. Throughout his lifetime, he devoted himself to achieving broad public recognition for photography as an art form by introducing the work of many young photographers to the public, developing higher-education programs in photography, and publishing extensively on the subject, but it is as a teacher that White made his greatest impact.

In his teaching, nationwide lectures, and workshops, White stressed the need to “read” photographs and emphasized that the meanings of images lay somewhere between the image and the viewer. Essential to his understanding of reading a photograph is the notion of an “innocence of vision”—defined by him as a serious and deliberate effort to experience the image directly and deeply. In the classroom, White introduced theatre techniques, classical music, mime, Zen meditation, and applications of Gurdjieff's teaching to help students conceive the taking and viewing of a photograph as spiritual and intellectual activities. His bold vision influenced many photographers, including Peter Bunnell, Paul Caponigro, Carl Chiarenza, Oliver Gagliani, William Heick, Bob Hollingsworth, Rose Mandel, and Jerry Uelsmann.

White's interest in photography can be traced to 1916, when his grandfather gave him a Brownie camera. White learned to print and develop photographs as a student of photomicrography at the University of Minnesota. Once graduated with a B.Sc. degree in botany and a minor in English (1933), he moved to Portland, Oregon, worked as a hotel clerk, was an active member of the Oregon

Camera Club, and taught photography at the YMCA. In 1938, White was assistant secretary of the People's Power League, a position that helped him secure the title of creative photographer for the Oregon Art Project commissioned by the Works Progress Administration's (WPA) Art Program of the Federal Works Agency. These early photographs are architectural studies taken in a direct, documentary style. In 1940, he completed his first article on photography entitled “When Is Photography Creative?” published three years later in *American Photography*. The following year, the Portland Art Museum hosted his first major one-man exhibition.

From April 1942 to September 1945, White served in the U.S. Army Intelligence Corps as an infantryman in the Philippines, receiving the Bronze Star. Although he photographed little during this period, he completed a manuscript entitled *Eight Lessons in Photography* that he incorporated into his later writings. White also wrote poetry, *Elegies*, *Free Verse for the Freedom of Speech*, and *Minor Testament*, which served as text for the 1947 sequence of photographs *Amputations* (never exhibited).

White lived in New York City after his discharge from the Army. He studied museum methods and worked as a photographer at the Museum of Modern Art (MoMA), where he befriended Beaumont and Nancy Newhall. With their help, White was introduced to a number of photographers, including Harry Callahan, Paul Strand, and Edward Weston. He also studied aesthetics and art history at Columbia University under Meyer Schapiro who strongly motivated him to consider a psychological approach to photography. White began to see a photograph as meaningful beyond content and style, a conviction supported by Stieglitz's idea of equivalence. White first met Stieglitz in 1946, the year he moved to San Francisco to join Ansel Adams in teaching photography at the California School of Fine Arts (CSFA), today the San Francisco Art Institute. Although he initially shared Adams's approach to photography, their views significantly diverged as White's interest in a psychoanalytic basis of making and interpreting photographs increased. For White, the sharp form and texture of straightforward photography were cer-

tainly important, but mostly because they inspired in the viewer ideas and meditations on the self.

In November 1946, White visited Weston for the first time at Point Lobos, an inspirational photographic site he returned to often even after Weston's death. Shortly afterwards, White assumed major teaching responsibilities at CSFA, helped develop a three-year photography program, and held various combined exhibitions with his students. He completed his first non-narrative sequence *Amputations*, which was never exhibited at the California Palace of the Legion of Honor, San Francisco, as scheduled because of White's refusal to exclude the poetic text from the exhibit. In 1948, he began to work in portraiture and figure composition exploring techniques of theatrical lighting, character revelation, and directorial projection that reach a climax with his *Fifth Sequence | Portrait of a Young Man as Actor* of 1952.

Along with Adams, Dorothea Lange, the Newhalls, and others, White founded *Aperture* magazine and became its editor in 1952. In November of the same year, he moved to Rochester, New York, to join the staff of the George Eastman House (GEH), where, as curator of exhibitions, White directed three large theme exhibitions: *Camera Consciousness* (1954), *The Pictorial Image* (1955), and *Lyrical and Accurate* (1956). He also edited *Image* magazine. His first New York City one-man exhibition was held at the Limelight Gallery in 1954.

In 1955, White taught photo-journalism at the Rochester Institute of Technology (RIT), gave his first public lecture at Ohio University, and accepted his first of many students in residence. The following year, he directed workshops that encouraged students to interact in lectures, field sessions, and print critique. He was appointed to the faculty of RIT in 1956 where he taught photography until 1965. In April 1959, *Sequence 13 | Return to the Bud* was exhibited at the George Eastman House, White's largest sequence to date comprising 115 photographs. In the same year, "The Way through Camera Work," a definite statement of White's philosophy to photography, was published in *Aperture*.

In February 1965, White was appointed visiting professor at the Massachusetts Institute of Technology (MIT) where he taught and exhibited (including *Light 7*) over the next decade. In 1968, he completed *Mirror Messages Manifestations*, the only book written by him on his own work. In 1970, White received a Guggenheim Foundation Fellowship, which had been denied to him on two former accounts.

In June 1976, White died of a heart attack in Boston. His archives are in the Library of Princeton University, New Jersey. Major collections of

his work can be found at the San Francisco Museum of Modern Art, California; International Museum of Photography, George Eastman House, Rochester, New York; The Art Museum, Princeton University, New Jersey.

WIENER AKTIONISMUS

Wiener aktionismus, or Vienna Actionism spanned the entire decade of the 1960s in Vienna, Austria, and was attributed to the collaborative work of four important artists: Gunther Brus (1938–), Otto Muehl (1925–), Herman Nitsch (1938–), and Rudolf Schwarzkogler (1940–1969). These artists were never formally organized as a group; and an art critic coined the name “Vienna Actionism” only at the end of their productive period. But they met each other early on, and collaborated throughout the 1960s on actions based upon a shared concern for Freudian theories of the unconscious: reactions to a post-war, post Fascist political environment in Austria and a mutual desire to extend the ideas of action painting to dramatic use of the human body as an artistic medium. Their work was notorious for its public nudity, use of animal cadavers and blood, and its seemingly flagrant disregard for social taboos and religious symbols.

Gunter Brus was interested in Viennese expressionism and the contemporary Austrian abstract art of Arnulf Rainer. After formal training at the Academy of Applied Arts in Vienna, he began to free himself from the academic canon of easel painting. Otto Muehl, impressed by his work introduced him to Herman Nitsch in 1962. In 1964 he performed his first two actions. Brus performed actions through the 1960s until 1968 when he was arrested and sentenced to six months’ imprisonment for degrading symbols of the state. He remained in exile in Berlin until 1976, and then returned to Vienna after his sentence was commuted to a fine.

Otto Muehl studied at the University of Vienna in 1948 following a tour of military service and duty on the Western Front in World War II. After a one-man show at the Galerie Junge Generation in 1960, he met Brus, who became a new influence. He abandoned easel painting in 1961, met Nitsch in 1962, and performed his first action in his studio flat using a naked model in 1963. Muehl performed actions throughout the 1960s and spent two weeks in prison in 1965 for his action with Nitsch—The Festival of Psycho-Physical Naturalism. By the 1970s, his communal life and Actions-Analytical Commune, influenced by Wilhelm Reich, took precedence over his art. In June 1991, he was sentenced to seven years’ imprison-

ment for “engaging in sexual intercourse with minors, illicit sexual acts, rape, and drug offences.” He now lives in Portugal.

Herman Nitsch studied Baroque and Renaissance religious painting at the School of Graphic Art in Vienna, concentrating on crucifixions. In 1957, he conceived the *Orgies Mysteries Theater*, and by 1959, this concept had advanced to a six-day play to be housed in the Prinzenhof Castle. This became Nitsch’s life work. In 1963, he was sentenced with Muehl to two weeks in prison for their *Festival of Psycho-Physical Naturalism* (his third action). Nitsch performed throughout the 1960s using lamb cadavers, animal blood, and naked male and female bodies, raising controversy and public protest. Nitsch was the only artist of the group to continue performing actions into the 1970s. In 1971, he purchased Prinzenhof Castle, and in August of 1998, performed the six-day play there at the castle in its entirety, realizing a life-long artistic goal.

Rudolf Schwarzkogler, the youngest of the group attended the School of Graphic Art in Vienna, leaving without a diploma in 1961. That same year he met Nitsch, became interested in early Austrian expressionism, and admired Arnulf Rainer and Yves Klein, as well as the writers Artaud, and Hans Henny Jahnn. In 1965, he integrated an action into Nitsch’s seventh action. A few weeks later he became the model for Nitsch’s eighth action, or “penis rinsing.” The careful staging of Nitsch’s actions specifically for the camera and photograph was a strong influence on the young Schwarzkogler. His final action, *no. 6* performed alone for the camera in his flat with Edith Adam in Vienna in 1966, gave him perfect control over aesthetics and ritualistic statement. After collaborating on Nitsch’s thirtieth action in Munich and two films with Muehl and Brus in 1968, unstable mental health drove him into isolation. In June of 1969 he died from a plunge from his apartment window in Vienna; the cause of his fall was never determined.

Perhaps more than any other performance artists of their time, The Wiener group incorporated photography into the conceptual framework of their practice. Photography accentuated the dialect-

tical relationship between the factual, neutral document and the image as an aesthetically transformed object. Many of their actions were so radically conceived, and so controversial, that they were often performed without an audience. Their work was widely ignored by critics and treated with outright hostility by the public at the time it was produced. The camera became a surrogate witness to their work, a means of documenting their actions, and a medium of transforming their artifacts into images of profound aesthetic beauty. Hundreds, perhaps thousands of negatives and photographs remain from their work.

