GLOSSARY

Editor's note: These definitions err on the side of succinctness and are intended to be beginning points for the serious student. An attempt to standardize terminology commonly found in the medium of fine arts photographs that avoids copyrighted term or trade names (“dye-destruction print” in lieu of “Cibachrome” and so on) has been made using guidelines set forth by the J. Paul Getty Institute. In acknowledgment of the increase in collecting vintage prints and the perennial interest in historical processes, many nineteenth century processes and obsolete terms are included.

Cross referencing within the glossary is indicated by italics; encyclopedia entries are indicated by small capitals.

Additive colors The primary colors of red, green and blue which are mixed to form all other colors in photographic reproduction. See entry COLOR THEORY: NATURAL AND SYNTHETIC.

Agfacolor Trade name for a subtractive color film manufactured by the European company Agfa-Gevaert; analogous to Kodachrome and Ansicolor.

Albumen print Prints obtained from a process in wide use during the nineteenth century in which paper is prepared with an albumen emulsion obtained from egg whites and made light sensitive with a silver nitrate solution. See also *Collodion process*; *Dry plate processes*.

Amberlith An orange acetate historically used for masking mechanicals during the process of preparing plates for commercial printing. The area so masked photographs as black to the camera, printing clear on the resulting positive film. See also *Rubylith*.

Ambrotype An image created by the collodion process, historically on glass, which gives the illusion of being positive when placed against a dark backing, often a layer of black lacquer, paper, or velvet. Also see *Ferrottype*.

Anamorphic image An image featuring differing scales of magnification across the picture plane, especially varying along the vertical and horizontal axes, with the result being extreme distortion.

Aniline A rapid-drying oil-based solvent used in the preparation of dyes and inks for photographic applications.

Aniline process A method of making prints directly from line art (drawings) on translucent materials bypassing the need for a negative. Also see *Diazo process*.

Aniline printing See *Flexography*.

Angle of incidence The measurement in degrees in terms of the deviation from the perpendicular of the angle at which light hits a surface.

Angle of view The measurement in degrees of the angle formed by lines projected from the optical center of a lens to the edges of the field of view. This measurement is used to identify lenses and their appropriateness to capture various widths or degrees of actual space in a photographic representation, thus an extreme telephoto lens captures between 6 and 15°; normal lens generally fall in the 40 to 100° range; a “fisheye” wide-angle is 150 to 200° (or more).

Ansicolor Trade name of a subtractive color film manufactured by the European company GAF Corporation.

Anti-halation layer The light absorbing layer in raw stock that prevents reflection of light back into the light-sensitive emulsion, preventing unwanted fogging.

Aristotype Trade name for a variety of non-albumen printing papers which became a general term; largely obsolete in the twentieth century.

Artigue process Variation on the carbon process; largely obsolete in the twentieth century.

GLOSSARY

- Aspect ratio** The ratio between height and width in photographic applications.
- Autochrome** One of the first commercially viable color photography techniques using pigments in potato starch fixed by means of varnish and coated with a light sensitive emulsion (orthochromatic gelatin bromide) on a glass plate. Also known as an additive color process color plate. Used most widely between 1900 and 1930.
- Autotype** A carbon process for making prints from negatives; originally a trade name which became the generic name for prints made with a variety of carbon processes.
- Bichromate processes** A family of processes, not utilizing silver, to make prints on various grounds by coating them with a colloid, which can be gum arabic, gelatin, or starch, that has been treated to be light sensitive with potassium or ammonium bichromates. Grounds include papers, films, and fabric. Also known as gum-bichromate or dichromate processes. See also entry NON-SILVER PROCESSES.
- Black-and-white print** See *Gelatin silver print*.
- Bleaching** The use of various chemicals, including iodine compounds or potassium ferricyanide, to remove the silver from an image.
- Bleach-out process** A technique for creating a hand drawing from a black and white print in which a drawing is made over a photographic image, which is then bleached completely away.
- Bleed** An image that runs to the edge of a print or page; “full-bleed” indicates the image goes to all four edges.
- Blindstamp** An embossed mark, generally colorless and usually outside the image, used to identify the publisher, printer, photographer’s studio or photographer. The stamp may be a symbol, initials, or full name and address. Also known as drystamp and chop.
- Blueprint** An image created via the cyanotype process that results in blue tones, most often used in architectural plans. See *Ozolid process* and *Diazo process*. See also entry NON-SILVER PROCESSES.
- Bromoil process** A variation of the carbro process in which the silver image of a bromide print is converted to a carbon image and then prepared with oil-based inks for printing.
- Bromide print** A print created on a black and white paper in which the emulsion contains silver bromide and silver iodide, resulting in a relatively greater sensitivity to light. See entry NON-SILVER PROCESSES.
- Bracketing** See entry.
- Burning-in** See entry.
- Calotype** An early and widely used paper negative process in which the paper was made light sensitive with silver iodide, also called Talbotype after its inventor, W.H.F. Talbot.
- Camera obscura** See entry.
- Carbon processes** Name for the family of photographic processes, originating in bichromate technique, accomplished using particles of carbon or colored pigments that includes the *Carbro process*. See also entries NON-SILVER PROCESSES; PRINT PROCESSES.
- Carbro process** Carbon process of versatility similar to silver processes in that it can be used for enlarged prints, with capabilities to manipulate during both development and enlarging (such as burning and dodging), developed from ozotype and ozo processes; name obtained from a combination of *carbon* and *bromide*. Standardized as assembly process color print. See also *Ozotype* and entries NON-SILVER PROCESSES; PRINT PROCESSES.
- Carte-de-visite** French for “visiting card”; a mainly mid-nineteenth century phenomenon of small photographs mounted on cards that became widely popular to exchange or distribute.
- CCD** For charge coupled device, a sensing device found in most digital cameras consisting of a rectangular grid of light sensitive elements that generate an electrical current relative to the amount of light sensed and replacing film.
- Celluloid** A type of plastic of dubious stability and extreme flammability developed in the mid-nineteenth century; used toward the end of the nineteenth century for the support for photographic emulsion in film manufacture.
- Chloro-bromide print** Variation of the gelatin silver print wherein the light sensitive material in the emulsion consists of silver chloride and silver bromide; produces a warmer image than the gelatin silver print. See also *Gelatin silver print*.
- Chromogenic development** Process in which chemical reactions are used to create colors (dyes) in a light sensitive emulsion. See *Chromogenic development print* and as opposed to *Dye destruction process*.
- Chromogenic development print** Standard generic name for common trade names such as in which a color image is obtained by means of silver halide coupled with cyan, magenta, and yellow dyes. This process is the opposite of the dye destruction process. See also entry PRINT PROCESSES.

- Cibachrome** Trade name for prints obtained by means of the dye destruction process originated by the British photographic concern Ilford in concert with CIBA AG of Switzerland. Originally ‘Cilchrome.’ Standardized as dye destruction print. Also less commonly: silver dye bleach process print.
- CIE Color System** International color system developed by ICI (CIE) using scientific color measurement to standardize color names and the color they describe. See also *ICI (CIE)*.
- Circle of confusion** The size of the largest open circle which the eye cannot distinguish from a solid dot, used to determine sharpness and thus depth of field. See entry *DEPTH OF FIELD*.
- Cliché-verre** A method for reproduction of drawings or painting by photographic means in which glass is coated with an opaque ground that is scratched away and then used as a photographic negative. Also known as *Hyalotype*.
- Collage** Two-dimensional or bas-relief image created by gluing or pasting together various pieces of images and materials collected from various sources. See also *Montage*.
- Collotype** Bichromate process for obtaining printed reproductions of photographic imagery invented mid-nineteenth century using plates of glass coated with a layer of adhesive gelatin followed by a layer of gelatin sensitized with potassium bichromate. Used chiefly for commercial printing applications before superseded by offset lithography in early decades of the twentieth century.
See entry *NON-SILVER PROCESSES*.
- Color Key** Trademark of Pantone Corporation for a color identification system used largely in graphic design and commercial printing applications.
- Color temperature** See entry.
- Composite photographs** A photograph created through the combining of two or more individual images to form a whole and generally rephotographed to create a seamless final image, as distinguished from montage.
- Contact print** See entry *CONTACT PRINTING*.
- Continuous-tone process** Any of a family of processes which create an image in which modulations from dark to light are achieved by variations in density of the image-forming substance, most commonly silver in black and white photographs and dyes in color photographs, in relation to the amount of light exposure received. As opposed to *Halftone process*.
- Cyanotype** A widely used iron-based process deriving from the discovery in 1841–1842 by Sir John Herschel that many iron compounds were in fact light sensitive. A relatively simple and versatile process that produces white images on a blue ground. Also known as the Ferropussianate process.
- Daguerreotype** A photographic process invented by L.J.M. Daguerre at the beginnings of photography in 1839 most commonly achieved by a thin film of silver on a copper plate that achieves a grainless, yet relatively fragile image. Largely obsolete by 1860s.
- “**The Decisive Moment**” See entry.
- Densitometry** The science of measuring the opacity of silver or dye images in films and prints; when standardized these measurements are used to determine a wide range of photographic aspects, including the speed of film; the length of exposure and development, contrast, and so on.
- Depth of field** See entry.
- Depth of focus** The area on either side of an image plane of a lens in which the image remains sharp. See *Circle of confusion*.
- Developing-out paper** The term for a family of photographic papers that require developing after exposure. See also entry *PRINT PROCESSES*.
- Diazo process** A method of obtaining color images through the use of diazonium compounds as the light sensitive medium.
- Dichromate processes** See *Bichromate processes*.
- Digital print** Any print created through digital means. See also *giclee print* and *inkjet print*.
- Dry mounting** Process of using heat-activated adhesives to mount photographs.
- Dry plate processes** Chiefly used to indicate a family of nineteenth century processes that were advances on the wet collodion process in which the light sensitive medium on glass plates or paper was exposed when dried. Also used more expansively to indicate any dry exposure process. See also *Albumen print*; *Wet collodion process*.
- Dye bleach** See *Bleach*.
- Dye coupler** Colorless compounds that when activated react with other agents to form dyes whose color depends on the dye coupler molecule. See entries *COLOR THEORY: NATURAL AND SYNTHETIC*; *DEVELOPING PROCESSES*.

GLOSSARY

- Dye destruction process** Generic name for process that is used by products with such common trade names as Cibachrome in which a color image is obtained by means of bleaching away unnecessary dyes from the emulsion. As opposed to processes that use chromogenic development to create dyes in the emulsion.
- Dye destruction print** Print made with dye destruction process. Standardized generic equivalent for Cibachrome.
- Dye diffusion transfer process color print** Print in which the emulsion is composed of multiple layers, including a final backing layer, that together create both the negative and final positive print. Standardized generic equivalent for the Polaroid print, a trademark of the Polaroid Corporation and other systems that create so-called “instant” photographs. See entry *INSTANT PHOTOGRAPHY*.
- Duratrans** Trademark of Kodak Company for a large-scale durable transparency generally mounted in lightboxes.
- Dye transfer** See entry.
- Ektachrome** Trade name of Kodak Company for a film that produces a positive or transparency (slide).
- Emulsion** A suspension of light-sensitive materials, generally silver halide crystals, in a support material, generally gelatin.
- Etch-bleach process** A technique for converting high-contrast images, such as obtained with lith films, to line-art. Also known as and see *Bleach-out process*.
- False color image** A monochromatic image in which various gradations of tone or densities are assigned arbitrary colors and presented as a color photograph. Generally used in scientific, especially astronomy, applications but also used as an artistic effect.
- Ferrottype** The generic name of the direct positive process on a metal ground known as Tintype. See *Ambrotype*.
- Ferrotyping** A process for obtaining a glossy or glazed surface on a photographic print by means of drying the print as in contact with a highly polished surface.
- Finlaycolor process** A method of full-color imaging by means of screens of specifically spaced elements as opposed to the random, mosaic screen used in the Autochrome process. Used primarily with panchromatic film to create a negative capable of being printed in color.
- Film speed** The capacity of any given film to record light within a specified timeframe, measured in units known as ASA (after the standardization organization American Standards Association) before 1980 and ISO after 1980. See entry *FILM*.
- Fish-eye lens** An extremely wide-angle lens, generally capturing between 140 and 200° (or more) of the angle of view.
- Flexichrome process** A method of hand coloring in which film is developed so that the exposed gelatin is hardened, allowing the unexposed portions to be washed away. Silver is then removed through bleaching; the remaining hardened emulsion dyed gray to be visible for hand-toning or coloring.
- Flexography** A process of printing an image using inks onto a nonabsorbent or uneven surface by preparing a negative relief from a photography which is then used to cast a rubber mold that will conform to an irregular surface or can be prepared with inks that will bind to ceramic, plastic or other nonabsorbent surfaces. Also called aniline printing.
- Fluorography** The recording of images rendered onto a screen in which the screen (as opposed to the object; this is known as fluorescent photography) is illuminated with X-rays.
- Focal length** A method of determining the basic optical character of a lens by measuring the distance along the optical axis from the rear nodal point (the center or highest point of the lens) to a plane when the camera is set at “infinity” on which an object remains in sharp focus. Also see *angle of view*.
- Footcandle** A method of measuring the intensity of light. A one candlepower light source emits 12.6 lumens. The amount of illumination is thus measured by the number of lumens falling on a square unit of a specified area such as per square foot or meter. See *lumen*.
- Flare** Unwanted light that scatters within the lens and can result in loss of contrast in exposed images.
- Flash** A device for creating a high-intensity light of short duration.
- Framing** A method used at the time a photograph is taken by which the camera distance and angle of view is used to mark off the edges of the photographic composition. Also the placing of the finished photograph in a frame for final presentation.
- Fresson process** A method of color printing invented at the turn of the twentieth century in France by Theodore-Henri Fresson that produces an image that is characteristically diffused and subtle, reminiscent of the “pointillism” of Impressionist painting.
- Fresnel lens** A condenser characterized by a series of concentric rings, each equivalent to a designated section of the curved surface of the lens that maximizes the light output of the lens. Originated by A.J. Fresnel in the early nineteenth century for use in lighthouses; used in photographic applications such as in camera viewing systems and rear-projection systems.

- f*-stop, *f*-number** The aperture settings on a camera. See entries CAMERA: OVERVIEW and LENS.
- Fuji-color** Trade name of a color negative film manufactured by the Fuji Corporation, Japan.
- Gaslight paper** A developing-out paper of relatively low light sensitivity used for contact printing in the late nineteenth century. So-called as it was light safe under weak gaslight illumination.
- Gelatin silver print** Any photographic print achieved using a paper in which silver or its compounds are used as the light sensitive material in a gelatin support, most commonly silver halide crystals but also silver chloride and silver bromide. Also known as black and white print and silver gelatin print. See also *Chlorobromide print*; *Emulsion* and also entry PRINT PROCESSES.
- Ghosting** Any incident of a double-image, but most often used to describe accidental occurrences, such as that which may occur when an electronic flash is used in an exposure with adequate ambient light or to describe the ghostly images that appear in long-exposures typical of early photographic processes where a human would move through the exposure leaving a blur or partial image.
- Giclee print** A term derived from the French “to spray” adopted in 1990 by Nash Editions to describe fine-art prints produced by digital spray technologies. See also *Digital print* and *Iris print*.
- Glazing** See *Ferrotyping*.
- Gold toning** The application of a bath of gold chloride where each silver particle in a gelatin silver print is coated with a layer of gold, rendering a warm tone and increasing the life of the image, as gold is resistant to tarnishing (oxidation).
- Grain** A description of the measurable, visible characteristics of the light sensitive medium of an emulsion. In unexposed materials, this measures, in silver processes, the undeveloped silver halide crystals; in a developed image, the bits of metallic silver themselves, expressed in a subjective scale of “fine” grain to “coarse” grain. See *Granularity*.
- Granularity** The measurement of the number of grains per unit of a specified area in an developed image. See *Grain*.
- Gray card** A standard to determine exposure and used to evaluate color balance in a transparency or print achieved through a gray-coated card that reflects visible wavelengths equally and reflects approximately 18 to 20% of the ambient light that strikes it, these percentages reflecting an averaging of the typical distribution of light and dark in a typical photographic scene.
- Gray scale** Description of the shades of gray or more accurately, range of tones from black to white in a photographic print.
- Guide number** A reference number used to calculate exposure when using flash that is not synched to the camera’s light meter (automatic). Film speed, *f*-stop setting, flash unit light output, and the distance between the flash and the subject are the four variables used to calculate this number.
- Gum-bichromate** See *Bichromate processes*.
- Gum ozotype process** See *Ozotype process*.
- Gum print** A print made through one of the many *Bichromate processes*.
- Halation** An effect wherein excess or unwanted exposure is caused by the reflecting of light off the film base back into the emulsion.
- Halftone** A photographic image obtained by means of a halftone process.
- Halftone process** Any of a family of processes which create an image by means of tiny dots or lines not visible to the unaided eye. As opposed to continuous-tone process.
- Hand coloring** See entry HAND COLORING AND HAND TONING.
- Hardener** A chemical or compound that by reducing the ability of a gelatin medium to absorb water during the developing and/or processing of film or photographic papers allows for a denser and therefore more durable surface on the final product.
- Heliography** Term used initially by the pioneer of photography Nicéphore Niépce to describe the process in which he was able to make the first permanent photographic images. From the Greek *helios* (sun) and *graphien* (writing).
- Heliogravure** Alternative French term for photogravure, a mid-nineteenth century photoengraving process made on Nicéphore Niépce’s discoveries. See *Photogravure*.
- Heliotype** A collotype process widely used in commercial printing at the end of the nineteenth century.
- High contrast films and papers** Photographic products which feature a limited range of gray tones or no gray tones at all. Often known as lith films and papers.
- High speed photography** Photography undertaken in acknowledgment that there are many physical processes that take place that the unaided human eye cannot resolve, which in its basic definition is photographs made with extremely short exposure times. In general terms, though always evolving, this means photo-

GLOSSARY

graphy with exposure times shorter than about 1/1000 of a second that almost always require special techniques, especially in light sources. For some purposes, the definition is shutter speeds beyond what is available on general use 35-mm cameras, commonly 1/4000 of a second, up to trillionths of a second. Pioneered in the nineteenth century by Eadweard Muybridge, to demonstrate the galloping of a horse; in the twentieth century, Harold Edgerton, an inventor of high-speed flash techniques, is considered the “father of high speed photography.” See entry *HAROLD E. EDGERTON*.

Hologram See *Holography*.

Holography A technique for making photographs known as holograms which give the illusion of three dimensions through embedding images in the photographic matrix that change in *parallax* and perspective as the angle from which the image is viewed changes. Holographs are made through the recording of “coherent” light—light which is emitted and follows a single wave pattern known commonly as lasers (as opposed to “incoherent” light—ordinary light which is of varying wavelengths with random phase relations). Holograms were described theoretically in 1947 by Dennis Gabor and became more common as advances in the laser technology needed to realize them were made in the late decades of the twentieth century.

Hyalograph A photograph created by means of etching an image from a negative into glass.

Hyalotype A method of creating positive transparencies used in the mid-nineteenth century primarily for lantern slides. See *Cliché-verre*.

Hydrotpe A bichromate process in which the master image is transferred to a ground of moistened paper, allowing the creation of multiple copies.

Hypo Common terminology for hyposulfite of soda, a nineteenth century designation for sodium thiosulfate, used during the developing process for films and papers to fix the image. See also entries *DARKROOM*; *DEVELOPING PROCESSES, FILM*.

Hypo eliminator Solution used in the processing of film or paper to neutralize the *hypo*. See also entries *DARKROOM*; *DEVELOPING PROCESSES, FILM*.

ICI (CIE) International Commission on Illumination based in France; in French, Commission Internationale de l’Eclairage, an organization that sets photographic standards, most notably a system for scientific color measurement in use worldwide to standardize color names and the color they describe. See also *CIE Color System*.

Imperial print A designation of nineteenth century photography indicating a mount for a photograph measuring 7 × 10 inches that could accommodate a contact print from the most common photographic plate then in use.

Incident light The light falling on any surface, in its various combinations of reflected, absorbed, or transmitted light. See entry *LIGHT METERS*.

Infinity setting The lens focus setting marked ∞ indicating the setting for photographing in focus objects at the greatest distance from the camera.

Infrared photography See entry.

Intaglio processes The term for a family of processes in which the image is formed by means of incisions below the surface of the material that is being used as a ground (often metal plates). Most commonly used in photoetching or photoengraving, both in commercial and fine arts applications.

ISO International Standards Organization, which sets a wide variety of standards in various fields; in photography, the designation of film speeds.

Iris print A digital print created using the printing equipment, inks, and papers developed by Iris Graphics of Bedford, Massachusetts but also used as a generic term for inkjet print created for fine arts applications. See also *Digital print* and *Giclee print*.

Ivorytype A photographic print transferred to materials manipulated to mimic ivory, popular in the mid-nineteenth century.

Kallitype A printing process using iron compounds developed at the end of the nineteenth century suitable for printing on paper and fabrics. A simple form of the kallitype is the Vandyke print.

Keystoning The linear distortion in which one end of a rectangle is larger than the other, usually as a result of the camera, when taking a photograph, not being parallel to the subject.

Kodachrome Trade name of Kodak Company for a film using a subtractive process (dye destruction) color film.

Kirlian photography A form of electrophotography named for the Russian couple who first identified it in which film in a metal container is placed in direct contact with the object or subject protected by insulating material. A current is passed through the film, and the pattern of energy as affected by the object or subject is recorded and developed.

- Kodacolor** Trade name of Kodak Company films.
- Kodalith** Trade name of Kodak Company's high-contrast films and papers.
- Law of reciprocity** See *Reciprocity*.
- Lens hood** Simple shielding device attached to front of lens to prevent flare.
- Light box** A device for viewing negatives or transparencies by internal illumination through a translucent material or a device for the display of photographic transparencies, especially popular in advertising and late-century fine art photography.
- Line art** In graphic arts and commercial printing applications, a term for a negative or positive image consisting of only two tones and featuring no modulation, as in a *continuous tone* image. See also *Lith films and papers*.
- Lith films and papers** High-contrast photographic materials most generally used in photomechanical reproduction, especially commercial graphic arts applications, prior to onset of digital technologies. See also *High contrast films and papers*.
- Loupe** Manual instrument used for viewing contact sheets, slides, or magnifying sections of full sized prints.
- Lumen** Unit for the measurement of the radiant energy emitted by a light source.
- Lux** See *Lumen*.
- Microfiche** A method by which sheet film is exposed by means of microphotography to create miniaturized images; widely used in the second half of the twentieth century by libraries and other institutions for records storage; made largely obsolete by the digital revolution.
- Moiré** A pattern created when superimposed line art or dot patterns interact and interfere with one another. Indication of poor registration in mechanical reproduction processes that layer multiple images; also used as a special effect by means of screens or filters.
- Montage** An assemblage of photographic images; generally distinguished from *collage* in both the restriction to photographic images (as opposed to drawn or three-dimensional elements) as well as the presentation of the final image as a unified whole, often by rephotographing. See entries MONTAGE; MANIPULATION.
- Munsell system** Standard system in the United States for specifying color in pigments and other opaque colorants.
- Negative** Any photographic film or print wherein the range of tonalities or color is reversed or the opposite of that of the subject or view photographed.
- Negative print** A photograph in which the opposite tones or colors from the subject of exposure is presented as a final work, usually for artistic effect.
- Noble print** Prints made with any of the family of bromoil processes, often featuring hand coloring.
- Notch code** An identity method used by film manufacturers by means of v-shaped notches incised into the right-hand corner side edge of sheet films.
- Offset** A photomechanical reproduction created when an image is transferred to a plate photographically, transferred in reverse to a roller, and then printed positively on paper or canvas; most commonly used in commercial printing applications. Also known as offset lithography.
- Offset print** Print created using offset process.
- Orotone process** A decorative process consisting of the photographic image being printed first onto glass plates, the silver then toned to a rich brown-gold tone. The glass is backed with a dusting of fine gold pigment.
- Orthochromatic** Designation for photographic emulsion that is sensitive to ultraviolet, blue, green and several yellow wavelengths but does not record red, allowing the use of a red safelight during the developing process. Also known simply as ortho.
- Ostwald system** Method of specifying color based on subjective (as opposed to scientific or mathematical) criteria. Often displayed as a cone or other form in which variations of hue affected by additions of white, black, and complementary colors are arranged in logical progressions.
- Ozalid process** A commercial diazo process developed in the early twentieth century to copy plans and drawings; commonly known as blacklines or brownlines. See also *Diazo process*.
- Ozobrome process** An improvement on the Ozotype process using a bromide print instead of the gelatin-bichromate sheet.
- Ozotype process** A carbon process developed at the turn of the twentieth century using a gelatin sheet sensitized with bichromate exposed by contact printing with a negative that is then flattened against a prepared carbon-pigmented tissue that hardens or tans the exposed emulsion. A variation on this process using a gum arabic emulsion is known as the Gum ozotype process.
- Palladiotype** Variation of the platinum print wherein the light-sensitive element of the emulsion is a compound of palladium, developed in the 1910s due to the prohibitive cost of this process due to the rarity of platinum. See entry NON-SILVER PROCESSES.

GLOSSARY

- Palladium print** More common term for the Palladiotype.
- Panchromatic** Designating an emulsion for which the light sensitivity is essentially equal for all visible light wavelengths.
- Parallax** The discrepancies in the field of view or coverage resulting from two differing viewpoints.
- Paraglyphe** A print resulting from a technique which achieves the illusion of low-relief or bas-relief by using a negative image to mask the same image's positive in creating an image which is a synthesis of the two.
- Pinatype** A bichromate process in which the master image is transferred to a ground of soft gelatin, allowing the creation of multiple copies.
- Pixel** The smallest discrete component of an image or picture on a television screen, computer monitor, or other electronic display, usually manifesting as a colored dot. In digital photographic processes, a unit of measurement to determine resolution (clarity of detail) of an image.
- Photogram** See entry.
- Photomontage** See *Montage*.
- Photogalvanography** An early bichromate process used in commercial printing to create printing plates from photographs.
- Photoglyphy** An early bichromate process used to create printing plates from photographs, patented in 1852 by photographic innovator W.H.F. Talbot.
- Photogravure** A photomechanical process adapting the traditional etching process that revolutionized commercial printing of reproductions in its ability to reproduce the appearance of the continuous tones found in photographs, an advance on photoglyphy. A sheet of bichromate gelatin tissue is adhered, using heat, against a resin-dusted copper plate and contact-printed with a positive transparency, the exposed gelatin hardening and protecting the plate lying beneath it. The unhardened gelatin is then washed away and the plate is processed in an acid bath, the unprotected copper being etched away at various depths. The plate is then inked; the etched areas holding ink to create the dark tones; the protected areas holding no ink and creating the highlights and used to transfer a positive image to paper.
- Photolithography** Using photographic methods to create the image in the traditional printmaking technique of lithography.
- Photomicrography** The recording by photographic means of highly magnified images seen through microscopes, most commonly for scientific and medical purposes, but also in fine arts photography.
- Photoserigraphy** Using photographic methods to create the image in the traditional printmaking technique of silkscreen or serigraphy. Also known as photosilkscreen.
- Photostat** A registered trademark for a commercial photocopying process using high-contrast that came into common use referring to a duplicate of an original.
- Platinotype** Patent name for prints created using papers light-sensitized through the use of platinum compounds marketed in the late nineteenth century.
- Platinum print** Generic term for any photographic paper using platinum and its compounds combined with iron salts as the light-sensitive material and developed in potassium oxalate, notable for its broad range of subtle, silvery-gray tones and for its relative permanency due to the stability of platinum.
- Polaroid print** See *Dye diffusion transfer process color print*.
- Polaroid transfer** A technique in which a Polaroid 669 print is soaked in hot water until the top emulsion layer lifts off its backing, allowing it to be transferred to a broad range of surfaces, including nonabsorbent surfaces such as glass. Also known as Polaroid emulsion lift.
- Positive** Any photographic film or print wherein the range of tonalities or color duplicates those of the subject or view photographed.
- Posterization** See entry.
- Primuline process** A diazo process developed at the end of the nineteenth century using the dye Primuline yellow.
- Printing-out papers** The term given to a family of photographic papers that require no developing after exposure, in which the emulsion of the negative is placed in direct contact with that of the print material, exposing it to light until an image is formed. Also known as photolithic papers. See also entry PRINT PROCESSES.
- Radiography** X-ray photography used primarily in medical applications.
- Resin-Coated paper** Photographic papers coated with resin to prevent absorption of developing bath into fibers, thus reducing washing time. Also known as RC Paper, a trademark of the Kodak Company. See also entry PRINT PROCESSES.
- Reciprocity** Term used to indicate the responses of film or paper to an exposure time plus amount of light (most often through controlling aperture setting), thus a long exposure with a small aperture opening will result

in a similar exposure as a short exposure time with a larger aperture opening. Also known as Law of Reciprocity.

Reciprocity failure An effect in which a film's sensitivity to light does not respond under conditions that should achieve mathematical reciprocity, such as in long exposures, or changes from the first exposure to the last exposure in a multiple image and overexposure, underexposure, or color shifts may result in the film. Also known as reciprocity effect.

Recto/verso In describing a photographic print, recto is the image side, verso the back or mount.

Resolution In photochemical processes, the size of the silver or other light sensitive elements in the emulsion; in digital technologies, the amount of detail or clarity offered relative to the number of pixels per square inch of an electronic image.

Retouching The manual manipulation of a photographic print or negative with brushes, airbrushes, pencils, inks, bleaching agents and so on to change details such as removing blemishes or filling in wrinkles in a portrait subject, or to correct defects in the exposure, such as dust spots.

Rubylith A red acetate historically used for masking mechanicals during the process of preparing plates for commercial printing. The area so masked photographs as black to the camera, printing clear on the resulting positive film. See also *Amberlith*.

Sabatier effect See entry SOLARIZATION.

Salted paper print Prints created by means of ordinary writing paper that has been light-sensitized with alternate washes of a solution of common table salt and a bath of silver nitrate; invented by W.H.F. Talbot in 1834 and characterized by a matte finish and a soft image resolution.

Scanner Device used in digital photography to electronically convert a visual (analog) image into digital data. See entry SCANNING.

Selenium print A print that has been toned with selenium which creates a warm tone and increases longevity, a misnomer in that the print is generally a gelatin silver print and the selenium is used only as an enhancement.

Sequencing The placing of photographs to create a narrative, visual message, or pictorial effect; a practice developed especially through scientific photography at the end of the nineteenth century by figures such as Eadweard Muybridge or E.J. Marey, and photojournalism and the photo-essay that emerged in the 1930s. Photographs can be those that exist in sequence as photographed with their inherent narrative, or can be disparate images that through such placement create a narrative, a practice especially explored by fine arts photographers in the postwar decades.

Silver-dye bleach process See *Cibachrome*; *Dye destruction print*.

Silver print Variation of *gelatin silver print*, not preferred usage.

Slide See *Transparency*.

Solarization See entry.

Stroboscope Rapidly firing flash used in high speed photography.

Solio paper A printing-out paper utilizing a gelatin-silver chloride emulsion for amateur use produced by Kodak in the late nineteenth century and used well into the twentieth century.

Spotting Method of retouching, most commonly used to describe the repair of imperfections such as dust spots, scratches to the film's emulsion, and so on by means of specially prepared dyes applied with a brush or pen that are matched to common paper tonalities.

Stereoscope A device for viewing photographs either hand-prepared or made with a stereographic camera that creates the illusion of three dimensions. Also stereograph.

Superimposure A combination of images, usually one atop another, in which aspects from the images are combined into a new image. Images can be superimposed in the camera through various exposure techniques, or created in the darkroom with multiple negatives. See entries MULTIPLE EXPOSURES AND PRINTING and SANDWICHED NEGATIVES.

Synchronization The relationship of timing between the action of the camera shutter and the activation of the flash.

Talbotype A short-lived name for W.H.F. Talbot's calotype process.

Test strip A simple method of judging proper exposure by means of creating a sample image on a strip of photographic paper by masking and then allowing progressively longer exposures. See entry DARKROOM.

Thermal imaging Imaging methods that capture radiant energy (heat) as a visual image, used in surveillance, medical imaging, and other industrial applications. Also known as Thermography.

GLOSSARY

- Time-lapse photography** The exposing of a series of images at regular intervals in still or motion picture photography or the multiple exposing of a single image in still photography, most often used to create illusions in motion pictures (“stop action”) or record a progressive motion or action, such as a rising sun.
- Tinting** See *Toning*.
- Tomography** A technique in radiography (X-ray) to obtain clear imaging by means of rotating the X-ray emitting tube in a specified manner.
- Tone-line process** Alternative name for *Etch-bleach process* and see *Bleach-out process*.
- Toning** See entry.
- Transparency** A positive photographic image on a transparent or translucent support, such as glass or film intended for viewing by a transmitted light source, such as a projector or a light box.
- Trichrome carbro process** An early form of the modern dye-transfer method in which layers of subtractive color images in carbon pigments are assembled in registration to create a color image, developed in the mid-nineteenth century. Also known as three-color carbro process.
- Tripod** Common form of support for a camera to allow for steady focusing and shooting, especially during long exposures; generally featuring three adjustable or telescoping legs that allow for set up on varying terrain.
- T-stop** A lens calibration similar to *f-stop* system that takes into account the variance between lens of differing designs in the amount of light transmitted to the film with particular applications in motion picture photography.
- Ultraviolet photography** Photography which captures light in the blue-violet end of the spectrum, not visible to the human eye, especially useful in evidence photography, and technical and industrial applications.
- Uniform system (U.S.)** Early calibration system for exposure settings on a camera, predating the *f-stop* system.
- Unique print** A photograph so printed or altered that only one original exists.
- Van Dyke process** A print process utilizing iron compounds which is the most basic form of the kallitype. Also known as brownprint.
- Variant** Used to describe photographs of a subject or view taken at approximately the same time that feature slight variations in either what appears as subject matter or the orientation or framing of the subject matter. Also prints of the same subject featuring varying exposures, cropping, or toning.
- Varnishing** Coating prints or negatives with varnishes or shellacs both to provide protection and achieve an even appearance.
- Velox** Trademark of the Kodak Company for a developing-out contact paper.
- Vignetting** An effect by which the central image is emphasized in a photographic print usually in a roughly circular or oval form. When unintended, vignetting is caused by an incorrect match between lens and camera format or improper lighting or exposure; when intended by masking the image during exposure or projecting image through a mask in the enlarging process.
- Waxed paper negative** A variant of the calotype negative.
- Wash-off relief process** See entry DYE TRANSFER.
- Wet collodion process** An early photographic process in which glass plates were made light sensitive utilizing a solution of nitrocellulose (gun cotton) in ethyl alcohol and ethyl ether. Exposure was made before the plate solution dried. Also known as the wet plate process.
- Woodburytype** A bichromate process developed in the mid-nineteenth century that achieves a true continuous tone and exceptionally faithful reproduction to the original through the creation of a relief image from a mold or series of molds.
- Xerography** See entry.
- Zone focusing** A method by which the *f-stop* can be selected based on predetermination of where the action or view to be photographed may occur.
- Zone system** Exposure and developing system developed by Ansel Adams and Fred Archer in the 1930s for black and white photography intended to allow the photographer to previsualize and predetermine exposure settings to achieve richest blacks and fullest range from black to white in any individual photograph, and match this to proper development techniques. Zones, which are conceptual rather than actual view areas, are numbered 0 through IX or in a later refinement, 0 through XI, Roman numerals being used to avoid confusion with *f-stop* numbers. Zone 0, for example, is represented by the maximum black tone obtainable in the individual print, with Zone I being the first discernible gray tone, and so on.

INTRODUCTION

Creating, in one useful, comprehensive publication, an encyclopedia of the history and practice of photography in the twentieth century is a daunting task. In any endeavor, the doing of it often best teaches how it should be done; and not only does the doing perfect the process, it refines the understanding of the subject of the endeavor and focuses the content to be more authoritative. Such is the case, certainly, with the current project.

The ambition of this project was to provide a useful resource of the entire scope of photography in the twentieth century. It was neither to be a definitive technical manual nor a compendium limited to the field's aesthetic achievements, but something more. The aim was to create an encyclopedia that would serve as a resource and a tool for a wide readership of students, researchers, and anyone interested in a scholarly discussion of photography history.

In this we believe it succeeds. The encyclopedia introduces the reader to the history of technical issues that have changed over a hundred-year period. It explains the contributions of photographers and situates their contribution within the history of photography. It defines the concepts, terms, and themes that have evolved over a century. It describes the role of institutions and publications in the shaping of that history. Importantly, the encyclopedia also explains the development of the medium in specific countries and regions around the world—offering a global understanding and a more local perspective of photography history.

This is the main purpose of the encyclopedia, to define the broad outlines and fill in the intimate details of twentieth-century photography. The user will find the large and small of twentieth-century photography. The project gathers information on the most often cited names, terms, concepts, processes, and countries, and it also gives ample attention to those most overlooked. Significantly, it provides the historical and theoretical contexts for understanding each entry so that the expanse of photography history in both its distinct and its partial developments is maintained throughout.

As a resource, the encyclopedia supplies the reader with tools for finding information. Extensive cross-referencing allows the reader insight into the various directions a topic or individual entry may lead: historical, theoretical, or technical. A glossary of terms directs the reader to definitions, describes processes as they were standardized at the end of the century, and gives technical information on photographic terminology, equipment, and accessories. In addition to an alphabetical listing of articles, the articles are also listed by subject to help orient the reader. Subjects are straightforward: equipment; institutions, galleries, and collections; persons; publications and publishers; regions; topics and terms. Each article is signed by the contributing scholar; readers can find a list of contributors in the front matter of volume one. Scholarly references are included at the end of each article so that the interested individual may further explore the topic in more detailed publications. Over 200 illustrations and glossy inserts in each volume will aid the reader's understanding of the articles, but the illustrations are not intended to be the strength of the encyclopedia. This is a work of scholarship, a book intended to be read rather than viewed—we point the readers to resources that contain the thousands of photographs that constitute twentieth-century photography. Finally, the analytical index serves as a critical tool that systematically guides the reader through the contents of the three volumes. The index directs the reader to discussions of sought for information but also allows the reader to explore the contents and discover related items of interest.

While it is hoped that the professional will find the publication as useful as someone approaching photography for the first time, the publication was not intended to take the place of the many fine monographs, textbooks, exhibition catalogues, and websites published for the professional audience that

INTRODUCTION

have proliferated in the field at the end of the century. It might be considered a port of entry to the world of twentieth-century photography and photography scholarship.

When this project was conceived, the twentieth century was in its final decade, yet it was not then clear that the arbitrary demarcation of the century as regards photography would be an actual marker as well. The astonishingly rapid rise of digital technologies during the 1990s distinguishes the shape of the medium in the twentieth century in a real way, just as the introduction in 1898 of the mass-use Brownie camera and all its attendant technologies forever wrenched the medium from its nineteenth-century essence as the domain of the dedicated enthusiast, whether professional or amateur. The democratization of the medium certainly seemed to be the main story being told at mid-century, and it may indeed, at further remove, be the overarching feature of the twentieth century. For ironically the digital revolution offers at the same time more and less access—more if one has electricity, a digital camera, and a computer, less if one does not, and many, at the beginning of the twenty-first century, certainly do not. Yet whatever the digital revolution may hold, it seems clear that the obsolescence of the standard photo-chemical processes and the widespread access to the medium they undoubtedly provided will define photography in the new century. Already, in 2005, photo-chemical films and papers have been discontinued or are no longer distributed in the United States; traditional processing labs are vanishing, and items that stocked the traditional darkroom are becoming collectibles, if not landfill.

The encyclopedia had the benefit of the knowledge provided by the distinguished Advisory Board. These individuals freely provided their expertise and advise. The process of selecting the topics and photographers, like anything else, reflects a degree of subjectivity. Yet this subjectivity was tempered by the broad range of experience represented by the Board. Topics were selected to provide snapshots of the entirety of the field utilizing established genres—“fashion photography” or “documentary photography,” or obvious entities—“camera” or “Museum of Modern Art.” Entries on individuals were more winnowed out than selected. The towering figures are obvious: they fill bookshelves and auction catalogues. But other, lesser known figures of regional importance or photographic innovators were also deemed important to record, and their selection rested on judgment, and to some extent, intuition. The attempt was also to broaden the scope from the United States and Europe, with its long history of photography, to an international one, both in topic discussions and selection of photographers. It goes without saying that many, many other serious, important practitioners of photography and photographic topics and institutions could have been included, yet for the purposes of this publication, we limited the number of entries to 525.

Finally, as tempting as it might have been for the many fine art historians, critics, and writers who authored these essays (and I thank them deeply for their efforts) to come up with original interpretations of photographers’ contributions or innovative theoretical stances, the encyclopedia was not intended as an opportunity for scholarship in the form of new interpretations of established figures or revisionary accounts of historical movements.

Conventions and Features

The encyclopedia is arranged alphabetically; spellings of names reflect the most common usage at the end of the century and attempt to use proper diacritical marks in languages which require them. The use of monikers as opposed to given names (i.e. “Weegee” as opposed to Arthur Fellig, or “Madame D’Ora” as opposed to Dora Kallmus) is also based on most common usage. Such “noms-de-photographie” are arranged in the appropriate alphabetical order, with given names included in the entry.

In reference materials, names of institutions are generally given as the full, proper name at the time of the citation. Thus, prior to 1972, it is the George Eastman House; from 1972 onward, the International Museum of Photography and Film, George Eastman House. For the most part, institution names are given in the original language to alleviate confusion about proper translation and ease further research, thus rather than the National Library of France, Bibliothèque nationale de France, and so on.

All entries feature bibliographies or further reading lists. Topics on individuals feature a Capsule Biography for quick reference and a list of Selected Works. Photographers also receive a listing of selected Individual and Group Exhibitions, with as complete information as is available detailing those exhibitions. Websites are occasionally given for governmental agencies, established institutions—especially museums—as well as for some foundations or individual archives. Private websites were generally avoided both to avoid endorsement and the fact that many such websites fail to be maintained over the course of time.

* * *

Although I am a curator of contemporary art, my first love was for photography. I studied it in school and practiced it as a student, taught by photographers who themselves turned out to be “towering figures.” As a curator I have organized a number of photography exhibitions, and overseen the collecting of contemporary photography. Yet I am hardly the foremost expert in the field, and thus was truly honored to have been asked to edit this important publication. I hope that my efforts have been equal to expectations.

LYNNE WARREN
Chicago, Illinois

A

BERENICE ABBOTT

American

Berenice Abbott's accomplishments in the world of photography are wide-ranging and unique. As a photographer, Abbott made important contributions to the art of portraiture, visual documentary, and science photography. As an archivist, she maintained and promoted the work of Eugène Atget for nearly 40 years. Equally, she was an educator, inventor, and an important photographic theorist. She maintained that "the vision of the twentieth century has been created by photography [...] the *picture* has almost replaced the *word* as a means of communication" (Abbott 1951, 42). Likewise, she believed in the ability of the photograph to record the modern world, supplying novel ways of seeing and new truths.

Abbott spent her youth in Columbus and Cleveland before enrolling at Ohio State University in 1917. After only a year at the college, she grew restless and moved to New York. While there, she shared a Greenwich Village apartment with Djuna Barnes, Malcolm Cowley, and Kenneth Burke and worked at the Provincetown Playhouse. Despite what must have been an invigorating experience, Abbott grew disenchant-

ed with America and in 1921 bought a one-way ticket to France.

During her first two years in Paris, Abbott studied sculpture and drawing, yet failed to maintain a steady income. In 1923, she was introduced to the American-born Dada artist Man Ray who was looking for a photographic assistant. Abbott volunteered and was accepted on the spot. Under Man Ray's tutelage, Abbott learned about the darkroom, but by her own admission, nothing about the practicalities of photographic techniques. While vacationing in Amsterdam in 1924, she took her first photographs and her devotion to the medium followed quickly. She began to photograph Paris and gained a sizable reputation. Soon the two photographers suffered an acrimonious split after arts patron Peggy Guggenheim bypassed Man Ray and requested a portrait session with Abbott. Although the relationship ended badly, Abbott would later state that Man Ray "changed my whole life; he was the only person I ever worked for [...] He was a good friend and a fine photographer" (O'Neal 1982, 10).

In 1926, Abbott held her first solo exhibition, established her own studio, and flourished. She worked for *Vogue* magazine, and her clients

ABBOTT, BERENICE

included artists and writers Jean Cocteau, Max Ernst, André Gide, James Joyce, Claude McKay, and Edna St. Vincent Millay. “To be ‘done’ by [...] Berenice Abbott,” Sylvia Beach once remarked, “meant you rated as someone” (O’Neal 1982, 12). Turning her back on the accepted standards of portrait photography, Abbott sought to dramatize, not flatter or romanticize her subjects. As she stated:

A portrait can have the most spectacular lighting effect and can be perfect technically, but it fails as a document (which every photograph should be) or as a work of art if it lacks the essential qualities of expression, gesture and attitude peculiar to the sitter [...] Personally I strive for a psychological value, a simple classicism in portraits.

(O’Neal 1982, 13)

In 1929, Abbott returned to New York for a brief visit only to find her former home irrevocably altered. She was fascinated by the city’s rapid transformation and decided against returning to Europe. She settled her affairs in Paris and embarked upon one of the most ambitious photographic projects of the twentieth century: to document in a comprehensive and precise manner, the face of modern, changing New York. As she stated in 1932 she sought to dramatize the contrasts of “the old and the new and the bold foreshadowing of the future.” Keenly aware of the scope and essential significance of the nascent modernity and urbanization of the city, Abbott desired to “crystallize” its transition in “permanent form” (O’Neal 1982, 16).

Abbott’s first New York photographs appeared in *Architectural Record* in May 1930, but during the five years that followed she was unable to procure funding from any of the private and institutional sources she approached. Throughout this period, Abbott supported herself working for such magazines as *Fortune* and *Vanity Fair*. In 1934, the New School for Social Research offered her a job teaching photography. She accepted a one-year contract little knowing that the position would supply her main source of income for many of the next 24 years. This year also witnessed the first major exhibition of Abbott’s New York photography. Mounted at the Museum of the City of New York, the show helped raise the profile of Abbott’s New York project and greatly contributed towards a successful funding application.

In 1935, Abbott applied for funding to the Federal Arts Project (FAP). In part, her proposal read:

To photograph NYC means to seek to catch in the sensitive and delicate photographic emulsion the spirit of the

metropolis, while remaining true to its essential fact, its hurrying tempo, its congested streets, the past jostling the present. The concern is not with an architectural rendering of detail, the buildings of 1935 overshadowing everything else, but with a synthesis which shows the skyscraper in relation to the less colossal edifices which preceded it [...] it is important that they should be photographed today, not tomorrow; for tomorrow may see many of these exciting and important mementos of eighteenth and nineteenth century New York swept away to make room for new colossi.

(Abbott 1973, 158)

In September 1935, her project—recently entitled *Changing New York*—was accepted by the FAP. Abbott was ranked project supervisor and was awarded funding and a small staff. Consequently, *Changing New York* became an immediate success. The photographs were published in *U.S. Camera*, *Popular Photography*, and the *Coronet*. The *New York Times* and *Life* both did extensive features. In December 1937, the Museum of the City of New York held another hugely successful exhibit; yet by December 1938, Abbott had taken her last project photograph and was demoted to assistant project supervisor. By August 1939, she had no staff at all. After proposing to document the 1939 World’s Fair, she was told she could remain on the FAP payroll only as a staff photographer. Choosing independence over employment, Abbott quit the FAP.

In late 1939, Abbott wrote a short memo to herself, the essence of which would occupy her photographic career for most of the next 20 years. Essentially she believed that “we live in a world made by science” and that photography could mediate between (as a “friendly interpreter”) science and the layperson in order to articulate and explain how knowledge controls and functions in everyday life (Van Haften 1989, 58).

Subsequently, Abbott began to experiment with scientific photography and in 1944 she became photo-editor of *Science Illustrated*. Although she quit the magazine two years later, Abbott continued to photograph scientific phenomena and the 1948 textbook *American High School Biology* included many of her illustrations. Her science photography inspired her to develop new photographic equipment, lighting methods, and techniques. In 1947, she incorporated The House of Photography to develop and promote her photographic inventions. Often in financial trouble, the company lasted until 1958, during which time Abbott established four patents.

Abbott continued her science photography in the 1950s, but her reputation, along with her finances,

languished until 1957, when the launch of the Russian Sputnik sparked a national obsession with science. Abbott, once again in vogue, was hired by the Physical Science Study Committee of Educational Services (PSSCES) to produce images for a new high school textbook. Her science photographs appeared in national and international magazines, and exhibits of her scientific work were shown in exhibitions around the country. In 1960, Abbott appeared on television in a program called *The Camera Looks at Science*, and the Smithsonian Institution acquired her entire scientific archive. After completing the seminal textbook, *Physics* (1960), Abbott left the PSSCES. She collaborated with Evans G. Valens on a further three scientific books in the 1960s.

Although Abbott's photography is often grouped into three distinct periods—portraits, New York, and science photography—she was equally fascinated by the landscape of America. Under the direction of Henry Russell Hitchcock, Abbott traveled America in 1933 recording the buildings of pre-Civil War America and the work of architect Henry Hobson Richardson. In 1935 she traveled to St. Louis with her friend Elizabeth McCausland, before heading into the Deep South. The resultant photographs anticipate much of the work conducted by Roy Stryker at the Resettlement Administration, although Abbott herself found it extremely difficult to intrude into the lives of people burdened with such poverty. In the 1940s, Abbott briefly worked for Stryker at Standard Oil, but had to withdraw due to poor health. In 1943, Abbott documented the work of the Red Rock Logging Company of California and in 1948 released her second New York book, *Greenwich Village: Today & Yesterday*. In the early 1950s, the photographer conceived a plan to document life along the Route 1 highway. Although she traveled from Kent, Maine to Key West, Florida twice in 1953, and took nearly 400 photographs, the project failed to find a publisher and remains Abbott's most obscure work. By the 1960s, however, Abbott's reputation was in the ascendancy and in 1966 she was given carte blanche to produce a photo-guide to the state of Maine, her recently adopted home. Shunning the standard guidebook images of the state, Abbott pointed her camera inshore and focused on the people and industries that made up everyday life in the state.

Abbott often stated that she had always had to balance two careers: her own and that of Eugène Atget. Abbott was introduced to Atget's photography in 1925 and subsequently befriended the

aging photographer. As she later noted, "Atget's photographs somehow spelt photography for me [...] their impact was immediate and tremendous. There was a sudden flash of recognition—the shock of realism unadorned" (Abbott 1964, 1). After Atget's death in 1927, Abbott acquired his complete archive and began to promote his work. On her return to America, Abbott lobbied to have the French photographer's work shown alongside her own and, for 40 years, acted as curator and agent for the Atget file, before finally selling the collection to the Museum of Modern Art in 1968. Moreover she supported the work of numerous other photographers. She endorsed the work of Mathew Brady, William Jackson, Dorothea Lange, Helen Levitt, Lisette Model, Nadar, and Timothy O'Sullivan. In 1939, she helped raise the profile of Lewis Hine by organizing an exhibit of his work at New York's Riverside Museum.

Throughout her life, Abbott wrote about the nature and practice of photography. Much of her thinking is clarified through her long-standing objection to the work and influence of Alfred Steiglitz. Abbott met Steiglitz in 1929 and found him pretentious and condescending. In contrast to Steiglitz as a modernist, Abbott believed there was "poetry in our crazy gadgets, our tools, our architecture" and that photography should fulfill "civic responsibilities": "the photograph may be presented as finely and artistically as possible, but to merit serious consideration, it must be directly connected with the world we live in" (O'Neal 1982, 14, and Abbott 1951, 47). Unlike Steiglitz and his followers of the important "291" Gallery, Abbott saw no connection between painting and photography:

If a medium is representational by nature of the realistic image formed by the lens, I see no reason why we should stand on our heads to distort that function. On the contrary, we should take hold of that very quality, make use of it, and explore it to the fullest.

(Abbott, "It Has to Walk Alone" 1951, p. 6)

She repudiated the manipulation of images characteristic of avant-gardism and championed realist, that is, documentary content. Photography, she believed, should orient itself towards documentary expression: it should strive towards the real and historical, not the artificial; it should record not imagine. Abbott's photography exemplified her philosophy. For almost 70 years, Abbott sought to capture the changing nature of everyday life. Through it, she forged an aesthetic of modernist realism that reflected the American scene, the me-

ABBOTT, BERENICE

dium of photography, and the essence of the twentieth century.

RICHARD HAW

Biography

Born in Springfield, Ohio, 17 July 1898. Attended Ohio State University, 1917–1918; moved to Paris to study sculpture, 1921. Worked as photographic assistant to Man Ray, 1923–1926; established own portrait studio in Paris and held first solo exhibition, 1926; began to document New York City independently, 1929–1935; traveled with Henry Russell Hitchcock to record pre-Civil War architecture and the work of Henry Hobson Richardson, 1933; began to teach photography at New York's New School for Social Research, 1934; traveled the South with Elizabeth McCausland, 1935; received funding from the Federal Arts Project and worked on the *Changing New York* project, 1935–1939; began science photography, 1940; documented the Red Rock Logging Company in California, 1943; worked as photo editor on *Science Illustrated*, 1944–1946. Published *Greenwich Village: Yesterday & Today* (1949), *Magnet* (1964), *Motion* (1965), *A Portrait of Maine* (1968), *The Attractive Universe* (1969), and *The Red River Photographs* (1979). Incorporated the House of Photography, and established four photographic patents, 1947–1958; began to photograph Route 1 project, 1953; retired from teaching at the New School for Social Research, 1958; worked for the Physical Science Study Committee of Educational Services, 1958–1961. Honorary doctorate from the University of Maine, 1971; honorary doctorate from Smith College, 1973; received the Association of International Photo Art Dealers' award for Outstanding Contribution to the Field of Photography, 1981; honorary doctorate from Ohio State University, 1986; awarded the First International Erice Prize for Photography, 1987; inducted as an Officer in the Legion of Arts and Letters by the French government, 1988. Died in Monson, Maine, 9 December 1991.

Individual Exhibitions

- 1926 *Portraits Photographiques*; Au Sacre du Printemps; Paris, France
- 1932 *Berenice Abbott: Portraits*; Julien Levy Gallery; New York, New York
- 1934 *Photographs for Henry-Russell Hitchcock's Urban Vernacular of the Forties, Fifties and Sixties*; Yale University, New Haven, Connecticut, and traveling
- 1934 *Photographs of New York City*; Museum of the City of New York; New York, New York
- 1937 *Changing New York—125 Photographs*; Museum of the City of New York; New York, New York
- 1947 Galerie de l'Epoque; Paris, France
- 1950 Akron Art Institute; Akron, Ohio
- 1951 Art Institute of Chicago; Chicago, Illinois
- 1953 San Francisco Museum of Modern Art; San Francisco, California

- 1959 *Science Photographs*; New School for Social Research; New York, New York
- 1960 *Science Photographs*; Smithsonian Institution; Washington D.C. and traveling
- 1970 *Berenice Abbott: Photographs*; Museum of Modern Art; New York, New York
- 1973 Witkin Gallery; New York, New York, and traveling
- 1976 *Berenice Abbott*; Marlborough Gallery; New York, New York
- 1977 Treat Gallery; Lewiston, Maine
- 1979 *Berenice Abbott: The Red River Photographs*; Fine Arts Work Center; Provincetown, Massachusetts
- 1980 *Berenice Abbott: Documentary Photographs of the 1930s*; The New Gallery of Contemporary Art; Cleveland, Ohio
- 1982 *Berenice Abbott: The 20s and 30s*; Smithsonian Institution; Washington, D.C., and traveling

ABSTRACTION

Discussions of abstraction in photography may seem to be a paradox as one is accustomed to its function of mechanical reproduction and of its descriptive representation. Yet, the fact that a photograph is difficult to recognize or hardly legible is not incompatible with its technical definition—a luminous print on a photosensitive surface. Whatever its nature is, the photographic image always remains an image or representation of something, even if the photographer uses various processes to make the viewer forget what the image is a representation of. Since its discovery in 1839, photography has served many documentary uses, producing pictures based upon the representational codes of human vision (verism). Nevertheless, from the early twentieth century, many photographers have sought to transcend this use by experimenting and developing an abstract practice of photography.

Origins of Abstraction

The history of photography often converges with that of Modernism in the late nineteenth and early twentieth centuries, chronologically as well as intellectually. The photograph's history was marked in particular by the idea of the specificity and growing autonomy of the medium—the medium's internal logic, principles, and evolution. The earliest abstract paintings emerged around 1910 by Vasily Kandinsky, Kasimir Malevich and others; historians observed almost at the same time the emergence of similar preoccupations among photographers. As early as the beginning of photography from the “photogenic drawings” of William Henry Fox Talbot in the 1830s to the studies of motion by Thomas Eakins and Etienne-Jules Marey (what he termed “chronophotography”) in the 1880s, one finds images that could be described as abstract, although they serve scientific

and technical purposes over aesthetic goals. It is only by 1908 that the germ of the formalist, stylized processes indicative of modernity emerged in Great Britain with Malcolm Arbuthnot's *The Doorstep* or *The Wheel*; these works revealed his interest in Japanese art with emphases on composition, structure, asymmetry, line, distribution of light and shade. After Arbuthnot, the appearance of deliberately abstract photography occurs in the mid-1910s in America with Paul Strand's *Porch Shadows* or *The Bowls* in 1915, pictures in which he played with forms and masses, composition and close frame. Already three years earlier, a similar work was realized by Alvin Langdon Coburn with his series *New York From Its Pinnacles*, and in particular, *The Octopus*, in which a bird's eye view flattened perspective and generated two-dimensional pattern. Strand would wait until his meeting with Ezra Pound and the Vorticism movement, inspired by the complexities of industrialization and urbanity, to realize between 1916 and 1917 his well-known series *Vortographs*. These works revealed his interest for cubist diffraction of space, and Italian futurism's obsession with dynamism and movement.

Evolution

The tendency towards abstraction in form of the aforementioned photographers illustrates what followed and lingered throughout the twentieth century, that is, the coexistence of two parallel views among American and European modernist photographers. These views included on the one hand, the inheritance of “pure” or “Straight” photographic aesthetic launched by American photographers such as Alfred Stieglitz, Aaron Siskind, and others; and on the other hand, an experimental aesthetic directly derived from the European

avant-gardism of László Moholy-Nagy, Alexander Rodchenko, and others.

Straight Photography sought to seize an objective reality made of everyday objects that usually escape the human eye. Without any manipulation and by emphasizing purely photographic processes such as framing, lighting, focus, scale, or viewpoint, the resulting images exploited the pure formalism of flattened and two-dimensional patterns, geometry, and design. This trend was well illustrated in America with Bernard Shea Horne, Max Weber and their students of Clarence H. White School of Photography in the 1910s, in Charles Sheeler's *House Of Doylestown, Staircase* (1917), in Stieglitz's series *Equivalents* in 1923–1931, and in Siskind's later work of the 1930s and 1940s. A related strain of the Americanists' Straight Photography materialized with the New Vision (*Neue Sehen*) in Germany and Russia whose prominent representatives were Moholy-Nagy (*From the Radio Tower Berlin*, 1928) and Rodchenko (*On The Pavement*, 1928).

Even more experimental or aesthetically radical than the work of the aforementioned Straight photographers was another strain of abstraction that considered photography as an ideal means of plastic expression to build and create new visual codes. Using a diversity of practices such as the photogram, manipulation of light, movement and chemistry, European photographers realized a range of recurrent features that became associated with modernist abstraction. Because the photogram was produced without a camera, the artist could create images from shadows and silhouettes of objects that were placed between the light source and light-sensitive paper or film, thus bypassing the mechanical or technical apparatus in favor of imagination and even surrealism.

At the origins of numerous abstract manipulations, the photogram became one of the most enduring techniques of the century, finding practitioners in Christian Schad as early as 1918, Man Ray in 1921, and Moholy-Nagy in 1922. Exemplifying Dadaist and Constructivist preoccupations, photogram processes allowed the exploration of photography's profound nature by exploiting the play of texture, pattern, transparency, and the duality of positive-negative relationships. The process permitted many possibilities such as experimentation with dematerialization, the interpenetration of forms, distortion and lack of perspective. Various artists such as Theodore Roszak, Georg Zimin, Piet Zwart, and Willy Zielke made photograms in the 1930s; Bronislaw Schlabs, Julien Coulommiere, Andrzej Pawlowski, Beksinki and Kurt Wendlandt in the 1940s and 1950s; Lina Kolarova, René

Mächler, and Andreas Mulas in the 1970s; Tomy Ceballos, Kare Magnole, Andreas Müller-Pohle, and Floris M. Neusüss have utilized the process in the 1980s.

Equally important among abstract practices, the use of light remains a fundamental principle with the function not only to reveal and make visible, but also to be exploited as a real material. In this respect, several trajectories can be traced, including the pictures of lighted surfaces or volumes in Francis Bruguière's *Light Abstractions* (1919) and Jaromir Funke's *Light Abstraction, Rectangles* in the 1920s. Between the 1930s and the 1950s photographers such as Moholy-Nagy with his *Light Modulator* "machines," Barbara Morgan seized upon luminous flow, whether fixed or in motion, to produce calligraphic expression. More recently in France, Thomas Reaume in the 1980s and Bernard Lanteri in the 1990s have realized luminous and fluid forms that defy the fixed nature of the photographic image.

Movement and blurredness represent another aspect of abstraction in photography. This tendency is illustrated by the works of Italian futurists such as the brothers Arturo and Antonin Bragaglia's photodynamism and aerial photography by Fedele Azari and Filippo Masoero, in addition to the kineticism of German photographers Oskar Schlemmer, Peter Keetman and Otto Steinert in the 1940s–1950s. Generally, these works fit an aesthetic of speed and movement linked to the expressions of the artistic avant-garde of the time. But it is only by the 1950s that an aesthetic of blurredness, movement, and random quality peculiar to photography found expression. As such, it seemed that American William Klein's work was as much a beginning and a major reference for contemporary photographers such as Gerard Dalla-Santa, Frederic Gallier, Hervé Rabot, Patrick Toth, and Müller-Pohle who during the 1980s viewed movement not only as a transcription of the urban world's brutal dynamism but also as a mine of pure form, revealing the visual and tactile qualities of photography (for example, grain).

Finally, choosing to relinquish the optical aspect of the medium, another group of photographers preferred to explore the medium's physical chemistry. Relying on darkroom experimentation and camera-less imagery, photographers explored the abstract qualities possible in chemical experimentation, leading to the specific forms of Edmund Kesting and Chargesheimer in the 1940s, and Stryj Piasecki or Pierre Cordier in the 1950s. Sigmar Polke during the 1970s and Riwan Tro-meur during the 1980s have produced a peculiar

ABSTRACTION

formal vocabulary by altering the very photographic chemical process.

ANSEL ADAMS

American

Throughout his life, Ansel Adams made monumental contributions as a photographer, teacher, lecturer, conservationist, and writer. He is best known as an undisputed master of straight natural landscape photography. His photographic studies of the American western landscape have gained extraordinary prestige and popularity, partly because he achieved an unsurpassed technical perfection by approaching the medium in a scientifically precise way and insisting on absolute control of the photographic process. According to Adams, an initial and most important constituent of this process is the photographer's visualization of the final product, which involves an intuitive search for meaning, shape, form, texture, and the projection of the image-format on the subject. The image forms in the photographer's mind before the shutter opens. Put in Adams's own words:

The camera makes an image-record of the object before it. It records the subject in terms of the optical properties of the lens, and the chemical and physical properties of the negative and print. The control of that record lies in the selection by the photographer and in his understanding of the photographic process at his command. The photographer visualizes his conception of the subject as presented in the final print. He achieves the expression

of his visualization through his technique—aesthetic, intellectual, and mechanical.

(Adams 1985, 78)

Born in San Francisco in 1902, Adams was interested at an early age in music and was trained to become a concert pianist. At the age of 14, on a family vacation in the Yosemite Valley, he took his first photographs—an experience that would inspire him for the rest of his life. Back in San Francisco, parallel to his education in music, Adams studied photography with a photofinisher. He returned to Yosemite regularly to dedicate himself to photography, exploration, and climbing. In 1920, he formed an association with the Sierra Club (a conservation organization), and in 1928, the year he married Virginia Best, began to work there as an official photographer. His first photographs were strongly influenced by the prevalent pictorialist style, visible in his 1921 *Lodgepole Pines*, a characteristic soft-focus, romantic image. This style would turn quickly into a more "honest" representation of nature. In 1927, Adams's first portfolio was published, *Parmelian Prints of the High Sierras*. After meeting Paul Strand in 1930 and being deeply influenced by his straight approach to the subject, Adams took the decision to devote his life to photography. By working as a

commercial photographer, he found a solution that would allow him to support his family and at the same time enable him to pursue the development of his own artistic photographic work.

Although first offered only occasional photographic jobs by private persons and California area companies, Adams gained gradually a reputation and was soon offered jobs across the country by major companies such as the American Telegraph and Telephone Company, *Life* magazine, the American Trust Company, and Eastman Kodak (later in his career).

Adams's first individual exhibition was held in 1931 at the Smithsonian Institution, Washington, D.C., and a year later, his work was exhibited at the M.H. de Young Memorial Museum, San Francisco. In that same year, 1932, he founded the Group f/64 together with Willard Van Dyke, Edward Weston, Imogen Cunningham, Sonia Noskowiak, John Paul Edwards, and Henry Swift. The name f/64 refers to the smallest aperture of the camera lens, a setting that produces the largest field depth and consequently sharply focused and finely detailed images.

The group promoted straight, pure modernistic photography, in contrast to the prevalent sentimental turn-of-the-century pictorialist style. Soft-focus and emotionalism was replaced by emphasis on crystalline sharp form and texture. Frequently, the photographic subjects were chosen deliberately simple, often seen in close-up and creating sometimes abstract designs, as for example in *Burnt Stump and New Grass*, 1935; *Rose and Driftwood*, 1932, *Frozen Lake and Cliffs*, *Surf Sequence* (a sequence of five images), 1932; or *Wood Flame*, *Tree Detail*. The prints were produced on glossy gelatin silver papers mounted on white board. Filters and only basic printing techniques, such as burning and dodging, were considered acceptable. In fact, Adams used filters often in order to accentuate the structure of clouds against the sky, or in general to darken a blue sky to appear almost completely black on the prints, as for instance in *Monolith, the Face of Half Dome* or *High Country Crags and Moon, Sunrise*, c. 1935.

Despite the clear rules of the Group f/64, Adams did not eschew a certain degree of experimentation, and used a variety of miniature and large-format cameras. After meeting Alfred Stieglitz in 1933, he opened the Ansel Adams Gallery in San Francisco. He published several articles in *Camera Craft* in 1934 and a year later, his first book, *Making a Photograph*, which was received with enthusiasm and assured him a worldwide reputation as a photographer. In many of his publications, Adams promoted the approach of

the Group f/64 with passion. The most convincing, tangible, and by the broad public best understood and admired arguments in favor of this approach, however, were undoubtedly Adams's photographic studies of the west coast. They stand as testimony for the power and beauty of straight photography. The sharp images of majestic mountainous landscapes, untouched by mankind, convey a sense of awe and instill respect and a desire for conservation of nature, an aspect that was most important to Adams throughout his life. Famous examples are Adams's *Tenaya Lake*, *Mount Conness*, c. 1946; *Winter Sunrise*, 1944; or *Moon and Half Dome*, 1960. Adams developed a strong intuition for the exact moment in time where the constellation of sun and clouds, shadow and light would combine to the desired dramatic interplay between strongly textured and planer, flatter elements of the image. Anticipation plays a decisive role in capturing the right moment: "Anticipation is one of the most perplexing capabilities of the mind: projection into future time. Impressive with a single moving object, it is overwhelming when several such objects are considered together and in relation to the environment" (Adams 1985, 78). Examples showing the effect of successfully capturing the right moment are Adams's *Clearing Winter Storm* (1944), or *Mount Williamson* (1944). However, the best example is his most well-known photograph, *Moonrise, Hernandez, New Mexico*, 1941, where, as is often the case, capturing the right moment was a matter of seconds:

After the first exposure I quickly reversed the 8×10 film holder to make a duplicate negative, for I instinctively knew I had visualized one of those very important images that seem prone to accident or physical defect, but as I pulled out the slide the sunlight left the crosses and the magical moment was gone forever.

(Ansel Adams, 273)

By 1936, Adams had earned such a reputation and impressed Stieglitz so much that an important one-man exhibition of his work was held at An American Place, New York. Adams moved into the Yosemite Valley, taking trips through the Southwest with Edward Weston, Georgia O'Keefe, and David McAlpin. The resulting photographs were published in 1938 in *Sierra Nevada: The John Muir Trail*. He met Nancy and Beaumont Newhall in New York in 1939, where in the following year, he assisted, together with McAlpin, in the creation of the Department of Photography at the Museum of Modern Art (MoMA).

In an effort to control the photographic process and to be able to record the visual impressions of a

specific quantity and quality of light, Adams, with the help of Fred Archer, developed the Zone System in the late 1930s. This tool provides the photographer with a practical, yet scientifically grounded method implementing the conceptual basis of Group f/64. It helps to realize the vision by controlling exposure, development, and printing, and thus enabling the photographer to project the wanted detail, scale, texture, and tone onto the final image. The Zone System is still used today by professional photographers. Each of the 11 zones, ranging from 0 (pure black) to X (pure white) corresponds to a specific ratio between a subject's brightness as measured with a light meter to its density in the negative and hence to its tone in the final print. The Zone System became very popular thanks to Adams's publications and workshops, and soon became the most important form of printmaking.

At the beginning of World War II, Adams went to Washington, D.C., working as a photomuralist for the Department of the Interior. Photographs of a war-time essay for the cause of interned Japanese-Americans were exhibited at MoMA in 1944 under the title *Born Free and Equal*. During the next two years, Adams taught photography at the museum and in 1946 he co-founded one of the first departments of photography at the California School of Fine Arts, later known as the San Francisco Art Institute. In the same year, he obtained a Guggenheim Fellowship to photograph national park locations and monuments. The Fellowship was renewed in 1948, and five productive years of important and creative photographic work followed.

Portfolio 1: In Memory of Alfred Stieglitz was published in 1948 and in the same year, Adams started publishing technical volumes in the *Basic Photo Series*. In 1950, *Portfolio 2: The National Parks and Monuments* was issued. In 1953, he collaborated with Dorothea Lange on a photographic essay on the Mormons in Utah for *Life* magazine and started a photography workshop in Yosemite in 1955. His *Portfolio 3: Yosemite Valley* was published by the Sierra Club in 1960.

Adams moved to Carmel, California in 1962, where he played an important role in the foundation of the Friends of Photography, of which he became president. A year later, the de Young Museum exhibited a retrospective show of his work from 1923–1963 and in 1966, Adams was elected a Fellow of the American Academy of Arts and Sciences. By the late 1960s, Adams had given up active photography and dedicated his time to revising the *Basic Photo Series*, publishing several

books containing his life's work, as well as preparing prints for numerous exhibitions. Two years before his death, Adams defined his personal photographic credo in a catalogue for his exhibition *The Unknown Ansel Adams* at The Friends of Photography:

A great photograph is one that fully expresses what one feels, in the deepest sense, about what is being photographed, and is, thereby, a true manifestation of what one feels about life in its entirety. This visual expression of feeling should be set forth in terms of a simple devotion to the medium. It should be a statement of the greatest clarity and perfection possible under the conditions of its creation and production.

My approach to photography is based on my belief in the vigor and values of the world of nature, in aspects of grandeur and minutiae all about us. I believe in people, in the simpler aspects of human life, in the relation of man to nature. I believe man must be free, both in spirit and society, that he must build strength into himself, affirming the enormous beauty of the world and acquiring the confidence to see and to express his vision. And I believe in photography as one means of expressing this affirmation and of achieving an ultimate happiness and faith.

(Ansel Adams, 235)

Adams died in 1984 in Carmel. Major collections of his work are found in the following institutions: Center for Creative Photography, University of Arizona, Tucson (archives); San Francisco Museum of Modern Art; the M.H. de Young Memorial Museum, San Francisco; Bancroft Library, University of California, Berkeley; MoMA New York; Victoria and Albert Museum, London; Bibliothèque Nationale, Paris.

There are several films dealing with Adams and his work: *Ansel Adams, Photographer*, directed by David Myers in 1957; *Yosemite, Valley of Light*, directed by Tom Thomas in 1957; *Photography: The Incisive Art*, five television films directed by Robert Katz in 1959.

EDDIE ADAMS

American

A prolific photojournalist, the self-taught Eddie Adams has photographed over 13 wars in the course of a career that has spanned more than 40 years. Although it is specifically these war-related photographs that have earned him international renown as well as hundreds of awards including a 1969 Pulitzer Prize, Adams's oeuvre also includes portraits of numerous American presidents, foreign leaders of state including Pope John Paul II and Fidel Castro, celebrities such as Louis Armstrong and Clint Eastwood, and anonymous figures around the world. Adams's photos have regularly appeared in such newspapers and magazines as *Time*, *Newsweek*, *Life*, *Paris Match*, *Vogue*, *Vanity Fair*, *The New York Times*, and *Stern*, and he has also done commercial, fashion, and advertising photography for numerous corporate and private clients.

Adams is probably best-known through his Pulitzer Prize winning photograph he took in February 1968, while stationed in Saigon as a member of the Associated Press. The image depicts the American-educated and trained Brig. General Nguyen Ngoc Loan (then South Vietnam's National Chief of Police) in the act of executing a Viet Cong prisoner who had just been apprehended for murdering several of Nguyen Ngoc Loan's men. Graphic and violent, this photograph was published on the front page of the *New York Times* and, along with the NBC film of the same event, is credited with having provoked the civilian outrage that led to massive demonstrations against the Vietnam War

and quite possibly to President Johnson's decision not to seek reelection. Since then, the image (along with Nick Ut's photograph of a naked girl fleeing her napalmed village) has been reproduced so frequently that it has come to serve as synecdoche for the entire Vietnam War, and stands as Adams's most significant photograph.

The image of the Viet Cong prisoner's execution has also played an important role in the decades-long debate regarding the risks and values of war photography. Without images like this one, some have argued, the horrors of war would remain invisible to the public far away from the fighting and might therefore be taken less seriously. Yet others contest that contemporary war depends on the very possibility of photographic exposure and that egregious acts of violence are committed as a result of this publicity. For instance, it has been argued that Nguyen Ngoc Loan was only interested in publicly assassinating the Viet Cong prisoner because there were AP press corps there to capture the image. For him, the photographic evidence of the execution was meant to teach the Viet Cong what would happen to their forces if caught. In this sense, the image represents a staged event as much as it represents a document of truth, thereby putting into question the unmitigated truth-value of photography.

Adams is also well known for his photographic essay of South Vietnamese refugees entitled *The Boat of No Smiles*. It is often suggested that Congress circulated copies of this series of touching photographs in order to raise support for an amendment to current immigration law that would

allow President Carter to allow 200,000 South Vietnamese refugees the right to come to the United States.

Born in Pennsylvania, Adams enlisted in the U. S. Marine Corps during the Korean War. Self-taught in photography, he began working as a photojournalist for the Associated Press in 1961. Assignments in the 1960s and 1970s took him to Vietnam, Cambodia, Africa, and other international hot spots. In the 1980s and 1990s he has served as a special correspondent for *Parade* magazine, shooting numerous covers for that publication. Beginning in 2000, Adams embarked upon a project to travel the world photographing important advocates of human rights. In 2002, he published these photos, along with interviews conducted by Kerry Kennedy Cuomo in a Random House book entitled *Truth to Power: Human Rights Defenders Changing Our World*.

Adams's contribution to twentieth century photography also includes his work at Barnstorm: the Eddie Adams Workshop, a tuition-free training camp he started in Jefferson, New York in 1988. Intended for ambitious student photographers interested in a hands-on opportunity to work with leaders in their field, the workshop has become very prestigious and is notoriously difficult to get into. Its importance in training a new generation of photojournalists will be seen as the twenty-first century unfolds.

ROBERT ADAMS

American

Photographer Robert Adams has documented the changing American West since the late 1960s. His black and white photographs, along with his significant writings, have explored the complex relationship of humankind to the natural environment. Adams's photographs emphasize the tension that lies between human expansion and nature. His seemingly stark, documentary-style images capture the need for home, the inescapable destruction of the land in western expansion, and the resiliency of nature. These photographs record suburban housing tracks, desolate prairie highways, mountain overlooks, highway exchanges, beaches, and people shopping. Adams seeks out the ordinary and often overlooked, allowing the viewer to question their own place and behavior within society and their natural surroundings.

Adams has always had an interest and love of the land. Some of his earliest and fondest memories are of hiking with his family in the woods. In the 1940s, Adams began to suffer from asthma. This propelled his family to move first to Madison, Wisconsin, and then to Colorado, for his health. While growing up in Colorado in the 1950s, Adams continued to be very active in the outdoors, becoming an Eagle Scout, guide and camp counselor, and working for the U.S. Forest Service. The many natural areas Adams explored as a young man would later become the areas he would see so drastically changed and be compelled to document in his photography.

At age 19 and before going to college, Adams's concern for societal issues led him to consider becoming a minister, as his great-grandfather had been in the Midwest. Although he did not pursue the ministry, his social concerns would be born out through his photography. Adams went on to study English at the University of Redlands in California, graduating in 1959 and later, pursued his Ph.D. in English from the University of Southern California, which he completed in 1965. In 1962, Adams returned to Colorado to teach English at Colorado College in Colorado Springs. He was troubled by the changes that had occurred during his absence. "I came back to Colorado to discover that it had

become like California...The places where I had worked, hunted, climbed and run rivers were all being destroyed, and for me the desperate question was, how do I survive?" (Di Grappa 1980).

During his time in Colorado Springs, Adams began to find that through photography he could "say what he wanted to say—which approximated what I felt" (Brooke 1998, 100). With little formal training in photography, Adams would in the late 1960s begin to capture the rapidly changing American West and the people who inhabit it. He wrote of his work in an essay "In the American West is Hope Possible":

So, when I have the strength to be honest, I do not hope to experience again the space I loved as a child. The loss is the single hardest fact for me to acknowledge in the American decline. How we depended on space, without realizing it—space which made easier a civility with each other, and which made plainer the beauty of light and thus the world.

(Adams 1989, 159)

Adams taught at Colorado College until 1970, when he turned to photography full-time. Important to his early career, Adams met John Szarkowski, director of the department of photography at the Museum of Modern Art (MoMA), in 1969. Szarkowski subsequently bought four of Adams's prints and supported Adams and his new approach to documenting the Western landscape. Adams was included in exhibitions at MoMA in 1970, 1971, and 1973 and throughout his later career. In 1975, he was one of several photographers featured in the important exhibition *New Topographics: Photographs of a Man-Altered Landscape* at the International Museum of Photography at George Eastman House, Rochester, New York. Through this exhibit, he became associated with the "new topographic" photographers, including Lewis Baltz, Joe Deal, Frank Gohlke, and Stephen Shore. These photographers all acknowledged the human existence in nature through their work, in contrast with other "western" photographers such as Ansel Adams (no relation), Imogen Cunningham, and Edward and Brett Weston of Group f/64, whose photographs often reflected a mythical and pristine natural landscape. Robert Adams and others were utilizing the

photographic medium to begin defining a new area of social critique.

Adams's inspirations are many. In his writings or in the accompanying text to his work, he regularly quotes poets and writers, including Henry David Thoreau, Edward Abbey, and others. He also cites and discusses painting, sculpture, and architecture as influential to his work. In particular, the German architect Rudolph Schwarz, known for his church designs, has influenced Adams. Beyond the documentary and social context, Adams's photographs have also been critiqued on a formal or aesthetic level. Most notably, his work has been compared to the paintings of American painter Edward Hopper, through his similar use of stark light, lone figures, and a building or element within the broader landscape.

Adams published his first book, *White Churches of the Plains*, in 1970 and proceeded to successfully publish over 20 books over the following 30 years. Included are *The New West: Landscapes Along the Colorado Front Range* (1974), an important early work; *From the Missouri West* (1980), Adams's personal survey of western expansion; *Summer Nights* (1985), which captured the contrasting beauty and solitude of the inhabited suburban landscape; *To Make it Home: Photographs of the American West* (1989); published to coincide with his major retrospective exhibit at the Philadelphia Museum of Art; and *West from the Columbia* (1995), which captures the landscape of the Oregon Coast where Adams and his wife vacationed for years and now live.

Adams's oeuvre extends beyond obvious irony and does not suggest an easy answer to the existential questions it poses. The viewer must come to grips with his or her own position in relation to the future and in relation to landscape and civilization. In sorting out these conflicts, the photographer has written,

Most of my hopes are for the amelioration of problems—a more conservative pattern of land use, a reduction in air pollution, a more prudent consumption of water, a lessening of animal abuse, a more respectful architecture. When I think about the possibility, however, of a landscape enriched by specific places to which we have responded imaginatively and with deference, I find myself thinking that we might be permitted to call it improved.

(Adams 1989, 163)

AERIAL PHOTOGRAPHY

The technology of aerial photography stems from nineteenth century devices—the photographic camera and air travel—but it was conceived in social and technological forces that began at the dawn of Western civilization. It is thus central to the development of photography, even though it is rarely treated as a subject of commentary.

Aerial photographs offer a geometrically determined view of objects within a given area. The origins of this view lie in the third millennium BCE, when Sumerian priests ruled city-states through estate management and a religion based on sky gods. As conceived at the time, urban deities surveyed their domains from the sky, conveying legitimacy onto the priests, who realized the aerial view with surveying. Since then surveying has been essential to governance, and from it has come geometry and a cascade of geometric disciplines, notably perspectival drawing and classical optics, that led to the development of photography.

The uses of aerial surveys have changed little since the days of Sumer. Every day the infrastructure and citizens of advanced nations are photographed dozens of times by a vast network of cameras based on satellites, aircraft, buildings and poles. These cameras are creating real-time maps of their subjects at scales ranging from the intimate to the global, and, as the first survey maps of Sumer, these automated mapmakers aid in governance of society and the control of resources.

The relation between photographs and maps may not be immediately obvious because most photographs are vertically stratified, that is they reveal the horizontal detail of their subject. However, when the picture plane of a camera is held parallel to the surface of the earth, as in aerial photography, the inherently map-like nature of

photography is intuitively obvious. Photographs and maps both reveal the spatial aspects of the environment, that is, the arrangement of objects on a plane in relation to one another. In both aerial photography and cartography, the vantage can offer some level of vertical stratification, the so-called chorographic view, or it can represent objects in their proper geometric form. Our visual intuition on the relationship between maps and cameras is backed by the historical development of the camera and the techniques of perspectival drawing that it automated.

Aerial photography began in the mid-1800s, some thirty years after the advent of photography. In 1858 the pioneering Parisian Nadar took a camera on a series of balloon ascents, and in 1864 he published a book about the experience, *Les Mémoires du Géant*. On the other side of the Atlantic, J. W. Black and Sam King ascended 1,200 feet in a balloon to take a photograph of Boston in 1860. It was war, however, that stimulated the development of aerial photography. Nadar refused his services to Napoleon III in 1859, but commanded the Paris balloon corps during the siege of the early 1870s. By then the American Civil War had established a number of wartime precedents. As the war broke out in 1861 a civilian balloonist inadvertently flew over Confederate states. His report convinced the Union government to support the creation of the U.S. Balloon Corps, which operated until 1863. During that time photographers stationed in tethered balloons created large-scale maps of battlefields that were overlaid with grids to determine troop movements.

In the twentieth century, the prospects of aerial photography improved as did aircraft, cameras, and telemetry. Balloon reconnaissance continued

in World War I, but by World War II lighter-than-air craft were replaced by airplanes. Development intensified during the Cold War. In the 1950s high-performance spy planes cruised the stratosphere, but, with the Soviet downing of an American U-2 in 1960, officials on both sides of the conflict realized that orbiting satellites were the safest option. The Soviet Union orbited the first surveillance satellite, but it was rapidly followed by the Corona program of the United States. The first generations of spy satellites ejected bulky containers of film into the atmosphere, but these were replaced by high resolution video signals.

To this day military and intelligence bureaus have been the prime innovators of aerial photography. Every aspect of the medium is subject to constant improvement. Airplanes and spacecraft have been improved, lenses have staggering resolution and digital technology has replaced analog signals. Aerial photography is of such importance that its full capabilities at any given time are a state secret. Surveillance programs were kept hidden for many years, and there is a lag of decades between the collection of military photographs and their release for other uses.

The dominance of the United States at the end of the twentieth century cannot be overstated. The satellites of Russia, France and a few other space-going nations offer little competition to the extensive surveillance network maintained by the United States. During the Cold War aerial imagery mostly served strategic purposes, but the U.S. military is now creating systems that offer live imagery of battlefields from satellite and aircraft, notably the Predator drone used in Serbia, Afghanistan, and Iraq in the last decade of the twentieth century. Building on Civil War technologies, computers overlay battlefield images with an information grid that provides a tactical advantage to combat soldiers.

Aerial photography has also found ample civilian application. Commercial applications include architecture, construction, urban planning and other development schemes, the travel industry, advertising applications of various sorts, publishing, especially in such popular magazines as *National Geographic*, and agriculture. The Aerial Photography Field Office, Farm Service Agency is the primary source of aerial imagery for the U.S. Department of Agriculture, holding over 10 million images from 1955 to the early 2000s in an archive accessible at www.apfo.usda.gov/.

In the scientific realm, multispectral cameras have become essential tools for geographers, oceanographers, ecologists and even archeologists. For

instance, an aerial archive of Middle Eastern archeological sites was established in 1978 under the patronage of Crown Prince Hassan bin Talal of Jordan, which consists of over 8,000 photographs and several hundred maps. Aerial photography's application in ecological and conservation efforts has been particularly front and center. Satellite imagery can precisely track large-scale changes in forests, deserts, oceans and other physical phenomena. Some artists have joined scientists in the skies, creating portfolios of merit, including the lush, colorful work of French photojournalist Yann Arthus-Bertrand with his massive "Earth from Above" series. Shown to huge crowds in venues around the world, Arthus-Bertrand's aerial photography has proven to be a useful tool for ecological awareness. He has instigated a worldwide organization to raise awareness of ecological concerns, including a professional organization, Altitude, which features international aerial photographers on its website. Often the reverse can happen, with photographs taken by those who would identify themselves primarily as scientists taking on considerable aesthetic value, such as Bradford Washburn's pioneering aerial views of Alaska's mountains and glaciers, including such starkly beautiful images as *Miles Glacier—Dead Ice at NW Edge*, 1938.

Aerial photography has become ubiquitous in the daily government of urban societies, joining cartography and surveillance as an essential tool of governance. Citizens of industrial nations can be surreptitiously photographed dozens of times a day in low aerial view by government and corporate cameras. Virtually every square meter of land in industrial nations has also been photographed in cartographic perspective from aircraft and satellites at a variety of scales. This visual information has been incorporated into Geographic Information Systems (GIS) that composite photographs with maps, political boundaries, property titles and other data. In most developed countries, private photographers also offer aerial services, often shooting homes or landscapes on commission for a range of clients, often as "portraits" of an individual's or family's property.

Many university libraries collect aerial photographs for historical and research purposes. Notable collections include the University of California, Berkeley; the Fairchild Aerial Photography Collection at Whittier College, Whittier, California, featuring historical views of that state; the Aerial Photography Collection at the University of Oregon Library, featuring some 525,000 aerial photographs of Oregon from 1925 onward; University of

AERIAL PHOTOGRAPHY

Waterloo Library, Waterloo, Ontario, Canada; and the Aerial Archive of the Institute for Prehistory and Protohistory of the University of Vienna.

Aerial photography is an important genre within fine-arts photography as well. From the austere black and white photography of Hiroshi Hamaya, whose striking photographs of the Himalayan mountains and deserts and wild places around the world gave new views to nature in the 1960s to Emmet Gowin's documentation of post-eruption Mount St. Helens in Washington State in 1980–1986 and more recent examinations of the changes wrought by atomic blast sites and mining of his "Changing the Earth" series, contemporary photographers have created memorable aerial images.

Many nature photographers utilize aerial photography as one of the available vantage points to capture their subjects. Notable in this regard are Indian photographer Subhankar Banerjee with his photographs of the Arctic National Wildlife Refuge at the turn of the century. Most modern aerial photography is accomplished through the use of airplanes or helicopters using gyroscopically stabilized cameras, but a significant number of professionals and amateurs use radio-controlled drones or even kites.

Kite aerial photography was in fact pioneered by Chicago self-taught photographer and businessman George R. Lawrence in 1906 to capture extraordinary wide-angle views of the devastation in the aftermath of the San Francisco earthquake. In an era before flight and when the volatile gases used in balloons could be extremely dangerous, thus limiting aerial photography, Lawrence's large-scale views caused an international sensation. Aerial photographer Robert Cameron had devoted his practice to aerial documentations of the major cities and scenic or historic sites of the world in a series of popular books such as *Above London* of 1980 or *Above Yosemite* of 1983.

Aerial photography can also be practiced from vantage points offered by skyscrapers; Margaret Bourke-White's pioneering efforts of the 1930s being notable examples; Oscar Graubner's 1931 photo of her perched atop an ornament of the Chrysler Building at work with her camera is an icon of twentieth century photography. Bourke-

White was also a pioneer of capturing the skyscape from an aerial perspective, creating such striking, almost abstract images as *B-36 at High Altitude, Flying over Wichita, Kansas*, 1951. New York City in fact has been photographed 'from above' by numerous photographers, from the well known such as Bourke-White to the lesser known, such as the Hungarian photographer György Lőrinczy who documented the city in the late 1960s.

At the turn of the twenty-first century, much aerial photography was being accomplished through use of digital technology and remote sensing or "the science and art of obtaining information about an object, area, or phenomenon through the analysis of data acquired by a device that is not in contact with the object, area, or phenomenon under investigation" (Lillesand and Kiefer, *Remote Sensing and Image Interpretation*) had become a field within the discipline. As the human eye becomes increasingly removed from direct observation of the physical world, whether in aerial or other photography, the range of images captured and the ability to interpret them will become increasingly complex.

PHOTOGRAPHY IN AFRICA: AN OVERVIEW

Twentieth century photography in Africa encompasses a wide variety of genres and practices. Months after its public invention in 1839, photography was introduced to Egypt, spreading quickly to coastal cities across Africa and more slowly to rural areas and the interior. The first half of the twentieth century saw studio photography practiced by Africans across the continent, although the prohibition against images made photography less popular in Islamic North Africa. At the same time, Europeans documented modern colonialist life in Africa, and European and American ethnographers traveled the continent in order to photograph, classify, and codify “tribal” Africans. These images, along with landscape photography and animal and plant exotica, comprise the genres of photography practiced mostly by Westerners for publications like *National Geographic* and other journals. By the 1950s and especially after the independence of most nations in the 1960s, African photojournalism flourished along with studio portraiture. Some African cultures, like the Yoruba and the Bini, incorporated photography into centuries-old political or religious rituals. In recent decades, photography as a contemporary art practice has also become popular, and photographers with international art world reputations have emerged from Morocco to South Africa, although many African photographers now work from Paris, London, and New York.

Because of the variety of practices that have developed at different times in various regions, many scholars today refer to “photographies” in Africa, emphasizing photography’s multiple histories. “Africa” itself here constitutes a geographic definition only, and should not be understood as indicative of a monolithic cultural identity. Aside from the violent oppression of European colonialism and subsequent independence of most nations during the 1960s, which colors the history of all countries except Ethiopia and Liberia, it is difficult to generalize about continent-wide similarities in cultures, politics, histories, traditions, and the influences of modernity, including photography. While some characteristics of photography in

Africa certainly bear similarities to photography everywhere, other aspects may appear recognizably West African, Egyptian, or Yoruban, but rarely if ever “African,” in that the phrase implies a consistent trait or style that occurs across the continent.

The history of photography in Africa is a burgeoning field, with further research, writing, and critical evaluation still needed in many areas, although much new information has come to light in the past 15 years. Two of South Africa’s best known photographers, David Goldblatt and Peter Magubane, published books documenting apartheid as early as the 1970s and 1980s. However, the surge of art world interest in African photography and subsequent publications on the topic can be dated closer to the mid-1990s. Several years after the 1991 exhibit *Africa Explores* at the Museum of African Art in New York anonymously exhibited Malian photographer Seydou Keïta’s striking black-and-white studio portraits. Keïta and his compatriot Malick Sidibé were subsequently “discovered” by Andre Magnin, who wrote their monographs. Further solo and group exhibitions, as well as books, journal articles, and catalogues, have since provided valuable new information about individual African photographers as well as common photographic practices in many parts of Africa. In Bamako, Mali, the first biennale exhibiting African photography, *Rencontres de la Photographie Africaine*, was organized in 1994 by the editor of *Revue Noire*, Simon Njami. *Revue Noire* has since published the work of a number of African photographers.

Nigerian curator Okwui Enwezor has also been instrumental in bringing African photography and art to a wider public. With Salah Hassan and Olu Oguibe, he founded *Nka: A Journal of Contemporary African Art* out of Cornell University in 1994. Enwezor co-curated the landmark exhibition at the Guggenheim in New York in 1996, *In/sight: African Photographers, 1940 to the Present*, which showcased studio photographers, contemporary artists, and the journalist photography of *Drum*, a popular South African magazine. The exhibition *The Short Century* (2001–2002), also curated by

Enwezor, and its accompanying catalogue, were especially important in bringing awareness of African photography, art, and political history to a wider public. Thanks to these and other efforts, significant research has been published pertaining to photographers and practices in West Africa, and a wide variety of sources can be found on different genres of photography in South Africa, including recent photographic festivals. A smattering of research also covers East Africa, Central Africa, and the islands of the Indian Ocean. Although traditionally considered separate from sub-Saharan Africa in African art and anthropology, some research exists on North Africa as well.

At the same time that photography by Africans is coming to widespread public attention in the West, revisionist histories that critically examine photographs taken by Europeans and Americans of Africans for anthropological and ethnographic purposes are cropping up as exhibitions and books. Such texts use post-colonial and feminist methodologies to analyze and re-situate these photographs, many of which are still in circulation, in the discourses of African art, history, and anthropology, within an understanding of European racism and the hierarchical classificatory systems it generated.

By 1900 colonial rule was strongly established in most African nations, and this vast attempt to reorganize and control African societies and land for European profit was often documented and celebrated by the colonizers through photographs that today appear horrifying in their casual acceptance of European brutalities. Sometimes these photographs fostered nascent European anti-colonialism and reform movements through their dissemination to sympathetic activists. For example, photographs that documented the abuses perpetrated by King Leopold II of Belgium in Congo Free State (now Democratic Republic of the Congo [DRC]) led to widespread condemnation of his behavior in Europe and the United States. As a result, in 1908 the Belgian Parliament annexed Congo Free State, ending the worst of the atrocities. This early example of the use of photojournalism in the fight against colonialism recurred in many countries during the independence struggles of the 1960s, and as late as the 1990s in South Africa, whose rule of apartheid ended in 1994.

The racist political system of apartheid contributed to South Africa's unique position in the history of African photography. Photographs by white South Africans followed the general trend of European photography, but with less interest in radical artistic innovation. Portrait photography became popular among all races, as elsewhere in

Africa. However, it is the photography of *Drum*, a popular magazine pitched to black South African life, which has become particularly well-known today for its quality photojournalism as well as its promotion of black self-representation.