While Muhl and Brus seemed more interested in challenging social norms, Nitsch and Schwarzkogler shared interests in alchemy, and transformation of the object through photography. The fundamental motivation of all of these artists was in one way or the other connected to Nitsch's theory of abreaction—stating that a cathartic response in the viewer produced by shock can unlock energies deep within the psyche. In the environment of post-fascist Austria, their work was also a deliberate challenge to the grip of social conformism that restricted artistic freedom in the years following the war.

It is generally agreed that Viennese Actionism was Austria's greatest contribution to Post-war

Modernism, but this has only been a recent claim made with many years of historical distance. The reputation as "shock-artists" with no ethics, or as pariahs gone over the edge into self-mutilation and degradation, has been difficult to dispel. Ironically, American critics such as Robert Hughes and Barbara Rose only contributed to the misunderstanding by their literal readings of Schwarzkogler's photographs that suggested he was mutilating his own penis. The critics' condescension and shock over photographs that were fabricated by the artist ultimately testified to the artist's skill and foregrounded the need to crack down on artistic freedom.

The legacy of Viennese Actionism will rest with several dynamic concepts found in the collective works of these artists: the use of deliberately extreme actions to test the boundaries of total artistic freedom, the use of the nude human body as an artistic medium in public contexts, and the use of the camera to create a ritualistic iconography of radical artistic practice.

DEBORAH WILLIS-KENNEDY

American

Deborah Willis-Kennedy is a photographer, educator, and historian specializing in African American photographic history. Her career spans more than 20 years of creating and critiquing images, and she has published numerous books on the history of African American photography, such as *The Black Female Body in Photography*, (co-author, Carla Williams, 2002) and *Reflections in Black: A History of Black Photographers—1840 to the Present*, (2000), advancing an area of scholarship that had been previously largely ignored. In recognition of her groundbreaking work, Willis-Kennedy was awarded a MacArthur Foundation Grant in 2000. Besides publishing, Willis-Kennedy has been an influential

teacher at Duke University, Durham, North Carolina, and New York University, worked at the Smithsonian Institution's Center for African American History and Culture, and exhibited nationally in solo and group shows.

Willis-Kennedy completed her undergraduate studies at the Philadelphia College of Art (now The University of the Arts) earning a B.F.A. in photography in 1975, and continued her education at Pratt Institute, New York, with an M.F.A. in photography in 1980. The early part of her career was spent as a fine art photographer exhibiting in the New York City area, including *Women Photographers: Reflections of Self* (Fordham University 1986), *Prisoners of War: In My Native Land and On Foreign Soil* (New School Gallery 1992), and *Occupations and Resis-*

tance (Alternative Museum 1992). The impact of her work spread, and notable national exhibits included *Words and Pictures* (The Light Factory, Charlotte, NC, 1992) and *Encounter 6: Deborah Willis* (Center for Creative Photography in Tucson, AZ, 1994). Personal narrative and visual history became two important themes in her images, and she drew on stories and relics from her childhood such as her father's aspiration to become a tailor and her Aunt Cora's quilts, both of which were symbolic of her family heritage. Weaving and textiles, two important themes in exhibits such as *Debra Willis: Photo|Quilt Stories* (1996), *Conceptual Textiles* (1995–1996), and *Fabricated Memories* (2000), became important components of her work in the 1990s and beyond. Telling personal histories through her photographs, symbolically in the structure of the textiles and visually in the images, Willis-Kennedy describes her works as visual diaries of personal events. They are not reactionary against racism, but seek to uncover a history that was neglected by the larger American story and mainstream canon. By looking at specific groups of people and visualizing their narratives, her works began as autobiographical and expanded to include projects such as *Picturing the Modern Amazon* (New Museum, NY, 2000). This project portrayed African American female bodybuilders with the knowledge of their own unique history and place in contemporary culture.

Willis-Kennedy was employed as the Curator of Photographs and Prints and Exhibition Coordinator at The New York Public Library, Schomburg Center for Research in Black Culture, from 1980 until 1992. While at this position, she began her research on African American photographic history and retraced its role in shaping the visual memory of American culture. Her M.A. in art history and museum studies, which she received from the City College of New York in 1986, also further influenced her focus on the study of the photograph as an art object and visual artifact. Her text *VANDERZEE: The Portraits of James VanDerZee* (1993) focused on was the manner in which VanDerZee's images created a social history of the emerging African American middle class between the two world wars in Harlem, New York. Willis-Kennedy claimed that his portraits were not created in a neutral documentary manner, but rather as subjective social mementoes of the emerging black middle class that were expressive and personal to VanDerZee. She also criticized the neutral stance of critics that claimed his work was only documentary, and stressed the historicity of the photographic medium in framing and re-fram-

ing cultural perspectives. After her tenure at The New York Public Library, Willis-Kennedy became the Associate Director for Research and Collections, Exhibitions Curator, and Museum Specialist at the Center for African American Research and Culture at the Smithsonian Institution in Washington, D.C. These research positions and her subsequent work established her as an expert on African American photographers and photo history and her contributions included the text and subsequent traveling exhibition *Reflections In Black: A History of Black Photographers—1840 to the Present* (2000). This text was monumental in its investigation and recovery of the rich legacy of African-American photography, and provided an invaluable resource to American historiography and its missing pieces. This text also placed Willis as the foremost expert on African-American photographic history, and her numerous lectures and presentations on the subject reinforced her status as a research specialist in the field. Willis-Kennedy's recent work includes the investigation of the Black female form through the legacy of photographic images in *The Black Female Body In Photography*. She examines the presentation of the Black female body as a cultural object, and explores its layered meanings through the images that portray women of varied social, racial, and class levels. Earning a Ph.D. in Cultural Studies from George Mason University (2003), Willis-Kennedy focused upon the identity and interpretation of the "new negro" in photographic images for her dissertation topic.

Willis-Kennedy's professional career expanded from research and curatorial work to pedagogical pursuits. She taught photographic history at the Brooklyn Museum, New York University, and the City University of New York. In 2000, she was appointed the Lehman Brady Chair in Documentary Studies and American Studies at Duke University in Durham, North Carolina. This dual appointment at Duke and the University of North Carolina at Chapel Hill placed Willis-Kennedy in the Center for Documentary Studies (Duke) and the American Studies curriculum (UNC), and her expertise created a course entitled "Visualizing Culture" that focused on the range of methods used in the humanities to study visual culture. She is currently Professor of Photography and Imaging at New York University's Tisch School of the Arts.

GARRY WINOGRAND

American

The life, art, and legacy of Garry Winogrand constitute one of the most complex contributions ever made to the history of photography. His prodigious creativity over three decades was driven by a thorny, pragmatic, yet ultimately poetic theoretical stance that both confounded attempts to read into his images and inspired countless disciples to follow in his shadow. His aggressive approach to photographing public life across America and abroad produced quintessential, expressive documents of life and culture during the 1960s and 1970s. Winogrand himself, however, disclaimed any narrative authority insofar as what his photographs showed; they were not made to tell a story other than the one implicit in their own making and evident in the image itself. Though considered a seminal influence on street photography and the snapshot aesthetic, Winogrand quickly dismissed such generic pigeonholing during his lifetime. His pithy, provocative observations about his own photographs, and the medium in general, have had a lasting impact, nearly commensurate with his photographs.

Winogrand began photographing in the late 1940s while attending art classes in New York City following a brief stint in the Army Air Force. Restless by nature and eager to make images, he soon abandoned painting studies for photography's more immediate gratifications. He quickly became proficient and worked through the 1950s as a freelance photojournalist. Early on he was interested in photographing things that expressed themselves through movement; sports and dance were among his favorite subjects. Such photographs could effectively explain themselves, and would not require interpretive commentary. Two of these early photographs appeared in *The Family of Man*, the major 1955 exhibition arranged by Edward Steichen at the Museum of Modern Art, New York (MoMA); the inclusion foretold a more extensive relationship with the museum in the future.

While not unprecedented—Robert Frank, Alexander Rodchenko, and Henri Cartier-Bresson can all be cited as partial precursors—the formal qualities of Winogrand's photographs were a departure from traditional hand-held 35 mm photography. He often

aligned the photographic frame with a vertical axis, as opposed to the usual reliance on the horizon as visual reference, causing the view to appear tilted. Use of a wide angle lens, adjusted for achieving maximum depth of field, brought deep space, middle ground, and foreground into planar equivalence. Black-and-white film, processed and printed to allow reading of a broad range of grays, refused to rely on conventional printmaking beauty; ironically, despite the wealth of information they contained, Winogrand also strove to eschew stories from his prints. His use of a rangefinder camera allowed him to see everything in focus, and to see beyond the edges of the final photographic frame, in contrast to the selectively focused window of the single lens reflex camera. If what he saw when he looked through his rangefinder camera looked familiar he would, he said, do something to change it. Though known almost exclusively for his black-and-white photography, the Center for Creative Photography, Tucson, Arizona, which holds the Winogrand archive, has begun showing examples of the non-commercial color photographs he made throughout his lifetime. Tod Papageorge underscores the complexity of Winogrand's photographs by describing them via a process of elimination, distinguishing them from other work being made in the late 1970s.

Winogrand's photographs do not give the conventional clues by which the works of an ambitious photographer are identified. They are not elegant constructions that flatten the picture plane; neither are they long suburban views, luminous blurs, or mystifying truncations. Nor is there the imputation that behind the literal world lies either a kind of moral truth that we could all see, were we good enough, or a simple, sensuous truth by which we remember that the world is beautiful. We are instead thrown back by his work, back to what seems to be the surface of life itself—a theater of quick takes, foreshortenings, and contingencies.

(Papageorge 1977, 16)

Whether photographing animals interacting in zoos, women anywhere, airports, children, cars, disabled people, rodeos, parades, press events, parties, or public demonstrations, Winogrand's creative mission was to balance photographic form and

literal content, letting neither rule the reading of an image. His photographs seek equilibrium between the extremes of esthetic self-absorption (art for art's sake) and narrative (the story told by an image's apparent subject matter). After years of providing content-heavy photographs for picture agencies and advertising clients, Winogrand began reconsidering his photographic work in 1960. Though he did not fully retreat from commercial work until 1969, when grants, teaching, and print sales began to support him, his personal work quickly attracted attention from institutions devoted to photographic art. The International Museum of Photography and Film at George Eastman House in Rochester, New York, showed Winogrand with Duane Michals, Danny Lyon, Lee Friedlander, and Bruce Davidson in the seminal 1966 exhibition *Contemporary Photographers: Toward a Social Landscape*. MoMA included Winogrand in two important group shows in the decade. The second, *New Documents* (1967), which featured Winogrand with Diane Arbus and Lee Friedlander, marked his break with photojournalistic tradition and his establishment as a leading photographic artist. This landmark exhibition signaled a critical shift in the perception of documentary photography and photographic art. Long seen as almost mutually exclusive, these two strands of photographic practice commingled in the work of these three artists; together, they demonstrated that a straightforward, ostensibly factual style could be employed toward personal, subjective goals. The show proclaimed that their aim was not to reform the world, but to know it through photographs.

Winogrand's career can be summarized as a formal investigation of the phenomenon of photography. He espoused a modernist, organic approach to the medium, and insisted upon the unique formal qualities and inherent limitations of photographic images. He disclaimed any narrative based on the content of his images. No matter how leading a picture's subject matter might seem, Winogrand would argue that the photograph is a self-contained thing, entirely distinct from what it depicts. His only explanation of his photographs were epigrammatic statements like "I photograph to find out what the world looks like photographed," or "There is nothing as mysterious as a fact clearly described," or "A still photograph is the illusion of a literal description of how a camera saw a piece of time and space." One of his enduring problems in making photographs was testing how small something could be in the full-frame 35 mm negative and still act as the nominal subject of the image; this self-assigned challenge can be seen

throughout his photographs of women, who sometimes are seen at a great distance from the photographer but still are read as central to the photograph's structure and impulse.

His commitment to probing the subject of photography led him to teach in college art programs and photographic workshops across the country, a pursuit that also afforded him extensive travel opportunities and fresh scenery for his voracious eyes. Winogrand claims to have been uninterested in the students themselves, preferring large classes, which distanced them and allowed him to speak in his favored, oracular fashion. He once stated in a workshop setting that "The student who can learn from a good teacher doesn't need him." His pedagogical yet abrupt character is well represented in transcribed interviews—confident, feisty, and fascinated by photographic seeing. As influences on his work he referred to Eugène Atget, Walker Evans, and Robert Frank. In his classes he often discussed Evans's work, along with that of André Kertész, Henri Cartier-Bresson, Edward Weston, and Bill Brandt.

Winogrand's influence takes many forms and is difficult to measure. His legacy has both enthusiastic adherents and vehement detractors, while many observers simply have mixed feelings. Even his long term supporter, John Szarkowski, who in the exhibition catalogue *Mirrors and Windows: American Photography since 1960* (MoMA, 1978), described Winogrand as the "central photographer of his generation," admitted to concerns ten years later in the catalogue published in conjunction with MoMA's posthumous Winogrand retrospective. Szarkowski comments that

Winogrand was at the end a creative impulse out of control, and on some days a habit without an impulse, one who continued to work, after a fashion, like an overheated engine that will not stop even after the key has been turned off.

(Szarkowski 1988, 36)

His compulsive photographing of women has led some to write him off as a sexist, chauvinistic objectifier. In his book *Women Are Beautiful* (1975), often cited as the most personal of Winogrand's books (he dedicated it to his wife and two daughters), he stated "Whenever I've seen an attractive woman, I've done my best to photograph her. I don't know if all the women in the photographs are beautiful, but I do know that the women are beautiful in the photographs.... 'Women Are Beautiful' is a good title for this book because they are."

While Winogrand made and expressed opinions about many memorable pictures that have assured

his place in the history of photography, he may also be remembered for pictures he never saw. When he died in 1984, he left behind more than 300,000 exposed negatives that were either undeveloped, developed but unproofed, or printed on proof sheets but unedited. Commenting on Winogrand's "last few thousand rolls," Szarkowski posits that "the making of an exposure had become merely a gesture of acknowledgment that what lay before the camera might make a photograph, if one had the desire and the energy to focus one's attention" (Szarkowski 1988, 36).

Szarkowski, with assistance from Winogrand's long time friends and colleagues Tod Papageorge, Tom Roma, and Thomas Consilvio, selected 25 pictures for the 1988 retrospective which were grouped under the heading of *Unfinished Work*. Szarkowski wrote that these photographs "were chosen because they are consonant with and yet different from his earlier work, and represent our sense of the change in his intuitions and ambitions late in his life." (Szarkowski 1988, 9) While such postmortem extrapolation is not unheard of in the history of art, and photographers often have backlogs of unprocessed film or unedited contact sheets, the scale of the Winogrand backlog has prompted numerous questions about the artist's career. Liz Kotz writes: "The awkward status of these late, 'unfinished' images should alert us to a structural failure or impossibility internal to Winogrand's project." Despite the valid, conceptual implications of archives suggested by the reams and rolls of unreviewed material, Kotz insists that Winogrand "doggedly clings to an older model of authorial agency, subjectivity and desire, even as it implodes around him during his final years" (Kotz 2000, 25 & 28).

The weight of Winogrand's articulated legacy and the astonishing number of negatives he left unremarked are matched by a comparable outpouring of words in response. *Winogrand: Figments from the Real World*, (1988) the most comprehensive single source of information on the photographer, includes over four dozen book and article citations, following listings of published interviews, statements, and taped lectures. The publication of this book and the exhibition it accompanied spawned numerous reviews and retrospective commentary in 1988. Several substantial biographical and memorial essays on Winogrand have appeared by writers including Helen Gary Bishop, Ben Lifson, Tod Papageorge, Leo Rubinfien, Kenneth E. Silver, Alex J. Sweetman, and John Szarkowski.

In the end, there can be no final resolution of the Winogrand legacy. The problems, both physical and mental, represented by his work will provide

fodder for endless arguments cycling around what for Winogrand were the central issues—the distinction between photography and sight, the tension between form and content, the use of photography to know life. As Alex Sweetman writes:

His nervous bliss, the ecstasy of the photographic activity that took him outside of himself, was what Winogrand worked for, lived for, and believed in: his own professionalism, the performance of his vision, was all that he had and the best that he could be. The resulting photographs were, finally, merely the leftovers and debris, the ash of the intensely seen and intuitively felt moments, not life itself

(Sweetman 1990, 11)

STANISLAW IGNACY WITKIEWICZ (WITKACY)

Polish

Stanisław Ignacy Witkiewicz (Witkacy) is now accepted as a unique photographer and one of the most fascinating artists of the avant-garde modernist period. Utilizing every medium available, the multitalented Witkacy (a self-created nickname combining parts of his middle and last names) was also a painter, dramatist, novelist, philosopher, historiographer, as well as art and cultural critic. Now amongst the Polish cultural elite, Witkacy's fame was very slow in coming. Only posthumously did he receive due recognition. Today, his works are well known throughout Poland and the world. Hardly a year goes by without the performance of one his plays or an exhibition of his paintings or photographs. His novel *Insatiability*, first available in English in 1953, is now considered a masterpiece of world literature. In 2000, a combined exhibition *Malinowski-Witkacy Photography: Between Science and Art* toured the national galleries of Poland and later Europe.

The son of the eminent art critic, painter, and architect, Stanislaw Witkiewicz, Witkacy was born February 14, 1885 in Warsaw and raised in Zakopane, the cultural capital of the Polish territory. After completing his high school examinations, he studied painting at the Academy of Fine Arts on and off from 1904–1910 in the bohemian city of Cracow under the direction of painter Jozef Mehoffer. More than the cultural life of Zakopane and the artistic development at the Academy of Fine Arts, the most seminal influences on the young artist came in his journeys to other cultures, where he witnessed new trends in the arts, science, and technology. Between 1904 and 1914, Witkacy traveled to Russia, France, Germany, and Italy, always taking time to visit the art galleries. On these trips, he discovered the various experiments in modern art in the works of Paul Gauguin, Arnold Bocklin, Henri Matisse, and the Fauves that were rejecting the representational movements, such as naturalism and impressionism, in favor of non-representational styles.

During this time, Witkacy began to express his artistic vision through photography. His first photographs, not unlike his early paintings, were in the “reported” style, faithfully representing the subject. The subjects in this period include studies of nature (e.g., landscapes, lakes, rivers, and mountains), trains, castles, and portraits. Around 1910, the artist began experimenting with the lens creating a new approach to portrait photography capturing the subject’s face by creating a sequence of posed close-ups. The best known of these are a series of close ups of his father and Tadeusz Langier. The new technique was most likely inspired by Julia Margaret Cameron (1815–1879), whose work was well known to the Witkiewicz family. (The elder Witkiewicz owned an album of her photography.) Cameron’s oscillation between aspiring to faithfully represent the external look of the subject and the treatment of a model as representation of symbolic form most certainly had an impact on the young Witkacy, who, like Cameron years earlier, connected the objective value of photography and the imagination of the photographer.

Between 1910 and 1917, Witkacy continued to develop a very unique personal style of portrait photography. Influenced by Tadeusz Langier, a well-known innovative photographer of the time, Witkacy explored new techniques such as gum print, over- and under-exposure, reducing the gray scale, cropping, blurring the photographs, and tight close ups. The subjects of his works primarily include self-portraits, friends, and family. This evolution in his development is the beginning of his psychological or “metaphysical” portraits that abandon faithful representation of the subject.