Originally aimed toward a European conception of a "tribal" audience, *Drum* was published in 1951 as *The African Drum*, but failed after three issues. After a change in ownership and attitude, *Drum* quickly became a hugely popular magazine depicting the lifestyles, newsworthy events, and social concerns of black South Africans. *Drum's* celebratory appreciation of township life and investigative reports into socio-political situations provided black South Africans with visual representations of their lives; under the regime of apartheid, *Drum's* presence was profoundly political. Although *Drum* was unable to overtly protest conditions in South Africa, the magazine's journalists and photographers pushed the constraints of censorship when possible. For example, *Drum* serially published Alan Paton's novel, *Cry the Beloved Country* (1948), which describes the clash between a black minister and a racist white farmer. However, *Drum's* owner Jim Bailey refused to publish British photo-journalist Ian Berry's shots of the 1960 Sharpeville massacre; when Berry sent the prints to London instead, international outrage erupted.

Drum also contributed to the evolution of a Pan-African sensibility, as offices were eventually opened across sub-Saharan Africa. The first office was opened in Nigeria in 1953 and the second in Ghana a year later. An East African office was established in 1957, and the last office opened in Central Africa in 1966. *Drum* reported on political events outside of South Africa, documenting Nigeria's independence, for example, and the initial meetings of the alliance of the West African Federation.

Aside from photojournalism, many countries established governmental photo agencies either during colonialism or after independence. Congo-presse in DRC was one such colonialist organ. Agencies in Madagascar, Angola, and Guinea were introduced under colonialism and changed names and structures after independence. Other post-colonial agencies based on former colonialist organizations include AMAP in Mali and ONICEP in Nigeria. The archives for some of these official agencies are not publicly available; for example, Seydou Keita's work for the government of Mali has not been released. The types of photography these organizations practiced varied; although most were political, Madagascar's SGM used photography for military and geographic pur-

poses before colonialism, and its post-colonial incarnation, FTM, services tourism.

Although generally agency photographers were allowed and indeed expected to document the political process and government activities in a way that had been illegal before independence, they worked in the service and within the boundaries of the new states' ideologies. Photographic image production, with its accompanying authority in appearing to present "reality," became a way for the new governments to assert their authenticity, but often at the expense of truth. In many countries, the public eventually came to doubt the veracity of official photography, which was often censored by corrupt post-colonial governments.

From the turn of the century until the 1960s, however, commercial black-and-white studio portraiture constituted the most popular and widespread type of photography in sub-Saharan Africa. Although studio photography was introduced by Europeans, Africans began to open their own studios for African clientele as early as the 1880s in some areas. At first only available to the wealthy, who were usually civil servants working for the colonial governments, photography became affordable to the growing middle classes in many parts of Africa by the 1930s. Many photographers learned their trade working in an older photographer's studio, although sometimes soldiers who had fought in Europe during the world wars returned home with cameras and newly learned photographic techniques. The need for identity photos contributed to the proliferation of photographers not only in cities but in rural areas.

Through studio portraits, Africans were able to participate in their own image creation, a practice that acted as a valuable social and cultural resistance to colonialism. The portrait photograph, a collaboration between photographer and subject in the creation of the subject's own self-image, was a particularly apt genre for this re-imaging of photography from an African point of view. Photographic portraiture was seen as modern and embraced for its modernity. Portraits were taken to commemorate special and celebratory occasions, in which the sitters usually posed in their best clothing. Photographs were hung in living rooms, set in photo albums that were shown to guests, or sent back by urban migrants to their rural families. Such photographs were usually made directly from contact prints using box cameras without an enlarger, and so were quite small. Usually a photographer who took over another's studio "inherited" the former owner's negatives as well. Recognizable traits developed in certain areas that

appear to show regional photographic practices, like the patterned backdrop or portraits of two sitters in matching clothing in West Africa.

Studio photography remained popular after independence, but the introduction of color labs starting from the late 1960s through the 1980s drastically reduced the number of studios and their ability to survive economically. The new technology appears to have contributed to the decline of the studio photographer and the increased prominence of the itinerant photographer, thus initiating a new aesthetic. Usually young men hoping to make a living without previous training in a studio, the itinerant photographers have been criticized by the older black-and-white studio photographers as lacking in quality.

Few women African photographers have been recognized to date, but Stephen Sprague records women working as studio photographers in Nigeria in the 1970s, and Heike Behrend has documented women practicing photography recently in Mombasa, Kenya. Several women also worked for Guinea's Syli-Photo in the 1960s. Currently, Jo Ractliffe and Penny Siopsis of South Africa, Zarina Bhimji of Uganda, and Lamia Naji of Morocco are working internationally as contemporary art photographers. Other male contemporary art photographers with international reputations today include Zwelethu Mthethwa and Santu Mofokeng of South Africa, Samuel Fosso of Central African Republic, Philip Kwame Apagya of Ghana, and Tahoumi Ennadre of Morocco.

PHOTOGRAPHY IN AFRICA: CENTRAL AND WEST

West African portrait photography has garnered much Western attention, spurred by the international fame of Malian Seydou Keïta. Scholars' gazes have also fixed on West and Central Africa's rich history of anthropological photography. Forms of state-sponsored photography and contemporary art practice have likewise elicited interest.

The medium of photography reached Western Africa's coastal towns soon after its invention, and African practitioners were active by the 1860s. The end of the nineteenth century saw the spread of commercial studios from coastal to inland centers. Varying policies by colonial authorities either fostered or impeded the development of indigenous photographers, yielding uneven progress. In the beginning of the twentieth century, studios participated in the international postcard market, supplying images to European publishers and distributing work regionally to Westerners (but rarely to Africans). Several photographers and publishers may be considered as exemplary of those participating from West and Central Africa in this global trade in images. The most important local producer was Frenchman Edmond Fortier, active in Senegal. Fortier's grand project is described by David Prochaska in his *African Arts* article "Fantasia of the Photothèque: French Postcard Views of Colonial Senegal" (1991) as a series of photographic documents, conceptually "filed" as colonial knowledge. Indigenous African studio and postcard photographers active at the beginning of the century include several Sierra Leone Creoles, whose work has been discussed by Vera Viditz-Ward in her article "Studio Photography in Freetown" in *Anthology of African and Indian Ocean Photography* (1999), and Togo's Alex Acolatse, whose career has been sketched by Phillippe David in the *Anthology of African and Indian Ocean Photography* article "Photographer-publishers in Togo" (1999). The thorny question of whether African photographers articulated a different vision than their European counterparts is considered by Christraud Geary in *Delivering Views: Distant Cultures in Early Postcards* (1998), where she offers a nuanced answer, acknowledging both the

power of Western conventions and the possibility of a particularly African vision.

Following World War Two, a boom in indigenous portrait studios responded to the needs of a growing African middle class. In the 1940s, Mama and Salla Casset operated studios in Dakar, Senegal, and Seydou Keïta began work in Bamako, Mali. Typically, Keïta's sitters availed themselves of costumes and studio props to project a fashionable, modern appearance. (The fascinating migration of Keïta's work from its Malian context into the canon of Western art photography is explored by Elizabeth Bigham's *African Arts* article, "Issues of Authorship in the Portrait Photographs of Seydou Keita" [1999].) The next generation of portraitists active after national independence, exemplified by Mali's Malick Sidibé and Niger's Philippe Koudjina, eschewed the studio formality of Keïta's work, frequently bringing the camera out-of-doors to photograph the leisure of a burgeoning youth culture. Samuel Fosso, a studio operator in the Central African Republic, has wrought personal statements from studio conventions since the 1970s in a series of theatrical self-portraits. In the 1980s, color photography arrived and studio photographers began to fade from the scene. An exception is Phillip Kwame Apagya who has worked in Shama, Ghana since 1982, relying on elaborate painted backdrops to create imaginative environments for his sitters.

Valuable anthropological studies of portrait photography are now being produced by Western scholars. The integration of photography into Yoruban cultural formations in Nigeria is the subject of Stephen Sprague's groundbreaking article in *African Arts*, "Yoruba Photography: How the Yoruba See Themselves" (1978). Taking the work of Cote d'Ivoire-based Cornélius Yao Azaglo Augustt as an example, Jean-François Werner's article "Photography and Individualization in Contemporary Africa: An Ivoirian Case-study" in *Visual Anthropology* (2001) argues from the ubiquitous identity portrait that photography's centrality in African visuality is derived from association with modern state power. In his article "Self and Acces-

sory in Gambian Studio Photography” in *Visual Anthropology Review* (2000–2001), Liam Buckley, by contrast, discerns common ground in Gambian practice between portrait-making and tailoring—both are forms of surface adornment.

The use of photographs as anthropological and ethnographic documents is another focus of contemporary study. Colonial ethnography was inevitably associated with colonial power, and its photography reveals the uneven relations of power at the heart of this endeavor. On the other hand, Western expeditions often maintained a stock of pictures with which to impress the “natives,” unwittingly providing indigenous people with a means of scrutinizing the West even as they are observed. Among the contemporary scholarly works analyzing ethnographic photography are two that treat important expeditions to the Congo before World War One: the efforts of expedition leader Emil Torday and photographer M. W. Hilton Simpson are considered by Jan Vansina in “Photographs of the Sankuru and Kasai River Basin Expedition Undertaken by Emil Torday (1876–1931) and M. W. Hilton Simpson (1881–1936)” (1992), while Herbert Lang’s work is discussed by Enid Schildkrout in “The Spectacle of Africa Through the Lens of Herbert Lang: Belgian Congo Photographs, 1909–1915” (1991). The oeuvre of Casimir Zagourski, a Pole active in the Belgian Congo between the wars, whose photography was collected in series entitled *L’Afrique Qui Disparaît*, shows how postcards and albums served as important means of distributing ethnographic images.

Government-sponsored colonial photography projects were often structured through binary oppositions between “civilized” (Europeans or Westernized Africans) and “savage” (“unenlightened” segments of the population). Christraud Geary’s *In and out of Focus: Images from Central Africa, 1885–1960* (2002) recounts the long history of colonial image production in the Congo. Circulated in Europe as postcards and through illustrated periodicals like *L’Illustration Congolaise* (1924–1940), photographs were visual propaganda of “the protection and moral development of the natives” only fitfully contested by reformers, whose photographs laid bare the brutality of the colonial regime.

Politically aware African self-representation in the colonial period occurred in images of and by King Njoya of Bamun, Cameroon. Christraud Geary’s *Images from Bamun: German Colonial Photography at the Court of King Njoya, Cameroon, West Africa, 1902–1915* (1988) attributes to Njoya an aesthetic and political agenda that he

wished to express through portraiture. Earlier exceptions aside, the years immediately following national independence in the 1950s and 1960s saw the greatest flowering of the photographic promotion of African political programs. Official press agencies like Syli-Photo in Guinea, Congopresse in the Democratic Republic of the Congo, and ANIM in Mali, crafted the public personae of the charismatic leaders of the era. Among the many photographers engaged in this effort was Keïta, who toiled for the Malian government from 1962 to 1971. The moment of national independence also saw the efflorescence of independent mass-media, particularly in the form of South Africa-based *Drum* magazine, which published editions in Ghana and Nigeria.

Contemporary artists using photography, often based in Western Africa’s diaspora communities in the West, include the late Rotimi Fani-Kayode, who explored, in collaboration with British photographer Alex Hirst, the connection between the body and an identity, which in his case was Black, African, and homosexual. In the 1990s, photography’s conjunction of personal experience and historical imagination has been interrogated by Nigerian-born Iké Udé and Ghana-born Godfried Donker, among others.

PHOTOGRAPHY IN AFRICA: EAST AND INDIAN OCEAN ISLANDS

Throughout the twentieth century, the East African photographic images in widest circulation in the West were those related to safaris and disasters. Within the region, portrait photography flourished and became integrated into political life and society. While less known and studied than work from elsewhere in Africa, the region's photographic practices (including those of adjoining Indian Ocean islands) embody a long history and several rich traditions.

With its exotic animal life, East Africa was and is regarded as a natural wonder. As early as the 1850s, Westerners were using photography to scientifically document animals and create mementos of big-game hunts in the present-day nations of Kenya, Tanzania, and Sudan. The telephoto lens and other technical developments of the 1880s and 1890s made possible the prospect of "hunting" with the camera rather than the gun. Pioneering camera adventurer A. Radclyffe Dugmore wrote in 1910 of the challenge of such hunts: "shooting animals is so much easier than photographing them that there is no possible comparison" (226). Typical of works published before 1914, including those by C.G. Shillings and Edward North Buxton, Dugmore's book features 140 photographs, mostly of wild animals. The accompanying text narrates the capture of the photos and offers practical information on arranging and equipping a trip to British East Africa. James Ryan's *Picturing Empire: Photography and the Visualization of the British Empire* (1997) discusses the ideological underpinnings of these early wildlife photo books and places them in the context of the visual construction of British imperial-

ism. Photosafaris remain popular and, despite technological advances, archetypes established by photographers a century ago remain current.

The prominence of East African images in the world news media is, by and large, a development of the last quarter of the twentieth century even though Ethiopian Emperor Haile Sellassie's coronation in 1930 was covered by European illustrated periodicals, and Alfred Eisenstaedt photographed Italy's 1935 invasion of the country. Images of Ethiopia's devastating 1984 famine created one of the century's most significant media events, and the most important documentation was a video produced by South African reporter Michael Buerk and Kenya-based cameraman Mohammed Amin. Amin, who co-founded Nairobi's Camera-pix agency in 1969, was one of the region's most active and celebrated photojournalists until his death in 1996. In general, the development of indigenous photojournalism has been limited, though Sébastien Porte's article "The Press in Kenya" (Porte 1999) highlights the against-the-odds dynamism of Kenya's indigenous press photography. Usually, crisis-driven coverage of East African events in the Western media is undertaken by photographers from outside the region: for example, the 1993 famine in Sudan was photographed by South African Kevin Carter and the 1994 Rwandan genocide by Frenchman Gilles Peress. Susan Moeller's article provocatively frames the vital question of whether such coverage in the Western press of East Africa's disasters serves to educate the public or simply inures its viewers to suffering (Moeller 1999).

Photography's political role in the region spans colonial and postcolonial eras. In turn of the century

Mauritius, portrait photographers were engaged to produce identity photographs of Asian and African immigrants, demonstrating English colonial rulers' use of photography for social control. Perhaps the most infamous interaction between colonial authority and photographic representation occurred in Rwanda and Burundi, under German and later Belgian control. Photographs were used to underscore European anthropological theories about racially-based distinctions between indigenous populations: pastoralist Tutsi, a minority ruling elite, and majority, agriculturalist Hutu. Photography provided visual "evidence" for colonial officials and missionaries of the Tutsis' "European" qualities, and thus supported the preservation of Tutsi dominance. After independence, this situation fostered violence that reached an awful apex in the 1994 Rwandan genocide.

Native elites in Madagascar and Ethiopia recognized the political relevance of photographic portraiture. On Madagascar, photography provided a means of self-representation and state building for the rulers of the Merina kingdom before the 1896 French conquest, and the medium's role in public life continued in the colonial and post-colonial eras through official photography agencies FTM and ANTA. In Ethiopia (which survived as an independent state through most of the colonial era) photography played a persistent role in domestic politics. Using images of uncrowned ruler Lij Iyasu, Western scholar Richard Pankhurst pieces together how photographs became weapons in the internal political struggles of early twentieth century Ethiopia in his article "The Political Image: The Impact of the Camera in an Ancient Independent African State" (Pankhurst 1992). After noting a local belief that opposition among the country's Christian nobility to Lij Iyasu was fostered by a now-unknown doctored photograph of the prince in Muslim dress, Pankhurst examines extant authentic portraits of the prince in both Christian and Muslim dress. Pankhurst carries the story forward, discussing the use of faked photographs to discredit Emperor Haile Selassie around the time of his overthrow in 1974.

In East Africa, commercial portrait photography proceeded from the coasts inland. The daguerreotype arrived on Mauritius as early as 1840 and, by 1843, the first photographic studio was established. Joseph Razaka, Madagascar's first indigenous photographer, opened a studio in 1889 that he operated until his death in 1939. Early commercial studios on the mainland coast included those of the Coutinho Brothers and A.C. Gomes and Son, both active in Zanzibar. Englishman William D. Young

ran studios in Kenya and was the "official" freelance photographer for the construction of the Uganda railway. In Ethiopia, portrait studios were initially run by Armenians, including the Boyadjians, a dynasty of royal court photographers. At the end of the century, Ethiopian studios were run mostly by indigenous photographers who continued to produce mostly formal, studio-based images for life passages and rituals including weddings and baptisms. Important studio photographers in Ethiopia include Negash Wolde Amanuel and Ato Kebede Guebre Mariam, with photographs taking on deep cultural meaning in the realm of familial relations, rituals, friendships, and courtships. The postcolonial history of this genre and its integration into society has been addressed by Heike Behrend in a series of articles on Kenyan and Ugandan portrait photography, including "A Short History of Photography in Kenya" from *Anthology of African and Indian Ocean Photography* (1999), "Fragmented Visions: Photo Collages by Two Ugandan Photographers" from *Visual Anthropology* (2001), and "Imagined Journeys: The Likoni Ferry Photographers of Mombasa, Kenya" from *Photography's Other Histories* (2003). In these articles, she highlights the contributions of South Asian photographers in Kenya, analyzes the elaborate collage-based practice of two Ugandan portraitists, and discusses the role of backdrops in the work of street photographers in Mombasa, Kenya. These articles situate photography firmly within East African culture as a means of documentation, commemoration, and self-identification. Together, Behrend's articles begin to demonstrate how portrait photographers in East Africa create for their customers a space in images for wish fulfillment and imagination, allowing—through painted backdrops, montage, and composite printing—for patrons to access luxuries, travels, and social relationships which would normally be out of reach.

PHOTOGRAPHY IN AFRICA: NORTH

North Africa's twentieth century photographic history was shaped primarily by the colonial era and the extended struggle for national liberation. Perhaps because of greater European immigration and integration into the global economy in the nineteenth century, photography by and for the colonial class became quite highly developed in the first half of the twentieth century. Colonization, tourism, and a taste for the Orientalist picturesque fueled the consumption of photographs of North Africa in West.

Colonial authorities in the first half of the twentieth century—French, English, and Italian—deposited photographs in vast archives. Daly and Forbes published images from Britain's Sudan archive and noted that the photographs, taken mainly by officials and tourists but also by commercial photographers and press correspondents, were initially collected in the service of military intelligence. Durand-Evrard and Martini presented photographs from France's Algerian archive alongside other textual and visual documents. Thematically organized around such topics as agriculture, écoles and lycees, and Saharan exploration, their book puts photography in the broader context of the production of colonial knowledge. Of particular interest are surveillance images from secret police files. A related group of identity photographs discussed by Carole Naggari offers the case of shamefully unveiled Berber women, whom Marc

Garanger was forced to photograph after being pressed into service as a regimental photographer. These women offer defiant gazes that resist the camera's coercive effects, and Garanger viewed these images' publication in the 1980s as a riposte to France's willful amnesia about the war of 1954–1962. (One might also mention photojournalism of Algeria's conflicts: Magnum photographer Marc Riboud's exemplary coverage of the 1954–1962 war, or photography of the under-covered "dirty war" between the government and Islamist rebels, typified in Algerian photojournalist Hocine's so-called *Madonna of Benthal*, an image of a grieving woman after a 1997 massacre [see Convert].)

The decades before World War One were a golden age for commercial photography of North Africa, a form of photography most widely distributed as postcards. The Koranic injunction against realistic images seems to have impeded the development of native-owned commercial and portrait studios, which were therefore often operated by Europeans and especially Armenians in this period as well as until well into the later decades of the century. Recently, a number of publications have offered country-specific selections of postcards, though unfortunately with poor quality reproductions (See Hébrard and Hébrard, Laronde, and Karmazyn).

Several important commercial studios active in the colonial era should be noted. The Bonfils family, based in Lebanon and Egypt, produced

large quantities of photographs in the late nineteenth century that remained in commercial circulation through the early twentieth. Jules Gervais-Courtellemont, a French convert to Islam, published the illustrated magazine *L'Algérie Artistique et Pittoresque* (1890–1892) and created thousands of direct color autochrome plates frequently reproduced in the popular press. Austrian photographer Rudolf Lehnert and German manager Ernst Landrock worked together in Tunis from 1904–1914 and Cairo from 1924–1930, at which time Lehnert returned to work in Tunis alone. Prolific and artistically ambitious, the two produced a broad range of images, including romantic Saharan vistas and erotic portraits, distributed through monographs and as original prints, lithographs, and postcards.

In an important theoretical text on Algerian postcards, Malek Alloula describes the corrosive impact of these mass-produced, erotic postcard images on the society of their colonized subjects. He writes

Behind this image of Algerian women, probably reproduced in the millions, there is visible the broad outline of one of the figures of the colonial perception of the native. This figure can be essentially defined as the practice of a right of (over)sight that the colonizer arrogates to himself and that is the bearer of multiform violence. The postcard fully partakes in such violence... (5)

Westerners' creation of visual imagery stimulated by a vision of North Africa(ns) as exotic "Other" began well before the period on which Alloula concentrates (1900–1930) and arguably extends to the present. Paul Bowles' recently published "souvenir snapshots" of his life in Tangier, Morocco, ambiguously relate to this tradition, offering a hermetic vision of the author's expatriate existence.

Anthropological and archeological photography represent two varieties of imagery created throughout the twentieth century. In the first category is the work of pioneering Finnish sociologist Edward Westermarck, whose photographs of Morocco in the years before the First World War were made into lantern slides to illustrate his lectures and, intended only as utilitarian documents, were frequently of questionable technical quality. By contrast, the work of Harry Burton was of sufficient aesthetic merit to warrant a 2001 exhibition at the Metropolitan Museum of Art in New York. Burton was an archeological expedition photographer in Egypt for the Metropolitan and for Howard Carter and Lord Carnarvon, discoverers of the tomb of Tutankhamen.

The Second World War, fought across North Africa, saw the creation of innumerable photographs, which generally take as their subjects the battling Axis and Allied armies. Unfortunately, these images are usually published in books aimed at aficionados of military history, which reproduce images with little of the context that is of particular interest to art historians.

The early history of artistic photography in North Africa is, of yet, little studied. The first photographic exhibition was held in Egypt in 1923; the second, in 1933, featured 600 photographs by roughly 130 photographers, over half them Egyptian. Contemporary photographers have figured in recent exhibitions of African art in the West. The 1996 exhibition at the Solomon R. Guggenheim Museum in New York, *In/sight: African Photographers, 1940 to the Present*, included, for example, Egyptian Nabil Boutros' documentary images of Cairo's people by night and arresting photographs of the body at moments of birth and death by Tunisia's Touhami Ennadre. Zineb Sedira works in the context of the North African diaspora. Born to Algerian immigrants in Paris, her work deals with cultural assimilation and family identity within North African Muslim society in the West.

PHOTOGRAPHY IN AFRICA: SOUTH AND SOUTHERN

Photography has been practiced in Southern Africa since the earliest days of the medium. From its earliest years in Africa there has been a tension between the documentary and the artificial uses of photography, a tension which was made more profound due to the pressures of foreign domination and racial classification derived from the colonial period. According to scholar Karel Schoeman, just as they became popular abroad, plate glass images, daguerrotypes, and ambrotypes, as well as paper images were also made in South Africa by private amateur or traveling artists, and by 1846 they were being produced in commercial photography studios. *Cartes-de-visite* were produced by Arthur Green in Cape Town as early as 1861. The conventions for sitters and their attire followed those of Victorian Europe. Also notable for this period were the anthropometric studies of Khoi-San people made by Wilhelm Bleek, whose attention was more directed at aspects of physical description and items of dress of the "natives" than the style of memorial portraiture seen in visiting cards of white subjects. By the 1890s, postcards were also produced in Southern Africa, mostly for tourist consumption. They described scenes from the diamond and gold mining camps, the rise of great cities Cape Town, Durban, Port Elizabeth, and Johannesburg, technological marvels, railroads, the destructiveness and genocide of the Boer War, native "types," and various aspects of the control of native populations by colonial powers and settlers, including images of Africans administering corporal punishment to other Africans. Another early use of photography in Southern

Africa, as noted by Patrick Harries, was as propaganda for missionaries, especially "before and after" shots of Christianized and western-clothed Africans. Also, in Mozambique, Harries notes that the anthropologist Henri-Alexandre Junod used photography to present a view of "primitive" Thonga society living "close to nature," in contrast to Europeans in cities who were experiencing the "trauma of industrialization."

By the time of the partition of the African continent among European powers after 1884, thus at the height of the colonial enterprise, European photographic greeting cards had evolved from the chromolithograph trade. These cards, collected in albums, were made as souvenirs of places traveled to in Europe, and also in its colonial outposts. What began as exoticism at home was transferred quickly to an exoticism of the colonial world, and thus it became fashionable among the middle class of Europe and in Africa to collect images of the scenes and types of the "countries of the world." These cards started as lithographic prints, soon included photographic prints, and then went into mass production using the halftone screen process. Christraud Geary notes that by 1900, Sallo Epstein and Company in Johannesburg had become the largest publisher of postal cards in Southern Africa. Epstein and other commercial houses, as well as individual artists, according to Geary, worked along the lines similar to photographers in other African territories. They reproduced similar stereotypes of the "native," such as the solitary warrior male and the seductively arranged, eroticized native female group. Studio portraits of Afri-

cans often blurred the edges between factual document and paternalistic fantasy. Interestingly, images of the amaZulu were in especially great demand abroad, because of their nation's famous resistance against European territorial ambitions under leaders like Shaka, Dingane, and Cetshwayo. Virginia Lee-Webb has noted that many nineteenth century images of the amaZulu often were made in-camera using fantasy backdrops, jungle scenes, and staged sittings. South African studio photographers even had boxes of "tribal" props for their sitters to wear and hold.

While in both ethnographic and commercial photography, African people were mostly imagined to be part of the flora of the country, a small number of studios such as H. F. Fine in Johannesburg, Deale in Bloemfontein, and traveling portrait photographers took pictures of petit bourgeois, middle class, and mission-educated black sitters. These images were mostly forgotten in storage rooms and the bottoms of drawers during the apartheid years from 1948–1994, but have recently been unearthed as part of Santu Mofokeng's (1991–2000) conceptual archival project, *The Black Photo Album/Look At Me 1890–1950*. In these portraits, turn of the century black families imagine themselves differently than the authors of the anthropological or studio fantasies of the "natives." They face the camera with dignity and wear Victorian attire.

At the other end of the spectrum was the multi-year, 6000 image documentary project on native "types" by Alfred Martin Duggan-Cronin, a former employee of De Beers Consolidated Mines in Kimberley. His tribal categorizations are random and arbitrary, but his images have the benefit of giving dignity to their subjects and not removing whatever signs of contemporaneity they wore as everyday garb. His pseudo-ethnological four-volume *The Bantu Tribes of Southern Africa (1928–1954)*, however, would later be used, especially after 1948 by the architects of apartheid like Daniel Malan and Hendrik Verwoerd, as evidence of the "natural" separation of the races and ethnicities. This, they believed, needed to be enforced through strict policing of borders and national legislation to keep African groups distinct from each other and apart from Europeans.

Closer in line with art photography, but equally romanticizing of her subject, were the many portraits of amaNdebele taken by Constance Stuart Larrabee during the 1930s and 1940s. The amaNdebele were a people whose lands had been taken during the nineteenth century and were living scattered on white farms just a short drive north of Stuart's studio in Pretoria. Because of easy access

to their homesteads by white weekenders, the amaNdebele have become something of an archetype of pristine native life in South Africa as seen as a whole. For this reason they would later be organized into a "homeland" and a tourist colony by the South African government.

By the 1950s and 1960s, the entrenchment of apartheid was reacted against by the efflorescence of documentary type, series-oriented, photojournalistic photography. Popular white owned, but black oriented and black staffed photo magazines like *Drum* and *Zonk!* devoted themselves to the politics and social life of the day. *Drum* would later be printed in West African and Caribbean editions, thus bringing images of South African life to other parts of Africa during the period of independence. At a time of growing racial animosity, activism by Nelson Mandela and the African National Congress, and government repression, *Drum* featured photographers like Alf Khumalo, Jürgen Schadeburg, Peter Magubane, Ranjith Kally, G.R. Naidoo, and Bob Gosani, giving the first mass exposure to a mixed-race group of outstanding photojournalists.

Black photographers were treated with particular roughness by the authorities. In 1969 Peter Magubane was placed in solitary confinement for two years, and then banned from taking photographs for another five. He later worked for *Time* and has published several major books on the 1976 Soweto student uprising and the revolutionary struggle of the 1980s. His colleague Ernest Cole was less fortunate. Cole's book *House of Bondage*, published in 1967, was a book-length version of the kind of photo essay work seen in *Drum*—the absurdity of pass laws, conditions of black poverty, illegal drinking establishments in the black townships, syncretic religion, the African middle class, and the romance/exile of the "bantú homelands"—but for an international audience. *House of Bondage* was banned in South Africa but copies were circulated underground and Cole's work influenced several subsequent generations of black and white photographers in South Africa. Unable to live in South Africa after the publication of his book, Cole went into exile and eventually died penniless on the streets of Manhattan. The other great master of the serial documentary approach was David Goldblatt who from the 1960s published a number of disturbingly frank portraits in a number of works including *Some Afrikaners Photographed* (1975), and *The Transported of KwaNdebele* (1989). Roger Ballen continued this documentation of Afrikaners in their homes and enacting inexplicable rituals in the

1980s and 1990s, to considerable international acclaim. Goldblatt was also instrumental in the founding of the Market Photography Workshop and as an individual mentor, where a number of young artists of all races, most notably Santu Mofokeng, could get hands-on training and also engage in intellectual discussions about the politics of representation.

The 1970s and 1980s saw the rise of this workshop atmosphere between artists and of social realist “struggle” photography. Still there was a tension regarding the most appropriate subject matter and formal approach among those who hoped to document the struggle and aid the effort to overthrow apartheid in South Africa. This tension can be seen by comparing two books from the 1980s: *South Africa: The Cordoned Heart*, prepared by the Carnegie Inquiry into Poverty and Development in Southern Africa; and *Beyond the Barricades: Popular Resistance in South Africa*, a project by the activist photographic collective Afrapix founded in 1982. *The Cordoned Heart* chronicles the underdevelopment of black South Africa. It contains mostly straightforward domestic scenes and some images of political rallies (it includes a portion of Goldblatt’s “Transported”). The only image of the State is at the end: in a photo by Omar Badsha, police appear at the airport to escort a recently released political prisoner. In contrast, *Beyond the Barricades* is by turns more lyrical and more harshly realist, since it includes scenes of the popular unrest and the police violence that permeated South African life during the 1980s. Cops and protesters and banners and blood are everywhere in these images, but there are also sections without images and a text that makes clear that photography, even press photography, was also used by the State as an instrument to surveil and silence. Afrapix members such as Steven Hilton-Barber, Santu Mofokeng, Paul Weinberg, and Guy Tillim, who initially worked together to supply the radical press, workers’ organizations, and struggle culture magazines such as *Staffrider* with images at low cost, by the later 1980s began moving away from the starker definitions of struggle photography. Weinberg began photographing the San of the Kalahari, Mofokeng went to look for spiritual sources in Lesotho, and Hilton-Barber showed images of northern Transvaal male circumcision—this last caused great controversy when exhibited in 1990 at the Market Gallery in Johannesburg. Photojournalists were also critical to the exposure of atrocities committed by South African occupying forces in Namibia. Likewise in Mozam-

bique, Ricardo Rangel set up a photography-training institute and archive for anti-colonial work, the Centro de Formacao Fotografica in Maputo.

Just before the first democratic elections in South Africa in 1994 high stakes commercial work was in great demand by foreign press agencies and a number of intrepid photojournalists, including Ken Oosterbroek, Mike Marinovich, Joao Silva, and Ken Carter helped sensationalize the ultraviolence of the transition period. After the elections and the broader access to international exhibitions and other art histories abroad, the 1990s and early 2000s also witnessed the production of more conceptual and experimental approaches to photographic technique including the use of serially arranged compositions (Mofokeng and Abrie Fourie), the grid (Hentie van der Merwe), life-sized color prints (Zwelethu Mthethwa), digital media (Minette Vari), constructed still-life composition (Lien Botha), and solopistic meditations on the history of the archive of South African photography itself (Senzeni Marasela).

Because of the long history of struggle for representation, there is still a strongly social activist tendency in present photographic practice in Southern Africa, even on the more artistic/conceptual end of the spectrum. Now there are other struggles besides colonialism or apartheid: the problems of overcrowding and urban blight, AIDS, the gay lifestyle, the continuing “stain” of race, and the unifying yet divisive potency of the sacred in everyday life. Artists working with photographic-related processes today are more aware of the alternating perception of the photograph as both artifact and artifice than were their peers during the nineteenth century. Some, such as Andrew Tshabangu, Tracey Rose, Jean Brundrit, Berni Searle, and others, are endeavoring to use this empowering knowledge to address the new demands for representation felt by South Africans in the post-apartheid era.

AFTERIMAGE: THE JOURNAL OF MEDIA ARTS AND CULTURAL CRITICISM

Founded in 1969 by the writer, photographer, and curator Nathan Lyons, the Visual Studies Workshop (VSW) in Rochester, New York, was also the birthplace of the well-known journal *Afterimage: The Journal of Media Arts and Cultural Criticism*. *Afterimage* remains the primary journal devoted to a critical understanding of issues in photography and art, despite its unassuming black and white broadsheet format. Since its conception, the journal has taken a radical political stance. *Afterimage* was founded in order to provide a forum for the investigation of the relationships between politics, art and photography. As Grant H. Kester writes in the introduction to the anthology of *Afterimage* essays published in 1998, the questions motivating *Afterimage's* founding were,

What is the relationship between art production and more direct (or at least more conventionally recognizable) forms of political struggle and protest? What constitutes an activist art practice? And what is the role of criticism, and the critic, in relation to such a practice? (p.1, *Art, Activism, and Oppositionality: Essays from Afterimage*. Durham and London: Duke University Press, [1998]).

The founding of *Afterimage* coincided with burgeoning socio-political critiques of photographic representation promulgated by such scholars as John Tagg, Abigail Solomon-Godeau, Victor Burgin, Rosalind Krauss, and Allan Sekula, influenced by French post-structuralist philosophers such as Michel Foucault and Roland Barthes. *Afterimage's* program was also concurrent with the initial stirrings and subsequent growth of revisionist art history and was part of a general movement towards visual culture studies at large, which included movements to break down barriers between scholarly disciplines.

The VSW began as an experimental, multi-purpose space, incorporating a gallery, archive, library, media center, educational programs and a press for the publication of artists' books as well as *Afterimage*. Lyons founded the VSW after leav-

ing his post as chief curator and assistant director at the George Eastman House's International Museum of Photography (IMP), also located in Rochester, so it is not a coincidence that Rochester has become a nexus of Visual Culture Studies and a hotbed of photographic activity. Graduate students and artists contributed to the workshop's initial and continued efforts, and Joan Lyons was originally in charge of the book publishing section. The organization even had a VSW Book Bus that brought the publications and ideology of the VSW to the citizens of Rochester. Today, the State University of New York (SUNY) College at Brockport offers a Masters of Fine Arts in conjunction with VSW.

The overall goals of the VSW were to create a bridge between theory and practice, in order to provide a more critical and useful understanding of both. Photographic work, so easily reproduced, was also seen as more democratic than other forms of art, in terms of its inexpensiveness and accessibility through circulation. Little institutional support at that time existed either for photographic criticism or for any kind of photography that was not strictly high art. Independent film and video were also fledgling industries and lacked little institutional support, and so the aims of VSW and *Afterimage* were also to provide institutional support and a forum for discussion of these media. Naturally, *Afterimage* has since incorporated discussions and work of digital media as well.

In the 1980s, according to Kester, *Afterimage* focused on the identity of the photographer or writer, at the same time attempting to locate his or her work in the context of political struggle. MFA programs in photography were becoming more widespread, and artists and photographers were trying to incorporate larger political issues into their local practices. Cultural diversity among practitioners was increasing at the same time the so-called "culture wars" that began in 1989 when grants to fund exhibitions of works by Robert Mapplethorpe and Andres Serrano by the

National Endowment for the Arts came under close scrutiny by the political right garnered wide attention. Under editors like Martha Gever, Catherine Lord, and David Trend, *Afterimage* focused on such political and topical issues as AIDS, reproductive rights, racial identity, political organizing, queer theory, sexual difference, patronage in the form of institutional support, audience reception and deconstructing the art world and art and photographic practice. *Afterimage* allowed new, formerly marginalized voices to be heard, and its authors engaged in contemporary debates about new scholarship, canons and practices. In the 1980s *Afterimage* published such important essays as Jan Zita Grover's "Visible Lesions: Images of PWAs" (Vol. 17, summer 1989); Coco Fusco's "Fantasies of Oppositionality" (Vol.16, December 1988) and Lorraine O'Grady's "Olympia's Maid: Reclaiming Black Female Subjectivity" (Vol. 20, summer 1992).

In its early days, *Afterimage* adopted two methodological approaches in order to question photography's aesthetics and to criticize institutional ways of understanding photography. Articles in the journal argued against the then standard mode of viewing art photography as separate from the daily uses of photography; essentially to argue for an inclusion of *all* types of photography in its study and history. The other, interrelated approach was to cross over the boundaries between critic, curator, and artist, creating new personas that incorporated some or all of these aspects, exemplified in Lyons, the founder, who took photographs as well as edited, wrote and curated. A strong interest in vernacular photography and

the hope of creating an interdisciplinary field that would embrace popular and visual culture also motivated the early issues of *Afterimage* and continue to inform its ideology today.

Physically, *Afterimage* does not look much different than it did thirty years ago, and its articles remain focused on topical political, theoretical, and social issues, as its subtitle suggests. Current issues are slightly larger and include four more pages than in the past. Currently edited by the French photographer and writer Bruno Chalifour, *Afterimage* devotes 24 pages to photography, video, film, digital media, and art, encompassing issues of craft, methodology, and social criticism alike. The bimonthly journal also includes exhibition and book reviews, a national list of exhibitions including some international venues, a list of internships and grants, editorials and letters to the editor, and usually contains an artist's portfolio of images. *Afterimage* is published internationally and keeps a rotating staff of freelance writers.

AGITPROP

The term "agitprop" fuses the first syllables of the two words agitation and propaganda. During the 1920s and 1930s in particular, this term was applied to a brand of Central European Left-wing cultural practice (theater, literature, painting, photography) that sought to propagate Marxist-Leninist ideology at the same time that it aimed to

agitate its viewers toward political action. Thus, agitprop was a socially-oriented art form whose aim was simultaneously to re-educate and politically stimulate. The use of the term signified differently depending on the political circumstances in which it was employed. In 1920s Germany, for instance, agitprop cultural practice intended to gal-

vanize a mass audience toward a communist revolution in the context of a capitalist political economy. Therefore, the tone of agitprop art was generally critical of and oppositional toward the governing regime. In the Soviet Union, by contrast, a communist revolution had already occurred in 1917. Therefore, agitprop took on a legitimizing function, designed to further enable the construction of an ideologically-strong socialist state. During the immediate post-revolutionary period in Russia, for instance, agit-trains traversed the countryside while agit-boats docked in harbors. Plastered with pro-Bolshevik images, these mobile agitprop vessels spread the new ideology on the premise that the visual image was the most effective and legible means by which to persuade an often illiterate mass audience.

Photography played a vital role in agitprop culture, not least because it was easily transportable, endlessly reproducible, and possessed a documentary status. As such, a photograph either provided testimony to Soviet industrial and social development, or it asserted capitalist “degeneracy” in the West. In Soviet Russia, the most innovative agitprop photographer was the avant-garde artist Aleksandr Rodchenko. Through the use of extreme camera angles, such as close-up, bird’s eye, and worm’s eye views, Rodchenko aimed to stimulate the eye and the mind, seeking to produce a fresh vision of a revolutionary society. Furthermore, technological advances in printing methods in the early 1920s, most notably the rotogravure process, allowed for the mass reproduction of both text and photograph on the same page. Thus, the journal *USSR in Construction*, which was published in four languages and distributed to an international readership, photographically documented the major construction projects in the Soviet Union during Joseph Stalin’s first and second Five-Year Plans. During this time of accelerated industrialization, the use of dramatic formal elements such as compositionally-assertive diagonals, close-up, and wide-angle views projected the image of dynamism, energy, and industrial prowess that the Soviet State desired to promote abroad. Rodchenko was only one of many contributors to this journal.

In Germany, the mass media empire of Willi Münzenberg, which was loosely affiliated with the Communist International (Comintern), used the photographs as the centerpiece of its agitation and propaganda efforts. Such was the impetus behind the Münzenberg-sponsored *Der Arbeiter-Fotograf* (The Worker-Photographer), a journal founded in 1926 and designed to educate a cadre of amateur proletarian photographers who would

generate class-conscious photographs for the revolutionary cause. Similarly, Münzenberg’s *Arbeiter Illustrierte Zeitung* (Worker’s Illustrated Journal) provided imaginative and socially critical photoreportage on a weekly basis for a broad leftist readership. In this journal, visually and politically compelling photographs were provocatively juxtaposed with incisive text or other photographs in order to activate communist political consciousness. Until the advent of National Socialism in early 1933, the *Arbeiter Illustrierte Zeitung* reached a peak circulation of 500,000, making it the second-most popular illustrated journal in Germany. Exiled to Prague, the journal continued to circulate its revolutionary message until 1938, albeit to a reduced readership of around 12,000.

Photomontage, or the juxtaposition of photographs with text or other photographs, was equally if not more significant as an agitprop device as pure photography. With the cut-and-paste technique of photomontage, it was possible to disassemble and then reassemble the familiarly represented world. The procedure emphasized the artifice of pictorial construction, which, depending on its context, either functioned as a metaphor for the deconstruction of the status quo, or signaled a new society still in the making. Typically, photomontage upset conventional representations of space, accentuating incongruity and spatial instability in order to convey social dynamism and change. Early Soviet photomontage, such as Gustav Klucis’ poster design *Electrification of the Entire Country* of 1920, juxtaposed abstract forms drawn from Constructivist aesthetics with photography, thus combining symbols of avant-garde art with technological modernization. Photomontages generated during Stalin’s Five-Year Plans featured a more immediately legible pictorial composition, in keeping with intensified propaganda efforts, but still foregrounded emphatic diagonals and a disjunctive syntax. This shift in representation is readily evident in Klucis’ 1930 *Male and Female Workers* (*Let Us Fulfill the Plan of the Great Projects*), which unifies multiple hands, palm up, into a symbol of the Five-Year plan while it slices across the pictorial surface in a gesture of resolute solidarity.

At the same historical moment, the provocative photomontages of the German artist John Heartfield (pseudonym of Helmut Herzfelde) were featured within the pages and on the front covers of the *Arbeiter Illustrierte Zeitung*. The goal of these photomontages was to seize and politically stimulate the passing gaze in a public sphere saturated by the photographic image. They aimed to reveal the reali-

ties behind appearances, mobilizing the visual machinery of satire, including, as the scholar David Evans points out, metamorphosis, hybridization, anthropomorphism, and metaphors of scale. In Heartfield's 1932 photomontage *The Meaning of the Hitler Salute*, for example, Hitler's arm does not thrust vigorously forth, but flops limply back, palm up, to receive millions of Rentenmarks from the hand of a giant, bloated capitalist standing behind him. "Millions stand behind me," declares the caption—Hitler's own proclamation—while the image reports the true source of Hitler's electoral support.

In photography, the notion of agitprop continued to be redefined in the later half of the twentieth century and has become primarily a tactic within advertising that uses references to the historical practice.

MAX ALPERT

Russian

Max Alpert was a leading Soviet photographer who helped shaped the modern photo essay through his work as a propagandist of the Soviet state in the 1930s through the 1950s. His documentations of huge state-sponsored projects form a lasting record of Soviet industry and ideology. Although always under the direction of the state to photograph the properly sanctioned material, Alpert brought a stark artistry to all his work, enabling it to survive while much Socialist Realist and propaganda photography has not.

Alpert was born in 1899 in Simferopol in the Crimea (present-day Ukraine). The son of an artisan, at age 15 he was apprenticed to a photographer in Odessa. In 1919 Alpert volunteered for the Red Army. During the 1920s he became a leader of the Red Army's photographic brigade alongside such young photographers as Yevgeny Khaldei. After his demobilization in 1924 he joined the Moscow newspaper *Rabochaya Gazeta* where he worked for four years. Many of his photographs

from this period, including *Maxim Gorky's Return from Italy*, were widely published.

Hired by Soviet organ *Pravda* in 1928 he photographed the collectivization of agriculture and construction during the first of Premier Josef Stalin's now infamous Five Year Plans. As part of his coverage of these projects he began to work systematically on developing serial or sequence photography. An important early example includes his series *The Construction of the Magnitogorsk Steelworks Factory* of 1929–1930. Over the years Alpert made repeated visits to the town to document its ongoing development. Among his most noted works was the sequence *Master and Builder* in which Alpert chronicled the career of Viktor Kalmikov, a worker at the Magnitogorsk steel foundry who began as an illiterate mason and became an expert construction worker.

In 1931 Alpert began photographing for the magazine *USSR na stroike* (*USSR in Construction*) contributing to stories directed at foreign audiences. During this time he covered the digging of the Fergana Canal (also known as the Great or Grand Fergana Canal), to draw water for irrigation

of cotton crops in the Fergana Valley in present-day Uzbekistan and contributed a series of photos of the hydroelectric plant on the Dnepr River.

In 1931, along with Arkady Shaikhet and Salomon Tulesa, Alpert worked on the picture story *Twenty-Four Hours in the Life of the Filippov Family*. The photo-essay, published as a cover story in the German weekly *Arbeiter Illustrierte Zeitung* to wide praise in Europe and the United States, covered the life of a metal worker in Moscow's Red Proletarian factory. The influential work was critical in establishing the photo essay as a significant photographic genre and was among the most significant photography projects of its time, touring Vienna, Berlin, and Prague as an exhibition in 1931. The project was organized by editor Lazar Mezhericher as a manifestation of his views as expressed in his article "Serial Photography as the Highest Stage of Photographic Propaganda." The three photographers spent four days with the Filippov family, producing around 80 pictures of Nikolai Filippov and his wife and children; of these, 52 were used in the photo essay.

The images depict specific events in the life of what is claimed to be a typical family, each shot presenting an intelligible narrative which adds to the whole. The series begins with portrayals of the Moscow neighborhood in which the Filippovs live. Contrast is made between the Filippov's previous wooden house and their new and comfortable apartment building by including a miniature shot of their former dwelling. The meaning of such juxtapositions is supported with explanatory texts to show the greatly improved living conditions of working families in the new Soviet society.

Following the presentation of the living environment the photographers present a complete portrait of the family members, each identified by name, as they enjoy a morning tea inside their furnished apartment. This introduction prepares viewers to identify family members as they go about their day on the streetcar, in the factory where the father and son work, in the stores where the mother shops, and in the store where the daughter works. Close-ups of joyful and happy family members portrayed the security Soviet workers felt while photos of the factory and commune showed that such security is only possible through the work of the community.

A year later the essay was analyzed thoroughly in *Proletarskoye Foto* in an article that identified the photo essay as a new art form, similar to film. The enormous success of the Filippov essay made photo stories mandatory. Prominent photo stories

that followed included Alexandr Rodchenko's White Sea Canal essay in 1933 and Mark Markov-Grinberg's sequence on the coalminer Nikita Izotov in 1934. The essay form as put forth by Alpert and his colleagues had a powerful impact on photography internationally, providing inspiration for *Life* magazine's founding in 1936. It also proved influential on the works produced by the Farm Security Administration in the United States.

Alpert, along with Arkady Shaikhet, led the Union of Russian Proletarian Photographers (ROPF), which formed in the early 1930s. The photojournalists of ROPF repudiated the experimental manipulation of the October group, the avant-garde agitprop artists as exemplified by Rodchenko. In opposition to the startling angles and crops deployed by these photographers, now commonly called the Constructivists, the realists of ROPF urged straightforward reportage. ROPF rejected notions of art for art's sake and argued that photography pursue a purpose. Content rather than style should be the photographer's primary consideration.

Along with Shaikhet, Alpert offered some of the earliest denunciations of the nonrepresentational works and theories of the October Association photographers, including Rodchenko, Boris Ignatovich, and Elizar Langman. This position eventually garnered official support. In 1931, the Central Committee of the Proletarian Cinematographers and Photographers sanctioned the photographic approach presented in *Twenty Four Hours in the Life of the Filippov Family* as the appropriate model for the proletarianization of Soviet photography.

Alpert's work was displayed at the Exhibition of Works by the Masters of Soviet Photo Art in 1935, the last exhibition to show the vitality and diversity of Soviet photography prior to the institutions of socialist realism. Alpert also exhibited in the First All-Union Exhibition of Photo Art at the State Pushkin Museum in Moscow in 1937. This exhibit signified the closing chapter in post-revolution Soviet innovative photography. At the same time Alpert's images were produced not for galleries or museums but for a mass audience.

During World War II Alpert reported for TASS news agency. As with other Soviet photojournalists of The Great Patriotic War (World War II), few of Alpert's wartime photos were ever shown in galleries. Following the war Alpert worked for the Soviet Information Office and the Novosti Press Agency. He died in 1980.

AN AMERICAN PLACE

In the aftermath of the catastrophic stock market crash that ushered in the Great Depression, photographer and curator Alfred Stieglitz opened his last gallery in December 1929. Stieglitz's first gallery, The Little Galleries of the Photo-Secession (known as "291" for its location at 291 Fifth Avenue in New York City) had been open from 1903 to 1917, and during those years, Stieglitz had championed photography as a fine art with exhibitions of American and European photographers and painters that provoked questions about the relationship between media and advanced the cause of an avant-garde aesthetic. During the 1920s, Stieglitz's

own photographic production had flourished, inspired by his new relationship with painter Georgia O'Keeffe, and he continued to champion the cause of modern art in America with exhibitions he organized at the Anderson Galleries (1921–1925) and The Intimate Gallery (1925–1929), both in New York City. In these years Stieglitz made some of his best-known works, including his photographs of clouds known as *Equivalent*s and his vast portrait of O'Keeffe undertaken over two decades. As the 1929 season at The Intimate Gallery came to a close in May, Stieglitz learned that the building would be demolished. Several colleagues felt

strongly that he needed to continue his work as a supporter of American art at a new gallery, and photographer Paul Strand and close friend Dorothy Norman raised funds to rent a space at 509 Madison Avenue that Stieglitz dubbed “An American Place.” The light-filled space included five rooms, with white or pale grey walls, and a plain, painted cement floor. The gallery opened on December 7 with an exhibition of new watercolors by John Marin.

At An American Place, Stieglitz maintained and refined the same approach to exhibiting art that had informed his work in the earlier spaces. He disavowed any commercial practices including advertising or promoting the gallery to potential customers. The phone number was not listed in the phonebook and one oft-repeated story involved a woman asking Stieglitz where she might find the gallery he ran, and the photographer responding with a dismissive explanation that he did not run any gallery—clearly he felt the confused woman to be unworthy of the kind of intellectual and spiritual sustenance offered by An American Place. Stieglitz did not profit financially from his role at the gallery. Funds from the sale of works of art went directly to support the artists and to pay the rent. During the 1920s and 1930s, Stieglitz focused his attention on an increasingly small group of American artists, rather than the international artists that he had championed from 1903–1917. The limited season of four to five shows annually at An American Place featured regular exhibitions of new work by painters John Marin, Arthur Dove, and Georgia O’Keeffe; other artists supported at the gallery included Charles Demuth, Paul Strand, and Marsden Hartley. With the opening of the Museum of Modern Art (MoMA) just one month earlier than An American Place, Stieglitz anticipated MoMA’s preference for the European avant garde and sought to advocate on behalf of the American artists he had supported since the earliest years of their careers.

Only a handful of photographers had exhibitions at An American Place, but their impact was nevertheless significant, and photography remained an essential element of the American modernist aesthetic advanced by Stieglitz. Soon after Julien Levy opened his new gallery in New York devoted to Surrealist art and photography in the fall of 1931, Stieglitz decided to mount a retrospective of his own work. *127 Photographs (1892–1932) by Alfred Stieglitz* was open from February 15 to March 5, 1932, and featured early images of New York and portraits of colleagues such as Marin and Paul Rosenfeld, as well as *Equivalents*, portraits of Dorothy Norman,

portraits of O’Keeffe, and new views of the changing skyline in midtown Manhattan as seen from the windows of An American Place and his apartment at the Shelton Hotel. Just one month later, Stieglitz mounted his final exhibition of work by Paul Strand. This show included images from Strand’s driftwood series and views of the New Mexico and Colorado landscape. Their friendship of more than fifteen years, however, was strained and Strand saw less and less relevance in the spiritual formalism advocated by his mentor. After handing in his keys to the gallery at the close of his exhibition, Strand would spend the next decade involved with social-realist and documentary filmmaking. Inspired by the rediscovery of some of his old negatives from the 1880s and 1890s, Stieglitz mounted one final exhibition of his own work in December 1934, to coincide with the publication of the collection of essays, *America and Alfred Stieglitz*.

On March 28, 1933, a new young photographer walked into the gallery and presented his work to Stieglitz. After looking through the portfolio, the senior master welcomed Ansel Adams to An American Place. The two photographers maintained a regular correspondence over the next decade, and the West Coast-based photographer made annual visits to New York to meet with Stieglitz. Stieglitz harbored hopes that Adams might take on the mantle of championing American art and photography at An American Place, but the younger artist would not abandon his connection to the Western landscape. Stieglitz presented Adams’s work in a solo show at An American Place in the late fall of 1936. The only other solo exhibition of photographs at An American Place featured the work of Eliot Porter. The December 1938 show included black and white wildlife studies and intimate landscapes. Following his experience at An American Place, the naturalist chose to focus exclusively on his photographic career, eventually producing the spectacular color images of nature for which he is best known.

In the final decade of the gallery, before Stieglitz’s death in 1946, photographers continued to visit or correspond with Stieglitz in hopes of some acknowledgement from the elder statesman of their field. László Moholy-Nagy, Walker Evans, and Weegee (Arthur Fellig) all made contact with Stieglitz during these years, and for better or worse, each counted the interaction a significant moment in their development. The final seasons of An American Place were devoted to exhibitions of paintings by O’Keeffe, Dove, and Marin.

APPROPRIATION

Appropriation became one of the most confounding and provocative strategies used by artists during—and since—the 1980s. The medium of photography was integral to this method as the most effective tool to enable artists to take possession of, borrow, steal, or otherwise copy existing imagery, whether drawn from the public domain, the works of other artists, or the general cultural context.

Art historical precedents for the late twentieth century strategy of appropriation included French avant-garde artist Marcel Duchamp's decision to exhibit "readymades" such as his signed urinal entitled *Fountain* beginning in 1913, the Dadaist collages and photomontages of Kurt Schwitters and others, Robert Rauschenberg's use of found objects in his "combine" works of the late 1950s, or the Pop Art and Fluxus movements of the early 1960s, both of which frequently incorporated commercial imagery. Certainly Andy Warhol's landmark photo silkscreens depicting multiple representations of Campbell's Soup cans, Coca-Cola bottles, and Hollywood personalities such as Marilyn Monroe became touchstones for later practitioners of appropriation such as American sculptor Jeff Koons.

Among the most notable artists to emerge in the wake of appropriation were Jack Goldstein, Louise Lawler, Sherrie Levine, Richard Prince, and Cindy Sherman. Each of these artists used photographic

techniques that played off photography's ability to represent reality and to create multiple originals, and expanded the definition of fine arts photography. Goldstein (re-)presented brief film clips such as the MGM lion's roar shown on a continuous loop, and Prince enlarged and thereby distorted imagery drawn from magazine advertisements featuring the iconic Marlboro cowboy. Levine critiqued the myth of the great Modernist masterwork in her re-photographic works such as the series *After Walker Evans*. Lawler, who also collaborated early on with Levine, became known for her photographs of works of art as they are displayed in public institutions and private homes. Sherman did not appropriate images as such, but uncannily mimicked the general look of 1950s and 1960s Hollywood films in her disarmingly straightforward 35-mm black-and-white series of *Untitled Film Stills*.

Artists such as Levine found support in the writings of critics such as Douglas Crimp and Hal Foster. Crimp, in his remarks as curator of the 1977 exhibition *Pictures*, made the case that artists were now in explicitly Postmodernist territory, having departed from existing Modernist norms: "Those processes of quotation, excerption, framing and staging that constitute the strategies of the work I have been discussing necessitate uncovering strata of representation... underneath each picture there is always another picture." Meanwhile Foster in his analysis of appropri-

tion commented that “this shift in practice entails a shift in position: the artist becomes a manipulator of signs more than a producer of art objects, and the viewer an active reader of messages rather than a passive contemplator of the aesthetic or consumer of the spectacle.”

However painters such as Julian Schnabel and David Salle met with strong market support yet were received coolly by those critics largely unsympathetic to a “return to painting” often perceived as uncritical and market-driven. While Schnabel gained initial renown for applying shattered crockery to the canvas and then covering it partially by thick layers of pigment, and also made reference to artists from Caravaggio to Warhol, others relied strongly on photography. In his paintings Salle incorporated both his own photography and found sources ranging from the art historical to the pornographic. The New York East Village painter Mike Bidlo created meticulous copies of the works of Pablo Picasso and other Modern artists, and by the 1990s he was also photographing staged tableaux based upon works such as Edward Manet’s *Olympia* and offering his own direct homages to Duchamp’s early readymades. Jean-Michel Basquiat also combined spontaneous and exuberant drawing by hand with photo-silkscreened elements from borrowed sources. Jeff Koons embraced his borrowed imagery in the name of a new pseudo-populist aesthetic. In his quest to please his collectors, he oversaw the replication of stuffed animals, liquor decanters, and posed for photographs using the idioms of advertising, publicity shots, and hardcore pornography.

Sigmar Polke and Gerhard Richter and the Russian émigré duo Komar and Melamid responded to their own specific cultural surroundings. Polke and Richter, both raised in the former German Democratic Republic, or East Germany, created works in the mid 1960s under the heading “Capitalist Realism” and both experimented extensively with photography. Polke manipulated and distorted his photographs technically and incorporated them into his large, nonsensical paintings, while Richter made exquisitely rendered paintings from family and found photographs. Komar and Melamid in their SOTS art appropriated and transformed the iconography and stylistic effects of Socialist Realism, yielding aesthetically seductive and critically incisive results.

The subtle and complex feminist critique evident in the works of Levine, Lawler, and Sherman was proclaimed more boldly in the photomontages of former graphic designer Barbara Kruger, which

displayed such slogans as “Your Body is a Battleground.” “It’s a Small World (but not if you have to clean it),” and “Your Gaze Hits the Side of My Face,” presented as bold white typographic statements set into red banners laid over large-scale appropriated images. Jenny Holzer also used fragments of everyday speech and received knowledge in her textual works, most characteristically displayed using moving LED display signs. Other contemporary artists such as the American media artists Dennis Adams and Hans Haacke, the Chilean social activist photographer Alfredo Jaar, and Polish-Canadian public art innovator Krzysztof Wodiczko recontextualized documentary images within gallery installations, light boxes, and slide projections in order to offer pointed political commentary particularly during the Reagan era of the mid-1980s.

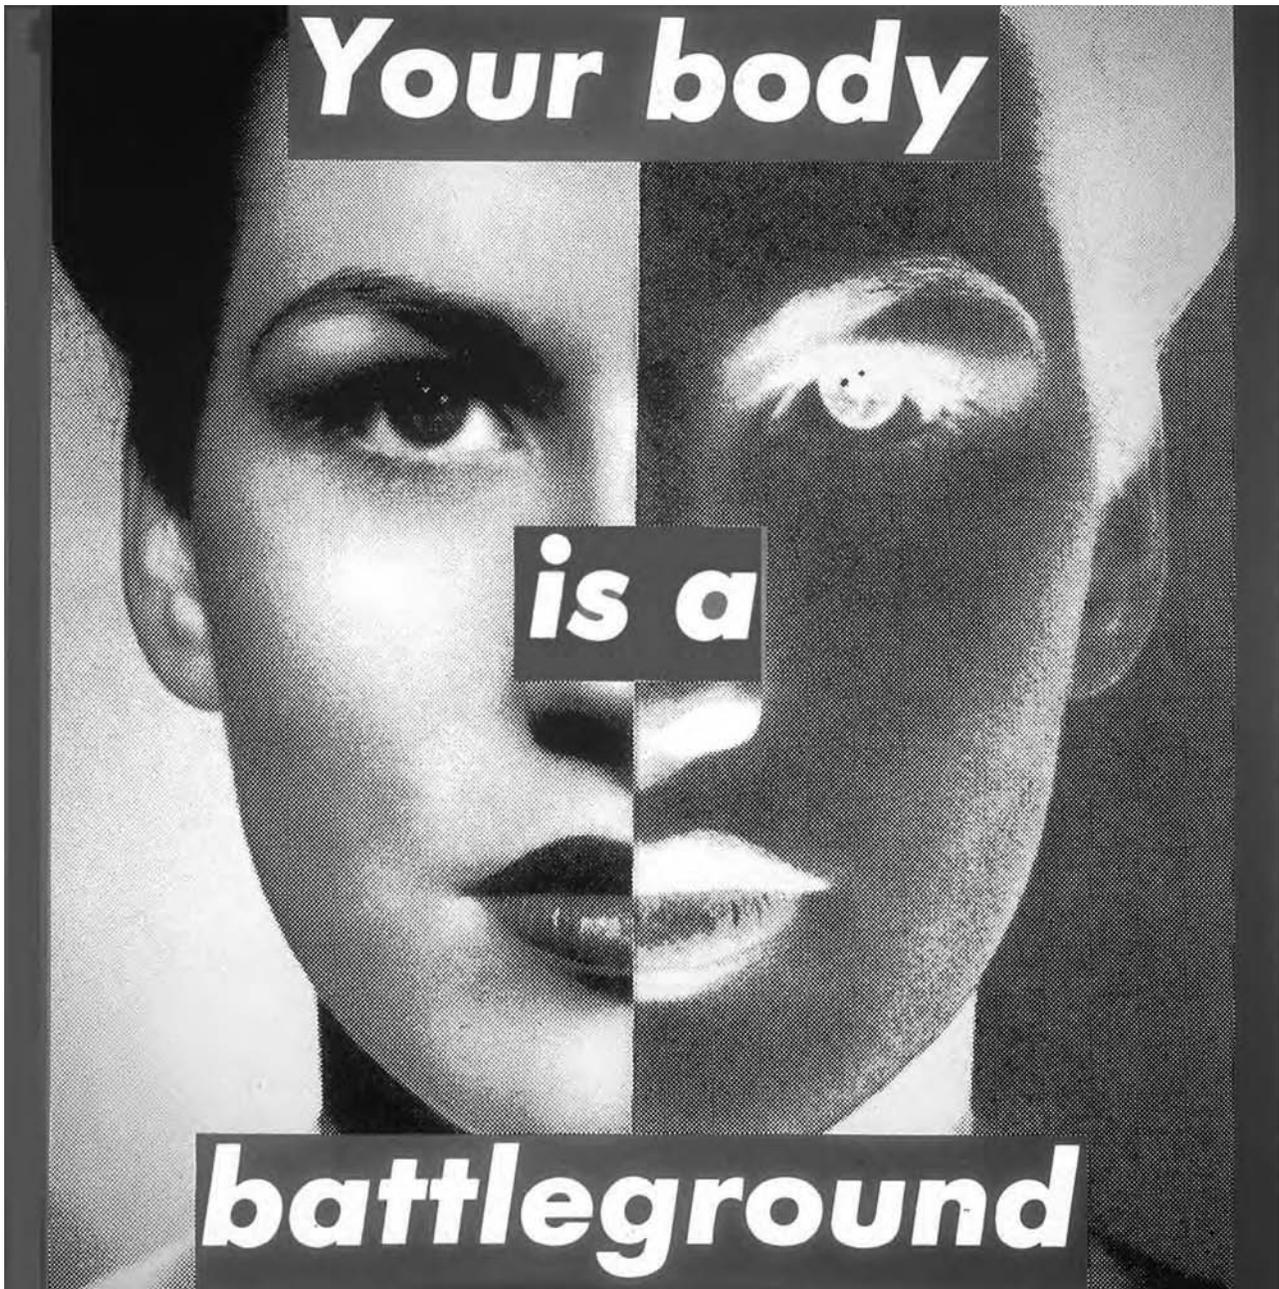

Appropriation became a characteristic artistic style of the 1980s, but perhaps as with its contemporaneous movements graffiti and neo-expressionism, its power and influence seemed to initially diminish after a period of overexposure. However in a more positive sense appropriation today has become merely one of a range of Postmodernist tools still actively used by contemporary artists in the context of multidisciplinary works. The general ubiquity of technology in the early twenty-first century, and the widespread use of digital replication and repetition in music, advertising, and film, almost ensures the likelihood that the strategy of incorporating borrowed images will continue unabated in the contemporary art world.

NOBUYOSHI ARAKI

Japanese

Tokyo-based Japanese photographer Nobuyoshi Araki has gained worldwide notoriety for his candidly erotic pictures. Perhaps the most prolific photographer in the history of the medium, Araki is the author of more than 200 books, and his exhibitions often include thousands of images. A self-styled “photo-maniac,” photography is a lifestyle for Araki; he shoots many, sometimes dozens of rolls of film a day. Best known for his voyeuristic, snapshot-style images of women often tied up with ropes (*kinbaku*) and colorful, sensual flowers, Araki has used photography to interpret emotions and experience.

Born in Tokyo, Araki was given a camera at the age of 12 by his father. In 1963, he graduated from the engineering department at Chiba University, majoring in photography and cinema. He went into commercial photography soon after graduating, working at the advertising company Dentsu in 1963. During his nine years there, he also pursued his own projects. In 1964 he received the Taiyo prize for *Satchin* (1963), a black and white photographic series featuring kids from downtown Tokyo, whose title derives from the pet name of a little girl. He exhibited these works and others in his first exhibition in 1965.

In 1970 Araki created the first of his *Xerox photo albums*, which he produced in a limited edition and sent to friends, art critics, and people randomly selected from the phone book. The quality of this early type of photocopy often led to unusual tonal effects in the resulting images. In 1971, he published the privately printed photographic collection *Sentimental Journey* (*Senchimentaru na tabi*), in which his personal life, in particular his wedding and honeymoon with Yoko Aoki, was displayed in a diary format. At first glance the images seem to be naïve records but they are in fact staged. *Sentimental Journey* established Araki’s reputation, and

in 1972 he left Dentsu and became a freelance photographer. Since then, almost all his works have revolved around his own life, and are almost always about the women who are close to him.

Stylistically, Araki has never been a purist. He works in black and white and color, using cibachrome as well as color photocopies for their garishness and artificiality; he uses natural light and hard flash. Araki has also employed many experimental techniques and processes including collage, montage, solarization, and hand-applied color, including paint (one series presents paint dripped onto close-up images of vaginas). He also works with negatives that are damaged or decayed, and scratches into the emulsion on finished prints, such as in a series where he scratched out the genitals on nudes. He juxtaposes snapshots with studio photos, portraits, and street scenes, and still lifes with hardcore pornography. He photographs voraciously, from the female body to food to cats. Araki works primarily with a Pentax 6 × 7 format camera, dating the resulting prints to register them in time; in his ongoing *Tokyo diaries* Araki uses a camera that automatically prints the date on the image. Reflecting the nature of how he shoots, his work is presented and is best understood in the context of the series.

Araki’s work is paradoxical in that it is subjective and yet makes no claim to photographic truth; he often appears in scenes containing sexual activity, yet one of his best known images is a self-portrait wearing his recently deceased wife’s pink coat, gripping a large black-and-white framed portrait of her. For Araki, an everyday street scene may become transformed into a setting of intimate revelation. Particularly preoccupied with female sexuality, Araki attempts to become more intimate with women through photography, claiming the ropes he uses replicate an embrace. However critics argue that the photographer’s objectification of his

ARAKI, NOBUYOSHI

subject limits if not precludes emotional connection and hence empathy, creating in effect, images void of intimacy. Similarly to Goldin and Joel-Peter Witkin, who also work with erotic imagery, Araki's work seeks to balance the sublime and the obscene; it is at once shocking and mysteriously tender. Over the years, his bold, unabashed photographs have been the object of censorship, especially in his native Japan, a fact that has not diminished his influence. Series have included images of gagged and tied women wearing the traditional dress of the kimono, on *tatami* mats in a *riyokan* (Japanese inn). Although the women are often restrained and silenced, the Japanese art of rope-tying, *kinbaku*, differs from Western style bondage. Araki's images are also heir to the Japanese tradition of erotic art, especially *Shunga*, the erotic painting from the Edo period. They combine ecstasy and death, a passion for life and a melancholy awareness of the finiteness of life.

Flowers have featured in several of Araki's projects of the 1990s and are appropriate subjects for his fusion of eros and death. Araki's photographs make explicit that flowers are reproductive organs and emblems of the consummation of love. However, Araki's flower studies are hardly sentimental; the flowers petals are often painted with garish colors and seem past their prime.

The city of Tokyo is another of Araki's chosen subjects although he claims only an interest in the urban areas he frequents and knows well, such as Shinjuku, Tokyo's entertainment district with its nightclubs, strip joints, and seedy hotels. People often seem sad and lonely in Araki's Tokyo. He claims that "photography is synonymous with what relates to me. I don't go somewhere simply to take photographs."

Araki has edited most of his own books, and has gained a strong and growing following in the United States and Europe. He has formed friendships with other great photo-diarists such as Robert Frank and Nan Goldin, and in 1995 Araki published a book with Goldin (*Tokyo Love*). He has also delved into stylized fashion photography. In 2002, the German publisher Taschen released a lavish tribute to Araki's work—an enormous and unique (numbered and signed) book featuring 1000 images, with a print run of only 2500 copies. In 2003 the photographer published *Araki by Araki: The Photographer's Personal Selection 1963–2002*—the most comprehensive collection of his work, gathering images from each year.

DIANE ARBUS

American

Diane Arbus, whose singular, often shocking portraits emerged among the most iconic and modern images of the 1960s, famously wrote in 1971, "A photograph is a secret about a secret. The more it tells you the less you know" (Arbus 1971, 64). Although Arbus's quote reveals her skepticism toward the common assumption that photography tells the truth—in other words, that it is a visually accurate medium—her work has nonetheless been linked to the documentary photographic tradition. By the late 1950s American photographers in particular began to register their discontent with the

prevailing photographic conventions that focused on formalism or "fine art" aesthetics. Photojournalism—including the role it played in larger cultural upheavals, such as Vietnam, the civil rights and women's movements—emerged as a viable mode of photography. Moreover, the role of the photographer in relation to his or her subject came under scrutiny. Post-World War II figures such as Lee Friedlander, Garry Winogrand, Danny Lyon, Bruce Davidson, and Arbus, among others, pointed their cameras toward the common, everyday, and often ugly realities of urban existence and the individual subject. Their vernacular approach, which actually borrowed from both the fine art and

documentary traditions, came to be described as the snapshot aesthetic. These pictures of the so-called “social landscape” were often captured quickly using portable 35-mm cameras, often on the street. They appeared to be casually composed (if at all), incorporating movement and happenstance. Critics and historians of photography such as Nathan Lyons and John Szarkowski attempted to describe this fresh development that brought greater, self-conscious creativity to the objective and socially conscious picture.

A formative exhibition that introduced the notion of social landscape photography was *New Documents: Diane Arbus, Lee Friedlander, Garry Winogrand* (1967), organized by Szarkowski at the Museum of Modern Art in New York. Head of the museum’s photography department from 1962 to 1991, Szarkowski’s wide-ranging and groundbreaking exhibitions helped place photography within the company of painting and sculpture in the art museum and beyond. *New Documents* heralded a nascent age in a photography that emphasized the pathos and conflicts of modern life presented without editorializing or sentimentalizing but with a critical, observant eye. Szarkowski saw in these three artists a shift in the documentary approach, traced through Walker Evans, which incorporated deeply personal ends. He wrote in the Museum’s wall panel, “Their aim has been not to reform life, but to know it. Their work betrays a sympathy—almost an affection—for the imperfections and frailties of society (Szarkowski quoted in *Diane Arbus Revelations* 2003, 51).

Arbus’s affinity for imperfection and frailty is today legendary, making her role in this sea-change historically relevant. Yet her oeuvre is also distinct and virtually unique in her generation for its emphasis on portraiture in its classical sense. Unlike the loose and cropped compositions of her peers, who often captured fleeting images and moments, Arbus’s photographs relied upon an established relationship of some sort between the sitter and the photographer. In other words, Arbus’s process intimately involved the subject, who was usually posed, and always remained cognizant of the photographer’s presence. While the pictures may appear candid, they were more often than not painstakingly composed with an emphasis on visual narrative and description. Her talents lie in her uncanny ability to communicate something distinct, private, and mutable about her subjects’ personalities, fantasies, or experiences, what she called “the gap between intention and effect” (Arbus 1972, 1–2). Drawn to the power of myth and self-invention, Arbus’s titles reflected this

interest in telling a story about her subjects: *A family on their lawn one Sunday in Westchester, N.Y.* (1968), *Man at a parade on Fifth Avenue, N.Y.C.* (1969), *A Jewish giant at home with his parents in the Bronx, N.Y.* (1970), and *Child with a toy hand grenade in Central Park, N.Y.C.* (1962). This narrative approach is related to the context in which the images were first seen—primarily in the pages of popular magazines where they appeared as photo essays.

Diane Nemerov Arbus’s photographic career began as a commercial one in which she partnered with her husband Allan Arbus. The couple ran a successful commercial studio in New York City, and their work appeared regularly in *Glamour* and other magazines. Diane generally devised the concepts and designed and styled the shots, while Allan worked behind the camera; she learned from him how to develop film and print negatives in the makeshift darkroom that was the couple’s bathroom. She simultaneously took her own pictures, using a 35-mm Nikon to photograph people, often those characters she met on the street. The Arbuses worked together from about 1941 to 1956 when Diane quit the business to pursue her own photography fulltime; she pursued editorial assignments in order to pay for more creative, personal work.

In 1959 she earned her first commissioned photo essay, ostensibly about the vagaries of urban life in New York City for *Esquire* magazine. Titled *The Vertical Journey: Six Movements of a Moment Within the Heart of the City*, the portfolio included portraits as disparate as a side-show performer known as *The Jungle Creep*, who appeared in Hubert’s Museum of eccentrics in Times Square to an honorary regent in the Washington Heights chapter of the Daughters of the American Revolution. She went on to publish more than 250 pictures in *Harper’s Bazaar*, *Esquire*, the *Sunday Times Magazine* of London, and elsewhere. Other photo essays included *The Auguries of Innocence* (*Harper’s Bazaar*, December 1963), *The Soothsayers—What’s New: The Witch Predicts* (*Glamour*, January and October 1964), and *People Who Think They Look like Other People* (*Nova*, October 1969). Arbus generally wrote extensive text captions for the essays’ images. She approached her personal work in much the same manner.

Although Arbus’s most famous subjects were outsiders such as transvestites, strippers, carnival performers, nudists, dwarves, and other assorted “freaks,” she was equally drawn to the prosaic in subjects as ordinary as children, mothers, couples, old people, and the like. She photographed her subjects in familiar settings: their homes, on the

street, in the workplace, in the park. While the environmental setting often provides description as to the sitter's personality or life, it does not distract from the matter at hand, namely the poignancy or intensity of the interaction between Arbus and her subject.

She admired and was influenced by the typologies of August Sander, whose assorted shopkeepers, industrial workers, peasants, artists, as well as social outcasts reflected archetypes the photographer found within his own milieu—Germany in the 1920s and 1930s. She shared with Sander a breadth of iconography and a sympathy with subjects presented without romanticism. Her nearly archeological interest in social mores and milieus is evidenced in her project proposal for a 1963 Guggenheim Grant. Titled *American Rites, Manners and Customs*, she sought to depict a range of social ceremonies, including beauty pageants, games and competitions, costumes, parties, and the like. Arbus called these ceremonies “our symptoms and our moments. I want to save them, for what is ceremonious and curious and commonplace will be legendary” (Arbus quoted in *Diane Arbus Revelations* 41). She won this grant and received a second one from the Guggenheim in 1966. Arbus's photography also bears the influence of her teacher, Austrian-born Lisette Model, who also photographed for *Harper's Bazaar* and whose expressive images monumentalize their human, often quirky, subjects.

In order to achieve sharper, less grainy images, Arbus had abandoned the 35-mm format by 1963 for a wide-angle Rolleiflex and later a Mamiyaflex camera, each of which produced 2-1/4" square negatives. A photographer held the 2-1/4" cameras at waist-level, looking down, which slowed down the process of picture-making considerably. This format was in keeping with her prolonged portrait sittings. In addition, the wide angle of her first Rolleiflex created a slight warping of the contents of the frame, lending a subtle skewing of the composition that enhanced the psychological effect of the picture. As early as 1965 she began printing her pictures with the irregular, black borders that showed the entire, uncropped negative. These borders (also used in Richard Avedon's portraits) called attention to the fact that the image was constructed on a two-dimensional surface rather than a window-like view to the subject. Typical of the 1960s documentary aesthetic, Arbus's use of the negative borders put stress upon the subjectivity of the photographer and her vision. Arbus's portraits search the *surface* of people, their facades, costumes, eccentricities, and her direct, frontal

compositions reflect this. However, penetrating vision often points to a hidden psychology, or at least the traces of the vulnerabilities that lie beneath this surface.

Historians have noted the potency, and discomfort, associated with Arbus's seemingly voyeuristic iconography, especially in relation to the viewer. Arbus was intently aware of the role she played in relation to her subjects, including any responsibility she might have for or to them. Because she recognized that the pictures were the result of an often passionate, emotional investment in her subjects, she was careful to temper this with aesthetic deliberation and dispassion. This complex intertwining of roles—between photographer and subject, photographer and viewer, and subject and viewer—reveals Arbus's masterful understanding of empathy moderated by critical distance (Phillips, *Diane Arbus Revelations* 59). The gravitas of her work, in fact, lay in this acute, triangular relationship linking photographer, subject, and viewer. It represented a rather early understanding of image theory that would later inform much of postmodern photography.

In keeping with Arbus's interest in subcultures, in 1969 she began photographing at a home for the mentally retarded in New Jersey. These images remain mysterious glimpses into the photographer's subjective mindset as well as beautifully poignant representations that seem to waver on the line between what is normal and abnormal. Arbus's care to show her subjects as individuals—without exploitation or editorializing—was reflected in the seriousness of this personal project, for which she had to seek extensive permissions. Most of the photographs from this series were posthumously printed and titled (as *Untitled* images). In her notebooks of the time she detailed the various residents by name, often describing particular interactions on a given day. The work was edited by her daughter Doon Arbus and published in 1995 (Arbus, *Untitled* 1995).

That same year she self-produced a limited edition portfolio of museum-quality prints titled *A Box of Ten Photographs* (dated 1970). The prints were displayed in a minimalist, elegant, clear box that doubled as a framing device, designed by her friend Marvin Israel. The collection of photographs—all of which related to the family—as well as their presentation represented a conscious statement about how she viewed herself as an artist and her photography (Phillips, *Diane Arbus Revelations* 66). The portfolio included several images from *New Documents* and five that had been published in *Artforum*, May 1971. She advertised the

sale of the portfolio in *Artforum* magazine; only four sets sold in her lifetime, one to the artist Jasper Johns.

At the time of her death by suicide in 1971 (she had suffered from depression throughout her adult life), Arbus's photography was not widely exhibited in museums and galleries, although it would prove to be instrumental in the artistic reexamination of photography within American museums, where the medium would assume a sure and stable place during Szarkowski's tenure. Although Arbus had serious reservations about displaying her pictures in museum exhibitions, where she feared her intentions might be misunderstood, her work has retained a vital and major place within the history of photography.

Biography

Born Diane Nemerov, New York City, March 14, 1923 to Gertrude and David Nemerov. Her wealthy family of Russian-Jewish descent owned Russek's, a fashionable Fifth Avenue department store. Married Allan Arbus against parents' wishes in 1941. Brother was Howard Nemerov, Pulitzer-prize winning poet and U.S. Poet Laureate in 1988. Daughter Doon Arbus born 1945; daughter Amy Arbus born in 1954. With husband opened fashion photography studio ("Diane and Allan Arbus"), 1946. Attended first photography course in mid-1950s with Alexey Brodovitch at New School for Social Research, New York City; studied with Lisette Model at the New School, 1956–1958. Quit the business in 1956 to pursue her own work, garnering assignments for *Esquire*, *Harper's Bazaar*, and the London *Sunday Times Magazine*. The Arbuses separated amicably, 1959; that year Diane began keeping notebooks of her writings with ideas for pictures and other interests. By early 1960s discovered Hubert's Museum (flea circus in Times Square) and Club 82 (a female-impersonator club in downtown Manhattan); revisited these sites extensively to photograph. Met Walker Evans through Marvin Israel, 1962. Received first Guggenheim Fellowship for *American Rites, Manners and Customs*, 1963; second Guggenheim Fellowship for *The Interior Landscape*, 1966. Began teaching at Parsons School of Design, New York City. Included in MoMA exhibition *New Documents*, 1967. Hired by John Szarkowski at Museum of Modern Art, New York, to research exhibition on news photography, *From the Picture Press*, 1969–1970. Produced with Marvin Israel a limited edition portfolio of 10 photographs (*A Book of Ten Photographs*), 1969–1970; published *Five Photographs by Diane Arbus*, *Artforum*, May 1971. Taught a private master class at Westbeth, the artists' cooperative housing where she lived, 1971. Died by suicide in her New York City home, July 28, 1971. Subject of posthumous retrospective at

Museum of Modern Art, New York, with accompanying monograph *Diane Arbus* (1972).

Individual Exhibitions

Note: Arbus's sparse exhibition history and the relative lack of scholarship on her is due in part to the control The Estate of Diane Arbus has maintained over her work including exhibitions and reproductions of it.

ARCHITECTURAL PHOTOGRAPHY

Architectural Photography is the representation of architecture in images. This includes the depiction of buildings and interiors in photographs, but also comprises the reproduction of designs, the depiction of architectural models, the participation in preservation campaigns, and all forms of journalistic imagery for magazines and newspapers. This genre of photography has wide commercial and industrial application, as well as a long tradition as a fine-arts practice. Architectural Photography is a tool for architects as well as for construction and development companies to advertise their services or product. For industries that manufacture components such as windows, doors, tiles, or drain pipes, the attractive, yet accurate rendering of the items provides a valuable shorthand reference.

Throughout its history, Architectural Photography has been as important in interpreting architectural design as in criticizing political approaches represented in buildings and constructions. Architectural Photography has also shaped architectural design itself through its pedagogical uses. Indeed, since the invention of photography in the mid-nineteenth century, Architectural Photography has been of primary importance to instruct architects-in-train-

ing as well as historians and others interested in the field. This included some of the technical derivations of Architectural Photography such as photogrammetry and (aerial) topogrammetric photography.

Architectural Photography may not have been more than just another aspect of the commercial and industrial use of photography if it had not been for the work of Eugène Atget. Atget linked the nineteenth and the twentieth centuries, both in his choice of subjects and in his stylistic approach. A frantic collector of edifices and details, who was especially attentive to situations that ordinarily might be overlooked, within three decades working on his own, he produced a grand oeuvre in Architectural Photography. This treasure trove was not widely known until it was discovered toward the end of Atget's life in the 1920s by the Parisian avant-gardists. The Americans Man Ray and his then-assistant Berenice Abbott were instrumental in bringing Atget's work to the attention of the New York fine arts and publishing world. The latter figure followed Atget's lead by amassing an extraordinary portfolio of architectural photographs of New York in the 1930s. At about the same time Walker Evans contributed

his unique, intimate approach to architectural subjects. With Abbott and Evans, a firm tradition of Architectural Photography was established that concentrated on the accumulation of large numbers of images, especially of vernacular architecture. Abbott's example was followed by photographers such as Chicago-based Harold Allen and Clemens Kalischer, whereas Evans found followers throughout the American continent, notably Wright Morris and David Plowden, who used a panoramic camera to capture wide sections of the built environment.

One subgenre within architectural documentation of the late nineteenth and early twentieth centuries had social purposes as well. Before 1900, a number of authors and social reformers had outlined the effects of living conditions on health and criminal activity, and photographers soon took up the cry. Thomas Annan photographed the old closes of Glasgow in the 1860s, Jacob Riis worked for city authorities in New York in the 1890s, and Lewis Hine's seminal photographs of New York City tenements were taken for the Red Cross from 1910 to 1930. The Berliner Hermann Lichte photographed for the Prussian health insurance industry around 1913, and anonymous colleagues were commissioned for similar work in the German cities of Kassel and Heidelberg. Many of these photographs were taken with small format cameras and flash and captured candid images of families living in neglected, rundown tenements in squalor and misery. Most of the architecture shown in these series had been erected in the nineteenth century, and it was the clear intention of both the photographers and their patrons that these buildings were to be dismantled as soon as possible. This application of Architectural Photography thus had the function of destroying the past and making way for future structures. These socially concerned series were part of the emergence of modernism, with Architectural Photography, changing its functions and form as did architecture itself.

In the realm of architectural practice, photography proves that a design has been executed, a building has been erected, or a bridge constructed. This documentation is now an integral part of the business practice of architects. One of the earliest architects to exist on private commissions and run a modern, professional office was the Beaux Arts architect Henry Hobson Richardson of Boston, Massachusetts. He was scrupulous in hiring the best photographers of his time. These images were not only used for covering the walls of his office and impressing prospective clients, but Richardson also arranged to have them reproduced in architec-

tural magazines—at his own cost—in one of the earliest appearances of Architectural Photography as a public relations strategy. The photographs Richardson commissioned focused primarily on the idea of the building, often showing a small but representative detail that best depicted his architectural and design ideas. To accentuate the building itself, when possible, Richardson set his structures on small hills so they had to be approached from a lower level, dominating and further impressing the viewer. He instructed his photographers to duplicate and even accentuate this experience in their photographs, creating portraits of his building more than strict documents.

This method of depiction was taken up and promulgated, somewhat ironically, when the Arts-and-Crafts movement spread through the United Kingdom and Central Europe around 1900. Although architects such as Charles Robert Ashbee, William Richard Lethaby, Mackay Hugh Baillie Scott, and Charles F.A. Voysey rejected any connection to the Beaux Arts school in architecture, they asked their photographers to set up their shots not only utilizing a low viewpoint, but using the raking light available when the sun was low on the horizon early in the morning or late in the day, or by photographing on a day when the sky was filled with dark clouds. It was at this time that Architectural Photography became a profession in its own right, and when some architects themselves took up photography, the two professions merged. Important photographs have been made by architect-photographers. Heinrich Rückwardt of Berlin, published his *Architectural Details* as portfolios in enormous sizes—up to 60 × 80 cm—from 1895 onwards, with a great number of photographers following his lead, each developing a different approach to documenting buildings both new and old.

Among the important architectural photographers around 1900 are Francis B. Johnston and Henry Bedford Lemere, who served as propagandists of the Arts and Crafts movement. Both operated throughout the United Kingdom and had well-known workshops in the vicinity of London. Although there is no typical stylistic approach in their work, it is clear that both leaned more toward the clear and straightforward designs of Charles Rennie Mackintosh than the wealth of detail characteristic of the work of other designers and architects of the era. Instigated by books and reports on English architecture, Italian, French, and German photographers such as Mauricio Lotze, Michel Neurdein, and Waldemar Titzenthaler began to produce portfolios of interesting interiors and

ARCHITECTURAL PHOTOGRAPHY

other series for the illustrated papers; some of them cooperated with well known architects by providing them not only with pictures of their edifices but with historical material as well. Similar to the work of their English counterparts, the presentation of architecture by these early twentieth century figures was meant to educate and refine the sensibilities of the increasing number of wealthy clients who had made their fortune in the late nineteenth century.

In the years shortly before World War I, modernism made its way to the public via Architectural Photography. European architects such as Le Corbusier, Walter Gropius, and Ludwig Mies van der Rohe had begun their careers at offices like those of Peter Behrens and Theodor Fischer, which featured large archives of photographic material from all kinds of sources. When Le Corbusier traveled to Greece and Italy he took photographs to aid his memory, but when he published his research in several magazine articles and books—thus founding avant-garde architecture—he used existing pictures by photographers such as Fred Boissonas, Arthur Koester, and Hugo Schmoelz. On the other hand, the American architect Frank Lloyd Wright began a close collaboration with the photographer Clarence Fuermann.

In the area of industrial use of Architectural Photography, the Deutsche Werkbund, a congregation of industrialists, architects, designers, artists, and craftsmen founded in 1907, set the parameters for modern object photography by producing catalogues of well-designed pieces shown on white backgrounds under diffuse light—a method of display used throughout the twentieth century. The years following World War I saw the beginnings of so-called straight photography as a fine art, with Architectural Photography playing a large role in this development, along with the conventions that arose around object photography in commercial and industrial applications. Although some American and European fine arts photographers, including Frederick Henry Evans, Alfred Stieglitz, Edward Steichen, and Hugo Henneberg, had used architecture as motifs in their compositions, Architectural Photography was not an important theme in this movement. The careers of Charles Sheeler and Paul Strand, however, placed Architectural Photography front and center in American fine arts photography. Their reference medium was the documentary film, and after finishing their movie about New York in 1921 architecture became their metaphor for both old and modern as well as rural versus urban life: Sheeler's series on Shaker villages as well as Strand's still lifes of metal objects were executed in technically perfect prints and shown as

if they were commercial Architectural Photography, elevating it to a fine art.

Different sources in Europe gave birth to similar results. The German *Neue Schlichkeit* (New Objectivity) was a painting movement emphasizing motifs that had been previously explored in Architectural Photography, and it returned to fine art photography again in the works of Albert Renger-Patzsch, August Sander, and their successors. In France, film had early on acquired the status of a fine art and the realism of French film, as in the work of the director René Clair, infused Architectural Photography into the modern consciousness in its use of settings. The photographer Claude Gravot had his roots in this cross-fertilization; he had worked for Le Corbusier and Robert Mallet-Stevens, the most renowned French film architect in the 1930s. In Belgium, documentary filmmakers such as Joris Ivens provided inspiration for the photography of Willy Kessels and Camille Petry. Only the United Kingdom seemed content with the aesthetic promulgated by the Arts-and-Crafts movement and its influence on the Linked Ring Brotherhood. Frederick Henry Evans, who had done most of his architectural subjects between 1890 and 1910 in England and France, found his successors in Bill C. Clayton, and later in Anthony Ayscough and Edwin Smith. Modernism in British Architectural Photography lies chiefly on the shoulders of Herbert Felton whose immense oeuvre is now one of the main sources of material on 1930s' design.

In the 1930s, Modernism continued to spread throughout the world, Architectural Photography being an important means of dissemination of the ideas of the modern architects who used the camera both for the preparation and the distribution of their work. Architectural Photography received a new quality in the work of Erich Mendelsohn, renowned modernist architect in 1920s Berlin who emigrated in 1933, arriving in San Francisco after a decade in Israel. Mendelsohn had cooperated with photographers like Arthur and Walter Koester but was driven to a collection of photographs showing American grain elevators and industrial sites that were presented by Walter Gropius at an exhibition of the Deutsche Werkbund in 1914. In 1924 he received the commission from one of his clients to photograph and describe modern American architecture and traveled to the United States. The photographs he brought back to Germany were not only interesting in their choice of subjects but as stylistic approaches as well. They subsequently caused a fashion of Americanism in European Architectural Photography strictly connected to Modernism.

By the late 1920s, conventions about how to depict modern architecture had spread throughout Europe. These conventions included depicting the building through an axial or diagonal (45°) orientation on the selected facade, generally in bright early morning or late afternoon sunlight with long and strong shadows that emphasized cubic volumes, or setting the building against a sky dark with cumulus clouds, and presenting the image in a crisp clear print with an overall depth of field and a glossy surface. Another convention was that except for the inclusion of one or two individuals in order to convey the scale of the structure, the pictures were empty of life. Motorcars were banned except when the architect had also designed an automobile, as in the case of Gropius and Le Corbusier. Trees were only allowed without leaves. Preeminent among the architectural photographers of this style were Claude Gravot and André Kertész in France, John Havinden, Francis Yerbury, and the German emigre Walter Nurnberg in the United Kingdom, the Studio Vasari in Italy, the Koester brothers in Berlin, Werner Mantz and Hugo Schmoelz in Cologne, Eduard Wasow in Munich, Otto Lossen in Stuttgart, Albert Renger-Patzsch in Essen, and especially Lucia Moholy in Dessau who, with her series on the new buildings of the Bauhaus, lay down the rules for a strict documentary approach to modern architecture. This modernist convention was propagated in illustrated papers, magazines, books, and most of all, on picture postcards.

Modernism became the global style in architecture, immensely aided by the exhibition, *The International Style*, at the newly founded Museum of Modern Art in New York in 1932. Organized by the art historian Henry-Russell Hitchcock and the architect Philip Johnson, the exhibition and its accompanying book drew from a wealth of photographic material that showed architecture from all over the world. This new international convention of Architectural Photography was quickly adapted by commercial photography studios, most notably companies such as Hedrich & Blessing in Chicago, Nyholm & Lincoln in New York, and Dell & Wainwright in London. These studios and others presented modern architecture in elegant, technically perfect images ready for publication in the glossy magazines of the day. Modern architecture was the rising star of lifestyle, and Architectural Photography was its medium. Individuals such as Sigurd Fischer and Ralph Steiner in the United States, Roger Schall and Maurice Tabard in France, or Hans Spies, Werner Mantz (both emigrated from Germany), and Jaap d'Oliveira in The Netherlands contributed to this mainstream report-

ing on quality design and photographic art. And there was Margaret Bourke-White with her huge series on the construction of Rockefeller Center and the Chrysler building in New York as well as the industrial photographs from the Soviet Union where photographers like Alexandr Rodchenko tried to integrate Architectural Photography into their Agitprop work.

The rise of power of the Nazi party in Germany saw the usurping of Modernism and its depiction of architecture as a propaganda tool. The Nazi stylistic approach, best described as an uncanny mixture of classicism and romanticism, saw a number of photographers profiting from their alliance with the regime. Walter Hege and Helga Glassner served as de facto reporters of Germany's historic architectural and social greatness; Otto Eisenschink., Max Krajewski (not to be misidentified as the Bauhaus student of the same name) and Hugo Schmoelz were named *Fotografen der Bewegung* (Photographers of the [Nazi-]Movement). Schmoelz' son Karl-Hugo at the age of 22 received the commission to photograph Nazi architect Albert Speer's gigantic model of Berlin's sweeping transformation. Some photographers were able to continue to integrate modern strategies into their architectural propaganda: Heinrich Heidersberger with his use of infra-red photography to create black skies over industrial buildings and small houses in Northern Germany (which influenced others across Europe) as well as in the work of Jonathan Jonals (Jonals Company) from Denmark and in the night journeys through Paris by Brassäi.