In 1914, Witkacy’s friend, anthropologist Bronislaw Malinowski, received a grant from the British Association for the Advancement of Science to work in Australia and Papua (New Guinea) among the Mailu people. Witkacy accompanied his dear friend on the journey as a photographer and draftsman. The expedition ended with the outbreak of World War I on July 18, 1914. Since Poland was partitioned at the time, Witkacy, born in Warsaw, was a Russian citizen. As a result, he enlisted in the Russian army in which he experienced first hand the horrors of war and revolution. A very famous photograph survived in this period, *Multiple self-portrait* (St. Petersburg, around 1915), in which Witkacy is seated in front of two mirrors that were set side by side at an angle, resulting in four reflections of the artist from different perspectives. One critic argued that this portrait reveals Witkacy in all of his careening manifestations as a photographer, dramatist, painter, and philosopher. Interestingly, the viewer does not see the real

Witkacy, only his back, reinforcing the artist’s concern with impossibility of establishing stable identity of self.

The final period of Witkacy’s photography, and perhaps the most interesting, is closely linked to his philosophy. Upon returning from the service in the military, Witkacy spent considerable effort articulating his ontology and philosophy of art. In his aesthetic works, he developed the famous theory of Pure Form in which he claimed that through the experience of true art an individual intensifies his or her feelings of individuality and affirms his or her own uniqueness in the face of an alien universe. As a result of this experience, the individual restores temporarily what Witkacy called the Metaphysical Feeling of the Strangeness of Existence, which simultaneously creates a feeling of alienation and a childlike sense of wonder about the uniqueness of self. With this in mind, his photographs of the 1920s and 1930s can be divided into two categories: metaphysical portraits and “Life Theater.”

The metaphysical portraits are psychological interpretations of the subject revealing the fragile sense of identity of self and consequently a heightened awareness of the mystery and horror of existence, often visible in the eyes of the subject. On the other hand, the Life Theater photographs are comical poses revealing life as adventure, play, a game, and infinite possibilities.

Witkacy’s life ended tragically as he took his own life in the small village Jeziory (in present day Ukraine) on September 18, 1939, when the Nazis approached from the west and the Russians attacked from the east. He was buried in a makeshift grave in an Orthodox cemetery. His photographs are maintained mostly in private collections. The largest public collection is found in the Tatrzańskie Museum in his hometown of Zakopane. Although he was not well known for his photography in his lifetime or even in his revival in the early 1960s, since the 1980s, his photography has been increasingly the subject of scholarly essays and book length studies as well as exhibitions all over the globe. He deserves, and has certainly earned, a unique and respected position amongst the luminaries in the history of modern photography.

Biography

Born in Warsaw, Poland 14 February 1885. Died in Jeziory, (in present day) Ukraine, 18 September 1939. Attended Academy of Fine Arts in Cracow, Poland, but never

completed his studies. Self-educated in photography. Engaged to be married in 1914, but his fiancée committed suicide. Accompanied anthropologist, Bronislaw Malinowski, to Australia and Papua New Guinea as a photographer and draftsman. Served as an officer in the Pavlovsky regiment in the Russian military during World War I and remained enlisted through the Russian Revolution. Returned to newly independent Poland where he devoted his life to photography, painting, drama, novels, and philosophy. Published *New Forms in Painting*, outlining his theories of painting and art, 1919. Founded a portrait firm abandoning "artistic" painting, 1924. Organized an amateur avant-garde formist theater, 1925. Completed his magnum opus in philosophy entitled, *The Concepts and Principles Implied by the Concept of Existence*, 1935.

JOEL-PETER WITKIN

American

The photographs of Joel-Peter Witkin showcase human anomalies, amputated body parts, dead animals, and cadavers composed in a manner highly consistent with traditional artistic formulas, especially the fifteenth and sixteenth century Dutch still-life tradition of *vanitas* paintings—collections of objects that symbolize the brevity of human life (also known as *memento mori* and to some extent, Surrealism of the 1930s. Since it was first exhibited in the early 1980s, Witkin's work has been the subject of controversy and debate, with some denouncing the work as sensational or exploitative.

Witkin's photographs have also received recognition in exhibitions worldwide, as well as critical acclaim from organizations such as the National Endowment for the Arts (NEA) and the New York State Council on the Arts, which have recognized his work as unique and worthy of support.

The son of an Orthodox Jewish father and Catholic mother, Joel-Peter Witkin was born in Brooklyn, New York, in 1939. Both Jewish mysticism and strict Catholic doctrine proved highly influential on him from an early age. He combined his fascination for religion with a penchant for photography after acquiring his first camera in 1955. (One of Witkin's earliest subjects was a rabbi who claimed

to have seen and spoken with God.) Witkin received formal training in photography while serving in the U.S. Army from 1961 to 1964. Although his assignment as a combat photographer and photographic technician exposed him to numerous accidents and deaths, Witkin's years in the military did not constitute his first experience with the macabre. He cites his earliest brush with death, an event that occurred in Brooklyn when he was six years old, as the incident that was highly pivotal in his development as a photographer. After witnessing a car accident, he claims that a young girl's decapitated head rolled to a stop at the curb where he stood watching:

This, my first conscious visual experience, has left its mark. Out of it I see many roots extending to my visual work in my use of severed heads, masks, and my concern with violence, pain, and death. I am no longer the helpless observer, but the objectifier who chooses to share the 'hell' of his confusion visually, rather than to confront the quality that distinguishes a vital and functional being from a dead body

(Celant 1995, 49).

Witkin's use of this story to describe the origins of his work is also indicative of the narrative quality of his writing style, a trait that earned him a poetry fellowship at Columbia University in 1974. While he did indeed witness a car accident in which a young girl died, family members insist that no head came to rest at Witkin's feet, and that the story is a manifestation of his active imagination, which continues to serve as an intrinsic element in the development of his photographs. This element of neo-surrealist narrative deeply imbues his photographs with a sense of the mystical and the macabre.

After leaving the military in 1964, Witkin returned to The Cooper Union School for the Advancement of Science and Art in New York, where he had studied sculpture from 1958 to 1960. He received his Bachelor of Fine Arts degree in 1974, and relocated to Albuquerque, New Mexico, where he continues to live and work. Witkin began working towards his M.F.A. in photography at the University of New Mexico in 1975, a degree that he obtained in 1986.

Witkin's method diverges from that of most photographers in that he sketches out his ideas for images prior to assembling the materials needed for the photo shoot. The resulting black and white prints are achieved through scratching the negative, printing through tissue paper, and toning select areas of the print, all in an effort to lend the image a distressed appearance, echoing the delicate condition of many surviving nineteenth-century photographs. His interest in religious dogma and symbolism is

evident in imagery that evokes spirituality, suffering, and death that refers to such artistic conventions as the crucifixion.

Although Witkin cites German photographer August Sander as a primary influence on his photography, even though Sander's stiffly posed but naturalistic portraits may seem to have no obvious commonalities, critics have compared his work to that of the Americans Diane Arbus and Weegee, who were also interested in capturing the violent and the macabre.

But Witkin's penchant for the exaggerated peculiar in his photographs moves beyond the styles of his predecessors, and has led Witkin to seek out models in a unique manner. In his monograph published in 1985, as well as the 1989 book *Gods of Earth and Heaven*, the photographer's afterword advertised for "physical prodigies of all kinds," including "people with tails, horns, wings, fins, claws, reversed feet or hands, elephantine limbs, etc. Anyone with additional arms, legs, eyes, breasts, genitals, ears, nose, lips...all manner of extreme visual perversions" (Witkin 1989).

He places his "physical prodigies" as well as amputated limbs, dead animals, and other unusual props, into compositions that often closely mimic seminal paintings from the Renaissance, Baroque, and later art historical periods. *Gods of Earth and Heaven, Los Angeles* (1988) draws directly from Sandro Botticelli's painting *The Birth of Venus* (c. 1482), but Witkin has replaced the central figure of Venus with a pre-operative hermaphrodite, providing an unexpected twist to an otherwise familiar scene. His photograph *Head of a Dead Man, Mexico* (1990), is reminiscent of many representations of the severed head of St. John the Baptist as it rests lifeless upon a platter. The head chosen for this image was selected when Witkin traveled to a forensic hospital in Mexico City, Mexico, in 1990 and photographed a number of unclaimed cadavers.

It was here that Witkin also produced his highly controversial *Feast of Fools* (1990), a Baroque-inspired *vanitas* in which bountiful grapes and pomegranates have been intertwined with amputated limbs and a dead infant. Such use of the human body has raised the ire of many critics. In 1992, protesters in Washington, D.C., who objected to the NEA's distribution of funds used Witkin's grisly *Testicle Stretch with the Possibility of a Crushed Face, New Mexico* (1982), as a symbol of the type of artwork the government agency considered highly offensive.

Witkin's work has been widely collected, including at the Whitney Museum of American Art, The Vic-

toria and Albert Museum, The J. Paul Getty Museum, and the Princeton Art Museum.

Born in Brooklyn, New York, September 13, 1939. Enlisted in the U.S. Army, 1961–1964; worked as a technical sergeant, photographer, and photo technician. Attended Cooper Union, New York, B.F.A. 1974; University of New Mexico, Albuquerque, New Mexico, M.F.A. 1986. Received a CAPS Grant in photography from the New York State Council on the Arts, 1974; Columbia University poetry fellowship, 1974; Ford Foundation Grant, 1977; National Endowment for the Arts grants, 1982, 1984, 1986, 1992; Maine Photographic Book Competition, Book of the Year award for the Twelvetees Press Monograph *Joel-Peter Witkin*, 1986; International Center of Photography Award, 1988; Cooper Union Distinguished Alumni Citation, 1988; Chevalier des Artes et Lettres award, 1990; National Endowment for the Arts and American Center in Paris residency grant, 1993; Cooper Union Augustus Saint Gaudens Medal, 1996. Living in Albuquerque, New Mexico.

STEFAN WOJNECKI

Polish

Stefan Wojnecki is one of the most distinguished Polish photographers. His career is not limited to the practice of photography, but includes roles as a theorist, philosopher, and art teacher. In addition, Wojnecki has organized numerous exhibitions that focus on new artistic practices and was the director, between 1991 and 2000, of the six international Photographic Workshops called *Profile*. He is often described in the context of “post-media photography,” which looks beyond photography’s traditional imagistic usage to physical and optical processes that create images not otherwise visible.