The end of World War II saw numerous new commissions for Architectural Photography in Europe and Japan to document the widespread destruction. Although it was forbidden in several countries—notably the United Kingdom and Germany—amateur photographers even during the war years had documented the substantial losses of their home cities and areas. As well, the Allied forces employed photographic surveillance units to record the damage of structures in detail, both in aerial and in ground-based films and still images. The reaction to these photographs was profound and nongovernmental organizations such as C.A.R.E. were founded to aid the devastated European populations. The destruction of Hiroshima and Nagasaki by atomic bombs dropped by American forces was first captured in aerial photographs. When blow-ups were printed in magazines and newspapers, people had difficulty believing what they saw—a particularly striking example of the power of Architectural Photography to stir individuals to political or social activism. This use

ARCHITECTURAL PHOTOGRAPHY

of Architectural Photography has become a convention that has persisted to the present day.

The disruptions of emergence of the Nazi regime, World War II, and its immediate aftermath saw exiles and refugees fleeing Europe in the late 1930s, and again in the late 1940s and early 1950s. In architecture, Gropius, Mies van der Rohe, and several other Bauhaus masters founded large architectural offices in the United States, all in need of good advertising photography. Mies became associated with Chicago's New Bauhaus (later Institute of Design) which trained many photographers in the "whole human" philosophy of László Moholy-Nagy, emphasizing industrial, product, and Architectural Photography. These expatriates joined other Europeans, notably Richard Neutra and Rudolf Schindler, who had already emigrated to the Los Angeles area in the 1920s. Neutra, an expert photographer himself, often told the story that in need of a good photographer in the late 1930s, he encountered Julius Shulman. Shulman had no professional training and was told by Neutra how to look at and photograph buildings. Legend or not, it was the beginning of an outstanding career which lasted for half a century. Shulman photographed not only every design by Neutra and Schindler but nearly every modern building in California. Modern American architecture would not have achieved its outstanding international reputation without Shulman's work.

The late 1940s with their postwar reconstruction and improving economies across Europe, Japan, and the United States, gave birth to a number of significant practitioners of Architectural Photography, each individually successful and important in his own country: Ezra Stoller and George Cserna in the United States; Eric de Maré in the United Kingdom; Heinrich Heidersberger, Arthur Pfau, and Karl-Hugo Schmoelz in Germany; Lennart Olson, Erik Hansen, and Carl Gustav Rosenberg in Sweden; Jean-Philippe Charbonnier and Robert Doisneau in France; Eva Besnyö and Cas Oorthuis in The Netherlands; and Studio Vasari and Paolo Monti in Italy, among many others. Important collaborations among photographers and architects began, like the life-long relation between Luis Barragán, Mathias Goeritz, and Armando Salas Portugal in Mexico, the latter being the photographer of both the architect and the sculptor. Some architects were married to photographers whose careers were secondary to those of their husbands: most prominent among them were Binia Bill and Ursula Wolf-Schneider.

The 1950s saw the first cross-over artists in Architectural Photography: writers such as Wright

Morris followed Walker Evans, historians Martin Huerlimann and G.E. Kidder Smith were as competent as photographers as they were experts in their fields. Even fine art cross-pollinated with Architectural Photography; the Americans Clarence John Laughlin, Jerry Uelsman, and other artists in photography used architecture as the metaphoric base of their ideas. A similar use of architecture is found in European fine art photography of the 1950s, which was further deeply influenced by existentialist philosophy: the Paris stories by the Dutch photographer Ed van der Elsken and the Swiss René Groebli needed the city's streets and places as much as Bill Brandt's perspectives or the work of the German *fotoforn* group and Robert Häusser's heroic pictures. The same can be said about the world-wide work of Henri Cartier-Bresson, the New York images of André Kertész, the Spanish series by Inge Morath and W. Eugene Smith, and a number of other photographic journalists whose photographs closely related their subjects to the architectural spaces in which they appeared.

All of these works influenced Architectural Photography by the introduction of the cityscape as subject. Whether inspired by writings of theorists like Kevin Lynch, Lewis Mumford, or William Hubbard on the importance of the image of the city, or simply actively involved in cultural movements of arts and literature, photographers such as John Szarkowski, Cervin Robinson, Morley Baer, and others began to document the conglomeration of what had grown within one century of American building, mainly in the big cities. Some, like Evelyn Hofer, returned to their European roots and—by titles like *The Stones of Florence*—even to the Arts-and-Crafts movement. There was also a return to one of the foundations of Architectural Photography: the preservation of monuments. In Chicago, Richard Nickel meticulously recorded every detail of historic buildings as they were being torn down; he paid with his life when part of the building collapsed while he was photographing the demolition of Louis Sullivan's Stock Exchange building. In photographing the demolition of New York's Pennsylvania Station in 1964, Norman McGrath succeeded in bringing back the political sense of building preservation that it had had in the nineteenth century.

Inventories of buildings to be preserved or lost were always politically influenced, but when modernism began to become stale in the late 1960s this field of Architectural Photography rapidly began to grow as a base of citizenship initiatives concerned about the integrity of their neighborhood.

Industrial archeology and oral history both used the camera to establish their methods hitherto seen as irrelevant. Photographers such as Hilla and Bernd Becher collected industrial construction forms; Concept Art groups like the London-based Art & Language (with Victor Burgin) or the Artist Placement Group (with Stuart Brisley) began with large collections of vernacular photography for specific reasons grounded in local contexts but with the space—and thus architecture—as constant background. When in 1975 the European year of building preservation was proclaimed, these initiatives were the first to gain political effort. But preservation still is not always seen as positive by governing forces; photographers such as Xujong, who want to save Beijing's *Hutong* quarters from being torn down, have to fight for decades with their work. Travel photography has also gained from the new interest in old buildings as can be traced in the work of the Swiss photographers Werner Studer and Emil Schulthess.

Urbanism is more than just old and new constructions along the roads and places of a given city, it includes the spirit of an overall layout, which was detected by a number of photographers and artists in the 1960s. Art Sinsabaugh with his large panoramas of motorway crossings and railroad junctions is an urbanist as well as other panoramists: Eugene Omar Goldbeck, Joachim Bonnemaison, and Josef Sudek. Ed Ruscha produced long *leporellos* of simple images taken along roads like Hollywood's Sunset Strip, which inspired architectural theory like Venturi and Rauch's *Learning from Las Vegas* and influenced Pop Art and Conceptual Art alike. Painters like Gerhard Richter began to work from aerial views of city centers by projecting these onto their canvasses. Richard Hamilton and Sigmar Polke had bird's eye views of urban places enlarged to the visibility of printing dots and transferred these images into oil paintings or silk screen prints.

The staleness of architectural modernism only was surpassed by the boredom of Architectural Photography at the same time. Postmodernism was on its way, and it would not have been possible without the influence of fashion and lifestyle photography in the 1970s. Again, this influence was made evident by the preservative character of photography, and large collections of pictures served as depositories for construction details freshly combined by architectural double-coding (Charles Jencks, *The Language of Post-Modern Architecture*, London: Academy Editions [1977]). Manfred Hamm was an important interpreter of industrial heritage and dead technique. Reinhart

Wolf began to set New York's skyscrapers' heads, Georgia's framework houses, Spanish *castillos*, and German as well as Japanese vernacular architecture into scenes. Jean-Claude Gautrand and the philosopher Paul Virilio strengthened their interest in bunker archeology along the French Atlantic coast. Gabriele Basilico went along Mediterranean coasts for his series on Italian and French harbors. Richard Pare collected courthouses in the United States; Lewis Baltz recorded industrial construction sites as well as parking lots all over the world; and Stephen Shore concentrated on road crossings.

Frank Gohlke, Joel Meyerowitz, and William Eggleston reduced the concept of their collections to the randomness of their appearance at a certain place, a concept to be followed by a large number of photographers in the early 1980s: Heinrich Riebesehl and Wilhelm Schürmann in Germany, Manfred Willmann in Austria, Luigi Ghirri and Giovanni Chiaramonte in Italy, Tony Ray-Jones and Martin Parr in the United Kingdom, and Jay Ullal in India. Postmodernism formed a full circle when the Japanese photographer Yukio Futagawa began to publish his magazine *Global Architecture* concentrating on the heroic period of modern architecture with the works of Frank Lloyd Wright, Ludwig Mies van der Rohe, Le Corbusier, and others.

In the 1980s photography had become a fine art in itself, established and regarded all over the world. Bernd Becher was awarded an academy professorship, and his Dusseldorf class seemed to be the first one constituting Architectural Photography as an important subclass of photographic art. Although the first generation of his students—Tata Ronkholz, Volker Döhne—followed his example of collecting vernacular or forgotten architectural specimen, the second generation began to make Architectural Photography in itself a theme: closure and distance were the categories to subsume their art now. They form the most renowned group of students from this class: Andreas Gursky, Candida Höfer, Axel Hütte, Thomas Ruff (today Becher's successor on the seat), Thomas Struth, and Petra Wunderlich. The third and last generation no longer regarded even these categories as serious, and only a small number of them still stuck to Architectural Photography: Laurenz Berges, Johannes Bruns, Elger Esser, Jongmyung Lee, Heiner Schilling, and Josef Schulz.

Becher's class had competition from the early 1980s onwards in a group of students forming themselves under difficult conditions of the late-communist Leipzig academy: Rudolf Schäfer,

ARCHITECTURAL PHOTOGRAPHY

Max Baumann, Matthias Hoch, Frank-Heinrich Müller, Frank Silberbach, Marion Wenzel, and Thomas Wolf, among others. When the school was reformed in 1991, the interest in Architectural Photography shifted similar to the Becher class from architectural documentation towards the distance between reality and imagery, only Frank Müller, Annett Stuth, and Thilo Kühne stuck to Architectural Photography. As usual in academic training, the Becher class reproduced itself: Thomas Struth and Candida Höfer gained seats in Karlsruhe and inspired students like Mona Breede. A number of other teachers in European and American academies and universities incorporated Architectural Photography more or less willingly into their curricula as was asked by the students.

Some photographers with a background in architecture, sculpture, engineering, or even computer science announced themselves in the late 1980s and early 1990s as the heralds of late modernism or new constructivism in Architectural Photography. Tomas Riehle came from the Düsseldorf academy having studied sculpture, Richard Bryant settled in the United Kingdom after leaving his native South Africa for the United States, Heiner Leiska became one of the best model photographers in the world after a career in computer-aided construction. The German Klaus Kinold and the Austrian Eduard Huber, working in New York, were trained architects but concentrated on photography in their subsequent work. Today, in most architectural departments of design schools, academies, and universities Architectural Photography is an integral part of basic instruction. There still is a large need for good Architectural Photography in magazines, books, and on websites but it is clear to see that the field will have had its days within the next decade.

Virtual Reality had found its way into architecture, and it has crept into the work of model builders, master draftsmen, and finally into photography. The results of computer-aided design at the end of the twentieth century finally left the plainness of scattered lines and flat surfaces to become more and more integrated into a form of photomontage. A simple photograph of a site is melded into an image of forthcoming constructions, and in more and more cases it is animated in one form of movement or another. Another development is of similar importance to the future of Architectural Photography: the fame of an architect is no longer dependent on the reali-

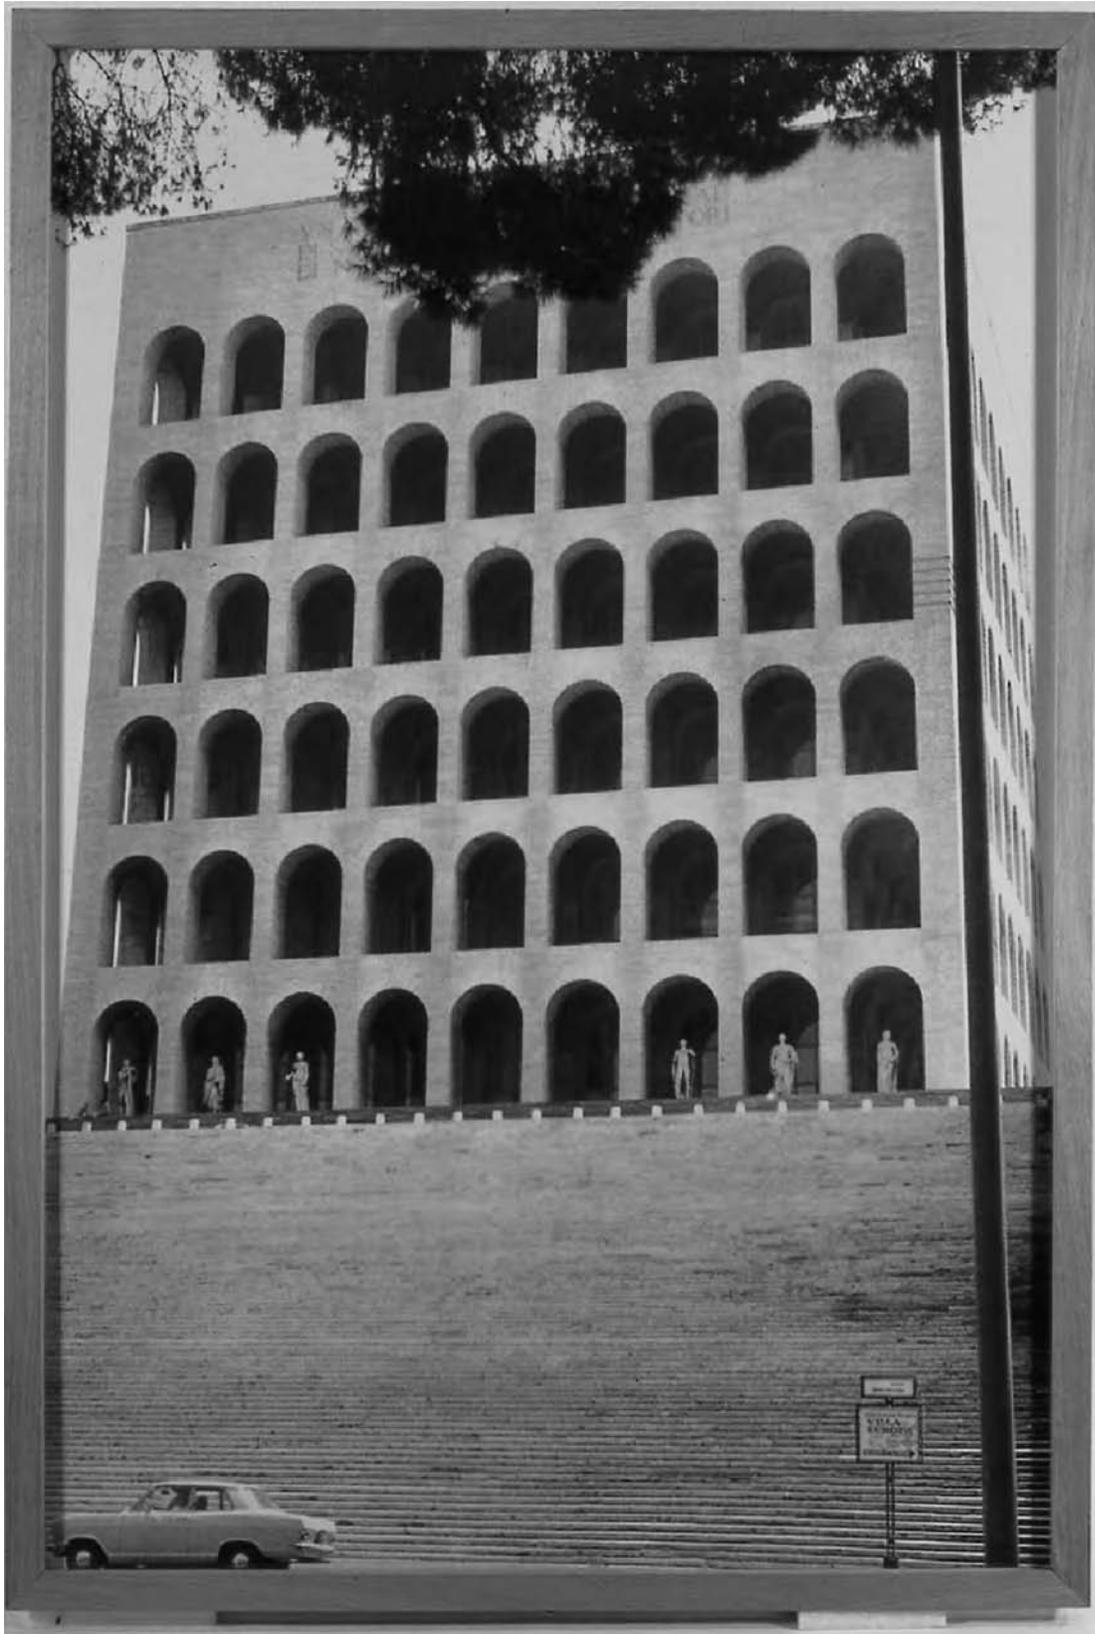

zation of his buildings. A good presentation at competitions, perfect CAAD visualizations of projects, a book or two with a wealth of text—all lead more to international acclaim rather than the actual building. Architectural Photography has lost its basic function but it is now recognized as fine art.

ARCHIVES

There is considerable confusion surrounding the concept of archives, and even professional archivists exacerbate the problem by employing the word in several ways. The words “archive” and “archives” are used in several different contexts, especially with regard to photographs. “An archive” is classically defined by archivists as the records of a governmental organization or institution, and such a file of records frequently contains photographs. However, by extension the term covers other kinds of collections, including business records, personal papers, and other archival collections. A long, rich tradition governs the manner in which such archives are processed, catalogued and described, stored, and made available for research. Archivists are professional staff responsible for the care of archival collections. The profession is well developed and is represented by a number of organizations in the United States and other countries, such as the Society of American Archivists, formed in 1936. Archival training is offered at various universities, often in history departments and library schools.

Archival, Library, and Museum Traditions

Because this entry concerns photographs in archives and archival collections, it is necessary to compare how photographs are managed in three basic types of repositories. Photographs are found in libraries, museums, and archives. Each type of organization has a distinctive tradition and methodology, although in practice they overlap considerably, with frequent exceptions to general rules. Libraries tend to be item-oriented: the bound book is the unit to be catalogued and tracked, from its shelf location to its circulation to patrons. By extension, the individual photograph in a library file cabinet is analogous to the book as a research or study unit; in practice it may not be individually catalogued—although it presumably would be if time and resources permitted. When possible, libraries may mark each photograph with a code or number which facilitates refiling it in its proper location. In a museum collection, the individual photograph is also the unit to be catalogued, typically according to aesthetic or technological criteria, rather than subject content. In an

art museum, emphasis is usually placed upon the photographer, and works by identified artists are stored by the artists’ names in alphabetical order. Exceptions may be made for special formats, especially unidentified or unattributed items. Anonymous daguerreotypes, for example, may be stored together. Accepted museum practice requires that each photograph, regardless of its precise storage location, be marked with a unique catalogue number to link it to its individual catalogue record, whether manual or electronic, which will also identify its provenance.

In archives and archival collections, the basic unit to be identified, catalogued, and tracked is a container, such as an approved, acid-free box, and its contents. The container may be filled with dozens or even hundreds of sheets of paper, including materials such as correspondence, financial documents, or photographs, neatly organized in labeled folders. To draw a parallel between library and archival practice, one might think of a box of paper documents in folders as rather like an unbound book. Typically, however, the archival document box and its contents will be described in a “finding aid” or “container list” rather than in separate manual catalogue cards or entries in an electronic database.

Archival theory and tradition assume that true archives and most “archival collections,” that is, organically created and assembled business and personal papers as well as “artificial” collections of papers and photographs (usually collected from external sources selectively) whether carefully or chaotically, will be processed and handled at the group level, both for theoretical and practical reasons. An archival collection such as the records of a governmental unit is usually retained in its original order, if that order was meaningful. Respect for original order derives from the fact that, in organically formed document collections, the existing order reflects the history and activities of the organization and the arrangement in itself provides information, which might be lost if that order were disrupted or destroyed. Implicit in the rule of retaining original order within a particular group of documents, regardless of the medium or form of the documents (e.g., manuscripts, type-

scripts, sound recordings, videotapes, photographs), is that the group will not be commingled with other groups; each will retain its separate identity and its provenance will be clearly articulated. These features of archives may be appreciated most vividly by contrasting them with the practices of most libraries, which tend to interfile the components of collections according to subject criteria. Certainly this is true of books, usually arranged by subject according to a classification scheme without regard to provenance. Similarly, libraries that collect photographs for study purposes often interfile them in accordance with subject criteria or a pre-ordained classification system, disregarding photographers and provenance. By contrast, archives do not normally interfile photographs in this manner because of concern for maintaining original order and provenance. It should be noted that many libraries and some archives do not attempt to identify and record photographers.

Photographs in Archives

Since at least the 1970s, many archivists have specialized in photographs, and training is available in university settings and in special workshops. The Society of American Archivists has sponsored courses on the management of photographic collections for many years, but archivists without specialized training are also expected to have at least a rudimentary knowledge of photographs and their physical and documentary characteristics in order to preserve them and make them available for research purposes effectively.

Margery S. Long of the Society of American Archivists wrote:

Archivists and historians did not always recognize photographs as primary source materials. In the formative years of archives, only written records were regarded as archival and deserving of preservation. Pictorial materials, if they were retained at all, often were removed from the collections of records and manuscripts and assembled in general picture files; the principle of provenance was seldom applied to them. Some archivists designated photographs "miscellaneous ephemera" or "memorabilia" and relegated them to the last boxes in manuscript and archival collections. Some photographs were not even noted in finding aids, but were left in their original location, intermingled with manuscripts, documents, and correspondence. Since photographs often had no identifying information written on them, such undisturbed positions in archival collections were fortunate. Often the only clue to identification for some photographs is their location in files, reports, or diaries, or their proximity to a letter describ-

ing the events or naming the persons shown in the photographs.

(Ritzenthaler et al., *Archives & Manuscripts: Administration of Photographic Collections*, Revised edition 1999.)

Attempts to maintain original order can create challenges for archivists, especially with photographs. For example, photographs intimately associated with other types of materials ideally may require a different standard of care and storage environment than the associated papers. Photographs are generally not catalogued individually because they are part of a group, which can be described at the collective level in registers and container lists; this practice, however, implies that the removal of a photograph from its file location for copying, reproduction, or exhibition represents a tracking challenge to ensure that the item eventually can be returned to its proper location. Many photographs are part of a large group, which would be difficult or impractical to catalogue at the item level. A by-product of the increasing interest in all kinds of historic photographs since the 1960s and 1970s is that greater numbers of photographs from archives are being selected for reproduction and other purposes, and greater demand creates challenges for archival methods and assumptions. Some archives have adopted a strategy of selective item-level cataloguing for photographs and other high-demand items on a user-driven basis, since usage frequently begets repeat demand and an increased need for staff to locate individual photographs or information about them; the need to identify image surrogates such as copy negatives and scan files implies item-level cataloguing in spite of the archival protocol for group-level description. Such practice makes the archival repository a more hybrid kind of organization, overlaying archival techniques with library and museum methods. Since photographs frequently embody many layers of meaning—as historical evidence, aesthetic object, and cultural artifact, whether identified and interpreted singly or in groups—a flexible approach to varied modes of access may be advisable. A library, museum, or archival repository can severely limit its options and its services to patrons by attempting to impose a rigid, tradition-bound policy for access to its holdings.

Photographs and other visual materials, no matter how well they function in a group context, ultimately demand some degree of item-level access. While a written document may be referenced, summarized, or quoted without physically removing it from its file location, visual materials

occasionally must be removed from their archival context to facilitate forms of “quotation” such as copying, scanning, or public display.

Groups of photographs whose “original order” is deemed not meaningful or absent altogether can be rearranged for the convenience of the archivists and their patrons. This situation often occurs when the original owners or creators of the photographs failed to recognize significant relationships among them or simply never devised a useful filing system. Archivists also deal with materials that are not “archives” in the sense of representing organic organizational records. Such aggregations, often broadly called “manuscript collections,” regardless of the precise content, frequently can be rearranged without loss of contextual information. Indeed, many such collections are acquired by archival organizations whose mission is to collect relevant research materials according to specified guidelines from a variety of collectors and sources. Some “archives” are hybrid organizations, fulfilling several distinctive missions. The archives of the Art Institute of Chicago, which hold the business records of the Art Institute, also collect the papers of artists—often including photographs—as well as miscellaneous research materials from a variety of sources.

Archival organizational structures vary widely. Some archival collections are found in libraries, which may or may not include administratively separate archival sub-units. The so-called “special collections” of many libraries often include manuscript collections and photographic files, and collections that are managed in accordance with archival traditions. University libraries typically hold such “special collections,” usually including photographic materials.

Archives range in size and scope from the files generated by a small business or an individual professional person (such as a photographer) to the vast holdings of governmental units. The National Archives and Records Administration of the United States preserves the records generated by the many official agencies of the U.S. government. The Still Picture unit of the Special Media Archives Services Division, located in College Park, Maryland, contains millions of photographs, which are made available to serious researchers. The National Archives is perhaps the quintessential archival repository, which helps to set archival standards for the entire profession. The Library of Congress, a separate government entity, is not merely a gigantic library but is a hybrid organization that includes collections of documents that are managed according to archival principles. It serves as a highly influential creator of descriptive standards. Its Machine

Readable Cataloguing (MARC) format for cataloguing databases is employed internationally for the cataloguing of books, and has been adapted for the description of archival materials such as photographic collections, at both group and item levels. Museums have tended to avoid the MARC format because of its library orientation.

Photographers’ Archives

The life’s work of a photographer, containing a variety of forms and media, such as original negatives, transparencies, prints, and professional and personal papers, is often called an archive. A few organizations, most notably the Center for Creative Photography (CCP) at the University of Arizona in Tucson, actively acquire selected photographers’ archives, most through donation. Photographer, curator, and educator Harold Jones was the founding Director of the CCP (1975–1977). The CCP holds more archives and individual works by twentieth-century North American photographers than any other museum in the nation. These holdings include a research collection featuring the archives of over 60 photographers—Ansel Adams, Richard Avedon, Lola Alvarez Bravo, Louise Dahl-Wolfe, Robert Heinecken, W. Eugene Smith, and Edward Weston among them. Archives include photographs, negatives, albums, work prints, manuscripts, audio-visual material, contact sheets, correspondence, and memorabilia and have recently been mined as a resource for specialized publications that contextualize photographers’ careers within their archives.

Other universities, libraries, historical societies at the regional, state, and municipal levels, and some museums also collect photographers’ archives on a limited basis, often because the photographer was an alumnus or former teacher or the work matches a preexisting collection strength. The archives of documentary photographer David Plowden, who attended Yale, is now in the collections of Yale University, for example. Laura Gilpin, famous for her views of the west, has her archive at the Amon Carter Museum in Fort Worth, Texas, known for its Western U.S. collections. Amon Carter also holds Eliot Porter’s archives.

Because a photographer’s archive can necessitate a heavy investment of space, budget, and staff involvement for processing and preservation, non-profit historical organizations must be highly selective and are understandably wary of large acquisitions. Art museums, normally devoted to issues such as connoisseurship and the acquisition and manage-

ment of individual works of art, usually are unable to accommodate entire photographers' archives except very selectively. And often these archives are accessioned along with a gift of a body of the photographer's work suitable for collecting and exhibition, as was the case of a 1997 donation to the Art Institute of Chicago by Irving Penn.

Some museums build collections around an important archive, such as the August Sander Archive in Cologne, which presents exhibitions of other photographers along with holding the seminal German figure's work, or the Berlinische Galerie's acquisition in 1979 of the Hannah Höch Archive of paintings, collages, graphics, and photographs.

At the end of the twentieth century, however, photographers' archives constituted a looming problem; many photographers or their heirs were unable to locate permanent homes for a sudden influx of thousands of negatives, prints, and papers, even on a gift basis, and large aggregations of significant photographs, whether considered works of art or historical documents, went begging for institutional protection, risking eventual dispersal or destruction. A fairly new solution is to set up an independent foundation (often with tax benefits to the estate) to house the archive; a model is the Foundation Henri Cartier-Bresson, inaugurated in 2003. Another is the Lee Miller Archive in East Sussex, England.

Another strategy is to pinpoint a genre or topic that can sustain broader donor interest than a single artist's archive, such as the Women in Photography International Archive, which amasses biographical files, books, and articles on female photographers past and present and as well as photographs taken by women.

Archives have also been increasingly seen as a source of profit. The venerable Bettmann Archive, long the model of a commercial stock photo archive, was acquired at the end of the century by Corbis, founded by Microsoft's Bill Gates to acquire images for digitalizing and distribution via the internet. The Hulton Archive, London, is another large international stock photo archive. Condé Nast publications' inventory of more than one million fashion, celebrity, still-life, and travel photographs and illustrations is housed in the Condé Nast Archive. Traditional photo agencies such as Black Star or Magnum Photos, though clearly commercial concerns, also function as archives.

Artifact Archives

"Archive" also has been used as a generic term for collections without regard to form of material,

especially at the George Eastman House in Rochester, New York, thereby introducing an additional element of confusion over the application of the word. Originally Eastman House's holdings of photographs, cameras, and other photographic apparatus, and ephemera were called simply "the collections," but beginning in the 1980s these holdings came to be called "archives," in opposition to the terminology employed by most museums. This apparently coincided with the "PABIR" slogan ("photographic archives belong in Rochester"), which was used in the successful fund-raising and public relations campaign to prevent the contents of the museum from being transferred to the National Museum of American History at the Smithsonian Institution. A distinction is now made between Eastman House curators and archivists: curators collect, organize exhibitions, and perform research, while archivists care for the collections and provide reference services for researchers. Since "archivists" normally deal with papers, photographs, and media such as motion pictures and sound recordings according to the archival traditions previously mentioned, the notion of archivists working with technological and cultural artifacts such as cameras, in the museum item-level tradition, strains the usual definition. On the other hand, in many institutions so-called manuscript collections (including photographs) are entrusted to manuscript "curators" rather than "archivists," even though they utilize archival methodology.

In the broadest possible, if non-traditional, sense, an archive may be construed as any body of original or primary source material maintained as historical evidence for study, so perhaps Eastman House can be forgiven for its extension of the term to cover its collection of "three-dimensional" cultural and technological artifacts. If the original assumption of archivists was that their collections would consist essentially of language materials—documents containing written words and mathematical symbols—it soon became evident that pictorial materials could not logically be excluded. Maps, engineering drawings, hand-rendered illustrations, and photographs—all documentary, historical evidence—are properly the concern of archivists. The distinction between museum collections and archival manuscript collections at times appears arbitrary in terms of the forms of material collected, hinging upon the volumetric versus the flat. Museums, of course, collect both types of objects, so photographs are found in both museums and archives. If the distinguishing feature of archives is their emphasis on groups of objects that bear some internal relationship or association,

it seems simplistic and arbitrary to exclude volumetric items merely because the archival tradition assumes flatness.

Conclusion

The essence of museum and archival collections is their emphasis on primary source materials. Conventional libraries collect mass-produced, secondary materials, rather than unique or original items, although most libraries also contain some rare items and some libraries specialize in rarities. Photographic collections in libraries may serve as primary source materials, and they have the advantage of facilitating immediate subject access to materials unrelated by provenance, introducing insights that may not be available in archival, self-selected collections. Photographs often function as primary source materials, although it must be admitted that this is a relative thing. Some photographs, especially photographs of objects that are still extant in approximately the same state as their photographs indicate, may function as secondary source materials. Archives, with their emphasis on aggregates and accumulations of related materials, provide a valuable service for those who require an extensive study of related photographs.

EVE ARNOLD

American

Driven by simple curiosity and a love of the unpredictability of photography, Eve Arnold helped shape photojournalism in the latter half of the twentieth century. Part of the Magnum Photos stable, Arnold took still photographs for magazine and newspaper assignments, advertising campaigns, and films. In choosing her photographs, Arnold asked herself if the subject was visual and

if words would enhance the picture. Rather than selecting the sensational, Arnold let the subject dictate the treatment, angle of approach, and point of view. Describing her vision, she stated that if a topic interested her then she believed that she could make it interesting to others. Her aim has been to hold a mirror up to the world and make people aware of the human condition.

Arnold became involved in photography in 1943 through a position as a manager at a photo-finish-

ing plant in New Jersey. She began photographing while working at the plant and decided to take a six-week course in photography offered by the influential photography teacher Alexey Brodovitch at New York City's New School for Social Research. Impressed by her pictures of a Harlem fashion show, Brodovitch encouraged Arnold to keep shooting. Some of these photographs were eventually published in a British magazine, which brought her to the attention of Magnum.

Arnold soon took up the profession full-time and capitalized on her status as a woman photographer—still a relatively rare occurrence—by using her female insight and personality to interpret what she photographed. After a disastrous experience in which a hostile writer changed the meaning of Arnold's fashion show photographs, she resolved to get as much control as possible over the words that accompanied her pictures; for Arnold, a photograph without words fell short.

Throughout the 1950s, Arnold concentrated mainly on portraiture, usually undertaken as assignments for magazines or Hollywood film productions. As she became more confident, she began to produce work independently, enjoying both the freedom and the knowledge that if the photographs were of sufficient quality, they would appear in more venues than if they had been tailored to the editorial needs of a particular magazine. Yet she kept the marketplace in mind when selecting her subjects.

Arnold first became associated with Magnum Photos in 1951 and became a full member in 1955. Always interested in improving herself, as she recalled later, Arnold scoured the files at Magnum, especially going over the proof sheets in an effort to understand how other photographers worked. Arnold had begun her career using a \$40 Rolleicord camera and had gone on to a Rolleiflex before she discovered that it was very hard to fill the frame of the large square-format pictures these cameras produced. She then changed to the 35-mm format Nikon, in part because it was difficult to get German-made Leicas in the United States after World War II. To move around easily and elicit more from her subjects, Arnold streamlined her equipment early in her career, eschewing motor drives, lights, or tripods, and carrying a minimal amount of gear in a single bag. As Arnold explained in her autobiography, *In Retrospect*, her way of working was a low-key approach based on establishing contact with the subject and using whatever light was available.

For example, when photographing on movie sets, Arnold habitually worked barefooted, seeking to not draw the attention of her subjects, and

would stop photographing if noticed. For greater variety Arnold would photograph the same situations in black-and-white and in color; she continued this method until the mid-1970s when the market for monochrome largely disappeared. In her color work, Arnold was inclined to use color as an accent or as part of the overall design and believed that muted color often proved more effective than stark tones.

While Arnold is known for her photographs of Hollywood stars, political figures, and religious leaders, including such notables as Marlene Dietrich, Joan Crawford, Senator Joseph McCarthy, Presidents Richard M. Nixon and Dwight D. Eisenhower, and Malcolm X, she also photographed ordinary people. The photographs for which she is perhaps best known are those of Marilyn Monroe. Unlike those of many celebrity photographers of the 1950s and 1960s, Arnold's photographs are typically candid, unretouched shots, as her portraits of Monroe illustrate. She had a total of six sessions with Monroe, ranging from press conferences to her last film, *The Misfits*. Male photographers generally captured Monroe's sexuality, whereas Arnold portrays a more relaxed star.

In 1961, Arnold began work with the London *Sunday Times* and relocated to England in 1962; she stayed under contract with the *Times* for the next ten years. At this stage in her career, Arnold worked autonomously, originating ideas and handling everything from initial research through to the finished prints. Although she completed difficult assignments such as traveling alone through the mountains of Afghanistan, Arnold never covered armed conflict. Despite her desire to do so, her art director refused to allow her to cover the Vietnam War because of the hazards involved.

Arnold is also known for her 11 books, which she closely oversaw, including volumes that featured Marilyn Monroe and Mikhail Baryshnikov and the American Ballet Theater. From the start of her days as photographer, Arnold had dreamed of shooting in China; a 1979 assignment resulted in the book *In China*. In it Arnold sought to reflect the happiness that most Chinese felt about the approach of industrialization. The pictures brought Arnold her first major solo exhibition at the Brooklyn Museum in 1980.

ART INSTITUTE OF CHICAGO

Chicago in the late nineteenth century experienced a burst of cultural and philanthropic activity as new universities, libraries, theaters, and museums appeared on the landscape. After a series of evolutions under different names, the Art Institute of Chicago was established on Michigan Avenue in 1882. Within about twenty years, the Art Institute was the largest art museum in the country. The museum presently encompasses 400,000 square feet and includes a theater and film center. Home to more than 300,000 works of art in 10 curatorial departments, the museum owns masterpieces by Pablo Picasso, Henri de Toulouse-Lautrec, Georges Seurat, Claude Monet, and Constantin Brancusi.

The School of the Art Institute, founded by a small group of artists in 1866, predates the museum and is presently the largest art school in the country. Another Chicago art school, the Association of Arts and Industries, was established in 1922 to compete with European product design. The Association had hoped to establish a school with a focus on design after attempts to join the School of the Art Institute were unsuccessful. In 1937 the Association invited László Moholy-Nagy to head the new design school. The New Bauhaus: American School of Design was reformed and renamed as the Institute of Design and eventually became part of the Illinois Institute of Technology. In 1950 the Institute of Design became the first American art

school to offer a graduate program in photography, conferring its first advanced degrees in 1952. James N. Wood, president of the Art Institute of Chicago from 1980 until 2004, has said, "Ask any photographer with whom he or she trained, and you can probably trace that education back to the Institute of Design." After four years of research, the Art Institute mounted a presentation of the Institute of Design's contribution to American photography titled *Taken by Design: Photographs from the Institute of Design, 1937–1971*. Installed at the Art Institute in 2002, "Taken by Design" traveled to the San Francisco Museum of Modern Art and the Philadelphia Museum of Art in 2003.

As the Art Institute was settling into its new home in the 1880s, photography was just becoming established as an art form in America. The first major photography exhibition in Chicago was held in April 1900, when the Society of Amateur Photographers presented the First Annual Photographic Salon. No American museums had yet established photography departments or programs, although three New York galleries were exhibiting photography in the early 1900s.

Alfred Stieglitz's protégé Julien Levy collected and exhibited photography at his New York gallery from 1931 until 1949. When the Art Institute acquired the Julien Levy Collection in 1975, it encompassed the work of 35 photographers, including Alvin Langdon Coburn, Imogen Cunningham, Lee Miller, László Moholy-Nagy, and Ralph Steiner, in addition to Eugène Atget's entire collection of photographs and negatives, which Levy had bought in 1927.

Under the direction of Robert B. Harsche, the Art Institute hired a professional curatorial staff in the 1930s, which led to the development of the Department of Prints and Drawings, which in turn generated the photography department. Daniel Catton Rich was named the Art Institute's Director of Fine Arts in 1938, and throughout his tenure provided support for exhibiting and collecting photography, before most other U.S. museums considered photography a fine art medium. Rich met Alfred Stieglitz's muse and painter Georgia O'Keefe in 1929 through Mabel Dodge Luhan, the arts doyenne of Santa Fe, thus cementing a friendship. After Stieglitz's death in 1946, O'Keefe turned to Rich for advice about dispersing Stieglitz's photographs and ultimately donated a major portion of the collection to museum. The memorial exhibition titled *Alfred Stieglitz: His Photographs and His Collection*, which opened in January 1948, included photographs by Edward Steichen, Ansel Adams, Paul Strand, David Hill, Julia Margaret Cameron,

and other members of Photo-Secession Group. Rich eventually arranged O'Keefe's first American solo exhibition.

Hugh Edwards, associate curator of prints and drawings at the Art Institute from 1959 until 1970, was one of the most influential curators of photography in America. Edwards shepherded the nascent photography collection at the Art Institute until it became an officially recognized department. His enthusiasm for street photography was infectious and served as inspiration for Danny Lyon, among others, and ultimately changed what was considered a proper subject for art. He was the first to offer shows to Duane Michaels and the first to exhibit Robert Frank's *The Americans* in 1961.

Edwards established an Art Institute tradition of granting solo exhibitions to photographers early in their careers: André Kertész and Walker Evans in 1946, Ansel Adams and Edward Weston in 1952, Gordon Parks in 1953, and Henri Cartier-Bresson in 1954. An exhibition of photographs by Harry Callahan in 1951 inaugurated the Photography Exhibition Gallery. In 1953 "Photographs in the Peabody Fund" displayed pictorial photographs donated by Mrs. Stuyvesant Peabody expressly for the newly established gallery, which according to an assistant curator was "part hallway, part waiting room." The gallery later became the AIC Gallery of Photography and was launched with an exhibition of work by Frederick Sommer in 1963.

Photography exhibitions at the Art Institute at that time were small by today's standards and organized without accompanying catalogs or checklist documentation. But the department continued to grow with additional gifts and acquisitions, including major donations of works by Paul Strand and more than 200 photographs by Edward Weston. The first color exhibition featured works by Arthur Siegel in 1954; Yasuhiro Ishimoto was the first Japanese photographer exhibited at the museum, in 1960.

The Art Institute continues to bring contemporary photography to Chicago, including shows by Mark Klett, Susan Meiselas, and Raghubir Singh, and a retrospective of the work of Kenneth Josephson in 2000. An exhibition titled *About Face: Photographic Portraits from the Collection* in October 2004, featured recent acquisitions in the Art Institute's collection. Thirty contemporary photographers were represented, including Sally Mann, Nicholas Nixon, Vik Muniz, Cindy Sherman, Nan Goldin, Susan Meiselas, Richard Avedon, Chuck Close, Luis Gonzalez Palma, and Fazal Sheikh.

ARTISTS' BOOKS

In diverse forms and contexts, artists' books experienced a dynamic presence in the myriad of art movements in the twentieth century. The evolution of artists' books reflects changes in technology as well as social, political, cultural, and economic developments. Artists' books have been made from traditional materials and bookbinding techniques, or radically challenging materials and various methods of compilation or presentation that sidestep bookbinding entirely.

No single definition of an artist's book can be both broad and specific enough to be useful but some book forms can be excluded. Some deluxe editions, letterpress work, handset type, for instance, do not typify the nature of an artist's book. Some artists' books can be mass-produced through xerography or other economical printing methods. In the 1950s, Robert Heineken printed photographs of highly political or pornographic imagery directly onto the pages of popular magazines that he then placed back on store shelves for sale to an unsuspecting public. Some artists' books exist in limited editions, perhaps produced with the participation of a printer, book center, gallery, or museum exhibition or collection. These efforts have spread in recent years, but remain distinct from books called *livre d'artiste*. Some artists' books may be a one-of-a-kind object, but generally the term refers to editioned, mass-distributed materials. Some artists' books entirely avoid material existence and circulate as performance pieces or as part of the World Wide Web.

Some artists' books are "containers of information," the material support being secondary to the

expression or contemplation of personal, political, emotional, or social ideas. In other artists' books, the object itself is the principle exploration and can exist in many forms. Artists' books can be bound in traditional, accordion folds, various Japanese bindings, or the book can be otherwise constructed, involving no binding at all. The book may consist of pages, be in scroll form, be kinetic and involve moving parts, or be sculptural and exist for viewing as a 3-D work of art. Some artists alter already bound books.

The growth and intensity of work with artists' books in the twentieth century has several historical references. In 1974, the Grolier Club organized an exhibition and book titled, *The Truthful Lens*, which describes 175 books with original photographs, mostly from the nineteenth century, claiming that a more complete list might number 2,500 titles. Technology changes in the late nineteenth century such as lithography, machine-set type, and the linotype machine, facilitated the mass-production and distribution of books. This activity did not end the practice of more elaborate book making and by the early twentieth century, the mass production of cheaper editions sometimes included the production of a limited number of more elaborate copies.

In the 1920s, Russian Constructionism served as a foundation for the idea of books as art. Art movements such as Dadaism, Surrealism, Expressionism, and Futurism searched not only for new content but for new forms of expression and artists' books were made by Tristan Tzara, Wassily Kandinsky, László Moholy-Nagy.

ARTISTS' BOOKS

In the 1930s, Walker Evans established a style often mimicked in subsequent photography books, with the photographs placed on the right-hand page and the left-hand page usually left blank. Many artists' books are constructed with this gallery-in-hand presentation.

In the 1950s, the German-born provocateur Dieter Roth shredded, then boiled paper that he stuffed into animal intestines to make "literary sausages." Considered one of the instigators of the contemporary movement in artists' books, Roth used a variety of found materials, such as overruns from commercial printers, as well as rubberstamping to establish many of the conventions of the field. Another seminal figure is the California painter Ed Ruscha. In the 1960s, Ruscha published *Twenty-six Gasoline Stations* and made clear his intent to explore book art as primary material, not as support for his other explorations in art. Ruscha's books have been highly sought-after, despite their original modest intent to reach a wider audience in expensive, unlimited editions. By the 1980s, book art branched out into the performing arts. In a review on performing arts in the 1990s, British editor Claire MacDonald refers to the theatrical manuscript, describing a new interest in questioning conventional relationships between oral and written texts.

In 1984, in the United States, the National Endowment for the Arts added bookmaking to its categories for funding. This fund was eliminated several years later.

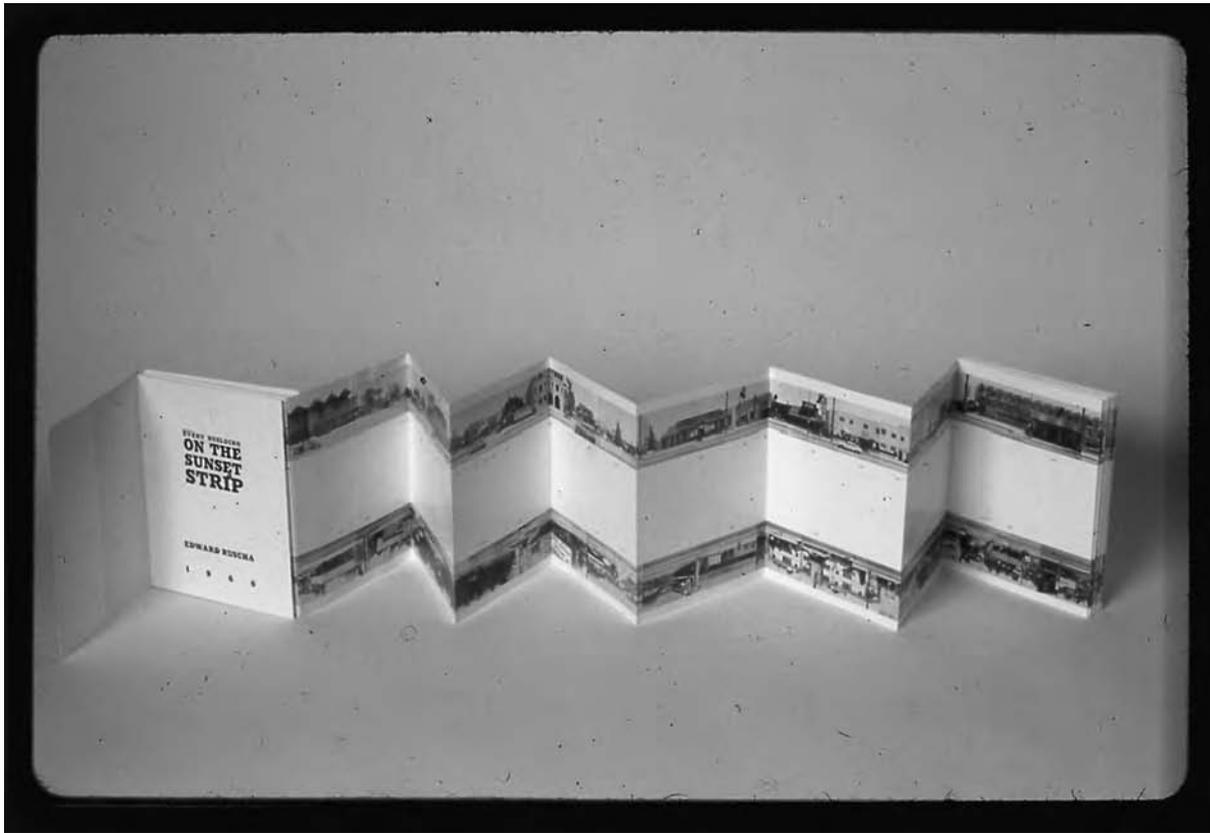

In the last decades of the twentieth century, Great Britain, Europe, Japan, and the United States saw a number of new printing establishments, mixing craft techniques in paper making and book binding. These establishments are sometimes part of a university or art school, sometimes a private institution such as New York City's Center for Book Arts or the Purgatory Pie Press. Book art centers may provide facilities for the production of work as well as funding and an infrastructure to showcase results. In 1965, Stan Bevington set up Coach House Press in Toronto primarily to publish Canadian authors but also to make more craft laden books. Since 1972, under the direction of Joan Lyons, the Visual Studies Workshop in Rochester, New York, has produced more than 200 books, including artists' books as well as critical or historical visual art titles. Other book art centers include the Pacific Center for the Book Arts (California), Printed Matter Bookstore and the Franklin Furnace (New York City), Bookworks (London), Art Metropole (Toronto), Women's Study Workshop (Rosendale, New York).

Franklin Furnace, founded in 1976, has pursued an active and often controversial roll in the production and distribution of artistic works not supported by existing artistic organizations. In 1979, Franklin Furnace exhibited work curated by several prominent figures from the art world including Clive Phillpot, whose curating, writing, and other activities made a significant contribution to the book arts in the twentieth century. The Nexus Press (Atlanta) is run by and for photographers who want to publish their own books. In 1976, Chicago Books appeared, inviting six to ten artists a year to produce a book at its facilities. In 1977, the Writer's Center in Bethesda, Maryland, expanded its activities to include the production of artists' books. Pyramid Atlantic, a book art center in Maryland, opened in 1981 under the direction of Helen Fredrick.

Thus, the expansion of funds and facilities for the production of artists' books progressed but diffusion of such objects remained problematic throughout the century. Their singularity often makes them both precious and inaccessible. Sometimes, artists' books can be showcased in traditional venues for books, such as bookstores, coffee houses, reading rooms, or libraries. Sometimes, such objects are best distributed through more traditional art venues such as galleries, museums, and art fairs. Art fairs devoted specifically to books provide fertile ground for artists and collectors to compare otherwise singular isolated works. Pyramid Atlantic hosted half a dozen such book fairs in Washington, DC, in the 1990s. In New York City, the Brooke Alexander Gallery showcased artists' books concurrent to the yearly Armory Show of prints and drawings. By the end of the century, many individuals, universities, and museums began to collect and exhibit artists' books, including the Museum of Modern Art, New York, the Bibliotheque Nationale Paris, France, The School of the Art Institute of Chicago, the Manchester Metropolitan University, and the Carnegie Mellon Libraries, Pittsburgh, Pennsylvania.

Fear that mechanical and digital technological changes throughout the twentieth century would bring an end to the artist's book did not prove true and the book as object remained a leading genre in the art world. Technology advances made desktop publishing an increasingly democratic possibility, supplementing works with precious materials with works available to low-budget projects. By the end of the century, immaterial books existed on the computer screen via the world wide web.

ASTROPHOTOGRAPHY

The night sky has been observed and its movements documented for thousands of years. Numerous symbolic visual paintings and carvings are found around the world as well as manmade solar and lunar calendars. But a true image of a celestial body was as fleeting as catching the moon's reflection in a bucket of water. The history of astrophotography began in 1838 when the French stage painter, Louis Daguerre, used his invention of a photographic plate to capture an image of the moon. The photographic plate consisted of a silver coated copper plate, which after taking a photograph was exposed to vaporized magnesium, followed by immersing the plate into sodium thiosulfate to fix the image and dissolve the unused silver iodide by rinsing the plate with hot water. This process was dubbed the Daguerreotype process. The image of the moon, however, was not very clear.

Wet Collodion Process

The Daguerreotype was used up until 1851, when a new process called Collodion or "Wet Plate" process was invented by a Frenchman named G. Le Gray and introduced by Frederick Scott-Archer. The Collodion process quickly became the preferred process of choice by astrophotographers. Due to the sensitivity of the plate—five to ten

times more sensitive than Daguerrotypes—the exposure time was much shorter. The only drawback was that the plate had to be used immediately after it was made.

A year later, following the introduction of the wet plate process, an amateur English astronomer, Warren de la Rue, used the wet plate process in capturing images of the moon. By using a 13-inch metallic reflector telescope and hand moving the plate every 10 to 30 seconds he was able to capture the desired images of the moon, which were later displayed in 1853 at the Royal Astronomical Society meeting.

Dry Emulsions

Another field of study that became intertwined with astrophotography was that of spectroscopy. Scientist realized during the 1880s that the light spectrum emitted by stars and planets contained information about the stars' chemical components. Spectroscopy did not become practical until the invention of the dry plate. In 1871, Dr. R.L. Maddox, an Englishman, produced the first positive dry emulsion plate by using a gelatin rather than using a glass base for the plate. Three years later in 1874, the negative dry emulsion plate was made by Johnston and Bolton. Dry plates could be made and stored until needed as well as being 100 times more sensitive than the wet

plates of earlier times. In 1876 the first spectrum of Vega was completed by a spectroscopist, W. Huggins, who also did the first spiral galaxy in 1899. Photography dramatically changed in 1884 when George Eastman once again advanced the art with the invention of the celluloid-based photographic film. But astrophotographers continued to use the glass plates for several reasons, such as film can shrink and warp over time, film is not completely flat all the time, and telescopes at observatories had large focal planes and had no use for the smaller film image frames. However for the backyard astrophotographer and the traveling scientist, the use of Kodak's new roll film was ideal.

Color and CCD

Astrophotography continued to be shot in black and white although the Kodachrome process was marketed in 1935 and color film had been introduced commercially during the 1940s. There was a problem in trying to capture a color image of the heavens because long exposure times resulted in distorted color representation. The sensitivity of the film needed to be increased so the exposure time could be shorter. The Kodak 103a spectroscopic films were still more sensitive than the color film and also the color films were not available in plate form. William Miller of the Mount Wilson and Palomar Observatories was the pioneer of color astrophotography. The 200-inch Hale reflector telescope at Palomar Observatory was built exclusively for photography. In 1959 Miller used Super Ansochrome, a commercially available reversal type film. Miller gave the film extended exposure time to offset the problem of reciprocity failure due to the film's speed, ASA 100.

Eastman-Kodak solved the problem of low-intensity reciprocity failure. This is where the photosensitive grains of the emulsion do not respond to light in a linear way because water and oxygen molecules become trapped within the emulsion. The answer was hypersensitizing, also known as gas hypering.

In 1969, bubble memory, a new type of computer memory discovered at Bell Labs was made sensitive to light. More sensitive than film, they are stable and can be directly input into a computer. Emulsion based astrophotography was replaced by the introduction of charge-coupled device or CCD sensor. The CCD is a small chip broken up into very small cells. Light traveling through the lens, is reflected by mirrors, then reflected by a prism onto the surface of the CCD detector. CCD is af-

ected by the photons of light when hit. Photons hitting the surface of the CCD knock electrons out of place in the cell. While CCDs were becoming popular, Kodak introduced a new film, Tech Pan in 1980, an emulsion with high contrast and sensitivity that also recorded infrared and ultraviolet objects. CCD however, had become the preferred method for astronomy. Most professional observatories now use the CCDs. CCDs were also the choice of NASA for the Mars Pathfinder mission, which upon landing on the Martian surface on July 4, 1997, began to send back very sharp images of the red planet.

The Camera in Space

Astrophotography in the twentieth century literally reached new heights. Now the cameras themselves were actually flying through the very heavens they had earlier captured while attached to telescopes on terra firma. In 1959 the Soviet *Luna 3* probe swung around the moon and captured the first photograph of the moon's far side. Sister probe to *Mariner 3*, *Mariner 4* reached Mars in 1965, and took the first close-up images of the Martian surface. NASA's Apollo missions had the objective of using photography to map the entire lunar surface. Hasselblad cameras were used with both black and white and color film. Several cameras were mounted within the command module while several other that were controlled by the command module were stowed in the scientific instrument module. The voyager space probes during the period of 1979–1980 sent back photographs of the planetary family as they swung by Jupiter and Saturn. The most astonishing photographs of the universe were to come once again from a telescope, but this time the telescope was floating in space. Launched on April 4, 1990 at 12:33:51 UTC, the Hubble Space Telescope began to send back remarkable images of our own galaxy as well as others. A 2.4 m, f/24 Ritchey-Chretien telescope, the Hubble could make observations in visible, near-ultraviolet and near-infrared. The imaging and spectroscopy of the future is the Next Generation Space Telescope, whose primary mirror diameter is twice that of Hubble's and designed to see the far visible to the mid-infrared part of the spectrum.

Camera and Tripod

The most accessible type of astrophotography is that of the camera mounted on a tripod. The cam-

ASTROPHOTOGRAPHY

era is mounted on the tripod and the shutter is held open with a trigger release cord. Most 35-mm cameras have a B or bulb setting to do this. This allows the film to be exposed to low levels of evening sky light. A large variety of wide and zoom lenses are incorporated, depending on the object being captured. Star tracking is one of the most common and easiest special effects to accomplish. This is where the shutter is left open for more than 15 seconds, thus letting star trails form on the exposed film.

Piggyback Photography

This is where the camera is connected to a telescope either in a piggyback fashion or hooked up to the eye piece of the telescope via an adapter. Piggyback photography provides the photographer with the ability to “track” the stars. An equatorial mount is used in which the rotational axis of the tracker is aligned with the rotational axis of the earth. This is different from an alt-azimuth mount where the camera is mounted on a vertical swivel so the camera may be aimed at a star during a long exposure. This type of mount produces an image of a star in the middle of the photo as a dot while outlying stars show up as arcs, which elongate the further the stars position from the center. The arcs are a product of field rotation, caused by the camera swivel not being aligned with the rotational axis of the earth.

Autoguided Photography

Two types of auto guiding are popular, the use of an off-axis guider and the use of a separate guiding scope. Professionals usually use a CCD autoguider or a reticle eyepiece. Reticle eyepieces used are either standard or illuminated. With CCD software for personal computers, an amateur astrophotographer with a hybrid telescope/camera can now be hooked up to a personal computer and guided through the night sky.

EUGÈNE ATGET

French

Although much has been recorded about the lives of photographers and artists who worked in Paris during the late nineteenth and early twentieth centuries, the photographer Eugène Atget is an exception. What little that is known about his life has been laboriously reconstructed; however, the vast amount of work he produced provides a record of his accomplishments as a photographer. Bits of his life have been pieced together from the memories of the few people whom he chose to befriend. These

include André Calmettes, actor and motion picture director, Man Ray, photographer, and particularly the American photographer Berenice Abbott who dedicated much of her time to the public recognition of Atget. Although he died virtually unknown and never formally exhibited his work, upon his death Atget left approximately 2000 eight by ten-inch glass plates and almost 10,000 prints.

Orphaned at age five or six, Atget was raised by an uncle. At a young age he signed on as a cabin boy on a steamer bound for Uruguay, and would later exaggerate that he had been on several

voyages. As a young man he turned to acting, and around 1886 met the actress Valentine Delafosse-Compagnon who became his lifelong companion, or *amie*, and the two toured minor provincial theaters. Atget's physique and provincial accent kept him from landing anything but undesirable "third" roles, and in 1888 he was dismissed from the theater. Around 1889 he and Valentine moved to Paris where he unsuccessfully tried his hand at painting (some of his paintings were uncovered in his studio upon his death). Sometime during the late 1890s he devoted himself to becoming a self-taught photographer, a technology only about 40 years old. Little is known about how he learned photographic techniques, but Abbott has described his early efforts as taking place in remote gardens where he was able to learn and experiment undisturbed.

Atget's early photographs were taken with the idea of creating study material for artists, and for some years he took pictures of natural images such as landscapes and plants. It is thought that Atget began working as a photographer in 1898, and it is clear that he was soon successful enough to meagerly support himself. The following announcement appeared in the February 1892 issue of *La Revue des Beaux-Arts*:

We recommend to our readers, M. Atget photographer, 5 Rue de la Pitié (Paris), who has for artists: landscapes, animals, flowers, monuments, documents, foregrounds for artists, reproductions for paintings, will travel. Collections not commercially available.

The hand lettered sign outside his fifth-floor apartment-studio at 31 rue Campagne Première read, "Documents pour Artistes," and it is said that numerous Parisian painters, including Georges Braque, Henri Matisse, and Man Ray were among his customers.

Atget's friend André Calmettes conveyed the photographer's early aspirations, "He already had the ambition of creating a collection of everything artistic and picturesque in and about Paris." Perhaps as early as 1898 Atget decided upon the subject for which he is best known, a systematic record of the streets, storefronts, people, architectural details, and landmarks of old Paris. These works were not commissioned, offering Atget an artistic freedom that was more agreeable to him than his earlier natural studies. He eventually disclosed to Abbott that he did not like taking commissions because "people [do] not know how to see." He allowed himself to seek and capture the endless surprises of Paris, the winding streets, and the old houses, the statues and reflections. His idea was nominally successful and in 1901 he began a series

that was overseen by the Bibliothèque historique de la Ville de Paris. The series, titled *La Topographie du Vieux Paris*, was in many ways a continuation of his own documentation of Paris. The concept behind this series, which made it different from Atget's earlier work, was to visually record architectural and historical sites that were about to be demolished, capturing the spirit of a Paris about to disappear.

The photographs of Old Paris by Atget are invaluable as a record of a quickly changing city, which underwent redevelopment at least twice during his lifetime. Napoleon III came to power in 1853, appointing Baron Georges Hausmann as chief administrator to oversee the task of modernizing the city of Paris with the purpose of showcasing it as the center of western culture and modernity. In the process of building parks, widening avenues, and raising new buildings and cathedrals that became known as "Hausmannization" many old landmarks were demolished, such as the street and buildings that were the subject of *Cour, rue Beethoven, 9* (1901). Victorien Sardou tipped off Atget as to which Parisian buildings and landmarks were destined for demolition, and Atget managed to visually record many of these sites just before their destruction. The process of modernization again occurred in Paris during the period following World War I when Parisians were concerned with rebuilding their devastated city. Atget himself did little to no photography during the war, but picked his camera back up after the war's conclusion and expanded his subject matter to include the countryside around Paris.

One intriguing aspect of Atget's photos is the ability of the viewer to see historic Paris through the eyes of an artist who insisted on the documentary character of his work. It is this view of his own work that might lead one to suggest that Atget fully realized the historical context in which his images existed and their potential value to future generations.

In 1926, Atget met the young American photographer Berenice Abbott. Abbott's interest in Atget's photography and life has proven to be indispensable. Upon Atget's death in 1927, Abbott purchased a number of his prints, negatives, slides, and papers from André Calmettes, and this collection was purchased in 1968 by the Museum of Modern Art, New York. Abbott photographed Atget only days before his death, and completed biographical writings on his life that have proven to be indispensable to scholars.

Atget captured the contradictions of Paris; the simple beauty of the urban landscape and the

elegance of Versailles juxtaposed with the poverty and hard reality of the times. He used various mechanical and compositional techniques in his photography to invite the viewer into the composition. His photographic style did not emulate painting as most photography then did, but instead his experience and facility with the camera allowed him to capture detail and surface texture, heightening the viewer's sense of reality of the subject. The depth of his images and their atmospheric quality also had the effect of drawing the viewer into his photographs. There was an intensity to his work often achieved by juxtaposing the focal point of the image, such as the statue in *Versailles, parc* (1906), against a dark background. His work welcomed the viewer's gaze because he used an eye-level viewpoint almost exclusively, and often created asymmetrical or angled images of his subjects, inviting one to mentally "step toward and move around" his subjects.

Although much of Atget's subject matter is architectural, he also explored human figures as subjects. His studies of people, sometimes casually posed and always naturalistic, represented honest investigations of the working class as they appeared in daily life on the streets of Paris as typified by *Ragpicker, Paris* (1899–1900) and *Street Musicians (Joueur d'orgue, 1899–1900)*. These images did not generally describe the particular individual, but instead, described their class or occupation through dignified and sensitive renderings. Given the technological limitations of photography at the time, Atget probably posed his figures, asking them to "hold still a moment."

Atget used a simple 18 × 24 cm view camera with a tripod. His methods were considered old-fashioned by the end of his own lifetime, requiring him to lug over 40 pounds of equipment including heavy glass plates, bellows camera, and the wooden tripod. The Paris Metro was his preferred means of transportation, and his client lists provide both addresses and the closest metro station. Atget never hired assistants to help him with his equipment, but preferred to work alone.

One of the photographic techniques Atget used that set his images apart from those of other photographers of his day was his use of a rapid rectilinear lens with a short focal length, resulting in a wide lens. This gave his pictures more depth than was fashionable at the time, the result being very different from contemporary styles of painting. He was a so-called "straight" photographer, meaning that he did not crop, trim, or alter the final image by burning or dodging any of his prints in the darkroom. He printed his glass plates by daylight and

toned them with gold chloride. Atget relied on nature and instinct, using no artificial light for his interior shots, no light meter, and judging exposure by experience and charts. In 1906 he discovered the "faulty" technique of shooting directly into the sun, a process that reduced detail but increased the atmospheric quality of his images.

Despite suggestions made by the surrealist photographer Man Ray to update the type of paper he used, Atget insisted upon using old-fashioned paper that curled and had to be glued onto cardboard, the acid eventually damaging the prints themselves. Because of the processes he chose, particularly the paper selection, many of his works have not survived well. Although Atget rarely dated his works, he did etch numbers into the emulsion, sometimes causing permanent damage to his negatives.

One of the reasons that Atget did not achieve much recognition during his lifetime was that he did not associate with any sort of photographic or artistic groups. He was a dedicated photographer who made little time for friends, clubs, or other social activities. He rose at dawn every day and used the morning hours to photograph in order to avoid traffic and crowds, and in the afternoon he would develop. He kept strict habits in his manners of dress and appetite, was a quiet figure who wore patched clothes and a large overcoat, and lived for 20 years on nothing but bread, milk, and sugar.

Atget's work has been compared with that of both the Cubists and the Surrealists, but it was the Surrealists who took an interest in his photography and looked to him as a pioneer of their movement. Man Ray's exclamation "I discovered him!" adequately describes the enthusiasm the group held for Atget. The Surrealists were interested in publishing Atget's work in their magazines, but he would often only submit his work anonymously, explaining "These are simply documents." The Surrealists found a certain mystery and atmospheric quality in Atget's photographs, particularly in images such as *Avenue des Gobelins, Paris* (1925), *Men's Fashions* (1925), and a myriad of images of shop mannequins and urban ennui. In 1931, Walter Benjamin wrote in his *Small History of Photography*, "Atget's Paris photos are the forerunners of surrealist photography." The photographer's everyday subjects, his found objects (or what the Surrealists called the *objet trouvé*), and the tiny details hidden in his works fascinated Surrealists as such objects and images were believed to be imbued with psychological meaning and mystical overtones. Painter Salvador Dalí commented upon

Eugène Atget, Avenue des Gobelins, 1925, silver printing-out paper print, 22.9 × 17.2 cm, ex-collection Man Ray.
[*Photograph courtesy of George Eastman House*]

ATGET, EUGÈNE

a detail in a corner of one of Atget's street images, "The reel with no thread clamorously demands to be interpreted."

During his lifetime Atget did not receive the recognition he rightly deserved according to his peers, critics, and photographers who followed in his wake. He died virtually unknown and unpublished in any major photographic publications; he never showed his work in the many Parisian salons. There were several institutions, however, that honored him by purchasing collections of works during his lifetime. These included the Bibliothèque historique de la Ville de Paris, the Bibliothèque nationale, and the library of the Musée des Arts décoratifs. Despite nominal success during his own lifetime, the work of Atget has been increasingly admired since his death. Calmettes wrote to Abbott the following epitaph for Atget, "May all those who are interested in what he loved so much...still pronounce sometimes his name, which was that of a strong, courageous artist, of an admirable *imagier*."

CATHERINE BURDICK

Biography

Jean Eugène Auguste Atget was born at Libourne, near Bordeaux, France, February 12, 1857. Moved to Paris, 1860s, enrolled in Catholic high school. Enrolled in Conservatory of the French National Theatre, 1879. Returned to Paris around 1889 and began photography around 1898. Self-educated in photography. Sold 100 prints to the Bibliothèque historique de la Ville de Paris, 1899. Began *La Topographie du Vieux Paris*, 1901. Sold 2600 plate glass negatives to the Service

Photographique des Monuments Historiques around 1920. Published in *La Révolution surréaliste*, 1926. Died in Montparnasse, August 4, 1927.

Selected Works

La Topographie du Vieux Paris (series)
Street Musicians, 1899–1900 (printed in 1956 by Berenice Abbott from Atget's negative)
Cour, rue Beethoven, 9, 1901
Versailles, coin de parc, 1902
Versailles, parc, 1906
Ragpicker, Paris, 1899–1900
Eclipse, 1911 (printed in 1956 by Berenice Abbott from Atget's negative)
St. Cloud, 1919–1921
226 Boulevard de la Villette, 1921
Avenue des Gobelins, Paris, 1925
Men's Fashions, 1925 (published title *Magasin, avenue des Gobelins*, printed 1956 by Abbott from Atget's negative)
Buttes Chaumont, 1926
Fete de la Villette, 1926
Boulevard de Strasbourg, 1926

ELLEN AUERBACH

American

Ellen Auerbach founded a pioneering woman-run photography studio in Berlin in the late 1920s and early 1930s, where she created memorable portraiture and advertising photographs. This studio, consisting of Auerbach and her close friend Grete Stern, came to

a sudden end with Hitler's rise to power. Throughout her flight from Berlin to Tel Aviv and then to London Auerbach still managed to work as a photographer. In 1937 she immigrated to the United States where she worked as a freelance photographer and then, late in life, as an educator working with children suffering from schizophrenia.

Auerbach's work, along with that of Stern's, focused on the object almost as a sculptural study, concentrating on the essential, revealing her affiliation to Walter Peterhans, with whom she studied privately, and the tenets of the Bauhaus. Auerbach, however, displayed a particular sensitivity to nature and children and conveys what she calls poetically "The third eye": "In my photographic work, I have not only endeavored to record what one sees on the surface, but also to capture the essence that lies beneath the surface of things."

Auerbach studied sculpture at the Badische Landeskunstschule from 1924–1927 and continued her studies at the Academy of Art (Am Weissenhof) in Stuttgart. Her uncle gave Auerbach her first camera (9 × 12 cm) in gratitude for the bust she had made of him. The new artistic possibilities and also a newly found financial independence led Auerbach to discontinue her study of sculpture and take up the study of photography.

In 1929, together with Grete Stern she took classes in photography as a private pupil with Walter Peterhans in Berlin and, aside from these classes, Auerbach was self-taught, although because of her association with Peterhans she is often considered as Bauhaus-trained. Even though the German capital in the 1920s was one of the most interesting places for artists, Auerbach and Stern appeared to have remained isolated from the various photographic circles. Stern had a short contact with the photographer Otto Umbehr, an acquaintance of her brother who advised her to study with Peterhans.

When Peterhans closed his studio to join the Bauhaus staff in Dessau in 1929, Auerbach and Stern acquired it with a small inheritance that Stern had received. They then opened "foto ringl + pit" (a moniker derived from Grete's childhood nickname, and the dancer Pepita Pit, whom Auerbach resembled), the first women-run advertising photo studio in Berlin. The studio specialized in portraiture, still life, advertising photography, and magazine illustration (1931–1933). The studio produced clear and precise images in the spirit of the *Neue Sehen* or new photography that was typical of Berlin photographers of the era. Their work was also notable for its imaginative usage of surrealist motifs and critical humor. Although photographs by ringl + pit appeared in periodicals such as *Gebrauchsgraphik* (*Commercial Art*) and *Cahiers d'art*, as well as *Neue Frauenkleidung und Frauenkultur* (*New Women's Clothing and Women's Culture*), and the firm's advertising clients ranged from manufacturers of hair lotion and cigarettes to distributors of petroleum products,

Auerbach and Stern could not make a living with their studio work.

Aside from her commercial efforts, most of Auerbach's photos from this time were the result of a creative interplay with Grete Stern. Their studio was not only a place of work, but also a space of vivid exchange and friendship. To this Auerbach brought sculptural sensibility and Stern brought her graphic design know-how; both photographers signed the works with the studio's name, making it difficult to distinguish authorship. This concentration on the world of objects differed from the contemporary use of the camera as a means to explore urban reality, represented by other photographers of the late Weimar Republic such as Lotte Jacobi and Marianne Breslauer. The ringl + pit studio time allowed Stern and Auerbach to take initiatives and to experiment with various techniques, including montage. They developed alternative representations of women in advertisement, for instance, their famous image *Komol*, and engaged in a playful confusion between "living model and manikin" (e.g., *Petrole Hahn*: the manikin is dressed in an old-fashioned nightgown, while a human hand holds the product).

In 1933 the studio ringl + pit gained international recognition as the two photographers received first prize from the Deuxième Exposition Internationale de la Photographie et du Cinéma in Brussels for its advertising photograph *Komol*, taken to advertise a hair lotion of the same name. But the incipient careers of Auerbach and Stern were soon stymied by Adolph Hitler's rise to power as chancellor in 1933. Her future husband, Walter Auerbach, an active communist, advised the two women of Jewish origin and with left-wing ties to leave Germany permanently.

As Auerbach could not provide the proof of financial independence necessary for emigrating to England as Grete Stern did, at the end of 1933 she emigrated with Walter Auerbach to Tel Aviv, Palestine. She found work with the Jewish National Fund (KKL) and the Women's International Zionist Organization (WIZO), but commissions aimed at promoting a Jewish state in Palestine were far from the photographer's interests.

Together with her friend Liselotte Grschebina and Walter Auerbach, she opened the children's portrait studio "Ishon," or eyeball. Her work in Palestine was radically different than her work done in Berlin. While the ringl + pit pictures could for the most part be considered studio work, which focused on representations of identities, with her emigration such criteria took on a secondary importance. The photographer became

an “open window” to the reality of the outside world. After the outbreak of the Abyssinian war in 1936, Auerbach shut down Ishon and visited Grete Stern in London. In the British capital, she met the likes of Bertolt Brecht, also in exile, whom she had the opportunity to photograph. Because Stern was to immigrate to Argentina, Auerbach intended to take over her London studio but was refused the requisite work and residence permits.

In 1937, she married Walter Auerbach and in April they immigrated to the United States, settling in Elkins Park near Philadelphia close to relatives. While Auerbach toured the suburbs of Philadelphia as a baby photographer, both she and her husband worked for the art collection of the Lessing-Rosenwald family in Jenkintown, Pennsylvania. Photographing the prints collection allowed Auerbach to explore even further new photographic procedures, experimenting with infrared and ultra-violet light to reveal restoration work and changes made to prints. During this period the photographer couple also made use of the carbo printing process. She and her husband entered the so-called New York School circles, where Auerbach took a photograph of an as-yet-unknown Willem de Kooning with his wife Elaine.

Auerbach separated from her husband in 1944 and went to New York, where she rented part of the studio belonging to the painter Fairfield Porter, whose brother, Eliot, was also a photographer. As a freelancer, she received commissions from *Time* magazine and *Columbia Masterworks*. In 1946 she traveled to Buenos Aires, where she met Grete Stern for the first time in a decade. In 1946 and 1948 Auerbach made film and photographic studies of babies and small children for the Menninger Foundation, a research institute based in Topeka, Kansas, and produced photographs and two 16-mm films, *Mounting Tension*, about the behavior of infants. In 1953 she traveled extensively to Europe (Greece, Majorca, Germany, and Austria). After a visit to the photographer Eliot Porter in Maine in 1953, she decided to accompany him on a photographic journey to Mexico in the fall of 1955. During this trip, the two photographers collaborated on a large color-photo documentation of Mexican churches, published some 30 years later: *Mexican Churches* (1987), and *Mexican Celebrations* (1990).

In her 60s, Auerbach reinvented herself again, and worked until 1986 with children suffering from learning disabilities. From 1984 on, photography receded into the background. Auerbach died on July 30, 2004 in New York, after having

finally received recognition for her important photographic work.

Biography

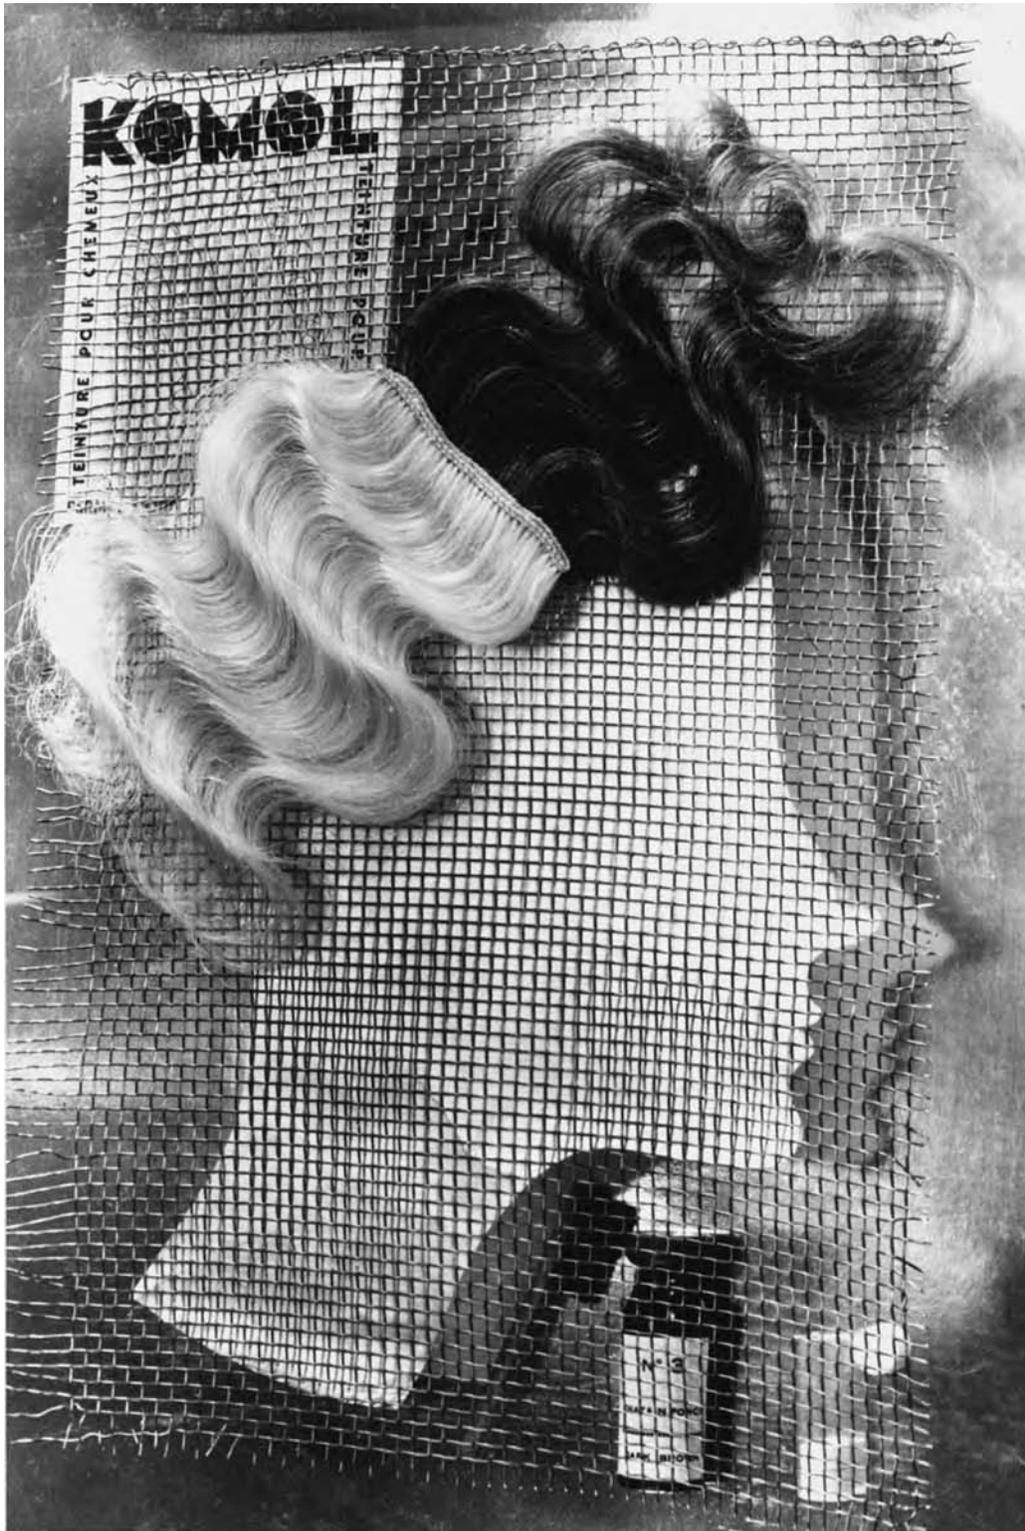

Born as Ellen Rosenberg on May 20, 1906 in Karlsruhe, Germany, she died on July 30, 2004 in New York City. Studied sculpture at the Karlsruher Kunstakademie (1924–1927) and in Stuttgart (1928), later photography with Walter Peterhans in Berlin (1929). 1930–1932 opened the advertising studio “foto ringl + pit” with Grete Stern, which won first prize at the deuxième Exposition Internationale de la Photographie et du Cinéma (Brussels) for its advertising photograph *Komol* in 1933. Emigrated in 1933 to Palestine, made a 16-mm movie and opened “Ishon” photo studio. Official photographer for WIZO (Women’s International Zionist Organization); joined Stern in London (1936); married Walter Auerbach (1937) and immigrated to the United States. Worked at the Lessing Rosenwald Print Collection in Philadelphia (1937–1944); Freelance photographer in New York City (1945) working for *Time* magazine, *Columbia Masterworks*. 1946, 1953, 1956 extensive travels to Argentina, Greece, Majorca, Germany, and Austria. Worked with Sybille Escolana for the Menninger Foundation, film: *Mounting tension*. Professor at Junior College for Arts and Craft in Trenton (1953). Documented Mexico with Eliot Porter (1955–1956). Traveled extensively, gaining a fascination for esotericism and psychology. From 1965–1984 undertook educational therapy for children at the Educational Institute for Learning and Research in New York.

Individual Exhibitions

- 1978 *Mexican Church Interiors*, Sander Gallery, Washington, DC
- 1980 *Images from Mexican Churches* (Porter/Auerbach), Cathedral St. John the Divine, New York, New York
- 1981 *ringl + pit*, Bauhaus-Archiv, Berlin, Germany
- 1982 *Ellen Auerbach: pictures after 1934*, Photographers’ Gallery, London, United Kingdom
- 1998 *Die Fotografin Ellen Auerbach, Retrospektive*. Akademie der Künste, Berlin, Germany
- 2003 *Ellen Auerbach, La Mirada intuitiva*, Lleida: Fundacion “la Caixa,” Fundacion Centre Social i Cultural (Blondel, 3), Spain

Group Exhibitions

- 1977 *Künstlerinnen International, Berlin 1877–1977*; Schloss Charlottenburg, Berlin, Germany
- 1978 *Das experimentelle Photo in Deutschland 1918–1940*, Galerie de Levante, Munich, Germany, and Centre Pompidou, Paris, France

ringl + pit (Grete Stern and Ellen Auerbach), "Pétrole Hahn", Werbefoto, Blatt 8 aus dem Portfolio "Fotografie ringl + pit," Zwölf Fotografien von Grete Stern und Ellen Auerbach, 1929–1933, Sander Gallery Editions, New York 1985 (Mappe IV/XV), 1932/ 1985
 Silbergelatinepapier unter Passepartout-karton montiert, 33.5 × 22.2 cm Abzugmaß (HxB);
 48.3 × 38.2 cm Passepartout (HxB).

PHOTOGRAPHY IN AUSTRALIA

Australia is an island continent situated between the Indian and Pacific Oceans to the southeast of Asia. Settled at least 40,000 years ago by Australian Aborigines it was colonized by Britain in 1788. Despite its geographical distance from Europe, news of the invention of photography reached Australia’s small free settler population by late 1839 and, two years later, George Goodman took the first known daguerreotypes. The introduction of photography paralleled the establishment and rapid growth of colonial settlement, and the camera became an extremely popular way for European photographers to represent a “new” land and its distinctive features.

By the time Australia became a Federation on 1 January 1901, the practice of photography had

developed significantly as a creative process. Along with thriving commercial portrait studios, the turn of the twentieth century saw a dedicated group of photographers committed to promoting the medium as art. Pictorialism, an international photographic movement that originated in Great Britain in the late 1890s, began to gain currency in Australia by the early 1900s and was a dominant style for several decades.

John Kauffmann was one of the country’s earliest and finest Pictorialists gaining his first-hand awareness of this soft-focus, aesthetic style from his travels to Great Britain and Europe. While Kauffmann was especially adept at “low-toned” work, fellow Pictorialist Harold Cazneau helped promote a “higher-keyed” approach. Cazneau be-

lieved sunlight was a key element in helping create a distinctly Australian form of Pictorialism and, as a leading member of the Sydney Camera Circle (founded in 1916), he actively promoted the so-called “Sunshine School.” Cazneaux was an influential advocate and theoretician, publishing articles on the aesthetic possibilities and development of photography for the *Australasian Photo-Review* (AP-R) and the British publication, *The Photographs of the Year*.

Most Australian Pictorialists were amateurs, producing work for exhibition at local and international salons, but professional photographers also applied this style to their commercial work. Around the turn of the century, for instance, H. Walter Barnett adopted a soft-focus approach in his highly regarded society and celebrity portraiture, and was the only Australian to be offered membership of the prestigious British group, the Brotherhood of the Linked Ring. Other notable professional Pictorialist photographers included Ruth Hollick who specialized in child and social portraiture and was one of a number of Australian women to take up the medium. Commercial photographer and adventurer Frank Hurley applied some of the atmospheric qualities of Pictorialism to very different and dramatic ends when he was employed as official photographer for both Charles Mawson and Sir Ernest Shackleton’s various expeditions to Antarctica and to the Australian Imperial Force during World War One.

Pictorialism remained popular with many Australian photographers throughout the 1930s and 1940s. Jack Cato was a major studio photographer whose work extended this by now well-established style to include more modern elements. Cato is also significant as the author of Australia’s first history of the medium, *The Story of the Camera in Australia* (1955). However, despite the continuation of Pictorialism it was clear that the creative spirit of the times was changing. As modernism took hold in the arts internationally, a group of avant-garde Australian photographers began to abandon the “fuzzy-wuzzy” look of Pictorialism for an approach that they believed was more in tune with the machine age.

Information concerning modernist photography reached Australia in the 1930s through imported magazines such as *US Camera*, *Das Deutsche Lichtbild*, and *Modern Photography*. Their illustrations had a strong impact on a group of younger Australian practitioners who began to experiment with modernism and Surrealism in their personal and commercial work. Also influential were a small number of modernist photographers who

had been forced to migrate to Australia due to the rise of Nazism. Photographers Wolfgang Sievers, Helmut Newton, Margaret Michaelis, and Henry Talbot, all arrived between 1938 and 1940 and brought with them first-hand knowledge of modernist photography.

Max Dupain was one of the most prolific and talented Australian-born photographers of the mid 1930s and 1940s. Along with the impact of modernist photography on his practice he was influenced by popular debates concerning the revitalization of society following World War One. In this interwar period, he produced many photographs that are often critical of modernity as a degenerative force on the body or which—in images such as *The Sunbaker*—suggest the regenerative possibilities of contact with nature, in particular, the Australian beach. Important outlets for Dupain’s work in the 1930s were innovative magazines such as *Art in Australia* and *The Home*, which featured a wide variety of creative practice from architecture and fashion to art photography.

Olive Cotton also adopted modernism in her own diverse practice. She developed a distinctive photographic approach to her architectural and commercial subjects but her most enduring interests lay with the natural world. Cotton’s sensuous appreciation of nature shows her delight in the ways that light and patterning could play both a compositional and atmospheric role. Another photographer to appreciate the creative possibilities of light was Athol Shmith. A Melbourne-based fashion and commercial photographer, Shmith mixed the clean lines of the modernist style with a seductive Hollywood glamour. His studio work in particular shows his ability to use lighting, dark-room techniques, and hand-coloring to create flawless images of beauty.

In the post-war period a group of Australian photographers began to produce work in the so-called Documentary style. This international movement, with its emphasis on creating clear statements of actuality, made a major impression on Australian photographers including Max Dupain, Axel Poignant, David Moore, Jeff Carter, and David Potts. These practitioners considered the Documentary style well suited to recording how contemporary Australians lived and worked. With a social realist perspective inspired by the Documentary philosophy of Scottish-born filmmaker John Grierson, these photographers focused on the world around them recording a diverse range of subjects from urban poverty to outback life and the Australian interest in sport and the outdoors.

An important source of inspiration for Australian Documentary photographers was the photo-essay, a new format in which writing was combined with images. Local outlets for Documentary work were limited with few magazines offering the opportunity of extended photo-essays. Talented photographers such as the Swiss-born Axel Poignant persisted for a time producing bodies of work that looked at distinctively Australian subjects, such as the natural environment and people living in the outback. He was particularly interested in the lives of Aboriginal people and produced thoughtful series of work in this area often publishing his images in the locally produced *Walkabout* magazine. But despite the success of his book *Piccaninny Walkabout* (1957), Poignant eventually left Australia to find work overseas.

David Moore, probably Australia's best-known photo-journalist, managed to sustain his career by regularly contributing to international journals including *Life*, *Time*, and *Picture Post*. One of Moore's most celebrated images was *Migrants Arriving in Sydney*—a photograph that captures the mixed emotions of joy, anticipation, and anxiety on the faces of those arriving for the first time in Australia. The photograph also summed up a specific moment in social history, when Australia's migration policies were relaxed sufficiently to allow people to settle from a broader range of European countries.

The humanistic approach of Documentary work reached its height internationally with the *Family of Man* exhibition mounted by the Museum of Modern Art in New York in 1955. This exhibition, which included the work of David Moore and Laurence le Guay, toured to Australia in 1959 and was viewed by record crowds. Following the flurry of interest in Documentary practice, the 1960s were a relatively quiet time for creative photography in Australia. An exception was "Group M," a group of committed amateur photographers in Melbourne, including Albert Brown and George Bell, who mounted a series of exhibitions that explored documentary and social realist issues. Mervyn Bishop, Australia's first professional Aboriginal photographer, also made a significant contribution in this period. Bishop began his long career as a press photographer in 1962 with the major daily newspaper, the *Sydney Morning Herald* and was awarded the coveted News Photographer of the Year Award in 1971.

In the 1960s, other Australian professional photographers also continued their work in the fields of fashion, architecture, and industry with one highly significant practitioner being Wolfgang

Sievers. Sievers, who had been trained at the Contempora School for Applied Arts in Berlin, arrived in Australia in the late 1930s and applied his experience of modernism to his industrial and architectural assignments. He created many powerful, even theatrical images that often showed the interrelationship of workers and the products of modernity.

In common with many other countries, a new energizing spirit infused Australian photography in the 1970s. A wave of social and political change swept through society and with it a desire for more contemporary means of creative expression. Many artists considered the camera to be a powerful aesthetic tool without the historical "baggage" of other mediums and one that offered a fresh way to express their social, political, and creative concerns.

The surge of interest in photography was met by institutional funding with the Labour government of the time injecting funds into art schools, many of which began to include photography in their curriculum for the first time. This period saw the foundation of collections of photography at public galleries. In 1967, the National Gallery of Victoria established the first separate curatorial Department of Photography in Australia and provided funds for a broadly based collection to be formed. It also began a program of Australian and international photographic exhibitions bringing the medium to the attention of a wide local audience. The Australian National Gallery, Canberra, made its first acquisitions of photographs in 1972 founding the basis for an important, wide-ranging collection; and the Art Gallery of New South Wales, Sydney established its Department of Photography in 1974 and began to build a strong collection. In 1974, the Australian Centre for Contemporary Photography in Sydney opened its doors as a venue for the exhibition, instruction, and promotion of the medium. The 1970s also saw the establishment of commercial galleries that specialized in photography, most notably in Melbourne, and important corporate sponsorship of photography including the Philip Morris Arts Grant.

Documentary photography continued to be popular among artists but was now often used to different ends. Carol Jerrems and Max Pam adopted a collaborative approach in their documentary work based on the consent of their subjects rather than simply "taking" portraits. In their distinct ways, both Jerrems and Pam captured the mood of the times: Jerrems taking portraits of a young Australian urban generation and Pam following the hippie trail to the East and a world of new experiences.

The impact of counter-culture politics and feminism also brought a distinctive range of subject

matter to light as the “personal became political.” Ruth Maddison was one of a group of photographers who validated the richness of everyday Australian experiences by focusing on the often overlooked rituals of ordinary life, while Sue Ford used her friends as the models for her fascinating study of faces taken a decade apart. Ford’s apparently simple photographs reveal the power of photography to show how physical, emotional, and social changes are reflected in a person’s face.

The creative uses of photography expanded considerably in the 1970s. The medium began to be absorbed into the “mainstream” art world as conceptual and performance artists started to employ the medium. For body artist Stelarc, photographs were an important creative adjunct to his art events in the 1970s. In a different vein, Jon Rhodes was one of several photographers of the period to address social issues when he used the medium to bring attention to land rights issues for Aboriginal people in the Gove Peninsula in his series, *Just Another Sunrise?* Others, such as John Cato and Les Walking, explored the metaphoric potential of photography. The range of photographic processes similarly expanded in this period. Most photographers still preferred to produce formally composed and finely printed black and white images but some, most notably women photographers, found that hand-coloring added to the creative possibilities of their vision.

The 1980s was a time of diversity in Australian photography. One distinctive aspect of the period was photography by practitioners from non-Anglo-Saxon backgrounds. Takis Christodoulou, for instance, used the documentary approach to create disturbing, almost claustrophobic images suggesting the cultural pressures for contemporary Greek families living in Australia.

However, generally speaking, critical attention was diverted in this period away from the documentary to a different kind of practice influenced by the theories and practices of Postmodernism. This complex international movement proved a powerful invigorating force on contemporary theory, art, and culture. Its influence on photography in Australia was profound, raising fundamental issues concerning the interpretation of images, the nature of reality, and the role of the artist. Critical debate concerning photography flourished and, in 1983, the magazine *Photofile* (published by the Australian Centre for Photography) became an important venue for writing in the field.

In general, post-modern photographers called into question the long-held objectivity of the medium, revealing the partial nature of any photo-

graph through the obviously constructed or “set up” character of their work. Naturalism, so long held to be the foundation of photography, was widely abandoned among Australian photographers in favor of openly declared theatrical fabrications. There was also a shift in the materials used, with black and white, discretely sized documentary photographs being replaced by large-scaled, opulent productions with photographers often reveling in the lush, saturated colors of the Cibachrome or Polaroid processes.

Post-modern photographers frequently questioned cultural truths through the use of allegory, parody, and the montaging of image with text to disrupt the usual interpretation of the photograph. The visual language of popular culture, film, and traditional fine arts, such as painting, were all raided in the process, as were other photographic genres—in particular, glamour, advertising, and surrealist imagery. Photographer and filmmaker Tracey Moffatt’s series *Something More* was characteristic of this fertile new area of inspiration for artists. In this influential series, Moffatt borrowed from 1950s B-grade films to create a fevered story of a young woman’s search for “something more” in her life. Casting herself in the lead role, Moffatt set her disturbing and sometimes violent narrative in outback Australia, producing images that resemble film stills.