Born in 1929, Wojnecki studied physics at Poznań University; he graduated in 1952. While working as a physicist and teacher in the mid-1950s, he took up photography, practicing what he has described as “socially engaged”. But from the beginning Wojnecki’s work in photography had a foothold in the scientific field. His career is marked by two distinct elements: technological research and reflection about photographic practice. His works can be seen as a succession of images that illustrate his various scientific experimentations related to physics and optics and is closely linked to how scientists perceive information as an image and how this affects scientific progress, as in the series *W Kosmos*, of 1958.

In a first reading, Wojnecki’s pictures seem to be like a personal diary, a log where each picture

becomes the equivalent of a manuscript annotation (*Maszt antenowy*, 1966, or *Rozklad energetyczny*, 1962). There is a will, however, to encompass the collective into a personal vision. Thus he conceives singular images that relate a world—his own world—while reflecting a sociological reality and the historic context of Poland during the last 40 years (*Fotografia Tozsamosvci*, 1981).

Gradually, his images juxtapose a political vision upon the simple representation of physics phenomena. His pictures represent stable moments, well-balanced and well-thought-out actions. Even so they swing to something else—his own thought. Wojnecki pictures give life to the materials: those used at the moment of the shooting and those represented by the shooting. His images go beyond the represented reality, they exceed the object surface, they contravene forms in order to keep the viewer in a thought about deepness.

In the early 1960s, Wojnecki’s work was directed toward a research on technical characteristics of material, specifically, the transmission of images and the way they determine perception. He invented an ultra-fast miniaturized shutter in 1965 and a stereoscopic A4 enlarger with a half-tone screen lens, building this equipment in order to experiment with the technological and perceptive potential of an image. The stereoscopic enlarger was used in his *Duogrammes* series. In addition, in his theoretical writings Wojnecki uses the development of his equipment in order to define, understand, and improve

human sensorial perception. As an example, in 1960, he took pictures of an oscilloscope screen. With this photographic action, he indicates to the viewer a specified limit of perception. Indeed, human perception is poorer in comparison with the one that is registered by a simple machine based on mathematical equations.

Furthermore, Wojnecki's pictures attest to research undertaken about specificity and semantic development of the photographic medium. He tries to develop the evocative possibilities of an object in relation to the photographic image. In 1965, he began to work with lenticular filters, which change the aspect of a photographic image. Wojnecki's efforts with this technique show the physical potential of the essence of the components of photography inherent in an image and the physical investment the viewer makes in the way he apprehends and reads photography. The series *Duograms*, begun in 1970, consists of a double image created by the lenticular filter, in this instance a glass pane. Each viewer's eye tends to focus on a different part of the image, which when combined by the brain, creates a unique image.

Wojnecki has also explored techniques in which the photographic image is transformed into an expansive space where the surface of the photograph and the distance of representation from the viewer are taken into account. The image works to "lock" the perception of the viewer elicited through different optical effects with the perception of the artist and the representation that results from the combination of the goals of the photograph and the technical instrument of realization of the photography. Depth in these pictures is not a simple rhetorical turn of phrase, but applies concretely in the series called *Hyperphotography* where Wojnecki works in the realm of macrophotography. In this series, he photographs fragments of the body—most often, hands. He then breaks the relationship of the body fragments by reprinting them in large scale and combining them in site-specific installations and photographic sculptures.

From 1967 until 1976, Wojneck served as president of the Poznań Photographic Club. In the 1980s, he began to think about the relationship between photography and other media, and began publishing articles on the topic, including *Revision of Art in the Holistic-Transcendental Spirit* in 1984 and *Photography as Communiqué* in 1985. He then began experiments of a more plastic nature, juxtaposing, superimposing, making holes in multiple photographs, and then assembling them in a number of photographic installations during 1983–1984. These installations, while featuring a cubist approach, are primarily about identity. Faces are replaced by ID

card numbers or other traces of identity in society, such as in *Faces*. In the series *Trace Is a Quotation A Quotation Is a Trace* (1992), Wojnecki disturbs the photograph by adding drawings or figures from various mediums.

In the 1990s, Wojnecki elaborated on the post-media photography concept. Pictures are taken through a pinhole in the shape of a vertical aperture. The result is surprising. Objects that lay on a table as static elements seem to be endowed with movement. He also worked on pictures that result from digital manipulation. The "abstract" image is still the result of algorithmic operations. But Wojnecki transforms this abstract image into a support for his reflections upon virtual reality, giving in this manner a part of virtual representation in a concrete image. Wojnecki's work was examined and celebrated in a major retrospective and symposium in 1999 at the Poznań Arsenal.

Biography

Born 6 April 1929. He studied Physics at Poznań University and graduated in 1952. Member of the Poznań Photographic Association, 1952. Study of the history of art, 1956–1960. Between 1965–1969, he built a photographic shutter and he became interested in stereoscopic photography by means of lenticular screens. In 1975, became an independent art photographer in Poznań. Since 1978, he has been working at the Academy of Fine Arts in Poznań and the same year, he worked with Agfa in Munich. Since 1991, Professor, Faculty of Painting, Graphics and Sculpture at the Academy of Fine Arts in Poznań. 1993, he became a member of the Council of Academic Artistic Education as an expert. Created the Scientific Photographic Association in 1998. Between 1991 and 2000, he was the director of six international photographic workshops called *Profile*. Since 2002, he has been a reviewer of the State Accreditation Committee. Half-century medal of the Poznań Photographic Club; Ministry of Culture and Art Prize, 1975, 1979, and 1983; Gold Cross, Poland, 1986; Josef Sudek Artist of Merit Medal, Czechoslovakia, 1989.

FRANCESCA WOODMAN

American

What is most moving in Woodman's photographs is a willingness to entrust the viewer with her youth, her solitude, [and] her artistic pre-occupations.

(Hirsch 1994, 48)

Francesca Woodman lived only 22 years but left a remarkable body of work focusing on female identity, sensuality, and transcendence. Beginning with a series of self-portraits at the age of 13, she created

over 500 black and white photographs, mural-size blueprints, and one published artists' book. Many images, such as *Space*, *Point of View*, and *Depth of Field*, were developed in series to fulfill class assignments, but accomplished with captivating individuality and personal investment. Her work is at once challenging and disorienting, with the exploration of the female body as the central theme.

Woodman was born in Denver, Colorado, and grew up in Boulder. Both English and Italian were

spoken by her father, painter George Woodman and mother, ceramicist Betty Woodman. From 1965 to 1966, when Woodman was in second grade, the family lived in Florence, Italy. The family purchased a farmhouse in Antella, outside Florence, where they returned each summer. In 1972, Woodman was enrolled in boarding school at Abbot Academy in Andover, Massachusetts. Here she was not only a frequent visitor to the Addison Gallery of American Art but she met an instructor who proved pivotal to her artistic development. The instructor, a dynamic art teacher named Wendy MacNeil, later taught at the Rhode Island School of Design (RISD) when she again mentored Woodman.

The young girl flourished at boarding school and photography began to dominate her life. According to Ann Gabhart's biographical essay on Woodman, the artist slept in her closet so she could use her room as a photography studio (Gabhart 1986, 53). Although her parents brought her back to Boulder to finish high school, she was already defining her artistic lexicon, fusing the passions of female adolescence with a growing visual vocabulary. Acknowledging the rarity of prodigies in the field of photography, Abigail Solomon-Godeau wrote, "Produced from early adolescence until the time of her death, Woodman's photography is the work of a prodigy" (Gabhart 1986, 14).

Woodman moved to Providence to attend RISD, where she was a flamboyant student and artist who demonstrated a remarkable sophistication and self-awareness. She explored Victorian novels and female authors such as Colette, Virginia Woolf, and Simone de Beauvoir. Woodman also admired the work of Duane Michaels and adopted his formula for working photographs in serials with incorporated texts. She staged her photographs inside run-down interiors, such as abandoned houses or old factories. For Woodman, the photograph itself constitutes a space, small and secret, which disclosed some private event.

The naked female body, often her own, became the center of her compositions. Atmosphere and movement often allowed this body to appear and disappear into the wallpaper, behind the fireplace, and into the corners of the rooms. Woodman inserted the paraphernalia of sexuality and fetishism into these scenes, achieving a disorienting effect not unlike early Surrealists. She explored the female form hidden, trapped, diminishing, but also liberated, suggesting the elusiveness of identity and the temporality of existence itself. The maturity of her work was acknowledged, when, during her freshman year, Woodman was given a solo exhibition at the Addison Gallery.

Her third year at RISD was spent in Rome, as part of the school's Honors Program. She found an old spaghetti factory where she photographed at night and became involved with the activities of a Surrealist bookshop, the Libreria Maldoror. There a solo exhibition of Woodman's work was mounted in 1978. She also had work accepted into an exhibition at Galleria Ugo Ferranti.

When Woodman returned to Providence, she gave her senior exhibition the prophetic title, *Swan Song*, and finished her last year in one semester. She moved to New York City in January 1979. Freed from the confines of class assignments, Woodman began exploring a wider scope of materials and formats. She projected slides onto light-sensitive paper forming long diptychs and triptychs. Some of these new mural-size blueprints were accepted into the show *Beyond Photography 80* at The Alternative Museum in Soho. Around this time, Woodman sent portfolios of her work to various fashion photographers, including Deborah Turbeville, but nothing came of these efforts. The well-known New York photography gallery Daniel Wolf Inc. included Woodman in two exhibitions, and she was chosen by Synapse Press to create an artists' book. The book was handwritten in an old mathematics primer, with photographs filled with allusions to her dead grandmother, skeletons, and mirrors. She titled it *Some Disordered Interior Geometries* and dedicated it to the proprietors of the Libreria Maldoror.

The summer of 1980, Woodman applied and was accepted as a Fellow at the MacDowell Colony in Peterborough, New Hampshire. Much of her time was spent reading Proust's *Remembrance of Things Past* and producing the ten-part series *Birches*. Back in New York, Woodman planned a trip to Rome but, instead, jumped from her apartment window on 29 January 1981. During her brief life she had been featured in eight group shows, three solo exhibitions, and had a book of photographs published one month before her death.

Several years after her death, Ann Gabhart of Wellesley College mounted Woodman's first retrospective. Rosalind Krauss of Hunter College contributed an essay to the accompanying catalogue. Since that time, Woodman's work has been included in numerous exhibitions and received growing critical attention, including a major monograph published on the occasion of the 1998 exhibition at the Fondation Cartier pour l'art contemporain in Paris. It is tempting to exaggerate the weight of Woodman's limited body of work and speculate what might have been created had she lived. Ultimately, Woodman remains like Nadja, the title character in one of her favorite novels by André Breton, who was

asked: "Who are you?" and answered "I am the soul in limbo."

WORKER PHOTOGRAPHY

The worker-photographer movement was active in Germany from 1926 to 1932. Worker photography continued a nineteenth and early twentieth-century tradition and preceded American social documentary photography of the 1930s. It involved the German publisher Willi Münzenberg's aim to create his own photo-agency of worker photographers who could provide his *Arbeiter-Illustrierte-Zeitung* (Worker Illustrated Magazine, AIZ, 1924–1938) with the needed picture material to promote Communist ideological principles. The picture material from the major German photo-agencies such as *Mauritius-photo*, *ufa-photo*, and *Ecce-photo* had threatened to boycott the AIZ, and the American photo-agencies such as Keystone, AP, and Worldwide hardly covered the conditions of working-class life in Weimar Germany. The social plight of the worker became the central theme of the AIZ, which aimed to counterbalance the bourgeois press and win over the consciousness of unorganized workers, themselves a new social force in an experimental democratic period. Though the term worker photography has been used broadly to indicate any photography that focuses on labor, it most correctly describes the brief history of this collective of amateur worker photographers from its inception to decimation by the Nazis.

The history of worker photography coincides with the relative stability in the German economy in 1923 and renewed faith in the Ebert government, which caused the workers movement to reorient itself towards a long-term struggle to develop class consciousness among workers. Propaganda and agitation took on a much more significant role in consolidating Communist influence and winning over unorganized workers. In 1923, the Communist party issued a new agitprop concept, opening the way for Münzenberg to establish a network of media production and distribution.

Willi Münzenberg and the AIZ

Münzenberg had a special status within the German Communist Party because he had been under the orders of the Control Commission of the Communist International since 1921. Münzenberg's special status enabled him to act on the new poten-

tial force of pictorial propaganda. He innovatively used not only print media but also picture media—photography and film—to the greatest possible effect upon the masses.

Together the AIZ and its photo-agency the *Ver-einigung der Arbeiter-Fotografen* (Association of Worker Photographers) would create a truly collective form of journalism, in which the producers and the readers of the periodical were one and the same, and leave a lasting impact on the production of photojournalism in 1930s.

Lenin recognized his friend Münzenberg's abilities as an organizer and coordinator. He directly commissioned him to direct the *Internationale Arbeiterhilfe* (International Workers' Aid, IAH). The German section of the IAH would remain self-sufficient and independent of the German Communist Party and the Red Aid (Moscow). It set its own guidelines and had its own organization and media apparatus that promoted sympathy for the Soviet Union, for socialism in general, as well as for the realization of a socialist society. The IAH acted as a second medium that substituted and protected the German Communist Party's and Communist International's propaganda apparatus in times of censorship and persecution as was the case from 1923 to 1924. This independent status of the IAH gave Münzenberg the necessary freedom to organize and effectively implement propagandistic campaigns, using illustrated magazines. Such mass-distributed publications came to define the role and style of photojournalism.

The reason for the IAH's founding was to campaign for aid to alleviate the suffering of workers and families suffering from a drought-induced famine in Russia. To this end Münzenberg published a monthly illustrated magazine called *Sowjet Russland im Bild* (Soviet Russia in Pictures) in 1921. This illustrated magazine served as an organ of the IAH and was distributed through IAH groups internationally. It appeared in the United States under the title *Soviet Russia Pictorial*. In 1923, the magazine's name changed to *Sichel und Hammer* (Sickle and Hammer), and then to AIZ in 1924. With the changes in name and format—from monthly to weekly—came changes in the magazine's scope. The magazine shifted its focus from

the Soviet Union to Germany and to working-class culture and society worldwide.

The Founding of the Arbeiter-Fotograf

In 1926, the editorial staff of the AIZ launched a competition, inviting their readers to provide the magazine with documentary photographs. This led to the creation of a center for amateur photographers for the purpose of exchanging experiences and passing on photographic commissions. These loosely-knit groups of worker photographers in Berlin, Hamburg, Leipzig, Halle, Dresden, Stuttgart, and subsequently in smaller towns were transformed by Münzenberg together with Walter Tygor, another Communist party functionary, into the formal *Vereinigung der Arbeiter-Fotografen Deutschlands* (Association of Worker Photographers of Germany) in 1926. Münzenberg's publishing company, *Der neue deutsche Verlag* (The New German Publishing Company), financed the formation of the organization, which was designed to bring people together under the banner of working class solidarity. Worker photographer associations eventually were established throughout Europe in Switzerland, Holland, Austria, France, Czechoslovakia, and England, producing picture material for the AIZ and other leftist publications. The Workers Film and Photo League, established in New York in 1930 (later The Photo League), shared a common sponsor with the German association of worker photographers, namely the IAH. The worker photographer could represent well everyday industrial life replete with social class differences, yet they fell short in terms of the quantity and quality of picture material needed by worker illustrated magazines and leftist leaflets and pamphlets, among other publications.

The association of worker photographers structured itself around networks of local chapters that offered instruction, informal exhibitions, and access to equipment. Members did not need to join the Communist party as the association was intended to be free of party politics. They represented a broad range of political viewpoints, bound together by a socialist world view. The association fulfilled its own social mandate by keeping unemployed workers from "indifference and dullness" and providing them with more or less useful diversions during the acute economic crisis of the Great Depression.

As of late 1926, Münzenberg, as chief editor and director, issued a monthly member magazine *Der Arbeiter-Fotograf, Mitteilungsblatt der Vereinigung*

der Arbeiter Fotografen (the Worker Photographer, Journal of the Association of Worker Photographers, AF), renamed *Offizielles Organ der Vereinigung der Arbeiter Fotografen Deutschlands* (Official Organ of the Association of the Worker Photographers of German) as of the eighth issue. The magazine addressed photographic technique and the worker photographers' political purpose. Worker photography aimed to show the world the way contemporary life is through photographs taken from the subjective perspectives of the "class eye." The worker photographer was encouraged to become a reporter and use a series of five or six photographs of happenings that would be of general interest to the workers. Soviet photography modeled itself upon the AF as of 1928. The National Socialists decimated the worker-photographer movement and the last official publication appeared in March 1933.

Impact of Worker Photography

Münzenberg's innovation as a pioneering newspaper publisher was the creation of a media apparatus upon a plurality of locations and collaborations in the production and distribution of print and picture media. He developed a new type of newspaper as exemplified by the weekly AIZ. The AIZ served as a model for weekly illustrated newspapers on an international level: from the Soviet Union's international illustrated magazine, *USSR in Construction*, to the French weekly illustrated newspaper, *Regards*. The magazine's synthetic montage layout demonstrated the extent to which the photograph could be manipulated to convey a political message and to influence its readers. American publisher Henry Luce sent Daniel Longwell, the editor in charge of planning *Life*, to Germany to study the illustrated publications.

WORKS PROGRESS ADMINISTRATION

The Works Progress Administration (WPA), established in 1935 as part of Franklin D. Roosevelt's New Deal, was the overarching agency that instigated and funded a series of programs to help generate employment for the nearly 10 million unemployed Americans during the Great Depression of the 1930s. Its philosophy was that through federal jobs programs public facilities and infrastructure (such as highways and parks) could be built and improved, and literacy and cultural awareness promulgated. The WPA became the largest agency within the New Deal programs and was eventually renamed the Works Project Administration.

Thus WPA's mission was unprecedented in that it not only carried out construction, beautification, and other good works, it also hired hundreds of artists, actors, photographers, and performers. The Federal Theater Project performed original and canonical plays, eventually supporting touring companies that brought theater to the remote and rural areas of America. The Federal Writers' Project documented the agrarian poor through their own stories, culminating in a number of books, including *These Are Our Lives*.

Two key agencies in the area of photography were created under the auspices of the WPA: the Federal Arts Project (FAP) and Farm Security Administration (FSA). The FSA had grown out of the Resettlement Administration, which was intended specifically to address the problems of America's rural poor. By 1937, the program had been integrated into the Department of Agriculture and had become its own agency. Rexford G. Tugwell, the head of the FSA, employed his friend and pupil Roy Stryker, an economist, to head the Historical Section of the program. Stryker believed that through photographic documentation the FSA could better preserve and record the tenor of the time; Stryker's emphasis on photographs produced one of the most prolific periods in American photography. During Stryker's eight-year tenure at the FSA, photographers such as Dorothea Lange, Walker Evans, Gordon Parks, Ben Shahn, and others produced more than 270,000 photographs for the American government, most of them stunning images of the impoverished, rural poor who had been neglected and often ruined by the intense economic turmoil of the Great Depression.

Originally, the FSA photographers' mission was to produce supportive propaganda for Roosevelt's New Deal, but the images they captured, far from simplistic celebrations of American life, became haunting visual icons of the harsh conditions of the poor, rural farmers, and their families. Through the FSA's photographs, Americans saw first-hand the devastation caused by the Great Depression and how affected families coped with their hardships. In fact, Dorothea Lange's photographs so captivated John Steinbeck that he integrated her images into his epic story of the Dustbowl Migration, *The Grapes of Wrath*.