Another characteristic trait of 1980s Australian photography was the appropriation of imagery from various sources. In one of the most notable series of the 1980s, *Bondi: Playground of the Pacific*, Anne Zahalka wittily explored and subverted the mythology and stereotypes that have evolved around this famous stretch of the Australian coast by reworking various Australian artworks. Julie Rrap also drew on art history in her installation *Persona and Shadow*, taking a feminist approach to provoke the viewer to consider how women have been represented in the visual arts, while Fiona Hall created complex tableaux of figures sculpted from sardine cans in her large scale Polaroids illustrating Dante’s *The Divine Comedy*.

In 1988, the Bicentennial of the founding of European settlement in Australia offered an opportunity to re-evaluate the country’s achievements. Many major art and social histories were published including two major histories of photography: Gael Newton, *Shades of Light: Photography and Australia 1839–1988* and Anne Marie-Willis, *Picturing Australia: A History of Photography*. Another major photographic publication was *After 200 Years*, which contained substantial photo-essays on, or by, contemporary Aboriginal

and Islander Australians, and reflected the beginnings of a renaissance in work produced by indigenous photographers.

The advent of New Media in the 1990s prompted fundamental shifts in how photography was understood. With technological advances that allowed the total manipulation of content and style, the connection between the photograph and the real world was severed. As a result, some Australian critics suggested that photography was dead. However, despite their pessimism the “corpse” of photography in fact remained remarkably lively with many concurrent streams of practice evident. Key areas of contemporary photography in the 1990s included an interest in digital technologies, gender issues (including queer art), abstract photography, photograms, and documentary photography.

Patricia Piccinini uses sophisticated new digital technologies to make witty and disturbing comments on genetic engineering. Her seemingly innocuous images of computer generated “life forms” point to one of the major issues of our times: that is, the ability to create and manipulate life. Another technically sophisticated photographer is Bill Henson, who continues to expand on a very successful local and international career begun in the late 1970s, with installations of highly lyrical images essentially concerned with untranslatable emotions. Henson was the first photographer chosen to represent Australia at the Venice Biennale in 1995, a mark both of his standing in the arts community and a sign of the incorporation of photography into wider art practice.

Perhaps in reaction to the overturning of traditional definitions of photography, a number of Australian artists are using various early photographic techniques, such as photograms. Penelope Davis is one photographer who turns the tables on the medium to ironically produce camera-less images of the camera. Anne Ferran has used convict women’s clothes to create a series of evocative photograms in which the ghostly qualities of the medium evoke the bodily forms of women whose histories are now otherwise lost.

Another significant aspect of contemporary photography in the 1990s was the re-working of traditional processes and styles, most notably in the area of documentary photography. After years of critical neglect, documentary practices underwent a surge in popularity with a new generation using and extending this way of working to explore the world around them. Two Australian prizes that helped encourage documentary photography among younger practitioners were held in the 1990s: The Felix H. Man Memorial Prize, at the

National Gallery of Victoria (1992 and 1993), and the Leica Documentary Photography Award, at the Centre for Contemporary Photography, Melbourne in 1998 (ongoing).

One of the most significant photographic trends of the 1990s, which continues to develop, is the outstanding work produced by Aboriginal and Torres Strait Islander photographers. In a fascinating twist on nineteenth century photography, indigenous photographs are often reconfiguring images of indigenous people taken by European photographers. Leah King-Smith and Brook Andrew, for instance, have both produced powerful bodies of work that quote nineteenth century photography in order to question how Aboriginal people have been depicted and to reassert their own continuing presence.

The work of indigenous artists is one important aspect of the robust contemporary photographic scene in Australia. Despite its relatively small population (around 19 million), the country has a rich photographic tradition and continues to produce many talented photographers. Although Australian practitioners historically have tended to follow broad international trends, the images they produced often showed considerable innovation and experimentation. Some, especially in the early to mid 1900s, sought to create an Australian photographic style based on local conditions and subjects—a desire for distinction that is of less interest among contemporary practitioners whose work is generally “internationalist” in appearance. While photography has a well-established and respected place in Australia’s visual arts, knowledge of its practitioners internationally is relatively limited: outside of Tracey Moffatt and Bill Henson, who have well-established international careers, few others are known in any depth. However, as the domination by traditional centers of photography is slowly replaced by a more encompassing and inclusive worldview, it seems likely that the significant and ongoing contributions of Australian photographers will reach wider prominence.

AUSTRALIAN CENTRE FOR PHOTOGRAPHY

The Australian Centre for Photography (ACP) is a publicly funded gallery curating exhibitions of Australian and international photography, combined with a workshop offering courses to the public and access to photographic facilities. It also publishes the magazine *Photofile*.

The ACP opened in 1974 and it was very much a child of its time. Interest in photography as a creative art was booming in Australia in the early 1970s. Art museums were establishing departments to collect and exhibit international and Australian photography, art schools were establishing photography departments to turn out graduates in what was then regarded as the hottest new medium, entrepreneurial individuals were opening (mostly short-lived) private photography galleries, and magazine and book publishers were experimenting with (mostly short-lived) publications devoted to the new art form. The boom took off first in Melbourne, but spread to other provincial capitals. This photography boom coincided with a general cultural and social renaissance in Australia, fueled in large part by greatly increased arts funding as a result of the progressive federal government, which had been elected in 1972.

In this climate a small group, led by the important Australian documentary photographer David

Moore, successfully applied to the government for funds to set up a ‘foundation’ for photography. Their initial plans were wildly grand: they conceived of it having a populist, social role (somewhat akin to Edward Steichen’s gathering the millions of photographs from which he selected the seminal *The Family of Man* exhibition shown at the Museum of Modern Art, New York, in 1955) as well as a professional role in supporting individual photographers—from giving them direct grants and commissions to collecting their work. But within a year or two of its opening APC had settled into a mode of exhibiting curated shows of photography to an art audience on a gallery/museum model, occasionally touring exhibitions, and offering facilities and courses to the general public in a workshop that was established in 1976.

The ACP has always suffered an uneasy relationship with its shifting and fractious constituency. In its formative years it was resented by some for draining scarce funds away from the other artist-run photography spaces, quasi-commercial photography galleries, and small photography magazines that were springing up and struggling to survive across Australia. This single institution, located in the heart of Australia’s largest and wealthiest city, was a natural magnet for accusations of elitism and

for being out of touch with “real” photography—whatever that was—since the term covered a constantly changing and expanding range of practices.

The ACP came into its own under the aegis of American museum-based formalism. In its formative years the ACP imported exhibitions by American masters, such as Diane Arbus; and American masters themselves, such as the then Director of the Photography Department of the Museum of Modern Art New York, John Szarkowski, in 1974, and the photographer Lee Friedlander in 1977. However the ACP also began to exhibit and support the first generation of Australian art school graduates, including Carol Jerrems, Bill Henson, and Max Pam. It also began to bring important aspects of Australia’s photographic heritage to light, for instance by giving Australia’s most important photographer, Max Dupain, his first retrospective in 1975. Olive Cotton, now one of Australia’s most loved photographers, was virtually unknown when she held her first retrospective at the ACP in 1985.

Between 1978 and 1982 its director, the U.S. trained Christine Godden, established a new level of museum professionalism in the gallery, and succeeded in moving the ACP to its present location in a busy and fashionable shopping precinct. But during this period the ACP was criticized for perpetuating a so-called “photo ghetto,” focusing narrowly on a formalist aesthetic, at a time when camera images were exponentially increasing in quantity, proliferating in format, becoming the central theoretical object of postmodern theories of representation, and forming the lingua franca of contemporary art in general.

From 1982, with Tamara Winikoff as director, the ACP deliberately tried to broaden and connect itself to a wider variety of communities. In 1983 it began to publish *Photofile*, which contained reviews and longer historical, critical, and theoretical articles. The gallery program now often featured community-based and issue oriented exhibitions exemplified by the ‘suitcase shows’ it toured, which were inspired by the radical socially aware practices of British photographers like Jo Spence.

Photofile was particularly exciting in the mid 1980s, with the critic Geoffrey Batchen as editor, because by then a whole range of sophisticated discourses had taken the photograph as their principal subject, and a new generation of theoretically savvy art school graduates placed the photographic

image—if not the idea of photography as an autonomous, historicized, fine art medium—at center stage in Australian art.

During the 1990s, with Denise Robinson as director, this new wave of art school graduates, such as Tracey Moffatt, Anne Zahalka, or Robin Stacey, were all featured in the gallery, which also became an important Sydney Biennale and Sydney Gay and Lesbian Mardis Gras venue. At the same time, however, the Workshop was languishing, *Photofile* was disappearing under a miasma of thick prose and arch imagery, and the ACP was falling into debt.

Much of the tenure of the next director Deborah Ely, appointed in 1992, was involved with successfully negotiating the re-financing and extension of the ACP’s building, as well as upgrading and updating the Workshop and revitalizing *Photofile*. The gallery, although closed for refurbishment for long periods, continued the trend of exhibiting work in photographically related, particularly digital, media.

The current director, Alasdair Foster, faces an entirely different climate from the one into which the ACP was born. Photography is no longer a young medium impatiently knocking on the doors of art. As an art practice its edges have long since dissolved into digital media, film, performance, and installation. It is now a pervasive cultural and psychological phenomenon. The ACP is no longer the sole ‘foundation’ for photography in Australia, it is now just a small part of a vibrant and well established matrix of museums, libraries, galleries, magazines, and art schools across the continent.

B

ROGER BALLEEN

South African

Roger Ballen grew up with an awareness of photography as an art form. His mother, Adrienne Ballen, worked at Magnum Photos from 1963 to 1967, when she founded Photography House, a gallery that showed the work of André Kertész.

In Ballen's first book of photography, *Boyhood* (1977), he describes how his mother's untimely death set him off on a four-year odyssey in search of his own boyhood, a recuperative journey that broadened into one of rediscovering himself. *Boyhood* searches for what is universal in boys: the Tom Sawyerish fantasies and bonding in their play, the stock characters among their peers, the "clown, Romeo, bully, sore sport, hothead, leader, weakling, braggart, tattletale, mope, do-nothing, nice guy, thickhead." Boys in temples, in rags, in motion, in mourning, all are photographed in spontaneous action or posed, often in a way Ballen favors for extracting an essence: compressed between the camera and a wall.

Boyhood took Ballen to South Africa, where he settled in 1982 and married the painter Linda Moross. Armed with a Ph.D. in Mineral Economics, he established a successful career in mining, which took him to remote and depressed parts of the country. Here he photographed the fabric of small towns, or *dorps*—the churches, main streets, stores, signs, and

the grain of dilapidating Edwardian columns, railings, and roof ornaments, which suggested to him "a nostalgia for a distant unattainable splendor." In his resulting book, *Dorps: Small Towns of South Africa* (1986), he relates a desire to freeze time, preserving these environments against modernization, much as *Boyhood* had sought to still the innocent timelessness of childhood. But it is the inhabitants and their habitations, particularly the interiors filled with personal mementos, ornaments, and pinups, that loom larger than the towns in *Dorps*. Ballen likens his subjects to the hillfolk of Appalachia, frozen in an earlier era. Their poverty is evident, and the viewer suspects inbreeding in the cramped interiors, scandals in the dirty sheets between the peeling walls. Furthermore, beneath these surfaces lie the ingrained realities of apartheid. These are strictly segregated towns, conservative and racist, parison with American photographers of the rural South during the depression of 1930s, particularly Walker Evans, Margaret Bourke-White, and Dorothea Lange.

The tensions that are subtle in *Dorps* come to the foreground in Ballen's next book, *Platteland: Images from Rural South Africa* (1995). (*Platteland* is a generic term that means "flatlands" in Afrikaans, and applies to the dreary region of rural plains dotted with *dorps*.) Ballen's introduction to

BALLEN, ROGER

Platteland clarifies that South Africa's psychosis had now gripped him tighter than earlier, when he was still a relative newcomer. Also, time had not stood still. Between *Dorps* and *Platteland*, the apartheid regime thrashed through the paroxysms of its death throes. First, in the late 1980s, when the government was run by a shadowy clutch of hawks in the military, intelligence, and police forces, the state unleashed a viciously repressive state-of-emergency. When this failed to quash resistance, Nelson Mandela was finally released in 1990, opposition politi-

cal parties were unbanned, and negotiations began for a new constitution and a democratic election, which was held in 1994. In this transitional phase, the rural areas were particularly tense as conservative whites tried to reverse the changes underfoot, engaging in sabotage and violence against black communities, while reactionary elements in the government simultaneously sponsored terrorism against urban black populations.

In *Platteland*, the poor whites of the region have moved to center stage, assuming a new tragic dimen-

Roger Ballen, Dresie and Casie, twins, Western Transvaal, 1993.
[© Roger Ballen]

sion as “ironic archetypes of alienation and immobility, victims of both political forces and personal circumstances, defending themselves against economic deprivation and psychological anguish in a hostile and unyielding environment.” They witness the crumbling of a system specifically designed to elevate them over blacks and guarantee them government employment. Experiencing a backlash of increased crime and violence against them, guns are now visible in several homes. A few mixed relationships testify to the legalization of sex between the races.

In *Platteland*, irony stiffens the tension between the subjects’ hardscrabble poverty and the sentimentality they attach to pets, pictures, possessions, family life, and toys. So too, between their battered bodies, the dross of their lives, and the gloss of consumer products and the glamour of pin-ups fixed to the wall—along with the subjects’ shadows. This disjunction is also evident between the posed and composed subjects and the disarray of their homes, and between the humor some reveal and their sad circumstances.

These are unsettling portraits in which one senses the horror of a horrible era. They are closer to the edgier strain of documentary that gained momentum after the depravity of World War II than to the sympathetic and optimistic humanism of much documentary photography up to and including the 1955 *Family of Man* exhibition. As Ballen remarks, “I believe that humanity is inherently more evil than good and part of my motivation is to force the confrontation of that.” Ballen’s use of hard flash and the overall grayness of the images, masterfully printed by his friend Dennis da Silva, formally strengthen his association with such photographers

as Diane Arbus and, although Ballen’s work is formally antithetical to street photography and the snapshot, Weegee and Jacob Riis.

In *Outland* (2001), Ballen’s subjects are not passive victims of the lens but expressive actors performing elaborately staged poses. This embroils them, the photographer, and the viewer in the bizarre tragedy of life in which we are all trapped. Graffiti and the wires that dangle haphazardly in these poorly electrified homes animate both moments and surfaces with anxious energy. Where in earlier pictures such elements may have been present by chance, now they are deliberately placed, formal elements that structure the composition and intensify the allusions to Ballen’s “universal and metaphorical scenarios.” Some actors, too, are familiar subjects returning in varied guises with new props: none of us is ever the same from moment to moment.

Through all of this, as in life, runs the latent charge that flows both in the flux between difference, and within the same. Arguably, it is more in this latter sense, of the diverse motivations that may stir within the self, ranging from the self-hatred of a flagellant to the self-love of a Narcissus, that these pictures hold up before us the mirror of our temporality.

Biography

Born in New York City in 1950. Settled in 1982 in South Africa and married the painter Linda Moross. With a Ph.D. in Mineral Economics, he established a successful career in mining that took him to many small communities where he photographed the fabric of the land.

LEWIS BALTZ

American

Lewis Baltz is a leading figure in the New Topographic movement. His large-scale photographic studies of commercial developments in the United States reflect a detached objectivity. Working within the tradition of the movement’s iconography of realism, his photographs of these often minimalist structures

comment on and reflect the corrosive destruction of the natural landscape by postwar American development. Baltz began his career photographing in the West and later worked abroad. In the late 1980s he moved away from subjects that formed the New Topographic genre, identified by a seminal 1975 exhibition, and into color and digital photography. A

concern with the relationship among power, architecture, and photography unites his work, as does a sense of temporal urgency. A theorist and writer as well as a photographer, Baltz is sought after as an expert on photographic realism and the integrity of the documentary image. Throughout his work he engages critically in issues that are essential to contemporary urbanism and representation.

Born in Newport Beach, California in 1945, Baltz was influenced by the rapid commercial development all around him as he was growing up, as farmland was transformed from landscape into real estate both commercial and residential. After study at the San Francisco Art Institute where he received his B.F.A. in 1969, he attended the Claremont Graduate School where he received his M.F.A. in 1971 and began his well-known series, *The Tract Houses* (1969–1971), 25 images of an estate of newly erected standard houses that depict an architecture where individuality has been eliminated. This series led to Baltz's inclusion in the 1975 exhibition *New Topographics: Photographs of a Man-Altered Landscape*, at the George Eastman House in Rochester, New York, which united major international figures who shared similar photographic viewpoints, including Robert Adams, Stephen Shore, and Bernd and Hilla Becher.

Baltz's next project continued in this genre, detailing the facades of 51 buildings in the second largest industrial park development outside of the Soviet Union in *New Industrial Parks, Irvine California* (1975). The photographs initially seem innocuous but become frustrating with their clean, technically precise images of factories with their impenetrable walls. Baltz also isolates details like openings that are utterly closed, adding a frightening mystery to the series. "You don't know whether they're manufacturing pantyhose or mega death," Baltz explained.

Baltz continued his intensely detailed, multi-pictorial mapping of the alienating effects of commercial development through his prolific black and white studies throughout the 1970s and early 1980s. These photographic documentations, most of which are accompanied by a publication, include *The Tract Houses* (1969–1971), *Maryland* (1976), *Nevada* (1977–1978). *Nevada* strikingly depicts of the wreckage caused by development in the Nevada desert. *Park City* (1980–1981) continues his inquiry into commercial development and includes 102 8×10 inch photographs, documenting the development of the country's largest ski resort and the metamorphosis of a territory, from coal mining area to skiing complex.

In the mid-1980s, Baltz became increasingly interested in the marginal zones of urban planning, open

areas where one sees both nature and the presence of industrialization. *San Quentin Point* (1982–1983) for example features 59 photographs of detritus and empty landscape with forensic detail as if investigating a crime scene—a land scraped bare of almost all natural references. In this work, he increasingly moves away from a clear narrative trajectory or moral perspective, and from traditional perspective and realism by isolating details, ridding the land of recognizable markers, and reflecting the disorientation caused by this junked space. *Near Reno* (1986), 14 photographs, also documents a terrain of scattered seemingly meaningless objects. For *Candlestick Point* (1984–1986) Baltz scans a hilly dumping site in a neighborhood of San Francisco. In the late 1980s, he settled in Europe, and began to work in color, often making larger prints for works, leading to muralistic studies of urban surveillance such as *Rule Without Exception* (1991) and in the spectacular *Ronde de Nuit* (1992), 12 large, unframed Cibachrome prints.

His work in the 1990s uses digital photography to further investigate the representational ability of the photograph, juxtaposing various documentary genres, sometimes even breaking down the image to unrecognizable parts, showing the limitations of photography to reveal truth, for example in the trilogy, *Ronde de Nuit*, *Docile Bodies* (1995), and *Politics of Bacteria* (1995). These works expand his critique of realism and maintain his emphasis on architecture and the architectural qualities of photography while being increasingly interested in science and technology. In his more recent work, he has been inspired by cultural theorists Guy Debord and Michel Foucault and urban theorist Paul Virilio, with their analysis of the politics of space, power, and spectacle in postmodernity. His works are also produced in other media besides photographic installations. *Deaths in Newport* was produced as a book and CD-Rom in 1995 and in many of his projects and productions, especially in the 1990s, Baltz has become directly involved in planning within a city or neighborhood.

Although Baltz remains frequently defined by his inclusion in the New Topography group, he resists easy categorization given the diversity of his work since the 1970s. His work shares concerns shown by other documentarians of urban landscapes including Charles Sheeler, Berenice Abbott, and Walker Evans. Links can also be made with conceptual photographic works of Ed Ruscha in the 1960s. Uniting the work, however, is an inquiry into photography's ability to reveal truth, regardless of quantity or scale of the work, a project not confined to the New Topographic, social documentary, or landscape traditions.

At the Canadian Centre for Architecture in 2002, an exhibition of the *New Industrial Parks, Irvine California* series asserted a relationship between architecture and photography that Baltz has seen since the beginning of his career. Baltz's concept of architecture is that it is the most prominent and enduring material artifact produced by the dialectic of nature and culture, and his practice attempts to formalize this theoretical stance by producing architectural photographic experiences.

ALFRED H. BARR, JR.

American

Widely regarded as an eloquent writer on the subject of modern art, Alfred H. Barr Jr. became the first director of the Museum of Modern Art, New York (MoMA) in 1929. This appointment was the product of the labors of the so-called “adamantine ladies,” wealthy patrons Abby Rockefeller, Lillie P. Bliss, and Mary Quinn Sullivan, who began planning for the first museum devoted to contemporary art the previous year. After preliminary meetings, the women enlisted the expertise of Harvard University Fogg Art Museum Director Paul J. Sachs, who in turn recommended 27 year-old Barr, a former student from Sachs’s famed “museum course” at Harvard.

Though initially Alfred Barr deferred, contending that Sachs himself would make a better inaugural director, Barr was excited at the prospect and ultimately convinced of his own readiness to direct the Museum, which quickly became a reality in the months immediately preceding the devastating stock market crash of 1929. In fact, Barr was both well prepared and well compensated for his newly awarded position, which commanded the then giant salary of \$10,000 per year with a \$2,500 stipend.

Prior to taking the position for which he is so associated, Barr taught at Vassar College in Poughkeepsie, New York, before going to Europe in 1924. For the 1925–1926 academic year Barr was awarded an associate professorship at Wellesley College in Massachusetts where he taught the first-ever official course in Modern Art, a subject first canonized in the aftermath of the Armory Show of 1913 held at the 69th-regiment armory in New York City. One of the most historic American exhibitions, the Armory Show aroused a great deal of emotion—much of it outrage—for the avant-garde artwork it displayed.

After pioneering the Vassar course in modern art, Barr again headed to Europe. He visited married artists Alexandr Rodchenko and Varvara Stepanova in Russia and then the Bauhaus in Dessau, Germany, before returning to Vassar with a wider range of reference for modern art scholarship, which would be his lifetime vocation.

Besides being a popular young professor at the women’s colleges, Barr was introduced to the American public when he was asked to write an article for *Vanity Fair* magazine based on tests incorporated into his modern art curriculum: his 50-question “Modern Art Questionnaire” was published in August 1927. While Barr noted in the introduction that “there are no spellbinders such as: Name four important artist-photographers whose names begin with St---,” the questionnaire included items on Saks Fifth Avenue, James Joyce, and The Barnes Collection of Pennsylvania. This article can be seen against the backdrop of philistine criticism of abstract art. With his penchant for formal analysis, Barr is perceived as having had a one-man mission to convert the public into modern art believers.

Born the eldest son to a prolific Presbyterian preacher’s family and reared in Baltimore, Maryland, Barr received his B.A. in 1922 and his M.A. in 1923 from Princeton University in New Jersey. His rigorous and analytical art historical training, largely under the tutelage of Professor Charles Rufus Morey, cultivated his interest in the discipline, and provided an antecedent for the way Barr would configure the institution of the MoMA. While in school, Barr made frequent trips to New York City, where he saw exhibitions of late nineteenth-century French painting at the Metropolitan Museum of Art, consisting of works representative of the seeds of modern art. Barr also visited the 291 Gallery, also known as the Little

Galleries of the Photo-Secession, run by photographer Alfred Stieglitz.

From its beginning the Museum of Modern Art was a major force in contemporary American art, unique in its incorporation of living artists into its program. The first of the seven exhibitions of the first year of the MOMA, consisting of 98 works by French painters, opened at the end of 1929 on the 12th floor of the Heckscher Building on Fifth Avenue in New York. The walls, erected within the extant space under the direction of Barr, were covered in light-hued monk's cloth to provide an appropriate base for the display of modern art. The inaugural exhibitions at MoMA, widely informed by the collections and collecting habits of the museum patrons and trustees, showcased both European and American art, of which the European examples were hugely favored over the American ones.

In 1930, before the full effects of the stock market crash of the previous year and ensuing depression were felt, which in any case had little bearing on families such as the Rockefellers and Blisses, Alfred Barr married Italian Margaret Scolari-Fitzmaurice in Paris at a church on Quay D'Orsay. Marga, or Daisy as Mrs. Barr was also known, spoke many languages and was an indispensable travel partner and general administrator for her husband. From the outset, Barr's role as director was a professorial rather than administrative one, evident in the way he generously compiled summer reading lists for trustees including titles by Thorsten Veblen.

In his introduction to the catalogue for "Art In Our Time, an exhibition to celebrate the tenth anniversary of the Museum of Modern Art and the opening of its new building (11 W. 53rd Street) held at the time of the New York World's Fair, 1939," Barr wrote that MoMA "is a laboratory: in its experiments the public is invited to participate." Barr's concept of the laboratory incorporated an interdisciplinary vision of the museum, which included the establishment of departments of film, photography, design, and architecture.

The first ten years of MoMA constituted Barr's most influential in terms of programming. In 1932, Barr's colleagues and friends, architects Henry-Russell Hitchcock and Philip Johnson, curated the seminal exhibition *Modern Architecture: International Exhibition*, which established the active relationship between the modern and contemporary art. In 1934 Barr mounted the *Machine Art* exhibition showcasing the design collection among other things. Late that same year Dorothy Miller, a

talented art historian, began a long tenure at MoMA with an appointment as her friend Alfred Barr's assistant. In 1936, Barr organized one of his most respected shows, *Cubism and Abstract Art*, the catalogue of which contained the famous Barr-authored diagram on *The Development of Abstract Art*.

Photography always played a central role in Barr's modern art and was exhibited as early as 1932. In the mid-1930s Beaumont Newhall, also from Sachs's museum course at the Fogg, was hired as the first MoMA librarian. In addition, he served as official photographer. Newhall told MoMA biographer Russell Lynes:

Barr had long wanted an exhibition of photographs on a scale with the biggest of the painting exhibitions and given the same importance as had been given them.

With all haste, Newhall and his new wife Nancy were sent by Barr to Europe to get material for the historic *Photography, 1839–1937*, a traveling exhibition of European and American photographic work and equipment. In addition to his formative years as director, Barr's major contribution to the field of modern art came in the form of his volume of writings and his dedication to the permanent collections of MoMA. In 1943, following the 1941 appointment of Nelson A. Rockefeller as museum president and the museum's increased relationship with the U.S. government, Barr was officially dismissed as director, though he never gave up his office on the premises. Five years later, the same year Edward Steichen became the director of Department of Photography, Barr was appointed director of the newly formed Museum Collections department, a post which he held for the next 20 years, building the museum's world-renowned collection until his retirement in 1967.

ROLAND BARTHES

French

Until his death in 1980, Roland Barthes' professional writing career spanned more than three decades, during which he sporadically offered commentary about the medium of photography. Most prominent among Barthes' writings on photography are three essays—*The Photographic Message* (1961), *Rhetoric of the Image* (1964), and *The Third Meaning* (1970)—and one book, *Camera Lucida: Reflections on Photography* (1980). Associated at first with the structuralism of Claude Lévi-Strauss and the semiology of Ferdinand de Saussure, Barthes is also considered a poststructuralist, that is, one of many, such as Michel Foucault and Jacques Derrida, who offer a radical critique of structuralism's faith in the stability of linguistic structures and its capacity to provide the analytical grid by which a new synthesis of all the human sciences could be established. Barthes' writings on photography, therefore, emphasize different issues at different times; all, however, depend on the nomenclature of structuralism and semiology.

In the 1950s Barthes assumed a position that perceived the photographic work as a sign capable of being decoded. A "sign" comprises a "signifier" and a "signified." The signifier is the physical entity, such as a word, used to communicate the signified, the conceptual meaning or message. The relationship between the signifier and signified is arbitrary according to Saussure: there is nothing about a dog that demands that it be called a "dog," and it is, in fact, called "un chien" in French. By the 1960s Barthes deepens his analysis of the struc-

ture of communication. In *The Photographic Message* he first posits that the photograph holds a privileged relation to literal reality: it is its perfect *analogon*. He argues that although the photograph is a reduction in proportion, perspective, and color of the object captured on film, it is *not* a transformation (in the mathematical sense of the term). Barthes' structural methodology, therefore, does not fully apply. Although a photographic image may function as a sign (a message that can be decoded), it remains a medium of communication that is not truly arbitrary, the way that language is. He draws two conclusions: the photographic image is a message without code and the photographic message is a continuous message. The working hypothesis, however, of *The Photographic Message* is that the photographic message in press photography is also connoted, and the remainder of the essay articulates the main levels of analysis of photographic connotation, including trick effects, pose, selection of objects or content, photogenia, aestheticism, and accompanying text. All indicate something about how content, composition, or use can be manipulated in the photograph.

In *Rhetoric of the Image*, an essay that focuses on images used in advertising, Barthes repeats his statement that the photograph is a "message without code" or "a continuous message"; he also states that the photograph does not simply convey a consciousness of the object or subject "being-there" (which any copy might provoke), but a consciousness of the thing's "having-been-there." The principal argument of this essay is that the rhetoric

of the image comprises three messages: linguistic, denoted, and symbolic (cultural or connoted). It is essentially in explicating the denoted message that Barthes must address the inherent difference between a photograph and, for example, a drawing. At the structural level of denotation the photograph presents an “uncoded” message, while the drawing’s message subsists as coded. The literal message of the photograph derives not from a transformation between signifieds and signifiers but from a registration that is mechanical. The registration of a drawing, on the other hand, arises through human intervention.

The Third Meaning concerns the Soviet avant-garde filmmaker Sergei Eisenstein, but the focus of the essay is not the moving pictures that Eisenstein has created but rather the movie stills that have accompanied his works. The first two meanings that Barthes ascribes to the photographic still are (1) informational, which serves the realm of communication and (2) symbolic, which functions on at least four levels—referential, diegetic, Eisensteinian, and historical—and which represents the still’s *signification*. Yet to such seemingly complete categories with regard to “meaning” in the photograph, Barthes feels compelled to add a third, for, quite simply, the first and second meanings are “obvious.” To the stratification and understanding of meaning Barthes inserts the proposition that something may remain in the analysis of the photographic still that transcends conventional or obvious meaning, something that he cannot be certain is justified or can be generalized. The third meaning possesses a theoretical individuality, and Barthes distinguishes this meaning as “obtuse,” that which supplements and cannot be absorbed by intellectual analysis—a meaning both persistent and fugitive, apparent and evasive, and beyond culture, knowledge, and information.

In *Camera Lucida*, a text commissioned by *Cahiers du cinéma*, Barthes offers not only his longest critique on the medium of photography but also his most controversial and compelling. Comprising two parts, Barthes begins by attempting to quantify and qualify the medium’s unique essence (its *noeme*). To this end he employs methodological tools and schemata that inform his structural analysis. By Part Two his attempt at an impartial, scientific investigation is fully abandoned for a highly personal reflection on the medium and its *noeme*. He begins this inquiry by looking through family photographs, where he discovers an image of his mother and her brother when they were children (known as the Winter Garden photo-

graph). The power of this one photograph to capture and convey to him the unique individual who was his mother (she had recently died) suggested to Barthes that what distinguishes the photographic medium from any other is its ability to authenticate “that-has-been.” He offers as new terms to the critical discussion of the medium *studium* and *punctum*, the former referring to the field of cultural information that a photograph may possess and that is generally available for analysis and the latter referring to the undefinable and varying aspect that overtakes an individual viewer. *Studium* relates to the field of connoted messages articulated in earlier essays; *punctum* can be linked to the obtuse meaning described in *The Third Meaning* but exceeds that notion by Barthes’s invocation of the *punctum*’s ability not only to disturb but also to wound. Among the most radical assertions that he makes in *Camera Lucida* is that photography’s *noeme* has nothing to do with analogy (a feature it shares with all kinds of representations): the photograph is not a copy of reality but rather an emanation of past reality. Barthes now suggests that to ask whether a photograph is analogical or coded is not a good means of analysis. The book concludes that photography’s madness and its ecstasy is its essential link with intractable reality, obliging the viewer to return to the very letter of time.

BAUHAUS

The Bauhaus, founded and directed by architect Walter Gropius, is renowned as the landmark German modernist school of the early twentieth century in which the integration of the arts and design with technology was first explored and practiced. The school was composed of workshops in painting, furniture design, typography, and other fine and practical arts courses, each taught by a master. Each Bauhaus student commenced hands-on training with a study of the elements of design common to all modern design endeavors. Established in 1919 and arising out of the combining of two pre-existing schools, the Weimar Art Academy and the Weimar Arts and Crafts School, in Gropius’ words the Bauhaus, strove for “unity in diversity” in function, design, and thought and reflected the influence of the Werkbund movement on its founder.

The Werkbund called for integration among the arts and the economic realities of capitalism, and looked favorably upon emerging technologies of the early twentieth century to assist this aim. The Bauhaus was a surprising success at what might seem a utopian aim. Best known for producing well-designed yet practical furniture, household items, including dishware and cutlery, graphic arts, typography, and training teachers, in the area of photography the Bauhaus had a profound and lasting impact.

In the strict sense, photography as an independent medium came rather late to the Bauhaus. It was not introduced into the curriculum of the school until

1929, four years after the establishment of the Dessau Bauhaus (1925–1933) and a full decade after the earlier Weimar school (1919–1925). László Moholy-Nagy, the multi-talented abstract artist and the master of the design foundation course, was the first to recognize the value of photography not only to document the Bauhaus, but as an independent art form. His modern teachings validated the significance of the photograph for generations of Bauhaus students, from Germany to America, first in his teaching, and later via his directorship of the New Bauhaus in Chicago (1936–1938). Number 8 of the famous Bauhausbücher series, *Painting, Photography, Film*, by Moholy-Nagy, is devoted to this medium.

Bauhaus photography tends toward the artistically self-referential: Bauhaus photographers photographed Bauhaus buildings, Bauhaus designs, and Bauhaus personages, including fellow Bauhaus photographers. Though Walter Gropius and the Bauhaus masters repeatedly denied the existence of any “Bauhaus style,” Bauhaus photographers nonetheless invented and shared an experimental method that today is readily identifiable. The hallmark of Bauhaus photography and its aesthetic strength is in its abstract qualities. Intense contrasts of blacks and whites, or strongly cast shadows in shades of gray, predominate. The compositions are most often structured by geometry, either the horizontals and verticals of Cubism or De Stijl, or else slashed through via the raking diagonals of Futur-

ism. Like the Bauhaus itself, photography at the school was dominated by a Teutonic coolness of form, an anti-Romantic, New World view, known as *die Neue Sachlichkeit*, or New Objectivity.

The New Objectivity, particularly as expressed by Bauhaus photography, is a world of stark images and abstract white cubic buildings, inhabited by impersonal males and languid females. It is a world of pure Platonic form. Bauhaus masters claimed that their inspirations were to be found not in art photography, but in technology and science. Thus distortions such as scale and angle produced abstract photographs influenced by views the eye could actually encounter only through the technology of a microscope or from an airplane. Even the commonplace objects of everyday life could become abstractions: human hands, for example, could be seen as sculptural abstractions in Bauhaus photographs.

The utilization of technology to create designs free of the strictures of the past was crucial to the Bauhaus. In fact, history courses were not part of the curriculum. Only through removing or reducing the capriciousness of human emotion could a modern purity of design emerge, although paradoxically, the Bauhaus foundation courses stressed hands-on activities through the creation of hand-made objects. The goal was an egalitarian one: to improve the lives of ordinary people. A secondary goal was to introduce new ways of seeing, technology understandably being at the forefront of this endeavor. Purity of image, however, became so important to Bauhaus photographers that technology was in fact eschewed. The direct contact of the subject with the treated paper, removing even the camera from the process of photography, was developed by Moholy-Nagy in the form of the photogram, a photographic image made without the use of a camera (also known as light graphics). Even though the form had been explored earlier by practitioners including Man Ray, the perfection and dissemination of the photogram can be seen as a seminal contribution to photography by the Bauhaus.

Moholy-Nagy was also a sculptor, and the amalgam of his sculptural abstraction with the flat image of the photograph was innovative. His imposition of three-dimensional objects, casting their shadows directly onto the two-dimensional flat surface of the treated photographic paper, created a wholly new formal type of composition. Ambiguous spatial effects are evident in these works, as unidentifiable objects seem to float within the empty space of a black background. One excellent example of such a photogram is found in the collection of the Busch-Reisinger Museum, Harvard University (BR

2004.18). Just as we think we grasp Moholy-Nagy's hard-edged abstraction, however, he astounds us with his sensuous, erotic art photograph of 1927, 'Two Torsos' (1949, 214).

Moholy-Nagy's first wife, Lucia, was also one of the photographic innovators of the Bauhaus. Lucia is renowned for the dramatic architectural portraits of the Gropius-designed white cubic and glass Bauhaus buildings. Her photographs provide the iconic images of the Bauhaus complex, and the visual memories by which the world recalls the Bauhaus. A selection of her documentary architectural photographs, also in the collection of the Busch-Reisinger Museum, attests to Lucia Moholy's formal sense of composition, her abstract love of form, her dramatic vision of architecture devoid of people, her profound stillness (see, for example, BR GA.20.57).

Other masters of the Bauhaus applied photography with varying and interesting perspectives. Typography master Herbert Bayer integrated photographs into his montages for posters, book jackets, and advertisements. The poster Bayer designed for master Marcel Breuer's 'Metallmobil' design exhibition is a classic. T. Lux Feininger contributed an informal use of photography to the Bauhaus repertoire, creating the most naturalistic, snapshot-like pictures of other Bauhaus students and masters, often unexpectedly at play. Documentary portraits of some of the major figures in the history of modernism, who visited the Bauhaus, were made by Bauhaus photographers, including formal pictures of architects Gropius, Mies van der Rohe, and painters Wassily Kandinsky, Paul Klee, Amédée Ozenfant, and El Lissitzky, to name but a few. Photographers associated with the German Bauhaus include Walter Peterhans, Florence Henri, and Ellen Auerbach.

Achievement in photography at the Bauhaus was not restricted to those primarily associated with the medium. Josef Albers, known for his "homage to the square" paintings, created photographs that come the closest of all Bauhaus artists to what can be called art photography, surprising in that they indicate the painting master gave himself a freedom in photography that he denied himself in his primary medium. In a series of abstract landscapes of fields and fences, and views of sea foam on sand, for example, Albers let his camera paint freely.

The great educational experiment came to a close in 1933 when the Bauhaus was closed by the Nazis. Bauhaus photography continues to be valued and appreciated not just for its rigorous aesthetics and design innovations, but as a document of a seminal period in the development of modernism created out

of the utopian visions of a handful of artists. The legacy of the Bauhaus continues in photography today through the influence of Moholy-Nagy's Institute of Design (New Bauhaus) and the dozens of teachers who trained there in the mid and late twentieth century.

HERBERT BAYER

Austrian

Herbert Bayer considered himself a painter, but he is recognized as a prolific artist who worked successfully in a variety of media including sculpture, typography, graphic design, and photography. During his long, multifaceted career, he designed furniture and tapestries, executed murals, and was an architect and photographer. Bayer discovered photography in the 1920s while a student at the Bauhaus in Germany. In an atmosphere of experimentation and reverence for industrial society and the machine age, Bayer embraced the camera as a means to create imagery suitable for the modern era. He went on to develop an innovative body of photographs including a series of photomontages in addition to a series he called *fotoplastiken* that included still life and geometric objects.

Herbert Bayer was born on April 5, 1900, in Haag am Hausruck, a small village near Salzburg in Northern Austria. As a child he developed an interest in skiing, mountaineering, and drawing. Bayer's interest in art grew throughout his youth, but plans for Bayer to attend art school in Vienna were curtailed by the unexpected death of his father, leaving his family few financial resources. After serving in the military during the last years of World War I, he became the apprentice of artist Georg Schmidhammer of Linz, Austria, in 1920. Bayer designed letterheads, posters, and advertisements. He left Schmidhammer's workshop and settled in Darmstadt, Germany, where he worked

for Viennese architect Emmanuel Margold at the Darmstadt Artists Colony.

In Darmstadt, Bayer was trained in the Art Nouveau styles. He became interested in the aesthetic philosophies of Walter Gropius after reading his book *Bauhaus-Manifest*. Gropius had founded the Bauhaus in Weimar, Germany in 1919. He based its curriculum around the principals of the Arts and Crafts movement, specifically the incorporation of art and industry. After an interview with Gropius, Bayer was admitted to the Bauhaus school in 1921. He left Darmstadt moving to Weimar, and for the next four years studied with the school's great professors concentrating on design and typography. He later joined Wassily Kandinsky's mural workshop.

When Bayer completed his studies, he was appointed by Gropius to head the printing and advertising workshops for the school. He moved to Dessau, Germany, where the school had relocated in 1925. Bayer taught graphic design and typography until 1928. He instituted the lowercase alphabet as the style for all Bauhaus printing and founded the now common type style variously called universal or univers. He also designed the signage for the Bauhaus's new building complex, which has become an icon of twentieth century design.

Bayer's earliest exposure to photography was in the 1920s while studying with Bauhaus instructor László Moholy-Nagy. Influenced by many of the innovative visual techniques characteristic of Moholy-Nagy's work, Bayer shot with a hand-

held camera and favored unusual cropping and composition techniques, including extreme close-ups and angles as well as presenting scenes from unusually high or low vantage points. His work set him at the forefront of avant-garde photography in the early twentieth century.

In 1929 Bayer left the Bauhaus and became the art director of *Vogue* magazine in Berlin. The period marked a distinct change in his approach to photography. Influenced by the surrealist movement and fascinated by the human subconscious, Bayer used the technique of photomontage to create psychologically compelling and fantastic images. In one of his signature images from this period, *Self Portrait*, 1932, Bayer looks into a mirror while removing his arm at the shoulder to his own amazement. This photograph was one of a series for use in a picture story called *Man and Dream*, which was never completed.

Although Bayer's photomontages were reminiscent of work by other surrealist artists, his photographs demonstrated a refined sense of design as a result of his training at the Bauhaus. Through skillful arrangement of objects, composition, and lighting, Bayer exploited the illusionary aspects of the photographic medium recreating otherworldly scenarios for his 1936 series of photographs he called *fotoplastiken*. One of the works, *Metamorphosis*, is regarded as Bayer's most successful treatment of spatial manipulation and symbolism. In the foreground, he arranged basic geometric forms—the sphere, the cone, and the square—that appear to converge upon a distant horizon of sky, clouds, and forest to suggest the sublime contrast of culture and nature or more deeply, the confrontation of reason and emotion.

Bayer fled Nazi Germany and immigrated to the United States in 1938. His career in the arts continued to proliferate. He designed exhibitions at the Museum of Modern Art including *Bauhaus 1919–1928*, *Road to Victory*, *Airways to Peace*, and *Art In Progress*. Following the end of World War II, Bayer was a consultant for the Container Corporation of America, whose president was the visionary executive Walter Paepcke, who had funded the Chicago manifestation of the Bauhaus, and later chaired the corporation's design department. Relocating to Aspen, Colorado in 1946, Bayer became the design consultant for the development of Aspen as a ski resort and cultural center, and was appointed architect for the Aspen Institute of Humanistic Studies, also funded by Paepcke, who had a second residence in the mountain town. Bayer also completed the first recorded "earthwork" environment entitled *Grass Mound* in 1955. From 1966 until his

death, Bayer was a design consultant for the Atlantic Richfield Company.

After suffering a heart attack in 1970, Bayer and his wife, Joella, moved their residence from the high elevation of Aspen to Santa Barbara, California, where the artist maintained an active studio until his death in 1985. Herbert Bayer's contributions to the world of art and design are unique and are demonstrated in an outstanding career that touched nearly every field of the arts from architecture to the fine arts, as well as photography and graphic design. During his lifetime, he had over 150 one-man exhibitions and seven traveling museum retrospectives throughout the United States and Europe. Over 100 books, articles, and films exist that deal exclusively with Bayer's extensive creative oeuvre. His work is included in major museums throughout worldwide. In addition, there are substantial archives of his work in the Bauhaus archive in Berlin, Germany, and the Bayer archive at the Denver Art Museum in Colorado.

CECIL BEATON

British

One of the best-known portrait photographers of the twentieth century, Cecil Beaton was a consummate arbiter of style and elegance. He passionately chronicled women, the social set, celebrities, and many aspects of World War II, documenting these through photography, writings, and illustrations over the course of half a century. Although known chiefly for his photography, he also received great acclaim for his set and costume designs, among them the legendary overstated Ascot hats and gowns for *My Fair Lady* and the beautifully evocative costumes for *Gigi*. Enormously prolific, his artistic roles were extraordinarily varied, however, and complexly interwoven, with style and culture always at the heart of the matter. Beaton intuitively understood the power of the press and media and defined how it could create and celebrate the notion of “celebrity,” his own included. The Paris editor of *Vogue* in the 1950s, Bettina Ballard, wrote he was “forever improvising.” Philippe Garner of Sotheby’s London wrote, “Beaton was an impresario who used fashion to colour the scenario of the play that he made of his life, and in which he himself starred as production photographer and principal player.”

Beaton’s interest in photography came quite early. While attending Harrow, he received from his parents a folding Kodak No. 3A Autographic, which produced postcard-sized negatives. He started taking pictures of his sisters, Baba and Nancy, dressing them up in various fantastic costumes under the direction of his nanny. He used mirrors or cellophane or painted backdrops to create a theatrical effect, and would pose family members dressed in elegant costumes, as seen in *Baba Beaton: A Symphony in Silver*, 1925. Self-taught in photography, he gradually developed a style of arty, stylized portrait photographs, inspired by such illustrious contemporaries as Baron de Meyer and Edward Steichen, the master fashion photographers of the early twentieth century. The roots of his fantasy of beauty lay in his comfortable Edwardian childhood, while his fashion pictures were constructed with elaborate artifice reflecting a kind of loosely derived, drawing room Surrealism.

Beaton began a career as a portraitist, where he was “taken up” by poet and society figure Edith Sitwell, of whom he took a number of memorable studies, and introduced to high society and the world of high fashion in the late 1920s. His first photographic exhibition, in 1927 in London, was a great success that eventually led to a contract with Condé Nast’s *Vogue* magazine. First hired by British *Vogue* as a cartoonist, he soon was photographing for the magazine as well as for the American and French editions. He worked for *Vogue* into the mid-1950s. That Beaton was the sole British exhibitor at the landmark 1929 *Film Foto* exhibition of modernist photography in Stuttgart indicates the consideration given to his earliest work. Beaton first visited the United States in 1929 where he photographed various stars for *Vanity Fair*.

Condé Nast, the irascible publisher of *Vogue*, loved to inspire his photographers by having them compete against each other to see who could create the most striking and exciting fashion photos. Beaton therefore found himself competing against one of the men upon whom he had modeled himself, the well-established Edward Steichen in New York as well as George Hoyningen-Huene in Paris. Although Beaton’s style did not change radically from that of his earliest, highly theatrical set-ups, it was refined, and his ability to make his “interesting, alluring, and important people...look stunning,” in the words of his biographer Hugo Vickers, was his real key to success. His unique, if eccentric style was richly varied with enough visual references to Surrealism to make the photographs inventive, witty and stylish.

Beaton would pose society women as well as mannequins in the most flamboyant Greek tragedy poses or as if in ecstatic mystical states, such as his 1935 portrait of actress Marlene Dietrich in which she poses as a “mirror image” of a classical bust. In many of his works, his human subjects became elements of an entire decorative tableau. The only stipulation that infringed on Beaton’s happiness at *Vogue* was Conde Nast’s insistence that he give up his “little” Kodak and replace it with an 8 × 10 camera that would provide the quality of prints the *Vogue* readers expected. The small camera had enabled Beaton to crawl around on ladders and get at

things from odd angles, reflecting his belief that amusement, innovation, and shock were essential to fashion. But Beaton adjusted to the larger format, which gave better quality images, and used it consistently except when on travels.

Beaton himself was of as much interest as his photographs. He had turned his back on middle class conventions and entered the aristocratic world of High Bohemia with his wide-brimmed hats, flowing cravats, and natty suits, which became his trademarks. Articulate and creative, he was accepted into many artistic and social circles, including royalty. He served as Wallis Simpson's official photographer at her wedding to the Duke of Windsor in 1937, is credited with helping create the beloved image of the Queen Mother after her husband's ascent to the throne, and photographed in exquisite color the Coronation of Queen Elizabeth in 1953. His color photographs of Elizabeth just before becoming Queen and of the young Princess Margaret are subtle, delicate, and simply beautiful renderings of women. Of Beaton's photographs of the Queen the *Illustrated* noted in 4 November 1950, "It has caught her radiance...that elusive quality of light and fairy book charm surrounding her." His compulsive work habits and discerning eye speeded up the process of trend setting.

Beaton moved easily through the worlds of high-fashion photography, Hollywood, and the theatre, and became a member of the glamorous world of money and celebrity that he flattered with his camera. His love of beauty and glamour worked superbly in the Hollywood of the 1930s, where he created portraits of film stars such as Greta Garbo in somewhat surreal settings.

With the gathering of war in the late 1930s, Beaton's flamboyant style fell somewhat out of favor. During the Second World War, he became a war correspondent for the British Ministry of Information. He was made an official photographer for the Royal Air Force and late in 1942 sent *Vogue* photographs of a burned-out German tank and other eerie "abstractions of destruction" from the North African desert. These photographs were as much an aesthetic exploration as a document. He traveled in the East and was with Lord Mountbatten, the Viceroy of India, in New Delhi.

The experience gained during the war years influenced the style of his portraits, which became less whimsical, more direct. In December 1945 he was reporting on what there was left of French fashion, using the crumbling walls of Paris as a backdrop for models wearing Balmain coats and Bruyere gowns. Beaton said of these shoots

There have been very great technical difficulties. However, in some cases I think the cutting of electricity and other drawbacks have resulted in our getting some pictures that are outside the usual fashion sphere—in particular, one, of a girl standing in an artist's backyard in a flannel Chinese blouse, in which I tried for some of the lighting of a Corot portrait. I think it one of the best I have ever taken.

Following the war, and still under contract to *Vogue*, Beaton returned to fashion photography, adapting some of the more restrained scenarios (including women dressed in high fashion but surrounded by everyday situations) typical of the "new realism" that was pervasive during this era. But new stars in fashion photography began to emerge in the 1950s, and the photographs of Richard Avedon and Irving Penn made Beaton's pictures seem outdated. His contract with *Vogue* was terminated. The later 1950s and 1960s led to his increased involvement with theater and cinema. Beaton designed the sets and costumes for both *Gigi* and *My Fair Lady* and won Oscars for both. In 1956 he began photographing for *Harper's Bazaar* such personalities as actress Marilyn Monroe, and writers Carson McCullers and Evelyn Waugh. These portraits were more personal and considerably more direct, showing that Beaton's ability to create a great portrait did not lie solely in his talent as a set decorator. He was knighted in 1972. In 1974 he suffered a stroke, and was not able to photograph for several years.

Beaton was unique in the variety of roles he took upon himself. He was not only fashion and celebrity photographer but also a chronicler of twentieth century fashion and a photographic historian whose contributions to these subjects include most notably, *The Glass of Fashion*, published in 1954 and *The Magic Image*, published in 1975 and written in collaboration with Gail Buckland. In it Beaton's pure love and clear understanding of the evolution of photography is eloquently and authoritatively set forth. Beaton's descriptions of individual photographer's contribution to the development of the medium are among the best writings on photography especially by a practicing photographer. He also was a tireless diarist, filling 145 volumes with words and pen and ink sketches from 1922 to 1974. Facing his own mortality, in 1977, Beaton sold his entire archive of over 150,000 photographs, and hundreds of thousands of negatives and transparencies to Sotheby's London, which remains the principal holder of his works. In 1979, however, Beaton began photographing again, and continued to do so until the time of his death.

Biography

Born in January 14, 1904, Hampstead, London. Attended Heath Mount School, London; attended St. Cyprian's School, Eastbourne, 1916–1918; entered Harrow School in 1918 and is encouraged in his interests in art by E. Edgerton Hine; St. John's College, Cambridge, 1922 to 1925, leaving without a degree. Publishes theatrical caricatures in *Granta*. Self-taught in photography. Freelance portrait and fashion photography 1926–1930. Photographs Edith Sitwell for the first time in 1926. Starts regular work for British *Vogue*, Visits New York and works for the first time for American Condé Nast. Portrays Hollywood stars for *Vanity Fair*, 1929. Publishes *The Book of Beauty*, November 1930, a mix of society heroines and entertainment stars. Takes lease on Ashcombe House, Wiltshire. 1931–1938 settles into a pattern of trans-Atlantic professional commuting for *Vogue*. 1932 Meets Greta Garbo for first time. 1933 visits Paris meets Cocteau, Christian Berard, and Pavel Tchelitchev and travels to North Africa with fellow *Vogue* fashion photographer and portraitist, George Hoyningen-Huene. 1935 designs costumes and décor for the Walter-Sitwell ballet, *The First Shoot*. 1938 forced resignation from *Vogue* following his addition of anti-Semitic scribbles on the cover of one of his decorative illustrations. Also completes *Cecil Beaton's New York*. 1940 receives commissions from the British Ministry of Information to photograph Churchill and War Cabinet members. Documents Blitz victims and damage to historic buildings in London. He is re-employed by *Vogue*. 1941 undertakes further official governmental propaganda photography for the Royal Air Force. These images are widely reproduced and later gathered into two books, *Air of Glory and Winged Squadrons*. 1942 joins the RAF as photographer and documents the Mid East theatre of war in Egypt, Iran, Iraq, Syria, and Jordan.

He turned to stage and costume design in the 1940s and continued through the 1970s. Receives two Academy Awards for *My Fair Lady*, 1965, and one for *Gigi* in 1959. Curates his own retrospective exhibition at the National Portrait Gallery at the behest of its director, Roy Strong. Knighted at Buckingham Palace in 1972, suffers stroke, 1974. *Vogue* commissions to photograph the Paris collections, 1979. Dies January 18, 1980.

BERND AND HILLA BECHER

German

The documentary works of Bernd and Hilla Becher contributed substantially to the public recognition of photography as an art form in Germany and are the foundation for much of the acceptance of straight photography in the late twentieth century on a par with painting, sculpture, or other traditional forms. The Bechers are best known for their *Typologien (Typologies)*, which document the vanishing industrial architecture of the nineteenth and early twentieth centuries. Their series of chiefly black-and-white photographs feature frontal views of factories, blast furnaces, gas storage tanks, cooling towers, tipples, mineheads, water towers, and other industrial structures. Over the years, they have constructed approximately 200 comprehensive documentary collections, each consisting of 50 to 100 images according to each structure's complexity and size. In displaying these photos in exhibitions, the Bechers presented serial arrangements of nine to fifteen photographs, creating grids of imagery. Series include *Zeche Zollern 2*, Dortmund-Bövinghausen; *Zeche Hannibal*, Bochum-Hofstede; and *Gutehoffnungshütte*, Oberhausen. In books, the photographs were published in a distinctly conceived typological design, with each photo the same size and presented in sequence. Among these are *Fachwerkhäuser des Siegener Industriegebietes* (Munich: Schirmer/Mosel, 1977); *Fabrikhallen* (Munich: Schirmer/Mosel, 1994); and *Gasbehälter* (Munich: Schirmer/Mosel, 1993).

The Bechers' collaboration began in 1959 at the Staatliche Kunstakademie (Academy of Art) in Düsseldorf, where Hilla, née Wobeser, was employed in the department of photography. Bernd, who had studied printmaking, painting, and lithography at the Staatliche Kunstakademie Stuttgart from 1953 to 1956, was studying typography at Düsseldorf from 1957 to 1961. Hilla who had had contact with the medium at a very early age through her mother, studied photography until 1961, the year she married Bernd Becher. After finishing school, she completed a three-year photography apprenticeship in her hometown, Potsdam, with Walter Eichgrün, a member of a famous family dynasty of photographers. Her training included architectural photography, a genre that already fas-

inated her, and she learned the basic principles that would later serve her well in her first collaborative work with Bernd Becher, photographs of the mining complex Alte Burg in the area of Germany called Siegerland.

The Siegerland area was home to Bernd Becher, who was born in the city of Siegen in 1931. The industrial landscape of this ore-rich region, with its iron and steel production and the half-timber construction of the worker housing complexes, became central to the drawings and painting that Bernd undertook upon finishing his training at Stuttgart. But the speed at which change was occurring to this largely nineteenth century architecture, with much of it being dismantled, prompted Becher to move from the time-intensive art of drawing to photography. Although he had initially taken up the camera as an aid in creating his paintings, through photography he could record and thus preserve the industrial landscape in a more efficient manner with more accurate detail.

The Bechers' collaboration is unique in that they share all aspects of making their art, from locating sites, negotiating with property owners and local authorities, setting up the camera to making the exposures and printing the final works. It was as collaborators that they developed the characteristic "Becheresque" visual language, which assumes the frontal focus captures the most objective view possible of their subjects. These straight-on perspectives are taken from an elevated vantage point that avoids as many distractions as possible, and removes elements that could designate a specific place in time. The centered viewpoint presents the subject occupying the middle of the final print, largely filling the picture. The light—always natural—is diffuse and shadowless, as the couple photographs under overcast skies during hours of the day and seasons of the year—spring and fall—that are most amenable to capturing such light. Because most situations they photograph do not permit an isolated view of the individual architectural elements within a complex of industrial structures, the Bechers frequently enlarge details from larger groupings and present them as stand-alone images.

Although the lighting is flat and without strong contrast, the images they capture are unfailingly

precise and sharp, which can be attributed to working with a large-format Plaubel plate camera (13 × 18 cm) and utilizing relatively long exposure times—generally 10 to 20 seconds, but occasionally as long as 10 minutes. As a consequence, the structures seem both far and near, appearing three-dimensional and extending out of the picture, but also seeming unapproachable and at a timeless distance from the viewer. This combination of distant absorption and concrete presence of the subject is found historically in the painters, draftsmen, and architects who, for example, sought to memorialize ancient Rome. Like these artists, the Bechers are concerned with preserving the images of buildings threatened with destruction; but, uniquely, the Bechers' work focuses on practical architecture and everyday, useful structures that are choreographed as monuments that should remain arrested in memory. Without, they say, "making relics of old industrial relics," the Bechers would like "to create a nearly perfect chain of distinctly manifested forms" (Becher 1969). They are not concerned with preserving buildings that have lost their economic and social function; rather, they aim to take stock of the passing world of heavy industry and mining—with its blast furnaces, winding towers, silos, factory buildings, gasometers, cooling towers, and workers' housing. Although such vernacular architecture, whose function gave it its form—a form for which engineers and factory operators were largely responsible—has been documented by others in both the nineteenth century and the early years of the twentieth century, the Bechers' approach has proven to be unique. For the Bechers such themes serve as sources for new ideas about photography and contemporary art, whereas in the work of Albert Renger-Patzsch and Werner Mantz in the 1920s, the objective was merely to document. Inspired by the objective, encyclopedic, inventory-like photography of the 1920s (such as August Sander), the Bechers also borrowed elements codified in nineteenth century architectural photography by survey photographers working to preserve historical monuments: central focus, temporal neutrality, elevated vantage point, monochrome, gray sky, and the exclusion of human work and other signs of life.

Another important precursor of the Bechers' work is that of Eugène Atget. Spurred by his personal desire, Atget set out to document old Paris as it was facing rapid change around the turn of the twentieth century. Another antecedent is the work of Karl Blossfeldt. A professor of arts and crafts, Blossfeldt made detailed close-up photos of parts of plants and flowers centered on a neutral, illuminated background. This made them appear concrete

and at the same time seem like abstracted ornaments. The origins for Blossfeldt's photo-herbarium can be found in Ernst Haeckel's *Kunstformen der Natur* (1899–1904) or even in the descriptive botany of Carl von Linné and gave rise to the kind of spatial sorting of images adopted by the Bechers. This presentation allows a vivid tableau of the object that, upon multiple viewings, preserves the individual characteristics of various types of things yet creates a typology. An example is the Bechers' presentation of gas storage tanks (*Gas-holders* [Germany, Belgium, France, Britain, United States, 1966–1993]) in a grid five across and three deep, which creates a tableaux of forms: spirals, telescoping shapes, disks, and spheres. Characteristically presented in blocks of nine, twelve, or fifteen photos, the Bechers' clusters of images enable the viewer to register them simultaneously while still giving thorough attention to each individual image.

Bernd Becher describes the path to typological serialization of photos as a personal engagement with the objects, which, when compared, reveal their distinctive character. This process also conveys the regional and national characteristics of certain types of structures (Becher 1999, 2). In addition to photographing in Germany, the Bechers worked in England, Scotland, France, Belgium, Luxembourg, and the United States. Mixing together the topographical and the narrative, the resulting series remove the historical context for the various individual structures, depriving them of their functional associations and presenting them in isolation. By presenting various categories of structures in sets of photographs, most 16 × 12 inches or smaller, their individual architecture is made distinct and their unique aesthetic qualities are revealed at the same time that their similarities can be noted. The place and the name of the industrial plant and the date of the photograph are added as information that ameliorates against the tendency encouraged by this mode of presentation to see these images as pure plastic forms.

The Bechers' critical reception in a purely artistic context began in 1968 with a solo exhibit in the Städtisches Museum in Abteiberg, Mönchengladbach, Germany. This was a year after their participation in the Leverkusen exhibit *Konzeption—Conception* dedicated to conceptual art. Co-curator of this exhibit was a gallery owner from Düsseldorf, Konrad Fischer, whose program concentrated heavily on minimal and conceptual art. Through him the Bechers came to know American minimal sculptors Carl Andre and Sol LeWitt, California-based conceptual artist and photographer John Baldessari, and Richard Long, among others. The

rhetoric of the static image and the Bechers' interest in typology proved compatible with the existing currents in art, something Carl Andre confirmed in "A Note on Bernd and Hilla Becher" published in the December 1972 issue of *Artforum*, in which he situates the Bechers' grids of anonymous industrial structures within the context of the serial production found in contemporary art of that era. The Bechers' work was also associated with what was called *Spurensicherung* (securing traces), a movement that deals with fragments and traces of history in which artists attend to their private histories and the ever-quickenings changes of life. This tendency was explored at the 1972 *Documenta 5*, organized by leading Swiss curator Harald Szeemann, which included works by the Bechers. Under the slogan "individual mythologies," their works were shown together with pictures depicting both private and collective histories. In 1975 they were the only European photographers to participate in the ground-breaking exhibition *New Topographics: Photographs of a Man-Altered Landscape*, at the George Eastman House in Rochester, New York. In the beginning the Bechers framed individual typologies together, but later changed to framing each individual picture. This allowed the construction of images on the wall that is not only larger than a typical painting but has a sculptural presence; in fact their work *Typologien (Typologies)* was awarded the prize for sculpture at the 1990 Venice Biennial.

In 1976 Bernd Becher secured a post as professor of photography at his alma mater, the Kunstakademie Düsseldorf. It was the first official photography professorship anywhere in Germany. Because it was legally impossible to grant a couple one position, the professorship went to Bernd, with Hilla also working with students. Among the first were Candida Höfer, Axel Hütte, Andreas Gursky, Thomas Ruff, and Thomas Struth, who have gone on to be highly influential contemporary photographers. The Bechers' teaching methods included familiarizing students with the entirety of art, while expecting them to work systematically and rigorously on a theme of their choice. The Bechers' influence is obvious on the early works of their students, which show a clear, unmanipulated view of nearby surroundings, yet strict typological serialization is found in only a few of the students' works (for example, Thomas Ruff's large-format frontal portraits). Students were also schooled in the meaning of the presentation of their works.

After the first and thoroughly successful generation of Becher students, the success of Jörg Sasse, Boris Becker, Claus Goedicke, Elger Esser, among

others, testifies to the Bechers' vision in tapping into the social desire for a language of images that is peaceful, clear, and seemingly objective, and unmanipulated.

In 1996 the Bechers entered into a cooperative relationship with the photography collection of the SK-Stiftung Kultur, Cologne, which focuses on objective documentary photography, to archive and publish their documentation industrial plants and structures.

HANS BELLMER

German

Although his primary identity is as a Surrealist draftsman and painter, Hans Bellmer created such a provocative series of images in that of his dolls, he was awarded a singular place in photographic history. Often described as a poet of the erotic obsession, his fetishistic creations have been found by many to be disturbing in their extreme manipulation of the female form. More recent scholarship ties his choice of subject matter to opposition to the rise of Nazism during the late 1920s, which had as its ideal the perfection of the body. To make his photographs, Bellmer built his own models. He augmented his photographs, many of them hand-toned, with prose and published the images and text in various magazines or books.

Born in the Upper Silesian area of Germany in 1902, Bellmer initially studied as an engineer in Berlin in 1924. He met artists Otto Dix and George Grosz, both associated with the German Expressionist movement; they taught him the fundamentals of art and design. After marrying in 1927, he supported himself with an industrial advertising studio, but by 1938, denounced, as were many other artists, as “degenerate,” and grieving over the death of his wife, Bellmer left Germany for Paris. Even before his arrival he had made contact with the Surrealists but maintained a rather marginal position amid Andre Breton’s circle of artists.

The doll Bellmer first constructed between 1932 and 1933 had a complex genealogy. Toys and objects from his childhood that had been returned to him upon his father’s death commingled with other events, such an erotic obsession with a young cousin, and his inspiration by a performance of *The Tales of Hoffman*, which features a lifelike doll. This doll was a metal and wood skeleton covered in plaster that resembled a robot or puppet. But the construction itself was not the object; it existed only through the medium of photography. In his book *Die Puppe* (1934) (*The Doll*), Bellmer collected 10 selected black and white photographs. Preceding the photographs is a prose poem that details the idea of tearing apart the mannequin and putting it together again. Serving as an aesthetic counterpart to the text, the series of photographs shows the constant shift between construction and decon-

struction with no final creation left at the end of the series, only a fragment.

In these photographs the female figure surrenders to the voyeuristic gaze; in the paperback format of the book this gaze is readily made available to all. Bellmer also demonstrates an alternating play between interior and exterior views. The exterior skin fosters the expectation of seeing a natural body, but the sight of the interior, of the constructed elements, reveals a hopeless artificiality; an ever indeterminate shifting between deception and disappointment begins. The doll, both near to the grasp and unreachable, is what Bellmer has described as “an incitement to poetry.”

A characteristic of this first construction is what has been called a panorama of the female torso made from a barrel-like structure fitted with objects of “bad taste,” as Hans Bellmer’s brother has remarked. With stress placed on the left nipple of the mannequin the panorama of the torso is set into motion and one observes it in the figure’s navel. With the ostensibly knowing gaze into the recesses of the female body, the viewers own projection is reflected back onto the male and female observer. This kind of panorama of a female torso, however, is never truly realized, but only in the construction’s outlines does the idea suggest itself and thus it remains in the viewers realm of fantasy.

Bellmer engages a fascination with the figure that viewed in some of his works raises the question of whether the figure is living or artificial. The photographic image stands as an analog in its capacity to mortify the photographed object while at the same time supplying a medium allegedly possessing more authenticity than any other ever has. The photographed doll is in many ways a confusing creation between art and nature, life and death.

From image to image Bellmer created various combinations of body parts for the doll. They were conceived in potentially limitless combinations and in the photographs of the second doll his combining of body parts continued. In building the second doll in 1935, Bellmer sought to force a greater sense of metamorphosis and volubility. An innovation in this second doll was the torso’s ball-and-socket joint—a construction inspired by a wooden jointed puppet. The remarkable characteristic of the second

figure was how its two stomachs were placed in mirror-image opposition on the stomach joint that circled the mid-section of the body. Individual limbs were interchangeable. Bellmer then staged the enhanced variability of poses in 100 photographs from 1935 to 1937 that he colored by hand. In 1949, Bellmer published 14 selected images together with accompanying texts and poems from Paul Eluard in the volume titled *Les Jeux de la Poupée*.

The construction of the second doll left open the ways one could read the image of the body, making a kind of “anagram” in Bellmer’s sense of the word. The photographs of this second model demonstrate the floating meaning of the body’s various parts: the vulva is double in size and is set in place of the mouth, breasts have wandered to the position of the lap, and so this act could go on ad infinitum. No top or bottom of the doll’s anatomy is clearly defined. Already in the photographic portraits of the first doll, Bellmer created a being that seemed posed between realities, a principle of crossing borders that refuted polarization, and Bellmer furthered this principle in the construction of the body of the second doll.

Bellmer’s sculptures also focus on the theme of dolls. With a bronze sculpture of the second model (1965) Bellmer released the body of the doll into “reality”—outside the medium of photography. In his sculpture, *La mitrailleuse en état de grace* (1937), Bellmer connected elements of both his doll creations. He fit the mechanical leverages of the robotic looking first doll to the smooth bodily form of the second. In 1972, Bellmer constructed his final mannequin figure, *La demi poupee*, which was not created to be photographed. As the name suggests, this doll had only one arm, one leg, and one breast.

Following the writing of Georges Bataille (*L’histoire de l’oeil*, 1946)—a theme of which is the multiple meanings of sexual signs—Bellmer created photographic series that featured bodies in twisted positions but not featuring the use of a doll. In 1958 the poet Unica Zürn posed for photographs in which the anagrammatic element was raised to a governing principle. The photographs show Zürn’s body constricted by wires in a way suggesting the anatomy, much like a doll quilted from an actual body. The automatic generation of biological and artificial body parts also suggests the reproduction process of the photographic medium itself.

After giving up his photographic work with dolls Bellmer turned to graphic art, and these works also focus on variations of composite bodies. Drawing as a medium provided the possibility of interfusing various formations of anatomic parts. Bellmer could now move totally within the world of fiction in con-

trast to photography. He abandoned the subtle play between the real and the virtual that results from the “believability” inherent in the photographic medium. Bellmer presented his works not only in book form, but also in Surrealist exhibitions (e.g., 1938 in Paris) and in surrealist journals (e.g., in *Minotaure* 1935). In 1972 the first major retrospective of the photographs was mounted in Paris (Centre national d’art contemporain) and for the first time the dolls were also displayed.

Bellmer’s works are shown in numerous exhibits. With her representation of artificial body fragments, Cindy Sherman (*Sex Pictures*, 1992) refers directly to Bellmer’s creations. Bellmer executes a mediated notion of “female” in two simultaneous ways: in the medium of the doll and in photography. Thus he is of interest to gender studies as well as to discussions of virtual worlds and of body production through gene technologies.

Biography

Born in 1902 in Kattowitz (Oberschlesien). Studied engineering in Berlin, 1923–1924. Broke off his studies to become a graphic artist for book illustrations. A self-taught artist, he had contact with artists such as Otto Dix and George Grosz. First trip to Paris, established contacts with the Surrealists, winter 1924–1925. Constructed the first doll and photographed the model, 1932–1933. Constructed second doll, 1935 and photographed the second model, 1935–1937. Moved to Paris, 1938. Detention in southern France with Max Ernst, 1940. Stayed until 1948 in southern France and produced series of graphic artworks. Returned to Paris, 1948. Met the poet and life-long companion Unica Zürn in Berlin, 1953. In the 1960s he produced primarily graphic works. First major retrospective in Centre national d’art contemporain in Paris, 1971. Bellmer died in 1975 in Paris.

Selected Works

Note: The following are titles of Bellmer’s original publication of his images; individual images from each series are titled with the series name.

Die Puppe (The Doll), 1934

Les Jeux de la Poupée (The Joy of the Doll), 1949

L’Anatomie de l’image (translated to English as *Little Anatomy of the Physical Unconscious*), 1957

Individual Exhibitions

1967 *Hans Bellmer Photographe*; Kestner-Gesellschaft, Hannover, Germany

BELLMER, HANS

1970 *Hans Bellmer*; Stedelijk Museum, Amsterdam, Netherlands

1971 *Hans Bellmer*; Centre national d'art contemporain, Paris, France

1975 *Hans Bellmer*; Museum of Contemporary Art, Chicago, Illinois

1983 *Hans Bellmer Photographie*; Centre Georges Pompidou, Paris, France

1983 *Bellmer Peintures Gouaches Collages*; L'autre Musée, Paris, France

1984 *Hans Bellmer Photographie*; Kestner-Gesellschaft, Hannover, Germany

JOHN BERGER

British

Painter, novelist, screenwriter, poet, critic, and occasional photographer, John Berger was known initially as the leading member of a group of post-World War II painters dubbed "the Kitchen Sink School" for their commitment to an unvarnished working-class realism. Berger later gained fame as a Marxist-oriented critic for *The New Statesman* and as the author of several novels, including *G*, which won the prestigious Booker Prize in 1972. In the range of his interests and abilities (he has written on topics as different as the life of Pablo Picasso and the writings of the Mexican political activist Subcommandante Marcos), he has few equivalents

among English-speaking writers. Unlike his American and European counterparts, he has worked outside a university umbrella. The closest comparison is with the late Michael Ayrton, an English sculptor, essayist, and novelist. In the case of both, their literary careers and recognition gradually usurped their importance as artists, but their experience of art making has given tremendous force and personality to their insights.

Although Berger has always been most attentive to painting and drawing, his interest in photography is longstanding and profound. It has produced numerous essays, four book-length collaborations with the French photographer Jean Mohr, including the seminal *Another Way of Telling* (1982), a

commentary in letters on the work of photographer Martine Franck, *Martine Franck: One Day to the Next* (1999), and a stunning revision of his own work, the novella *Once In Europa* (1987/99), which he transformed into a dialogue of text and images with the photographer Patricia Macdonald. In spite of Berger's trenchant criticism of photography—he has famously dubbed it a “quotation of reality” and like Susan Sontag indicted it for robbing us of the ability to remember—he has been compelled by the rich particularity of photographs, especially their ability to convey social, political, physical, and even environmental information. As one who believes deeply in the rootedness of art in its historical and political situation, Berger cannot help celebrating and exploring photography's fundamentally documentary nature.

Berger's reputation as a critic of photography rests largely on three texts: his first collaboration with Jean Mohr, *A Fortunate Man* (1967, as of this writing in its 54th printing), the essay *Why We Look at Photographs* (1978), and another Mohr collaboration, *Another Way of Telling* (1982). His fundamental insight, the ramifications of which he explores in all three writings, is that photography is essentially overdetermined in terms of information and undetermined in terms of meaning. Just as reality per se cannot explain itself, so the images captured by the camera can convey an enormous—indeed, often an uncontrollable—amount of detail but remain ambiguous and always in need of interpretation. To drive this point home, in *Another Way of Telling* Mohr shows to a group of people various photographs he has taken and asks them to explain what they see. In only a few cases do their conjectures approach the original circumstance of the image, and in some instances completely contradict it.

Such ambiguity poses significant problems. First, outside their originating contexts, photographs risk almost complete meaninglessness. So Berger attempts to anchor their interpretation in a visual “grammar” that is little more than the fact of an image's coherence in an instant of time and in space. The “art” of a photograph consists in the complex of correspondences or relationships it frames. These correspondences within an image articulate ideas that include but reach beyond the particulars of the moment. As Berger puts it, “In the expressive photograph, appearances cease to be oracular and become elucidatory.” For one so sensitive to the life of photographs with in communities of interpretation, this is a strikingly formalist approach, placing great weight on the graphic and iconographic structures of the image.

Nevertheless, photographic images can be used for any purpose, from propaganda to testimony to advertising, and as soon as a private image, with direct and clear significance to some viewer, becomes severed from this viewing context, it loses its anchor (but not necessarily its poignancy). This suggests another way that photographs can be made to “mean”—as elements of a narrative. Coupling image and text can limit and direct the photograph's waywardness and even restore it as an agent of memory. As Berger puts it in *Why We Look at Photographs*, “A radial system has to be constructed around the photograph so that it may be seen in terms which are simultaneously personal, political, economic, dramatic, everyday and historic.”

Berger had already embodied this idea of storytelling in *A Fortunate Man*, his collaboration with Mohr detailing the life of the rural English doctor John Sassall. More narrowly political and psychological than its journalistic predecessors *Let Us Now Praise Famous Men* by James Agee and photographer Walker Evans or the photo stories of W. Eugene Smith for *Life* magazine, Berger's book preserves their traditional relation between image and the explicating, polemical text. Not so *Once In Europa*, his story of love, death, and industrial exploitation in rural France. Here it is the images that comment on, contextualize, and expand the framework of the written story and its characters.

Another Way of Telling takes yet a third approach, eschewing commentary at the end of the book in favor of an extended suite of images, which leave it to the reader to reconstruct a “story” of French peasant life. This follows the line of Berger's didactic and highly successful art history text, *Ways of Seeing* (1972), which provides readers various ways of interrogating art images and objects, and then gives them images to work on. In truth, Berger's photomontages aspire to the condition of cinema, a form that can fully reap the suggestive benefits of juxtaposition, explore the texture of duration and history, and unfold a set of terms for its own interpretation.

Yet in the end, Berger is drawn to the single image as the bearer of existential and historical testimony. Where critic Roland Barthes scans photographs like a visual flaneur, Berger scrutinizes images for their lived realities and fugitive insights. He is at his best as an interpreter, discovering through his responses to what he sees, broader significance, whether in August Sander's image of three country boys in suits or in Paul Strand's photographs. Perhaps what Berger is ultimately seeking is the core of memory within himself, not suppressed but released by the photograph. These

encounters provoke him, as he said in a 2002 interview, to “tell the story of being here at this moment in time.”

Biography

Born London, November 26, 1926. Educated St. Edward’s School, Oxford. Won scholarship to Central School of Art, London, but education interrupted for two year’s military service, 1944–1946. Resumed education for three years at Chelsea School of Art, London. Exhibiting painter throughout the late 1940s, 1950s, and 1960s. Writer for weekly *Tribune*. Appointed art critic for the *New Statesman*, 1951, provoking controversy for his Marxist views and defense of realism. First novel, *A Painter of Our Time*, published in 1958 and withdrawn from publication under pressure from the CIA. Throughout the 1960s published poems, novels, criticism, translations, and first photographic collaboration with Jean Mohr.

Won Booker Prize in 1972 for novel *G* and donated half the prize money to U.S. radical group Black Panthers. Developed ground-breaking BBC television series on art, *Ways of Seeing*, aired in 1972. Moved permanently to small village in Haut Savoie in the French Alps, 1974. Subsequently collaborated on scripts for three films with director Alain Tanner and published a series of novels on peasant life, *Into Their Labors*. Continues to write articles, essays, poems, and novels.

BERLINISCHE GALERIE

On November 21, 1975, the Berlinische Galerie was opened as a private society by fifteen patrons and interested citizens of the city of Berlin, Germany. The society stated

The Berlinische Galerie is a museum which collects art works and material concerning the artistic and cultural history of Berlin from the fields of visual art, architecture, artistic photography, applied art and design, carrying our research into these and making them available to the public.

(Quoted in Jörn Merkert, “Berlin or the Round Head”, in the *Berlinische Galerie visits Dublin*, Dublin 1991, p. 12.)

As the founding director, Eberhard Roters envisioned a museum that would highlight Berlin art history in all fields from 1870 to the present, which no other museum in the city was doing. Such an endeavor in a then divided city was no easy task.

From the beginning there had been financial problems, but Roters’ early vision was well targeted and persistent, resulting in an interdisciplinary collection of Berlin art from 1870 to the present that included painting, graphic arts, sculpture, video, photography, architecture, and the archives and papers of various artists. Roters chose to stay in the public eye by mounting changing thematic or monographic exhibits, rather than a permanent exhibition of the growing collection, and by continually announcing new acquisitions. A primary benefactor for the new museum, as for a number of the other Berlin museums was the Foundation Deutsche Klassenlotterie in Berlin.

In 1986 the fledgling museum moved to the prestigious Martin-Gropius Bau, designed by Martin Gropius and constructed in 1881. Designed in a style similar to an Italian Renaissance palace, the building contained beautiful mosaics, reliefs illustrating the different arts and crafts, and crests at

various German cities. Left in ruins after World War II, the building was not to reopen until 1981, with minimal alteration, to house large exhibitions. The Berlin Wall stood behind the building. The Galerie used this space until 1997. The building was further renovated for large exhibitions in 1999.

The Galerie then used space in the Lapidarium, once Berlin's pumping station from 1873–1876 and also home to magnificent large sculptures that once decorated the Avenue of Victory in Berlin's *Tiergarten*. The Galerie also sponsored exhibits in different sections of the city of particular significance were its *Längsschnitte* (sections) and *Querschnitte* (cross sections) held at Jebenstrasse near the Zoo Station, in space previously used by the Gallery of the Twentieth Century. From February 2002 to April 2003, the Berlinische Galerie sponsored a series of five exhibits, "*Zwischenspiel*" at the Berlin Grundkreditbank. In 2003 the Berlinische Galerie finalized a contract to purchase and renovate a former glass warehouse at 124–128 Jakobstrasse, 10969 Berlin-Kreuzberg, near the Jewish Museum designed by Daniel Liebeskind. Scheduled to open in October 2004, the new Berlinische Galerie space with its wide expanses would be able to mount significant and innovative exhibitions that celebrated and examined the richness of Berlin's art from 1870 to the present. The new museum space would also include a library, study rooms, workshop space for restoration projects, office space, and a restaurant.

Two large initial goals for the Galerie were to bring renewed recognition to those artists who had been termed "entartet" or degenerate under Hitler's rule and to establish respect for contemporary artists. Examples of the Galerie's early exhibits include: Berlin Artists of the Twenties: Feldberg Collection (1978); Art in Berlin from 1960 to the present (1979); Art in Berlin 1930–1960, (1980); George Tappert, A Berlin Expressionist, (1980); Berlin Realism, 1890–1980 (1981); Dada Montage, (1982); Aus Berlin Ernigriert (Artists forced to leave Berlin after 1933), (1983); Berlin at 1900, (1984). Later the Galerie sponsored exhibits including, *Self Portraits of the Twenties* (2004), *Russians in Berlin from the Twenties* (2003), and *Menschenuntereinander (Men together): Graphics and Photography 1918–1933*, (2002). A major exhibit that the Galerie mounted with the Pushkin Museum in Moscow was "Berlin-Moscow/Moscow-Berlin 1900" that was shown in Berlin in the Martin Gropius Bau in 2003.

The museum's collection now includes approximately 7,000 paintings, 1,500 sculptures, 150,000 works on paper, and 250,000 photographs. In addition to its focus on Berlin art, the collection also includes major international works of modern art,

such as the avant garde of Eastern Europe. The collection reflects the revolutionary experiments in Expressionism, Dadaism, Constructivism, the Bauhaus, and so on. and the larger historical currents that accompanied two world wars, the social crisis between the wars, the reign of National Socialism, the Cold War, and a divided Germany and Berlin, as well as current trends since the fall of the Berlin Wall.

In 1979 a major acquisition to the permanent collection was the Hannah Höch Archive with its collection of paintings, collages, and graphics. Höch's Dada experiments, her scrapbooks, etc. provide a window on a stimulating and active period of German and European cultural and art history. Celebrating the 100th anniversary of Höch in 1989, the Galerie produced "Hannah Höch—*Eine Lebenscollage*," volume I, containing significant archival material.

The photographic collection is an important part of the museum's holdings. Under the initiative of Janos Frecot, the collection has grown to contain major holdings in the history of photography. The oldest materials are portrait daguerreotypes from various Berlin ateliers in the 1840s. The oldest architectural photographs include images of the magnificent synagogue on Oranienburger Strasse, taken in 1866. Architectural photographs by Max Pancow later in the nineteenth century show new buildings representing the rise of industry and villas in new suburbs of Berlin. Further, one finds images of F. Albert Schwartz, the urban photographer, showing landscape scenes, iron works, and general city views. Heinrich Zille, working between 1900 and 1910, shows a darker side of Berlin, the working class, broken down dwellings, rubbish piles, etc. The fashionable and elite were recorded in the Art Nouveau portraits of Nicola Perscheid, who worked summers in Baden-Baden and winters in Berlin. Experiments with geometry and abstraction in photographs, photo-grams, and photo-montages are seen in the collection's holdings of El Lissitzky, László Moholy-Nagy, and Heinz Hajek-Halke. The great Weimar Republic photojournalist, Erich Salomon, is well represented with glass and film negatives, slides, and vintage prints. One can see, for example, the English prime minister, Ramsay MacDonald in conversation with Albert Einstein, along with Max Planck, and Secretary of State for Foreign Affairs, Julius Curtius, in 1931, or Marlene Dietrich with her daughter in Berlin in 1930. Salomon's illustrated reports on sessions of the Reichstag, on conferences in Berlin, Paris, the Hague, London, Geneva, etc. were greatly respected and widely read. Other photojournalists represented in the collection include: Felix H. Man, Martin Munkacsi,

Erich Comeriner, Fritz Eschen, and Umbo (Otto Umbehr). The great portrait photographers such as Lotte Jacobi, who photographed those involved in the arts and sciences before escaping to the United States, or August Sander, the recorder of a variety of levels of society, are represented here. Experiments in advertising photography such as that of Fritz Brill or Herbert Bayer or the archives of the popular magazine *Volk und Welt* are to be found in the collection.

From 1955 to 1965 Berlin was an important fashion center. Photographs by the Hamburger, F.C. Gundlach present an atmosphere of a city trying to rise out of the ashes of World War II. Michael Schmidt, the founder of the Berlin Werkstatt für Photographie (Photographic Workshop) fostering emerging photographers is represented by his early work such as his *Kreuzberg* and *Wedding* series (1978 and 1980), and from the exhibit *Waffenruhe* (cease-fire).

In 1990 the East-Berlin collection of the photographic history of East Germany was obtained by the Berlinische Galerie. This collection includes approximately 1,500 images by seventy photographers, including work by Sibylle Bergemann, Arno Fischer, Thomas Florschütz, Helga Paris, Evelyn Richter, and Ulrich Wüst.

The Berlinische Galerie continues to collect in a variety of areas. Its photography is probably one of

the strongest aspects of its collections. With its new building, its future appears to promise increased acquisitions, exhibitions, and study areas for Berliners and the world at large, fulfilling much of the vision of its 1975 founders.

RUTH BERNHARD

German

Ruth Bernhard is known for her “radiant” photographs of female nudes that have been described as “hauntingly sensual but classically reserved.” She is also known for her doll images and her meticulous photographs of commonplace objects such as lifesavers, an egg slicer, and a teapot, for which she has been acknowledged as a “a master of the still life genre,” by art critic Ilee Kaplan.

Born in Berlin, Bernhard was the daughter of famed poster artist Lucian Bernhard. In 1927 she emigrated to New York where her father then lived. She learned the rudiments of photography while using an 8 × 10 view camera when she work-

ed briefly at *The Delineator*, a popular woman’s magazine. After she was fired for lack of motivation, she began to freelance as a fashion and advertising photographer.

Her first published image was *Lifesavers* (1930). Her still lifes are at times reminiscent of the work of avante-garde photographers associated with the Bauhaus school, for example Hein Gorny’s rows of men’s collars and Grete Stern’s dolls and use of light “as the defining element in the image.” Bernhard has said “It’s not the object that is beautiful, its the light in which we see it.”

In 1934 while on assignment for the *Machine Art* exhibition at the Museum of Modern Art in New York, she photographed her first nude. A visiting

friend noticed the large stainless steel bowls she was shooting, and Bernhard asked her to pose in one of them and she agreed. Bernhard produced a series of these photographs, and they soon became her signature images.

Her meeting with Edward Weston in 1935 was a turning point in her life. Inspired by his work, she began to regard photography as art. A year later, she set up a studio in Los Angeles and had her first solo exhibit at bookseller Jake Zeitlin's gallery, which received good reviews. One image was described as "leaves [that] quiver with subtle changes of light that we had never noticed before." Her doll images were the first photographs she took after meeting Edward Weston. This series was made between 1936 and 1939 in Bernhard's Hollywood studio when she made portraits of children. She says she regards the dolls in her photographs as children.

She returned to New York in 1939 and continued working on commercial assignments. Two years later, she sold some of her images of seashells at an exhibit in Florida and produced a series of seashell images that were published in a special edition of *Natural History Magazine*. The influence of Weston was still strong and can be seen if one compares her *Classic Torso* and his *Nude by the Door*.

Bernhard says that she later grew critical of Weston's nudes seeing in his images "his interest in seduction and connection," while her "quest" was "abstraction and sculpture...I wanted to achieve and ideal harmony...with the universal idea of the body as a work of art. I wanted to convey innocence...the innocence of a tiger or a cloud in the sky."

During World War II Bernhard joined the Women's Land Army and spent her time at a working farm in New Jersey. After the war, she returned to California and continued her association with Edward Weston, known for his many love affairs, visiting him at his home in Carmel. She maintains that although there was a mutual romantic attraction, she preferred not to risk the loss of the friendship.

In 1953, she moved to San Francisco where she eventually became part of a circle of photographers that included Ansel Adams and Imogen Cunningham. She began teaching photography in 1966 and throughout the years has felt that her teaching "is more important than my photos." In 1970, the first book containing her images, *The Eternal Body: A Collection of 50 Nudes*, was published. Several years later, she produced two limited edition portfolios: *The Eternal Body* (1976) and *The Gifts of the Commonplace* (1976). Both sold out quickly. During that time, and due to inhaling fumes from a faulty heater, she lost her ability to concentrate for long periods of time, and has made no new negatives

since then. In spite of this limitation, Bernhard, now in her 90s, retains her *joie de vivre*. In *Between Art and Life*, she lists eight factors contributing to long life, including "never get used to anything," "hold on to the child in you," and "say 'yes' to life with passion."

While Bernhard has enjoyed acclaim for the sheer artistry of her images, on another level, her photographs of nude women, including women of color, and her relationships with several men, suggest unexamined issues related to gender and ethnic perspectives. The new biography by Margaretta Mitchell is forthcoming about Bernhard's bisexuality. She considered Eveline Phimister, an artist and designer as "the love of her life." Bernhard also maintained long relationships with Edward Weston, an older man, and with a former Tuskegee airman, Price Rice, a younger man. In order for Bernhard's complex aesthetic to be better understood, her work deserves critical examination on levels hitherto ignored.

JOSEPH BEUYS

German

Joseph Beuys was not a photographer; however, as a conceptual artist, he exploited the promotional capacity of photographs, using them to document his performances and disseminate his ideas, greatly influencing the development of photography in the 1970s as he influenced virtually every other area of contemporary art practice. Beuys infused his art with his persona, establishing his own image as the central icon in his oeuvre. To achieve this, Beuys consistently wore the same uniform: felt hat, fisherman's vest, white work shirt, blue jeans, and black boots. As a result, Beuys's photographic image registered instant recognition informing the production of startling, compelling images of himself as a political and spiritual leader during the Cold War era. Although Beuys created art in traditional forms, most notably drawings and sculptures, he is best known for his socially-oriented didactic performances and political activities. Photographs recording these events are central to understanding his diverse oeuvre.

Beuys avoided traditional art media and adopted such materials as fat, felt, honey, and other organic substances in a personal symbolism for his theoretically complex work. A tireless promoter of his pedagogical concept, "Social Sculpture," Beuys drew extensively from his life experiences to underscore his central belief that humans are creative beings and that only by harnessing this power could a true democracy be fully realized. Beuys did not remain isolated in the realm of art; he established several political organizations in West Germany, including the German Student Party and the Organization for Direct Democracy through Referendum, and he was a co-founder of the Green Party. These ventures enabled him authentically to fuse art with politics and gain access to a wider audience. Harnessing the propagandistic force of photographs, Beuys infil-

trated the political arena to publicize his aesthetic ideology. He famously proclaimed:

Every human being is an artist who—from his state of freedom—the position of freedom that he experiences at firsthand—learns to determine the other positions in the total artwork of the future social order. Self-determination and participation in the cultural sphere (freedom); in the structuring of laws (democracy); and in the sphere of economics (socialism)."

(Cuoni 1990, 21)

As a young adult, Beuys considered medicine for a profession but was drafted by the German military in 1940. He became a dive-bomber in the Luftwaffe and, in 1943, his plane was shot down in the Crimea. He claimed to have been found, unconscious, by Tartars who smothered his body with animal fat and covered him with felt (animal pelts) to keep him warm. For 12 days, he drifted in and out of consciousness before being found by a search party, ultimately regaining full consciousness in a German hospital. It is unclear if his recounting of this event is fact or the creation of a personal myth; Beuys's hospital records indicate the crash occurred in 1944 and that Russian civilians delivered him to the Germans. In an effort to support his account of this wreck, Beuys provided photographs of (reportedly) his damaged Stutka. Regardless of Beuys's accuracy in recall, this trauma was a key episode that transformed the development of his iconography and aesthetics.

After the war, Beuys studied at the Kunstakademie Düsseldorf with Ewald Mataré, working as Mataré's master student until 1954. Throughout the 1950s, Beuys produced countless works on paper and later claimed that his aesthetic ideology and personal iconography were initially established during this phase. After undergoing a severe depression that lasted several years, Beuys was appointed Professor

of Monumental Sculpture at the Kunstakademie in 1961, and, by the mid 1960s, his political convictions were the core of his artistic endeavors. At this time, Beuys cast himself as a modern shaman whose primary mission was to enable the spiritual redemption of the German people after the traumas inflicted by Hitler and the Nazis. Focusing on the student population, Beuys recognized that his greatest skill was as a pedagogue. Most of his performances culminated in prolonged question-and-answer sessions in which he lectured for as long as his audiences would listen.

Participating in several Fluxus—a loose association of performers and Dada-influenced artists—instigators—concerts, Beuys viewed performance art as a means for translating his artistic ideas into theatrical presentations. The initial importance of photography in Beuys's career can be traced to stunning images taken of his performance at a Fluxus event at the Aachen Technical College in 1964. At this concert, Beuys's performance was disrupted by conservative students who stormed the stage, and one of them punched the artist in the nose. Resolute and determined to proceed, Beuys was photographed by Heinrich Riebeschl with his nose bloodied, his right arm raised, his left hand carrying a crucifix, his visage exuding concentration and confidence. This photograph radiates with a resolute power that supercedes the time-based constraints of the performance itself, operating as an art work in its own right. Drawing on this experience, Beuys recognized the power of theater and, just as importantly, the documentary authority of photography.

Shortly thereafter, Beuys began to conceive of performances (*Actions* as he called them), with a keen awareness of how the camera would capture isolated moments. In the following year, Beuys organized an action, entitled *How to Explain Pictures to a Dead Hare*, that occurred on the opening night of his first major solo exhibition at the Galerie Schmela in Düsseldorf in 1965. At this event, Beuys coated his face with honey and gold leaf, presenting himself as a sun god. In his arms, the artist cradled a dead hare. During much of the performance, Beuys sat in a chair, lecturing to the animal. No visitors were allowed in the exhibition space; rather, the public was only allowed to watch the performance through the gallery's front window. Beuys explained his drawings to the dead rabbit, animatedly gesticulating and eventually carrying the corpse throughout the exhibition space. The resulting photos by Ute Klophaus conferred the status of a mythological figure on Beuys. Although the performance occurred long ago, these photographs remain haunting images that underscore Beuys's aesthetic

philosophy and the central role of photography in his oeuvre.

After this performance, Beuys consciously recognized that his choice of symbols and the aura of his personae could resonate within photographic images; co-opting the photo as a work of art in its own right, Beuys began to use photographic reproductions as one of numerous resources that promoted his "expanded concept of art." Beuys's 1974 performance, *Coyote: I Like America, America Likes Me*, further implicated this artist's reliance on photographic images. Responsible for producing an installation at the René Block Gallery's inaugural exhibition in New York, Beuys created a week-long action documented by many oft-reproduced photos. In this event, Beuys cohabitated the gallery space with a wild coyote flown in from New Mexico. Beuys intended his interaction with the animal to symbolize a reconciliation between Europe and America.