The FSA photographs not only often incited outrage and indignation at the suffering they depicted, but also brought "documentary photography" into popular American consciousness. Shortly after the FSA photographs began to appear in various well-respected journals (due to the tireless efforts of Stryker), some magazines began adopting a mixture of text and photo. This new editorial style gave rise to the still-popular photojournalistic movement and helped shape the newly-established American magazines such as *Life* and *Look*, which became the standard-bearers of this genre.

The FAP employed visual artists of all kinds, including artists who documented and decorated WPA projects including schools, libraries, and other facilities such as state and federal parks. Painters and graphic artists designed posters for the Federal Theater Project's touring shows, created advertisements for local WPA sponsored programs, and helped produce various propaganda items, including illustrated travel texts.

Although FAP photographers were employed across the United States, some of the best-known projects took place in New York where Berenice Abbott, Arnold Eagle, Gordon Parks, Sid Grossman, and many others started their careers on FAP assignments. Assignments consisted not only of documenting other FAP programs, such as dance or theater projects, but capturing various aspects of city life. Labor projects, life on the streets, and neighborhoods were photographed. One of the best-known is Berenice Abbott's *Changing New York*, which documents with loving detail the peo-

Berenice Abbott, Rockefeller Center, from 444 Madison Avenue, from the series "Changing New York," 1937, Gelatin silver print mounted on paperboard.

ple and culture of the great city and offers a fond, romantic glimpse of the changing cityscape over a four-year period. This was not atypical. Though the FSA, FAP, and other WPA agencies used photography to help achieve their aims and further their agendas, most of the photographers employed by these programs approached their jobs creatively, producing works with aesthetic and social importance that ranged far beyond simple propaganda.

A major archive of FAP images can be found at the Museum of the City of New York as well as in the New York Public Library's Miriam & Ira D. Wallach Division of Art, Prints, and Photographs Photography Collection.

Eventually, both the FSA and FAP became too expensive to continue. The approach of World War II helped turn Americans from the introspection that characterized this period in history, and increased momentum for the already-growing economy. The FSA was subsumed into the Office of War Information with a much more purely propagandistic mission to produce positive images meant to boost home-front morale. When various rural assistance programs were reorganized in 1943, the FSA was discontinued. The archive was transferred to the Library of Congress where it is known as the Farm Security Administration-Office of War Information Collection and is available for public use.

The WPA's emphasis on photographic documentation had given America an unprecedented record of the history and the culture of the 1930s. The FSA photographers, in documenting the ravages of the Great Depression on rural areas, produced images that became etched into America's collective con-

sciousness. The FAP photographers, in documenting the minutia of city life and the changing American landscape, provided for posterity a window into the very soul of a pivotal decade in U.S. history.

XEROGRAPHY

Xerography, also known as copy art, first emerged in the 1960s as artists from such diverse disciplines as painting, printmaking, sculpture, and photography began to examine the potential of the photocopy machine as an aesthetic tool. Developments in photocopy technology during the 1950s, which laid the foundation for such experimentation, greatly expanded upon previous duplication processes such as the Mimeograph and the Photostat, while sharing with them a common dependence upon the camera and photo chemistry. Patent attorney Chester Carlson perfected his electrographic copying process, called xerography (from the Greek, 'dry-writing') by the Haloid Company of Rochester, New York (now the Xerox Corporation) who introduced it to the public as the first commercial dry copier in 1948. In the xerographic process, an electrostatic charge is applied to a metal plate, rendering it photosensitive. The charge is dispensed upon exposure to light while a black powder, called toner, is made to adhere to those remaining charged areas of the latent image. The positive image is then transferred to paper, which has the opposite charge and is fixed through the application of heat. A competing process called the Thermofax was developed by Carl Miller at 3M Corporation, which was

based on the concept of heat absorption rather than static electricity. The first color copier, the Color-in-Color, created by Dr. Douglas Dybvig also at 3M Corporation, and introduced in 1965, was an automated machine capable of producing a dry color copy in 60 seconds.

Xerography's resonances with the photographic medium extend beyond the relationship between the two technical processes. Like photography, xerography as an art practice raises issues pertaining to originality and market value. Just as Walter Benjamin argued that as a reproductive medium, photography lacked the aura of the rare work of art, xerographic art is often conceptually bound to its status as a "copy" with the potential for limitless duplication produced with a utilitarian office tool. The very use of the word copy suggests that the piece functions as a reproduction of or surrogate for another original work, rather than reflecting its status as a unique creation. As with photography, xerographic works of art are often produced in limited editions, which do not entail the notion of a deteriorating printing matrix as with editioned prints produced in graphic arts such as etchings or lithographs, but which nevertheless serve to enhance their value in the market-

XEROGRAPHY

place. Yet also fundamental to the xerographic work of art is the opposite notion of the medium as an inexpensive mode of expression. As Margot Lovejoy argues, “a signed, numbered copier print may only be seen by a collector or by the museum-going public as opposed to its appearance on countless billboards in the streets, on subways, or on buses...” (Lovejoy 1989, 113). Thus the issue of market value with respect to xerography is likewise inextricably wound with assumptions about the photocopy’s private versus public functions.

Also central to the process of xerography as art practice is the concept of time. The immediacy of an aesthetic process by which images are produced in a matter of seconds resembles the type of instantaneousness touted by the “you-push-the-button-we-do-the-rest” claim of early amateur photography. And as with photography, xerography is associated with a certain democratization of the artistic process, in which its processes are easily accessible to the masses; in the case of the latter, its tools are readily available in the grocery store or copy center. Xerography is also linked to the notion of time in terms of the ephemeral nature of works in this medium, which are considered under the umbrella of “throw-away” art, valued for their immediate impact rather than their permanence and lasting object value. Artists who began to experiment with the utilitarian-found tool of the copy machine in the early 1960s worked largely in isolation from one another, and explored just these notions of process and time in various manifestations.

In 1970, Sonia Landy Sheridan founded Generative Systems at the School of the Art Institute of Chicago, where she taught from 1961–1980. This research program was based on the dynamic relationship between artist-scientist-industry-society and was designed to examine the potential of the copier machine as art tool as well as the broader functioning of the machine within society. Born of a certain dissatisfaction with traditional art media, the program encouraged its students to take an active role in the exploration of machine technology and to reconsider photography, printing, painting, and sculpture in light of the copier’s potential to expand the parameters of these fields. Generative Systems furthermore challenged perceived limitations of current modes of art education and the functioning of the museum/gallery. It served as a model for similar programs founded in subsequent years by the Center for Advanced Visual Studies at MIT in Cambridge, Massachusetts, the Visual Studies Workshop in Rochester,

and the Tyler School of Art at Temple University in Philadelphia.

Sheridan forged the artist-scientist relationship on another level as Artist-in-Residence at the 3M Corporation research facilities in St. Paul, Minnesota in 1969. Working along with artist Keith Smith, Sheridan had the opportunity to explore the aesthetic possibilities of the recently developed 3M Color-in-Color machine. The two artists created a body of xerography that challenged assumptions as to distinctions between art and industry. One remarkable work borne of this collaboration was a Color-in-Color copier composite image of a human figure on cloth, which hung two stories tall in the foyer of the Museum of Modern Art in New York in 1974. Central to Sheridan’s work is the notion of process. The artist envisions her xerographic art not necessarily as completed works, but as the presentation of information about her generative process with the machine, which are often shown in long continuous sequences. For example, Sheridan’s *Stretched Scientist’s Hand*, created in 1980 was a 10 inch by 6 story xerography image of G. Roger Miller’s hand, which hung outside of the Xerox Corporation Building in Chicago. Sheridan’s work has been the subject of several one-person exhibitions including *The Inner Landscape and the Machine: A Visual Studies Workshop Exhibition of the Work of Sonia Landy Sheridan* in 1974 and *Sonia Landy Sheridan: A Generative Retrospective* at the University of Iowa Museum of Art in 1976.

Although often concerned with similar issues concerning artistic process, those artists who work with the copy machine cannot be thought of as a unified school or movement. Manipulation of the unique visual language of the copy machine has yielded diverse results. Artists’ choice of subjects and working methods are also necessarily influenced by the relative immobility of the copier machine and its accessibility. Esta Nesbitt first experimented with the copy machine at the Parsons School of Design but continued her work on Xerox machines in the company’s showroom in New York City. She has created a self-referential body of copy art called *Transcapsas*, in which she takes the light generated by the copier machine as her subject, redirecting it back into the lens with a reflective material placed over a glass surface called the platen. The wide, fixed aperture of the copy machine’s lens results in an extremely shallow depth-of-field, which Pati Hill exploits with respect to her three-dimensional subjects, thus turning the machine’s two-dimensional limitation to her aes-

thetic advantage. Hill describes the often otherworldly results of her manipulations:

This stocky, unrevealing box stands 3 feet high without stockings or feet and lights up like an Xmas tree no matter what I show it. It repeats my words perfectly as many times as I ask it to, but when I show it a hair curler it hands me back a space ship, and when I show it the inside of a straw hat it describes the eerie joys of a descent into a volcano.

(Hill 1979, 7)

With respect to such transformation of subject, the notion of a machine which copies the literal appearance of its subjects becomes increasingly inadequate.

Xerographic portraits, while perhaps first created by countless inquisitive office workers experimenting with the copier's unconventional capabilities, have been widely explored, especially in the form of self-portraiture by artists such as Joan Lyons in works such as *Untitled (Woman with Hair)*, 1974 and William Gray Harris, such as in his one-of-a-kind color work, *Self Portrait*, 1973. Artist Dina Dar challenges the notion of the endless reproducibility of the object of the copier's lens through her use of the ephemeral subjects of flowers and foods, as in her 1978 work, *Slow Boat to China*. The use of collage techniques in the creation of xerographic images is central to many artists' work. The seamless construction of imagery through collage has been adapted to both fanciful formal compositions and social and political commentary. Artist Carl Chew's 1979 work *George Eastman Hunting Elephant with Stamp* creates a contemporary metaphor in the juxtaposition of collage elements about commodity value in its depiction of the photographic pioneer on an African safari toting a postage stamp of his prey in place of his gun. Artist Peter Nagy uses xerographic collage toward overtly political ends, such as with *Passéisme* (1983), which rearranges historical markers in a non-linear configuration, aligning such disparate elements as a Jasper Johns' piece with a Mesolithic rock shelter. Artist William Larson utilizes xerography in the creation of unique artists' books, which address the idea of the degeneration of imagery and the abstraction of visual information through successive recopying.