Beuys's interest in photography was not concerned with technical proficiency. Rather, his approach to the image was to use photos that violated common technical conventions of framing, lighting, and printing. For the traveling exhibition *Arena: What I Would Have Achieved If I Had Been Intelligent*, first shown in Naples in 1972, Beuys selected more than 400 photographs of himself and his art, which were displayed in aluminum containers. Beuys reworked the images, covering them with diverse substances such as wax, grease, honey, and gelatin. Although the photographs documented his prior activities, Beuys's reworking of them created unique works of art. In the following year, Beuys made *Enterprise*, a sculpture in an edition of 24, which incorporated a photograph of Beuys's family watching television. The sculpture consisted of a zinc box with a print of the photograph glued to the lid's interior; the box itself contained a box camera with a round piece of felt covering the lens. Later, Beuys turned to using manipulated photographs to create a series of postcards that promoted his aesthetic ideology. Although best known as a performance and installation artist, Beuys routinely exploited the documentary nature of photographic images to promote his aesthetic theories and political ideology.

BIBLIOTHÈQUE NATIONALE DE FRANCE

Starting with royal collections that became national collections after the French Revolution, Bibliothèque nationale de France (BnF or French National Library) has evolved through many forms and locations before its present manifestation, reflecting the evolution of French culture and socio-political structure

through the centuries. Today, the BnF is the major national repository of French and international photographic work, and serves as the principal source for many modern French photography exhibitions.

The library's royal collection was transient for the first generations of its existence, until Louis XI

(1461–1483) issued decrees that stabilized the library. Jean-Baptiste Colbert, as Louis XIV's controller and minister of finance, moved some of the royal library contents to rue Vivienne in Paris, which is the present day site for the BnF Richelieu site.

The library continued to expand, and during the twentieth century, faced lack of space for collections, ever more acute problems of conservation, and rapidly increasing demand by readers and researchers. At the end of the century, the need for additional space was addressed by the construction of an additional site for the BnF, consisting of an esplanade and four impressive towers. The public reading rooms in this new Bibliothèque François-Mitterrand at Tolbiac in the 13th arrondissement Paris opened in December 1996, and in October 1998, the opening of the research library finally brought this major project to completion.

The abundant material in the special collections of the BnF—manuscripts, engravings, photographs, maps and plans, music, coins, medals, antiquities, and material on the performing arts—remains within the Richelieu library, to be reorganized with larger stockrooms and reading rooms. All special collections have been reorganized into five departments, including prints and photographs.

It is generally considered that the Cabinet Photographique, or Prints and Photographs Department of the BnF, thusly named in 1976, was founded in 1667, with 120 engravings and drawings from the Abbé de Marolles collection. The department began to receive legal deposit prints in 1638, while successive gifts, bequests, and purchases steadily increased the size and importance of the collection, numbering at the turn of the twentieth century from 2 to 3 million photographs. The department's mission is to conserve images that can be reproduced in multiple copies, and thus photographs are but one of many mediums that are collected.

Dating from a 1537 decree by Francois I, "*depot legal*," or legal deposit, required that all printers and booksellers deposit a copy of any printed matter with the royal library as a legal or copyright deposit. Legal deposit provisions were considerably improved and reinforced in 1925, applying this obligation to both printers and publishers, which was successively extended to cover imported books and other materials including photographs. Thus, with certain stipulations, French photographers are required by law to have a copy of their photographs in the BnF collection. Obviously, the sheer volume of photographic production in France prohibits the democratic application of this law. In practice, the Curator of Photography at the BnF must monitor and solicit work deemed appropriate for the national collection.

Photography has been in the forefront of the collection from an early date, when photographers began voluntarily depositing legal deposit copies in 1851. Most initial attention to photography did not concern itself with the photograph as a work in its own right, but with the photograph only as a subject matter information source. This policy for collecting continued until the 1940s when a growing awareness of the photograph as art allow new approaches to photographic collection and exhibition.

The department holds an impressive collection, including collections of nineteenth century masters, as well as works by Eugène Atget. The work of contemporary photographers is particularly well represented with a collection of 100,000 prints. Chief curator for prints and photographs from 1963–1998, Jean-Claude Lemagny, acquired works by contemporary photographers through donations, purchases, and under the terms of "*depot legal*." Largely due to his diligent work, the BnF houses one of the most important photography collections in the world. After Lemagny's retirement in 1999, Phillippe Arbaizar was appointed chief curator of photography.

Significant twentieth century acquisitions include 50,000 prints from the Nadar study collection that were purchased in 1949. In 1961, 200,000 prints from four major French press agencies were acquired (Rol, Meurisse, Mondial, SAFARA). The department acquires works from two to three hundred contemporary photographers a year. From 1986 to 1996, for example, the collection grew by over 46,000 photographs. As a library and not a museum collection, the department is able to collect from the general and vast world of photography, building a diverse body of work by both French and international photographers.

The Prints and Photographs department at the BnF has a reading room where original photographs from the collection can be accessed. Staff is available for guidance and, as a matter of library policy, even principle curators are available for consultation to the public on a regular basis. Additionally, works from the collection are exhibited on a regular basis in the Galerie Colbert, Passage Colbert 2 rue Vivienne. Named after the seventeenth century minister who shaped the BnF, the Galerie Colbert has been an experimental exhibition venue, striving to establish an appropriate setting for the exhibition of contemporary photography. The gallery has one wall of windows that face directly onto the Passage Colbert. The exhibitions are accompanied by a text usually written by the Curator of Photography. Photography exhibitions at Galerie

Colbert strive to balance the best qualities of both public and private institutions: free access, impartial selections, and direct contact with the public with freedom of initiative and flexible activities. More than one hundred exhibitions have filled the gallery walls since its inception.

The photography collection at the BnF is often the principal source of images for many major exhibitions. The 1977 exhibition of creative twentieth century photography at the National Museum of Modern Art in the Georges-Pompidou Center was built from the BnF collection. Also, works from the BnF were exhibited at the Pavilion des Arts in 1984 titled, "Creative Photography." The 1994–1995 exhibition and book, *La matiere, l'ombre, et la fiction*, grouped 279 photo-

graphs by 104 authors in a major look at works from the collection.

RICHARD BILLINGHAM

British

Richard Billingham does not consider himself strictly a photographer. He began taking snapshot photographs as part of a wider effort to gather preparatory source materials for his paintings when he started his degree in fine art at the University of Sunderland in 1991. Over the course of the next five years, using a simple auto-exposure camera and cheap film, Billingham photographed his family in their council flat home in the Midlands of England. The resulting color images are garish in technique and content. They seem to break all the classic formal rules of photography and suggest amateurism; many images are out of focus, overexposed, haphazardly framed, or display an extremely grainy print quality. But Billingham's candid portraits of his parents, Ray and Liz, his brother Jason, and various family pets, are an intimate and unapologetic depiction of the artist's working class home life. Their amateurism can perhaps be overlooked in light of their honesty.

In this collection of photographs, distressing images of addiction and violence are juxtaposed with captured moments of comedy and tender affection. Ray's alcoholism is a consistent theme. Billingham's grey-haired, gaunt, middle-aged father is pictured in various states of sobriety; falling over,

seated next to a vomit-spattered toilet, tucked up in bed with the covers to his chin, or just staring back at the camera through vague, uncertain eyes. Billingham captures his mother's expressive range also. Liz, a large rounded woman with vibrant tattooed arms, is pictured vehemently arguing with Ray, and then joyfully cuddling a tiny kitten. Her presence is felt throughout the home as various feminine knickknacks decorate the grubby walls and furniture of the flat.

Initially Billingham's photographs of his family were not intended for exhibition or to form a cohesive series, and most still remain untitled. But a selection of images was first publicly shown in 1994 in *Who's Looking at the Family?* at the Barbican Art Gallery in London, and from there, Billingham's career quickly flourished. By 1995 his work was being represented by Anthony Reynolds Gallery in London and his first book of photographs, *Ray's a Laugh*, was published in 1996. Overnight the book brought him notoriety and critical acclaim as critics were at odds about the photographs. Admirers applauded his snapshot aesthetic and the vernacular quality of the spontaneous images. They commended his critique of traditional social documentary practices by using gaudy color and avoiding a customary discreet or impartial distance from his subject. In this respect Billingham's

work was likened to that of other contemporary British photographers, Martin Parr and Nick Waplington. But other critics accused Billingham of sensationalism. Their polemic revolved around moral questioning and the notion that the work irresponsibly commodified the private reality of the artist's family, providing spectacle for the popular entertainment of others in the style of a reality television show.

It is quite ironic then that the next major public venue for Billingham's work was the controversial show *Sensation; Young British Artists from the Saatchi Collection* in 1997. This group exhibition was likely truly responsible for establishing Richard Billingham's place in the British art scene and launching his international career, with concurrent solo shows in New York, Los Angeles, and Paris. His first major commissioned work came the following year from Artangel (London) in conjunction with the British Broadcasting Corporation. For this assignment Billingham produced *Fishtank* (1998), a 45-minute film comprised of Hi-8 video footage. Rather than a narrative, the piece functions more as a cinematic vignette of the artist's series of family photographs, depicting everyday actions such as Ray feeding the goldfish or Liz playing with her pets.

Fishtank aired to mixed reviews on BBC2 in December 1998. Again, the arguments for and against the power of Billingham's out-of-focus family scenes revolved around the question "is this art or social commentary?" Critics suggested it was difficult for an audience to understand the film because there is no voiceover or introductory narration; a criticism which echoed earlier claims that Billingham's photographs were difficult to understand because they were not captioned like traditional documentary images. Was the artist seriously challenging his audience or merely exploiting his own family and their miserable living conditions? Billingham later made other films in this vein; *Playstation* (1999) features a close-up of his brother's hands while playing a video game. His nail-bitten fingers dart over the controls of the game in a mundane, repetitive, yet mesmerizing fashion.

Billingham received further critical attention in 2001 when he was nominated for the Turner Prize, a prestigious annual award given by the Tate Gallery to a British artist for a significant body of work. Billingham was shortlisted on the strength of his major solo exhibition at the Ikon Gallery in Birmingham (2000), which featured his now infamous series of family-based photographs and videos. Although he did not win the prize, he was a notable candidate because it was rare for a photographer to even be nominated. Since then Billingham's more recent work has engaged concerns of landscape aes-

thetic. Even though he has photographed landscapes since the early 1990s, this component of his work has been largely overshadowed by the controversial family pictures.

Billingham's series of untitled landscapes from 1992–1997 depict semi-urban places; odd forgettable spaces located between rural land and housing estates. But these places were not forgotten by Billingham, who associates these mundane landscapes of derelict playground areas and grassy industrial wastelands with the rites of passage of his boyhood. By contrast, landscape images included in the exhibition *New Pictures* (2003) at Anthony Reynolds Gallery introduced a new perspective of Billingham's longstanding yet overlooked interest in beauty and nature. Experimenting with using a medium format camera for the first time, the new photographs depict various natural landscapes where the artist's emphasis is about experiencing a place for the first time, rather than documenting a specific or personal space. Formal concerns of pattern, texture, and space override any apparent social comment Billingham may wish to convey, and this new work is obviously a concerted effort by a young artist trying to expand his range in style and technique.

WERNER BISCHOF

Swiss

Although relatively young when he died, Werner (Werner Adalbert) Bischof was one of the most influential international photojournalists of the period following World War II. His most well-known pictures combine intense observations of his subjects and a technical perfection out of which arises a striking beauty. His documentary photographs especially set a new standard for the genre.

Born in Zurich, April 26, 1916, Bischof was raised in Waldshut, Germany, where he received his basic and secondary education. He returned to Switzerland to attend the Kunstgewerbeschule in Zurich (Zurich School for Applied Arts), where he took a newly established photography course from Hans Finsler, one of the most important advocates of the technically-oriented photography of the German "New Vision" (*Neue Sehen*) school. Under Finsler's influence, Bischof photographed large numbers of plants, shells, and various other subjects in a dispassionate, technical style. After his studies, Bischof worked as an independent designer and photographer in the fields of fashion and advertising in Zurich-Leiten, 1936. In 1938, he took a position at a Zurich publishing house, but also worked as a graphic and interior architectural designer. In 1939, he designed a pavilion for graphic design and worked for the fashion pavilion at the Swiss National Exposition.

During a stay in Paris in the same year, he decided to suspend his photographic activities to concentrate on painting. The beginning of hostilities in 1940 forced his return to Switzerland where he served in the military until 1942 and during this time he returned to photography. In 1942 Bischof began experiments with light and shadow effects, publishing the results in the magazine *Du*. He soon became a regular contributor and began to work as a photojournalist, choosing a path that was basically in opposition to his object-oriented education and experience to date. Artificial arrangements in the studio were left behind. The ravages of war caused him to take up what would become his primary subject: people. His subjects were not spectacular catastrophes or atrocities, but the devastating effects of war both internalized by those who survived it, and expressed by the environments in which they had to survive. Bischof controlled the forcefulness of his statements by use of subtle framing of what might first appear to be casual snapshots. In 1944–1945 Bischof, as a member of the art group Allianz, published his first reportages. During this time his photo essays, *Der Zirkus* (*The Circus*) and *Die Invaliden* (*The Invalids*)—early examples of the form in color—were published. In 1945 after he spent time with Italian partisans who had sought refuge in the Swiss state, Tessin. *Die Flüchtlinge* (*The Refugees*) was a result of this

sojourn. He also traveled to France, Germany, and Holland to capture the devastation caused by the war. In his candid photographs Bischof demonstrated that this technique, more than any other type of war photography, is best able to describe the inconceivable consequences of war. In December 1945 and May 1946, some of these pictures appeared in *Du*, shocking many with a photograph showing the mutilated face of a Dutch boy on the title page. There was public consternation at this imagery, and as a result, Bischof's projected book about the consequences of the war was never realized.

After the war Bischof became increasingly involved in the making of photographs and picture stories for the international press. From 1946 to 1948 he worked as a photographer for Schweizer Spende, a Swiss relief organization for war-disabled in Italy, Greece, Austria, and Eastern Europe (Rumania, Hungary, Czechoslovakia, and Poland), then in Finland, Sweden, and Denmark. In 1949 his photos were published in *Du* and in a special edition of *Atlantic*. In 1948 Bischof photographed the Winter Olympics in St. Moritz for *Life* and in 1949 he worked for the British magazines *Picture Post* and *The Observer* following his move to England. In the same year he became a founding member of Magnum Photos, New York and Paris, which with help from other members such as Robert Capa, David "Chim" Seymour, and Henri Cartier-Bresson, became one of the most important organizations of socially engaged photographers in the post WWII period. Trips to Italy, Sardinia, Paris, and Iceland followed. In the Italian magazine *Epoca*, a feature on *Le Piazze d'Italia (Italian Plazas)* appeared. For *Life*, in 1951, Bischof photographed probably his most famous reportage, *Famine in Bihar (Hunger in Bihar)*, which covered the famine in the Indian province. Stunned by the bitter poverty of the Indian people, he captured striking images without exploiting or sensationalizing his subjects, including, for example, a worm's-eye view photo of a begging mother with a child in her arms. The symbolic communication of pictures such as these were particularly powerful.

From 1951 to 1952, Bischof was sent by *Life* to Tokyo. There he rediscovered himself as an artist, increasingly choosing tranquil, well-balanced compositions that avoided dramatic effects. He reflected on this period of personal transition in his book, *Japan*, which appeared in 1954 and for which he received the Prix Nadar (France) in 1955. Outstanding examples of pictures from this time include *Schlafender Priester im Ryoanji-Tempel (Sleeping Priests in the Ryoanji-Temple)*, Kyoto, Japan (1951) and *Steinweg durch den Teich im Heiangarten Kyoto*

(*Stone Path Through the Pond in the Heian Garden of Kyoto*) (1952). Thus it was with reluctance that he accepted an assignment in Indochina as a war correspondent for *Paris Match*. Doubting more and more the capacity of photojournalism to change society, Bischof had sought independence from magazine work and wanted to remove himself from war correspondence since 1951. He was able to move more toward creating photoessays that depicted the culture and lifestyles of various nations. In Finland, Bischof worked on an international documentary about *Women Today*. That same year he wrote a feature on British Columbia for *Fortune* magazine. Via California and Mexico he and his wife traveled to South America for an extended photo tour.

In 1954 Bischof worked on a photo story in Lima, Peru, and Santiago, Chile, after working for a period in Panama on assignment for *Life*. When his wife returned to Switzerland, Bischof flew to the Inca city, Machu Picchu. Returning to Lima he met the geologist, Ali di Szepessy, who was on an Amazon expedition, and decided to accompany him. On 16 May, 1954, their wrecked car was found in a gully. Just a few days before the accident Werner Bischof's undeniably best known photograph, *Flöte spielender Junge bei Cuzco (Boys Playing Flutes in Cuzco)* had appeared. It was a poignant and impressive ending to Bischof's career in which he had been able to reduce situations to their essentials: parents and children, hunger and war, loneliness—all timeless, universal themes. Through the unification of ambitious aesthetics and ethics, Bischof's works have become classics that convey the misery of our world in a dignified and enduring manner.

Biography

Born in Zurich, April 26, 1916. Basic education, 1922–1931. Childhood and youth in Waldshut, Germany. Higher education: studied drawing and sports at a teaching school in Schiers/Graubünden (Switzerland), 1931–1932. Studied at the Kunstgewerbeschule in Zurich (Zurich School for Applied Arts), 1932–1936 under Hans Finsler. From 1936 on, worked as an independent photographer and technical drawer (fashion, advertisement) in Zurich-Letten. Employed by Graphis-Verlag (publishing house), Zurich, 1938. Employee and later chief editor of the newspaper *Du*. Publication of his photos of devastation of war in Europe in the illustrated newspaper *Du*, 1942–1944. War reportages covering France, Germany, The Netherlands, Italy, and Greece, 1945. Official reporter for *Life* at the Winter Olympic Games in St. Moritz,

1948. From this followed further commissions for *Life* as well as for *Fortune*, *Picture Post*, *Weekly Illustrated*, *The Observer*, *Epoca*, *Paris Match*, etc. Founding member of Magnum Photos, 1949. Married Rosellina Mandel, 1949; two sons, Marc, 1950 and Daniel, 1954. A co-founder of the Kollegiums Schweizerischen Photographen (Committee of Swiss Photographers), 1951. Photo reports from Europe, The Middle East, and America. Died in a car accident in the Peruvian Andes, the region of Trujillo, May 16, 1954.

BLACK STAR

By the mid-1930s, photojournalism in America was firmly established. Editors and publishers used photographs freely, secure in the public's support for newspapers and magazines that used photographs to describe the events of the day. Ironically, the photographers who produced all those pictures, who made illustrated journalism a fact of life in America, received little in the way of either respect or gratitude. Most often, images in the press were run without credit, and those who made the pictures in the first place were routinely characterized as

uncouth brutes. To make matters worse, prints and negatives were rarely archived; when newspapers or magazines changed hands or went out of business, or when photographers changed jobs or retired, old negatives and prints were simply thrown away. But all that was about to change, and the Black Star picture agency, founded in New York City in early 1936 was a principle instrument of that change.

The origins of Black Star lay in Europe, especially in Germany. The rise of Adolph Hitler and the Nazis in January 1933 impelled some of Europe's

most talented journalists to emigrate to the United States where they had an immediate and profound influence on journalistic practice. Three among them were the founders of Black Star: Ernest Mayer, director of the Mauritius Publishing Company, one of Germany's most successful photo agencies; Kurt Safranski, manager of the legendary Ullstein group of magazines; and Kurt Kornfeld, a literary agent.

As it happened, the three German émigrés arrived just as the world of American magazines was being transformed by publishers such as Henry Luce of Time, Inc. and Mike Cowles of the Des Moines, Iowa *Register* and *Tribune*. Convinced that the public's appetite for the visual mandated a different approach to illustrated journalism, Luce and Cowles were determined to produce national magazines in which the photograph and the photographic essay reigned supreme. Luce won the race to produce America's first large-format picture magazine; the first issue of *Life* hit the newsstands in November 1936. Cowles's *Look* followed in February 1937.

In the year before the publication of the first issue of *Life*, Luce relied on advice and counsel from Black Star, and early editions of the magazine nearly always contained work produced by Black Star photographers. This is hardly surprising since Time, Inc. had agreed to pay Black Star a minimum of \$5,000 a year for first refusal rights on all Black Star photographs not taken expressly for other publications. In addition, Luce's company agreed to pay extra to secure first rights on all photographs imported from Europe by the agency.

The phenomenal impact of *Life* and Cowles's *Look* led to a proliferation of photographically-illustrated magazines and to the early success of Black Star. Most of the new picture magazines kept their staffs small, preferring instead to purchase images from agencies like Black Star that had connections with photographers and other agencies around the world. For instance, before the United States went to war in 1941, Black Star had a curious and special arrangement with Deutscher Verlag, the official Nazi news agency. For years, Black Star received photographs of the German army nearly every day in the mail. At *Life* one bureau chief remembered that in the early days the magazine "needed Black Star more than they needed us." And it was not simply access to the occasional exclusive photograph that mattered, for *Life* also "needed their stories for our files, their contacts, their staff for assignments, and their pictures." The relationship between the agency and the magazine was so symbiotic that some of Black Star's most talented photographers—Ralph Crane, Andreas Feininger, Fritz

Goro, Walt Sanders, Bill Ray, and Burk Uzzle—eventually joined the staff at *Life*.

While the initial success of Black Star undoubtedly lay in what historian Hendrik Neubauer calls "the enormous appetite which magazines worldwide had for photographs," there is much more to the story. Even in the heyday of the big picture magazines like *Life* and *Look*, the agency sought to widen its client base to include corporate and advertising photography, which is far more remunerative than traditional news and documentary photography. Since the demise of the large-format picture magazines in the 1960s and 1970s, the need to include corporate and advertising photography in the work of the agency is clear, though not universally appreciated. Howard Chapnick, the legendary president of the agency from 1964 to 1989, noted with some frustration that in spite of the "large number of publications using photography," comparatively few have any use for the kind of "extensive documentary picture stories" that were once the mainstay of the business.

Ben Chapnick, Howard's first cousin and successor as president of the agency, concurs. "It is quite apparent to me," he told Hendrik Neubauer, "that without the corporate business and its expansion since 1960," Black Star might have managed to eke out a narrow existence as "a much smaller entity" or ceased to exist altogether. Instead, by recognizing both the necessity and value of producing commercial photography, the agency assures that its photographers will continue to work, even though their journalistic and documentary efforts no longer bring in the kind of income they once did.

Black Star's importance in the history of twentieth-century photography is unquestioned. Beginning with its early association with *Life* magazine, the agency became one of the most important suppliers of news and feature photography to newspapers, magazines, books, and corporations around the world. The photographers represented by the agency were and are at the top of the profession; many, such as W. Eugene Smith, David and Peter Turnley, John Launois, Claus Meyer, and Charles Moore have rightly achieved considerable fame. The approximately 350 men and women now associated with the agency produce a daunting array of work for journalistic and commercial clients worldwide, and Black Star's enormous collection of stock photographs constitutes a stunning visual history of the world since the mid-1930s.

KARL BLOSSFELDT

German

Karl Blossfeldt depicted plants by the thousands—in photographs which feature flowers, buds, branched stems, clusters, or seed capsules shot directly from the side, seldom from an overhead view, and rarely from a diagonal perspective. He usually placed the subjects of his photographs against white or grey cardboard, sometimes against a black background. Hardly ever can details of the room be detected. The light for his shots was obtained from a northern window, making it diffuse, yet the light came from the side, creating volume. The technique and processing conditions were simple; only the size of the negative format was more demanding. Nothing should detract from the subject. Blossfeldt produced such pictures for over 30 years and producing them was nothing but work.

This line of work was not his main profession, although his fame today rests on his photographs. Rather, plant photography was part of an all-inclusive whole, a teaching concept. He taught for over 30 years at the *Kunstgewerbeschule* (School of Arts and Crafts) in Berlin. Shortly before his death, when already famous for his photography, he announced his intention to publish his teaching methods, in order to place the images in their right as he saw it. Neither this plan nor that of completing an archive of plant photographs was ever realized. What has remained are bundles of photographs, which have made history on their own, and the memory of a teacher, who—like so many in his field—left no lasting impression outside of his personal sphere. But Karl Blossfeldt's life achievement occupies a firm place in the history of twentieth century photography.

To a certain extent, he had foreseen that he neither would be recognized as a photographer in

the style of plant-loving still life painters nor as an artist in his own field, sculpture. He knew that his photographs were part of a straight vision just recently discovered before his first exhibition in 1925, and he hoped that, at least, his photographs would teach people to look more closely at nature, even through art. Two sentences of his rare writings encapsulate all of his ideas:

But the plant never falls into the sober representation of a mere object; it forms and grows according to logic and function, and, with primeval power, forces everything to the most sublime artistic form....My flower documents should contribute to restoring the relationship to nature. They should reawaken a sense for nature, point out its teeming richness of form, and prompt the viewer to observe for himself the local plant world.

(Blossfeldt 1932, 5)

Born in the Harz Mountains in central Germany, Karl Blossfeldt grew up in the country surrounded by plants and animals, which he enjoyed drawing and modeling. His education included an arts and crafts apprenticeship, a craftsmen's scholarship for further education in drawing, and some musical instruction about which sparse biographical sources provide no details. He appears to have wavered between a career as a relief sculptor and that of a singer's rehearsaler until he was given the task that was to determine his life's work. As a student of the Berlin School of Arts and Crafts he was asked to produce models for drawing classes in accordance with the method of Moritz Meurer, then his teacher. Meurer and six of his students were given a grant to live and work in Rome for six years in order to produce a collection of drawings and models of natural ornaments to be used by Germany's industry. Karl Blossfeldt was one of the two modelers in this party.

Moritz Meurer and his assistants not only collected, drew, and cast botanical specimens in Rome and its outlying regions, but also systematically photographed plants. Shoots were removed from stems, roots cut back and, if necessary, buds opened. The plant types were stuck on a support, mounted before a uniform background, and exposed. In the history of photography the adoption of this method with its roots in painting was a tradition in itself. The first publication of the project was dedicated to a single plant—acanthus (cowparsnip)—and its influence on ancient art; two of its photographs bear Blossfeldt's name. They show the leaf and stem of the acanthus with the characteristic pointed tips and crenature on the head, pictured before a grey background. When the book was published in 1896, Moritz Meurer returned to Berlin and left Blossfeldt without subsidy.

For a time Karl Blossfeldt went through a phase of reorientation, undecided whether to stay in Italy, emigrate to the United States, or assume employment in the German arts and crafts industry. In the end, he chose a position as an assistant teacher for modeling from plants at the Kunstgewerbeschule in Berlin. In 1899 he was elevated to the post of lecturer. Blossfeldt's task in his beginners' classes was essentially that of demonstrating that the best constructions for industrial designs had already been anticipated in nature. So he did, with nearly no change and development until his dismissal in 1930—and as steady as his teaching method was his use of the camera.

In 1925, the Berlin gallerist Karl Nierendorf recognized Karl Blossfeldt and his plant photographs. He immediately realized their similarity to 1920s' avant-garde art, asked Blossfeldt to print a larger number of exhibition photographs, and subsequently prepared their publication in a book. It appeared under the title *Urformen der Kunst* (Basic Forms of Art) in 1926, with a second issue within one year, and was translated into several languages. The great photographic exhibition of 1929, *Film und Foto* in Stuttgart, showed his work with the greatest respect possible. After 1930 there was scarcely a major photo exhibition and nearly no important annual without Blossfeldt's images. In the autumn of 1930, Karl Blossfeldt had reached retirement age and gave up teaching in order to devote himself to the evaluation of his plant archives. His second book of photographs, *Wundergarten der Natur* (Nature's Wonderful Garden), was published in the spring of 1932. On December 3, 1932, Karl Blossfeldt died in Berlin.

ERWIN BLUMENFELD

American

In 1921, Erwin Blumenfeld mailed a postcard from Amsterdam with a photograph of his face collaged atop a woman's body and the words "President-Dada-Chaplinist-Charlotin" to poet and Dada founder Tristan Tzara. Tzara and the Berlin Dadaists, to whom Blumenfeld was connected, actively recognized the value of photography and its creative possibilities. Several key members of the group would become innovators of photomontage and an important influence on political propaganda, photojournalism, and advertising photography following World War I. Always true to his Dadaist spirit, Blumenfeld never ceased to experiment in the darkroom, using techniques such as solarization and double-exposures, and created clever, unexpected compositions in his photographs. He would later become one of the most sought-after, highest-paid photographers in the world.

Erwin Blumenfeld was born on January 26, 1897, to an upper-middle class Jewish family in Berlin. His father, Albert Blumenfeld, was a principal partner of Jordan & Blumenfeld, an umbrella manufacturer. The Blumenfelds initially lived a life of bourgeois comfort, and the children were treated to expensive toys as well as regular outings at the theatre and art museums. During a trip to the Kaiser Friedrich Museum, Blumenfeld was deeply affected by the delicately veiled nudes of Sandro Botticelli's *Venus* and Lucas Cranach the Elder's *Lucretia*. As a result of this visit, veiling and female nudity would subsequently become a recurrent theme in his work.

Blumenfeld received his first camera as a gift at age 10 and described this moment as when his "real life started." He shared his enthusiasm with his best friend, Paul Citroen, a Dutch boy he met at school, the rigorous Askanisches Gymnasium in Berlin. The boys commemorated their friendship in a 1910 double self-portrait, which they later re-enacted in 1916 and 1926. Fittingly, the young Blumenfeld was intrigued by reflected images and fascinated by mirrors. In his first self-portrait dressed as Pierrot, he captured simultaneous frontal and profile views of his face using a mirror.

In 1913, Blumenfeld finished his studies and began a three-year apprenticeship for Moses & Schlochauer, a German dressmaker. He abandoned further education due to his father's mental deterioration and consequent death from syphilis that left the family in financial ruin. As he grew disenchanted with the garment industry, Berlin was becoming a dynamic forum for the international avant-garde. Expressionists, Fauvists, Cubists, and Futurists exhibited regularly in the city beginning in 1910; the same year Herwarth Walden's cultural weekly, *Der Sturm*, began publication. In 1915, Blumenfeld and Citroen met Walden, and Citroen became the manager of the *Der Sturm* bookstore in 1916. That same year, Blumenfeld fell in love with Citroen's cousin Lena.

Through Walden, Citroen and Blumenfeld met the founding members of the Berlin Dada movement: George Grosz, Walter Mehring, Wieland Herzfelde, and his brother Helmut Hertzfelde (John Heartfield). In 1917, Citroen was dispatched to Amsterdam as a representative of *Der Sturm*, and

Blumenfeld was drafted in to the German army originally as an ambulance driver and soon after became the bookkeeper for a field brothel. Blumenfeld planned to desert the army while on leave in 1918, only to be reported by his mother and imprisoned. After the war's end, he left Berlin for Amsterdam where he was reunited with Paul and Lena Citroen and declared himself the president of Dada in Holland.

Once in Amsterdam, he sought to establish himself as a Dada artist and created some of his most important collages. He married Lena in 1921, and two years later, he opened The Fox Leather Company, described in his autobiography as: "eaten up by expenses from the day of its birth." At the shop's second location, he discovered a hidden darkroom, where he would master solarization, and asked customers to pose for portraits, sometimes nude, which he displayed in the front window. In 1932, Blumenfeld had his first exhibition as a photographer at the Kunstzaal van Lier. Two years later, Blumenfeld published photographs in the noted French publication, *Photographie*. In 1935, French painter Georges Rouault's daughter Geneviève, a dentist, visited Blumenfeld's shop and agreed to exhibit his work in the waiting room of her office in Paris.

With the hope of becoming a professional photographer, Blumenfeld moved to Paris in 1936. Upon arrival, Geneviève Rouault collected a small group of clients eagerly awaiting sittings, including her father and famed painter Henri Matisse. The portrait business did not prove lucrative, and he set his sights on fashion photography. In the meantime, he accepted advertising commissions and rented a studio in Montparnasse where he continued his own work. In 1937, Blumenfeld published a series of photographs in the first two issues of the prestigious art quarterly, *Verve*. Among these images were several of his accomplished nudes such as *Nude Under Wet Silk*. Later, *Verve's* editors sold 50 of Blumenfeld's images to an American publication, *Coronet*, and the annual *Photographie* continued to prominently feature his photographs.

Although he was well represented in magazines and galleries, work as a fashion photographer remained unattainable until 1938, when he met British photographer Cecil Beaton, who helped him secure a contract at Condé Nast. His first portfolio appeared in the October 1938 issue of French *Vogue*, and the May issue included another 20-page spread, which featured Blumenfeld's legendary photograph of model Lisa Fonssagrives on the edge of the Eiffel Tower. In 1939, *Vogue* did not renew his contract, and as a result, he decided to seek opportunities in New York.

Shortly after arriving in New York, Alexander King promised him work at *Life*, and a meeting with editor Carmel Snow at *Harper's Bazaar* resulted in an immediate, well-paid assignment in Paris. After returning to Paris, he was ordered to report to a French concentration camp in 1940. When it was determined that Blumenfeld had been interned by mistake, he and his family fled to America, only to be detoured and detained again by German forces in Morocco. Rescued by the Hebrew Aid Society, they arrived in New York, and Blumenfeld's arrival was greeted with a rewarding contract from *Harper's Bazaar*.

At *Harper's Bazaar*, Blumenfeld worked with renowned art director Alexey Brodovich and forged a close relationship with photographer Martin Munkacsi. Although *Harper's Bazaar* was an effective showcase for Blumenfeld's work and secured him major advertising contracts with clients such as Helena Rubenstein and Elizabeth Arden, he responded to financial incentives at Condé Nast and returned to *Vogue* in 1944. Art director Alexander Liberman conceded a considerable amount of creative freedom to Blumenfeld and encouraged him to experiment with veiled images, where models were photographed behind ground glass and cellophane or reflected in mirrors, as well as color photography, integrating motifs derived from painting into his work. Liberman appreciated his Dadaist and Surrealist sensibilities and recognized that his carefully composed, surprising images would make impressive covers. He included Blumenfeld's photographs in his book, *The Art and Technique of Color Photography*, published in 1951.

Blumenfeld's contract with *Vogue* ended in 1955; however, he still received advertising commissions from loyal clients and signed with L'Oreal in 1963. Although he was included in two group exhibitions at the Museum of Modern Art, New York, in 1947 and the Los Angeles County Museum of Art in 1948, Blumenfeld seldom exhibited in the United States. He dedicated the latter years of his life to composing his autobiography and collecting his best 100 photographs into a book. Of those images, only four are from his work as a fashion photographer. Both works were published posthumously. Erwin Blumenfeld died on a trip to Rome, Italy in 1969.

BODY ART

At the end of the 1960s, artists in the United States and Europe began using their own bodies as the material and instruments of the artistic work. Decades before, actionist elements were already increasingly important, especially under the influence of experimental theater and the reception of the historical avant-garde of the second and third decades of the twentieth century. Hans Namuth's photographs of Jackson Pollock painting his Abstract Expressionist canvases played a key role in this development; these images had a catalyzing influence on artists as different as the French "Art Informel" figures Georges Mathieu (1921–) and Yves Klein (1928–1962), the Japanese Gutai Group, the American "Happenings" artist, Allen Kaprow (1927–), and the Vienna Actionists (Wiener Aktionismus),

both on their performance and on their stated doctrines. Body artists pursued the fusion of art and life that was typical of the 1960s and 1970s to its very apex. Practitioners differed considerably and distinguished their use of the body in its social, sexual, cultural, and political meaning. Though the actions or performances usually took place before audiences or in private venues including the studio, photography was an essential component, recording, documenting, and codifying the activity. Although film and video were other important components, it is the still images that have come to stand in for the temporal action, giving Body Art its face to the contemporary art world. Next to the alternately poignant and humorous self-examination of Vito Acconci (1940–) stand the physical and psychic extremes of

BODY ART

the Yugoslavian-born Marina Abramovic (1946–), who often performs nude, allowing her body to be slammed, pushed past, or otherwise stressed as in *Rhythm 0*, of 1974, and Chris Burden (1946–), the Californian conceptualist notorious for having himself shot in the arm. Leading contemporary art figure Bruce Nauman (1941–) has learned from modern dance that simple everyday actions can be art; his spouting of a stream of water *Self-Portrait as a Fountain* (1966–1967) in homage to Marcel Duchamp's famous urinal titled *Fountain*, has become an icon of postwar contemporary art. Figures who emerged in the 1980s often explored popular culture, such as Californian Paul McCarthy (1945–) who pushes American popular culture to the limits of good taste with often scatological actions in which individuals wear Santa Claus costumes or Mickey Mouse ears. The Cuban-born Ana Mendieta (1948–1985) and American Dennis Oppenheim (1938–) fuse body and land art, while the Japanese artist Yayoi Kusama (1929–), who lives in the United States, uses her body as a sign of sexual liberation and political protest. Feminism came to the fore in the late 1960s and early 1970s in America with Carolee Schneeman (1939–) in her body-in-motion film and performance works, with Hannah Wilke (1940–1993) in her narcissistic poses and role-playing, and in Europe with Gina Pane (1936–1990) in her acts of auto-aggression, including a famous action in which she sliced her face with a razor blade, *Psyche* of 1974.

A principle in the Vienna Actionism movement, Günther Brus (1938–) reduces the body to its most basic functions; the German Rebecca Horn (1944–) expands it with prosthetic devices; and the Cyprus-born Stelarc (1946–) dreams of a post-biological body. These artists plumb the limits of the body, set free suppressed fears and repressed feelings, and overstep taboos, and the radical, asymbolic corporality of earlier body art raises actions to a legendary, mythic standing. Nevertheless, they were largely forgotten in the 1980s—a decade that favored painting—and were rediscovered in the 1990s.

Critical to their rise, as the body artists always emphasize, were the social and political events of the 1960s. More directly than other genres, body art transported the conflicts and attitudes of the civil rights and protest movements, sexual liberation, feminism, rock and pop culture, the explosion of mass media, and the atmosphere of disruption and violence. Noteworthy in this respect is the great number of women who took part, as well as the fact that body art, was for many artists, such as William Wegman, Dennis Oppenheim, Barry Le Va, Stuart Brisley, Keith Arnett, Valie Export, and Lucas Samaras, only one episode in their lifework.

Critic Willoughby Sharp coined the term “body works” in 1970. He saw in it a variation of conceptual art inasmuch as it followed a firm dramaturgy. European theorists such as Lea Vergine and François Pluchart, who had earlier worked in psychoanalytic interpretation, expanded Sharp's definition.

Body works exist in many variations: as performance and also in the form of photography, film, video, and text. In contrast to other artistic developments directed toward performance, these call for the participation of the public only in a limited way or not at all; to shut out distractions, many artists exclude the public altogether. This restricts the effect of their works; so, in general, to keep the works from falling into oblivion, artists have resorted to using reproductive technologies, which have become immensely important if not absolutely unavoidable as they are in the case of happenings, action art, and land art. Most artists engaging in body art have great appreciation for these art movements; the development and perfection of body art owes much to the possibility of recording and distributing ephemeral artistic experiments. Since the 1960s, recording equipment has become less and less expensive, enabling individual artists to purchase and use it.

Only by recording their works does their art become a product that they can exhibit and market. Instead of the “original,” they show exhibits of photos, film stills, and video prints, which are offered to the art market. A famous example is the edition called “Eleven Color Photographs (1966–1967) of Bruce Nauman's, which included *Self-Portrait as a Fountain*. A very few artists with an especially rigid ethos decline to record their works, such as Ulay and (Marina) Abramovic in the early phase of their collaboration; they distrusted the truth of photography and considered marketing their art a commercial excess. This is why the black-and-white photo documentary of their collaborative performances *Relation in Space* (Venice Biennial, 1976) and *Expansion in Time* (Documenta 6, 1977) comes across as simplistic and blurry; only in the 1980s did they begin to allow photo editions of their work. These artists stand against recording was an exception.

To prevent posthumous distortions of his art, Chris Burden allowed his body works to be carefully photographed and, occasionally, filmed, and he controlled their publication. Documenting his start in the 1970s, he released plays in book format, *Chris Burden 71–73* (Los Angeles, 1974). Burden established a prototype for their presentation in which he meticulously communicates his intentions with a photograph and a description of the project. Despite their considerable length, his works can be cap-

tured visually in a single moment because they are created from a single situation. From his choice of photographs, Burden shows he has a thorough sense for aestheticizing and dramatizing his works. For *Through the Night Softly* (1973), he crawls fifty feet over broken glass before the eyes of a few passersby; in the photograph he released of the event, the little pieces of glass against a solid black background look like a shimmering starry sky. The photograph of *Doorway to Heaven* (1973) shows the artist with two tense electric wires around his chest, and a flash of electricity makes it look like he is encircled by a halo. Although his pieces are both simple and sensational, Burden became the darling of the mass media that always recognize star potential and report and broadcast the most controversial and risqué experiments. Artists understand just as well how to harness the power of the media for their own goals. For example, in the erotic environments she creates, Yayoi Kusama poses as a pin-up girl both in front of her camera and in front of the press and public, who are informed beforehand.

In explaining his body works, Vito Acconci claims that despite their simplicity, it is necessary to freeze the flow of time, which he does with video—Acconci is considered the founder of Life-Video-Performance—and with Super 8 film, in the same way as Bruce Nauman, Paul McCarthy, Rebecca Horn, and others who prefer video and film to the camera. The sequence of rather simple photographs from, for example, *Conversion II* (1971) is of secondary importance because the photos are taken in such rapid succession that they are difficult to tell apart; a complete, successful, and detailed collection of photographs must convey a precise impression whenever possible. Gina Pane engages in the same practice, though clearly in a more artistic way. Her action art, such as *Azione sentimentale* (1973), plays out in three phases. First she prepares every detail from sketches she has on hand. When she executes her performance, Pane becomes an active photographer and strictly follows her plans and the arrangements prepared in advance. The third part is the precise arrangement of the photographs into a tableau and their exhibition as an installation. The photographic recording and distribution serve Pane as the substance and results of her action art. This understanding of photography's role is shared by many, including Ana Mendieta, who has carefully recorded *Glass on Body* (1972) and *Siluetta Series* (1980) in color photographs, and Dennis Oppenheim, who as a rule permits the public to view only recorded documentation of his performances. Among Oppenheim's color photographs is *Reading*

Position for a Second Degree Burn (1970), in which he allows the sun to burn his skin except for an area of his chest shaded by a book. Hannah Wilke emphasizes photography in her work for different reasons—she practices body art as a staging of the self before the eye of the camera in, for example, *S.O.S. Starification Object Series* from 1974. *So Help Me Hannah* was from the beginning only a series of photographs that were taken and exhibited at P.S. 1, New York, in 1978. Only afterward did she create a performance out of it that she staged many times between 1979 and 1985. She continued her work until her death, including *Intra-Venus*, a series of photographs of cancer therapy taken by her lifelong partner, Donald Goddard.

The spectrum of photography within body art ranges in varying degrees of ability, from chance snapshots taken by the public and press to professional photography taken by the artist or from the artist's instructions. Among these are also carefully staged and arranged works with an expressive value independent of the performance.

CHRISTIAN BOLTANSKI

French

Christian Boltanski is not, strictly speaking, a photographer. He frequently describes himself as a painter though he does not utilize pigment and canvas either. He is an artist who works with several mediums and utilizes photography—usually found images—by implementing them into his installation pieces and artists' books. He has remained thematically consistent throughout his career, as the subjects he returns to most often are childhood, absence, and death. His aim has always been to blur the division between art and life, and to touch his viewers on a personal level without being overtly didactic or sentimental.

The artist's biography is somewhat elusive, largely because much of his artwork has involved the propagation of false stories regarding his past. He was born in Paris just two weeks after the city's liberation in 1944. His mother was Catholic and his father was a Jewish-born doctor who converted to Catholicism at a young age. Despite his conversion, Boltanski's father had to feign disappearance during the occupation and hide in a narrow crawlspace in the family apartment. As a child Boltanski felt like an outsider among his peers, and at the age of 11 was allowed to leave school to be instructed by his parents and two older brothers. He did not return to school, and is self-taught as an artist.

The environment of postwar France has continuously influenced the tone and subject matter of Bol-

tanski's work. He began developing his artistic practice in the late 1960s, a time of political and social upheaval culminating with the May 1968 student rebellions. His early projects bear a resemblance to the Arte Povera works in Italy made around the same time. Like many artists of his generation, Boltanski became interested in the dereification and dematerialization of the art object as a means of subverting the art market. Never pledging allegiance to any singular medium, Boltanski embraced a variety of techniques for his early pieces, including mail art, experimental film, ephemeral sculptures, and found objects.

He became particularly interested in creating fictional histories in the guise of autobiography, and told true and untrue stories about his own childhood using visual mediums. Yet the stories he related are not remarkable; he purposely emphasized the most banal possible events and objects in order to convey a sense of universal childhood that any viewer might be able to relate to. His earliest utilization of photography involved inventories of personal objects he associated with his childhood, from vacation snapshots to pictures of old toys. In a 1972 artist's book entitled *Ten Photographic Portraits of Christian Boltanski, 1946–1964*, the artist showed snapshots of 10 different people posed in the same location, arranged in order of age from 2 to 20 years. Each bears a caption identifying the figure as Christian Boltanski, but only the last image is a true portrait of the artist. Boltanski found photography to be parti-

cularly useful for these mythmaking projects, since viewers tend to have an automatic trust in the inherent veracity of photographic documents.

Boltanski subsequently became interested in inventing other people's stories, and began rephotographing found snapshots of strangers. In the 1971 project *Photo Album of the Family D., 1939–1964*, he attempted to reassemble such pictures into a linear narrative, knowing he would always fail, since photographs cannot reveal truth as we often expect them to. There is also a somber undertone to Boltanski's found photographs to the extent that they convey a sense of loss and absence. They are images that have been stripped of their original meanings by being separated from their original owners.

In the mid-1980s Boltanski created a series of works entitled *Monuments*, for which he recycled pictures of children's faces, usually re-photographed from school portraits and blown up into blurry, ghostlike visages. The images were installed in darkened rooms, in some instances placed over stacks of rusted tin biscuit boxes, and illuminated by electric bulbs placed around each picture. The effect is of a Catholic shrine with icons illuminated by candles. Though these installations are referred to as monuments, which suggests the commemoration of deceased individuals, it is not the loss of life being mourned but the loss of childhood and of memory. These pieces can also be interpreted as references to the Jews killed in the Holocaust—an event that often haunts Boltanski's installations without being directly invoked. Boltanski's preoccupation with the lost histories of anonymous figures continued in a project entitled *Reserve: The Dead Swiss*, for which he assembled photographs cut from the obituary pages of Swiss newspapers. He specifically chose to memorialize people from Switzerland because they lack a strong cultural or historical association; the neutrality of the Swiss nation thus lends itself to universality.

Crucial to Boltanski's artistic method is a perpetual recycling of images. He not only lifts photographs from mass media and photo albums into his own work, he also lifts images from his own past projects and inserts them into new ones. In 1987 Boltanski created an installation for Documenta 8 entitled *Archive*, which was essentially the sum total of all the portrait images he had ever used for previous projects. Such a practice underlines Boltanski's belief in the fluidity and ephemerality of

materials, and disavowal of the notion of the eternal and unique art object.

Boltanski has also been consistently interested in problematizing the notions of good and evil, particularly in relationship to the events of World War II. He has frequently explored the idea that atrocities such as the Holocaust can be committed by anyone, and do not require a supernaturally diabolic impulse—a concept defined by Hannah Arendt as the banality of evil. In his 1995 installation *Menschlich (Humanity)*, Boltanski interspersed the images of Nazis and their victims across a gallery wall, not differentiating between the guilty and innocent. The following year he carried a similar idea into the installation *The Concessions*, which involves images of murderers and their victims projected onto curtains throughout the middle of the gallery. On the walls are hung several photographs of the victims' mutilated bodies, which are covered by curtains but periodically revealed when a fan placed in the room causes these coverings to levitate. Again, the artist does not identify which are criminals and which are victims.

Throughout his career Boltanski has maintained his devotion to impoverished materials, subordinating formal concerns in favor of story and process. He has held fast to the belief that the universality of his message depends on the commonness of his materials and means. He is married to artist-photographer Annette Messager and continues to live and work in Paris.

SHANNON WEARING

Biography

Born in Paris, France, 6 September 1944. Artist in Residence, Deutscher Akademischer Austauschdienst (D.A.A.D.), Berlin, Germany, 1975; Guest Artist, Harvard University, Cambridge, Massachusetts, 1981. Living in Paris.

ROBERT BOURDEAU

Canadian

Since the late 1950s, Robert Bourdeau has been a bridge between modernists of the early twentieth century and contemporary photographers. Pursuing a goal more often associated with Pictorialism (making photographs that evoke timeless feelings in the beholder) with the visual language of modernist formalism, Bourdeau has created a body of work remarkable for its rigorous consistency, both of vision and of craft, and its lasting fascination and beauty.

Bourdeau was born in Kingston, Ontario on November 14, 1931. He lived there with his family until he went to the University of Toronto to study architecture in 1957. He had always been an avid snapshot-taker, but while he studied architecture, he discovered that the photographs he made of structures interested him more than the structures themselves. This would prove to be an enduring interest.

In 1958, Bourdeau left the University of Toronto. He returned to Kingston, and there he came across a back issue of *Aperture* magazine from 1955. The quality and vision of the magazine impressed him. He immediately wrote to then editor Minor White, who was in Rochester, New York, and asked to meet him and to see more issues of *Aperture*.

White agreed, and their relationship actively continued in person, through letters and over photographs until 1968.

Bourdeau's correspondence with White, along with his relationship with Paul Strand, whom he met in New York in 1965, formed the backbone of his photographic practice. From White, Bourdeau took an approach to making photographs, what White, and Alfred Stieglitz before him, called "camera work." There is also the concept of the "feeling state," an emotional state reached while photographing.

Bourdeau relates an anecdote where Minor sent him to contemplate *Windowsill Daydreaming*—this was an often-repeated photo reading exercise. After an hour, Bourdeau returned and said, "Minor, now I know what love is all about." White used Bourdeau's quote under that image in his book *Mirrors, Messages, Manifestations*.

From Strand, Bourdeau gleaned an uncompromising commitment to print craft as well as a sense of humanity.

Bourdeau cites no other photographic influences. As his career progressed, he no longer actively engaged with the work of other photographers, in order to focus more clearly on his own vision. He did however find inspiration from a wide range of

other artists such as Cézanne, Hopper, Beethoven, and Bach.

He first exhibited in a traveling group show at the National Film Board (now the Canadian Museum of Contemporary Photography) in Ottawa in 1966. In 1980, Bourdeau approached Jane Corkin, a fledgling photography dealer in Toronto, to represent him. As he recalls, Corkin's energy and intelligence immediately impressed him. Their relationship has lasted to this day, and has been instrumental in bringing Bourdeau's photographs to the attention of curators, writers and collectors, nationally and internationally. In 1985, with Corkin taking care of sales and promotion, Bourdeau was able to leave the job as an architectural technologist that he had had since 1960 and was free to devote himself entirely to photography.

During the summer months, Bourdeau travels and makes photographs—he prefers the light of long days—and during the winter, he prints and researches locations for the next summer's forays. He has photographed extensively in Canada and the United States, and in England, Sri Lanka, Ireland, Scotland, Mexico, Costa Rica, on the French-Spanish border, Germany, Luxembourg, and France.

Mary Bourdeau, his wife, an artist in her own right, always accompanies him to help with the equipment and provide a quiet working environment—Bourdeau refers to her as both quartermaster and chief grip—but also his companion. Bourdeau acknowledges that he could never have accomplished what he has without their artistic partnership.

Bourdeau does not set up his camera—an 8" × 10" format Kodak Master View he bought in New York for \$150 in 1973 (before that he worked in 5" × 7" format)—until he has scouted the location and intuited its potential for a successful photograph. He determines the "station point," the point at which the visual, emotional, and spiritual come together and shoots about 40 images, which Bourdeau then wittles down to 15 or so final prints.

A Bourdeau photograph is unmistakable for its print quality—what writer David Livingstone has described as "soft greys, pearly whites and velvety black." Bourdeau has always gold-toned his prints for a subtle warmth and added intimacy, and for its composition, often a loss of scale and heightened texture. His 8" × 10" negatives are either contacted or enlarged only slightly: impeccable presentation.

For Bourdeau, the subject of his photographs often becomes secondary to his experience of photographing them, to the transcendence he seeks to achieve while photographing. "The subject itself becomes secondary to greater meanings—a univer-

sality, emotional and spatial ambiguities, and a sense of timelessness," he wrote in January 1994. The record of the subject is a by-product of the whole experience. Undeniably, however, there are certain sites Bourdeau has repeatedly sought out to find those transcendent experiences.

When Bourdeau began to photograph, the landscape was all-consuming and he photographed purely in the landscape for 15 to 20 years. In 1979, he traveled to Sri Lanka and Ireland, and began photographing Buddhist, Hindu, Christian, and pre-Christian structures in addition to the landscape, as well as the visual interplay between structure and landscape.

Bourdeau also makes still life photographs—he calls them small landscapes—for example, peaches on a densely floral tapestry, or a field of small white flowers, close-cropped, a tapestry in itself. He has also made many portraits that have never been exhibited.

In 1990, Bourdeau began the most important work of his career to date. He started to photograph abandoned and disused industrial sites—steel plants, coal mines, textile mills, quarries, "secular cathedrals" as he calls them—in Europe and North America, many of which have since been completely dismantled. Of this work he wrote, in July 1998:

These industrial sites are places that possess a power in which I feel vulnerable, with a sense of ominous stillness and qualities that transcend the specificity of time. These are in a state of transition, transformation and possible transcendence where order and chaos are in perpetual altercation. I must emphasize that this is not a documentary but a photographic and inner quest.

These photographs carry clear threads from such photographers as Margaret Bourke-White, Charles Sheeler, and Germaine Krull. However, they eschew the monumentality and drama of these modernist images, just as they eschew the removed typology of the work of his contemporaries Bernd and Hilla Becher. Instead they carry what novelist Anne Michaels has called an "elegiac" quality. And in that sense, they are more akin to Berenice Abbott's *Changing New York* project, even though Bourdeau's intention is distinct from Abbott's—they are an homage to time passing, to place, and to love. Paradoxically, the *Industrial Sites* photographs are powerful both for their timelessness—an important concept for Bourdeau—but also for their timeliness.

Bourdeau has been the recipient of numerous Canada Council grants, and was elected to the Royal Canadian Academy of Arts (RCA) in 1983. Bourdeau taught photography at the University of

Ottawa from 1980 to 1994. In 1999, he was awarded the Advertising & Design Club of Canada Award for Still Life Photography.

MARGARET BOURKE-WHITE

American

Bourke-White's career reads as a sequence of milestones and she had a knack of being in the right place at the right time. She knew which genres and styles of photography would sell. She was a risk taker who, once her path of attack was strategized, would not be satisfied until she had attained her objectives. In many instances, these involved taking considerable risk in forcing her cameras and lighting equipment right into the midst of heavy industrial or military action. She herself was an invader in as much as she took pictures of private scenarios, often without asking permission and almost always rearranging the scene for dramatic effect. She was also cognizant of how manipulating her own image as a woman familiar with the inner workings of high executive circles could open doors. Publicity shots she had taken of herself at work—leaning over skyscraper parapets, taking a shot right in the middle of trafficked downtown streets, peering into industrial sites, surrounded by Russian crowds, all posed and costumed in the height of fashion—were arguably as effective as the shots she took in making her name a national byline by 1930 and a national buzzword by the early 1940s.

Bourke-White was a consummate, if not innovative, photographic communicator. Her pictures worked either the "dramatic angle, neutral background, luminous lighting... and subject...to create an idealized picture" or "the chaos of patterns... vibrat[ing] to disturb the viewer" (Puckett 1984,

33). She also excelled in pre-visualizing photos as components of stories. Raw materials—both human and nonhuman—were refined, processed, and ultimately transformed into marketable products.

In 1927 when Bourke-White, aged 23, established a commercial practice as an estate, industrial, and corporate photographer in Cleveland, she was already a skilled marketer and entrepreneur. Educated in public schools in New Jersey, she was encouraged by her parents in science and engineering but excelled in writing, drama, debating, and organizing student activities. She took a photography course at the Clarence H. White School of Photography during her freshman year at Columbia University, New York. After her father died and she was forced to fund her higher education, she freelanced during subsequent student years at the University of Ann Arbor, Michigan. As a senior at Cornell University, Ithica, New York in 1926–1927, she established a small business photographing the campus for the alumni newsletter and marketing prints through various sales outlets. Her competitive edge over John Troy, campus photographer, consisted in unusual angles of view; taking advantage of mood-inducing atmosphere and natural and artificial lighting; composing rhythmic shapes and patterns; and taking multiple exposures and views so as to ensure a marketable "hit." These would be the leitmotifs of her success throughout an adventurous, nonstop globe-trotting career that only Parkinson's disease could terminate. Equally key were the contacts she made with high-placed, influential

administrators, professors, and graduates, which percolated into a working familiarity with the upper echelons of the corporate world.

Bourke-White's first major clients were the Otis Steel and Union Trust companies in Cleveland. In 1929 she became a charter and contributing editor of *Fortune* and in 1930 she moved to New York. This led to numerous national and international industrial assignments as well as to major corporate advertising commissions and to the beginning of her association with major publishers. Her corporate and industrial photographs of the late 1920s, followed by her industrial and commercial jobs of the early to mid-1930s, are the most self-consciously styled of her oeuvre, reflecting early twentieth-century corporate ideals and cultures of empire. In her sequence on Cleveland's new union station, the Terminal Tower (1927–1929), the building and its spire became the hub of numerous "imperial" views as she moved in from the distance up to the tower, framed it in massive viaduct arches, positioned it over "mountains of ore" (the title of one image), and geysered it over the curving sluices of parallel railway tracks. Close-up views of the grand lobby breathe heavy, dark, and jewel-like airs of material opulence and spatial grandiloquence. Likewise, in her work for Otis Steel, which the company published in a folio-styled brochure, she moved into and around the blast furnace and featured fiery, molten steel illuminating its vast, murky halls. This early work is indebted to Tonalism and language of pristine Pictorialism as practiced by Clarence White, Alfred Stieglitz, Alvin Langdon Coburn, and Frederick H. Evans. Modernism and Edward Steichen's hard-edged shapes, reflections, and shadows lie behind Bourke-White's NBC photomurals, executed in 1933 for the R.C.A. Building, Radio City, in Rockefeller Center, New York. *Skyscraper* of 1935, commissioned by American Catalin Corporation, and *Bottled Time*, a sequence of work for the Elgin National Watch Company published in *Fortune* in April 1930, exemplify this more abstract, direct-to-upscale-consumer approach.

The mid-1930s, capped by her move from *Fortune* to *Life*, were the time of Bourke-White's maturation as an artist. Not only did she show her work with other photographers of the American avant-garde, but she codified an avant-garde vocabulary of monumental form, high contrast and, most characteristically, closely conjoined, repeated objects, positioned close to the picture plane as freshly minted coinage from the proverbial assembly line. She came into prominence writing for and being written about in leading newspapers and magazines, as an artist, designer, and "trapper" of "the Waves of Sound"

(*Vanity Fair* 1978, 26–27). Her credo exulted the glory of "industrial subjects, which are so powerful and sincere and close to the heart of life....because the industrial age which has created them is powerful and art...must hold the germ of that power." (Batchelor, May 10, 1930, MBW Papers). Her status as an independent artist was bolstered by her appropriation of the semantics of advertising and public relations—grandiose, over-achieving, hyperbolic, and massively appealing to the image managers of the American public.

It is widely believed that, due to a change of heart while photographing the Dust Bowl in 1934 for *Fortune*, Bourke-White gave up the glamorous world of advertising and devoted the rest of her career to the human-interest stories she illustrated in *Life* and delineated in her books. These began in the Depression-scourged South and hit their stride in the European theaters of World War II. This generalization is misleading. Although it is true that she did turn to people as her prime subjects and did not court corporate clients after 1936, even while freelancing for *Life* from 1940 to 1951, she continued to do advertisements (*Industrial Rayon Corporation, Painesville, Ohio* and *Coiled Rods, Aluminum Company of America*, both 1939). Her work continued to adduce and promise an ideal "American way" predicated on the "world's highest standard of living." Quite possibly her most famous image from the 1930s, featuring a billboard with those exact slogans, is *Flood Victims, Louisville, Kentucky* (1937). The billboard itself was a component of a huge national publicity campaign mounted by the National Association of Manufacturers to stimulate consumption and promote industry. Its message aptly summarizes the message of the voluminous writings and photographs Bourke-White would produce over the next 25 years. Whether the image was military (*Waist Gunners, England*, 1942) or civilian (*Bridge Construction, New York Thruway*, 1954), the glorification of American-fabricated, consumable, and surplus power seared its way into viewers' eyes and minds.

Unlike many of her contemporaries in documentary photography, Bourke-White was not part of the federally funded Farm Security Agency photographic project led by Roy Stryker in the 1930s. Nor did she participate in the Standard Oil of New Jersey-sponsored photography archive amassed under Stryker's direction in the 1940s. These projects were extremely important stages in the evolution of documentary photography as it surveyed the successive landscapes of poverty, prosperity, and an emergent highway culture. This omission comes as some surprise as Bourke-White was the first twentieth-century photographer, after Lewis Hine, to be fea-

tured in the third, 1930 edition of *American Economic Life*, an important textbook co-authored by Stryker while he was associated with sociologist Rexford G. Tugwell at Columbia University. Stryker's projects were conceived and executed as sociological studies. They were carefully scripted, long-term experiences in living and picturing poverty. Bourke-White's approach elevated consumption, the individual, and the image of individuality. She not only accepted, but thrived on short deadlines. She vaunted her ability to capture the essence of a story in one or two visits, pre-visualizing it in the "day in the life" of a representative character. She worked for her publishers but continually wrote her own scripts. She was not a sociologist studying human habitats, but a publicist ripping gutsy pictures and good copy.

Bourke-White's strikingly memorable images come from her war and postwar assignments: *Nazi Bombing of Moscow*, 1941; *German Civilians Made to Face Their Nation's Crimes, Buchenwald*, 1945; and the famous *Mohandas Gandhi at His Spinning Wheel, Poona, India*, 1946, among others. However manipulated by her agents, editors, biographers, and herself, behind them reads a real story of nonstop danger and adventure where the photographer justifiably took center stage to get pictures no one else scooped. This story, enscripted in her autobiography, *Portrait of Myself* (1963), became Bourke-White's final milestone. She died in 1971.

BRACKETING

Bracketing is a technique by which a photographer tries to ensure that he gets a correct (or desired) exposure for the conditions under which he is shooting. Using a camera's built-in light meter or a separate light meter, the photographer can meter the light around his subject and adjust his camera's shutter speed and aperture settings accordingly for a correct exposure. However, some variables can cause a light meter to recommend an incorrect exposure—for example, if the subject is surrounded by either a

very light or a very dark background, or if there is a bright light somewhere in the frame of the shot. In these instances, a light meter will tend to average all present light and recommend a setting that will, in fact, either overexpose (resulting in an image that is too bright and does not have enough dark tones or shadows) or underexpose (resulting in an image that is too dark and does not have enough light tones or highlights) the subject. Both over- and underexposure result in film that has not recorded much dis-

BRACKETING

cernable information, which will translate to prints or slides that lack detail in the highlights or the shadows. With bracketing, the photographer takes two or more additional shots: one or more slightly overexposed and one or more slightly underexposed. This way, he is more likely to have a correct exposure—with different settings and exposures. Even if the light meter has recommended an exposure that is slightly off, the photographer will have compensated for the possibility of incorrect metering by shooting the additional under- and overexposed shots. Bracketing is most commonly used by studio photographers or with views amenable to fixed equipment or conditions, which allow deliberate shooting; obviously any sort of action photography is not well served by this technique.

Bracketing with film cameras is done in one of two ways: either by adjusting the shutter speed or the lens aperture. Which method is used depends on what the photographer is shooting and what he hopes to accomplish with the image. If the photographer is concerned with maintaining a consistent depth of field, he should adjust the shutter speed when bracketing, rather than the lens aperture. On the other hand, if the photographer is concerned either with capturing or stopping motion, he should adjust the lens aperture rather than the shutter speed. Leaving the ISO consistent with all the shots, the photographer takes one exposure at the recommended settings, then re-sets either the aperture by closing it either one or one-half stop or the shutter speed by increasing it one increment, takes another exposure, and then re-adjusts the aperture by opening it to either one or one-half stop above the original light meter recommendation or the shutter speed by decreasing it one increment from the original recommendation and taking a third exposure. It is important that the under- and overexposed shots are calibrated in relation to the light meter's recommended "correct" exposure. After adjusting the aperture or shutter speed to underexpose a shot, the photographer should adjust the settings not in relation to where they are, but to where they were for the "correct" exposure.

Automatic bracketing is an option on some digital cameras, and if this setting is chosen, the camera will automatically adjust the aperture or shutter speed a pre-set degree above and below the "correct" setting so that the photographer can trip the shutter three times and will record three exposures with the three different settings. Often with digital cameras, the over- and underexposed bracketing exposures have to be taken within a limited time frame before the camera automatically re-sets to the "correct" exposure. With digital photograph

manipulation software, a photographer can layer the exposures on top of one another and then use a tool such as an "erase" tool to uncover different exposures in areas of the image. With this type of manipulation, a photographer might be able to combine his preferred exposures of different areas of the image to create a composite image that was not attainable with one combination of aperture and shutter-speed settings.

If the photographer desires, a wider bracket can be achieved by taking more than one overexposed shot and more than one underexposed shot. Generally, it seems that with one overexposed shot and one underexposed shot, the photographer has sufficiently accounted for imperfections in the light metering and will be pleased with one of the three resulting images. Occasionally, even if the recommended setting proves to be correct, the photographer may prefer either the under- or overexposed image for aesthetic reasons.

In film photography, one disadvantage of bracketing is that when a photographer uses this technique, he expects that some of the exposures will be incorrect—so the photographer knowingly "wastes" film. With experience, photographers can become more sure of getting a correct exposure and can reserve bracketing for use only when unsure about an exposure, rather than for every shot. If a photographer wants to be assured that he will get a correct exposure, though, bracketing is a good way to make sure that even if the photographer's light meter is incorrect, he will still be able to get a good image from one of the shots in the bracket.

With digital photography, bracketing is often easier to incorporate into regular practice—since there is no film to waste, unless storage on disk (or other removable media) space is limited, photographers can bracket without reserve. And just as sometimes it is the "incorrect" exposure that gives photographers their best or favorite print or slide image, digital photographers should wait to delete images that they feel are incorrectly exposed until the files have been moved onto a computer. Whether a photographer chooses to manipulate images in a software program or simply choose the best image from those he shot, the ease with which digital media can be erased and re-used makes it easy for photographers to postpone editing decisions until later, rather than trying to edit at the same time that he is shooting.

Bracketing works well as insurance for the photographer. Even if an image can be re-shot, it is much easier to have a variety of exposures to choose from rather than having to rely on a light meter to give a correct reading every time. And if

an image cannot be easily re-shot, then bracketing ensures that out of multiple exposures, it is almost guaranteed that one will be correct.

ANTON GIULIO BRAGAGLIA

Italian

Among early twentieth-century photographers, perhaps none rivaled Anton Giulio Bragaglia in the crusade—both practical and theoretical—to distinguish photography as an art form. The mystical and metaphysical predilections of Bragaglia's imagery—which Giovanni Lista has called “the first modern revolution in photography”—liberated photography from the rigid cast of a recording machine. Bragaglia's photographic innovations inspired an entire generation of Italian artists—Wanda Wultz and Tato, Ivo Pannaggi and Fortunato Depero among them—to adapt the medium of photography to the expanding contours of Futurist art and activism. On a wider scale, his experiments and expositions anticipated European avant-garde approaches to photography as a fine art in its own right, independent of painting or the cinema.

Born in Frosinone, Italy on February 11, 1890, Anton Giulio entered the seminary at the suggestion of his monsignor uncle, and studied there until 1910, developing a strong interest in literature and archaeology. Thereafter, he dedicated himself to photography with the intention of becoming a journalist, despite his father's opposition. Along with his brother Arturo (1893–1962), Anton Giulio began frequenting the Cines film studios for which his father served as the general manager and lawyer. After buying their first camera in the Campo dei Fiori in Rome, the brothers undertook various kinds of photographic experimentation, using a bedroom in their home as a makeshift studio and darkroom. During the first years of their collaboration (1911–1914), the two brothers signed their

photographs with the shared epithet “Bragaglia.” Anton Giulio seems to have composed and staged the images, while Arturo served as the technical force behind the pair. The Bragaglias appropriated the fundamentals of E.J. Marey's chronophotographs to their own method of “vitalist” expression—a photography of movement that they would come to term *Fotodinamismo*. Of the two brothers, Anton Giulio was by far the more theoretically oriented artist, writing various theses, conducting conferences, and launching manifestos on the development of *Fotodinamismo*.

Late in 1912 the brothers met the Futurist ring-leader F.T. Marinetti through the painter Giacomo Balla, and their *Fotodynamismo* was baptized an official branch of the Futurist avant-garde. As an interdisciplinary movement seeking to integrate new forms of art with modern life, Marinetti's Futurism initially embraced photography as an eminently modern vehicle of expression. Anton Giulio became increasingly involved in the Futurist fold, collaborating with painters and poets on numerous projects. The Futurist painter and musician Luigi Russolo, for example, served as Bragaglia's model in the now famous image *Il fumatore* (*The Smoker*) of 1913; sculptors and painters Balla, Umberto Boccioni, Luciano Folgore, and Francesco Pratella would all pose for *fotodinamiche* (*photodynamics*) as well. There also became a certain reciprocity between the Bragaglias' photographic experiments and the early paintings of Balla, and the mutual influences of these works are difficult to sort out. Bragaglia's *The Typist* (1912) or *The Slap* (1913), for example, share much with Balla's paintings of protracted movement, most no-

tably *Dog on a Leash* (1912) and *Girl Running on a Balcony* (1912), revealing a common inspiration in the chronophotographic image.

Yet Anton Giulio actively and emphatically distinguished his *Fotodinamismo* from photography *per se*. Their only affinity, he claimed, was in the shared use of the camera. Despite his obvious and far-reaching debts to Marey, Bragaglia disavowed influence by the French photographer in an attempt to disassociate his images from the technical, mechanical reputation of photography. In his essay *Fotodinamismo futurista* (1911), first published in the Florentine journal *Lacerba* in July 1913, Bragaglia criticized Marey's chronophotography for coldly fragmenting movement rather than "synthesizing" it. For Bragaglia, Marey's positivist experimentations failed to transcend the realm of science; only the rhythmic flux of *Fotodinamismo* could make photography over into an art form. *Fotodinamismo*, Bragaglia argued, transfigured the visual world by deforming it, refracting it—thus creating a new, artistic image that captured something beyond the physical, material world.

"We despise the precise, mechanical, and glacial reproduction of reality," he wrote. "For us this is a negative element, whereas for cinematography and chronophotography it is the very essence." *Fotodinamismo*, he argued, proffered not a dissection of physical and temporal units, but a synthetic flow of sensation turned inside out: "A shout, a tragic pause, a gesture of terror, the entire scene...can be expressed in one single work," declared an ebullient Bragaglia. (Bragaglia 1970, 39).

Like much Futurist discourse, Bragaglia's writings and images vacillate between, on the one hand, a drive to represent movement and action, and on the other, a turning away from external appearances, to "seek the interior essence of things." Mere photography—whether cinematic or chronophotographic or simply descriptive—failed to evince the lyrical and emotive aspects of visual experience. In short, they did not sufficiently "dynamize" (to use a Futurist watchword) the subject.

In this regard, Bragaglia was profoundly influenced, as were many of his contemporaries in Italy and abroad, by the metaphysical theories of the French philosopher Henri Bergson. Bergson's concepts lent to art a renewed purpose of penetrating beyond the material world, beyond quantitative measurements or descriptions. Bergson's championing of intuition over rationalized thought clearly influenced Bragaglia's approach to the photographic image.

"We are not interested in the precise reconstruction of movement, which has already been broken up and analyzed. We are involved only in the area of movement which produces sensation, the memory of which still palpitates in our awareness."

(Bragaglia 1970, 38)

Fotodinamismo thus willfully incurred dissolution, dematerialization, and interpenetration. The nimbus-like trails of light clinging to Bragaglia's subjects, as in the image *Change of Position* (1911), are meant as signifiers of memory still "palpitating." By flooding their subjects with light and overexposing the photographic plate, the Bragaglia brothers hoped to record not motion, but the psychic and emotional energy underlying it. The spiritual pretensions of *Fotodinamismo* also derived in part from other trends circulating in contemporary art and literature, such as Theosophy and mysticism, and the rarefied geometries of the "fourth dimension." Anton Giulio himself subscribed to various occultist and mediumist theories, and believed that *Fotodinamismo* could reveal invisible and spectral qualities that lurked within matter.

Notwithstanding Bragaglia's invectives against positivism and the "precise reproduction of reality," his own images were, in turn, subjected to a very similar criticism from within Futurist ranks. The eminent Futurist artist and theoretician Umberto Boccioni came to disparage Bragaglia's work, claiming that photography could not be an art form, much less a Futurist one. Boccioni viewed Bragaglia's *photodynamics* as prosaic, cinematographic inventories of movement, for all their pretensions to a poetic rendering of dynamic synthesis. Six Futurist artists published a statement disavowing any affinities between *Fotodinamismo* and Futurist "plastic dynamism." Under pressure from the importunate Boccioni, Marinetti withdrew his support of the Bragaglia brothers towards the middle of 1913. Such polemics not only reveal the nuances of what is often perceived as a monolithic Futurist movement, but also mark a significant chapter in the contentious history of photography as art.

In 1914, Anton Giulio temporarily abandoned photography for experimental novels, but soon collaborated again with Arturo, this time publishing a (notably un-Futurist) study of Roman ruins entitled *Nuova archaeologia romana* (1915). The following year, Bragaglia created his own film company and shot three full-length films. His film *Thaïs* (1916), one of the few Futurist films ever produced and the only Futurist film extant today, featured

elaborate, abstract sets by the artist Enrico Prampolini. Despite the originality of Prampolini's sets and Bragaglia's compositions, the film shared little with the theories of *Fotodinamismo* or Futurism. Anton Giulio's exclusive engagement with the cinema was short-lived, in any case.

The trajectory of his career reveals the prominence of photography not only as an aesthetic end in its own right, but also as a supplement to and document of avant-garde performance and experimentation. After founding the Casa d'Arte Bragaglia in Rome in 1918, as well as his own theater company in 1922, Anton Giulio dedicated himself to exhibition promotion, set design, theater production, and continued photographic experiments with *Fotodinamismo*. A tireless writer, he wrote numerous theoretical tracts on the theater and photography throughout the 1920s and 1930s, while participating in many collective exhibitions of Futurist photography. Bragaglia died in Rome in 1960.

BILL BRANDT

British

Often characterized as England's most British photographer, Bill Brandt was in fact born in Hamburg, Germany. He moved to London in 1931, at the age of 27. The fact of his true country of origin and Brandt's own habit of presenting himself as British born, however, cannot obscure his role in the history of British photography. During his long career he produced important work in the genres of social documentary, landscape, the nude, and portrait photography. Brandt committed to England and English society in a profound way, documenting its imposing class structure and the physical landscape as well as making portraits of many of the luminaries of the British arts and letters. His many photography books were noteworthy for the ways in which he contrasted wealth and poverty as well as how he depicted reality mixed with a surrealist edge.

While he pursued numerous subjects throughout his career, Brandt tended to follow one genre for an extended period before moving on to the next. He first became known as a social documentary photographer in the 1930s. This is when he first published his evocative scenes of both the struggling working class and their privileged counterparts in Edwardian society. Brandt's documentary work coincided with the rise of the picture press in England and consequently, his early photographic series became synonymous with the extremes of British life between the wars. This work was striking for its dark grittiness, a mood that reflected both the political atmosphere and England's economic depression at the time.

After World War II Brandt turned away from reportage. During the second half of his career his photographs were characterized more and more by mystery, experimentation, and a brooding quality that reinvigorated some of photography's oldest and most common genres; landscape, portraiture, and the nude. By the late 1970s Brandt had long been recognized as one of the masters of modern photography. While his work from earlier decades is included in major collections of photography around the world, his last body of work consisting of color photographs of still life's and three-dimensional

box-like constructions was little seen or understood. While Brandt explored many genres and processes throughout his life, it is the work of the post-WWII period for which he is best known.

Beginning in the 1930s and continuing through the 1960s Brandt created a distinct photographic language based on dramatic composition, stark lighting, and shadows. The empathy for his working class subjects often found in his social documentary work was slowly replaced by a haunting surrealism and a probing focus on the individual in both his nudes and his portraits of English writers and artists. In addition to having his work published in periodicals like *Picture Post*, *Lilliput*, and in both the British and American editions of *Harper's Bazaar*, Brandt also published his work in photography books. These publications, which include *A Night in London* (1938), *Camera in London* (1948), and *Literary Britain* (1951), and finally *Perspective of Nudes* (1961), are among the most influential photo books of the modern period. Brandt's published works, often focusing on the social interactions of upper and lower classes, reveal powerful narratives, created through the deliberate sequencing and placement of the images throughout each book. Brandt was often cited as an early influence of Robert Frank, whose own book, *The Americans* (1955) became a turning point in American social documentary photography.

Brandt's early childhood was spent in Europe and his early career as a photographer was shaped in large part by his time in Paris, where he was surrounded by the artistic avant-garde, including Man Ray, Brassai, Eugène Atget, and the work of the Surrealists. Moving permanently to Britain in 1931, the spirit of that country became an important theme.

During World War II Brandt began a series depicting London at night, a series of images that perfectly captured both the eerie beauty of the city and the anxiety that gripped its inhabitants. While the city was under siege, the city's first defense was to extinguish all streetlights, creating an environment that had not existed since the introduction of the gas lamps of the previous century. "The glamorous make-up of the world's largest city faded with the lights," Brandt wrote in *Camera In London* (1948).

Though the city may have lost its shimmering glitter, the shadowy urban nights that he photographed had a graphic allure similar to that of Brassai's Paris. Brassai and André Kertész were both early influences on the photographs in both *Camera in London* and *A Night In London* (1938). Work from the latter bears a striking similarity to Brassai's *Paris de Nuit* (1932). Another assignment during the war, commissioned by the Ministry of Information in 1940, produced one of Brandt's most memorable picture stories; people huddling in improvised bomb shelters in locations throughout the city. At night Brandt visited tube shelters, church crypts, and cellars and photographed these overcrowded spaces with artificial light. The impact of the series owes virtually as much to the strong contrast of light and dark as it does to the difficult subject matter of displaced, fearful families huddled in cold, uncomfortable spaces. Seen together, Brandt's photography during this period records the extremes of life during the war years while simultaneously displaying the innovations in night photography.

The 1940s also saw Brandt turn to portrait commissions as another source of income. He published portraits of poets, writers, painters, and film directors for the next 40 years. In 1941 *Lilliput* magazine published a series of eight portraits that revealed his distinctive approach to this traditional photographic genre. While his portraits captured single subjects usually in their homes, Brandt's vision often turned typical sitting rooms and libraries into strange environments. He avoided isolating the sitter's face or focusing on her or his expression. Still he was able to consistently reveal the intensity of the sitter's character by the juxtaposition of sitter and environment. Subjects such as the painter Francis Bacon and the writer Martin Amis appear lost in their private realities.

While his early documentary works expand the notion of documentary photography as a tool for social change, Brandt's later work reveals his powerful formal inventions. As he branched out from reportage, Brandt began to explore the technical side of the medium and found darkroom work to be more interesting than the act of pressing the shutter. Near the end of World War II Brandt dedicated himself to photographing the female nude. Inspired perhaps by the distorted nudes created by Surrealist photographers via reflections in various materials, Brandt experimented with distorting the female form, the image he produced, however, taking on a disturbing, psychological edge. Posed individually, either in stark English townhouse interiors or on the rocky British coastline, these nude studies stand in sharp contrast to the elegant views of the British aristoc-

racy and the humble tableaux of grimy coal mines of his earlier works. While seemingly grounded in the reality of a figure in a naturalistic setting, these are among Brandt's most surreal images, and can be said to be the photographic equivalent of British artist Henry Moore's abstracted figure sculptures.

Brandt considered the nudes to be the major artistic statement of his photographic career and he continued to focus on it for almost three decades. Unlike virtually all other photographers who employed distortion techniques to highlight the sensual or erotic in their nudes, Brandt seemed interested in avoiding any hint of eroticism. Brandt later noted that the Orson Wells's film *Citizen Kane* deeply influenced the look of these photographs, and it is clear that this cinematic vision is further enhanced by Brandt's use of a wide-angle lens with a fixed focus and no shutter. By using this antiquated equipment he was able to produce images where the human form was wildly distorted and viewed in unrealistically deep perspective. While depicting the female nude, even in distorted forms was not new in visual art, Brandt's extreme formalism was striking and the results were images in which the sexual availability of the sitter was completely erased. In contrast to his earlier work, where the viewer is made to feel like an invisible observer of the photographed scene, the women in Brandt's later work often look directly at the camera meeting the viewer's gaze.

In the 1970s and 1980s, following the nudes, Brandt began to explore entirely new processes. After working for nearly 50 years in traditional black and white photography he began creating three-dimensional collages using rocks and debris found on the beach, and started photographing in color. This late work was personal and experimental. Initially this work seemed to have little apparent relation to his earlier photographic interests, resembling garish, deserted dreamscapes. This abstract work, however, drew heavily on his lifelong interest in Surrealism and points to the early influence of Man Ray's work in the 1920s. Although the collages and color photographs were exhibited in London in the mid 1970s and again 10 years after Brandt's death in 1992, they were never fully embraced by either critics or the public and are seldom included in retrospectives of his work. Brandt's stature as a giant of British and indeed international postwar photography, however, is assured.

BRASSAI

Hungarian-French

Brassai's obsession with the diverse character of social relationships, urban spaces, and the objects and events that often go unnoticed in everyday experience prompted expatriate American novelist Henry Miller to nickname him "The Eye of Paris."

Brassai pursued a style of immediacy and intimacy to bridge the distances between subject matter, artist, and viewer. His landscapes of nighttime monuments and deserted streets and his portraits of both the unknown as well as the most famous artists and writers in mid-century Paris demonstrate photography's ability to bracket references to rea-

lity for heightened awareness and interpretation. Brassai often repeated that his “ambition was always to see an aspect of everyday life as if discovering it for the first time.” While best known as a photographer, Brassai was also a writer and accomplished in drawing, painting, and sculpture.

Brassai was born Gyula Halász in Brassó, Transylvania, then a part of Hungary. The pseudonym means “a native of Brassó.” In 1903–1904, Brassai’s father, a professor of French literature, brought his family to live with him in Paris while he was conducting research at the Sorbonne, and at a young age, Brassai developed a love of Paris that would remain throughout his life. Brassai served in the Austro-Hungarian cavalry in World War I and afterwards briefly attended the Academy of Fine Arts in Budapest. In December 1920, after Transylvania became part of Romania under Soviet influence, Brassai fled to Berlin and began a career as a journalist for Hungarian-language newspapers and magazines. In part to avoid being drafted into the Romanian Army, Brassai attended the Akademische Hochschule where he cultivated the image of a rebellious bohemian. In Berlin, Brassai developed a close friendship with Lajos Tihanyi, a prominent Hungarian painter; met László Moholy-Nagy and modern painters Oskar Kokoschka and Wassily Kandinsky; and read Goethe, whose appreciation of commonplace objects and events would inspire Brassai’s emphasis on seemingly direct depictions of people and places. With runaway inflation in Germany, Brassai returned to Brassó in late spring 1922 for what would be his last visit to his birthplace.

He arrived in Paris in early 1924 and wandered through the city, being fascinated with the details of the built environment and the lives of the city’s inhabitants. Writing for publications in Germany, France, the Netherlands, Great Britain, and the United States, Brassai first began signing his articles “Gyula Brassai” to separate the opinion and trivial topics of his journalism from more artistic literary and visual works for which he planned to use the family name “Halász,” but by the 1930s, he began to use “Brassai” exclusively.

Initially disparaging photography as illustration, Brassai only began collecting old photographs and postcards in 1924, and he did not begin to take his own photographs until the end of 1929 when he could afford to buy a camera, a Voigtländer, and then a Rolleiflex in 1935. With his own photography, Brassai began to recognize the potential of the medium for detailed observation. Exploring Paris at night, Brassai focused his attention and his camera on deserted areas,

buildings, and monuments and on human interactions at all levels of society from the bourgeoisie to prostitutes, ruffians, and the poor on the fringes of society. In late 1932, this material was published as *Paris after Dark*, with written text by Paul Morand. Offers for exhibitions and magazine assignments followed, and Carmel Snow and Alexey Brodovitch, editors of *Harper’s Bazaar*, hired Brassai to begin a more than twenty-year relationship with the magazine. Working at a time of great popularity for illustrated magazines, Brassai produced photographs for substantial weekly publications, Surrealist and post-Surrealist journals, fashion magazines, and detective and sexually evocative “*magazines legers*,” which were important sources of income for many period photographers and for the promotion of modern photography.

Not until 1976 did Brassai publish *The Secret Paris of the 30s*. This series explored a range of licit and illicit locations of entertainment and pleasure, ranging from high society to fringe establishments, such as opium parlors, bordellos, and homosexual bars. Combining artistic and documentary interest, though often appearing to be candid journalistic press photography, Brassai’s photographs were made with his subjects’ agreement that they would be photographed but without knowledge of when. He conducted research to anticipate action and bought drinks for and gave payment to some of his subjects. Brassai’s interest was not that his images be true but that they be convincing. He did not invent but observed, selected, and developed his ideas. Considering literal translation of an object to be a betrayal of reality, Brassai pursued imaginative resemblance and representation that was anchored in lived experience and the objective world.

In 1932, Brassai was asked by Tériade to take photographs of Pablo Picasso, his work, and his studio for the first issue of *Le Minotaure*. Brassai published over 150 images in the first nine issues of the journal with half of the photographs being portraits of artists and images of their work and their studios. Brassai worked on portraits of Picasso for four decades and was much stimulated by their association. Picasso’s etching on one of Brassai’s negatives inspired his *Transmutations* series. *Conversations avec Picasso* grew from the notes Brassai began to collect after their first meetings, but not until 1960 and with Picasso’s suggestion did these materials become a book. Included are discussions of Picasso’s working habits, philosophies, friends and wives, as well as discussion of Brassai’s own work habits and interests. Picasso much appreciated the opportunity through Brassai to see his own work with “new eyes.”

Brassaï also famously photographed the great painter Henri Matisse at work in his studio.

Although often linked with the Surrealists, Brassaï's relationship to Surrealism is complicated. Brassaï did not meet Surrealist major domo André Breton until 1931, and by then, many of Brassaï's friends, including Jacques Prévert, Robert Desnos, and Raymond Queneau had already been expelled from the official movement. Many of Brassaï's images were influenced by Surrealism and were used to express Surrealist ideas, but Brassaï refused to join the movement, and his interest in the physical world was incompatible with Surrealist emphasis on fantastic associations. Like Picasso, Brassaï's images remain based on rational, visible, and mental constructions of the complexity of the world. Brassaï's photography expresses in a two-dimensional discourse the authenticity of the subject of the image.

Graffiti especially inspired Brassaï because of its ancient history and its correspondence to the origins of writing. Over a thirty-year period Brassaï kept careful notebooks and witnessed its changes over time. In regards to graffiti, but useful as a general statement of his philosophy of art, Brassaï explained that a work of art

stands alone and naked, like a conscript in front of a recruiting board, and it should be allowed to be its own judge. The way it was generated, its genealogy, the ambition or intention that inspired it, none of these has anything to do with its value, and can neither enhance nor reduce it, justify nor destroy it.

(Brassaï, "Images latentes," *L'Intransigeant*, 15 November 1932)

In 1943–1945, when working as a photographer was not possible during the Nazi occupation and with Picasso's encouragement, Brassaï began drawing again, and in 1946, he published, *Trente dessins*, a portfolio consisting mostly of nudes, with a poem by Jacques Prévert written in response to the images. After this publication, again with Picasso's influence, he began to sculpt palm-sized river stones, usually extracting female torsos from them. Later sculptures were larger and made use of other materials, a practice that continued through the early 1970s. Shortly before his death, Brassaï completed *Marcel Proust sous l'emprise de la photographie*, a study of Proust's interest in photography and the role of photography and photographs in *A la recherche du temps perdu*. At the close of the twentieth century, Brassaï's work was receiving considerable scholarly attention, both for his own contributions and his role as part of the Parisian avant-garde of

the 1920s and 1930s, one of the most fertile periods of photographic practice of the century.

MANUEL ALVAREZ BRAVO

Mexican

Arguably the most renowned photographer of Latin America, Manuel Alvarez Bravo is the cornerstone of this medium in Mexico. When he began photographing in the 1920s and 1930s, artists who constitute a veritable “who’s who” of the lens immediately acknowledged his innate capacity: Edward Weston, Tina Modotti, Paul Strand, and Henri Cartier-Bresson. The respect that he engendered was encapsulated in Cartier-Bresson’s response when someone likened Alvarez Bravo’s imagery to Weston’s: “Don’t compare them, Manuel is the real artist.” Alvarez Bravo’s unique eye was such that the founder of surrealism, André Breton, sought him out in 1938 to commission an image for the cover of a surrealist exhibition catalogue. His recognition by such luminaries notwithstanding, Alvarez Bravo had little visibility within the United States prior to the modest 1971 exhibit at the Pasadena Art Museum in California. Subsequent exhibitions at the Corcoran Gallery of Art in Washington D.C. (1978) and San Diego’s Museum of Photographic Arts (1990) made Alvarez Bravo a much more familiar figure, and his consecration was assured by the 1997 exhibit at the Museum of Modern Art in New York.

When Alvarez Bravo began photographing in the 1920s, the Mexican Revolution (1910–1917) had unleashed a national search for identity, and the question of what to do with Mexico’s inherent exoticism was the burning issue for photographers. Perhaps influenced by his relationship with Weston and Modotti, Alvarez Bravo was the first Mexican photographer to take a militantly anti-picturesque stance, and he achieved international recognition for work that reached creative heights from the late 1920s through the mid-1950s, a period during which he perfected a sophisticated approach to representing his culture. Conscious both of Mexico’s otherness and the way in which that has led almost naturally to stereotypical imagery, Alvarez Bravo has always swum counter to the stream of established clichés.

Consider *Sed pública* (*Public Thirst*), the 1934 photo of a boy drinking water from a village well. This image contains all the elements necessary to

make it picturesque: a young peasant, dressed in the white clothing typical of his culture, perches on a battered village well to drink the water which flows from it; an adobe wall behind provides texture. But, the light in the image seems to concentrate itself on the foot that juts forward into the frame, a foot that is too particular, too individual to be able to “stand for” the Mexican peasantry, and thus represent their other-worldliness. It is this boy’s foot, not a typical peasant’s foot, and it goes against the expectations of picturesqueness raised by the other elements, “saving” the image through its very particularity.

A similar tactic can be observed in *Señor de Papantla* (*Man from Papantla*, 1934), where an Indian stands with his back to the wall, facing the camera. Here, as with the image of the boy, the objective elements in the photo would seem to make it picturesque: white peasant clothing, bare feet, and adobe walls, as well as a *sombrero* and bag woven of reeds. But, having awakened our anticipation of the exotic, Alvarez Bravo cuts back against it with an artistry that rejects the facile. The man refuses to dignify the camera by returning its look. It is often felt that the esthetic strategy in which the subject “retorts” the camera’s gaze is that which most effectively represents people at their most active, because it negates somewhat the camera’s tendency to reduce them to objects. But here, Alvarez Bravo gives us another turn of the screw by presenting us with an Indian who, in looking away, seems to say disparagingly: “Take all the pictures you want, outsider. Who cares what you do?”

Alvarez Bravo’s search for *mexicanidad* (Mexicanness) led him to reconfigure national symbols. For example, *Sand and Pines* is an early image from the 1920s that demonstrates that a young Alvarez Bravo was much influenced not only by pictorialism, but also by the then pervasive interest in Japanese art. Infusing international art forms with Mexican meaning, Alvarez Bravo forms the background to his “bonsai” with what is in essence a mini-Popocatepetl, one of the volcanoes that dominate the Valley of Mexico. Another example is the 1927 photo of a rolled-up mattress. Here, he chose not to use the beautifully textured, folkloric *petate* which, woven of wide reeds, provided depth to the still lives created by Modotti and Weston. Instead,

Alvarez Bravo photographed a modern mattress, but with the twist that its bands of shading make it look like the well-known Saltillo *sarapes*. In his recurrent imagery of the maguey cactus we can see his interest in playing with a ubiquitous symbol of Mexican culture; in one photo he “modernizes” the maguey by making it appear as if the central flower stem that sprouts from these plants has been converted into a television antenna.

The politics of Alvarez Bravo are always talked about in relation to his most famous photograph, *Striking Worker, Assassinated, Oaxaca, 1934*. Nonetheless, while it is certainly true that he rejects official nationalism as completely as he does the picturesque, this image is problematic: its meaning is determined by the title ascribed to it, which may have been influenced by Alvarez Bravo’s involvement in LEAR (League of Revolutionary Writers and Artists) during the 1930s. It may be argued instead that the politics of Alvarez Bravo—and his search for Mexico’s essence—can better be found in the ways he represents the daily life activities of humble people, rather than in overt social commentary. His imagery is a modest, almost transparent portrayal of individuals whom he seems to have “found” within their natural habitats rather than to have “created” through conspicuous visual rhetoric. A very understated esthetic that avoids overt expressivity, Alvarez Bravo’s is an all but invisible technique designed to capture anonymous people in ordinary activities, where they are neither romanticized nor sentimentalized. A perfect instance is *La mamá del bolero y el bolero*, an exquisite image from the 1950s in which a mother visits her son to bring him lunch, and eats with him while he rests from his tasks of shining shoes.

Manuel Alvarez Bravo has been a definitive influence on Mexican and Latin American photography. His rejection of the facile, his insistently ambiguous irony, and his redemption of common folk and their daily subsistence have marked a path of high standards for photographers from his area.

Biography

Born in Mexico City, 4 February 1902. Attended Catholic school from 1908 to 1914, but left in 1915 to work. Begins to educate self in photography, asking advice from photography suppliers, and learning English by reading the labels on developer bottles. The 1923 arrival of Edward Weston and Tina Modotti in Mexico City is crucial to Alvarez Bravo’s development, and he buys his first camera

in 1924. Wins first major award in 1931, and decides to pursue photography as full-time career, in part as a still photographer in cinema productions. Meets Andre Breton in 1939, and his work is included in a Paris Surrealist exhibit. In 1942, the Museum of Modern Art (New York) acquired their first works by Alvarez Bravo and, in 1955, his photographs were included in Edward Steichen’s *The Family of Man*. During 1959, Alvarez Bravo stopped working in the film industry, and became the photographer of important art books for El Fondo Editorial de la Plástica Mexicana, Mexico City, of which he was a founder. Alvarez Bravo left the Fondo in 1980 to work with the Mexican-based media empire, Televisa, where his collection of photography was exhibited and published in a three-volume set. In 1996, Alvarez Bravo’s collection moved to the newly-created Centro Fotográfico Alvarez Bravo in Oaxaca City, Mexico. Bravo died in Mexico City, October 19, 2002.

JOSEF BREITENBACH

German-American

Josef Breitenbach embraced photography in its entirety as a professional and artistic photographer, collector of historical photography, and instructor of photography. Shaped by the desperation and ingenuity of exile, a passion for photography, and a keen interest to preserve the "other Germany," Breitenbach participated in the creative foment of the refugee artists, intellectuals, and scientists in Paris, France, in the 1930s. His photographs are poetic in the tradition of Eugène Atget and at times, recall the psychological depth of Christian Schad's portraits. Creating disparate bodies of work in Germany, France, and the United States, it was only in the late decades of the twentieth century that his contribution has been fully recognized.

Breitenbach was born into an upper middle-class family of Franconian Jews in Munich on April 3, 1896. Although his parents were newcomers to this Bavarian metropolis, the move to Munich brought upward economic, social, and political mobility. Upon graduating in 1912 from the *Oberrealschule* (modern high school), Breitenbach undertook a commercial apprenticeship, as he would eventually take over the family business, a successful wholesale wine business. He also became an activist in the youth section of the Social Democratic Association, a pacifist organization. In spite of this, Breitenbach was drafted into the army in early 1916, but was discharged for health reasons at the end of the year.

His civilian life resumed and gravitated around the circle of Kurt Eisner, where he met Oskar

Maria Graf and his colleagues Erich Mühsam and Ernst Toller. In 1918, Breitenbach played an active part in the successful November Revolution to overthrow the Bavarian government and became a member of the Provisional Central Workers' Council. Eisner became the first minister-president of the Free State of Bavaria and Breitenbach was given a small post in the new administration as diplomatic courier for the Bavarian embassy in Switzerland. Kurt Eisner was in power for only a few months when his political opponents assassinated him. His death precipitated the proclamation of the "Soviet Republic" by the Bavarian left, and marked the end of Breitenbach's political ambitions.

Breitenbach remained associated with the Social Democratic party in the 1920s, but his life adopted a new focus—family, business, and art. He married Pauline Schmidtbauer in 1918, more than a year after the birth of their son Hans. The marriage ended in divorce in 1926. He took over his father's business in 1922, and it went bankrupt in 1930. It is not clear if this was due to his lack of interest in the business. But what is certain is that the many business trips through Central European wine regions became photographic excursions and led to his study of viniculture, which won the gold medal at the Milan Photography Competition in 1928.

In 1932 Breitenbach opened his own photographic studio and began a steady engagement as stage photographer for the Münchener Kammerspiele (Munich Studio Theater). His portraits of great actors such as Alexander Moissi, Albert Basserman, and Karl Valentin earned him modest artistic recognition and financial success. His promising career, however ended abruptly in the summer of 1933, when the Nazis came to power.

It seems that his life was spared because of a photograph he made of Franz von Papen, Hitler's deputy in the National Socialist government. Legend has it that SS agents visited Breitenbach with the intention of taking him into custody. Breitenbach confronted them with the Papen portrait and the accompanying letter of thanks. Caught off guard by this first-class reference, the SS left Breitenbach to confirm that they had not descended on the wrong person. Breitenbach wasted no time in leaving the country for France. For the National Socialists, the participants in the November Revolution of 1918 were the most hated of opponents. They were decried as "November criminals" and were the victims of the first wave of terror, which liquidated the political opposition. Breitenbach, therefore, was a target of the Nazis more because of his earlier political commitment than his Jewish birth.

Breitenbach found himself in Paris among throngs of artists and intellectuals who formed a network of new alliances referred to as the "other Germany." With his son Hans he took up residence in a Latin Quarter hotel. The series of bureaucratic hurdles that restricted the lives of the exiles made Breitenbach's initial stay in Paris difficult. However, Breitenbach did not arrive as an anonymous person in Paris. The Comité National de Secours aux Réfugiés Allemands Victimes de l'Antisémitisme recommended him on October 10, 1933 to the Police Prefecture. Such protection helped him set up a business. Two months after his arrival in Paris he was invited to show his work in an exhibition of exiled photographers at the Librairie Lipschutz, held from November 20–30, 1933. The exhibition was organized by the Comité Française pour la Protection des Intellectuels Juifs Persécutés, a group of university professors dedicated to assisting exiled Jews in France. After only a year, Breitenbach had established himself as a professional and artistic photographer in Paris. He held his first solo exhibition in Paris at the Galerie de la Pléiade.

During these years Breitenbach experimented with numerous techniques, including multiple printing, solarization, hand-coloring, and bleaching. It was in one area, however, that Breitenbach was a true innovator. In 1937 he began using a process, developed by French botanist Dr. Henri Devaux, to capture in visual form odors from various things such as camphor, cigars, coffee beans, and pine needles. These "odor emanations" resemble his work in photograms, with which he also experimented.

Breitenbach also continued his work in portraiture, shooting the leading figures of the day, including playwright Bertolt Brecht, novelist James Joyce, and painters Vasily Kandinsky and Max Ernst. He was also a beloved teacher of photography, who promised "thorough individual specialist training" in courses of several months or in compact seminars. His most important pupil was Ruth Snowman, who became also his lover and business agent and would aid him in escaping France. It was in 1935 that Breitenbach began to work as a photojournalist, documenting Brecht's theater productions in Paris and the exhibition *Free German Art*, among other events. Although Breitenbach made only a modest living, he received artistic recognition and was accepted into the Société Française de la Photographie in 1938 and the Royal Photographic Society of London 1939, the leading photographic associations of the time.

On September 26, 1938, the seventieth expatriate list announces "the forfeiture of the German citizenship" of Josef Breitenbach; a year later he is interned by the French authorities, his career once again shut down. Breitenbach was released from

BREITENBACH, JOSEF

internment on November 18, 1940 and emigrated to New York, finally ending his long flight from National Socialism.

In the United States Breitenbach worked for a number of magazines including *Fortune* under Walker Evans. The painter Josef Albers invited him to teach at the short-lived but now legendary Black Mountain College, North Carolina, in 1944. Later, he would teach at both the New School for Social Research and Cooper Union in New York, retiring from teaching finally in 1975. He created his last major body of work in Asia on intermittent trips from teaching and under the auspices of the United Nations. After his death in 1984, his archive was donated to the Center for Creative Photography in Tucson, Arizona.

Biography

Born in Munich on 3 April, 1896. Attended the *Oberrealschule* (modern high school), graduates in 1912. Completed a commercial apprenticeship, but self-educated in photography. Drafted in early 1916. Active in the November Revolution, 1918; Member of the "Provisional Central Workers' Council." Diplomatic courier for the Bavarian embassy in Switzerland, 1918. Photographic excursions through Central Europe's wine regions, 1920s. Gold medal at the Milan Photography Competition, 1928. Opens his own photographic studio, 1932. Works as stage photographer for the Munchener Kammerspiele (Munich Studio Theater), 1932. Registered as a photographic studio in Paris in September 1934, elected member of the Société Française de la Photographie in 1938 and the Royal Photographic Society of London in 1939. Interned by the French authorities, September 1939; accepted as voluntary "Prestataires," 30 May, 1940. Immigrates to United States, 1941; becomes U.S. citizen 1946. Works for various magazines in New York, early 1940s. Serves as chief of still photography, United Nations Reconstruction Agency, Korea, 1952–1953. Teaches at Black Mountain College, 1944, at both the Cooper Union, 1946–1966 and New School for Social Research, 1949–1975. Died in New York on 7 October, 1984.

BROWNIE

The proliferation of amateur snapshot photography and its impact on contemporary society in the twentieth century can be traced to pivotal developments in both camera technology and the marketing of the medium to the masses at the end of the nineteenth century. Entrepreneur George Eastman (1854–1932) began his career in banking but soon turned his budding interest in photography toward professional ends, founding the Eastman Dry Plate Company (later Eastman Kodak Company) in Rochester, New York in 1880. While at the forefront of the manufacture of dry plates in the United States, Eastman realized photography's cumbersome equipment and processing requirements was daunting for potential users and strove to introduce a radically simplified process. Although the paper roll film holder Eastman soon devised (along with other manufacturers) helped to supplant the dry plate negative, the small 'detective' camera he first equipped with this new type of film in 1886 was still too complicated and expensive to achieve broad success in the marketplace. By 1888, Eastman created a new version of the hand-held roll film camera—a small wooden box fitted with a simple lens and loaded with film capable of recording 100 circular images, 2½ inches in diameter. The name Kodak was coined for this latest manifestation of the hand camera—chosen by Eastman for the authoritative look of the word's two letter 'Ks' and for the ease of its pronunciation in various foreign languages. Yet the widespread success of this camera can be attributed to neither its catchy name or even wholly to its innovative film format, but rather to Eastman's groundbreaking marketing of the total photographic endeavor.

In addition to being simple enough that “anybody, man, woman or child, who has sufficient intelligence to point a box straight and press a button” could make successful photographs, the pre-loaded Kodak camera was returned intact after the exposures were made to the Eastman Company for development and printing and was finally sent back to the customer re-loaded and ready for use (Eastman in Coe and Gates, *The Snapshot Photograph* [1977] page 17). Eastman's ingenious marketing strategy, encapsulated in the company's slogan, “You press the button, we do the rest,” and laid

the foundation for a widespread democratization of photographic practice in the decades to follow (Ford, *The Story of Popular Photography* [1989] page 62).

Yet the Kodak camera was still relatively expensive—at the cost of \$25 in 1888, it was well outside the range of many, and by 1898, the Eastman Company introduced a less expensive, easy-to-operate camera aimed at further broadening the pool of amateur photographers. This simple box camera, called the Brownie, was devised by Frank A. Brownell, who had designed and manufactured cameras for the Eastman Company since 1885 and who would be its chief camera manufacturer until 1907. The Brownie was made of wood and jute board with an imitation leather covering and was equipped with a simple fixed-focus lens and rotary shutter. It was capable of producing successful exposures in relatively strong sunlight with subjects in focus from several feet to around 100 feet. The Brownie had no viewfinder but was marked with V-shaped sight lines on the top of the box which aided, when held at waist level, in aiming the camera toward the subject. The Brownie was pre-loaded with roll film, and yielded six 2¼-inch square images per strip, which could be tracked through a built-in red indexing window. At the cost of \$1.00 (film included), the Brownie did indeed satisfy the demand for a markedly less expensive camera accessible to the amateur practitioner. With developing, printing, and mounting of prints equally affordable at \$0.40, sales of the Brownie camera soared, reaching more than 100,000 cameras by the end of 1900.

By 1910, approximately one-third of all Americans owned a camera—that many of these were Brownie cameras must be attributed to a significant factor beyond its technical simplicity—namely Eastman Company's deliberate marketing of the new camera to children, both through a barrage of advertisements and in the very naming of the camera itself. Brownie was very much a household word in turn-of-the-century America before becoming the name of Eastman's latest camera. It described a type of small elf culled from popular legend to occupy the pages of author and illustrator Palmer Cox's children's stories. First published in the juvenile magazine, *St. Nicholas*, the brownies were

BROWNIE

further immortalized in numerous books, each of which bore the same introductory description of these creatures:

Brownies, like fairies and goblins, are imaginary little sprites, who are supposed to delight in harmless pranks and helpful deeds. They work and sport while weary households sleep, and never allow themselves to be seen by mortal eyes....

(Cox, *The Brownies: Their Book* 1887, n.p.)

This description of the Brownie, when associated with the Eastman's camera, speaks both to common assumptions about the nature of photography as revealing of something of the intangible aspect of the visual world unseen by the naked eye, as well as to its fit with Eastman's targeted users—children. The original 1900 packaging of the Brownie camera featured one of Cox's mischievous creatures playing against a colorful red, yellow, and green background on all four sides of the carton. In addition, these same brownie characters pitched the notion of photographing with the camera as a playful toy in advertisements for the ten years from 1900 to 1910. Ultimately, this manufactured relationship surfaced in one of Cox's own illustrations, which featured his character armed with the camera bearing his name.

In addition to the marketing of the Brownie camera with this popular children's character, Eastman Company also appealed to youth as potential photographers through extensive illustrated advertisements. In fact, it is estimated that images of children, engaged with this new photographic 'toy,' previously known to many of them solely within the formal confines of the portrait studio, comprised more than one-third of all those advertisements produced by the company between 1917 and 1932. Reproduced extensively in popular juvenile magazines of the day such as *St. Nicholas*, *The Youth's Companion*, *American Boy* and *Boy's Life*, as well as in the professional dealer publication, *Kodak Trade Circular*, such Brownie advertisements were often accompanied by the slogan, "Any Schoolboy or Girl Can Make Good Pictures with the Brownie Camera." Ads produced after 1910 often focused on young boys in particular, targeting their potential for a more sophisticated understanding of the camera's advanced features and capabilities, as opposed to the carefree leisurely practice of the "Kodak Girls" of Eastman's earlier campaigns. Eastman Company expanded upon the marked success of such campaigns with various special promotions such as a Brownie Camera Club. In celebration of the fiftieth anniversary of the founding of the company, Eastman offered young girls and

boys a free camera for their twelfth birthday during 1930—specifically, a unique variation of the No. 2 Hawkeye Brownie covered in tan imitation leather and marked with a gold foil anniversary seal. In just a few days in May 1930, approximately 550,000 of these special edition Brownies were distributed to children.

Following the first Brownie introduced to the public in 1900, to the last camera that carried this name, nearly 100 different models were produced. The first variation, simply called the No. 2 Brownie, was introduced in 1901 and varied from the original (thereafter call the No. 1) in several ways. The No. 2 Brownie was equipped with a reflective viewfinder as well as three aperture options and produced $2\frac{1}{4} \times 3\frac{1}{4}$ -inch images. While this second version of the Brownie cost twice as much as its predecessor, it was extremely popular and served as the model for numerous variations in design produced through the 1950s. In fact, by 1930, the price of the No. 2 Brownie was not prohibitive, representing only 15% of the average weekly wage of Eastman Company's factory employee.

The vastly popular Nos. 1 and 2 Brownies, widely imitated by competing companies in both the United States and abroad, were also produced in an ongoing line by Eastman Company in the coming decades. In Great Britain, George Houghton and Sons devised a version of the Brownie in 1901 called the No. 1 Scout, while the American company ANSCO sold a competing line of cameras bearing the name Buster Brown, beginning in 1906. Those variations of the original Brownie camera produced by Eastman Company included several larger, and more expensive, folding camera models, produced between 1904 and 1926. In 1934, designer Walter Dorwin Teague created the Baby Brownie in a series of smaller models equipped with 127 roll film. The design of the Baby Brownie embodied both newly evolving capabilities in the molding of those plastics used to form the camera body, as well as the sleek, streamline aesthetics of the era. Specialty editions of already existing models were produced throughout the 1930s, including the Boy Scout Brownie (marketed in 1932 and 1933–1934), which featured the insignia of the American Boy Scouts against a geometric design on the camera's front panel as well as a similar model commemorating the World's Fair (marketed in 1939–1940). Other embellishments included Brownie models produced in a range of colors, such as the No. 2 Portrait Brownie. In addition to being outfitted with a special adjustable lens for close-up portraiture, this camera, marketed especially to women, was available in six colors as well as the standard black.

Although Eastman Company's initial advertisements of the Brownie cameras emphasized its perfect suitability for children, such promotion likewise underscored the camera's inherent simplicity for all amateur users, young and old alike, as well as its natural associations with the notions of adventure and imagination. Its removal of the need to understand the technical aspects of photographic processing and printing furthermore helped to introduce the snapshot to a vast array of new practitioners, who produced a myriad of images of family life, travel, leisure, and work, largely marked by an informal spontaneity as yet unseen in the history of the medium. A new element of the everyday entered into photography's vernacular, which stood in opposition to both the rare occasion of the family portrait and the elevated concerns of the photographic artist.

Yet the snapshot's thorough saturation in contemporary popular culture, with its origins in these turn-of-the-century amateur practitioners, has been met with both chagrin and critical interest. While considered far outside the purview of the art establishment by some, the last few decades have likewise seen the snapshot made the subject of scholarly attention and museum exhibition, while the sim-

ple aesthetic potential of the Brownie camera has been utilized by artists such as photographer William Christenberry.

FRANCIS JOSEPH BRUGUIÈRE

American

Francis Bruguière produced some of the most avant-garde photography experiments of the early twentieth century. Always drawn to the abstract, Bruguière blended the sharp lines of modernism with a passion for darkroom effects. Until he found his own voice, however, Bruguière's first explorations were in a more traditional vein and thus largely neglected in the photographic canon today. Perhaps this censure was also due to Bruguière's frequent collaborations combined with his late involvement with one of the premiere movements to establish photography as a fine art, Alfred Stieglitz's Photo-Secession. Nevertheless, Bruguière forged a unique vision that did not end with the demise of Stieglitz's group, but began after it.

Bruguière was born to parents of French and Spanish heritage in 1879 in San Francisco, California. From a wealthy background, he attended a private school in the East and toured Europe. In 1901, he met and married Eliza Jones, a Broadway actress, who bore him a son three years later. In 1905, Bruguière visited New York. Instead of being drawn to the enigmatic Stieglitz, as many Photo-Secessionists were, he was instead drawn to Frank Eugene. Originally a painter, Eugene was known for incorporating liberal handwork into his negatives and prints and was often criticized for his extreme techniques. At Eugene's encouragement, Bruguière began to investigate photography as an art form and opened a studio in 1906. The two remained friends and corresponded for the rest of their lives.

Typical of the aesthetics and subject matter of Pictorialists, misty scenes of nudes comprised Bruguère's early work. In 1915, Bruguère and the Bay Area Photo-Secessionist Anne Brigman curated the photography section of the Panama-Pacific Exposition in San Francisco. It was not shown in the Palace of Fine Arts, where one could see Impressionist and Post-Impressionist masters, leading his fellow Photo-Secessionists to boycott. Despite becoming a Photo-Secessionist in 1905, Bruguère remained on the outskirts of the movement geographically and philosophically, allying himself with more minor members. He exhibited only once at the Photo-Secession gallery "291" in New York and contributed only one photograph to its journal, *Camera Work*—one issue before Stieglitz stopped its production in 1917.

Bruguère moved to New York in 1919 and immediately began to investigate a more "modern" aesthetic. There he opened a studio and began photographing for *Vogue*, *Harper's Bazaar*, and *Vanity Fair*. Bruguère also engrossed himself in the theatre, becoming the official photographer for the New York Theatre Guild (1919–1927). It was during a photography session for *Harper's Bazaar* that he met Rosalinde Fuller, the British actress who would become his model and mistress for the rest of his life.

In 1923, Bruguère discovered Sebastian Droste, a young German dancer, and began a daring film project titled *The Way*. Droste and Fuller were the sole actors in this drama, an early example of surrealist leanings in America. Scenes of *The Way* included jarring multiple exposures, "film-noir-escape" lighting, and eerie heavy makeup. Bruguère intended *The Way* to concern "(the) thoughts of people who imagine rather than act realities. The main idea is that of a man who seeks happiness. From the beginning of his Pilgrimage to the end, he lives in a world of dreams." Unfortunately, Droste died in 1925 and the film was never finished; it survives only in Bruguère's posed still photographs.

Using techniques developed to light the stage, Bruguère began to explore issues of time and space by photographing cut paper. Although Bruguère's experiments recall cubist interests in abstract form, his primary goal was to allude to motion. This theme was further developed when he photographed Thomas Wilfred's "color organ," or clavilux, in 1921. An outgrowth of an interest in "synaesthesia," or the crossing of the senses, color organs allowed people to "see" compositions of light from a keyboard. Bruguère saw in these performances a popular turn-of-the-century notion—the fourth dimension. He wrote: "that is the effect I have long wanted to

give. The effect of movement in the eye of the beholder, though the object itself was absolutely stationary when photographed."

In 1928, Bruguère moved to London and became acquainted with two men with whom he would later collaborate: critic Oswald Blakeston and graphic designer E. McKnight Kauffer. Bruguère produced several books in which photographs were integrated with, and sometimes stood in for, text: Lancelot Sieveking's *Beyond this Point* (1929) and Blakeston's *Few Are Chosen* (1931). With Kauffer, Bruguère created novel advertisements that combined photographs, text, and surrealist imagery for Shell Oil, the British Postal Service, and Charnaux Corset Company.

Perhaps the epitome of Bruguère's blending of various media can be seen in his collaboration with Blakeston on England's first abstract film, *Light Rhythms* (1930). This film exists today only in description and notation as the original was destroyed in World War II. Arranged into movements and accompanied by a piano score, Bruguère's cut paper abstractions were lit by moving lights in pre-arranged sequences. In later investigations into cinematic effects, Bruguère photographed New York buildings at severe angles for a never-finished film he dubbed *Pseudomorphic*.

During the 1930s and 1940s, Bruguère occupied himself with further variations on photographic processes, including solarization and the cliché-verre. Both of these processes do not necessarily rely on an object or even a camera to produce their effects. The strange almost aura-like results of solarization, popularized by Man Ray in the 1920s, are created by exposing a print to light during the development process and engage chance, a topic of interest to the Surrealists.

In 1937, Bruguère was commissioned to design the entrance to the British Pavilion at the Paris Exposition, covering the 50-foot-high walls with large photomurals. Shortly after the exposition, Bruguère moved to the country to devote time to painting. Due to poor health, he returned to London where he began an unfinished autobiography. Before his death in 1945, Bruguère explored C. G. Jung, mandalas, and Eastern philosophies. His multi-disciplinary acumen—ranging from theater, music, film, to graphic design—prefigured a type of artistic activity that was to become more common later in the century, especially with the artists of the postmodern era. His legacy, however, can be seen in the abstract work of later photographers such as Frederick Sommer and Carl Chiarenza.

VICTOR BURGIN

English

Equally known for his theoretical writings and for his artworks, Victor Burgin has had a profound impact on photography since the late 1960s. Comprising photography, text, video, and critical writing, his creative practice challenges traditional dualistic categories, operating in the in-between spaces between art and theory, image and text, photography and film, narrative and coincidence, inner and outer realms, psychic and social realities. As Maya Deren did for American avant-garde film, as Joseph Kosuth did for early conceptual art, and as Allan Kaprow did for happenings—artists who were impassioned advocates for their particular media, art histories, and conceptual positions—Burgin has extensively contextualized the ideas and concerns fueling his work. In the process he has staunchly defended the relevance of photographic images to contemporary society. He has done this on two fronts: in terms of the hidden ideologies images represent from the point of view of social, economic, and gendered institutions, and in terms of the way the psychological unconscious fuels our subjective projections onto what we see in the world around us.

Burgin's interests have moved from the semiotics of Roland Barthes to the class consciousness of Karl Marx and Louis Althusser to the psychoanalytic theories of Sigmund Freud and Jacques Lacan, along the way including feminism, film theory, postmodernism, and cultural studies. Often giving a very close reading of his influences, Burgin finds in each of these theorists language that articulates the complexities of interpretation and meaning, with a methodological focus on demystifying social phenomena—sign, image, class, and sex respectively—formerly assumed to be fixed and natural. Burgin's genius is to apply these theories and methods to the task of denaturalizing photography, which also suffers from essentialist assumptions about its truth-value. Throughout all of his investigations is a persistent questioning of the way social institutions and personal experiences mediate photographs, an emphasis on the connotative, rhetorical meanings of photographic images that belie their obvious empirical, denotative meanings.

A few key pieces early on lay Burgin's theoretical, aesthetic groundwork. *Photopath* (1967), first presented in the landmark exhibition *When Attitudes Become Form*, presents a row of photographs of a hardwood floor laid out exactly to match the areas photographed underneath them; the subtle one-to-one displacement, however, briefly confuses the real and the imaged, suggesting the faint ghosting of memory on the actual event. In *Performative Narrative* (1971), nearly identical images of an office desk are paired with 16 different text narratives. The slight differences in both are governed by a strict set of binary possibilities: file folder open or closed, desk chair pushed in or out, events described closer or farther in time, closer or farther in space. The systematic exploration of these possibilities contrasts sharply with the more evocative connotations of the scenes, as the emotional resonance of the photographs shifts depending on who we think took the photo, whose experience we think it captures, and how all those involved relate to one another. The street poster *Possession* (1976), initially posted throughout the city center of Newcastle upon Tyne, England, appropriates the visual rhetoric of mass media but with a linguistic twist; while the image shows a conventionally beautiful couple embracing, relying similar to advertising on the appeal of the image to draw a passerby's glance, the text questions the status quo distribution of wealth and property. Rather than convince us of the accuracy of the camera's reportage, these early photographic projects ask viewers to become critically aware of our own contribution to creating meaning for the images at hand.

One consequence of denaturalizing photography is that all perception can then be understood to arise out of a complicated intermingling of factual, cultural, and psychological associations. In Burgin's more recent work, which includes video portraits of New York, London, Paris, Weimar, and Berlin, and a collection of essays titled *In/Different Spaces: Place and Memory in Visual Culture* (1996), the experience of place becomes the subject of this critical analysis. For example, *Venise* (1993) explores the Mediterranean port city of Marseilles, but is juxtaposed with footage of San Francisco. A voice-over narration that tells the story of *Vertigo* and its dual manifestations in Alfred Hitchcock's film set in California and the

original novel set in Paris and Marseilles. Other elements add to this layered doubling to emphasize the theme of migration: colonial imagery from a 1936 French film, North African music on the soundtrack. As the multi-threaded videos suggest, even while walking the streets the real and the imagined are hopelessly confounded by past experiences of other cities, memories of other times, snippets of literary, historical, and filmic representations, and our own idiosyncratic needs and wants. For Burgin, the object of our gaze, much as the object of our love, is never what we think it is; we never see something purely but always filtered through a network of prior recollections and desires. This explains in part the complexity of Burgin's video work: the open-ended narratives, the repetitions and patterns that provide structural support in lieu of a singular storyline, the tendency to appropriate other films and other artworks into his imagery, the shifting authorial voice of its speakers. As in his writings, Burgin quotes many other artists and authors in his artwork: Edward Hopper's *Office at Night*, Edouard Manet's *Olympia*, Johann Wolfgang von Goethe's *Elective Affinities*, Freud's case histories, E.T.A. Hoffman's *Gradiva*, Hitchcock's films, the personal letters of Friedrich Nietzsche and Lou Salome, the correspondences between Freud and his collaborator Sandor Ferenczi. By putting his images in a complex stream of other images, culled together through the peculiarities of his own imagination, Burgin defeats the single point of view of the isolated photograph. He allows photography to work around its own limits, or rather, its material, analogue basis, to begin to represent the harder-to-show subjective side of meaning.

In artists' books and exhibition catalogues such as *Between* (1986), *Some Cities* (1996), and *Victor Burgin* (2001) from his retrospective in Barcelona, Burgin has generously shared a detailed view of his motivating preoccupations. While such articulation should not be taken as narrowly definitive of the work—the work itself being more robust than what the artist has to say about it—it gives a rare chance to understand in depth one artist's relationship to his chosen profession. Those who love photography are fortunate to have such a record at our disposal.

BURNING-IN

Burning-in is a darkroom technique employed by photographers to fine-tune the tone and shadows in one or more areas of a print by adding more light to those areas than the rest of the image receives. Once a photographer has determined how long his exposure should be and has made a print at that exposure time, he might decide that there are areas of the print that are too light, but that increasing the overall exposure time would make most of the print too

dark. Burning-in allows him to add more light only to selected areas of the print while still maintaining the original exposure time for the rest of the image. Burning-in is often used to darken areas that are too light so that, hopefully, more information from the negative will show up on the final print.

It is important to remember that burning-in occurs after the initial exposure time and is the addition of light to specific areas of the print. While

BURNING-IN

burning-in can be a helpful technique, overuse of burning-in can create areas that are grey and murky, and can decrease contrast, especially in black and white prints. Burning-in requires practice, and the added “burning” time changes with each negative printed.

Burning-in an area on an image can be done with or without a specific “burning-in” tool. Some photographers prefer to use their hands, held together in such a way that there is a small hole between the hands or fingers through which light can pass. In some ways, this is easier than using a burning-in tool with a static opening, because the size of the hole a photographer’s hands are making can be changed during the burning-in time and is infinitely variable. A burning-in tool is usually a piece of opaque board with a small hole cut or torn somewhere near the middle of the board. The tool (whether board or hands) is then held between the light and the easel, and is moved rapidly back and forth to create a small “spotlight” or light directed onto the image in the area that needs additional light. The rapid back-and-forth movement creates a feathered effect that ensures that the burned-in area will blend with the surrounding areas and with the rest of the image. If the burning-in tool remains static, the area of added light will stand out from the rest of the image with clearly-defined borders.

Once a photographer has determined that an area needs to be burned-in, he places an unexposed piece of photographic paper into the easel and exposes it for the already-determined length of time. Then, without moving either the easel or the enlarger, and without changing the aperture setting, he turns back on the enlarger lamp to add more light to selected areas. This is most easily done with a foot pedal, as that allows the photographer to have both hands free to cover the image and only allow light to fall in the selected area. However, a foot pedal is not necessary, and burning-in can be accomplished with any kind of timing device. It is important that nothing be moved before or during the burning-in, as re-exposing areas of the image after movement will cause blurring on the final image—so not only should the photographer be sure not to move anything before adding light, he should also be careful not to bump the enlarger or the lens with his burning-in tool while making the exposure.

The time needed to burn-in areas agreeably can vary widely. Since burning-in occurs after the initial exposure time, burning-in times are almost limitless. If desired, the photographer can make a test strip in the area that needs to be burned-in, taking as his starting time the overall exposure time and increasing the time from there. Once satisfied with the tone

of the area on the test strip, the photographer can make a full-sized print and burn-in the area for the amount of time indicated by the test strip. The photographer can also use trial and error to determine how much additional time an area needs, making educated guesses based on each print he attempts.

Obviously, past a certain point, continued light in an area of a print will turn that area black. This can be used to the photographer’s advantage if he is interested in creating, for instance, an artificial vignetted-edged effect—here, the photographer would burn-in each edge for a sufficient amount of time to turn the edge black, making sure to feather the edges into the rest of the print. Using this technique, the photographer can change the appearance of the format he is printing, such as by burning-in the edges to a circular or oval shape.

Burning-in can also be used to create other visual effects in the darkroom. Just as edges of burned-in areas are softened by moving the burning-in tool for the duration of the additional exposure, hard edges can be created by holding a piece of opaque paper with a specifically cut out area stationary between the light and the easel. While most photographers want any burned-in areas of their prints to blend into the non-burned-in areas, there are certainly ways to play with the obviousness of burning-in. Burning-in can be helpful in evening out tones in prints made from uneven or thick negatives, the additional light often bringing out information that did not come through in the initial exposure.

Most digital image manipulation software includes a variable-sized burning-in tool, which can be moved across the image to darken certain areas. However, it often seems that digital burning-in quickly de-saturates and muddies colors, rendering them less vivid than non-burned-in areas. While it can be a useful tool, burning-in seems best used sparingly and in small areas, both digitally and in traditional darkrooms.

RENÉ BURRI

Swiss

The work of René Burri continued the tradition of engaged, documentary photography in the second half of the twentieth century. Traveling with his camera to a myriad of places around the world, he is one of the most important representatives of “live photography.” Born in 1933 in Zurich, Burri was educated at the Kunstgewerbeschule in Zurich (Zurich School for Applied Arts) between 1949–1953. His teachers included Johannes Itten who taught elements and color instruction and Hans Finsler who taught photography. Burri’s initial interest was in film. While still at the Kunstgewerbeschule, Burri received a scholarship to create a documentary about his school. In 1953, he also served as camera assistant to Ernst A. Heininger for the Disney film, *Switzerland*. His interest in film continued throughout his life, and in 1964 Burri was a founding member of Magnum Films.

After military service, Burri began to work with his 35-mm Leica. Through the intervention of his friend, Werner Bischof, who also motivated him to continue developing his style, Burri’s coverage of deaf-mute children at the Zurich Institute for Musical and Rhythmic Education appeared in *Life* magazine (it was previously printed in *Science et Vie*). This began a significant career in international photojournalism with world travels and numerous photographs published in *Look*, *Fortune*, *Paris-Match*, *Twen*, *Stern*, *Geo*, *The New York Times*, and *The Sunday Times*. Many of his best-known series, however, appeared in the Swiss magazine *Du*, including *Gauchos* of 1959 and a series on famed architect Le Corbusier.

Through Werner Bischof, Burri had become acquainted in 1955 with Magnum Photos and its founder Henri Cartier-Bresson. Bresson became a friend and, following Hans Finsler, Burri’s second great teacher. Whereas Finsler taught him to view things in an austere manner, emphasizing graphics, Burri was able, via Cartier-Bresson, to confirm his ideas about photojournalism, that it should be humane and has a moral obligation to inform. The combination of these divergent tendencies is significant. Burri is at base a storyteller, for whom photographic composition always plays an important role. Even in the shots that sometimes appear to be fortuitous, a specific moment can be found in

which elements such as the cropping, camera angle, composition, and lighting harmonize with the content. Such pictures, therefore, sometimes appear to be constructed.

I am conscious of my great facility in constructing images, that probably comes from my knowledge and experience of graphic arts. But technique should never impose itself, know-how should never be distracting. The means are made to clarify the end, not to obscure it.

(Burri 1984)

Portraits of artists such as *Pablo Picasso* (1957 and 1960), *Alberto Giacometti* (1960), and actress *Ingrid Bergman* (1960) or the icon-like portrait of revolutionary *Che Guevara* (1963) with a cigar analyze the character of the sitter despite the fortuity of the foreground. With these portraits Burri demonstrates a pronounced knowledge of human nature, proving himself to be a meticulous observer, who understands how to concentrate and imbue the sum of his impressions into single, empathetic photographs. Burri described his procedure as follows:

There are a few ground rules: The photographer is the clown. With his camera, he can induce something that a journalist cannot. Although a person can tell a journalist everything, a camera can cause the subject to be suddenly confronted with himself. To create intimacy without being perceived is crucial, but not always possible. Some people become too affected by the scene. Everyone is vain, but some can transpose it better than others. Only a very few manage to conceal the vulnerable places.

(Ulmer 1999)

In 1962 *Die Deutschen* (*The Germans*), Burri’s first book, was published by Robert Delpire with a forward by French cultural theorist Jean Beaudrillard. In this photoseries Burri explored his mother’s nasence the end of the 1950s. On the one hand, he analyzed himself in a sort of critical search for his identity in the former Germany of his mother’s time. Following the tradition set by Henri Cartier-Bresson with *Die Europäer* (*The European*), 1950–1955 and his fellow Swiss, Robert Frank with *Die Amerikaner* (*The Americans*) 1954–1958, Burri’s photographs received considerable acclaim, while the book itself (now a collector’s item) was not a commercial success. His second book, *Gauchos*,

with a text by famed Argentinean author Jorge Luis Borges, appeared in 1968.

He achieved more success with his aerial cityscapes in Brazil such as *Sao Paulo* (1960). Using a bird's eye view of the city center, which flattens the architecture, and shooting for dramatic contrasts of both light and geometric and organic forms, a breathtaking panorama is presented that emphasizes the anonymity of the city and the alienation of its human residents, who are depicted as tiny silhouettes.

Idyllic places are rarely depicted in Burri's pictures. Similarly, illustrated confirmations of clichés about places and countries are also rare. Rather, in his photographs he explores national identities through documenting the living history while connecting it with the past, especially evident in such series as *Terre de Guerre* and *In Search of the Holy Land*, which depict war zones, to his Argentinean *Gauchos* and *Amerikanscher Traum: Photographien aus der Welt der NASA und des Pentagon* series. Burri succeeds in depicting a world wherein common human concerns are emphasized while the unique qualities of particular places are captured.

International contracts sent Burri to Czechoslovakia in 1955, France and Libya in 1957, the Middle East and Egypt during the 1956 Suez Canal crisis and the 1967 Six-Day-War, South America for numerous assignments, Korea and Japan in 1961, Vietnam during the Vietnam War in 1963, and China in 1964 among many other places. These trips resulted in photoserries and books such as *Nasser's Egypt* (1958), *Fidel Castro's Cuba* (1963), *The New Petrol Kings* (1974), *A Day in the Life of America* (1974), *Searchers for Gold, Brazil* (1977), *Palestinian Fighters* (1979), and *A Day in the Life of Australia—March 6, 1981* (1981).

Burri most characteristically works in black and white, although he also worked with color since 1976. Parallel to his work in photography, Burri also produced films for advertisement and industry that include *The Physical Face of China* (1965), *Three Villages of China* (1965), *The Industrial Revolution* (1965), *Jerusalem* (1967), *What's It All About?* (1967)—with this film he won the New York International Film and Television Festival Award in 1967—*Jerusalem After the Six-Day-War* (1967), *The Two Faces of China* (1968), *Bracia Si, Uomini No* (1970, with Peter Ammann), *Xerox in Concert* (1971, with Philipp Gittelmann), *Jean Tinguely* (1972), and *Indian Summer* (1973).

FRANZ-XAVER SCHLEGEL

Biography

Born in Zurich, Switzerland, April 9, 1933. Studied at the Kunstgewerbeschule in Zurich (Zurich School for Applied Arts), 1949–1953. Basic courses from Johannes Itten; Photography from Hans Finsler and Alfred Willmann. From 1953 on active as a photojournalist and published first photo reports. Served in the military and bought his first Leica in 1954. Set up studio with Walter Binder, 1954. In 1955, a photographer for Josef Müller-Brockmann; became an independent photographer. Member of the photo agency Magnum, associated in 1955. In 1956, correspondent in New York and Paris. In 1959 became a full member of Magnum and in 1964, a founding member of Magnum Films. President of Magnum France, vice president of Magnum in Europe, and opened the Magnum Gallery in 1982 together with Bruno Barbey. Married Rosellina Bischof in 1963 and had two children: Yasmine and Oliver. Became Art Director of the *Schweizer Illustrierte* in 1988. Honors: International Film and Television Festival Award, New York, 1967; Dr. Erich-Salomon-Preis der Deutschen Gesellschaft für Photographie (DGPh) (Dr. Erich Salomon Award for the German Society of Photography) in Cologne, 1988; and was named Chevalier d'Ordre des Arts et des Lettres by the French Minister of Culture, 1991. René Burri has remarried and lives in Zurich and Paris.

LARRY BURROWS

British

Shot by shot, story by story, Larry Burrows developed an enduring vision of the war in Vietnam, where he photographed for nine years from 1962 until his presumed death under fire in a helicopter on the Vietnam-Laos border in 1971. In the process, Burrows developed his reputation as one of the preeminent photojournalists of the twentieth century. Working for *Life* magazine, Burrows created remarkable photo essays in both black-and-white and color that chronicle the escalating involvement of the United States in Vietnam, from advisers to full combatants after 1965, and the emotional and physical toll of the war on Vietnamese and Americans alike. Besides the powerful legacy of his Vietnam photographs, Burrows photographed a range of other subjects across several continents in his 25-year career.

Born Henry Leslie Burrows in London in 1926 to working class parents (his father was a truck driver for the railroad, his mother was a housewife), Burrows never attended college. He honed his craft through a lengthy apprenticeship, first as a dark-room assistant at Keystone Photographic Agency in London in 1941, then getting a job in 1942, at age 16, as a photographic laboratory technician in *Life* magazine's London bureau. Rejected by the military because of his poor eyesight, Burrows served in the Home Guard during World War II and experienced the blitz firsthand. He worked in *Life*'s lab until 1945, other than for a period during 1944 when he was conscripted by the government to

work in the British coal mines in support of the war effort. His duties at *Life* ranged from fetching tea and coffee for people in the office to processing film and printing photographs taken by some of the legendary combat photographers of World War II, including Robert Capa.

Burrows' professional career as a photographer began in 1945. He was a freelance photographer from 1945–1961, often under contract to *Life*. In this period, he photographed more than 700 assignments, working mainly in Europe, the Middle East, and Africa, although he also went to India, Pakistan, and the United States. His varied subjects included celebrities such as novelist Ernest Hemingway, shots at bullfights in France and Spain, politicians such as Winston Churchill, violent conflicts in Lebanon and the Congo, and archaeological excavations. In this period Burrows also worked on a project photographing great artworks in Europe for reproduction in *Life*, an experience that honed his sensitivity to pictorial composition and taught him to understand and use color like an artist, as a means to create emotion and bring out the nuances of a visual story.

In 1961 Burrows became a *Life* staff photographer, based in Hong Kong, a position he held until his death in 1971. Although Vietnam subsumed much of his time during the last 10 years of his life, he also produced photo essays on subjects in places from India to New Zealand, photographing the architectural wonders of India's Taj Mahal and Cambodia's Angkor Wat, the beauty of New Guinea's birds of paradise, Emperor Hirohito of Japan

and Prince Sihanouk of Cambodia, the 1964 Olympic Games, a historical piece on the British East India Company, and the 1970 cyclone in the Ganges Delta in what was then East Pakistan.

In 1962 Burrows went to Vietnam for the first time. The war was a small story in 1962 as far as the United States was concerned: President Kennedy had only recently sent American soldiers as advisers to the South Vietnamese Army, with no commitment of combat troops. Burrows, then 36, grasped at once that Vietnam had the potential of an epic story. According to David Halberstam in his introduction to *Larry Burrows: Vietnam* (2002), Vietnam “was the assignment [Burrows] had always wanted....He was drawn to it by both its elemental humanity and its parallel cruelty and violence, and by the fact that it lent itself so well to what he wanted to do—the magazine photo spread.” Burrows used the essay format brilliantly to tell compelling stories, including his first long Vietnam feature in *Life*, titled *In Color: The Vicious Fighting in Vietnam, We Wade Deeper into Jungle War*, a 14-page story with a foldout cover published on January 25, 1963, which helped convey to Americans the quality of that cruel civil war fought by small bands of soldiers in the countryside, pitting Vietnamese against Vietnamese. In this and subsequent essays, Burrows demonstrated his pioneering understanding of when and how to use color effectively for war photography, showing human dramas against landscapes of often stunning beauty.

Burrows had the advantage over press photographers working for daily newspapers, who worked on tight deadlines, of having time to conceptualize and develop a story, often spending months immersing himself intellectually and visually in a long photo essay. Press photographers in Vietnam had extraordinary freedom of access to combat zones, and Burrows was fearless about getting close to the action. Stories abound about his courage and dedication, including strapping himself to the open doorway of an airplane to shoot photos for his 1966 essay, *The Air War*.

A chronological survey of Burrows’s Vietnam photo essays demonstrates his intellectual grasp of the important trends of the ever-escalating war, with its terribly mounting violence and evolving psychological texture. *One Ride with Yankee Papa 13*, a spread of 22 photographs published in *Life* on April 16, 1965, chronicled a dangerous helicopter mission during which marines attempted to rescue wounded comrades, one of whom died. Focusing in particular on a young crew chief, Burrows’s photo story conveyed the soldier’s emotional journey in the course of the mission from grinning newcomer to devastated veteran. *Operation Prairie*, published on October 28,

1966, documented a bloody six-month Marine infantry campaign that took a devastating toll in U.S. casualties. One photo from that story, *Reaching Out* (during the aftermath of taking hill 484, South Vietnam), which shows bandaged soldiers covered in mud, is one of Burrows’s most frequently reproduced photos. Although Burrows said he began working in Vietnam with leanings as a hawk, his ten-page photo essay, *Vietnam: A Degree of Disillusion*, published on September 19, 1969, expressed, Burrows wrote in one of his captions, “a degree of disillusion and demoralization in the Army and the population that surprised and shocked me.”

On February 10, 1971, as the invasion of Laos was imminent, Burrows and four other combat photographers—Kent Potter, Keizaburo Shimamoto, Henri Huet, and Tu Vu—rode aboard a South Vietnamese helicopter that was shot down by antiaircraft guns along the Vietnam-Laos border. Burrows, who was 44 years old, left behind his wife Vicky, son Russell, and daughter Deborah. Twenty-seven years later, in 1998, an American search and recovery team excavated the crash site in Laos, recovering pieces of film and a Leica camera that most likely had belonged to Burrows.

NANCY BURSON

American

The works of Nancy Burson have earned a place within the history of postmodern photography largely as images that challenge the viewer's perception of visual reality, normality, beauty, and often, abject ugliness. While Burson's portraits share surface similarities with the works of Diane Arbus and Ralph Eugene Meatyard from the previous two decades, they are more directly related to conceptual photography as well as being emblematic of contemporary experiments with digital photography, exploring techniques of manipulation, simulation, and reproduction. However, Burson has always moved omnivorously among photographic media and approaches, and her work is difficult to classify.

Burson's oeuvre can be roughly organized into three phases: her early work (1979 to 1991) dealt with fantasy or surreal faces. These computer-generated works included composite imagery, aged portraits, and digitally manipulated faces that resulted in bizarre and sometimes frightening anomalies. Examples include *Warhead I*, a computer-generated "portrait" composed of media images of world leaders based on quantities of nuclear arsenals of each country. The composite image is 55% of Ronald Reagan, 45% of Leonid Brezhnev, and less than 1% each of British Prime Minister Margaret Thatcher,

French President François Mitterrand, and Chinese leader Deng Xiaoping. The work is presented as a full frontal portrait in a format similar to a mug shot, without background. The second phase of her work—made between 1991 and 1995—includes "straight" photographic portraits of what Burson calls "special faces," namely persons whose features have been deformed or marred by disease or other natural abnormalities. The third phase (1996 to the present) includes disparate images that combine straight and manipulated technologies, among these, color Polaroids of "faith healers" (the *Healing* series), and collaborative projects that meld art with science and technology, including *The Human Race Machine* (2000), an interactive installation that allows a viewer to picture himself or herself as a different race or an amalgam of races.

In 1968, shortly after a move to New York City from Denver (where Burson had studied painting at Colorado Women's College), she viewed an exhibition at the Museum of Modern Art that signaled a turning point in her career. *The Machine as Seen at the End of the Mechanical Age* traversed six centuries of historical intersections between art and technology with a particular emphasis on technological art of the 1960s. Burson was thus inspired to conceive an interactive ageing machine, an installation that would allow a viewer to age himself or herself with

the aid of a computer. In 1976, the Massachusetts Institute of Technology's Architecture Machine Group (today the MIT Media Laboratory) adopted Burson's project. However, it would take several years for the technology to advance in order for Burson and her collaborators to realize *The Age Machine*. In 1981, the artist and engineer Thomas Schneider jointly received a patent for "The Method and Apparatus for Producing an Image of a Person's Face at a Different Age," which has been subsequently used by the United States government, including the FBI, to locate missing children based on the computer-generated photographs of what they would look like if they had been "aged." Reflective of her ongoing investigations about the self and the myriad representations of identity, sameness, and difference, Burson continued to refine the technology with the aid of computer scientists David Kramlich and Richard Carling. In 1990, Kramlich and Burson presented *The Age Machine* at MIT, an interactive computer station whereby a viewer could sit at a console and scan an image of his or her face, input some data, and within seconds the machine would create a speculative portrait of the sitter 25 years in the future.

Burson relied on this collaboration to create a number of arresting "portraits," or composite pictures in which the structure or features of numerous individuals are blended in the creation of a hybrid, a person who only exists in fantasy or virtual reality. Examples of these include a series of *Untitled* color Polaroids of subjects whose warped features appear partly human, partly alien. Other composites that meld faces of different races, ages, and sexes, as well as media images of celebrities and politicians, result in sometimes eerie, sometimes humorous visages that blur the line between the universal and the particular, self and other. Although some viewers might interpret Burson's composites as simply bizarre or voyeuristic—fodder for a circus sideshow—the artist believes that they represent a relevant curiosity about identity, selfhood, and the truth of the photograph. According to curator Dana Friis-Hansen, "plotting gut instincts about the self and human nature against the mechanics and metaphors of technology led Burson to her considerable achievement: a humanizing technology" (Friis-Hansen, 1990, 8).

Moreover, her work reveals connections not only to the massive history of portraiture but to the history of physiognomy (the study of personality traits based upon facial characteristics), as well as phrenology, a nineteenth-century pseudoscience that purported to establish links between cranial and facial structure and intelligence and racial superiority. While Burson's composites engage with or perhaps

echo this history, they do not claim to define or make statements about the aforementioned races or "types" as her historical antecedents did. Rather, Burson is drawn to the question of whether seeing can be equated with believing and whether visual perception can effectively communicate reality. Never one to assume that seeing *is* simply believing, Burson's photography has continually sought to explore the imagistic, the psychological, and the spiritual aspects of the visual world.

After spending approximately 15 years on the forefront of digital and computer technology in order to create her fantastical faces, Burson then turned to a more traditional approach to the medium. She began shooting "straight" portraits of subjects—adults and children—whose faces were deformed by various diseases such as cancer or genetic abnormalities. In effect the photographer turned from digitally altered faces to those that had been biologically altered, if not permanently marred. Burson explained that her interest in photographing children with Apert syndrome and other craniofacial disorders was spurred by her own pregnancy in 1989. Preoccupied with the possibility of genetic deformities, as a prelude to the straight works, she began to produce composite "portraits" based on images she found in medical casebooks. These *Untitled* images from the late 1980s are meant to be read as ambiguous representations of genetic disorder based on multiple images, rather than a specific individual visage. When she turned to flesh and blood rather than virtual subjects, the photographer reexamined the blurry notion of photographic truth (essentially asking, "Does the camera lie?") but also forced the viewer to recognize his or her preconceived notions about Burson's difficult subjects. The result is that the viewer is caught up in the artist's own vision as the camera captures the sometimes stark and grotesque faces of the deformed.

Apert syndrome, an extremely rare and random genetic disorder, affects and deforms the bones of one's head, hands, and feet. Subjects with the syndrome often have overly tall or asymmetrical skulls, sunken features, and webbed hands and feet. Burson's first subject of this kind was Nathaniel, the young son of a friend, Jeanne McDermott. One mother's painful recognition that the world might never accept her son based on his appearance spurred McDermott to ask Burson to photograph him. She desired other people to see a different vision of her beloved child, one in which his humanity would connect rather than differentiate him from others. McDermott wrote in *Nancy Burson: Faces*:

So deeply embedded is our experience of the visual world with what we see from the moment of birth, that vision never was and never will be a mechanistic process of recording reality 'just as it is.' This is particularly true when it comes to faces. According to studies, within the first five seconds of meeting someone, we make up our minds about a person's character and moral nature based largely on how we see his face.

(Burson and McDermott 1993, n.p.)

Burson echoes this notion in her claim that her faces are mirrors for the viewer, reflecting one's projections and ideas in sometimes startling ways. The untitled series was made with a plastic Diana camera, a simple child's camera that results in square negatives and blurry images, as aperture and focus cannot be manipulated. These snapshot images communicate a poignancy and beauty that brazenly confronts the taboo of looking at the "other" among us. Burson's images of sufferers of Apert syndrome do not shy away from the reality of her subjects' deformities, but they also do not fetishize them. Rather, these images reflect a warmth and tenderness without resorting to sentimentalizing or editorializing. The hazy gray tones, close-up point of view, tight cropping, and seemingly haphazard compositions endow these pictures with an air of mystery and surrealism while also capturing the everyday or snapshot aesthetic. She followed this series in 1994–1995 with 24 × 20-inch color Polaroids of faces altered by cancer, reconstructive surgery, and prosthetics.

Since 1996 Burson has created photographs that echo her investigations into science and technology, often returning to the computer-generated image. In 1997–1998 she photographed androgynous men and women in a series called *He/She*. The sex of the sitter is not made clear to the viewer (all of the Polaroids are untitled) as Burson specifically sought faces that blurred conventionally masculine and feminine features. Burson writes

My goal is to emphasize the commonality of people rather than their differences or separateness....the series intentionally challenges the individual's notion of self-perception, by allowing viewers to see beyond superficial sexual differences to our common humanity.

(Artist's Statement 2004)

The artist's focus on universality and humanity more closely aligns her work with modern (rather than postmodern) theories of the self. In addition, the *He/She* portraits do not present these ideas in any didactic way, but rather function on a purely aesthetic level.

As part of a series titled *Pictures of Health*, Burson teamed with Russian scientist Konstantin Kor-

otkov in 2000 to photograph the "aura" emitted through a person's fingertips using a Gas Discharge Visualization camera. The camera—used in Europe and Russia for diagnostic purposes—records energy fields, or auras. Two of these works that Burson describes as "aural fingerprints," titled *The Difference Between Negative and Positive Thought* and *The Difference Between Love and Anger*, were made from the hands of hands-on healers who generated a wide range of emotional states within themselves. Burson then photographically "mapped" a range of auras based on the emotional temperature, as it were, of the healer. Other recent, related works made in collaboration with geneticists at the National Cancer Institute include images of healthy and unhealthy DNA. The images are created as scanned electron microscope photographs that Burson outputs as Iris prints.

Biography

Born in St. Louis, Missouri in 1948; currently lives and works in New York City. Raised in the Midwest; studied painting at Colorado Women's College in Denver, CO, 1966–1968; subsequently moved to New York, NY. Visiting professor at Harvard University, Cambridge, MA, and adjunct professor at New York University. Collaborated with Creative Time and the Lower Manhattan Cultural Council completing several important public art projects including the billboard *There's No Gene For Race* and the poster/postcard project *Focus on Peace* (2000). The *Focus on Peace* project distributed 30,000 postcards and 7,000 posters around the site of the World Trade Center to coincide with the anniversary of 9/11.

C

CABLE RELEASE

A cable release is a device that allows the camera shutter to be remotely activated. Seen in practical terms, the device allows the photographer to be “hands-off,” because even the almost undetectable movement caused by the body’s pulse can be enough to blur the image in a shot with the camera. In technical terms, a cable release is a plunger that the photographer grasps, a cable, and a pin or some device to trigger the camera shutter.

Yet the cable release can be useful in other applications in which the photographer wants to be away from the camera while taking the picture. The cable can be of various lengths, and is most widely used in animal and nature photography where the photographer may need to screen himself or herself separately from view, apart from the camera set-up; candid photography, where the photographer’s presence fixed to the camera may dampen spontaneity; children’s photography, where the subject may need to be actively distracted by the photographer, and in instances when the photographer wants to appear in the picture.

Professional studio photographers employ cable releases routinely if engagement by the photographer carrying on a conversation with the subject leads to better portraits, less squirming or movement by the subject, and may permit the subject to

be more natural and relaxed. The use of large-format cameras, where the parameters of the scene are set by ducking the head under a light-dampening blanket, historically used in studio portraiture, certainly can be seen as inhibiting a natural response in a subject. In nature photography, some means of being away from the camera is often essential a camera being much easier to hide than a person. Cable releases attached to trip wires where the photographer is nowhere in the area have also been increasingly used in remote locations where sitting for hours awaiting a shy or nocturnal animal is simply not practical.

A variation on the conventional mechanical system featured in most cable releases is the use of an air bulb to trigger the device that then clicks the shutter. Some feel this is more gentle, reliable and dependable. The air bulb is attached by a tube to a piston that is moved by the increase in air pressure that occurs when the bulb is squeezed. This motion in turn then triggers the cable release socket on the camera to trip the camera shutter. Typically the fixed mechanical cable release is short and places the photographer near the camera. The tube on the air or bulb release sort of system may be longer, at times up to 20 feet, allowing the photographer to be further away. It also can be released by foot

CABLE RELEASE

pressure, freeing up both hands for gesturing or otherwise communicating with the subject.

In many modern cameras the cable release is electronic. The plunger is a button that is powered by the power source for the camera, the cable is wire, and the shutter is triggered by the electrical impulse from the plunger. Many modern cameras do not have mechanical sockets for the straightforward cable release; they depend entirely on the electrical system. Other modern external release systems are able to entirely dispense with the cable. A beam of microwaves, light, or radio waves replaces it. No different a change than from the old cable connected television remote to the more modern one that allows much more movement and convenience. Cameras, like many other devices in the modern world, have become wireless.

Each of these devices has its application. In most medium format and large format photography, it is simply convenient to use a mechanical cable release whether the camera is handheld or attached to a tripod. In the case of large format, it is almost always the case that the camera is on a tripod. To go to the trouble of the larger format, the tripod, and then to hand trip the shutter is simply a contradiction.

In the case of studio photography where there may be elaborate lighting setups firing a number of the lights, synchronization of these lights more often than not requires some form of cable release. There are combinations of slaves and triggers that are operated by light, radio frequency, or microwaves that make these setups possible and manageable. This is moving toward the elaborate iteration of the cable release, but the intent is the same—coordi-

nation of various pieces of equipment and removal of the photographer's hand from the camera.

In photography such as macro-photography, product photography, or other close-up requirements in which extreme sharpness is important, it is critical that the release of the shutter be as smooth as possible. Thus, to reduce blur, some sort of cable shutter release system is essential. Simple mechanical cable releases are inexpensive and are an affordable way in which to improve the ability to get an optimal exposure. They do jam, bend, and otherwise occasionally fail, and like all camera gear, cable releases should be packed and cared for gently. Air releases are usually marginally more expensive but remain one of the more affordable of all photo accessories. Electronic cables are considerably more expensive, and the wireless systems even more so, and each photographer's requirements will dictate the type of equipment best suited to his or her needs.

It is also important when selecting a camera that one thinks about what sort of work will be done with it and whether or not a cable release system will be required, for there are some cameras that are not equipped with any attachment point for any sort of external release mechanism. There are instructions for homemade cable releases that can be found in books and on the internet that may help if one is confronted with this sort of problem, although it is best avoided.

GENEVIÈVE CADIEUX

Canadian

The extraordinary force of Geneviève Cadieux's work derives from the visual coherence and breadth with which her often very large creations repeatedly bring corporeal intimacy and absorptive anxiety into an inescapably public forum. They engulf and destabilize the viewer through simultaneous attraction and repulsion, while con-

currently calling into play multiple resonances around both aesthetic and social issues. Born in Montreal in 1955 but raised in Ottawa where she obtained a BA with a specialisation in visual arts from the University of Ottawa, she sometimes referred to the influence which her father's repertory cinema had upon her tendency to visualize her works in large-screen filmic format, or as installations in often darkened rooms. For example, in the

early installation *Voices of Reason/Voices of Madness*, 1983, as much as in the recent video *Paramour*, 1998–1999, the viewer is offered close-ups of female heads during an endlessly repeated fragmentary event, pregnant with an implied narrative of psychic torment. In the first work, the viewer steps before a color slide projection of a woman's head with only the eyes lighted, staring at the opposite wall, where another woman's head, in a black-and-white projection, gradually dissolves into a milky focus and an anguished expression. Suddenly, the viewer is shocked by a loud shot, and the face gradually returns to focus, to begin again. In the second, the woman anxiously asks again and again, "Haven't you ever loved a woman? Haven't you ever desired a woman? Not once, not for a single moment? Never, ever?" to be answered each time by a male voice from behind the viewer, "No, never."

However, Cadieux's work cannot be enlisted to feminism, as almost any label tends to oversimplify the range and depth of her references. The woman's questions in *Paramour*, for example, are derived from a text of Marguerite Duras, an appropriation of literary sources which Cadieux had previously displayed in *La Blessure d'une cicatrice ou Les Anges (The Wound of a Scar or The Angels)*, 1987. In that large diptych, the left panel contained a painted image of Le Petit Prince, hero of Saint-Exupéry's famous children's book, his features effaced and with the inscription below "Voilà le meilleur portrait que plus tard, j'ai réussi à faire de lui" [Here is the best portrait that I was later able to make of him], while the right panel reproduced one of the most famous of the *Storyville Portraits* by E.J. Bellocq—a prostitute seen from the rear, her head scratched out in the emulsion. In Cadieux's work, she seems to be drawing a butterfly on the wall. This juxtaposition, taken from two volumes collected by Cadieux in what she called her "archives," combined and amended both literary and visual sources in a duality which problematized portraiture and identity through metaphors of inadequacy and scarring, and the conflation of child, prostitute, and angel. That Cadieux was suggesting an implicit damage or disability when contemplating the sensitive self seems confirmed by another work which also used the Petit Prince quotation, *A fleur de peau (On Edge or Skin Deep)*, 1987. There, the left panel of the diptych reproduced the quotation in Braille, while the right was a clouded mirror; a blind viewer would not see a reflection in the mirror, while a sighted viewer would not understand the Braille unaided, and neither could easily decode the fragmentary or

elusive view of self, based as much on suggestible memory as on immediate experience, into which they were being drawn.

These examples also foreground two other defining formal features of Cadieux's work—its multi-media range, including a crucial use of often punning titles, and its intimate focus on bodily damage or enlargement as an evocative mechanism. She frequently uses blown-up scars or parts of the body or skin contextualized by positioning with landscape or architectural elements. For example, the instability of meaning in titles such as *La Fêlure, au chœur des corps*, recalls the postmodern insistence on language games, and is matched with the surreal juxtaposition of two giant lips kissing between two healed scars. This intense interest in the body's pleasures and the marks of corporeal pain, linked to a size which engenders a sense of both overwhelming force and of powerless voyeurism, reflects other postmodern fascinations. This work, constructed at room size and displayed as Canada's contribution at the *Venice Biennale* of 1990, confirmed Cadieux's international stature. She has been exhibited extensively in 13 countries in Europe as well as in Canada, the United States, Japan, Brazil, and Australia, and she has taught in France (1993–1994, 1996), Spain (1997), and in the United States (1998) as well as Canada. Together with some other Canadians such as Jeff Wall and Evergon, she helped to define and influence a tendency among young Canadian art photographers to use large color photographic imagery to construct ironic or surreal worlds.

However, no other Canadian has so effortlessly moved between sculpture, painting, photography, and video formats, appropriations, installations with sound, and classic references to diptych, triptych, and serial forms, all often connected to landscapes, interior or exterior architecture or specific sites. She came to photography later in her artistic training, underlining that, fundamentally, the presence of the artist is felt in her works more in the concept, which determines medium and form, than in the physical mark. This allows her to roam between a very precise realism (e.g., *Elle*, 1993, a cast of her mother's arm) and an evocative abstraction. The texture of the pores of the skin in many of her works can seem indistinguishable from the grain of photographic emulsion, an effect she admits is deliberate. She also calls upon a range of previous classical genres, from nudes to portraiture to landscape, set within a range of social contexts, from medicine to technology; but they are created usually for a museum space which can tolerate and

assimilate the works according to that oxymoron, conventional avant-gardist criteria. In portraiture, already referred to above, she has made deft use of her own family members to explore by suggestion themes of attraction and alienation, and of aging. In three of her most well-known works, *Hear Me With Your Eyes* of 1989, *Family Portrait* of 1991, and *La Voie lactée* of 1992, she has used, respectively, her actress sister in a triptych which revealed her at two intense moments some 10 years apart; an installation of three large free-standing lightboxes featuring enigmatic details of her father, mother, and sister turned away from each other at the corners of a triangle; and a billboard-size view of her mother's lush mouth installed on the roof of the Musée d'art contemporain in Montreal. Except for *Family Portrait*, these works are not, at first, evident as portrait statements; nonetheless, their effectiveness depends on the viewer's sense of identification with the physical and psychological presence, even the suffering, of another which underlies the impact of portraiture.

Cadieux's work has also been likened to pornography (e.g., *Loin de moi, et près du lointain* [*Far From Me, Near to the Distance*] 1993, a photograph showing a flaccid penis) although the only work to be censored to date is *Blue Fear*, which contrasted an older man's naked back set against a pair of large staring eyes. This work so disturbed the older citizens of Plymouth, England, that, in 1992, the work was rejected for exhibition; notably, it was to have been installed on Plymouth Hoe, a seaside recreational site, not in a museum. However, the body does fascinate her, very like photographic emulsion, which is also sensitive and which makes a record; it is like the body which ages and, in Cadieux's words, "qui enregistre le temps, la peau qui enregistre les blessures" [and which records time, skin which records wounds].

Biography

Born in Montreal, Canada, 17 July 1955. Obtained a BA with specialization in visual arts from the University of Ottawa, Canada in 1977. In 1993, won a Deutscher Akademischer Austauschdienst to work in Berlin for some months; over 1993-94, was artist in residence at the École nationale supérieure des beaux-arts in Paris, France; in 1996, taught at the École d'art de Grenoble in France; in 1997 at the Universitat Politècnica de València in Spain; and in 1998 at the College of Architecture

and the Arts, University of Illinois, Chicago. Lives in Montreal, Canada, and teaches fine art there at Concordia University.

Individual Exhibitions

- 1977 Saw Gallery; Ottawa, Canada
- 1981 Galerie France Morin; Montreal, Canada
- 1982 *Works by Geneviève Cadieux*; Agnes Etherington Art Centre, Queen's University; Kingston, Canada; and The Gallery Stratford, Stratford, Canada
- 1988 *Geneviève Cadieux*; The Power Plant; Toronto, Canada
- 1990 *Canada XLIV Biennale di Venezia: Geneviève Cadieux*; Canadian Pavilion; Venice, Italy
- 1991 *Geneviève Cadieux*; Centre d'art contemporain de Genève; Geneva, Switzerland
- Kent Fine Art; New York
- 1992 *Geneviève Cadieux*; Institute of Contemporary Art; London, England
- Geneviève Cadieux*; Institute of Contemporary Art; Amsterdam, Netherlands
- Geneviève Cadieux*; Musée départemental d'art contemporain de Rochechouart; Rochechouart, France
- Roppongi Square installation, organized by Sagacho Exhibit Space; Tokyo, Japan
- 1993 *Geneviève Cadieux*; Centre d'art contemporain de Montréal; Montreal, Canada
- 1994 *Geneviève Cadieux*; Bonner Kunstverein; Bonn, Germany
- Geneviève Cadieux*; Museum van Hedendaagse Kunst Antwerpen (MUHKA); Antwerp, Belgium
- Geneviève Cadieux*; Nouveau Musée/Institut d'Art contemporain; Villeurbanne, France

CLAUDE CAHUN

French

In the mid-1980s, during the time of gender and identity debates, Claude Cahun (Lucy Schwob), a prominent figure of the Parisian avant-garde, was rediscovered. Her works created photographic productions of personal identity, in which the self-taught photographer thematized gender and identity in playful engagement with masks and role-playing. For feminist theory, which held self-representation as a central theme, Claude Cahun became an interesting case study. She seemed to anticipate the questions raised by prominent feminist author Judith Butler about the influence of sexuality and development on identity and the problem of the social and sexual normalization of individuals. Accordingly, she was routinely connected to the postmodern strategies of self-production promoted by such artists as Cindy Sherman.

The theme of self-production followed Claude Cahun through all her artistic works in various media. She resisted specializing her artistic activity and worked as a poet, essayist, literary critic, translator, actor, and political activist. The growing reception of her works in the 1980s was concentrated primarily on her photography, however, which was in addition to language the most essential medium of her artistic expression.

The central works of this French artist were self-representations, made between 1912 and 1953, that portrayed her in ever-changing roles. Self-enlightenment was not her obsession; rather, she was interested in the production of possible identities, the ambiguity of gender, and the desire and play with masquerade and alienation. She assumed the

role of the dandy and dressed like a sailor and as a weight lifter; there are also many photographs of her as the Buddha. She displayed herself in a young girl's costume, with her blond hair falling in her face, or as a little girl with knitted sweater and close-cut hair. In the years 1917 to 1929, she most often posed facing the camera in front of a temporary, tightly pulled sheet, and peered with a fixed gaze back at the viewer that challenged him to position himself opposite her. The unsettling effect of her portraits results from the uncertainty of identity that we try to resolve by relying on biological gender distinctions in the photographs. In her confusing play with these identity constructions, Cahun demonstrates the impossibility of locating a fixed, stable definition of self.

In her frontal portraits, she harkens back to the statuary form of bourgeois studio portraits; she deploys in the background a tightly pulled cloth sheet, a citation from nineteenth-century portrait photography. She worked with mirrors and doubling effects—techniques used by the surrealists and by the photographer Florence Henri as their central method of self-representation. A truly radical artist, she paid no heed to the conventions of female beauty and the limits of her body. In *Frontière humaine* (Human frontier), a distorted enlargement that appeared in the surrealist journal *Bifur* in 1930, her head mutates into a grotesque, vertically stretched, anamorphic image of a skull. In another doubling montage, she presents herself as Siamese twins.

In her most important book, *Aveux non avenue* (*Unavowed Confessions* 1930), autobiographical text fragments, dream sequences, and aphorisms

appear next to photomontages that were created with her partner, Suzanne Malherbe (alias Marcel Moore). In it she writes:

I've spent my solitary hours disguising my soul. The masks were so perfect that whenever they crossed paths along the great square of my conscience they did not recognize each other. Tempted by their comic ugliness, I tried on the worst instincts; I adopted, I raised in me young monsters. But the makeup I had used could not be washed away. I scrubbed myself to remove the skin. And my soul, like a face flayed alive, no longer had a human form.

Born Lucy Schob in 1894, the daughter of the publisher Maurice Schwob in Nantes, France, Cahun grew up in an intellectual Jewish bourgeois family. Her grandfather and then her father published the regional newspaper *Le Phare de la Loire*, and her uncle Marcel Schwob was the founder of the prestigious newspaper *Mercure de France* and also a symbolist writer who had an early influence. After studies in Nantes and Oxford, England, in 1914 Cahun studied philology and philosophy at the Sorbonne, Paris, and published her first article, "Vues et visions," in *Mercure de France* under the pseudonym Claude Courlis; after adopting a number of other pseudonyms, including Daniel Douglas, she began calling herself the gender-ambiguous Claude Cahun in 1917, and began her lifetime relationship with her stepsister Suzanne Malherbe in 1919. Their apartment in Montparnasse became a meeting place of Paris bohemians.

Malherbe was a frequent collaborator as well; between 1929 and 1930, they created ten photo collages that divided the accompanying text into panels. This work reached back into a bank of self-portraits that Cahun used as a sort of self-reference. In these collages, she is working through the fragmentation of the body—mostly faces, but often hands, arms, legs, and eyes—that float in the black visual space. The collaboration between Malherbe and Cahun also allegedly extended to many self-portraits in which Malherbe operated the shutter release.

That Cahun's work circles around the issue of self-identity was surely influenced by the fact that the patriarchal structure of society did not provide a role for a lesbian Jew. The typical role of the female artist in surrealism was that of model, muse, and lover of male artists. However, in the lesbian subculture of Paris in the 1920s, Cahun found support and also a forum for her works, which to that point in her life had never been exhibited. She became friends with the writers and

editors Adrienne Monnier, proprietor of the bookstore La Maison des Amis des Livres, a favorite meeting place for the Parisian literary community, and Sylvia Beach, a prominent lesbian expatriate and owner of the English-language Paris bookstore Shakespeare and Company.

The 1930s led to increased politicization of Cahun's art, and she entered public life as an activist. In 1932, she met André Breton and, alarmed by the growing fascist movement, joined for a short while L'Association des Écrivains et Artistes Révolutionnaires (AEAR), a group of revolutionary artists. After a disagreement in 1933 between the organization and the surrealists, whose art was deemed in conflict with the aesthetic line of the Communist International, she left the group and formulated her critique of it in "Les Paris sont ouverts" (translated as Place Your Bets The Paris are Open; 1934). Here, she warned that blind party loyalty would impoverish poetry. In the same year, she became a member of the antifascist political coalition Contre-Attaque, founded by Georges Bataille and André Breton. In the 1930s, she maintained loose contact with the surrealists and signed onto most of their declarations.

During her collaboration with the surrealists in the mid-1930s, she produced works that she exhibited in 1936 as part of the Exposition surréaliste d'objets in Paris and London. In conjunction with this, she published the text "Prenez garde aux objets domestiques" (Beware of Household Objects) in *Cahiers d'Art*. She also created a series of surrealist objects by assembling photographic tableaux, in which numerous artificial human substitutes, such as mannequins, marionettes, and dolls self-made from newspaper, were arranged on a surface with everyday objects. She created the series *Poupée*, which displayed a soldier made from the newspaper *L'Humanité*, the central organ of the French Communist Party, and critically reflected on the position of the Communist Party during the Spanish Civil War. She staged another series with wooden marionettes that she arranged in a scene beneath a glass bell jar.

In 1937, to escape the looming Nazi threat, she moved with Malherbe to the Isle of Jersey, England; she illustrated a collection of poetry for children by Lise Deharme, *Le Coeur de Pic (Pic's Heart)*, with still-life photographs resembling tableaux. During the Nazi occupation of France, Cahun and Malherbe were suspected of spreading antifascist propaganda and in 1944 were imprisoned, condemned to death, and remained in a

CAHUN, CLAUDE

prison until liberated by the Allies in 1945; unfortunately, most of Cahun's works were destroyed during the war.

Biography

Born Lucy Renée Mathilde Schwob in Nantes, France, October 25, 1894; schooled in Nantes. Father remarried, 1906, bringing stepsister Suzanne Malherbe into the household. Studied in Oxford, 1907–08; created her first photographic self-portraits in 1912; began study of philology and philosophy at the Sorbonne, 1914; published "Héroïnes," translation of Havelock Ellis's *Study of Social Psychology*, 1925; worked as an actress in Pierre Albert-Birot's experimental theater, *Le Plateau*, 1929; met André Breton, 1932, joined L'Association des Écrivains et Artistes Révolutionnaires, which she left in 1933 after a disagreement between the organization and the surrealists. Joined the antifascist political coalition *Contre-Attaque*, 1934; participated in *Exposition surréaliste d'objets* in Paris and London, 1936; moved with Malherbe to the Isle of Jersey, England, 1937. Died in Saint-Hélier, Jersey, on December 8, 1954.

HARRY CALLAHAN

American

Harry Callahan joined the premier ranks of American photographers almost from the beginning of his career in the mid 1940s. By the time he was included in the popular 1955 exhibition *The Family of Man* at the Museum of Modern Art, New York (MoMA), his restless experimentation, always at the service of capturing the human and natural landscape and presenting it to further his values and expressive purposes, had made him one of the most important figures in twentieth-century photography. No matter his subject—and most often it was the stuff of ordinary life—Callahan infused his photographs with emotion and quiet elegance. He was also eloquent in speaking of his vision:

You must start with a concept, with the idea that there is much more to the subject than meets the unaided eye. The subject is all-important. And I experiment with various techniques to help me see things differently from the way I saw them before. That is seeing photographically, and when you see photographically, you really see.

(Greenough 184)

Born in Detroit in 1912 to a middle-class family, Callahan studied chemical engineering and then business at Michigan State College from 1934 to 1936. After completing his formal education, he worked as a shipping clerk for the Chrysler Motor Parts Corporation. In 1936, he married Eleanor Knapp, who would later serve as the subject of many of his most enduring photographs. It was about this time that Callahan developed an interest in photography through a photo club at his workplace; he purchased his first camera, a Rolleicord 120, in 1938. After attending a 1941 Detroit Photo Guild workshop taught by the landscape photographer Ansel Adams, Callahan began to devote himself seriously to photography. During 1944–1945, he worked as a processor in the General Motors Corporation photo lab.

Aside from his attendance of photo club lectures, Callahan was self-taught. A seminal episode in this education was a 1945 trip to New York that he described as a “personal fellowship” where he met

many of the established photographers—including Lisette Model, Berenice Abbott, Minor White, and Paul Strand—and art curators of the day. Two major career developments occurred in the late 1940s: in 1946, he was hired by László Moholy-Nagy, then director of the “New Bauhaus”—the Institute of Design (ID) in Chicago—as an instructor in photography; and he began his long friendship with Edward Steichen, director of the department of photography at MoMA. Callahan was included in numerous group and solo exhibitions at MoMA in the 1940s and 1950s, introducing his work widely to the photography community.

Relocating to Chicago from Detroit in 1946, Callahan spent the next 15 years teaching at ID and shooting some of his best-known photographs. He served as head of ID’s Light Workshop (the photography department) beginning in 1949, after the resignation of his old Detroit Camera Club colleague Arthur Siegel. He held this position until 1961, when he left Chicago to assume the chairmanship of the photography department of the Rhode Island School of Design (RISD) in Providence. He held this position until 1973, although he stayed on as a professor until 1977.

Callahan was an influential instructor and a role model for countless students, many of whom would become important photographers in their own right, including Yasuhiro Ishimoto and Kenneth Josephson. His personal innovations and experimentations had a deep impact on ID’s photography program, and his legacy to this now-legendary institution included hiring Aaron Siskind in 1951. Although the Bauhaus curriculum at ID emphasized the study of light (which Callahan expressed in photographs that featured tracings of a flashlight beam created by moving his camera), his assignments often included projects that took his students into the streets of Chicago to record the interaction of architecture and the human figure with the raking light and shadows the urban infrastructure could create. Candid studies of people going about their business, their anonymity paradoxically revelatory, were typical of both Callahan and his ID students and have formed a school of photography celebrated in such exhi-

bitions as *Light and Vision: Photography at the School of Design* and *When Aaron Met Harry: Chicago Photography 1946–1971*. Callahan's famous 1950 series of close-ups of anonymous women shoppers in Chicago began a strain of photography that captured average people and celebrated their individuality; Lee Friedlander and Garry Winogrand perfected this style in the 1960s and 1970s, and it is sustained into the new century by photographers such as Beat Struli.

During Callahan's short formative period, he was influenced by the intimate and contemplative nature studies by Adams; the European Modernism exemplified by the Hungarian Moholy-Nagy; and the aesthetic purity of Alfred Stieglitz, the legendary photographer and curator. By the late 1940s, Callahan had forged a style of his own at the service of a clearly articulated goal, which was to be able to express his life and his observations about life through his photography. Thus, it is not surprising that prevalent in Callahan's work are elegant portraits of his wife Eleanor and daughter Barbara, who was born in 1950. These posed yet strikingly intimate works include views of Eleanor in the streets of Chicago, such as *Eleanor, Chicago, 1953*, and the iconic studies of Eleanor nude in the confines of the domestic interior, such as *Eleanor, Chicago, 1948*, and his 8-inch by 10-inch view camera "snapshots" of Eleanor and Barbara going about their daily lives. At the same time, Callahan continued the tradition of Moholy-Nagy in his formalism and experimentation with the photographic medium, although, rather paradoxically, these photographs also are intense and highly personal. Many of his experiments involve layered images, distortion, or manipulations of focus and contrast, such as *Collage, Chicago, 1957*, which features hundreds of clippings from magazines. Callahan had known the architect Mies van der Rohe when they were on the ID faculty together, and van der Rohe's predilections for simplified form that was also generalized and abstract mirrored his own. Influenced by van der Rohe, Callahan created a series of multiple exposures of architectural subjects typified by *Chicago* (ca. 1948).

Throughout his career, Callahan photographed the natural landscape, including brooding, Minimalist beach scenes taken in Cape Cod, Massachusetts, and textural nature studies of leaves, grasses, tree branches, and twigs, such as the elegantly minimal studies of plant stems against a white background, such as *Detroit* (ca. 1947), which mimics the creases and lines of the nude female body of *Eleanor* (1947). These works have a strong sense of abstraction, and taken together with his more experimental multiple-exposure photographs, show

his familiarity with painterly issues and the influence of painter friends and colleagues such as Hugo Weber (a fellow ID teacher) and Robert Motherwell, whom he met when he taught a summer session at Black Mountain College in North Carolina.

Although he is often thought of as a photographer of the figure or the cityscape and landscape, Callahan also dealt with popular culture and the mass media. Some of his earliest work photographed neon signs, transforming them with camera movements into expressive bursts of light. Especially in the 1960s, perhaps reacting to the general climate of sweeping social and political change in the United States, Callahan focused on cultural imagery, superimposing images taken from television with images of pedestrians, which contrasted the powerful, carefully constructed media images with the mundane reality of everyday life. This strain in Callahan's work, although not as well known, prefigures much of the "image scavenging," or appropriation, practiced by many artists of the 1980s to the turn of the century, including Barbara Kruger and Richard Prince.

Although Callahan experimented with color from the beginning of his career, his photographs of the 1950s and 1960s were generally in black and white; color came to the fore in 1977 in architectural and landscape studies that featured intense, yet low-key, color. Callahan continued his photographic explorations throughout his long career, returning in the 1990s to subjects that he first explored in the 1950s: landscape and street scenes featuring raking light that abstracts the image.

Callahan was influenced by his travels, including a year-long trip to Europe in 1957, which was funded by a grant from the Graham Foundation. This sojourn in Aix-en-Provence, France, produced his well-known works of double-exposure images of Eleanor and the landscape of Provence. A 1963 trip to Mexico was followed by extensive travels in Europe, South America, the South Pacific, Australia, New Zealand, Japan, and China. He was honored with a retrospective at MoMA in 1976 and a traveling retrospective organized by the National Gallery of Art in Washington, DC, in 1996. His photographs have been exhibited internationally and are included in the collections of virtually every photography museum and photography department within general museums. A variety of magazines published his photographs, including *Life*, *Newsweek*, *The New York Times* and *The Chicago Tribune* magazines, *U.S. Camera*, *Aperture*, and *Harper's Bazaar*.

SOPHIE CALLE

French

Sophie Calle produces unique, even idiosyncratic, works at the intersection of performance, photography, and literature. She continually thwarts expectations by radically transforming her artistic methodology for almost every new project. Although Calle works within the lineage of conceptual art, at times recalling the earlier tactics of American conceptual artists of the 1960s and '70s Vito Acconci (surveillance) or Douglas Huebler (mapping), she always places herself in the midst of her practice, as personal narratives unfold within the varying structural contexts of gallery installations, photographic books, and video documentation.

Calle was born in Paris, France, 9 October 1953. Her parents divorced when she was only three years old. She was an introverted child who read avidly. Calle's father, a doctor, collected contemporary art including examples of Pop Art by the Americans Roy Lichtenstein, and Andy Warhol and the French painter Martial Raysse. Calle was heavily influenced by the turbulent politics of the late 1960s and has recalled, "At 15, I was a militant." At the age of 18, Calle traveled to Lebanon and witnessed the Palestinian struggles firsthand. After her initial sojourn abroad, she returned to likewise witness struggles in Paris between assorted factions of activists, and she involved herself with a group which assisted women in obtaining free contraception and abortion (then illegal in France) on demand. Throughout a seven-year period during the 1970s, Calle spent much of her time traveling abroad, including Canada, Mexico, and the United States.

In 1979, Calle asked 29 different friends and acquaintances to sleep in her bed for eight-hour stretches during a one-week long period, and her resulting documentation culminated in a work called *The Sleepers*. Subsequently, Calle created *Venetian Suite*, which begins with the statement:

At the end of January 1981, on the streets of Paris, I followed a man whom I lost sight of a few minutes later in the crowd. That very evening, quite by chance, he was introduced to me at an opening. During the course of our conversation, he told me he was planning an imminent trip to Venice. I decided to follow him.

In *The Hotel*, while working as a chambermaid, Calle made clandestine photographs of the guests' belongings. In 1983, she called phone numbers taken from a lost address book, and then published documentation of her communications each day that August in the newspaper *Libération*. Such elaborate stunts and clever games have become a hallmark of her creative approach.

In *The Blind* (1986) one of Calle's most poignant pieces, she interviewed people who were born blind, querying them about their ideas of beauty. In the resulting works, Calle grouped photographic portraits of the interviewees along with their statements ("White must be the color of purity. I'm told white is beautiful. So I think it's beautiful. But even if it weren't beautiful, it would be the same thing.") and an image taken by the artist. A similar instance of physical absence coupled with verbal description is exemplified by the series *Last Seen* (1991), in which Calle solicited comments from museum employees about "missing" works which then were on loan or had been stolen. The remarks shared with Calle ranged widely from being vague and speculative, to at times poetic or exacting in nature ("I don't remember it at all. Except, I remember there was a guy with a top hat and maybe a mustache/I remember a predominant russet tone apart from the pale rose colored face and hands").

Calle's projects have incorporated both social and personal contexts. In *Exquisite Pain* (1984–2003), Calle displayed 92 photographs and recounted a three-month period she spent in Japan as a student, and the subsequent and painful end of a romantic relationship. The photographs are stamped in red to record the artist's countdown "...DAYS TO UNHAPPINESS." The second part of the exhibition is devoted to images evoking and texts recording the period after Calle's lover fails to appear at their designated meeting place, a hotel room in New Delhi. Here, Calle places a diaristic description of her own angst alongside the responses of others to the question "When have you suffered the most?" The 2003 video *Unfinished* (and an accompanying group of photographs) documents Calle's attempts to create a work using footage and photographs appropriated

from the cameras installed in automatic teller machines. In dealing with the visual records of daily financial transactions, she pondered the various ways by which she could realize a work drawn from this material. The images in turn seemed to thwart Calle's efforts, and the artist ended up with a work that she declared "unfinished."

Collaboration has played a large role in many of Calle's projects. In 1992, Calle co-directed a feature-length video with the American photographer Greg Shepherd entitled *No Sex Last Night (Double Blind)*, which documented their road trip taken in a Cadillac from New York to California. Each used a separate camera to record the journey and their increasingly tense relations. For the exhibition *Double Game*, Calle worked with the writer Paul Auster, who had previously created a fictional character based on Calle who appeared in his 1992 novel *Leviathan*. Both also share an interest in private detectives, as Calle hired one to trace her steps in the 1981 work, *The Shadow*, and Auster's acclaimed *New York Trilogy* (1985–86) reworks the conventions of the detective novel. Calle later asked Auster if he would conjure another character for her to "inhabit" herself, and inspire works for the artist to then "create." The two have communicated back and forth in this way, blurring the edges between fantasy and reality.

Calle often merges realms of fact and fiction in her diverse body of work, creating a third compelling entity, which combines her voice or text, along with a series of images in accordance with a theme. She tends to spy on other participants, both willing and unwilling, and equally to reveal in calculated fashion more and more aspects of her own private (and public) identity. This frequently results in an effect resembling a mirage, hallucination, or hall of mirrors, as Calle departs from the exactitude of photographic facts and instead favors the poetic character of spoken truths.

CAMERA: 35 MM

The 35-mm format is the most popular film and camera format today. Contributing to its popularity are its small compact size and ease of use. At the end of the twentieth century, over 90% of households in the United States owned one or more cameras, most of these 35-mm format. 35-mm film is inexpensive and widely available, as is processing of this versatile film format.

A 35-mm film camera can be one of two types: a rangefinder or a single-lens reflex. Many of today's popular "point-and-shoot" and one-time use cameras use 35-mm film. The term 35-mm directly relates to the film size; the resulting images on film are 35-mm in the longest dimension. 35-mm film is a roll film, meaning it comes in a light-tight canister containing several feet of unexposed film.

A 35-mm camera is typically composed of three main parts: a light-tight body, which also houses the light meter and shutter, a lens, and a viewfinder. In a rangefinder-type 35-mm camera, the viewfinder is located in the top corner of the camera, independent of the photographic lens. Rangefinder 35-mm cameras, also known as point-and-shoot cameras, typically have automatic features, such as automatic film loading, auto-advancing, automatic exposure, and built-in flash that fires when needed to boost exposure. Other features often found on this type of camera are zoom lenses, date/time imprinting, and advanced flash features such as fill-flash and red-eye reduction. Point-and-shoot

cameras have evolved to a camera that is extremely portable, easy to use, and relatively inexpensive.

The second type of 35-mm camera, the single-lens-reflex (SLR), has an incorporated viewfinder. The camera lens is both the viewfinder lens and the lens that is used to photograph with. The image enters the lens, and is reflected off of a mirror up to the viewfinder. The viewfinder of an SLR is composed of several mirrors and prisms to brighten the image and display it in proper orientation to the subject. When the shutter button is depressed, the mirror swings out of the way, temporarily blocking the view through the viewfinder, and allows the image to travel back to the film plane.

35-mm SLRs have the advantage over point-and-shoot cameras in that they allow for interchangeable lenses. The lens is modular, allowing the photographer to choose a specific lens according to his or her needs. SLRs also typically allow for a greater level of control over exposure and metering. For these reasons, 35-mm SLR cameras are the format of choice for many professional photographers, such as photojournalists and commercial photographers.

Camera Components

Body

The camera body is simply a light tight box that houses the film. Inside the camera body is the film

advance system. The film advance is designed to pull the film across the film plane (where the image will be formed). Once the photograph is made, the film advances the distance of one frame, or individual picture area. In many point-and-shoot cameras, advancing the film is done automatically. Once the shutter is closed, a motor winds the film to the next frame to ready the camera for the next exposure. In a manual SLR, advancing the film is done with a film advance lever. Motor drives can be added to SLRs to automatically advance the film. Some SLRs come with an integrated motor drive.

The body also houses the shutter. A shutter is a device used to regulate the amount of time light is permitted to strike the film. The shutter is one of two controls used to regulate exposure. Shutters in 35-mm cameras are typically of the focal plane variety, meaning they are located directly in front of the film, or focal plane. These shutters are composed of either a set of cloth slit curtains or metal leaves. The shutter speed is created by the curtains or leaves moving in sequence, exposing the film from side to side or top to bottom. The speed is dependent on how fast the traveling slit moves across the film.

Shutter speeds can range from 1 second to as fast as $\frac{1}{400}$ of a second. A standard shutter speed range is: 1 sec (slowest), $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{15}$, $\frac{1}{30}$, $\frac{1}{60}$, $\frac{1}{125}$, $\frac{1}{250}$, $\frac{1}{500}$, $\frac{1}{1000}$ (fastest). Increments of these speeds are typically double the time, or half the time, depending on the direction. For example, changing the shutter speed from $\frac{1}{60}$ to $\frac{1}{30}$ doubles the amount of light striking the film, where as changing from a $\frac{1}{60}$ to $\frac{1}{125}$ cuts the amount of exposure in half. One of these increments is typically known as a stop.

In addition to determining the amount of time light is allowed to strike the film, shutter speeds are also responsible for capturing motion. A long shutter speed will blur motion; a short shutter speed will capture it sharply.

In order for the camera to evaluate the amount of light the film needs to make an exposure, it needs a light meter. Virtually all modern 35-mm cameras have built-in light meters, and depending on the camera, the light meter can either set the exposure controls automatically, or give the photographer a guideline of what the exposure needs to be, allowing for various effects.

Lens

The purpose of the lens is to focus the image on the film plane. Depending on the camera, this focusing can take place manually, by rotating the

lens collar, or automatically, in the case of auto focus lenses and cameras. Auto focus lenses work via infrared or ultrasonic sensors that determine subject distance and then set the lens accordingly.

The lens contains the second key element in exposure control, the aperture. The aperture is an iris-like device set inside the lens to control the amount of light that reaches the shutter. The aperture is controlled either automatically through the in-camera light meter, or manually through a series of increments. These increments are called f/stops. A typical f/stop range is as follows: f/2.8 (widest opening), f/4, f/5.6, f/8, f/11, f/16, f/22 (smallest opening). F/stops control how much of an opening there is inside the blades of the aperture. Each increment is half or double the next or last, respectively. For example, changing the aperture from f/11 to f/16 will halve the amount of exposure, while changing from f/11 to f/8 will double it.

Aperture also controls depth-of-field, or the amount of focus in an image. The smaller the aperture opening (higher number), the greater the amount of depth of field there will be in an image. For example, a small aperture would allow a person in a field to be focused as well as the field behind them. A wider aperture (smaller number) would mean the person was sharp, but the field would drop out of focus.

Lens types

Most camera lenses have fixed focal lengths, typically measured in millimeters. A “normal” lens is considered to mimic the average field of view of the human eye, or 50 degrees of view if you are looking straight ahead. To mimic this field of view, a “normal” lens must be equal to the physical diagonal of the film format being used. In the case of 35-mm, this measurement equals approximately 50-mm.

Short focal length lenses are any lenses that are shorter than normal focal length. A 28-mm lens would be considered a short focal length lens for 35-mm format. The shorter the focal length of the lens, the wider angle of view it provides. A 28-mm offers a 75° field of view when on a 35-mm camera. For this reason, short focal length lenses are often known as wide-angle lenses.

Long focal length lenses are any lenses that typically have an angle of view of 35° or less. In a 35-mm, these would be any lenses that are 80-mm or more in focal length. Long focal length lenses enlarge the subject as they narrow the field of view. Within this category are telephoto lenses, which are specially designed long-focal length lenses that

magnify the subject to a greater degree than the focal length would normally determine.

Zoom lenses are lenses of varying focal length. They are labeled as a range, e.g., 28–80 mm. The purpose of the zoom lens is to replace multiple focal lengths with a single lens. However, visual quality will almost always fall short when compared to a fixed focal length lens.

Macro lenses are lenses of normal or longer focal lengths that are designed to focus at a much closer range. This allows the lens to be within inches of the subject for much greater subject magnification than conventional lenses. Macro lenses are also optically corrected to focus critically in high magnification.

Exposure

The shutter speed and aperture needed to capture a given photographic image depend largely on the sensitivity of the film. In the earliest days of photography, film was considered to be “slow”—it was not unusual to have to make an exposure of several hours to get any kind of information on film. Modern films are now so efficient photographers are able to capture images in fractions of a second, provided a properly sensitive film is used. Film sensitivity, or speed, is measured in terms of ISO (International Standards Organization). The higher the ISO, the more sensitive the film, where as lower numbers represent films that are not as sensitive, or “fast.”

Film speed will dictate the shutter speed and aperture needed to make a good exposure. The camera’s internal light meter evaluates the amount of light in a scene. In a manual camera, it will then give the photographer its recommendation as to the shutter and aperture settings to use based on the film’s ISO. Many modern cameras set the ISO automatically by scanning an electronic code located on the film canister.

These settings, once determined by the meter, are interchangeable to a point. For example, if the camera recommends that the exposure should be $\frac{1}{60}$ @ $f/8$, the photographer has several choices. Shutter speed and aperture share a reciprocal relationship. If the photographer wants more depth of field than $f/8$ will him, he could use $f/11$. However, since he has now cut the amount of light striking the film in half, he must compensate by lengthening the time. His final exposure could be $\frac{1}{30}$ @ $f/11$, which would produce exactly the same amount of density as his original light meter reading.

Metering Systems

Light meters in all cameras are based on an average. The light meter assumes that the scene will have equal light areas, dark areas, and mid-tones. This assumption averages out to a characteristic known as middle gray, or 18% gray. The light meter places anything the camera is aimed at in this value. The most common metering system is to simply average all of the subject reflectance that is inside the viewfinder. This system is known as averaging.

However, since not all scenes can or should be averaged to 18% gray, more advanced 35-mm SLR systems allow metering choices. Center-weighted metering places the meter’s emphasis in the center of the frame. Matrix metering is based on a grid that is based on a series of typical lighting situations, such as a bright sky on the top of the frame, and darker land at the bottom. The camera then tries to automatically compensate among choices on the grid. Spot metering, the most precise method, allows the photographer to specify a point in the photograph that they would like to be 18% gray, or take readings off of a highlight and a shadow and average the two.

Accessories

Accessories for 35-mm are widely available because of the format’s widespread popularity. In addition to interchangeable lenses, flashes, tripods, filters, motor drives, bellows, cable releases, a number of other accessories are available for the novice all the way up to the advanced professional.

Flashes

Many 35-mm point-and-shoot cameras have built-in flashes, as do some 35-mm SLR cameras. SLR cameras also offer the choice of additional external flashes, usually connected to the camera via a top slot called a hot shoe, or into a plug via a synchronization cord. Depending on the camera, photographers can employ an additional electronic flash that has a light sensor located on the flash itself, or one that is more advanced and can work with the camera’s meter to shut the built-in flash off at the proper time. These systems are dedicated and automatic, or TTL (through-the-lens) systems, respectively.