Wide-spread public awareness of xerography practice did not occur until the early 1970s when several small group and solo exhibitions were mounted. The first major museum exhibition of xerography, *Electroworks*, was held at the International Museum of Photography at George Eastman House in 1979 and included 250 works. This title had likewise referred to numerous exhibitions

mounted in the United States and Canada during the 1970s. The related movement of Mail Art served to expose a broader public to xerography specifically outside of the parameters of the museum context. First practiced in the early 1960s by artists such as Ray Johnson and E.F. Higgins II, founder of a vein of this movement called the New York Correspondence School, who conceptualized the mailbox as museum, Mail Art consists of xerographic works in the form of postcards and other pieces of mail, which in their widespread dissemination through the mail served as both an alternative form of public exhibition of their art and a way to generate a network of xerography artists working in similar veins. While the prevalence of xerographic practice began to lessen in the United States in the 1980s, interest with many European artists, especially in France, Belgium, and the former West Germany, expanded in that same decade, culminating in key international exhibitions such as *Electra* at the Musée de l'Art Moderne in Paris in 1983. Of particular prominence is French artist and teacher Cristian Rigal, who in addition to his own work in the medium he calls Electrography, has established a collection and resource center called El Museo International de Electrografia in Cuenca, Spain.

Z

ZERO-61 GROUP

In the 1960s in Poland, artistic collectives flourished in the city of Torun, fostered by the academic community of Copernicus University despite the restrictions placed on artists by the Communist régime then in power. One of the most significant of these groups was a photography collective known as Zero-61. The moniker was derived from the year of the group's founding, 1961, and was based on the members' insistence on starting from scratch, aesthetically speaking. Desiring to shed themselves of all influence and formalistic tradition, they sought to begin again from zero. The founding members included Józef Robakowski, Czesław Kuchta, Lucjan Oczkowski, Jerzy Wardak, and Wiesław Wojczulanis. As the 1960s progressed, more artists came to participate in the collective, including Andrzej Różycki, Antoni Mikołajczyk, Michał Kokot, and Wojciech Bruszewski.

The various participants shared darkroom space, experimented with technique, and exhibited their resulting work together. They did not employ a specific program or write an artistic manifesto, as their aesthetic direction was essentially freeform. Yet they did share certain values and strategies in common. Their motivation was self-consciously rebellious, and they were specifically interested in challenging the journalistic, documentary photo-

graphy popular in Poland at the time. Their work is characterized by a playful attitude toward the photographic medium, and frequent experimentation with technique and process. Such manipulation served to problematize photography's reputation as a transparent window into reality, and a conveyer of unmediated truth.

For the Zero-61 group, artistic intervention did not conclude with the click of the shutter. They were interested in pushing the boundaries of their medium by manipulating their images and combining their photographs with other materials. There was diversity to the formal strategies utilized by the Zero-61 members, and the results of their experimental endeavors were often visually poetic. Bruszewski frequently scratched his negatives, Różycki painted directly on finished prints, Mikołajczyk utilized multiple exposures, and nearly all produced various types of photomontage. Some created montages by juxtaposing negatives, others by combining fragments of prints and re-photographing them to create a sense of seamlessness. The willingness of the Zero-61 members to mix photography with other mediums points to the multiplicity of their artistic practice; some were practicing painters, while others went on to create more conceptually-based work.

ZERO-61 GROUP

The Zeroists' transgressions of their medium and of tradition took place not only in the production of their images, but in the exhibition of the work as well. The artists often showed their photographs as part of installations. In one case they hung photographs alongside real objects that either appeared in or corresponded with the images. A heap of sand was placed before a photograph of a bulldozer, a picture of a fence was hung on an actual fence, and so forth. For another exhibition, the group invented an imaginary artist named Józef Korbiela and showed work under his name. Such projects and exhibitions anticipated subsequent artists' exploration of conceptualism and institutional critique.

The group held its final exhibition in Torun in 1969. The artists appropriated an abandoned factory as their gallery space, and included some of the found objects left over in the building as part of the

installation. By the time of this exhibition, it was clear that the artists were exploring divergent aesthetic directions. Unable to maintain a coherent unity, the Zero-61 collective dissolved. They proved to be an important but still understudied influence on the Polish avant-garde of the following decades.

PIET ZWART

Dutch

Known primarily for design work executed during and immediately following his brief and tenuous association with the modern movement De Stijl, Piet Zwart remains one of the most important modernist innovators of graphic design and typography and, as such, critical to the development of photography over the twentieth century. Not strictly a photographer per se, his long and varied career led him to work in the disparate fields of architecture; architectural criticism; woodworking; education; interior, furniture, graphic, and exhibition design; typography; and, finally, photography. Before meeting Vilmos Huszár and Jans Wils, early members of De Stijl, Zwart's aesthetic concerns, expressed most concretely in his interior designs, more closely paralleled the conservative arts and crafts tradition favored by practitioners of the Amsterdam School. However, Zwart was seduced by Wils and Huszár's emphasis on the universality of pure form and in their utopian aspiration to generate a new social order based on the complete fusion of art and life. Intrigued as he was by their ideas, Zwart never officially joined the De Stijl group or published in its eponymous journal. He mistrusted what he per-

ceived to be De Stijl's limiting tendency towards the restrictive and dogmatic. He also felt that the group was not sufficiently committed to embracing new technologies in their pursuit of a new modern art.

While still loosely associated with De Stijl, Zwart was commissioned to design the exhibition stall for a cellulose manufacturer planning to exhibit at the 1921 Utrecht Industrial Fair. Zwart reasoned that any successful exhibition design must: 1) acknowledge the condition of being temporary; 2) serve as a background for the product; 3) correspond to the surrounding interior architecture; and, 4) be complicit with a modern consciousness. While seemingly simple and straightforward, these four principles led Zwart to an exhibition design that would radically affect avant-garde exhibition strategy throughout the rest of the century. Zwart's first proposal for the space depicted the room in the style used by most De Stijl colorists to prevent the distortion of perspective from entering their compositions: a single, flat plane wherein the walls were rendered as if peeled open. His second sketch, from 1 August 1921, marked a definitive break with the first and, not coincidentally, with his strongest De Stijl allegiances. Instead of the two-dimensional format, he chose to render the proposed space from an oblique perspec-

tive, focusing on one corner of the booth. His final drawing expanded upon this focus on corner, but emphasized an increased dynamism of the space through the use of strong diagonals and interlocking forms which heightened the viewer's experience of being drawn into the room. Zwart's design for this exhibition booth eventually led to the avant-garde emphasis on viewing the exhibition space as an independent demonstration space wherein interiors themselves could become the focus of display, as they did, for example in El Lissitzky's *Proun Space* (1923).

A similar concern with drawing the viewer in conditioned Zwart's typographic experimentation in the name of advertising. While working for Berlage, Zwart met his future son-in-law, a member of the Board of Directors for NKF, a Dutch cable factory. Over the next 10 years, he designed approximately 275 advertisements and posters for NKF, each of which expanded upon and honed his commitment to "functional" typography, well-suited to communicating information in a speed befitting a modern reader. As opposed to the poster designers who had preceded him, Zwart emphasized the white spaces of the background, using asymmetrical form, layout, bold graphics, and large print to generate a dynamic tension intended, once again, to draw the viewer into the ad as quickly as possible. Dynamism replaced harmony as the reigning aesthetic.

Zwart increasingly employed photography, or what he would refer to as phototypography, in his designs. At first he worked with industrial photographers, but eventually eschewed them in favor of taking his own photographs, all of which emphasized sharp focus, close-up views, and extreme angles in depicting the mechanical objects and icons featured in the ads, such as the cross section of a bundle of electric cables in his 1929 NKF English catalogue, or a picture of stacked wood in *Untitled (lumber yard)* in which the light grid created in the ceiling reflects the pristine, precise lumber stacks. He also employed photomontage in his advertisements, but tended away from the photogram techniques he learned from El Lissitzky as early as 1923.

In 1933, Zwart made a radical return to interior design, producing a number of notable interiors, including the 1938 kitchen he designed for the Bruynzeel Company. Zwart's exacting and innovative legacy is recognized in Rotterdam in the establishment of the Piet Zwart Institute for Postgraduate Studies and Research as part of the Willem de Kooning Academy Hogeschool.

HANNAH FELDMAN

Biography

Born in Zaandijk, The Netherlands 28 May 1885. Studied drawing and architecture at the National School for Applied Arts in Amsterdam (Rijkschool Kunstnijverheid), 1902–1907. Taught drawing and art history at the Industry and Household School for Girls in Leeuwarden, 1908–1913. Studied Architecture at Institute of Technology (Technische Hogeschool) in Delft in 1913. Employed as draftsman in Jan Wils' architectural practice, 1919–1921; left to become chief draftsman for Henrik Petrus Berlage. First typographic commission in 1921; from 1923–1933 designed advertisements for NKF. Died in Wassenaar, The Netherlands, 27 September 1977.

Selected Works

Design for Chair, with Vilmos Huszár, 1920
First, Second, and Definitive Designs for Celluloid Manufacturer's Stand, Annual
Industrial Fair, Utrecht, 1921
Hot Spots, NKF advertisement, 1925
ITF (International Film Festival), Poster, 1928
NKF English Catalogue, 1928–1929
Cabbage, 1930
Untitled (lumber yard), c. 1930s