Tripods

A sturdy tripod allows a photographer greater freedom when using slower shutter speeds. Tripods

can be made of wood, though most common commercial tripods are composed of lightweight metal.

Filters

Filters are used over the lens to either create or negate a particular visual effect. Filters can also be used to block out a particular color or wavelength of light, as in UV filters. Color correction filters can correct a colorcast in a scene, while specialized filters can create images with starbursts around lights or other specialized effects.

CAMERA: AN OVERVIEW

The camera is in large part responsible for shaping the cultural landscape of the past one hundred years. A camera enables its user to seize a moment in time and capture it on film or as digital information. The camera's final product, the photograph, allows anyone to become an eyewitness to these captured moments, whether 'real' or manufactured. The pervasiveness of photography in world culture is a direct result of advancement in camera technology and manufacture. Modern cameras are portable and precise, though their origins date back to ancient times.

Camera Obscura

The predecessor of the modern camera is the camera obscura ("dark room" in Latin). The camera obscura was often a darkened room, with a small hole in a window covering. Through the hole, an image of life outside the window was projected on to an opposite parallel wall, upside down. This principle had been known in early Chinese, Arabic, and Greek cultures.

The basic concept behind the camera obscura, and all cameras, is that light travels in a straight line. When light rays reflected off of a subject pass through a hole, they cross and reform. The hole acts as a point of projection for the image. Any ray

of light that passes through the hole will hit the focus plane (the wall) at a particular point. Any other ray of light, again being reflected off of the initial subject, will intersect at a different point. These multiple points, when reassembled on the focus plane, form the image. The distance from the hole to the focus plane determines the final size of the image.

The discovery of photography in 1827 by Joseph Niépce and his partner, Louis Daguerre, fostered the birth of the modern camera. In fact, Daguerre used camera obscura in many of his early photographic attempts, but soon employed more portable cameras such as pinhole and simple lens cameras.

Pinhole cameras

Pinhole cameras consist of a light-tight box or container with at least two parallel surfaces, with a small hole in one of those surfaces. The primary difference between pinhole cameras and camera obscura is that pinhole cameras use some type of light-sensitive material (film or photographic paper) to capture the image and make it permanent. Pinhole cameras can be made out of almost any container that can be made to be light tight.

Pinhole cameras, though still in use today, present some drawbacks, although some photographers

CAMERA: AN OVERVIEW

exploit these characteristics for aesthetic ends. Images generated by pinhole cameras are fuzzy and lack detail. Optics, and, finally, complex lenses began to be used in place of the hole in a pinhole camera, allowing an image to be focused on the image plane.

The simple camera

A simple camera consists of three basic parts: a light-tight container, or body, a lens, and an image plane, that is, a place for film or other light sensitive material to be placed to receive the projected image. Modern cameras also include viewfinders to aim and compose the image, a shutter and aperture to control the light reaching the film, and a light meter to determine the amount of light needed to create the image. Modern photography often integrates these systems so that the user is often not aware of the inner workings of the camera.

Camera types can be divided into several categories, most notably by their viewing/lens systems.

View Cameras

The earliest lens camera type, the view camera, is still used today. The view camera body consists of two standards (front and rear) that provide a support system for a flexible length of bellows. The bellows are an accordion-folded length of stiff, light-tight material that extends between the standards. The front standard of a view camera holds the lens board, which contains a view camera lens. A view camera lens contains all of the exposure controls for the camera, including the aperture and shutter speed. View cameras do not have light meters. The rear standard houses the ground glass, the image plane of the view camera. The image is focused on the ground glass with the help of a dark cloth draped over the back of the camera and the photographer. The film is then inserted in front of the ground glass before taking the photograph.

Older view cameras used glass or metal plates coated with photographic emulsions as their light-sensitive material. Many early photographic processes, including Daguerrotypes and Tintypes were done with view cameras. Modern view cameras use sheet film, squares of film cut to fit the size format of the camera. The most popular view camera size today is 4×5 , that is, utilizing film that is 4×5 inches, though cameras utilizing 8×10 inch film are still used. Film sheets are loaded in complete darkness in sheet film holders specially designed to be light tight. Once inserted into the view camera, the

dark slide protecting the film is removed so that the film can be exposed in the camera. Each film holder contains two sheets of film when loaded. View cameras can also use instant film, such as Polaroid, with a special film holder.

Sheet film presents with the advantages of excellent clarity and resolution, but also is slow to load and inconvenient to shoot quickly. As technological advances in photographic materials allowed for shorter exposure times and flexible films, many photographers wished for cameras that could be used more quickly as well. Roll-film cameras were developed to support burgeoning fields such as photojournalism, allowing photographers to capture images seconds apart. Film was made into long strips, or rolls, to allow for more speed and spontaneity in photography.

Rangefinder Cameras

The dilemma with view cameras is that the viewing system and the image capture system are one and the same. The rangefinder camera attempts to solve that problem by providing a separate “composition” finder, either mounted on top or inside the camera, to allow the photographer to more spontaneously choose and frame their subject.

Many of the first consumer-level cameras were rangefinder cameras developed by George Eastman of Eastman Kodak Company. The Kodak “Brownie,” a box camera with roll film already loaded, had a viewfinder in the top corner of the box. No more than a channel blocked off by clear glass, the viewfinder nonetheless allowed users to “point and shoot.”

The rangefinder viewing system remains popular today. The advantage of rangefinder cameras is that they are among the quietest and smoothest systems available, with no mirror to jar the image upon exposure. Rangefinder cameras are what are commonly referred to as today’s “point and shoot” cameras.

Rangefinder cameras are made for both 35-mm roll film and medium format roll films.

Twin Lens Reflex

The term “reflex” in both twin lens reflex and single lens reflex cameras refers to the use of a mirror to reflect the composed image to the viewfinder. The mirror in a twin lens reflex sits directly behind the upper viewing lens, while the lower lens of the camera is responsible for transmitting the image to film.

The mirror sets the image right side-up, but like any mirrored image, the image is reversed left-to-right. The image is projected on a ground glass surface in the viewfinder for focusing and composition. Since the two lenses are mounted as one piece, any focusing that takes place for the viewing lens is mimicked in the photographic lens. The viewfinder in a twin-lens reflex camera is most often a waist-level finder, meaning the image is projected to the ground glass mounted to the top of the camera. In order to easily see the image in the ground glass, the photographer must hold the camera at waist-level. The ground glass image is typically shielded for viewing by a set of metal leaves that form a box around the ground glass.

Twin lens reflex cameras are typically made for medium format roll films.

Single Lens Reflex

The most common modern camera type is the single lens reflex camera. In a single lens reflex camera, both viewing and photography takes place through a single lens. A mirror deflects the image coming through the lens and sends it to the prism for viewing and composition. The prism of a single-lens reflex camera is made up of a series of mirrors and lenses to brighten the image and orient it properly for the viewer. When the shutter button is depressed, the mirror swings out of the way to allow the image to travel back to the film. Although the most popular example of a single lens reflex camera is 35-mm roll film format, most professional grade medium format cameras today are also single lens reflex.

Light Control

Exposure

Exposure is the amount of light needed to form an image on film or other light sensitive materials. In the early stages of photography, it was not uncommon to require several minutes of exposure to form an image. Technological advances in film sensitivity and characteristics have reduced this time to fractions of a second.

There are many different levels of sensitivity available in today's modern films. Film sensitivity, often referred to as film speed, is measured in terms of ISO (International Standards Organization). The higher the ISO number, the more sensitive the film is, and the less light it will need to make a proper exposure. The lower the film speed, the more light it will need to obtain a proper exposure. For example, a film with an ISO of 800 will allow

the photographer to capture images with shorter exposures than will a film with a speed of 400. ISO numbers correspond to their sensitivity; ISO 400 film needs twice as much light to make the same exposure as ISO 800 film.

Light Meters

In order to determine how much light is needed for an exposure, a photographer must use a light meter. Light meters are most often integrated into the camera system, either informing the photographer of the proper exposure for that film and scene, or setting that exposure automatically. In order for the light meter in the camera to function properly, the meter must know the sensitivity, or ISO, of the film being used. Many modern film manufacturers mark the film canister with an electronically read code, called a DX code, so that a DX-code enabled camera can automatically set the meter to the proper ISO.

Shutter and Aperture

Once the amount of exposure has been determined, cameras employ two controls to obtain that exposure, shutter and aperture. The shutter is a device inside the camera that controls the amount of time that the film is exposed to light. Because of today's high film speeds, shutters must travel very quickly, exposing the film in fractions of a second. A typical shutter speed range could be from $\frac{1}{2000}$ of a second all the way up to one second. Many cameras set shutter speed in increments so that each speed is twice or half the one next to it. For example, the next speed up from $\frac{1}{500}$ of a second would be $\frac{1}{1000}$ (half the amount of time), and the next down would be $\frac{1}{250}$ (twice the amount of time). These increments are commonly referred to as stops. Most commonly, shutters are located inside the camera body directly in front of the film. These types of shutters are called focal plane shutters, and are usually constructed of a series of cloth curtains or metal leaves. Less common is the leaf shutter, typically found in view cameras and professional grade medium format cameras. A leaf shutter is constructed of lightweight metal in a circular, iris-like fashion.

The other camera control used to control exposure is the aperture. Located in the lens, the aperture is an iris-like device that is set to permit a certain amount of light. When the blades of the aperture are closed down, a very small hole is created for light to pass through. When the blades of the aperture are opened up, a larger hole is created, therefore allowing more light to pass through. Openings of aperture

CAMERA: AN OVERVIEW

are measured in f/stops, which are based on the area of the opening. A typical range of f/stops on a lens may span from f/2 (wide opening) to f/22 (very small opening). Like shutter speeds, apertures are also most often set in increments to the power of two. For example, an aperture of f/8 lets in twice the amount of light as f/11.

Aperture and shutter speed share an inverse relationship. Each controls a different aspect of the image. If the goal is to capture fast motion, a faster shutter speed is needed. In order to achieve that fast speed, it is usually necessary to open up the aperture to compensate for the short shutter speed. Likewise, smaller apertures allow for a great amount of depth of field. Depth of field is what allows the photographer to control the amount of focus in the image. For example, if someone is photographing a flower with a mountain range for a background, they could have both in focus if they use a very small aperture, such as f/22 or f/32. However, since these f/stops constitute very small openings, a longer shutter speed is usually required to make up for the exposure lost by closing down the aperture.

CAMERA: DIANA

The Diana Camera is a plastic “toy” camera that contemporary photographers have embraced for its simplicity and unique quality of image. The camera was manufactured by the Great Wall Plastic Factory of Kowloon, Hong Kong, beginning sometime in the early 1960s through reportedly the early 1970s. It was imported to the United States by the Power Sales Company of Willow Grove, Pennsylvania, and only sold by the gross (twelve dozen), with a price ranging from one to three dollars each. Though Diana is the best known brand name, the camera was marketed under other names including Anny, Arrow, Arrow Flash, Asiana, Banier, Banner, Colorflash Deluxe, Debonair, Diana Deluxe, Diane F, Dionne F2, Dories, Flocon RF, Hi-Flash, Justen, Lina, Lina S, Mark L, MegoMatic, Merit Mirage, Pnanx Photon 120, Pioneer, Raleigh, Reliance, Rosko, Rover, See, Shakeys, Stellar, Stellar

Flash, Tina, Traceflex, Truview, Valiant, Windsor, Zip, and Zodiac. Two cameras that are currently being manufactured are popular successors to the Diana, the Chinese-made Holga and the Russian-made LOMO.

Technically, the Diana camera has a plastic body, light blue and black, and a plastic lens. The standard model has a single shutter speed that, because of its inexpensive nature, varies in speed from $\frac{1}{30}$ to $\frac{1}{8}$ of a second. Other models have a B (bulb) setting, and the F model even has a built-in flash. Included on all models are three aperture settings, illustrated by drawings: sunny (f-16), sun with clouds (f-6.3), and cloudy (f-4.5). The camera also allows for limited manual focusing with three settings: 4 to 6 feet, 6 to 12 feet, and 12 feet to infinity. The camera uses 120 film, making sixteen exposures that are approximately 2×2 inches. The

film is manually advanced. A frame count can be viewed through a red window on the back of the camera. It is often recommended that the body of the camera be taped with black electrical tape along the seams to avoid light leaks.

For many photographers, the very nature of the camera, a plastic toy, allows them a spontaneity that they may not have with more sophisticated and technical equipment. Through its friendly appearance, it allows photographers an ease in which to approach subjects and shoot pictures, especially portraiture. The photographer embraces and is challenged by the serendipitous nature of the resulting work. The light leaks, along with the shape of the negative, the distortion of the plastic lens, and the fact that the lens is not color-corrected all lend an element of surprise to the final image. Often the images come out blurred and distorted, achieving a dream-like, surreal quality.

The use of the camera by students and professionals in the United States dates to the late 1960s. Early milestones include photographer Nancy Rexroth's portfolio of images included in "The Snapshot" issue of *Aperture* in 1974. Her 1977 book entitled *Iowa* included Diana images that were autobiographical of the artist's childhood and furthered her reputation as a serious photographer who used the Diana camera. Another early project that familiarized photographers with the camera came in the late 1970s when photographer Mark Schwartz, for a project entitled *We Do the Rest*, sent several hundred Diana cameras to United States photographers, asking them to shoot the film and return the camera with exposed film intact. In 1980, David Featherstone organized *The Diana Show* for the Friends of Photography in Carmel, California. Featuring the work of 43 photographers, the exhibit and accompanying catalogue and essay were important firsts in highlighting the Diana camera.

The Diana camera and its successors continue to be used by amateur and professional photographers in the fields of fine art, commercial photography, and photojournalism. In the early 1990s, artist Nancy Burson, best known for her digitized composite portrait photographs, used the Diana camera to photograph children with craniofacial condition, a rare disfiguring disorder. Burson used the camera to create subjective, softly focused portraits in sharp contrast to more sterile, clinical portraits. Using the contemporary Holga camera, award-winning photojournalist David Burnett captured unique and powerful images of American political candidates on the 2000 presidential campaign trail.

The idiosyncrasies of the Diana camera are its legacy, allowing photographers to capture images and express themselves in unique and unpredictable ways.

CAMERA: DIGITAL

At the end of the twentieth century, digital cameras were rapidly becoming the norm in many fields of photography. Film photography struggled to compete not in terms of quality, where it remains superior for most photographers, but in the transformations

of use that the digital camera has enabled. Digital cameras can be quite diverse in form and function but there are two principle technologies that, while not common to all digital cameras, will serve to distinguish them from their conventional

film based counterparts. These are the sensor and the storage system both of which are akin to a “digital film.”

The Charge-Coupled Device (CCD) was invented in 1969–1970 making it the first digital sensor array. The array consists of a horizontal and vertical grid of light sensitive elements that convert light into electricity, and which can then be converted into digital data by an analog-to-digital converter (ADC). Each of the elements of an array is called a pixel—a word corrupted from “picture element.” During the 1970s it was common to have an array of several hundred pixels across by several hundred deep. By the 1980s an array was developed by Kodak that was 1,500 pixels by 1,000. This totals 1.5 million pixels marking the first step into measuring the resolution of camera images in megapixels (one million pixels is a megapixel). Other forms of more recent sensor device include the Complementary Metal Oxide Semiconductor (CMOS) which, for example, Canon Inc., uses and the Junction Field Effect Transistor (JFET) which Nikon employs.

However, to say that the camera is collecting so many megapixels of information can be misleading. In order for a sensor to capture color it has to filter out the light so that it is reading only one color at a time. Digital cameras function through capturing red green and blue light independently by placing a color filter in front of each element. The most typical arrangement of these Color Filter Arrays (CFAs) is the Bayer grid developed by Kodak. This consists of a 2×2 grid which contains two green pixels and one each of red and blue. Because only half of the green pixels are really captured and a quarter of the blue and red, a process called demosaicing was developed to interpolate the missing color information. This results in a slight blurring occurring in images that use the CFA system. The Bayer grid is not the only system; Sony Corporation has developed another grid system not based upon red, green, and blue (RGB) but upon cyan, yellow, magenta, and green filters, and Fuji film corporation has developed a CCD that uses a grid system at a 45° angle which, they claim, gives better data for demosaicing. They have also developed a system that captures at two different sensitivities in order to increase dynamic range. Foveon Inc. makes a CMOS chip that uses three layers of sensors to capture full color data at every location. However, this sensor has a lower sensitivity than CFA systems because the light has to pass through three layers of sensors.

Another method of capturing full color data is to capture the RGB data in three passes. This is how most large format cameras with digital backs work. They scan the subject line by line, three times over in single color in order to create a full color composite in the host computer to which the back is tethered. The disadvantage of this is time: it can take several minutes to “shoot” an image rendering any moving subject unsuitable; the advantage is that the quality is unparalleled as full color information is captured for every pixel.

For digital backs the images are stored on the host computer’s hard drive although for the majority of cameras this is not the case. There are various forms of storage that retain the information created. Currently, the most common of these is a Secure Digital card (SD) a card with a tiny form factor ($1" \times 1\frac{1}{3}"$) and so is suitable for use in compact digital cameras. Most commonly used in digital single lens reflex (SLR) digital cameras is the CompactFlash (CF) form factor, which is the size of a matchbook. This comes in two differing forms where the type II is slightly thicker than the type I. CF Type I stores the information in flash memory—a nonvolatile form of memory where power is not needed to maintain the information—and the type II form factor is used most often with a Microdrive, which is a small hard drive. Microdrives are slightly slower than flash media but are available in larger capacities. There are several other forms of memory; however, these two are the principal types.

Although the memory and the sensor array are the two distinguishing features of the digital camera, probably the most significant feature is in its connectivity to other digital systems: it sits much more readily within the workflow of the digitized publishing environment such as newspapers; because of specialized imaging needs, it is employed in areas such as astronomy; and, with the rise of the personal computer, a mass market for digital cameras has become a reality.

Astronomy demonstrated the first benefits of using digital technology in the mid-to late 1970s where because of their sensitivity to individual photons digital sensors provided images that conventional film was unable to capture. In 1981 Sony introduced the first digital camera with the Mavica (MAGnetic Video CAmera), the original still video camera. Still video cameras are video cameras that capture single shots as photographs, which is the system still used in the majority of compact digital cameras but not in SLRs. Soon after this, in 1984, photojournalism conspicuously

embraced digital cameras enabling shots to be taken at the Olympics in Los Angeles and sent to Japan across phone lines for publication within 30 minutes. Through the mid-1980s all the major camera manufacturers began to market digital cameras aimed at professional users, although the image quality of these early cameras was really quite poor by contemporary film standards. In 1986, Canon produced its RC701 still video camera, Kodak developed its milestone 1.5 megapixel digital sensor, and Nikon produced a digital camera prototype. In 1987 Kodak introduced its Still Video System, which included a printer, storage system, and camera. All of these cameras were prohibitively expensive for anyone but professional users, but towards the end of the decade, cameras that were aimed at the nascent consumer market were developed, most notably the Logitech Fotoman. Naturally, to bring the price down the image quality that had been steadily becoming finer was reduced for this line of cameras (the Fotoman had a resolution of 640×480 pixels).

Also at this time digital studio cameras were being developed that had improved image quality but were tethered to a computer. At the beginning of the 1990s this evolved into high resolution cameras that took the form of the digital back. The digital back utilizes a pre-existing camera, replacing the film holder with a sensor. These have the advantage of using existing camera parts, most notably the camera body and optics. This principle is also used in digital SLRs. In 1992 Kodak paired with Nikon Inc. to produce the first digital SLR, the DCS200, which became the benchmark for digital cameras as that time.

Rather than using a video feed that was captured in still frames, it used Nikon's optics and camera integrated with Kodak's sensors producing an image that was four times as fine as the standard still video camera. Kodak and Nikon's collaboration led the digital camera revolution for the next few years, until Nikon produced its own camera and Kodak teamed up with Canon in 1995. As the decade progressed smaller and cheaper sensors provided the consumer market with viable prices that could capture enough detail to satisfy amateur photographers. At the time of writing the high end of the consumer market has reached eight megapixels and the professional SLR cameras have reached 12 to 14 megapixels, although this figure will undoubtedly increase for some time to come.

CAMERA: DISPOSABLE

The basic concept behind a disposable camera is a very simple one. Consumers buy a camera the same way they buy a roll of film, and send the camera to process. Film companies are able to sell cameras instead of films. These cameras with film should be very simple and cheap, providing "good enough" quality picture, meeting the needs of those not willing to spend the

money on a "real" camera, or to learn some basic concepts of photography. However, the concept proved to be so successful that disposable cameras have seen their way into art photographers hands, seeking a simple "non-technically driven" way of making pictures, or into other serious photographers' bags as a cheap camera to use in harsh environment.

CAMERA: DISPOSABLE

Even if a disposable camera was already in production in 1887 and the first Kodak camera was in concept, if not in price, close to a disposable camera, it was in the late 1980s that the modern disposable camera appeared in the world market. The idea is the same behind disposable razors, bottles, or almost everything in modern society, use and dispose of. It was a sign of the times when resources and environmental consciousness were less developed. The modern disposable camera with its very good technical quality and low price was only possible with modern plastic production technologies, modern optic design, allowing for a fair quality in single elements lens design, and above all to modern film technology with high speed, fine grain, and a large exposure latitude, allowing for good results with a fixed exposure lens.

From a marketing point of view, these cameras are addressed to a public who did not want or is not able to afford a sophisticated camera, with its price, bulk, weight, and technical needs. Children and travelers are the main market targets. These cameras are promoted also as a mean to preserve the “real cameras” from dangerous environments like sand, sea, or snow.

The first modern disposable camera introduced by Fuji in 1986 used the then current 110 film format; it was unable to give a good enough technical quality. However, a year later, the ever-present 35-mm film found its way into a disposable camera, the Fuji Quick-Snap, allowing surprisingly good technical quality. The two key elements for this quality are a simple (usually single element) lens of good quality and a film with wide exposure latitude, particularly in overexposure.

The first disposable cameras were just a cheap and simple way of getting pictures, but soon manufacturers saw increased potential in these humble cameras, and all film manufacturers started producing them. Beach or snow use were among the main concerns of their consumers, so, new models appeared enclosed in a plastic box capable of getting the camera under water, if not to a deep dive, at least to 10 feet. There was even a complete underwater housing made to take a disposable into deeper waters. Panoramic, or pseudo-panoramic, was a fashion of the 1990s made possible by the use of disposable cameras with a wider lens (24 mm or even 17 mm) and a film gate keeping the wide part of 35-mm film (36 mm), but reducing the smallest dimension of the film from 24 mm to 12 mm. This format was also used in compact auto-focus cameras and even in SLRs, but most tried it first with a disposable camera. The telephoto disposable camera was not a big success, but manufacturers kept

trying a useful concept for them, and in the summer of 2001 Ferrania introduced a new model using mirrors in the light path to keep with the small size. With a plastic body with some cardboard printed external parts, they were also a good promotional tool for companies and events, making them a favorite for a cheap camera collection.

The modern revival of black and white photography led to the disposable black and white camera using traditional film or modern films based in color negative film technology, and able to be developed in the ever present “one hour lab.” Konica even started producing their black and white chromogenic film first for use in disposables and only then sold it as a separate film. Even instant photography went into disposable, with the added difficulty of the price of some camera parts, mainly the rollers needed to develop the film.

The APS format launched in 1996 was supposed to be a revolution in disposable cameras. The basic idea of reducing the film frame, as it was more than adequate for the small prints most costumers wanted, was that it could be applied to the disposable camera market. Cameras could be made smaller with shorter lens and greater depth of field (useful in fixed focus cameras). The panoramic format could be used in the same camera along with the two other APS formats. Most important was the idea that the newer APS disposable cameras could give a start to the changes in photo-finishing business needed to adopt the new format. As with most things in this format, things actually were not up to what was expected and APS seems to represent only a small part of the single use camera market, even if these new cameras are smaller and, sometimes, pretty.

Disposables did not meet the same success in every market. Japan seems to be the place where the concept met a higher success, with a series of accessories, including motor drives and optical complements, available for disposables. The current shift towards digital seems to have cooled down the disposable market; however, disposable camera image quality is still much better than cheap digital cameras can achieve.

The term disposable is not a very accurate one. The cameras are not actually disposed of, most of its parts are reused or recycled. The terms “ready to photograph” or “single use camera” seem more accurate. The unpublicized fact that the cameras are user re-loadable and quite simple technically led to its use in school projects, making it a cheap way of getting a large number of simple and good quality cameras; it has also found favor in some

kinds of art photography where technology is to be kept as simple as possible.

CAMERA: INSTANT OR POLAROID

The term instant is applied to a camera that produces photographs developed by the means of the chemical products it has enclosed with the film medium. These developers are released via the simple mechanical process of passing the film packet through rollers that spread the chemicals over the exposed image as it leaves the camera. These rollers characterize all instant cameras and serve to quickly distinguish them from other camera types. Atypical as well is the fact that instant photography has been dominated by a single manufacturer, and the history of instant photography is inseparable from that of the Polaroid Corporation. In fact, the word "Polaroid" is widely used when referring to an instant camera. The instant camera is most widely used as a consumer product, but it also has applications as a professional tool—to make quick proofs when shooting with other cameras, and has been in the later part of the twentieth century an important genre in fine art photography.

Invented by Edwin Land in 1947, this process was first made available to the general public in 1948 by the Polaroid Company. Touted as "one-step" photography, the Polaroid Land Camera produced a 3¼ × 4¼" dry print and sold for the relatively costly price of \$89.95. These first cameras used a film not too different from the roll film foldings currently in use: a paper negative that offset the image onto a sheet of sensitized photographic paper were sealed together in a rolled packet. A two-roller mechanism smashed and spread the developer chemicals across this packet and the sensitized papers inside. After exposing the image, the film was separated from the camera. The finished picture was then separated from the negative a few seconds later and the negative discarded.

This new invention was an immediate success. A long succession of new and improved cameras was introduced. They used three series of roll film: type

40 in the first and most sophisticated type 95, 95A, 95b, 100, 110, 110A, and 120, among other models; type 30 and type 20 used on cheaper models and mostly plastic-bodied cameras like the J33 and Swinger models. As none of these films is available these cameras are not usable, unless converted to the still current pack films.

The first films available for use were sepia, but soon came black and white, higher speed black and white, high contrast materials for scientific applications, and positive/negative with a proof print and a usable negative.

In 1963, Polaroid introduced the second generation of cameras. They use the still current type 100/600 peel apart pack film, in several types of black and white and in 75 ASA/ISO color. These were plastic-bodied, box-like cameras, and more sophisticated folding models with differences in body material (plastic or metal) lens design and construction, the presence and type of rangefinders, or timers. There were four successive series the 100, 200, 300, and 400, with no important differences among each series. The series 100 was introduced in 1963 and had six models, the range increased with each series until the 300 series from 1969 had 11 models. Consumer products had an electronic shutter, the first introduced in a mass-produced camera, auto exposure, and needed a hard to find battery. There were manual exposure models, the 180, 185, 190, and the 195; they are sold for high prices in the used market. A new limited production version of these is currently on sale, but it is produced by NPC. Some of the consumer models were a huge success with production numbers up to 1,000,000. However, there were simpler and cheaper plastic bodied models: Colorpack, Memory Maker, Minute Maker. They all have automatic exposure, some had fixed focus lens, while others had some simplified devices to

CAMERA: INSTANT OR POLAROID

help focus. Some used the smaller type 80 film (Square Shooter). Their prices ranged from around \$25 to \$45. The Pack film range included also the BigShot, a long focus, fixed-focus, fixed exposure model dedicated to portrait, famous as being used by Andy Warhol; a new range of plastic folding cameras in production until the late nineties (EE-100; Reporter; Propack); the Mamiya based and built 600 and 600 SE, the latter with 75-127- and 150-mm, interchangeable lens, and some special cameras dedicated to macro-work. Still in production are Portrait and Passport models with two and four lens, providing two and four images in one single frame.

In 1972, there was an easier way to use instant photography, the new SX70 camera used the first integral film system. There was no need to pull the film from the camera as it had a small motor, powered by the battery in the film pack, to eject the film. The SX70 camera was a folding SLR, not much larger than the pictures it produced. It featured electronic control and electric film ejection. The image was unreversed on film by means of a mirror, the film was parallel to the bottom of the camera, and not to the lens plane. The first model finished in brown leather and brushed metal was an example of good design, from a time most industrial design is bound to be forgotten. The variations of the original SX70 had little more than different colors, black metal with brown leatherette, chromed metal with black leatherette, and even white and gold models. Except for the non-reflex model 3 the technical differences were small.

In 1978, Konica had just introduced the first auto-focus camera, and the SX70 evolved to auto-focus, which was accomplished by adding a sonar auto-focus module on its top. It allowed focusing in complete darkness, a feature stressed by Polaroid advertising. Most auto-focus Polaroid cameras still use this auto-focus system.

SX70s were expensive (\$180 in 1972), so the same principle of reversing the image with a mirror was applied to rigid plastic bodied models, the most popular in the United States was the Onestep, which in 1977 became the best-selling camera in the world; it remained so for four years. It was followed by other models some including sonar auto-focus. Art photographers still use these discontinued models as SX70/Time Zero film allows for manipulation not possible with more modern integral films.

Most post-SX70 Polaroid cameras and films are based on this concept. The 600 series cameras use the same size of film but with a speed of ISO 640 instead of ISO 150. With minor adaptations, it is

possible to use SX70/Time Zero in these cameras, as this film is not suited for manipulations and SX70 cameras are no longer produced. Most cameras using type 600 film are technically similar simple plastic cameras. However there is a large number of different models, some appealing to a children/youth market, using cartoon (Taz, Barbie) or music characters (Spice Girls), making this film the most popular in the Polaroid range. The current models are different from former models as they are of the folding type, similar in aesthetics to the Spectra/Image range described below. The most capable cameras of these series the 1980s 680 and the more recent 690, are no more than sonar auto-focus SX70s with built-in flash and metering systems able to deal with the faster film. Other current Polaroid film systems are the Spectra/Image system, which works in a similar way but is a bit wider, and led to a more advanced, although non-reflex, camera line, backs to scientific instruments and computer printers. This range originally had four folding cameras, three of which share the same body: the 125 mm, 3 elements F10 lens called Quintic and an unusual focus system consisting of a segmented arc-shaped center element, which swings on a pivot to adjust focus. (Spectra/Image; Spectra/Image 2 Spectra/Image Pro) and another, ProCam, with a more rugged construction, folds sideways and has a wider lens, said to be of better quality. To extend the possibilities of Spectra/Image cameras, Polaroid produced ingenious close-up accessories, some particularly suited to police work. A recent variation of the Spectra/Image is the 1200 series folding cameras using 12 pictures per pack, instead of 10, but with backwards compatibility with earlier Spectra/Image film packs. There are a few current models in this range, including one with an LCD viewfinder.

In 1993, trying to produce a smaller and cheaper film, Polaroid launched the Captiva/Vision series with a concept closer to the original SX70, a folding reflex, with a compartment to keep the ejected picture. It was not a success, but the film type was kept for the the Joycam, a very simple cheap camera that does not have a motor to eject the picture. This film type was also used in the Popshots an ill-fated adventure in the single-use camera market.

The I zone, earlier marketed as Xiao by a Japanese toy maker, uses a smaller film, close to a 35-mm frame in a 110 look alike camera, with bright colors and cartoon characters appealing to a very young public. There is also a scanner dedicated to Izone photographs, a film/digital camera combo, and a camera with a FM radio. In the United States Polaroid also markets the

Mio camera, which seems to be no more than a repackaged Fuji Instax 10 or 20.

For the most part of these more than 50 years, Polaroid was almost alone in the instant photography market even if some companies produced cameras compatible with Polaroid films. Kodak tried to compete with his own line of cameras and films in the late 1970s. All ended with lawsuits and courts ruling Kodak out of this market. In the late 1990s Fuji started producing instant films for the professional market usable on Polaroid cameras and film backs, and later, consumer cameras and films.

In the beginning of the digital era, instant photography seemed to have little reason for existence, and Polaroid faced a very difficult situation, the expert photographer targeted by earlier models and even SX70 seemed to be left out, and current consumer Polaroid cameras aimed at the lower end of the market. Polaroid also marketed low-end conventional film and digital cameras. However the professional/scientific uses of instant photography were still provided as from its beginnings. Polaroid

has a commitment to serious photographers, producing cameras, backs, and films for proofing and as a final photograph. Art photographers are using some forms of Polaroid process in the intended and unintended ways. Collectors appreciate the large variety of models (around 275, not counting color variations) and their availability. Polaroid owns some 20 × 24" cameras, which can be rented from their studios in some European and North American cities. The pictures some photographers produced with them are among the most prized of modern photography.

CAMERA OBSCURA

The camera obscura existed long before photography itself. In fact, there would be no photography without it. The name literally translates from Latin to mean “dark room.” The moniker, however, is a bit misleading, as it leaves out the most crucial element of the camera obscura: a small hole through which light can enter the darkened chamber.

No one invented the camera obscura; it is a naturally occurring optical phenomenon. Like Plato’s cave, in which projected shadows are an allegory for reality, the camera obscura projects real life, in full color and movement, onto a two-dimensional wall or screen to be observed and contemplated. Light enters a darkened enclosure through an aperture such as a small hole or a glass lens, projecting an inverted image onto an opposite wall or screen. The science that allows this to occur is simple. Light travels in straight lines. When entering a small hole, rather than scattering, light will only pass through in an organized manner. Thus, light reflected off of

a flag atop a flagpole will pass through the aperture and hit the lower part of the back wall or screen. Whereas light bouncing off the base of the pole will end up at the top of the projected image.

In essence, a camera obscura is simply a camera without film. It dates back centuries before light sensitive materials were developed. The first recorded observations of the phenomenon are attributed to the Chinese philosopher Mo-Ti in the fifth century BC. Aristotle (384–322 BC) took note of this process while observing light filtering between the leaves of trees and projecting crescent shaped images of the eclipsed sun on the ground. He also took note that the smaller the hole, the sharper the image appeared.

Although it was probably a principle known by contemporary scholars at the time, the first account of the camera obscura itself dates back to the Arabian scholar Alhazen (Abu Ali al-Hasan Ibn al-Haitham) (c. 965–1039). In 1490 Leonardo

CAMERA OBSCURA

da Vinci clearly described the camera obscura which he called *oculus artificialis* in reference to its commonalities with the eye. He also suggested overcoming the problem of the reversed image by projecting it on a sheet of thin paper and viewing it from behind.

The person most often credited, though incorrectly, with developing the camera obscura is the sixteenth century Neapolitan scientist, Giovanni Battista Della Porta. This is because the camera obscura was described in detail in his book, *Magiae Naturalis*, one of the best known works on popular science from that time. Della Porta was the first to describe camera obscura as an aid to artists attempting to draw from life. Though he was not the first to do so, he took advantage of developments to the camera obscura, such as the use of an optical lens instead of a simple hole, which brightened and sharpened the image. He also used a mirror, which, by reflecting the image, corrected its earlier reversal. Della Porta created theatrical pageants that took place directly outside the darkened room, with sets and costumed characters. Once his audience's eyes adjusted to the darkness of the room, what they saw was truly cinematic. Projected before them was a drama acted out by miniature two-dimensional characters. They were in awe. Those who disbelieved Della Porta's explanation of the illusion even accused him of sorcery.

As the camera obscura became more popular, it took new forms. Rather than a specially constructed permanent room or building: smaller, more portable versions were made. Some were small rooms light enough to be carried on rails by two men, like a sedan chair. The astronomer Johann Kepler, who actually coined the phrase "camera obscura," had a portable tent camera that he used when making a topographical survey of Upper Austria in the 1620s.

Very tiny versions were also developed. One was inset into the stem of a goblet. Through the use of a small mirror, an image was projected onto the surface of the wine (white), so that the host could keep an eye on his guests: arguably the predecessor to the modern day surveillance camera. The most popular version of the camera obscura, however, was just small enough for a person to carry under one arm. These had a frosted glass or translucent screen onto which the image was projected (much like a view camera), eliminating the need to be in an enclosed room.

Many seventeenth and eighteenth century artists were interested in the camera obscura's ability to

essentially replicate, though monocularly, human vision. It helped them to achieve perfection on difficult to render perspectives. Notables among these artists were Jan Vermeer (1632–1675) and Canaletto (1697–1768). The extent to which they used the camera to create their precise paintings remains controversial to this day.

At this point the camera obscura was essentially the prototype for the modern camera. The only change needed was a way to load it with film. Both Nicéphore Niépce and William Henry Fox Talbot used camera obscuras to expose their various light sensitive materials and produce the first photographs. With this, a major shift in the camera's role in the world occurred. A light and chemical reaction took the place of the artist's pencil. Instead of being an instrument for observing, and possibly drawing a subject, an act still somewhat subjective, it became instead a recorder of a "truth": the creator of a subject itself.

Camera obscuras live on today. Around the world there still exist some walk-in camera obscuras whose function is both entertainment, observation (most of these are in areas of splendid views), and education. Some contemporary artists, such as Ann Hamilton, Vera Lutter, and Abelardo Morell still create work using the phenomenon.

But the camera obscura's true descendant is the modern camera. Be it film or digital, large format or movie camera, the basic structure and concept of the camera has remained the same through the centuries: a light-tight box into which light, admitted through an opening, strikes a parallel surface and projects an image. Unlike in centuries past however, the image, no longer fleeting, can now be kept intact.

CAMERA: PINHOLE

Pinhole photography is photography in its most basic form, involving no optical or electronic elements, working with only a light proof container and a tiny hole. The container can be made from cardboard, wood, metal, plastics, almost anything the photographer's imagination can suggest. In the 1980s, Jeff Guess (American) used his mouth as a pinhole camera. Inside a pinhole camera, either a piece of photo paper or photo film can be placed to record the image. The film or paper can be black and white, color, Polaroid, or hand-sensitized materials. The pinhole opening can be made directly into the container or from other materials such as aluminum shim attached to the container. The shutter can be closed and opened by a simple piece of black tape or more sophisticated mechanical devices. The pinhole camera can be any size, from tiny 35-mm film containers, to a shoe box, lunch box, or trashcan size, to an entire room or building. In the 1990s, Patricia Gabas (French) and Andre Kertzenblatz (French) built a pinhole cabin large enough for several people to fit inside and put it on the back of a truck, a mobile pinhole camera, literally a *camera obscura*, or dark room.

Without the pinhole opening, ambient light striking a piece of photo paper or film cannot represent a scene because light rays, traveling in straight lines, are sending information from any particular point to all directions at once. This excessive information cannot reproduce on photo paper a recognizable image. A piece of photo paper that has been held up to a chair and developed looks exactly like a piece of photo paper held up to a lamp and developed—only the scattered light will be captured and the picture will feature only gray tones. This chaotic quality of light can be structured by forcing the light to travel through a tiny hole. A tiny hole blocks most light rays, transmitting light from a particular point in one, as opposed to, multiple directions. The projected image is upside down but otherwise recognizable. When properly directed light strikes a photographic piece of paper or film, the projected image can be recorded as a photograph.

The phenomena of pinhole, or camera obscura, was understood and exploited well before the advent of photography. In China, Mo Ti (c. 4000

B.C.) describes how light traveling in a straight line, like an arrow, projects a recognizable image. Egyptian scholar Hassan ibn Hassan (c. 1000) describes the use of a pinhole device to observe an eclipse of the sun. Other historical references to pinhole include Aristotle (384–322 B.C.), Francis Bacon (c. 1267), and Leonardo Da Vinci (1452–1519).

Some of the historical activity with pinhole images has been scientific, such as observing eclipses, measuring time, or researching the qualities of light. Some of the activity has been educational, such as workshops or classes where people make and use their own pinhole camera, exploring firsthand the phenomena of orderly light and photography. Some of the historical activity has been in the art world. In the fifteenth century, painters used camera obscura devices to help sketch and paint with perspective. The camera obscura device was a light tight space or container with a small opening pointed at the scene to be sketched or painted. Light traveling through the hole projected the scene onto paper or other support to be traced by the artist. With the advent of photography in the nineteenth century, Sir David Brewster (1856) coined the word pinhole and is the first to have made pinhole photographs. Use of pinhole cameras fell out of use in the early part of the twentieth century. In the 1960s and 1970s, there was a revival of many alternative photographic processes and through the end of the twentieth century, pinhole photography surfaced in the arena of contemporary art.

There are several particular qualities to pinhole photographs, such as long exposures, infinite depth of field, more or less refined resolution, angles of view, possible distortions, and multiple exposures. Without the use of optical glass elements, the projected image is relatively dim and thus exposure times are often necessarily lengthy and can last from a few seconds to several days. Exposure times will vary according to the amount of available light, the size of the pinhole, and the sensitivity of the film or paper being exposed; the more available light and the larger the size of the pinhole, the shorter the exposure time. A smaller opening makes for relatively longer exposure times, but has better resolution than large openings, producing a more refined

CAMERA: PINHOLE

reproduction of detail. The greater the distance between the pinhole opening and the photo paper or film (the focal plane), the less refined the resulting image. This distance also affects the angle of view. When the pinhole opening and the photo paper or film are relatively close to each other, the resulting angle of view is somewhat wide-angle, becoming more and more telephoto as the hole and paper are farther and farther apart. It is commonly thought that lenses are responsible for improved visual resolution but in fact the principal difference between pinhole and lens photography has to do with intensity not quality of light. In lens photography, the use of optical elements concentrates multiple light rays, intensifying the projected light and shortening exposure times. In both pinhole and lens photography, the visual resolution is more a factor of the size of the opening than the use of a lens. Moreover, a lens imposes the need to focus, whereas a pinhole photograph has infinite depth of field; all objects close or far from the pinhole camera will be reproduced in equal focus. A flat piece of photo paper or film placed directly across from the pinhole opening can reproduce a scene with little visual

distortion, or diverse distortions are possible by bending or curving the photo paper or film. Multiple exposures are facilitated by the typically long exposure times and mechanical simplicity of most pinhole cameras.

At the end of the twentieth century, pinhole photography was a well-published topic, a common part of many educational programs, and exhibited in major museums as well as commercial galleries, community centers, and libraries.

CAMERA: POINT AND SHOOT

The 35-mm film cameras known familiarly as “point and shoots” are not your (Great) Grandma’s Brownie. They are smart, sophisticated, and snap-shot easy miniaturizations of the classic rangefinder cameras, scaled down to a viewing screen to guide the eye and an interior circuitry that automatically measures light and distance. In the hands of a photographer who understands their parameters, a simple model with a good lens can take photographs indistinguishable from their larger and more complicated cousins, the single lens reflex (SLR) and rangefinder cameras.

It took more than a hundred years of invention to perfect cameras as small, sharp, and nearly foolproof as the contemporary snap shot camera. Miniaturization, however, was a goal from the beginnings of photographic research. Henry Fox Talbot, one of photography’s founding fathers, realized early on in his experiments with light that tiny cameras with

lenses of short focal lengths (the distance between the aperture and the sensitized plate) would concentrate the light in a small area and lead to shorter exposures. Nicknamed “mousetraps” by his wife, some of the little boxes fitted with microscope lenses measured only two-and-a-half inches square. Unfortunately, enlargers had yet to be invented, and the tiny images were dismissed by Fox Talbot as looking like the work “of some Lilliputian artist.”

The first functioning roll film camera small enough to take on a picnic was George Eastman’s brilliant invention, the Kodak No. 1, introduced in 1888. It was a simple box camera less than seven inches long and four inches wide, with a set shutter speed of $\frac{1}{25}$ of a second and a fixed focus lens that managed a reasonably sharp picture eight feet or more away from its subject. It came with the instructions “You Press the Button, We Do the

Rest” and a preloaded roll of film that recorded 100 images. Film and unopened camera were sent back to the factory in Rochester for processing. It was the beginning of the family snap shot, and its simplicity made the camera a household item.

The Kodak Brownie followed in 1900, along with a host of competing manufacturers of small cameras for the amateur market. It was another 25 years, however, before the development of a 35-mm precision camera capable of sharp focus, variable shutter speeds, and low light exposures. This camera, the Leica, was introduced by Oskar Barnack, head of the experimental department at the E. Leitz German Optical Works in 1925.

Following World War II, color film and the large choice of small, easy to load and use cameras put a modern camera on everyone’s wish list, but the rangefinder 35-mm and the increasingly popular single lens reflex 35-mm cameras, introduced shortly after the war, still presented technical challenges to most amateur photographers.

Auto-exposure was the first breakthrough. Built-in light meter systems coupled with electronically controlled shutters set the shutter speed, depending on the photographer’s choice of aperture. In 1977 Konica introduced the first 35-mm compact camera with auto-focus and auto-exposure. By the 1990s easy to load film handling, automatic film speed settings, automatic end of the roll rewind, dedicated flash units, zoom lenses, and ultra lightweight compact designs for 35-mm point-and-shoot cameras dominated the amateur market.

Depending on the camera model, there are two systems of auto-focus to choose from: passive or active. In the active system, a beam of light, usually infrared, is emitted from a small opening near the lens and provides the lens with the distance from the subject (as determined by the object in the center of the viewing screen) to the camera. The lens automatically adjusts the focus. This is an effective system in low light, or on a foggy day, but if the subject is behind glass or the beam strikes falling snow, the system fails to focus on the subject.

In a passive system, used frequently on point and shoot cameras with zoom lenses and on auto-focus SLRs, sensors are located behind the lens. These sensors measure both horizontal and vertical bands of the subject and can be more accurate, particularly in a landscape situation. They depend on contrast to work properly. Therefore, a single tone or color (for instance, a field of snow) will be difficult, if not impossible to focus. In some more expensive point and shoots, an active “assist beam” is available for these situations.

In these fully automated cameras, the auto-exposure and the auto-focus function together when the subject is placed in the center of the viewing screen and the shutter is pressed half way down. Light meter sensors, located on the body of the read the areas from several “zones” in the image. These meters average the exposures of the different zones to match an eighteen percent gray card, but generally give greater priority to the center of the viewing screen. Known as center-weighted, this kind of meter is good for subjects in a landscape or backlit (light falling on the subject is less than the light behind the subject).

Some center-weighted meters are balanced with additional metering systems, such as spot meters. Spot meters measure very specific areas, rather than averaging the entire image. Usually, there is a mode or a combination of modes to press to utilize this type of metering.

Continuing to press halfway down on the shutter locks in focus and exposure. This allows the photographer the opportunity to adjust exposure and arrange the composition by moving the camera to a different angle or view. Warning lights indicate if there are problems with these functions.

The lenses on these cameras are “fixed,” that is, they are not removable. The range of lens choices, however, continues to grow, with zoom lenses a top consumer choice. These little multifocal lens generally range from wide-angle 35-mm to the telephoto 145-mm, or higher. A shortcoming of these lens is an aperture range that is rather limited and difficult to use in low light situations. Small but powerful built-in dedicated flash units have been developed to ameliorate this limitation. They can be quickly employed as fill-flash for backlit subjects on a sunny day or as full flash in low light situations. Many of these cameras also come with a night mode or slow sync flash. In this mode, the flash goes off and the shutter remains open, often for as long as a second, to record the ambient light.

A large choice of films and film speeds are available for 35-mm point and shoots. APS point and shoots, however, are far more limited. Film is easily dropped in and speed is read from the DX code on the canister. If the code does not function, these cameras default to a film speed of ISO 100. The film automatically rewinds after the last shot. The ease of these cameras, their low cost, and their precision functions have once again put cameras in the hands of amateurs, just as George Eastman’s Kodak No. 1 did in 1888.

PHOTOGRAPHY IN CANADA

Canada emerged in 1867 when the francophone Lower Canada and anglophone Upper Canada nations, containing almost equal populations, were united, creating a country of vast landscapes and contrasting seasons that makes up the second largest sovereignty in the world after Russia. Canada has offered to photographers and explorers countless exceptional locales and phenomenon.

In the beginning of the twentieth century, Canada's population was concentrated in the eastern provinces, mainly Ontario and Québec, the largest city until the 1960s being Montréal. In the late decades of the century, most of the Canadian population became concentrated in the southern parts of the country, which had some 30 million inhabitants at the end of 2001. The Canadian North, covering half of the country, remains a virtual desert of snow and ice, immortalized by the pioneering ethnographic works of Robert J. Flaherty as early as 1910.

In photography, as in many other areas, Canada's culture and history tend to be overshadowed by that of the United States. America's dominance in the northern hemisphere has resulted in many stereotypes and myths about Canada, with many Americans knowing Canada only for few famous pictures, such as the panoramic perspective of the Niagara Falls. Yet Canada has great depth and breadth of photographic imagery which has both shaped and disseminated its culture, some of the best known being views of the spectacular and

historic Quebec City, which was selected by UNESCO to appear on its prestigious "World Heritage List." The magnificent Château Frontenac atop Cap-Diamant and dating from 1893 is perhaps the most photographed hotel in the world.

Unfortunate stereotypes perhaps still linger, as a comprehensive history of Canadian photography has yet to be written. Chief among those who have explored aspects of Canadian photographic history are Professor Michel Lessard, who has written extensively about the origins and evolution of visual arts in Canada. He founded the "Atelier de recherche sur l'image photographique" (ARIP), at the Université du Québec à Montréal (UQAM). Yet it is clear that photographs and photographers were always popular in all regions of Canada. Prior to 1914, for instance, there were some 700 professional photographers, men and women, owning studios just in the St. Lawrence Valley (including Montréal, Québec City, and many villages) (Lessard, 1986). That amazing number tripled in the three following decades. One should add to this number countless amateur photographers across Canada's 10 provinces.

The history of Canadian photography in the twentieth century, however, can be roughly divided into two main categories: that which celebrates the few photographers who were aligned with the aims of the Canadian establishment, and that of the numerous unrecognized photographers, portraitists, and anonymous amateurs who showed a

more comprehensive vision of Canadian diversity. The “official” photographers provided images of an urban, expanding colonial country, often depicting only the anglophone élite, even in French majority regions. The workaday professionals and countless amateur photographers, on the other hand, depicted rural peoples and their lives, as well as the urban proletarians who constituted the francophone majority. (According to art historian Louise Désy, who surveyed phone directories from the end of the nineteenth century, 80 percent of the St. Lawrence Valley photographers were francophones [Désy 1984]). These two versions of the history of Canadian photography, the colonial point of view reifying anglophone artists and the post-colonial perspectives that recall the English dominance over the francophone population although lingering to the present, perhaps obscure other histories.

In a country as vast as Canada, photographic postcards proved a useful means of diffusing images that contributed to the social construction of typical Canadian scenes and folkways. Yet it was only from December 9, 1897 that the Canadian government authorized private enterprises to produce and sell illustrated postcards in Canada (Beauregard, 2005). The first postcards available most often represented typical Canadian monuments or neutral images (flowers, children, animals, a lady, lovers). Yet a number of these postcards were produced and printed in foreign countries using photographs originally conceived by the Studios Livernois (Québec City) or by Notman and Son (Montréal), without ever mentioning the source or the author (Poitras 1990). A golden age of the postcard occurred in Canada between 1905 and 1915, and interest in this period supports the collecting of old postcards and clubs for collectors, such as the “Club des cartophiles québécois.” Author Jacques Poitras wrote two fine books about the emergence of postcards in Canada (Poitras 1986, 1990).

Canadian photography in the early twentieth century was very much the continuation of the tradition initiated during the nineteenth century, with some respected photographers and famous institutions, such as the studios and galleries founded by William Notman (1826–1891) in Montréal, or the studios of J. Ernest Livernois (1851–1933) and his rival, Louis-Prudent Vallée (1837–1905) in Québec City, pursuing their work and experiments. For instance, since the 1880s, Louis-Prudent Vallée specialized in the stereoscopy, showing panoramic views of Québec City, and

that lucrative commerce carried on during the first decades of the twentieth century. The tintype was certainly the most popular type of photographic image in Canada until the end of the 1920s (Lessard 1987).

Some historians considered William Notman (1826–1891) as the most influential photographer in Canada at the end of nineteenth century. Born in Scotland, he came to Montréal in 1856, after studying fine arts in Glasgow. William Notman innovated when his studio on Rue Bleury, Montréal, offered colorized photographs beginning in 1857. His three sons, W. McFarlane Notman (1857–1913), George Notman (1868–1921), and Charles F. Notman (1870–1955), continued their father’s enterprise in the beginning of twentieth century. An international corporation of studios and laboratories, Notman and Sons had branches in four Canadian provinces, (in Toronto, Ottawa, Halifax, St. John) and in the United States (in Boston and New York City). At the turn of twentieth century, when funds were needed to finance the construction of the Canadian National Railway and the Canadian National Railway towards the west side of the country, their epic photographs of the Canadian West landscapes contributed to give a positive image of these wild regions of Alberta, Saskatchewan, and Manitoba.

The Studios Livernois in old Québec City was one of the longest-lived institutions in the history of Canadian photography, and the most important laboratory of photographers in Québec City from 1854 to 1974. It began as a family enterprise, la Maison Livernois, founded by Jules Isaïe Benoit de Livernois (1830–1865), known as J.B. Livernois. His son, J. Ernest Livernois (1851–1933), took charge of the commerce a few years after the premature death of his father. In 1910, J. Ernest Livernois opened a three-floor store and a studio on the Rue de la Fabrique, near the City Hall in Québec City. An artist and businessman, J. E. Livernois diversified his commercial activities to include laboratory services, official portraits, death-cards, business cards, photo-albums, and postcards. His son, Jules Livernois (1877–1952), pursued the family enterprise for the third generation, before being succeeded by his sons Victor and Maurice Livernois. But the Studio Livernois was not just a family affair; collaborators included photographers Thaddée Lebel, Georges Landry, André Laberge, Nazaire Dufour, Alexandre Fauchon, Fernand Lamontagne, and Livernois’ cousin Émile Pelchat, who was also a photographer (Lessard, 1986). The enter-

prise was synonymous with quality, style, and distinction. But after 120 years of artistic presence in Québec City, the Livernois Studio closed its doors in 1974, and the whole enterprise ceased its activities in 1979, leaving a legacy of more than 200,000 photographs.

Among other notable photographers, the five members of the Pinsonneault family had studios in smaller towns: in Saint-Jean (Québec), Trois-Rivières, Victoriaville, Sherbrooke.

Sidney Carter (1880–1956) was one of the earliest and certainly most talented of the amateur photographers at the turn of the century who worked toward the recognition of photography as an art form in Canada. Largely unknown today, he created striking images in a Pictorialist style, including self-portraits and a portrait of writer Rudyard Kipling.

Although most Canadian photographers were born in either Québec or Ontario, some of the most celebrated artists in the history of Canadian photography were immigrants, such as the Scottish-born William Notman. Two notable examples in the twentieth century are Chow Dong Hoy and Yousuf Karsh.

A Canadian of Chinese descent who was born in Guangdong, Chow Dong Hoy (1883–1973) had many jobs before adopting photography as a profession, after he emigrated to Quesnel, Canada, in 1902. Between 1909 and 1920, Chow Dong Hoy took some 1,500 photographs of Chinese who had come to British Columbia as workers. Many Chinese workers and gold miners and prospectors engaged Chow Dong Hoy to make their portraits to be sent to far-away families. During this same period, Chow Dong Hoy also photographed with his Kodak model “A” camera Aboriginal nations including the Carriers and the Chilcotins, who were living in West Canada, near Barkerville, British Columbia. He later opened a general store and gradually abandoned photography. Although he also made many portraits of notable Canadians and European immigrants, Chow Dong Hoy is now cherished for his photographs of Natives and Chinese-Canadians. After being more or less forgotten for some decades, an exhibition (*First Son—Portraits by C.D. Hoy*) was dedicated to him by the McCord Museum of Canadian History in Montreal (Moosang 1999).

Possibly the most renowned Canadian photographer of the mid twentieth century is Yousuf Karsh (1908–2002), an Armenian born in Mardin, Turkey, who was forced to leave his country in 1922. After a short stay in Syria, he arrived in Sher-

brooke (Québec), in 1924. There, Karsh learned to be a photographer with his uncle, George Nakash, who was already established as a respected photographer-portraitist in Sherbrooke. But Karsh wanted to learn more about his new profession and went to work for a few years in Boston, Massachusetts with photographer John H. Garo, who specialized in portraits of celebrities. Back in Canada, Karsh established himself in Ottawa (Ontario) from 1932, and he soon became the most respected photographer for his official portraits, until his retirement in 1992. Almost every official visitor of the Canadian government—foreign leaders, kings and queens, actresses, and even the Pope—was photographed by Karsh, who had a studio in the Château Laurier, an elegant hotel near the Ottawa Parliament. He made many albums and luxurious books of his most prestigious photographs.

Most of his collection of some 11,000 portraits of celebrities (including Canada’s foremost politicians, artists and leaders, and also Winston Churchill) were acquired by the National Archives in Ottawa. After selling his archives, Karsh returned to Boston in 1997 and stayed there until his death, on July 13, 2002. His younger brother, Malak Karsh (1915–2001), was also a photographer who emigrated to Canada in 1937. Like his brother, he made official portraits for the government of Canada; one of his pictures of the Ottawa Parliament once appeared on the one dollar bill. Since he worked with his brother, and to avoid confusion, he signed his portraits only with his first name, “Malak.”

Another distinguished Canadian portraitist was Roloff Beny (1924–1984), who in particular achieved an international reputation for his lavishly produced photo books. His photographs, a large mass of which were donated to the National Archives of Canada following his death, record the leading figures in the worlds of dance, opera, music, literature, cinema, theatre, fashion, and politics of the latter half of the twentieth century. One of his best-known images is a 1959 portrait of Canadian pianist Glenn Gould.

Sam Tata, born in 1911 to Indian parents in Shanghai, practiced social documentary photography in China and in the late 1940s with Henri Cartier-Bresson, documented the final years of Mahatma Gandhi’s India. After chronicling the establishment of communism in China during the 1950s, he emigrated to Canada in 1956, where he became a notable portraitist, especially of Canada’s literary movement of the 1960s and ‘70s, shooting

well-received portraits of Canadian poet and songwriter Leonard Cohen and many others.

Foreign photographers had a significant influence upon the perception of Canada. Many Americans, for instance, had their first encounter with Canada through the pages of *Vogue* magazine. A young photographer from New York City, Lida Moser, went to Montréal in 1950 to prepare a series of articles about Canada. Fluent in French, she met the two most important specialists of the Canadian heritage at that time, novelist Félix-Antoine Savard and folklorist Luc Lacoursière, both professors from Université Laval in Québec City, who helped her to discover rural Québec. Moser also visited Québec City and Montréal (Moser, 1982), shooting landscapes that previously had been mostly unknown to most Canadians, much less Americans. She also made portraits of most of the important Canadian artists and intellectuals of the era, including painter Alfred Pellon, poet Alain Grandbois, actor Pierre Dagenais, novelist Roger Lemelin, and maestro Wilfrid Pelletier. Lida Moser was so delighted with her experience of Canada that she returned in December 1950 to make another series of photographs, for *Look* magazine.

Legendary photographer Henri Cartier-Bresson visited Québec in 1965, and some of his photographs were included in a montage for Rex Tasker and Wolf Koenig's documentary film *Le Québec vu par Cartier-Bresson* (NFB, 1969).

Some respected foreign photographers came to Canada to establish themselves: Pierre Gaudard emigrated from France in 1952; Sam Tata came from Hong Kong in 1956; Gabor Szilasi came from Hungary in 1959; George Zimbel left the United States for Canada in 1971 (Hanna, in Dessureault, 2000).

Canadian-born photographers of importance of this period include Michel Lambeth (1923–1977). A published author, he is known for his in-depth portrait of Toronto of the 1950s, and he was a leading photojournalist during the 1960s. Lambeth also amassed an important historical collection that featured anonymous photographers' shots of Toronto from the early years of the century. Arnaud Maggs, born in 1926 in Montréal, emerged via the important 1977 exhibition *7 Canadian Photographers* at the National Film Board. He had had a successful career as a fashion photographer and graphic designer, and began his photographic career as a portraitist. He is best known for works consisting of materials he collects and photographs, including death notices, factory records, or public signs arranged in grids of dozens of images.

John Max, born in 1936, also took up fine-arts concerns at a time when most Quebec-based photographers were focusing on photojournalistic or social documentary subject matter. In the 1960s, he worked with subjective, autobiographical topics in striking black-and-white photographs that prefigured the turn towards more personal work at the end of the eighties in Canada. After a sojourn in Japan in the 1970s, he returned to Canada to undeserved obscurity. His oeuvre includes a striking two-part portrait of his colleague Sam Tata.

If the Canadian Natives and Inuit were often the subjects of ethnographic or "exotic" photographs, instituted early on by the popularity of Robert Flaherty's images, some also contributed as photographers themselves, mostly towards the end of the twentieth century. A pioneer among Native photographers is George Johnston, a Tlingit Indian hunter, trapper, and entrepreneur, who took many photographs of the Yukon's Natives before 1940. His contribution is memorialized by the naming of an exhibition hall after him, the George Johnston Museum in Yukon.

In the latter half of the twentieth century, most Canadian Native photographers worked in cities in Ontario. Among those Native artists are Jeffrey M. Thomas, born in Buffalo, New York, in 1956, a member of the Onondaga tribe of Six Nations, Ontario; and Barry Ace, born on Manitoulin Island in 1958, an Anishnabe (Ojibwa) of the West Bay First Nation. Both are self-taught artists. Among other notable Native photographers are Greg Hill, an installation, multimedia, performance artist and photographer, whose work explores his Rotinonhsyonni (Iroquoian) identity; and Greg Staats (Mohawk) born in Brantford, Ontario in 1963. Raised on the Six Nations Reserve near Brantford Ontario, Greg Staats is currently based in Toronto. All of them have participated in exhibitions in Canada and in Canadian embassies abroad.

Among Native women photographers from Canada are Mary Anne Barkhouse, a graduate of the Ontario College of Art who was born in Vancouver in 1961, a member of the Nimpkish Kwakiutl nation; and Métis artist Rosalie Favell, a digital photo artist and printmaker as well as a scholar. Rosalie Favell obtained a BFA from the Ryerson Polytechnical Institute and an MFA from the University of New Mexico; she was born in Winnipeg, Manitoba in 1958. Also a graduate of the Ontario College of Art, filmmaker and photographer Shelley Niro, born in Niagara Falls, New York, in 1954, is a member of the Mohawk Nation, Iroquois

Confederacy, Turtle Clan of the Kanien'kehaka, from the Six Nations Reserve.

These photographers participated in an important exhibition, *Emergence from the Shadow: First Peoples' Photographic Perspectives*, held in 1999 at the Art Gallery of the First Peoples Hall of the Canadian Museum of Civilization.

Created in 1939, the National Film Board of Canada (NFB), a governmental institution that specialized in short films, documentaries, animation, and experimental films, has had an extraordinary impact upon the development photography in Canada as well as making Canada an important center internationally in filmmaking. Although primarily an organization to support filmmaking, many innovations came from the various important NFB directors including Norman McLaren, Michel Brault, and Claude Jutra. A documentary directed by Jean-Claude Labrecque, *60 Cycles* (1965), for instance, was the first film to use a 1,000-mm lens in an opening shot that remains famous: a group of cyclists is shown riding towards the camera with the impression that they are not even moving due to the long focal length of this particular lens.

The most original contribution from Canadian filmmakers to the world history of motion pictures was certainly the creation of "Cinéma direct" at the end of the 1950's, which had an influence on U. S. and European documentary directors such as Don Alan Pennebaker and Jean Rouch. Among these cameramen was Michel Brault, who borrowed the spontaneous approach of Henri Cartier-Bresson when filming. Brault is known for his use of wide-angle lenses in lieu of shooting from a distance. Among his best examples are *Les Raquetteurs* (co-directed with Gilles Groulx, 1958) and *Pour la suite du monde* (co-directed with Pierre Perrault, 1963). Brault's aesthetic innovation helped assure a place for francophone directors at the NFB, something that had been more or less denied before 1960, although French-speaking directors were required to submit their projects in English until the mid-sixties.

Through the following decades, those associated with the NFB pursued various explorations into documentary, animation, and some fiction as well, sometimes mixing genres in a single film. *J. A. Martin photographe* (1976)—a feature film that pays tribute to the itinerant photographers who historically traveled to isolated villages, or to factories and hotels, to do portraits of groups, workers, families, and individuals—may have been inspired by a photographer from Nicolet, Québec,

named Philius Coulombe. Directed by Jean Beaudin from a script by Marcel Sabourin (who also played the leading role), it was produced by the National Film Board of Canada and gained actress Monique Mercure (who played the photographer's wife) a prize at the Cannes Film Festival.

A unique organization, the National Film Board of Canada has contributed to the creation and conservation of some of the most important collections of images of Canada. Today, a part of that visual heritage is held at the Canadian Museum of Contemporary Photography in Ottawa.

During the two world conflicts in twentieth century, Canada participated along with England and the Allies, and war photography is therefore an important portion of the archives kept by the Canadian Army and veterans. Many cameramen from the National Film Board of Canada were sent abroad to film stock footage for newsreels. The War Museum in Ottawa owns an extensive collection of such materials. A 1973 exhibition catalogue, *Relentless Verit: Canadian Military Photographers Since 1885* edited by Peter Robertson traces a history of Canadian involvement in various actions and wars through the eyes of soldier-photographers, beginning with a documentation of the troops of the Yukon Field Force embarking for Klondike in 1898. The Canadian presence during the South African War in Durban in 1902 as photographed by Henry Joseph Woodside (1858–1929) is featured along with photographs of Canadian soldiers and peacekeepers on the battlefields in Belgium, France and elsewhere in 1917 during World War I and during the World War II years.

Compared to other countries, relatively few books showing the Canadian landscape and urbanscape were published prior to the 1980s. That genre emerged and blossomed when photographers sought to publish the photographs that they exhibited in galleries and Canadian embassies. Mia and Klaus glorified various natural sites in a series of books, such as *Canada* (Mia & Klaus, with Roch Carrier, 1986). Eugen Kedl produced many photography books focusing on Canadian cities and heritage. Known for his ability to catch the sunlight at dawn, photographer Claudel Huot took hundreds of images from Québec City over several decades in which he magnified the lateral lightning of sunrise on urban walls. One of his most striking books, *Québec, ville de lumières* (with a text by Michel Lessard), was published in French and English. Toronto-born artist Bill

Vazan (b. 1933) had a more conceptual approach but remains a main figure in the Land Art movement; he does not limit his subjects and sites to Canada, however.

A number of remarkable illustrated books were published during the second half of twentieth century. Jean Bruchési wrote *Le Canada* (1952) for the famous French publisher, Fernand Nathan, with 131 splendid black-and-white photographs from various sources, including cities, landscapes, famous sites, Natives, and reproductions of paintings in museums. Art books and exhibition catalogues for most of the postwar era remained the chief source of photographic illustrated books, published by many museums. Patrick Altman (born in Paris, France in 1950) made a notable career specializing in reproductions of paintings and works of art.

Perhaps because of the size of Canada and the vast empty landscapes of the north, aerial photography has been frequently employed. Beginning very early on for the genre, from the mid-1920s, W.E. Edwards in Québec City produced aerial photographs of the region; the Fairchild Aerial Surveys Co. in Grand-Mère (Québec) also produced aerial views during the same period.

Provincial governments photographed almost every section of the country from the air. Pierre Lahoud has been particularly active in this area, both as an aerial photographer himself and an historian. His first book, *Québec à Ciel ouvert* (1987), included a short history of the beginning of aerial photography in Canada, with Compagnie aérienne franco-canadienne, an affiliate of Compagnie aérienne française, a French corporation. Lahoud points out that after the cessation of hostilities from World War I in 1919, many combat pilots became private and commercial pilots, hiring themselves out to photographers. Their hydroplanes flew over the Province of Québec from 1920 until 1933 (Lahoud, 1987). And as part of the burgeoning worldwide interest in aerial photography at the end of the century, Lahoud edited his own works into a lavish book with a text by geographer Henri Dorion titled *Le Québec vu du ciel: Au rythme des saisons* (2001), which was also translated in English. Through various viewpoints and angles, vertical and oblique, Lahoud illustrates the magnificence of the Canadian landscape. As a sign of its popularity, the original French version was named “Favorite Book of the Year” in a vote made by the users of Québec City’s public library, in the year of its publication. There exist numerous examples of aerial photography of

places such as Halifax, Québec City, Ottawa, Toronto, Niagara Falls, Saskatoon, Vancouver, and Victoria. Some of these views were published in a predecessor to Lahoud’s widely popular compilation in 1957 by the Canadian publisher, Leméac—*La Province de Québec*, with 141 héliogravures taken by various photographers.

While the natural and built landscapes of Canada have served as primary sources of subject matter for Canadian photographers, another major area of interest is sports. As do many Americans and Europeans, Canadians love sports, and they consider hockey their national sport. Many Canadian newspapers dedicate their third page to sports, making this a major outlet for sports photography. One of the most memorable events of the twentieth century, the competition between an all-star Canadian team and the Russian Army team in 1972, was celebrated in a book titled *Twenty-seven Days in September* (McFarlane 1973).

If illustrated books were always popular in Canada, they usually concentrated on the present, showing the country as it is at any particular moment in time. In the mid 1990’s, the Government of Québec’s publisher, Les Publications du Québec, created an ongoing series, *Aux limites de la mémoire*, of 11 thematic albums dedicated to vintage photographs of Québec, most before 1960 and some from the early twentieth century. The books focus on specific themes: *Naviguer sur le Fleuve au temps passé 1860–1960* (Franck, 2000) is about sailing; *La Vie Rurale 1866–1953* (2001) about farms and farmers; *Au Rythme du train 1859–1970* (Reford, 2002) features railroad engines, and construction of railroads, bridges, a train trestle, and train accidents. The most recent in the series *Quartiers ouvriers d’autrefois. 1850–1950* (Sicotte, 2004) depicts workers, factories, and working-class neighborhoods. Each title includes almost 200 photographs with detailed comments, year, archival references. An overarching theme is worker photography: the series presents farm employees, blue-collar workers, male and female workers, and even children and aged workers. *Aux limites de la mémoire* had a wide distribution in bookstores, with each title selling more than 7000 copies, an impressive number for art books in Canada; some of those books were accompanied by a traveling photography exhibition.

This concept of exploring history through archival photography was followed by another series produced by a private publisher, GID. Focusing on specific regions and their local history, and using vintage photographs from both private and

public archives, titles include *La Côte-du-Sud: Belle à croquer* (Hébert, 2003) and *Les Îles-de-la-Madeleine* (Roy, 2004). These works and others draw in part from the numerous public archives of photographs in Canada, the most important being the National Archive in Ottawa, the Archives Nationales du Québec (in Québec City and Montréal), the archives of the National Film Board of Canada, in Montréal, and the archives of the Cinéma-thèque québécoise, in Montréal. Important collections of photographs can also be found at The Canadian Museum of Contemporary Photography in Ottawa, at the McCord Museum in Montréal, in newspaper archives, and in those of many religious institutions. The Canadian Press Photo Archives, for example, holds more than 85,000 images taken by Canadian photojournalists.

The decades at the end of the twentieth century made many Canadians aware of the artistic possibilities of photography. In fact, it is contemporary photography that made a whole generation of art enthusiasts care about visual arts. *Confluence: Contemporary Canadian Photography*, by Martha Hanna, Director of the Canadian Museum of Contemporary Photography, summarizes the contribution of some of Canada's most interesting artist-photographers. It includes works by such leading figures as Michael Snow, Lynne Cohen, Geneviève Cadieux, Geoffrey James, and Jeff Wall, all of whom have achieved recognition beyond Canadian borders.

One of Canada's most famous experimental artists abroad, Michael Snow has produced multidisciplinary works which have been an inspiration for many English-Canadian artists. Filmmaker, visual artist, composer, he has produced notable photographic works and art videos since the early 1960's. An example of his complex, theoretically-based work is *Manifestation* (1999), a life-sized self portrait, in which Snow mixes a plastic lamination of a color ink-jet photograph with spray paint, black paper, and a mirror. This unusual photograph can be seen as a new take on a previous work, *Authorization* (1969); both works are in the collection National Gallery of Canada, in Ottawa.

Among contemporary photographers, there are those who practice more traditional types of photographic representation, such as Clara Gutsche, who in her *The Convent Series* showed respectfully the everyday life of cloistered nuns during the 1990s. Edward Burtynsky, born in St. Catharines, Ontario in 1955, is a leading photojournalist and environmental photographer who has made an international

reputation with his large-scale, color photographs of mines, quarries, recycling yards from Canada and the United States, ship-dismantling facilities in Bangladesh, and a documentation of the Three Gorges project in China titled *Before the Flood*.

At the end of the twentieth century, Montréal attracted photographers from all horizons—Lynne Cohen (born in Wisconsin), Bertrand Carrière (born in Ontario), Raymonde April (born in Moncton, New Brunswick)—all of whom gained international reputations. Among other notable Canadian artists and contemporary photographers are Patrick Altman (born in France, in 1950), Geneviève Cadieux (born in Montréal in 1955), and Charles Gagnon, Thaddeus Holownia, Geoffrey James (born in 1942, in St. Asaph, Wales), Ken Lum, Diana Thorneycroft, Jeff Wall, (born in 1946, near Vancouver, British Columbia), Ian Wallace, and Jin-Me Yoon. Many of them share a common taste for abstraction and formal research. Many of these photographers were first seen in the prestigious biennial exposition *Mois de la Photo* in Montréal. Since 1989, this event has celebrated current trends in photography in Canada and abroad, with exhibitions, events, festivals, conferences, and workshops.

Many of the most active Canadian photographers both at home and abroad exemplify the most advanced of emerging international trends. Experiences in so-called “rephotography,” a type of appropriation, were explored by Andrzej Maciejewski in his book, *After Notman* (2003). The photographs made by William Notman, his sons, and associates between 1890 and 1911 and were taken again by photographer Andrzej Maciejewski (b. 1959), using the same lens format, respecting the angle and viewpoint of original from almost a century removed. Most photographs concentrate on Montréal and give striking examples of the urbanization and modernization that have occurred in most North American cities.

Another book using rephotography created a parallel between old and recent photographs of sites located in Québec City. Written by historian Jean Provencher, with new versions of old photographs made by Jocelyn Paquet, *Québec, les images témoignent* (2001) also includes photographic postcards from the early twentieth century.

Research into holography has also been a common concern of advanced Canadian photographers. Marie-Andrée Cossette, a professor at Université Laval, has specialized in holography since 1976. She was the first scholar worldwide to author a fine arts master's thesis on the topic. As an artist, she

exhibited her holograms in Canadian galleries and at the Massachusetts Institute of Technology (MIT) in Cambridge, where she was part of the research team at the Spatial Imaging Group, and taught at the MIT Media Laboratory, in 1987. Among her works are *Barcelona 1982*, a holograph which refers to Gaudi's magnificent unfinished church, La Sagrada Familia, and another tribute to Catalonian art, *Hommage to Dali*, which acknowledges famed Surrealist painter Salvador Dali's own fascination with holograms beginning in the early sixties.

Copy Art, or Xerography, is another arena in which Canadian artists have made pioneering efforts. In Montréal, the Centre Copie-Art was created by artist Jacques Charbonneau; its establishment was influenced by the underground research from Europe and the United States in the 1970s. The center, between 1982 and 2000, promoted new forms of visual research using the photocopier machine and related processes. There were two exhibition rooms, a workshop, a library, plus many photocopying machines and printers, including from a (at that time) rare color photocopier. Many experimental artists gathered from all parts of Canada to create multidisciplinary works, at times combining photography and Xerography. Although it closed in 2000, the Centre Copie-Art was an inspiration for other copy-art centers such as the Centre Canon de Paris in France, the Museo internacional de Electrografia (MIDE) in Cuenca, Spain, and the Museum für Fotocopie in Germany.

Experiments in copy art were made in other cities as well. In Québec City, Yves Laberge made many generations of photocopies from a single black-and-white photograph to compare the many stages and the deconstruction of shapes and lines in an exhibition titled *La photocopie: le non-souci du détail* held at the Laval University Library in 1987. As explained in the exhibition catalogue, using a Canon photocopier, an original photograph was photocopied, and the photocopy was then photocopied again, and the new one photocopied once more, each generation being different from the previous and from the following until the forms and lines so apparent in the initial image literally disappeared. Laberge dubbed the process "regeneration."

Advanced, experimental photography has also flourished on the coasts of Canada. On the west coast, a highly conceptual photography has flourished at Simon Fraser University and the University of British Columbia, around the pioneering

efforts of Vancouver native Jeff Wall, who taught at both institutions for a number of years. On the east coast, the Nova Scotia College of Art and Design, Halifax, has also trained generations of artists using photography as part of their contemporary art efforts.

Canada also has hosted great numbers of active professional, commercial, and amateur photographers, many associated with camera guilds or clubs. One of the largest is the Canadian Association for Photographic Art/L'Association canadienne d'art photographique, which was formed in 1998 by two venerable associations: the Colour Photographic Association of Canada (founded 1947 in Toronto), and the National Association for Photographic Art (NAPA) founded in 1967 by photographers interested in advancing the practice of black-and-white photography. NAPA published the magazines *Xerography* and *Fotoflash*. The Photographic Guild of Nova Scotia, founded in 1947, also serves as an organization for professional, commercial, and amateur photographers, offering conferences, competitions, and other professional services. Active photo clubs flourish in virtually every major Canadian city, including Calgary, Edmonton, Hamilton, Kingston, Regina, and Victoria, with many members continuing to capture and celebrate the natural beauty of Canada and its towns, cities, and diverse citizenry.

ROBERT CAPA

Hungarian-American

Perhaps the greatest war photographer ever, Hungarian-born Robert Capa covered five wars in 18 years, during which time he took some of the most enduring images of war ever captured on film. Guided by his own maxim "...if your pictures

aren't good enough, you're not close enough," Capa achieved an immediacy and intimacy in his photographs that revolutionized the way wars were documented. His keen eye and preference for small format cameras yielded a signature style that combined a rigorous formal composition with a snapshot's dramatic impact and sense of documentary

authenticity, which resulted in compelling and candid images that gave concrete visual expression to war and its effects. A pacifist and anti-war advocate, Capa spent much of his life and ultimately died photographing the human and sometimes inhuman face of the world's conflicts.

Robert Capa was born Endre Friedmann on October 22, 1913 in Budapest, Hungary, the second of three sons born to Dezső and Julia Friedmann. Capa became politically and socially conscious at an early age, due in part to his contact with the artist, poet and Socialist Lajos Kassak, whom Capa met in 1929. Kassak exposed the young Capa to the photographic work of several Hungarian-born social documentary photographers, as well as the important images coming out of America at the time by the more famous reformer-photographers Jacob Riis and Lewis Hine. Looking to combine his dual interests in politics and literature, Capa soon aspired to a career in journalism. He also adopted many of Kassak's reform-minded political beliefs and sympathies as his own, and by the age of 17 he had already participated in several local demonstrations and marches protesting governmental policies.

Capa's burgeoning political activism led to his more radical participation in local protests and other forms of political agitation in Budapest against what he viewed to be a repressive Hungarian government. His enthusiasm for reform also led him to meet briefly with a recruiter for the Hungarian Communist Party, and while Capa decided not to join the communist organization, his contact with one of its members resulted in his arrest and eventual expulsion from Hungary in the summer of 1931. Thus, Capa left his hometown of Budapest to pursue a degree in journalism at the Deutsche Hochschule für Politik in Berlin, Germany.

Arriving in Berlin with minimal resources, Capa fatefully took a job as a darkroom assistant at Dephot, a photographic agency that at the time represented a number of important photojournalists. Dephot's director, Simon Guttmann, took a liking to Capa and eventually lent him an old 35-mm Leica camera to use and allowed him to cover minor local events for the agency. The Leica was a small, unobtrusive camera well suited for the close-range candid photo-reportage that interested Capa, and for which he would soon become famous. He received his first significant assignment as a photojournalist in November, 1932, when his superiors at Dephot sent to him Copenhagen, Denmark to cover a speech being given there by the exiled revolutionary Leon Trotsky. Able to smuggle his inconspicuous Leica into the

stadium and position himself near to where Trotsky was speaking, Capa clandestinely snapped a series of photographs that superbly captured the energy of the impassioned Russian orator and the drama of the moment, so much so that Berlin's *Der Welt Spiegel* devoted a full page to Capa's photographs.

With the rise to power of Adolf Hitler in early 1933, Capa, being both Jewish and a political activist, left Berlin. He eventually settled in Paris, where sometime during the spring of 1934 and after a difficult period living in near poverty Capa met fellow Hungarian André Kertész, a successful art photographer and photojournalist whose work regularly appeared in the French magazine *Vu*. Kertész helped the young Capa by loaning him money, finding him work, and teaching him about photography. It was also in Paris around this time that Capa befriended David Szymin and Henri Cartier-Bresson, two young photographers with whom Capa would develop lifelong personal and professional relationships. Cultivating both his photographic skills and professional contacts through this growing network of photographer friends in Paris, Capa finally began to make a name for himself as a photojournalist, initially through a series of well-received photographs for the Paris paper *Regards*, chronicling the political marches and strikes associated with the leftist Popular Front campaign leading up to the 1936 elections.

In the summer of that year, Capa took the first of several trips to Spain with his companion Gerda Taro to cover the civil war that had recently erupted there. Using primarily his Leica, Capa produced a highly regarded series of photographs documenting the fighting that was taking place in northeastern and southern Spain. And it was in the south near the town of Córdoba that Capa snapped one of the most iconic photographs ever taken: his famous image of a Spanish Republican soldier at the precise moment of his death. This and other photographs by Capa from the Spanish front were featured in a number of large-circulation newspapers and prestigious magazines in France and Britain, and the American magazine *Life* published a series of his images that documented the siege of Madrid and the plight of its inhabitants. Capa's acclaimed photographs of the Spanish Civil War heralded his arrival as a premier photojournalist onto the world stage, and upon his return to Paris he published a book of his and Taro's photographs from Spain titled *Death in the Making*, which he dedicated to Taro, who had died while covering the conflict.

In 1938, the now famous Capa went to China with filmmaker Joris Ivens to photograph another war: the Japanese invasion of China. Capa covered the Sino-Japanese war for six months and once again produced graphic, straightforward visual testimonies of war and its effects on a local populace. His sought-after images appeared in *Life* and elsewhere, and his photographs documenting the Japanese aerial bombardment of the Chinese city of Hankou rank among his most successful.

Upon his return to Europe, Capa worked on a number of miscellaneous assignments, most notably in a piece on orphanages in Biarritz, France, an in-depth assignment on the Tour de France bicycle race for the French magazine *Match*, and a series of stories documenting the working class and the unemployed in and around Antwerp, Belgium. In 1940, he spent several months in Mexico covering the political rallies and usually violent protests leading up to that country's presidential elections. With the outbreak of World War II, Capa worked on a number of assignments devoted to the Allied war effort for news outlets on both sides of the Atlantic, but worked primarily in England for *Collier's* magazine and then as a European correspondent for *Life*. His photographs of London during the Blitz accompanied the text for a book published in 1941 titled *The Battle of Waterloo Bridge*, which documented the resiliency of working-class Londoners during and after the extensive aerial bombardment of the city by the Germans. During the late spring and summer of 1943, Capa covered the Allied campaigns in North Africa and Sicily led by General George S. Patton, and he spent the remainder of that year documenting the Allied advance at various battlefronts throughout mainland Italy, including the liberation of Naples and the fighting around Anzio. On the historic occasion of D-Day on June 6, 1944, Capa accompanied the first wave of American troops landing at Omaha Beach on the Normandy coast of France, snapping some of the most memorable and iconic photographs of World War II while in the water and on the beach during the chaotic opening moments of the liberation of France. To document the Allied landing at Omaha Beach, Capa had with him two 35-mm Contax cameras and a Rolleiflex, and while a majority of the photographs for which he risked his life that day were accidentally either destroyed or damaged in a darkroom mishap back in England, those that survived—including his famous image of soldiers wading ashore from their landing crafts—appeared in *Life* magazine and were hailed as the finest taken of the invasion.

From the beaches of Normandy, Capa went on to cover the Allied troop advances through to the liberation of Paris in August 1944, for which he accompanied the French 2nd Armored Division into the capitol. In Paris, he documented the delirium of the newly liberated inhabitants and their assistance with the elimination of pockets of German resistance by the liberating forces. After the liberation of Paris, Capa went on to cover the fighting that winter in the Ardennes—which would become known as the Battle of the Bulge—where he took a number of dramatic photographs of German soldiers surrendering to allied forces. He also parachuted into Germany with American troops in 1945 and was on hand to photograph the key Allied victories at Leipzig, Nuremberg, and Berlin. As with every conflict that he covered, during World War II Capa focused his lens not only on soldiers and the front-line action, but also on the local population and the war's impact on them, often capturing telling moments in the expressions and gestures of those around him. Throughout the war, Capa's images of both soldiers and civilians appeared regularly in *Life* and *Collier's* in America and in the *Weekly Illustrated* in Britain. For his efforts during the war, Capa, along with 20 other World War II correspondents, received the United States Medal of Freedom in 1947.

Soon after the war, Capa became an American citizen and in 1946 spent several months in Los Angeles, California, during which time he wrote his war memoirs, titled *Slightly Out of Focus*, and briefly aspired to become a director-producer. In 1947, he collaborated with his old friends Cartier-Bresson and Szymon (who now went by David Seymour and his nom-de-plume "Chim"), as well as George Rodger and William Vandivert to found the international photographic agency Magnum Photos. Living primarily in Paris by now, Capa devoted himself to Magnum, overseeing operations at the cooperative's New York and Paris offices and assisting the agency's young photographers.

In addition to running Magnum, during the late 1940s Capa collaborated on a number of travel books, including one documenting a month-long trip that he had taken with John Steinbeck to the Soviet Union in 1947. Also, in May 1948 Capa took the first of three trips to Israel, where he covered the fledgling country's declaration of independence and the ensuing war with its Arab neighbors for *Illustrated*. On his two subsequent trips to Israel, Capa concentrated his lens on the flood of refugees arriving in and around Haifa, photographing their living conditions in the immigrant

camps established to process and temporarily accommodate them.

During the first few years of the 1950s, Capa avoided most political assignments, and instead spent much of his time in Paris working at Magnum and writing a series of lighthearted travel articles for *Holiday* magazine. In the spring of 1954, he went to Japan to shoot a photographic series for Mainichi Press on children, a subject that had interested Capa throughout his career during times of both war and peace. Indeed, many of Capa's images of children from throughout his career achieve the same sense of immediacy and intimacy that has become the hallmark of his more acclaimed battlefield images.

Capa's six-week assignment in Japan lasted only three, however, as *Life*, in need of an emergency replacement photographer, sent him to cover the war in what was then known as French Indochina. Soon after arriving in the capitol of Hanoi, he left for Laos to photograph the release of French soldiers captured by the Viet Minh during their historic victory at Dienbienphu. Capa then returned to Hanoi, where he spent several days photographing the inhabitants of the city and their daily routines. On May 25, Capa accompanied a French convoy on a mission to evacuate two outposts, documenting the soldiers' slow advance through the hostile countryside of the Red River delta. While apparently maneuvering to photograph a column of soldiers as they advanced across a meadow Capa, with Contax camera in hand, stepped on a land mine and was killed almost instantly.

Days after his death, the French military awarded Capa one of its highest honors, the Croix de Guerre with Palm. In 1955, the Overseas Press Club and *Life* magazine jointly established the annual Robert Capa Gold Medal Award awarded to photojournalists exhibiting extraordinary courage and enterprise while working abroad. In 1958, Robert's brother Cornell Capa and mother Julia Friedmann, along with David Seymour's sister, created The Robert Capa-David Seymour Photographic Foundation in Israel. Eight years later, in 1966, the Werner Bischof-Robert Capa-David Seymour Photographic Memorial Fund was established to celebrate and support the work of these and other photojournalists, which in 1974 evolved into the International Center of Photography in New York City. In 1976, Capa was inducted into the International Photography Hall of Fame and Museum.

PAUL CAPONIGRO

American

In the essence of his work, Paul Caponigro belongs to a long-standing strand of American photography practiced by figures such as nineteenth-century landscape master Carleton E. Watkins, Edward Weston, Laura Gilpin, and William Clift (1944-), who have been drawn, almost mystically, to the power of the natural landscape. Caponigro's subjects are the landscape and still life in all of their manifestations—from close-ups of a sunflower or an apple to a Connecticut rock wall, or light simply reflected in the water, or the megalithic stone monuments of Northern Europe such as Stonehenge, Avebury, and Carnac. Caponigro has also famously captured sublime and enigmatic running white deer, the gardens and temples of Japan, the Arch of Reefert Church, Glendalough, Ireland, the consecrated places of the American Indian in the West, and the great buttes of Utah and New Mexico. At the root of Caponigro's photography is his concern for man's history and awareness of what forces lie around him. In his best work, he reveals nature's delicate balance through simplified forms and formations that have been skillfully observed and meticulously printed. The power of observation and a deft control of his craft have been key elements to Caponigro's contribution to the modern definition of the language of photography.

Paul Caponigro's sensitivity to place and his understanding of the quality of light and how it affects place have enabled him to produce images that are simultaneously remarkably quiet and powerfully resonant. This distinctive strength arises from his masterful darkroom technique in which he is willing to allow each negative to dictate the specific process by which it will be developed and on which papers it will be printed.

Caponigro typically tones his prints so that they contain a subtle but rich gradation of tone so that he might capture "the elusive image of nature's subtle realms."

Paul Caponigro also writes passionately about photography and his work:

...of all my photographs the ones that have the most meaning for me are those I was moved to make from a certain vantage point, at a certain moment and no other, and for which I did not draw on my abilities to fabricate

a picture, composition-wise or otherwise. You might say that I was taken in. Who or what takes one to a vantage point or moves one at a certain moment is a mystery to me. I have always felt that after such experiences that there was more than myself involved. It is not chance. It happens often.

(Paul Caponigro, a monograph 1971)

Early and enduring influences on Caponigro were the lives, vision, and work of Ansel Adams, Edward Weston, Minor White, and Northwest Coast painter Morris Graves. Ansel Adams' sharply focused and highly skilled craftsmanship set a standard for Caponigro to emulate; Minor White's psychological and spiritual approach to photography informed his life-long concern with the mystical and spiritual dimensions of landscape and still life photography, a viewpoint that was very influential on others of Caponigro's generation as well. Early on in his career, Caponigro visited an exhibition by Morris Graves in San Francisco. Graves' paintings of symbolic animals and ritual objects presented a mythical dimension connected to nature yet parallel and apart from it. These paintings influenced by Eastern brush painting and Native American art were a catalyst for Caponigro. Caponigro creates pictures that are immediate; however, he is constantly engaged in the effort to reveal something other—something that is not immediately visible, tangible, or legible. He has conducted a survey of the material world, conducted, over a lifetime, with such metaphysical fidelity that it transcends the need for explanation.

DIANA EDKINS

Biography

Born in Boston, Massachusetts, December 7, 1932. Studied piano, College of Music, Boston University, 1950–1951. Drafted into the army and served as a photographer from 1953–1955; stationed in San Francisco, where he became acquainted with the West Coast photographers Ansel Adams and Minor White. Apprenticed in a commercial photographic concern, 1952. Studied with Benjamin Chin and Alfred W. Richter in San Francisco, 1956, and with Minor White at Rochester Institute of Technology, Rochester, New York in 1957–1958. First solo exhibition, George Eastman House in Rochester, New York in 1958. Assisted Minor White with summer photographic workshops, 1959. Instructor and lecturer in photography at colleges and other centers in the

CAPONIGRO, PAUL

United States from 1960 until the present. Helped found the Association of Heliographers and their Gallery Archive in New York, 1963. Married Eleanor Morris in 1964. Two Guggenheim Fellowships, in the British Isles in 1966 and Japan in 1975. Exhibition at The Museum of Modern Art, New York in 1968. National Endowment for the Arts Photography Fellowship in 1975 and 1982. Moved to Santa Fe, New Mexico in 1973. Arts Council of Great Britain Grant, 1978; Peer Award, Friends of Photography, Carmel, California, 1983; Annual Governor's Award, New Mexico, 1984. Moved to Maine in the early 1990s and has taught extensively throughout the United States at universities and workshops.

MANUEL CARRILLO

Mexican

Born in Mexico City at the home of his grandparents on January 17, 1906, Carrillo was the son of an important Mexican family with roots in the northern state of Chihuahua. His grandfather, Lauro Carrillo, was a close ally of Mexican dictator Porfirio Díaz, and an uncle, Adolfo Ruiz Cortines, served as President of Mexico from 1952 to 1958. Manuel Carrillo attended several private schools in Mexico and worked briefly in the fledgling Mexican film industry before moving to the United States at the age of 17. In the United States, he worked at a variety of odd jobs, mostly in Chicago and New York, washing dishes, teaching dance at the Arthur Murray Studios, and finally for the Wall Street firm of Neuss Hesslein and Co. He returned to Mexico at the age of 24 and worked for a pioneer of the Mexican tourist industry, Alberto L. Bravo. He later took a job with the Illinois Central Railroad, where he eventually became the manager for their Mexican operations.

At the age of 49, he joined the Club Fotográfico de México and soon afterwards the Photographic Society of America. Within the ranks of these two organizations, he developed his art and a reputation as an artistic genius. He was often called “El Maestro Mexicano” or “El Fotógrafo del Pueblo” for his mastery of the photographic medium and his skill in capturing the essence of the Mexican people. Carrillo’s greatest regret was that he started his photographic career so late in life. Several of his early photographic exhibitions were sponsored by his employer, the Illinois Central Railroad, and one of his best-known photographs is *Garrotero de Nonoalco*, a photo of a railroad employee on smoke-shrouded tracks near Mexico City.

His first exhibition, *Mi Pueblo*, opened at the Club Fotográfico de México in 1958, where he had previously participated in several group exhibitions. From the time he joined the organization in 1955, he was active with the group; he won many awards, and the club named a special trophy for him in 1982 that honored its master photographers, and in 1985 it also named an exhibition gallery for him. A version of the *Mi*

Pueblo exhibition was displayed at the Chicago Public Library in 1960 and was viewed by an estimated 100,000 visitors.

In 1966, he entered a print entitled *Dog on his Master’s Grave* in a *Saturday Review* photography contest. He won first prize in the monochrome category—out of 149,000 entries—and the photo was published in the January, 1967 issue. This award and Carrillo’s evocative photographs soon brought him international fame. Many of Carrillo’s photographs depict animals, reflecting a long interest in animal rights and animal protection efforts. One of his best-known photographs shows a mass of street dogs, many emaciated, as they wait for food from a private feeding effort in Mexico City. The focus is not sharp, and Carrillo commented in an interview that he had difficulty taking the photo because of the tears in his eyes. Pictures of children and old people with their animal friends were favorite subjects for the photographer. *Los Inseparables*, an exhibition featuring people and animals, was shown at an event celebrating the animal protection law passed in Mexico in 1981.

Soon after his 1967 success in the *Saturday Review* photo competition, his *Mi Pueblo* collection of images depicting the people of Mexico toured photo clubs and galleries in the United States with great success. His friend Frank Christopher arranged for many of the exhibitions and encouraged the publication of his photographs in foreign magazines. In 1970, his photographs were selected for an exhibition at the Palacio de Bellas Artes (the national art museum) in Mexico City, and a few years later they represented Mexico in a tour of the Federal Republic of Germany. Since 1975, his work has been exhibited in 20 different countries in Europe, Asia, and North and South America. In 1980, he was honored at a meeting of the Photographic Society of America and was made an honorary citizen of El Paso. Also in 1980, his work was the subject of a feature in *Photozoom* magazine.

By 1988, Carrillo’s work had been seen in 209 individual exhibitions and 27 group exhibitions in Mexico, the United States, and countries around the world. His work has been published in a variety

of photographic anthologies and journals. *Manuel Carrillo: Fotografías de Mexico*, published by Juan Salinas Cortés in 1989, captured 225 of Carrillo's best works.

Although some criticize Carrillo's work as being sentimental, his emotional connection to his work often adds dimension to his documentation of everyday life in traditional Mexico. The bulk of Carrillo's photographs were taken from the mid 1950s through the late 1970s, but his choice of subject matter gives the photographs a timeless quality. Children at play, market scenes, and men at work and leisure show the activities of a broad spectrum of Mexican society. Melissa Carrillo (no relation to Manuel), who created an on-line exhibition on Manuel Carrillo's work for the Smithsonian Institution's website, describes his work as an expression of post-revolutionary nationalism, and notes that Carrillo often expressed pride in his country. As Robert Tilendis said in his description of Carrillo's work:

Carrillo has concentrated on the people and places of Mexico in his work. His photographs are readily identifiable with that county, with a specificity that, rather than diminishing their meaning, adds to their scope. His mastery of photographic technique and of the elements of composition combines with a sensitivity to the nuances of human feeling to produce a series of images rich in associations.

Manuel Carrillo did his own developing and printing, but he always concentrated on the image itself and its composition rather than darkroom manipulation. The images look deceptively simple and straightforward, and they often give the impression of happy coincidences, but Carrillo often waited hours for the right light or effect of shadows. He always used natural light and never used a flash or zoom lens. According to a 1982 interview, he generally produced 6 × 6 cm negatives, preferring his Rolleiflex or Mamiyaflex cameras; all of his best-known work is in black-and-white. He also had a 35-mm Nikon that he used for color transparencies (most often for portraits, glamour photos, or landscapes) and a Hasselblad, which he used infrequently for wide-angle photography. The Mexico City earthquake of 1985 virtually destroyed his darkroom; he also lost some of his negatives and much of his photographic equipment. This personal disaster led him to look for a home for his photographs in the United States.

Carrillo died on 20 January, 1989, leaving behind an important artistic legacy. His works are held by many private collections, universities, and museums, including the Victoria and Albert Mu-

seum in London, the Museum of Modern Art in New York City, the Center for Creative Photography in Tucson, the Museum of Contemporary Art in Chicago, and at least 30 other museums. He maintained close ties with friends in El Paso, a city where his family had lived for a time during the Mexican Revolution and where he received medical treatment in the 1980s. In 1991, the University of Texas at El Paso purchased Carrillo's photographs and papers from his widow, and the collection is now housed in the C. L. Sonnichsen Special Collections Department of the University Library. A virtual museum of his work is available at <http://latino.si.edu/virtualgallery/manuelcarrillo/mc code.htm>.

HENRI CARTIER-BRESSON

French

One of the giants of twentieth-century photography, Henri Cartier-Bresson might also be said to be the seminal figure of the postwar era, both for his own achievements and for the wide influence of his humanist photographic sensibility. Described by *The New York Times* as "the archetype of the itinerant photojournalist," he was also a succinct portraitist, capturing newsworthy personalities such as sculptor Alberto Giacometti, writer Jean-Paul Sartre, and Indian leader Mahatma Gandhi in what were to become signature portraits. He was a photographic visionary who co-founded the now-legendary photo agency Magnum Photos and pioneered the concept of "the decisive moment."

Well-illustrated by the 1932 work *Behind Saint-Lazare Station, Paris, France*, which shows a man leaping in the midst of a flooded street, captured in the split-second before his heel will hit the skin of water, Cartier-Bresson's unique photographic sensibility put forth the idea of "the decisive mo-

ment"—the exactly proper moment when any particular set of occurrences as observed through the frame of the lens will cohere to become the best possible photograph, balanced in composition and other formal elements and capturing a photographic reality that freezes and thus abstracts the "real world." Cartier-Bresson often described his philosophy thus:

To take a photograph is to hold one's breath when all faculties converge in a face of fleeing reality. It is at that moment that mastering an image becomes a great physical and intellectual joy.

(HCB Foundation website)

What distinguishes Cartier-Bresson's vision from the many other photographers who strove to capture ideal moments, often instead perpetuating clichés, however, was his ability to pre-visualize and pre-edit the image so that it would be rich and resonant, not merely capturing a suspended instant. The famous Saint-Lazare railway station photograph is filled with remarkable, even uncanny detail.

Posters in the midground reiterate the leaping figure and his reflection in the water; the man has propelled himself off a ladder-like structure that mimics railway track, and so on. Cartier-Bresson was seldom accused of the “lucky shot” culled from numerous exposures, however, for he was famous for shooting judiciously, often exposing only a few frames during events, when other photojournalists would shoot many rolls.

Henri Cartier-Bresson was born in Chanteloup, Seine-et-Marne, on August 22, 1908, the oldest of five children. His father was a textile manufacturer of considerable wealth, yet the household was run as would be one of modest means to the point that as a boy Cartier-Bresson had little idea of the family’s resources, which included extensive land holdings in Normandy where he would summer. He was educated in Paris at the Lycée Condorcet, where he read avidly, but received no formal photographic training. His introduction to the medium as a potential career was through seeing photographs by Martin Munkacsi as a teenager, which impressed him with their beauty and possibility. He did, however, study painting in 1927–28 under André Lhote, who had been an early practitioner of Cubism; it was Lhote who Cartier-Bresson claimed taught him everything he knew about photography through his training to observe closely and imaginatively and learn from art history. He was also deeply impressed by the works of the Surrealist artists who were then beginning to dominate the Parisian art world. He studied English literature and art at Cambridge University in London until his induction into the French Army in 1930. Upon his discharge, filled with the poetry and literature and looking for adventure, he was off to the French colony of Côte d’Ivoire to hunt. It was here he first took photographs using a Brownie that he had been given as a gift, and the pursuit of shooting game as a metaphor for shooting photographs, which he often used in his writing and speaking about the medium, also arose. He contracted blackwater fever, however, and almost died. The photographs he took were also lost. Returning to Marseilles to recuperate, he acquired his first professional camera, a Leica, which he used to photograph in earnest when he had occasion to travel the continent with friends. His first exhibition was in Madrid; however, by 1935 he was in New York, where he exhibited at the Julien Levy Gallery. While in New York, he met Paul Strand, who at that time was making films. Inspired by Strand, when he returned to France Cartier-Bresson secured the position of a

second assistant on Jean Renoir’s *A Day in the Country* and *The Rules of the Game*. He was also involved in a propaganda film the famous director made for the French Communist Party that denounced France’s prominent families in France, Cartier-Bresson’s own among them. Cartier-Bresson did not join the Communist Party, but he harbored a life-long sympathy for oppressed and demoralized lower classes, which was often reflected in his choice of subject matter.

In 1940, with the German invasion of France, Cartier-Bresson, a corporal in the Army’s Film and Photo Unit, was captured. He spent a total of almost three years in prisoner-of-war camps, escaping twice and being recaptured and returned to hard labor, which he later claimed had been a helpful lesson. On his third escape attempt, in 1943, he succeeded, and he hid on a farm in Touraine until he secured false papers that allowed him to travel in France, where he once again took up photographing as a member of the Resistance. He established a photo division within the French underground to document the German occupation as well as their eventual retreat, an experience which surely shaped his ideas about the photo agency, Magnum, when it was established in 1947, and photographed such notables as artists Henri Matisse, Pablo Picasso, and Georges Braque. Following France’s liberation in 1944, the United States Office of War Information hired Cartier-Bresson to direct a film about the homecoming of French prisoners and deportees.

Upon completing this well-received film, *The Return*, Cartier-Bresson traveled once again to New York City, where a retrospective at the Museum of Modern Art, conceived as a tribute on the belief that he had been killed in the war, had been planned. He was thus able to work on his own “posthumous” exhibition, and he took time as well to travel around the United States, taking such signature images as *Harlem, Easter Sunday, 1947*, which shows a lovely African American woman wearing a satin-flower filled hat framed within the architectural details of a modest brick structure, which join with the forms of the hat to create an even more elaborate chapeaux.

Returning to Paris in 1947, he learned that his associates Robert Capa, David Seymour (Chim), William Vandivert, and George Rodger, had laid plans for a cooperative photo agency with offices in New York, Paris, and other world capitals. Dubbed Magnum Photos, the organizing group named Cartier-Bresson to their board of directors, knowing that he was like minded and aware of his considerable prestige. He was tapped to be in charge of Far

Eastern assignments; and his insistence on small format cameras, no auxiliary equipment such as flash, tripods, or telephoto lens and the integrity of the frame as photographed—no darkroom manipulation—became the gold standard for postwar photojournalism as well as being highly influential on fine arts photography.

Thus the late 1940s saw Cartier-Bresson's rise as an international photojournalist. For Magnum he traveled to the China, India—where he photographed Gandhi literally minutes before he was assassinated—and Indonesia, photographing political events and the people in their streets and homes. Extraordinary “decisive moments” were captured, such as *Gold Sale, Shanghai, China* of 1949, which shows a human “rope”: Chinese peasants with their arms braided and intertwined, binding themselves, as it were, at the stoop of a building. Taken during the communist takeover of China in 1948–49 this remarkable composition captures a run on a bank selling gold; the crowd is not controlled by any authority, but by its own essence of panic and agitation in the face of huge events.

By 1952, Cartier-Bresson, back in Europe, was finally receiving wide recognition in his home country. His first book, *Images à la sauvette* (with its English title of “The Decisive Moment,”) with cover art by Matisse, was published. He began a long collaboration with eminent fine arts publisher Robert Delpire, including a book on Balinese theatre, *Les Danses à Bali*, featuring text by Antonin Artaud. His book *Les Européens*, with cover art by painter Joan Miró, was published as well; and in 1955, he received his first exhibition in France at the Louvre.

The 1960s were again a period of intense international travel. He returned to Mexico, where he had made one of his first photographic forays as part of an ethnographic team in the early 1930s. On assignment for *Life* magazine, he traveled to Cuba during a time of high tension between that country and the United States. He visited Japan and once again traveled to India. In 1966, Cartier-Bresson terminated his relationship with Magnum Photos, claiming he had stayed with the agency “two years too long” and admitting to detractors that perhaps he had said all he had to say through photography. Although he took on occasional commissions, such as one from the IBM Corporation, *Man and Machine*, he turned once again to his early passion for painting and drawing. After divorcing his wife of 30 years, the Javanese dancer Ratna Mohini, he married the Magnum photographer Martine Franck in 1970. After 1974, he photographed very little, and then often secretly,

which he had perfected during his long career as a photojournalist working with a small camera that he would often further minimize by covering with black tape any metal parts which might reflect light and catch the eye.

Coinciding with a 2003 retrospective of his work at the Bibliothèque nationale de France, and shortly before his 95th birthday, Cartier-Bresson, along with his wife Martine Frank and their daughter, inaugurated the Henri Cartier-Bresson Foundation, which they had conceived several years earlier to “preserve and share the legacy of his work.” Housed in an historic atelier in Paris, the Foundation archives Cartier-Bresson's vintage prints and contact sheets, as well as publications, rare books, albums, posters, exhibition invitations, and films and videos that document the photographer's career. The HCB Foundation also bestows an award named after Cartier-Bresson, organizes and circulates exhibitions featuring his work, and maintains a comprehensive website available at www.henricartierbresson.org. Magnum Photos also distributes Cartier-Bresson photographs. Henri Cartier-Bresson died in the south of France on 5 August 2004.

Biography

Born Chanteloup, Seine-et-Marne, 22 August 1908. Educated Lycée Condorcet, Paris and studies painting with André Lhote, 1927–28; no formal photographic training. Studied English literature and art at Cambridge University, London, 1928–29; inducted into French Army, 1930. Traveled in Africa, 1931, European continent, 1932. First exhibition in Madrid, 1932; New York, 1933. Prisoner-of-war, 1940–43; member MN PGD organization of the French underground, 1943–44. Co-founded Magnum Photos, 1947; worked in Far East, 1948–1952, Cuba, 1963; Japan, 1965; left Magnum in 1966. Traveled in USSR, 1972–73. Married Martine Franck, 1970. Largely ceased photographing after 1974. Numerous awards, including Overseas Press Club of America, 1948, 1954, 1960, 1964; Prix de la Société Française de Photographie, 1959; the Culture Prize, Deutsche Gesellschaft für Photographie, 1975; Hasselblad Award, 1982. Died in Céreste, Alpes-de-Haute-Provence, France, 3 August 2004.

Selected Work

(Note that HCB did not formally title works, and works may appear under various titles.)

Behind Saint-Lazare Station, Paris, France, 1932 (also known as *Place de l'Europe*)

Spanish Morocco, 1933

Valencia, Spain, 1933
Calle Cuauhtemoczin, Mexico City, 1934 (also known as *Prostitutes in the Calle Cuauhtemoczin*)
Sunday on the Banks of the River Marne, France, 1938
Dessau: Exposing a Gestapo Informer (also known as *Exposing a stool pigeon for the Gestapo in a displaced persons camp*), 1945
Jean-Paul Sartre on the Pont des Arts, 1946
Harlem, Easter Sunday, 1947 (also known as *Easter Parade*)
Eunuch of the Imperial Court, Beijing, China, 1948
Gold Sale, Shanghai, China, 1949
Rome, Italy, 1951
Athens, Greece, 1953
Near Burgos, Spain, 1953
Rue Mouffetard, Paris, 1954
Sunbather, Peter and Paul Fortress, Leningrad, USSR, 1973

Individual Exhibitions

1933 Julien Levy Gallery; New York, New York
 1947 *The Photographs of Henri Cartier-Bresson*; Museum of Modern Art; New York, New York
 1952 Institute of Contemporary Art; London, England
 1954 *Photographs by Henri Cartier-Bresson*; Art Institute of Chicago; Chicago, Illinois
 1955 Pavillon de Marsan de Louvre; Paris, France
 1965 *Henri Cartier-Bresson*; Asahi Gallery; Tokyo, Japan and traveling worldwide
 1970 *On France*; Grand Palais; Paris, France and traveling worldwide
 1974 *Apropos USSR: Henri Cartier-Bresson*; International Center of Photography; New York, New York
 1976 *Glimpses of America: 1945–1975, by Henri Cartier-Bresson*; International Center of Photography; New York, New York
 1979 *Henri Cartier-Bresson: Photographer*; International Center of Photography; New York, New York and traveling
 1981 *Henri Cartier-Bresson*; Musée d'Art moderne de la Ville de Paris; Paris, France
 1985 *Henri Cartier-Bresson*; Museo de Arte Moderno de Mexico; Mexico City, Mexico
 Henri Cartier-Bresson: A Half-Century of Portraits; International Center of Photography; New York, New York
 Henri Cartier-Bresson en Inde; Centre national de la photographie, Palais de Tokyo; Paris, France
 1987 *Henri Cartier-Bresson: The Early Work*; Museum of Modern Art; New York, New York
 1988 *The Reluctant Photographer: Henri Cartier-Bresson*; International Center of Photography; New York, New York
 Henri Cartier-Bresson In India; International Center of Photography; New York, New York
 1994 *Henri Cartier-Bresson: Homage*; International Center of Photography; New York, New York
 1997 *De Européenne*; Maison Européenne de la Photographie; Paris, France
 1998 *Tête à Tête: Portraits by Henri Cartier-Bresson*; Smithsonian Institution National Portrait Gallery; Washington, DC

Group Exhibitions

1935 *Documentary and Anti-Graphic*; Julien Levy Gallery; New York, New York

1951 *Five French Photographers: Brassai, Cartier-Bresson, Doisneau, Izis, Ronis*; Museum of Modern Art; New York, New York
 1972 *Behind the Great Wall of China: Photographs from 1870 to the Present*; Metropolitan Museum; New York, New York
 1977 *Concerning Photography*; The Photographers' Gallery; London, England
 1984 *In Our Time: The World as Seen by Magnum Photographers*; International Museum of Photography and Film, George Eastman House; Rochester, New York and traveling worldwide
 Subjektive Fotografie, Images of the 50's; Museum Folkwang; Essen, Germany (traveled to the San Francisco Museum of Modern Art; San Francisco, California)
 1989 *On the Art of Fixing a Shadow: One Hundred and Fifty Years of Photography*; National Gallery of Art; Washington D.C. and Art Institute of Chicago; Chicago, Illinois (and traveled to Los Angeles County Museum of Art; Los Angeles, California)
 Photography Until Now; Museum of Modern Art; New York, New York (traveled to the Cleveland Museum of Art; Cleveland, Ohio)
 Magnum Founders: Robert Capa, Henri Cartier-Bresson, George Rodger, and David Seymour Chim, 1931–1986; International Center of Photography; New York, New York

CENSORSHIP

Censorship, in its broadest sense, can be used to indicate the suppression and restriction of written and visual materials on a variety of grounds, be they socio-political, economic, moral, or aesthetic. The forms taken by censors are similarly diverse, and can include racial, ethnic, or religious groups, government agencies, social organizations, corporations, educational institutions, even the creator of a work in question. Beyond these vague parameters, however, censorship resists more precise definition, mainly due to the vast multiplicity of agendas to which a censor may subscribe. For some, censorship may be used as a protective measure against an existing verbal or visual assault; for others, it may function as a preemptive strike against an individual or faction who is construed as a threat to the larger group. Regardless of the specific circumstances, censorship is fundamentally about control, and having that power acknowledged both internally and externally.

That censorship has been so prevalent insofar as photography is concerned is due in large part to the nature of the medium, as photographic prints can be easily reproduced and then disseminated over great distances, whereas paintings and sculpture are difficult and time-consuming to reproduce, and are generally viewed in the context of a gallery or museum. Moreover, the apparent naturalism and assumed objectivity of the photographic image—as opposed to one that is hand-drawn—has contributed greatly to the notion that photography is a considerably more dangerous and volatile medium. This is perhaps best exemplified by a trial in New Zealand in 1917, which found a photograph of Giorgione's painting *Sleeping Venus* hanging in a shop window to be "indecent." Due to pressure from the United States Postal Service's policing of nudity in photographs, Eastman Kodak established a private censorship operation in 1949.

Times of war are especially prone to censorship, as governments have often sought to use photographic media to fashion an acceptable view of conflict for the civilian population. American journalists of the First and Second World Wars were subject to the regulatory influence of military censors, who sought to protect the general populace from viewing graphic images of dead and wounded

soldiers. The extensive censorship of media images by the United States government during wartime was partially alleviated by the development of the wire services in the 1930s, which enabled news services such as the Associated Press to send images quickly over telephone wires. While the conflicts from Vietnam through to the more recent campaigns in the Middle East continue to be understood mostly through televised news reports, it is often isolated images that circumvent censors and elicit powerful reactions from civilians. Further complicating this issue is the use of the largely unregulated Internet for the dissemination of digital photographs, which will have an enormous effect on the methods of control and management of information in the future.

The thriving avant garde around the Bauhaus in Dessau and Berlin was squashed by the rising tide of Nazism in Germany, which resulted in the closing of the school and the threatening of its instructors. As often is the case, results of censorship can be unpredictable. The fleeing from censorship and oppression by such figures as László Moholy-Nagy or Herbert Bayer brought them productively to the United States, where their work had even greater influence. Decades of tight governmental control in China, which allowed only certain subject matter as suitable for photographing, resulted in a veritable flood of creativity in the field once censorship was relaxed in the 1990s.

Censorship of photography as an instrument of political and social control has also been used to stifle perceived internal conflicts, most notably during the Cold War in the United States, which saw the government exert its enormous influence against the threat of communism by disbanding organizations judged to be subversive. The crusade against what were considered identifiably communistic tendencies in modern art led to the 1947 blacklisting of The Photo League, a group of mainly left-leaning photographers who published a newsletter, *Photo Notes*. The Photo League counted amongst its members some of the most influential figures in American photography, including Lewis Hine, Paul Strand, Walter Rosenblum, Ansel Adams, Edward Weston, W. Eugene Smith, Lisette Model, as well as other photographers formerly employed by the Farm Security Administra-

tion (FSA) of the Works Progress Administration (WPA). German photographer Hans Haacke was met with similar disapproval not by the government, but by the Solomon R. Guggenheim Museum in New York, for producing an exhibit in 1971 consisting of photographs of tenement apartments in New York City, revealing through the accompanying text the owners and mortgage holders of each property, all of which was public record. The exhibition was canceled and the curator was fired, despite Haacke's agreement to remove the names from the wall labels. In this circumstance, the gravity of the apparently innocent photographs of buildings is not implicit in the images themselves, but rather in the context in which the artist seeks for us to understand them.

Yet historically, the key objectionable image has been the human body, and controversy ensues when the body portrayed questions the moral standards of sexuality, or more specifically, heterosexuality. Whether presented clothed or nude, in war or at home, in groups or in isolation, the human body is constantly viewed and scrutinized according to a society's value system.

An early example of both political and sexual censoring occurred with the work of Minor White (1908–1976), who began his photography career in the late 1930s. An example of a self-censoring artist in his early years, White omitted overt references to his homosexuality. A veteran of the U.S. Army, White worked and experienced great success for many years within the acceptable limits of his medium. His first experience with censorship occurred when White developed more personal work that was accompanied by his poetry. In the immediate post-World War II era, San Francisco's Palace of the Legion of Honor refused to allow the poetry to join White's photographs; it was deemed both too personal and lacking in patriotism. In the late 1940s and early 1950s, White photographed male nude subjects that were not sexually explicit or outwardly homosexual. Bound by his self-censorship, these works were not shown at the time. However, many of these works were eventually exhibited in 1989. While homoerotic or homosexual depiction became more acceptable toward the end of the century, homosexual content was at the center of one of the most volatile censorship battles of the century.

The most pervasive and publicized appearance of censorship in the late decades of the century was the outcry against photographs deemed to be of "obscene," "indecent," or otherwise distasteful subject matter, generally relating to prurient or anti-religious (typically anti-Christian) themes.

Most notable amongst examples of this genre are the exhibitions by Andres Serrano and Robert Mapplethorpe in the late 1980s, both of which erupted in a firestorm of controversy. Serrano, whose *Piss Christ* of 1987 presented a plastic crucifix submerged in a jar of urine, was targeted by irate members of Congress and the religious right, who condemned the photograph as offensive and overtly anti-Catholic. A series of graphic images of erotic homosexual activity and nude children in Mapplethorpe's 1989 touring exhibition *The Perfect Moment* resulted in the cancellation of the show at the Corcoran Gallery of Art, in Washington, DC, followed by the arrest and indictment (and subsequent acquittal) of Dennis Barrie, the Director of the Contemporary Art Center in Cincinnati, who rebuffed an order by the county prosecutor to remove seven of the photographs. The maelstrom caused by these artists was due not only to the perceived unsuitability of the subjects of these photographs, but that the artists and/or the exhibiting institutions were funded by grants from the National Endowment for the Arts (NEA), which rekindled the continuing debate about the purpose of and selection process for government grants for the arts. While the media fanfare surrounding the Serrano and Mapplethorpe cases have made them the most notorious instances, scores of photographers have been met with both successful and unsuccessful attempts at censorship that have been decidedly less visible. For example, works by Alice Sims, Sally Mann, and Jock Sturges, have been cited for indecency for their use of nude or seemingly abused children.

CENTER FOR CREATIVE PHOTOGRAPHY

The Center for Creative Photography (CCP) in Tucson, Arizona, in the United States is an archive, museum and library dedicated to preserving, exhibiting, and promoting the study of creative photography in its broad diversity. It is a repository for the lifetime records and photographs of more than sixty photographers and photographic institutions. It promotes interest in photography by hosting exhibitions drawn from its collections, by exhibiting the work of contemporary photographers organized by its curatorial staff, and by serving as host to traveling exhibitions organized by other institutions. The CCP maintains and circulates an extensive library of books and other publications by and about photographers in its collections and about the greatly diverse range of photographic activity in the history of photography.

A unit of the University of Arizona Library, the CCP was founded in 1975 by then University President John P. Schaefer and photographer Ansel Adams when Schaefer approached Adams and suggested the University of Arizona as an eventual home for Adams' archive. From that initial idea the CCP has evolved to become a major institution supporting the study of the history of photography by offering both the products of a photographers' career and the archival materials documenting the conditions in which that work was created.

The CCP opened in 1975 under the direction of Harold Jones, founding director of Light Gallery in

New York. James Enyeart, director of the Friends of Photography, in Carmel, California, became director of the CCP in 1977 when Jones left to found the photography program at the University of Arizona's department of art. Enyeart directed the CCP for more than ten years, further developing its collections and leading the campaign to provide the Center with a permanent home in a state-of-the-art building on the University campus; he left the CCP in 1989 to become director of the International Museum of Photography and Film, George Eastman House in Rochester, New York. Terence Pitts, who had been librarian and later curator under Jones and Enyeart, served as director of the CCP from 1990 to 2000. In August 2003 Douglas R. Nickel, a graduate of Princeton University and formerly curator of photography at the San Francisco Museum of Modern Art, was appointed director of the CCP.

The CCP became a reality when the five founding archives of Ansel Adams, Wynn Bullock, Harry Callahan, Aaron Siskind and Frederick Sommer were received in Tucson in 1975. When the CCP celebrated its twenty-fifth anniversary in 2000 its Research Center held the lifetime archives of over 50 photographers and many smaller collections. In addition to those already cited, the CCP holds archives or significant manuscript collections from the photographers Edward Weston, Dean Brown, Dorothy Norman, Paul Strand and Garry Win-

grand, educators Laura Volkerding and Robert Heinecken, fashion photographers Louise Dahl-Wolfe and Richard Avedon, pictorialists William Mortensen and Adolf Fassbender, photographer, educator and theorist Henry Holmes Smith, photo-journalists W. Eugene Smith and Dan Weiner, the critics and historians A. D. Coleman, Beaumont Newhall and Nancy Newhall, archives from such collective photographic undertakings as the Espejo and the Water in the West projects, records from the Limelight and Witkin photographic galleries and from the Society for Photographic Education, and materials from many other sources.

Many of the collections are related, yielding to researchers a more complex view of a photographer's work and life, and the web of relations between them and others, than a single archive may on its own. For example, the Edward Weston archive, which contains a wealth of material from the photographer himself—including correspondence, manuscripts of his daybooks, negatives, memorabilia and other materials—is further complemented by the Center's additional holdings of archival materials from Weston's friends and associates Johan Hagemeyer, Sonya Noskowiak, and numerous other small collections.

Although photograph collections at the CCP are predominantly twentieth century and from the United States, nineteenth century photography and work of an international scope are also represented. The Center holds more than 60,000 exhibition quality prints by more than 2,000 photographers in its print collection. Some photographers at the CCP are represented by the largest public collections of their work held anywhere. In addition to work by photographers whose archives are held at the center, the print collection includes important bodies of work by David Levinthal, William Christenberry, Tseng Kwong Chi, Todd Webb, Josef Breitenbach, Lee Friedlander, Andreas Feininger, Arthur Tress, and Marion Post Wolcott.

Since its founding in 1975 the CCP has presented more than 280 exhibitions, many of them traveling to other institution, including foreign venues in 12 countries. A record of exhibitions between 1975 and 1995 at the Center is detailed in *Exhibiting Photography: Twenty Years at the Center for Creative Photography* (1996).

The CCP has an extensive record of publishing the results of research within its collections in its journal *Center for Creative Photography* (later renamed *The Archive*). Issues of the journal have often been devoted to scholarly essays about particular bodies of work in the CCP collections, have

provided extensive illustrations of work not previously published or little known and self-reflexively have addressed the matter of study in archives itself. A series of scholarly bibliographies provide access to publications and writings by and about photographers in the collection; these include *W. Eugene Smith: a Chronological Bibliography, 1934–1980* (1981) and *A. D. Coleman: A Bibliography of His Writings on Photography from 1968 to 1995* (2000). Other publications include monographs such as *Solomon's Temple: The European Building-Crafts Legacy* (1996) by Laura Volkerding, retrospectives such as *Reconstruction: The Art of William Christenberry* (1996), collections of essays, as in *Henry Holmes Smith: Collected Writings 1935–1985* (1986), an appraisal of photography in the twentieth century United States on the occasion of the medium's 150th anniversary in *Decade by Decade: Twentieth-Century American Photography* (1989), and the extensive catalog *Edward Weston: Photographs: From the Collection of the Center for Creative Photography* (1992). *Original Sources: Art and Archives at the Center for Creative Photography* (2002) provides a guide to the collections of the CCP.

Since 1991 the Ansel Adams Research Fellowship has provided scholars with the opportunity to research in the Center's archives, print collections and library. The Adams Fellowship is provided twice annually with the support of Polaroid Corporation. Through the auspices of the Center's education department visitors are provided the opportunity to see collection holdings not on exhibition through the print viewing program.

The CCP's department of rights and reproductions administers the copyright to work by numerous photographers whose archives are held in the Center's collections. These include Lola Alvarez Bravo, Louise Dahl-Wolfe, Adolf Fassbender, John Gutmann, Otto Hagel, Hansel Mieth, Hans Namuth, Dorothy Norman, Mickey Pallas, Peter Stackpole, Laura Volkerding, Edward Weston and Max Yavno.

PHOTOGRAPHY IN CENTRAL AMERICA

This entry addresses twentieth-century photography in the continental countries of Guatemala, Honduras, El Salvador, Costa Rica, Nicaragua, Panama, and the island of Cuba, with additional references to other Caribbean countries. A description of some Central American photographers and their explorations and work in photography follows a brief look at historical references and principal themes to twentieth-century photography in Central America.

Photography arrived in Central America soon after its invention. Pioneer photographers in Central American countries include: O. Salvin (1861) and E. Muybridge (1870) in Costa Rica; J. Washington (1841) and Bennet (1842) in the Dominican Republic; R. Alexander (1852), Charney (1859), and W. Bradley (1859) in El Salvador; W. Helsby (1844), Osbert Salvin (1861) in Guatemala; W. Bradley (1859), O. Salvin (1861) in Honduras; A. Molina (1856), E. Mestre (1858) in Nicaragua; E. Muybridge (1870), Timothy O'Sullivan (1870) in Panama; J. Washington (1840), Antonio Rezzonico (1841), Halsey (1841), R.W. Hoit (1841), J.de J. Quintiliano (1855), Molina (1855), Esteban Mestre (1856), Francisco Serrano (1857), C.M. Suarez Arango (1859), Encarnacion Irastegui (1859), and Francisca Madero (1859) in Cuba.

Professional photographers have been active in Central America throughout the twentieth cen-

tury, including photographers specializing in studio portraiture, journalists specializing in reportage and documentation, and artists using the medium as expression for its own sake. Photography was also present in rural areas of Central America, many towns and villages having their own studio photographer. Through the end of the century, it was common that itinerate photographers traveled from town to town selling their services, in some cases utilizing ingenious ways to make the craft of photography a mobile business. Some photographers used handmade cameras large enough for tiny trays of chemistry inside. The camera produces a paper negative that is developed then rephotographed for the positive image, a 30-minute process from exposure to damp but finished photograph.

For most of the twentieth century, little information is available on photography in Central America, and drawing broad conclusions from the available information is problematic for several reasons. First, Maria Cristina Orive from Argentina describes part of the problem as a heretofore excessively commercial and colonialist market dominated by large foreign firms such that even in their own countries many do not know what has been achieved, exhibited or published. Secondly, much of the available information is about Latin America in general but not necessarily invol-

ving Central American photographers or organizations. The large photo colloquia and their accompanying exhibitions in the 1970s and 1980s, starting with *Primer Coloquio Latinoamericano de Fotografía* held in Mexico City in 1978, united hundreds of photographers from Latin America, but few exhibiting artists were from Central American countries. Thirdly, available information comes from two principal sources, either the work of an indigenous researcher with more intimate knowledge of the subject but perhaps with relatively limited research tools, or the visiting researcher from Europe or the United States working with a variety of resources but through foreign eyes. Fidel Castro once commented that non-Latin American curators have enjoyed the luxury of traveling around from country to country for a first-hand look. Many European and US writers on photography make a critical distinction between art photography and social or political works. This distinction may be too arbitrary to impose on Central American photography. Finally, authors on Central American photography describe a plethora of perspectives that fail to blend into one coherent regional identity. Robert Levine in *Windows on Latin American* writes that “the rise of photographic reportage to document social injustice in Europe and the US in the 1880s did not happen in Latin America,” whereas Cuban author and photographer Maria Eugenia Haya (Marucha) describes early Latin American work that does demonstrate photography as a tool for social witness.

Even if the literature were more complete, defining a single Central American photographic identity would be a dubious undertaking. For one thing, there is a diversity of cultures and histories in the region. Some countries have relatively small indigenous populations, like Costa Rica; in others the majority is indigenous, like Guatemala. Despite the relative geographical proximity, certain activities and movements are contained and not dispersed in the region. Moreover, some examples of photography from Central America reflect universal, not regional, aspects of photography. In his introduction to the exhibition catalogue *Images of Silence*, João Clemente Baena Soares describes Latin American photography: “The fusion of elements of fantasy and reality has produced a tangible, at times magical, presence in the printed image that the artist-photographer presents to the onlooker.” The sentence is both direct and poetic, but it describes photography from around the world. Author and curator Belgica Rodriguez writes, “In Latin America, no one aesthetic or stylistic line predominates.”

Many writers are emphatic about the myth of a single homogenous Latin American identity. Relative scarcity of information results in limited conclusions that may reflect research more than reality. Yet there are many commonalities among these neighboring countries, such as historical links to European colonialism; political, social, and economic influences from the United States; the predominance of Spanish as an official language; or the struggles for political stability and independence. Some authors cite the presence of political and social themes as specific to Central American twentieth-century photography, although these themes are also richly explored in other parts of the world. Other authors refer to specific aesthetics, such as high contrast, but again these aesthetics are also found elsewhere in much photography.

Much of the current literature has exposed the mythical interpretations of Latin American photography, a myth summarized by Jorge Gutierrez as “a continent laden with exoticism...between misery, the machete and the gun, filled with lovely but dangerous romanticism.” This new awareness follows several events. Although some factors held photographic exploration back in the region (including unstable political regimes, sporadic economic performances, and cultural attitudes about photography’s role in society), by the 1990s, situations had progressed to the point that ideas and modes in Central American photography were similar to those in Europe or the United States. The available information makes it clear that the quality and intensity of exploration in photography in Central America keeps pace with other regions of the world. In 1981, El Consejo Mexicana de Fotografía published *Libros Fotográficos de Autores Latinoamericanos*, listing over two thousand titles of photography books by Latin American authors since 1961.

By the end of the century, this exploration was not contained to the world of photojournalism or social and political documentation. A gradual decline over the twentieth century in labor and art agency sponsorship of documentary photography lessened the presence of such photojournalism. The art world sometimes exhibited work previously destined for the media and did so through the end of the century, but with a concurrent increase in art photography.

In the last decades of the twentieth century, more unified photography projects took root, providing context and structure for a look at photography in the region. In Mexico City in 1977, Pedro Meyer guided the Consejo Mexicano de Fotografía, undertaking numerous exhibitions and publica-

tions, receiving financial support from the Instituto Nacional de Belles Artes (National Institute of Fine Arts). This activity led to the first of three colloquia on Latin American photography. *Primer Coloquio Latinoamericano de Fotografía* held in Mexico City in 1978, which produced a traveling exhibition titled *Hecho en Latinoamérica*. The colloquia each consisted of three days of presentations by guest speakers, various workshops, and a coordinated program of exhibitions with the *Hecho en Latinoamérica* exhibition as its centerpiece. Participation was principally from convocation with little additional curatorial work. The conference inspired representatives from many Latin American countries, including the Central American countries of Costa Rica, Cuba, Guatemala, Honduras, Panama, and Puerto Rico, to found the short-lived Latin American Council of Photography.

The second colloquium, in 1981, was also in Mexico City. In a presentation at this colloquium, U.S. critic Max Kozloff described a “distinctive aura” to Latin American work, both from subject matter and aesthetics. Giuliana Scime from Italy heatedly pointed out that all such criteria could be equally applied to European photography. The program for these colloquia states the following about how photography might contribute to changes in Latin America: “By producing a photograph whose most beautiful incarnation is fulfilled by faithfully showing the face of a mestizo continent that is willing to attain justice for everyone—this being the supreme creative feat.”

The *Coloquio Latinoamericano de Fotografía*, the third Hecho en Latinoamérica colloquium and exhibition, was held in 1984 in Havana, Cuba. In addition to the presentations and exhibitions similar to the previous colloquia, Hecho III sponsored a Latin American and Caribbean photography competition at Cuba’s Casa de las Americas. La Casa de las Americas has sponsored various cultural activities since its inception in 1959, but, at Pedro Meyer’s suggestion, 1984 was the first year photography was included in their activities. Awards were given to Cuban photographers Raul Corrales, Mario Garcia Joya, Rogelio Lopez Marin, and Rigoberto Romero, as well as Puerto Rican photographer Hector Mendez Caratina and Pedro Valtierra from Mexico. The Third Latin American Photography Colloquium was attended by over 400 participants from Latin America, the United States, and Europe. The Cuban dictator Fidel Castro made a surprise visit and presentation during the day’s events.

The Hecho colloquia received some criticism for their structure and agenda. Argentinean photogra-

pher and publisher Sara Facio criticized the colloquia’s “exclusively leftist orientation,” especially for the restrictive criteria for the photo competition that required work to reflect the “contemporary reality” in the region. This process selected works that may or may not represent photography overall. Some photographers choose not to even submit. Furthermore, residents of countries under the most restrictive dictatorships were not able to submit at all. In an effort to bring to the forefront of the world’s attention the photographic activity of the region, these colloquia proposed a basically socialistic, humanistic mode of photography, despite the fact that many regional photographers chose not to work this way. In promoting such work, the colloquia continued to support the deeply entrenched notion that documentary photography is the natural expression for third-world countries.

The *Hecho en Latinoamérica* colloquia, however, also received praise for some of their accomplishments. They provided a new structure for Latin American photographers to communicate. Prior to these events, many regional photographers had no structure to enable them to be in touch with or even aware of each other’s work. Also, the events united sufficient examples of quality work to end the misconception that photography in Latin America is in any way backward or limited. By the third colloquium, there seemed to be a more concentrated effort on the technical and aesthetic preparation of the photographs themselves and their presentation. Finally, these colloquia helped solidify a desire for additional primary research on Latin American photography. American photography professor at the University of Illinois, Chicago, Esther Parada writes of the potential danger to hoping for social change via stereotyped images of protest, but describes nonetheless a significant public impact of the *Hecho* exhibitions and publications. Despite these criticisms and the fact that most Latin American participants did not come from Central American countries, these colloquia significantly raised regional and global awareness and curiosity about the area, spurring further research and activities both in Latin American countries and around the world.

The Zurich exhibition of *Fotografía Lateinamerika von 1860 bis heute* at the Zurich Kunsthhaus in 1981 was curated by non-Latin American researchers. This work traveled widely in Europe with a catalogue in German, eventually translated into Spanish. This was the first comprehensive exhibition of Latin American photography, the result of extensive curatorial work. Similar to the Hecho en Latinoamérica colloquia, most photographers in

this exhibition and book are not from Central American countries.

Images of Silence was an exhibition that originated in the United States with more than 60 photographers, each represented by two photographs, from all countries of the hemisphere, showing works that demonstrate both the technical and aesthetic vitality of photography. Photographers in this project were selected by a team of curators from Latin American countries, including the following from Central American countries: Jerry Craig (Jamaica), Alexandra Cummins (Barbados), Magdalena Granadino de Lima (El Salvador), Rosario Murillo (Nicaragua), Jose Antonio Perez Ruiz (Puerto Rico), Marianne Tolentino (Dominican Republic), and Virginia Vargas (Costa Rica). The photographs examine recent paths photography has taken in the region, leaning on artistic endeavors more than social or political documentation. After exhibition in Washington, DC at the Museum of Modern Art of Latin America, part of the Organization of American States, the work traveled to New York and Puerto Rico.

Originally a series of exhibitions for Fotofest 1992 in Houston, Texas, *Images and Memory* became a traveling show with Independent Curators Inc and finally a book in 1998. *Images and Memory* looks at Latin American photography via three criteria: artistic merit, associations with important directions in the history of photographic art in the region, and intentional connection to important aspects of regional history and culture. The book contains material on several Central American photographers, with lucid texts about Latin American photography through the century. The authors are very frank about the lack of information available for some countries, or for the entire region between 1950 and 1980. Nonetheless, the presentation makes a bold argument for the dynamic photographic activity in the region.

As well as several major exhibitions, the end of the decade saw the rise of several cultural institutions devoted to Latin American art. The aforementioned Museum of Modern Art of Latin America exhibits as well as publishes on diverse subjects including photography from Central America. In Paris, La Maison de l'Amérique Latine is a cultural center that hosts conferences, exhibitions, workshops, and it also publishes materials on diverse aspects of Latin American life, politics, and culture.

The following descriptions of Central American photographers, organized by country, is far from complete. It provides a springboard for individual analysis and reflection on twentieth-century photography in Central America.

Cuba has a rich history of photography, especially well documented following the 1959 revolution, and in art photography in the 1980s and 90s. Photographers such as Augustin Victor Casasola and his work on the Mexican Revolution established the tradition of epic photography early in the century in Latin America, and this tradition was richly exploited in the Cuban context. Photography became an international tool for political messages, and the bearded face of Castro became an international icon. The Cuban national sense of identity developed within Cuba's political stance and position in the world, particularly vis-à-vis the U.S. policy of isolation. Many photographers documented the revolutionary aspects of the day, such as Alberto Korda, whose photograph of Ernesto Che Guevara converted that revolutionary figure into an international icon. Photography was appropriated for revolutionary importance, though some photographers produced slightly different bodies of work, such as Tito Alvarez or Mario Garcia Joya. Twentieth-century Cuban photographers include Alberto Diaz Gutierrez (Korda). Born in Havana in 1928, Korda has lived and worked with photography in Havana since 1956. In 1959, he was named Fidel Castro's official photographer, and his *Guerrillero Heroica* is a major publication in the history of photography. Cuban photographer Mario Del Rosario (Mayito), born in 1938, worked as an artist with various agencies and exhibited as well as curated exhibitions in Cuba, Europe, and America. Another Cuban photographer, Ramon Grandal, born in 1950 in Havana, has been a professional photographer since 1970, exhibiting internationally and working for the journal *Revolucion y Cultura*. M. Eugenia Haya Jimenez (Marucha), born in Havana in 1944, participated as a photographer and a writer in many exhibitions and publications, especially in the last 15 years of the century. Marucha was widely published internationally, including *La Fotografía Cubana en el Siglo XIX* (Cuban Photography in the XIX Century). Marucha died in Havana in 1991. Finally, Cuban photographer Gilda Perez, born in 1954 in Havana, exhibited widely and worked for the review *Revolucion*.

Guatemala also has a rich history of photography, though less a part of the international political scene than Cuba. The Japanese photographer Juan Jose de Jesus Yas (1844–1917) operated a formal portrait studio producing numerous portraits of priests. In the 1880s, Yas traveled in Central America, eventually studied with two Guatemalan photographers, and set up his own photo studio in Guatemala City in 1890 before moving to Antigua.

CENTRAL AMERICA, PHOTOGRAPHY IN

Jose Domingo Noriega, born in 1885 in Guatemala, lived and worked with Yas, exhibiting his work. Photographs and information about both Yas and Noriega appear in a publication called *La Antigua Guatemala, J.J. Yas y J. D. Noriega* (La Azotea). Maria Cristina Orive, born 1931 in Antigua, studied in the United States and Paris, where she lived for 15 years. In 1973, Orive moved to Buenos Aires and with Sara Facio founded La Azotea, an editorial foundation for Latin American photography. Diego Molina, born in Guatemala in 1949, authored numerous books and articles, and traveled and exhibited in India, Norway, China, El Salvador, Japan, and Uruguay. Molina was also a photography professor. Born in Guatemala, Ricardo Mata, studied and trained in the United States and exhibited his photography, which received many awards. Daniel Hernandez, born in Guatemala, worked in the last decades of the century, both as a photojournalist for Associated Press International and as a fine art photographer.

Guatemalan photographer Luis Gonzalez Palma, born in 1957, lived and worked in Guatemala, Paris, and Argentina. Palma's art photography, including three-dimensional works incorporating photography and other media, was widely exhibited and published. One of the most exhibited of Central American artists, his works express tragic legacies of the impact of colonialism on indigenous peoples and their cultures. By abandoning all pretense of documentation and ignoring demands for authenticity, he explores deeper levels of political messages through artistic manipulation. His tearing, taping, and nailing of some of his imagery emphasize the fact that these images are not representations of the world but are objects in the world. Palma's work was exhibited at the Art Institute of Chicago, the Havana biannual, the Museo de Belles Artes, Mexico City, and the Museum of Contemporary Hispanic Art New York City.

In Honduras, Max Hernandez, was born in Tegucigalpa in 1958, and studied in Central America and Europe. Hernandez exhibited internationally and worked as a photojournalist in Honduras.

Nicaraguan Claudia Gordillo, born 1954 in Managua, studied photography in Rome, exhibited internationally, and worked for the newspaper *Barricada*. Gordillo published the book *Nicaragua; una decada de revolucion* (1991). Leonardo Barreto, Director of the National Center for Photography in Managua, studied photography in Nicaragua, Europe, and the United States. Barreto worked for the press *Barricada* and *La Prensa*. Rossana Lacayo, born in Managua in 1958, studied in Nicaragua and the United States, and worked as

a photographer for the Minister of Culture. Since 1980, Lacayo directed 15 documentaries with the Nicaraguan Institute of Film, and she exhibited internationally, including at the Museum of Modern Art, New York, and was awarded the 1984 National prize for Photography in Nicaragua.

In Panama, Sandra Eleta, born in Panama City in 1942, worked freelance and exhibited widely, after studying photography in the United States. Eleta published *Portobelo* in 1982.

In El Salvador, examples of photographic activity range from the political arena to the world of fine art. During the 1980–92 civil war, photographs by members of popular organizations, labor movements, combatants, artists, journalists—mostly Salvadorian—were collected into an archive, using documentary photography to chronicle a political moment. The creators of this work were participants in the events. The growing archive of images, titled *In the Eye of the Beholder*, was kept mobile for safety, names of photographers often omitted for privacy. At the end of war in 1992, the archive contained 80,000 negatives. American Katy Lyle worked for years with Salvadorans to organize and protect this archive and to house this work, establishing the Museo de la Palabra y la Imagen/ Museum of the Word and the Image in San Salvador. Other examples of photography in El Salvador come from the art world. Maria Teresa Diaz Colocho, born in San Salvador in 1960, studied photography in the United States and exhibited widely. Muriel Hasbun, born in 1961, studied photography in the United States. Hasbun's work was exhibited internationally, and she taught photography in Washington, DC at the Corcoran College of Art and Design. Hasbun, whose parents were involved in photography and the arts, grew up in El Salvador confronting an eclectic personal heritage and a violent national agenda. Her photography draws from intense elements of her personal and political environment. These photographs do not simply document her identity: they shape it.

In the Dominican Republic, Wilfredo Garcia, born in 1935, first studied photography in Puerto Rico. Garcia's work was widely exhibited and received many awards. He was a professor of photography and founder of such groups as Jueves 68 and Fotogruppo. Domingo Batista, born in Santiago de los Caballeros in 1946, began his art career in 1969 with the group Jueves 68. Batista received many national and international awards, including first place in photography at the XV Biennial of Fine Arts in the Dominican Republic in 1981. He was also widely published, and he co-

authored *Ten Years of Dominican Photography*, published in 1978. Mariano Hernandez, born in Jimani in 1954, studied photography in 1978 at the UASD of Santo Domingo, was a founding member of Fotogrupu, and exhibited throughout Central America.

Costa Rican Victoria Cabezas Green, born in San Jose in 1950, studied photography in the United States at the Pratt Institute in New York. Green exhibited and taught in Costa Rica. After studying photography, Giorgio Timm, born in Esparza Costa Rica in 1947, worked and exhibited his photography in Costa Rica and abroad.

In Barbados, Ronnie Carrington, born in Barbados in 1949, trained in New York was active as a photographer and in video and television production in Barbados and other Caribbean countries. Tony Lynch, born in Barbados in 1946, studied in the Caribbean and New York and was a freelance photojournalist who was also very active with photo clubs.

In Puerto Rico, Frieda, Medin Ojeda, born in San Juan in 1949, was educated in the United States and Puerto Rico. Ojeda worked as a freelance photographer and was widely published and internationally exhibited. She also worked in filmmaking and installations. Finally, Victor Vazquez, born in San Juan, studied sociology and psychology, and worked internationally as a self-employed photographer.

In Jamaica, Owen Minott, born in Jamaica in 1925, was influenced by Amador Packer. Minott received many awards and exhibited in Jamaica. At the end of the century, Cecil Norman Ward, born in Jamaica in 1984, studied in Canada, traveled and worked in Kenya, then freelanced with art, photography, and architecture in Jamaica.

Though far from complete, this list illustrates the dynamic and eclectic complexities concerning twentieth-century photography in Central America. Many photographers are working within the worlds of both journalism and art, or by combining art photography and art education. By the late 1990s, the increasing popularity of web galleries provided some Central American photographers with opportunities to showcase their work without the more expensive and cumbersome channels of traditional exhibition or publication activity. Perdo Meyer presents the work of international and many Central American photographers on the web site *Zonezero*.

In 2001, a meeting of the Popular Culture Association and the 5th Congress of the Americas in Mexico City solicited presentations on photography in Mexico, Latin and Central America, and the Caribbean, citing photography as one of the most primary of common denominators between cultures worldwide, noting that much of the intense national and cultural struggles for identity in twentieth-century Central America have been recorded on film.

CENTRE NATIONALE DE LA PHOTOGRAPHIE

The Centre national de la photographie (CNP) in Paris, France, is a cultural institution subsidized by the Ministry of Culture and Communication (Délégation aux Arts Plastiques). The mission of the CNP is the promotion of contemporary photography and the support of young talent through in-house and off-site exhibitions, the publication of catalogues and a journal, educational and cultural activities, and the co-production of video works.

The CNP was created in 1982 at the initiative of the Minister of Culture. The first CNP exhibition entitled *Moins Trente, Under Thirty*, established a link with young artists and has since become a biannual event. Until 1984, the CNP sponsored exhibitions at various sites in Paris. Beginning in 1984 to 1993, the CNP organized 180 exhibitions, which were held at the Palais de Tokyo museum in Paris. The Palais de Tokyo, the largest exhibition space in the world devoted on a permanent basis to photography, was previously housed in the Museum of Modern Art. Since 1993, the CNP has held its exhibitions at the Hotel Salomon Rothschild, in the 8th arrondissement, the same address serving for administrative offices and other cultural activities. Additional exhibitions are regularly organized to travel throughout France and abroad, from Italy to China and other countries. Exhibitions have been organized around themes, such as "Botanica," "Images Indiennes," "La Tour Eiffel," or retrospectives of the work of notable photographers such as Eugène Atget, Robert Capa or introducing the photographic works by those not primarily known as photographers, such as the writer Lewis Carroll (Charles Dodgson). Yet many exhibitions introduce new artists: in the late 1990s solo exhibitions mounted by CNP included the Germans Anna and Bernhard Blume, the French Sophie Calle and Pascal Convert, Russian Boris Mikhailov, Australian Tracey Moffatt, and the Japanese Ryuji Miyamoto and Mariko Mori.

As well as exhibitions, the CNP successfully launched a publication called "Photo Poche," or pocket book. These hand-size and inexpensive

publications provide affordable and diverse access to works by various photographers or themes in photography. The first two publications were on the nineteenth century figure Nadar and Henri Cartier-Bresson. Subsequent publications have addressed Jacques-Henri Lartigue and the American Farm Securities Administration photography project. Eighty-five different titles had been published by 1999 and the book is now also published in Great Britain and the United States.

The CNP has also been active in audiovisual productions, providing an additional and highly unique link between work in photography and the general public. These audiovisual products exist in several formats. The CNP and Garance coproduced 170 mini films directed by Agnes Varda called *One Minute for One Image*. Each film is commentary on a particular photograph and they were distributed via television. The photographer William Klein suggested an audiovisual product on photographers analyzing their own work by means of their contact sheets or work prints. This series is called *Contacts* and includes thirteen-minute productions on photographers such as Robert Doisneau, Don McCullin, Elliott Erwitt, Raymond Depardon and Klein himself. Since 1997, the series has branched out thematically to look at photographers' work in ways other than through contact sheets. These films are available on videocassettes or DVDs.

Since 1983, the biannual *Moins Trente* is a source of funds and recognition for young artists. Since 1989, the CNP also sponsors the richly endowed Grand Prix International Henri-Cartier Bresson (HCB Award) for creation at a higher level.

Robert Delpire was the first director of the CNP, serving from 1982 until the autumn of 1986. Since 1986, Régis Durand has been director. Laurence Brun, working under both directors, has been responsible for meeting with artists and providing other cultural services such as guided tours or educational activities. In 1996, the CNP's mission was redefined by the Delegation of Plastic Arts under the Minister of Culture to specialize in the support of young artists in the exploration

of works clustering around photography, thus including video, digital, and installations as well as conceptual photography.

Durand has an academic background in the arts and experience as an art critic. He has published several books, including *Habiter l'image – essais sur la photographie 1990–1994* and *Le Temps de l'image – essais sur les conditions d'une histoire des formes photographiques 1995*. Before assuming the directorship of the CNP, Durand worked under the Minister of Culture and handled artistic direction for the Printemps du Cahors, an annual contemporary art and photography event in France since 1990 with dozens of international participants and over 100,000 visitors each year. As director of the CNP, Durand curated the exhibitions *Biannual of the Image, Paris 98* and *Chronicles from outside and other hypothesis*, presented at the Recontres internationales de la Photographie at Arles in the summer of 2000.

Durand describes his vision for the CNP as follows:

It seems necessary more than ever that artists have access to other tools of production and post-production, more flexible and less burdensome tools. This is the role of art centers and this is how the CNP functions, in a specific field of activity, namely that of the contemporary image, looking at explorations where photography, video, digital and cinemagraphic works coexist. The CNP accepts as its mission the challenge of accompanying and exhibiting the work of artists exploring image in a vast sense

of the word image. Photography is neither art nor non-art. Approached in certain ways, photography can reveal information, journalism, documentation. Approached in other ways, photography desperately seeks to be identified with other arts. Photography becomes true creation only when it plays with certain particular photographic qualities, qualities applied to a specific project, notably in its aptitude to produce an image transformed and reflected from the real and at the same time, inventing new forms. This is why photography persists as a remarkable tool for creation, inseparable today from the mobile world of other forms of images.

MARTÍN CHAMBI

Peruvian

Few Latin American photographers are more recognized for their technique and artistry than the Peruvian Martín Chambi. In his work, Peruvian society and Inca culture of the first half of the twentieth century still live. As Eugène Atget is to Paris and its streets, so is Chambi to Cuzco and its Inca haunts.

Chambi was born in Coaza in 1891 in an Andean village in southern Peru, near Lake Titicaca. Of Indian descent and raised in poverty, as a boy he joined his father in working for the British

Santo Domingo Mining Company. Young Martín attached himself to the company's photographer-surveyor. Fascinated by the man's equipment, the boy bore it for him over the wide and hilly terrain of the mining company's interests. At an early age, therefore, Chambi became familiar with the basic operations of a camera, its placement, angles, and views, and the photos that emerged from it after the magic intermingling in darkness of plates and chemicals.

Some time in his late teens, around 1908, he went to live in Arequipa, possibly to pursue secondary education; but he also became the apprentice of the

noted photographer, Max T. Vargas. Remaining with him for almost a decade, Chambi became progressively more skilled in photography. Belonging to a prominent family, Vargas was a noted photographer of Arequipa society, skilled at producing flattering images of his social peers. He was also a good teacher, and Chambi rose to become virtually his partner. Chambi attempted, unsuccessfully, to establish a branch of the Vargas studio in La Paz, Bolivia.

Marrying in 1917, Chambi struck out on his own that same year to establish a studio in Sicuani. In 1920, he moved to Cuzco, briefly setting up with another former apprentice of Vargas. Eventually, he established his own studio, settling on Calle Marqués, a location that soon became the most noted photographer's establishment in the city.

Like Vargas, he cultivated and appealed to an upper-middle-class clientele. However, as someone of Indian descent, he was totally alien to their society. He viewed his clientele sympathetically yet with the insight of an outsider. His individual and group portraits along with his pictures of weddings, parties, and social gatherings have come to bear rich testimony to the world of Cuzco elites in the early twentieth century.

In the best of this work, he captures the dignity and integrity of individuals as reflected in the features of their faces, the cast of their eyes, the posture of their bodies, and the character of their surroundings. For example, he captured the serene innocence and assurance of a socialite bride on the grand stairway of the family mansion. The white train of her gown flows luxuriously down the steps while above her rise richly carved banisters mounting to a mezzanine arched by a canopy of stained-glass roof. Nevertheless, in another portrait, in which he so carefully captured the flamboyance of a fashionably dressed belle, one wonders if he could not also have been quietly yet suitably ambiguously amused at the extravagance of his "newly rich" clients.

Chambi's artistic legacy lies even more so in the work he developed out of doors, with haunting, memorable views of Cuzco, Indian culture, and the Andes mountains. Two factors supported Chambi in his ability to capture the value and dignity of this environment. He was buoyed by the professional respect he had achieved in his society. In addition, he had come to live in a city that was at the center of a revival of indigenous Peruvian pride.

In 1924, the Peruvian political leader, Víctor Raúl Haya de la Torre, living in exile in Mexico City under the protection of the Mexican Revolu-

tion, founded the *Alianza Popular Revolucionaria Americana* (APRA—American Revolutionary Popular Alliance). This party believed that the Indian races and the mystical force of their history would be the basis for developing Latin America, which it referred to as Indo America. In 1931, Haya de la Torre returned to Peru, finally able to bring his Aprista doctrine to his native land. In the early thirties, this movement, especially in Cuzco, had cultural, social, and political recuperations still vibrant today in Peru.

Although politically indifferent, Chambi acquired growing respect for his own native roots; he was increasingly absorbed into and articulated the movement that promoted appreciation of indigenous culture. He was an active member of groups in Cuzco that brought together journalists, teachers, literary figures, artists, and other photographers. Gathering in homes, cafes, or taverns, they extolled the value of native culture.

Imbued with a sense of his professional worth and cultural identity, Chambi became an exceptionally effective photographer. He photographed Cuzco with meditative reflections on the aged, subdued dignity of the city's ancient structures. With ineffable sympathy and touching respect, he memorialized itinerant Indian musicians, jovial vendors, and hollow-cheeked street urchins. Among the first to photograph the newly rediscovered (1911) ruins of Machu Picchu, he captured the tenacious ingenuity of its structures nestled in the breathtaking sweep and evanescent mists of the Andes.

Much still needs to be studied regarding the technical achievements and aesthetic components of Chambi's genius. He seems primarily to have used German or English cameras and supplies. Little as yet, though, has been written regarding his photographing habits or developing techniques. How he achieved the singular chiaroscuro (modeling of volume by depicting light and shade by contrasting them boldly) effects that give such nuance, subtlety, depth, and richness to his pictures has not been closely analyzed. A project to catalogue and preserve the tens of thousands of glass plate negatives began in the late seventies under a team headed by Edward Ranney in conjunction with Víctor and Julia Chambi, two of the photographer's children, supported by the Earthwatch Foundation of Belmont, Massachusetts.

The most productive years of Chambi's career spanned nearly a quarter century, from the mid-twenties to the fifties. The earthquake of 1950 that devastated so much of Cuzco and its society also ruptured his career, and his life was increasingly unsettled with age and illness. Although respected

in the latter years of his life, it was primarily in Peru where he received recognition. It has been in the years since his death in 1973 that his reputation has reached its international renown. Much as Machu Picchu, its photographer too has come to receive the attentive curiosity and respect of the world.

EDWARD A. RIEDINGER

Biography

Born in Coaza, Peru, November 5, 1891. Worked for Santo Domingo Mining Co. and is camera-bearer for English photographer, 1900–1907. Moved to Arequipa, becoming apprentice and then assistant to photographer, Max T. Vargas (father of Alberto Vargas, creator in the United States of the glamour photographs, *Vargas Girls*), 1908–1917. Married Manuela López Viza, 1917; two sons, four daughters. Moved family to Sicuani, opening

own studio, 1917. Moved to Cuzco, 1920, which became permanent residence. Opened third studio in Cuzco, on Calle Marqués, which became his permanent one, 1925. Eldest son, Víctor, became his assistant, 1933. Photographs published in *Cuzco histórico* (“Historical Cuzco”) by Rafael Larco Hoyle, 1934. Supported founding of the Instituto Americano de Arte (American Institute of Art), in Cuzco, 1937. Survived earthquake of 1950, extensively photographing it. Declining health and photographic work in following years. Named patron of the first national Peruvian publicity campaign for the promotion of professional photographers, 1971. Died in Cuzco, September 13, 1973.

CHARGESHEIMER

German

Chargesheimer (Hargesheimer, Karl-Heinz) is one of Germany's most important photographers of the post-World War II period. Through his advertising photography, portraiture, photo-essay books, and experimental photography, he created a far-ranging and important body of work at mid-century. He was a multi-talented artist who throughout his life expressed himself as a graphic designer, a set designer, theater director, and a sculptor, but for whom photography was both a means of documentation and a favorite artistic medium.

Chargesheimer was born Karl-Heinz Hargesheimer on May 19, 1924, in Cologne, Germany. From

1942–1944 he studied photography, sculpture, and graphic design at the Werkkunstschule in Cologne and later at the Bayerische Staatslehranstalt fuer Lichtbildwesen. Only after 1948 did he adopt "Chargesheimer" as his artist's name. In 1949 he began a beneficial, lifetime association with Cologne collector L. Fritz Gruber who invited him to exhibit in the first *Photo-Kino* exhibition as well as every second year thereafter. He taught photography at the Bikla School for Photography and Film in Dusseldorf, Germany, from 1950–1955, and afterward began his work as a commercial photographer and photojournalist.

Chargesheimer's early photography shows the influence of *Art Informel*, a movement that focuses

on abstraction and spontaneity and is aligned with the international movement known as Subjective Photography, which stressed the personal interpretation of otherwise 'realistic' imagery to create subjective works of art. Along with photographers such as Arno Jansen and Edmund Kesting, Chargesheimer exhibited in the 1951 and 1954 *Subjektive Photographie* exhibitions organized by Otto Steiner in Saarbrücken, Germany. Chargesheimer's use of the *Subjektive* aesthetic, or utterly realistic beauty, can be seen in his experimental, abstract work, such as *Play* of 1950 and in his advertising photography, such as *Ford Taunus*, 1960, an automobile atop its reflection off the wet pavement is a typical example of his interpretation of an everyday subject. Chargesheimer described his intentions this way: "I want to show the world as it is, our world in all its harshness, its strangeness, its serenity and its beauty, yes its beauty" (Albus Volker 1997, p. 149–150).

The photo-essay books Chargesheimer published, nine of 12 between the years 1957–1961, dominate his 20-year career. His books were composed primarily of black and white photographs with a brief text accompaniment by authors such as Heinrich Böll and G. Ramsegger. Because many felt that he portrayed the cities and people of Germany's Rhineland area in a negative light, his books evoked strong reactions both pro and con. L. Fritz Gruber described Chargesheimer as a photographer who "possessed a seemingly uncanny ability to capture the personalities of prominent people, and to capture events, landscapes, and buildings as well as the life and emptiness of cities with precise verisimilitude." (Gruber 1982, p. 15).

Chargesheimer was also a portrait photographer known for his close-up portrayals of stars and celebrities such as jazz artists Billy Holiday, Josephine Baker, Louis Armstrong, Ella Fitzgerald, German Chancellor Willy Brandt, and others. One of Chargesheimer's best known photographic portraits is that of German Chancellor, *Konrad Adenauer*, 1954, taken the same year the first television broadcasts were made in Germany.

Reinhold Misselbeck, Curator of Photography and Video at Museum Ludwig, Cologne and one of the leading authorities on Chargesheimer's work, refers to Chargesheimer's photographic approach as the "the opposite of Henri Cartier-Bresson's." (Misselbeck 1983, p. 7.) Misselbeck points out that when photographing in the street, Chargesheimer did not photograph "decisive moments" like Cartier-Bresson, but instead portrayed his subjects as performers in a sort of photographic theater. To bring his interests in photography and the theater closer together,

Chargesheimer began working as a theater designer, director and set-builder in cities throughout Germany after 1961 and then produced the photo-essay *Theater-Theater*, in 1967 with behind the scenes shots of rehearsals, make-up rooms, and costume making.

Less known, though, are Chargesheimer's camera-less experiments in the darkroom, which from 1948–1953 included gelatin silver paintings, or light graphics (photograms) that he created without knowledge of similar work by Man Ray or László Moholy-Nagy. Chargesheimer returned to his darkroom experiments in the 1960s, and in the 1990s a catalogue of these experimental photographs were published, making this work more widely available.

The range of Chargesheimer's work can be grasped by comparing his first book *Cologne Intime*, 1957, to his last, *Cologne 5:30 AM*, 1970. In *Cologne Intime*, we see the local *Stadtbürger* (citizens of Cologne) and the inner city up-close and personal at festivals and at home through the lens of one of the city's native sons, a city and people Chargesheimer knew and loved. In contrast, in *Cologne 5:30 AM*, Chargesheimer shows a cold and alienating city, the results of modern public works. By photographing concrete highways, street signs, and public housing high rises devoid of people, he shows us how much his hometown had changed and indirectly how much this depressed him. In 1995 Cologne photographer Wolfgang Vollmer retraced Chargesheimer's steps and photographed the exact same locations, which can now be found in the book *Cologne 1970/1995*.

Numerous articles were published about him during his lifetime by German, Italian, and English magazines, journals, and newspapers such as: *Die Welt*, *Neue Post*, *Stern*, and *Der Spiegel*. In 1968 Chargesheimer was the recipient of the Kulturpreis der Deutschen Gesellschaft für Photographie and since 1986 the city of Cologne has given a prize titled "Chargesheimer Preis der Stadt Köln" to an emerging photographer from Cologne who works in photography, film, or video. Additionally, in 1970 he was awarded the Karl-Ernst-Osthaus Prize by the City of Hagen, West Germany.

Chargesheimer died on New Year's Eve, 1971 in Cologne, Germany. Since his death, the more than 30,000 negatives he made are being reevaluated, researched, and investigated, and he has been included in a number of exhibitions as his place among the post-war, European avant-garde continues to be reassessed.

PHOTOGRAPHY IN CHINA AND TAIWAN

Photography in China

Photography arrived in China in the 1860s with Western photographers who mostly made portraits. One of the most well-known of these photographers is Milton Miller, an American who owned a photo studio in Hong Kong. He had taken formal portraits of Cantonese merchants, Mandarins, and their families in the early 1860s. The other is the Scottish photographer John Thomson (1837–1921), who owned a photo studio in Hong Kong. Unlike Miller’s motifs, his were peasants and workers—the underclass of the late 1860s and early 1870s.

Studios run by Western photographers provided Chinese photographers with practical training and produced some photographers of note. Afong Lai and Mee Cheng were active during this period, and both managed to turn their interest to commercial advantage. Ah Fong was active from the 1860s to 1880s, and in 1937 in Shanghai he published a photo album entitled *The Sino-Japanese Hostilities*, presenting 110 black-and-white photographs, seen primarily as historical documents. Some of his landscapes, however, express aesthetic qualities reminiscent of traditional Chinese painting. Mee Cheung identified himself as a “High Class Photographer,” clearly referring to fine-arts aspirations, and is known for his documentary snapshot-style photographs.

As the nineteenth century progressed and the West became more and more fascinated with the country, its culture and art forms, China attracted numerous Western amateur and professional photographers. Most were interested in capturing

images of historical importance. The Italian Felice Beato, also known for his later work in Japan, photographed landscapes and battle scenes in the 1860s. Englishman Thomas Childe completed a series of photographs of Beijing and its environments in the early 1870s. During the first two decades of the twentieth century, however, Western photographers were discouraged and then banned from taking photographs in China. Some of the few that exist were taken by a young boy, Walter J. Bronson, shooting surreptitiously as he traveled about China with his family. M.E. Alonso was a photographer for the Wulsin Expedition to Northwest China in 1923, sponsored in part by the National Geographic Society, which brought some of the first photographs made of these territories to the West. Donald Mennie, a British merchant, shot landscapes in a pictorialist style in the 1920s. In 1926 in Shanghai he published a photo album entitled *The Grandeur of the Gorges*, in which he presented his 50 photographic studies of the Yangtze River, along with 12 hand-colored prints. He had previously published the portfolios *The Pageant of Peking* and *Chin—North and South*.

Documentary Photography in China After 1911

In 1925, China was swept by the May 30th Movement, an anti-imperialist movement in protest against the massacre of the Chinese people by the British police in Shanghai on that date. This movement had a great impact on how Western influence was received but also formally introduced modern photography, especially photojournalism, to China,

and later shaped the development of photography in the 1930s, as Mao Zedong and the Communist Revolution shaped the history of China.

CHEN Wanli is the most influential photographer during this period of time. He started his study of photography in 1919, coming from a background in medicine. He was concerned with photographic composition and the photographer's artistic interpretation of motifs. His work *The Forbidden City in the Year of 1924* is regarded as the first documentary photography in China. In this series of photos, he documents the scenes of the last emperor of the Chin dynasty, banished from the Forbidden City. In 1928, he selected some photographs from this series and published them as a photographic album through a Shanghai bookstore. His *Dafengji* (1924) is the first photography album created by an individual photographer in China and includes 12 photographs selected from his solo exhibition in Guan Shen in 1924. These photos depict landscape and still life according to the traditional Chinese aesthetic. The photographs express the abstract and pictorial quality of motifs, rather than any realistic association. For him, the art of photography is to express the color of Chinese art and to further develop its characteristics. *Dafengji* was created to reflect upon this understanding of photography. *The Journal to the West*, 1925, is an album that presents photographs he took during his visit to Tun Wong with American anthropologists. He shot over 300 photos, using motifs of desert and rural costume.

Chen was also a leading member of the photographers' association in China. In 1923, and in conjunction with WU Yuzhuo and WU Jix, he organized the first photographic association for amateurs. This group was commonly known as the *Guang* (literally meaning light) *Association*. From 1924 to 1927, the association actively held group exhibitions to display its members' works. In 1928 and 1929, those works were published in two volumes of yearbooks, the first of their kind in China.

LIU Bannong (1891–1934) was well known as a poet and scholar of language, literature, and education, and also as a promoter of the May 30th Movement. In photography, he was the leading exponent of theories on photography in China. He had studied in Britain and France and completed a PhD in literature. He had learned photography during his study in Paris in the early 1920's, and he joined *Guang Association* in 1926, becoming very active in the photographic field. He was editor of two photographic yearbook volumes. He also translated photographic essays in Chinese. In 1927,

he published *Talking about Photography*, which summarizes his views about photography. The book was publicly distributed and became very influential. One of his arguments in the book tries to show that photography is a type of art, and then to emphasize the principles of aesthetics in photography, such as composition, lighting, and tonality. He promoted photography as a means of expression and creation, and his ideas remain influential today.

LONG Chin-san (also Jinshan; 1892–1995) was born in Zhejiang province in China and died in Taipei. Between 1903 and 1906, he was trained in Chinese ink painting and later photography in a high school in Shanghai. He had been working for newspaper publishers in China and is regarded as the first photojournalist in China. In 1911, he took a job in an advertising department at a newspaper publisher in Shanghai, where he could observe photography at close hand. Between 1926 and 1937, he worked as a photographer for the *Shanghai Times*.

In 1928, Long Chin-san, together with HU Boxiang (1896–1989), HUANG Baohui, HUANG Zhengyu, and ZHANG Zhenhuo, founded the *China Photography Society* in Shanghai, one of the earliest photographic associations in south China and the most influential nation-wide photography organization in China. Long was a leading photographer in Shanghai during the time. In March, 1926, he had a solo exhibition, which inspired other photographers to hold photographic exhibitions. In 1930, he lectured on photography at Nanyang High School, a girls' school in Shanghai, and this perhaps encouraged the spreading of formal education in photography throughout China. After World War II, Long moved to Taiwan and by 1961 was creating montage pictorial photography.

Social Documentary and Reportage Photography During Anti-Japanese War and Civil War in the 1930s

Photography during the rise of China's Communist Party is associated with reportage photography around motifs of war and portraits of Communist leaders. In 1937, SA Fe joined the Communist Eighth Route Army, and two years later he established a propaganda department to develop reportage photography for the Party. This department initiated photojournalism in the Party. In 1938, SU Jing held the first workshop on photojournalism to train Party photographers. An alternate way of

training photography was to apply the age-old master-disciple system to young photographers. Photographic training was intended to achieve two goals: to educate photographers in using the medium for the promotion of the significance of the revolution, and to teach photographers to master basic darkroom skills.

It was also during this period that a number of pictorial newspapers emerged to report the war to the public. The Communist Party saw these newspapers as propaganda tools, and in 1942, it established its own illustrated newspaper to present photojournalism that extolled the successes of the Eighth Route Army. After the establishment of the People's Republic of China in 1949, pictorial newspapers and magazines retained their role in the promotion of the Party and its ideals. Two important pictorial magazines, *China Pictorial* and *China Reconstructs*, were published, providing an outlet for social documentary and reportage photography.

WU Yinxian (1900–1994) was the most active and well-known photographer who favorably addressed Communist concerns. He was popular for his socialist and realist style in documenting the history of China's Communists. He was concerned with the form and technique of lighting to dramatize his visual motifs. His early works focused primarily on the miserable lives of marginal and low-class subjects confronted by the social and political changes in the 1920s and 1930s. He later developed photographic education programs for the Red Army. He had joined the Party in 1938, and in 1939 he published a book called *The Knowledge of Photography*, a textbook for Communist photographers. One of his best-known works, *Dr. Bai Qiuen* (1939), documents outdoor surgery on a Communist soldier. This photo expresses the dignity of Dr. Bai who, during attempts to save the soldier, seems not to care at all about the danger of the ongoing war. Dr. Bai was a foreigner, but his bravery symbolizes his strong commitment to the revolution. After the establishment of People's Republic of China in 1949, Wu Yinxian focused on developing film education in China.

XU Xiaobing (1916–) and HOU Bo (1924–) are a married couple well known for their portraits of Communist leaders and significant ceremonies in the history of the Party, from the 1930s to 1950s. They are especially famous for depicting Chairman Mao, Hou Bo having been Mao's personal photographer from approximately 1949 to 1961. Though primarily a filmmaker, one of Xu Xiaobing's portraits of Mao is a profile view of him

facing an adoring audience. This photo later became an exemplary work for photographers to show their leader's openness toward the public. Xu studied photography in a film company in Shanghai. Later, he joined the Party and served as a photojournalist, documenting on film the early history of Party. After 1949, he was active in documenting important national ceremonies and events. Hou's photo of the ceremonial founding of the PRC in Tiananmen Square records the most significant single moment of the history of the PRC, and her studio portraits of Mao became the basis for the well-known painted, poster, and banner images of Mao that were ubiquitous during this time.

It is not an exaggeration to say there was no "personal" photography in China at this time. Cameras were rare commodities and used only for official purposes: identification, documentation of state projects and leaders, and propaganda as China rebuilt its war-torn nation and emerged into modernity.

It is, however, important to point out the significance of SUN Mingjing's works during this period. Sun was an amateur photographer, and his photography has been lesser known until rather recently. Sun was significant for the establishment and development of film education in China. He had learned film and photography from American missionaries. As a scientist and engineer in the service of the Party, he conducted numerous field trips in China to research the state of industrial manufacturing. He took over a thousand photos and shot documentary films during these trips. Some of those photographs are important for reporting the social conditions during the time, and also for preserving historical moments of this era. Yet some of the photos also express Sun's concerns with the symbolism and aesthetics of photography that were disavowed by social documentary and reportage photography. One photograph depicts a scene in which a city is ravaged by a plague of locusts; Sun uses the locusts to symbolize the invading Japanese army. (The word "locust" in Chinese is euphonicly similar to the translation of "Japanese army.") Another photograph depicts rows of young nude teachers, silhouetted against the sunrise performing physical exercises. The symbolism of wartime patriotic struggle is obvious from the fact that, in Chinese, the translations of the phrases "against the sunrise" and "against Japan" are exactly the same, as well as the fact that the projected shadows of these men form a pattern that suggests Japan's wartime flag. Sun Mingjing, unique in Chinese social documentary and reportage photography, addressed photography with the idea of transfiguring accepted motifs into symbolic images.

As there was for all intents and purposes no fine-arts expression of photography in the People's Republic, the Cultural Revolution, occurring between 1966 and 1976, had little impact on the field. Although intellectuals, artists, and other cultural elites were persecuted, not allowed to practice their disciplines, interned, and even killed, greatly affecting the study and practice of art, music, and literature, the impact on photography was indirect, with the result being that as reforms were put into place in the late 1970s and into the 1980s, photography for the first time was taken seriously as an artistic medium, following the models of the West. Photographers for the first time could adapt an identity as creative individuals and look at their output as expressive of their individual personalities. Landscape photography, nature studies, expressive portraiture, and even social and veiled political commentary began to be practiced. Documentary photography, however, still dominated.

Several well-known Western photographers created important bodies of work in China in the second half of the century, notably Henri Cartier-Bresson. His wide-ranging documentation was published by Robert Delpire in 1955. Robert Capa, Marc Riboud, and René Burri also undertook important series.

Documentary Photography in the Late 1980s

In the late 1980's, documentary photography emerged to become pervasive in China. HAN Lei and LIU Zheng (1969–) are two examples of photographers engaged in this type of photography. They often took pictures of marginal people—laborers and others of the lower classes who were confronted with the dramatic change of their lifestyle and social status due to China's process of Western modernization. These photographers traveled in order to select their motifs, and they continued to document these motifs for a long period of time. Liu Zheng's series *The Chinese* is considered a pioneering body of images in that they depicted groups and individuals from all walks of life in actual pursuits as opposed to staged, propagandist depictions of Communist Party social programs. Liu Zheng has continued to produce important bodies of work, including his series of lush color tableaux, *Four Beauties*, which presents the lives of four fabled historical women.

CHEN Changfen is an important landscape photographer of this period. He began his career as a professional photographer in 1959. He was selected by *Time* magazine as one of 10 eminent

photographers in the history of photography. He is well known for his landscape photography of the Great Wall, a motif that he has been fascinated with and involved in since 1959. In his photographs, he successfully combines the aesthetics of photography and ancient Chinese monuments.

Contemporary Photography After the Mid-1990s

After the mid 1990s, with the increasingly affluence and globalization of the country, photography became widespread in China. It also came to dominate contemporary art practice in China, now eagerly sought after by Western art aficionados. Photography during this period, however, was engaged in by artists who had training in visual art, rather than photography, leading to an open and experimental style. The availability of digital photography was another vital factor that stimulated the development of contemporary photography. The domestic market for photography was further sparked by the rapid ascendancy of Chinese manufacturers of photographic equipment, especially digital cameras, in the 1990s.

QIU Zhijie (1969–) is one of the pioneers of contemporary photography. In his early works, he depicts middle class people's lives in relation to livelihood and lifestyle. Some photographers studied photography abroad and also worked abroad. The early works of XING Danwen (1967–) deal with the Cultural Revolution in a reportage perspective. In her later works, she became interested in China's global issues on E-trash and urban transformation. RONG Rong (1968–) lived and studied photography in Japan in the mid 1990's. He was interested in documentary photography in his early career. Later, he took self-portraits, sometimes with his wife, using ruined buildings and sublime landscapes as his surroundings.

The rapid transformation of China in social, political, cultural, and economic domains came to the lens of these artists' cameras during this period of time. YANG Yong was interested in depicting the city in its various facets. He preferred to take snapshots for his motifs. HONG Hao (1965–) is another Chinese artist looking to the West and interested in set-up photography. In his works, facsimiles of advertising photographs in which he appears as a suave model selling Western luxuries and lifestyles, Hong Ho creates scenes that signify the dream-like world of the middle class in China. A typical work is *Hello, Mr. Hong* of 1998. HAI Bo's (1962–) photographs address the issues of

family and his own cultural identity in relation to the socialist meaning of family. He often used historical photographs as the material for creating new works. In *Them*, 1999, he reassembled a number of women wearing drab Maoist garb who had been captured in an official black-and-white group portrait from 1973 to photograph them in exactly the same configuration, but in color wearing Western-style dresses.

The use of historical motifs also underlies the work of ZHUANG Hui, who orchestrates large group portraits of schools, factories, and other institutions in the style of official photography of earlier eras. WANG Qingsong mines the entire span of Chinese history in ambitious, panoramic works that assembled dozens of models in elaborate tableaux, often with the intent of pointing out or satirizing modernization; in the work *Look Up, Look Up*, 2000, a group of people wearing unflattering clothes and hairdos in the latest styles stand gazing up at an oversized bottle of Coca-Cola.

HONG Lei (1960–) is known for his photographic appropriation of Chinese landscape paintings. He found the exact scene that a Chinese painter depicted and took a photo based on the exact aesthetic and visual effect that the painting conveys. ZHAO Bandi (1966–) uses digital techniques to create photos in which his own images, an artificial panda, and texts that are reminiscent of propaganda posters and advertisements, have been incorporated.

Photography in China only recently became connected to international trends. And it was only at the end of the century that photography become a formal major in art colleges. At the end of the century as well, international photography exhibitions began to be held in China, bringing prominent international artists, curators, and critics who displayed their work and lectured there. The Court-Yard Gallery and Red Gate Gallery in Beijing, established by Westerners, have been important private institutions for the promotion of Chinese contemporary photography and art. Local artists using photography and video, which had become extremely popular at the end of the century, had increasing opportunities to show their works abroad, especially in Europe, and have become concerned with China's global issues. Seminal traveling exhibitions organized by the Kunstmuseum, Wolfsburg, Germany, and the International Center of Photography, New York circulated at the turn of the century.

Important internationally focused Chinese contemporary photographers include WENG Fen

(1961–). Weng Fen's series of large-scale color works entitled *Wall Straddle*, 2001, depicts young girls in school uniforms sitting across crumbling, trash-strewn walls and looking in the distance at modern skylines. His interpretation of China's urban development relies on symbolism—as if in these photos the girls foretell the future of globalized China. CHEN Lingyang is an emerging female photographer whose works are concerned with the female body and female identity related to the image of city. *Twelve Moon Flowers*, 1999–2000, depicts female genitals in a poetic fashion, as the viewer sees their relation to twelve flowers. XIANG Liqing (1973–) montages hundreds of images of high-rise buildings to create colorful, large-scale tableaux that comment on the anonymity of modern urban society. YANG Zhenzhong (1968–) satirizes contemporary Chinese family life and family policy with his portraits of squawking roosters, hens, and chicks that stand in for husbands and wives, fathers, mothers, and children in his *Family Fortunes*, *Lucky Family* series of the mid-1990s. Important expatriate Chinese photographers include ZHANG Huan (1965–), known primarily for performances that test the limits of his bodily endurance; he also directs performances documented with large-scale color photographs, such as a shot of Chinese men half-immersed in a body of water, titled *To Raise the Water Level in a Fishpond* of 1997.

Photography in Taiwan

Photography appears in Taiwan arguably as early as 1871, when the Scottish photographer John Thomson (1837–1921) visited what was then called the island of Formosa, during his travels in China from 1868–1872. Thomson is known for his ambitious photo album of portrait photography on Chinese workers and peasants, published in England in 1893/4 as *Illustrations of China and Its People*. He appears to be the first photographer to do landscape photography and portraits of aboriginals in Taiwan.

Other photographers during this period of time were Christian priests who lived and worked in Taiwan. They often took portrait photographs of native inhabitants.

Document and Realist Photography from 1895 to 1948 during Taiwan's Colonial Period under Japanese Occupation

Photography in Taiwan during this period of time was heavily influenced by the Japanese. Documen-

tary photography was widespread, although mainly used by Japanese anthropologists, scholars, and reporters during the early period of the Japanese Occupation (1895–1920), as cameras were mostly considered research tools for field work in the newly-acquired colony. Portraiture was the other popular type of photography. As a colonized island under the Japanese, Taiwan was under heavy restriction. The local Taiwanese could not afford to purchase cameras and photographic equipment that Japanese and a few British companies carried. Even so, Taiwan natives were not allowed to acquire negatives or experiment with chemicals or other photographic materials.

The difficult conditions did not entirely prevent the use of photography, however. Japanese photographers and reporters based in Taiwan ran the photo studios and shops, but also offered a few photographic classes to introduce the functions of cameras and basic darkroom techniques to the native population. This was undertaken for commercial reasons to keep up with the demand for portrait and documentary photographs, and there was no formal or professional education in photography in the schools. The master-disciple system was thus strongly relied upon in the commercial photography studios. SHR Chiang and LIN Tsao were two important figures who emerged amidst these conditions. They were trained in the master-disciple system, and they later established their own commercial studios. In 1901, Shr Chiang set up the first studio that was owned and run by Taiwanese natives called *Duplicated Me Photo Shop* which existed until 1946. Around the same time, Lin Tsao (1881–1953) inherited a studio from his teacher Mirimoto, a Japanese reporter based in Taiwan. He renamed this concern *Lin Photo Shop*. Shr Chiang, Lin Tsao, and others who set up shops were largely patronized by Japanese officials to record their activities and to report propaganda events.

PENG Ruei-lin stands out as an exceptional photographer of this era. Like his predecessors, he ran a photo shop to support himself. Unlike them, he had received formal training in photography from a Tokyo professional school in the 1920s. This training made a considerable difference in his approach to the medium. He experimented with various techniques in color photography in 1930 and infrared photography in 1933. While both of these areas had been discovered and discussed by Western photographers, they were little known in Taiwan. Peng Ruei-lin's experimentation illustrates how, even in artistic isolation, he was able to use a camera for artistic

creation and to attempt to create aesthetic effects. Yet, Peng Ruei-lin's significance was not widely recognized by other native photographers, and his concerns did not enter the mainstream understanding of photography in Taiwan. He taught classes continuously from 1933 to 1937 in his photo shop, with many of his students becoming key figures in photography after the Japanese departure from the island.

TENG Nan-kuang (1907–1971), CHANG Tsai (1916–1994), and LEE Ming-diao (1922–) were the most active and influential photographers during the late colonial period and Sino-Japanese War from 1934 to 1948. They have been called the “Three Swordsmen of Taiwanese Photography” to identify their roles as strong promoters of photography in Taiwan, especially during the 1950s. Stylistically their photographs are reminiscent of Japanese realism in documentary photography, where the dominance of the realist style leaves little room for photographers' individual creations. Yet, unlike the early documentary photography of Taiwan, so influenced by the Japanese style, the works of these three figures create a more humanistic sense and express each photographer's concern and individual awareness of Taiwan. Traveling all over Taiwan, Teng Nan-kuang, Chang Tsai, and Lee Ming-diao captured images that showed their interest in early Taiwan's rural culture, religious rituals, and social conditions. Teng's best-known work is a series of so-called tea ladies. Shooting candid portraits of the ladies at work. Chang traveled to Orchid Island, an isolated island away from Taiwan, and painstakingly photographed aboriginals in great detail near Jade Mountain, Taiwan's the highest elevation capturing his motifs in a straightforward and direct way. Lee is known for photographs of rural life and the traditions rooted in Han Chinese culture. While qualifying as documentary photographers or photojournalists, the Three Swordsmen were not primarily motivated by commercial or political intentions as were their early Taiwanese counterparts, and their works went a long way to encourage native photographers to reassess the aesthetic potential of the medium.

The Three Swordsmen also helped shape the environment of photography in Taiwan. Teng set up networking and a photographic association, and enhanced formal education on photography in schools. In 1953, he was a co-founder, with LONG Chin-san, of the Chinese Photography Association, the first association for professional photographers. (See below) This association helps

gather photographers, exchange knowledge, and nurture the public's understanding of the aesthetic dimension of photography. In 1964, Teng founded the Taiwan Photographic Society, with the dual aim of disavowing the motifs of salon photography and of promoting modern photography in Taiwan. (See below: "Photography in Taiwan in the 1960s and 1970s.") Chang initiated photography classes in professional training schools. Lee published the first professional photographic magazine in Taiwan, which was distributed through photo shops. The magazine published the texts of updated theories and concepts about photography.

Montage Pictorial Photography after World War II

LONG Chin-san (1892–1995) was a leading photographer and an influential promoter of photography in Mainland China and Taiwan, having moved to Taiwan from Mainland China after World War II. Long is regarded as one of the earliest pioneers in photography from the early 1900's and one of the most active photographers in Mainland China. His photographic experiences in China distinguished his works, conceptually and stylistically, from that of other Taiwanese photographers. Unlike those photographers trained in Japan and Taiwan, Long's concern with photography pays attention to both the techniques and aesthetic dimensions of photography. His early training in Chinese ink painting contributed to his understanding and skill in the artistic elements of photography.

In 1961, Long took up a unique photographic practice known as montage pictorial photography. Montage pictorial photography was groundbreaking in the history of photography since it applied photographic techniques to express the aesthetic of Chinese ink painting. The basic concept of montage pictorial photography is to create a black-and-white photograph, based on the classic theory of Chinese ink painting (commonly known as "the six principles of painting"). For Long, photography was capable of presenting the beauty and aesthetic of traditional Chinese art and culture, with two factors determining whether a photograph could be considered art: artistic composition and a significant message embedded in the work—important criteria in all works of art. For Long, positing a scene in a traditional Chinese painting is not unlike composition in photography, even though in painting, an artist can adjust the positions of compositional elements, whereas a pho-

tographer is restricted by the mechanical eye. Through photographic techniques, a photographer can resolve this problem.

The process of making a photograph characterized as montage pictorial photography is complex: it includes planning motifs, making the images, planning the layout of the images, collaging negatives through techniques in the darkroom, including multiple exposures, among others. Although Western photographers have, since the 1920s, employed darkroom techniques that achieve image overlap similar to Long's concept of composition, Long's montage pictorial photography depends on the unique considerations of Chinese painting principles.

The Scenery of Lake and Mountain is now generally regarded as Long's most typical "compositional" picture. A landscape compiled by shots of an old man sitting in a pavilion, amid rocks and pine trees, a boat, villages and a lake, the composition depicts a narrative typical of a traditional Chinese landscape. The space created in the photograph dismisses the principle of three-point perspective, with the gradated tonal effects in the photograph also reminiscent of a Chinese ink painting.

Intentional Photography and Modern Photography in the 1960s and 1970s

In contrast to the Salon style and pictorial photography advocated by Long Chin-san, a few styles have emerged that feature what is termed Intentional photography and other modern styles.

KE Shi-jie (1929–) is among the most important photographers who have worked on Intentional photography. In his early works, he shot a series of portraits and landscapes and was concerned with the personal traits and aesthetic quality of his motifs. Later, he went to New York and became a commercial photographer. Quitting his job, he then spent several years, in the late 1970s and early 1980s, traveling the world and photographing. The works that resulted are abstract, featuring dream-like scenery appearing to be influenced by Surrealism, emphasizing the tonality of the shadows. His best-known works include *Living Tao*, *Still Vision*, *Dancing Brushes*, *Embrace Tiger*, and *Return to the Mountain*. Other Intentionalist photographers are HSIEH Chun-teh (1949–) and Denial LEE. They emphasize the photographer's interpretation of his subject, rather than simply reporting or documenting it, and they are concerned with the elements of color, shape, composition, and contrast in their works.

The modern photography movement in Taiwan began around 1965 and lasted for around ten years. It is important to note the American influence on Taiwanese photography during this period. After World War II, the U.S. army established bases on the island. Taiwan shed Japanese influence, and absorbed American culture and art, motivating photographers and shaping the development of photography. Key figures in this development are JANG Jao-tang, HU Yung, Hsieh Chun-de among others, who used wide-angle lenses to create distorted images, favored high contrast between light and dark, a rough grain, and blurry or out-of-focus images. This tendency did not pervade the entire photographic field in Taiwan, but rather was confined to a group of photographers who held joint exhibitions. One of these was in 1969 and presented the works of eight photographers active in this movement. Ambitious photographers made a number of attempts to increase the awareness of modern trends in photography. A photographic festival was dedicated to modern photography in 1966. Two important magazines began publication: *Photo Century* in 1970 and *Modern Photography* in 1976.

Riding the wave of this cultural change, V-10 was a photography group founded in 1971. It aimed to promote discussion among the modern art, photography, and visual media. The founding members included JOU Dung-guo, HU Yung, NING Ming-shen, GUO Ying-shen, JANG Guo-shiung, Jang Jao-tang, JUNG Ling, YE Jeng-liang, LUNG Sz-liang, SHIE Jen-ji; and by 1973 the group expanded to include HUANG Yung-sung, Shie Chuen-de, JANG Tan-li, LIU Chen-tzuo, LI Chihua, WU Wen-tao. None of them continued to be full-time independent photographers, working instead for newspapers, TV stations, advertising companies, and filmmakers. Some of the founding members had participated in experimental theater and film. Their photographs were frequently published in *Photo Century*, an important magazine for modern photography in Taiwan. While not sharing a unified aesthetic principle, these photographers participated in several group shows in the 1970s.

Reportage Photography from the 1970s to 1990s

Despite the efforts of some photographers, photography in Taiwan was dominated by photojournalism the mid 1970s and 1980s. The development of this style is associated with several political events

of the period, a tumultuous period of political and international relations. In 1971, Taiwan was forced out of the United Nations, and in the same year, Japan's government took possession of a small island which both Taiwan and Mainland China claimed as theirs. The sovereignty of Taiwan, threatened by absorption into China, became a critical issue that provoked the awareness of photographers and artists; they sought to identify and preserve Taiwan's culture, society, and people. Photography in Taiwan during those 20 years thus developed into a style of social realism, which was prevalent in photography magazines, popular magazines, and newspapers.

It is important to point out that several photographers had started to work in a reportage style in the 1960s, particularly JANG Shr-shian, CHENG Shang-his, and HSU Ching-po.

Cheng Shang-his was a leading reportage photographer who worked for three important magazines. After its publications, his *Story of the Hung Ye Baseball Team* was regarded as one of the early examples of reportage photography in Taiwan. Another of his well-known works is *The Series of Jilung* (1960–1965) which records the change in his hometown. He was inspired by his teacher, Chang Tsai, and he used a snapshot style with simple and straightforward compositions in capturing his subjects. His student, JANG Jao-tung, later became a very active and important reportage photographer, and in 1965 the two held a two-man show dedicated to modern photography.

The emergence of several photography magazines and newspapers was essential to advocate and popularize the style, allowing serious photojournalists to emerge, including WANG Xhin, LIANG Jeng-jiu, and LIU Chen-hsiang.

Echo magazine was first published in 1971; it aimed to introduce Chinese culture and create cultural exchange between the West and the East. In 1978, the magazine dispensed with its English version and instead launched a version in Chinese that featured a special issue on Chinese photography. It encouraged interest in reportage on the motifs of Taiwanese culture, and exclusively displayed their works, including those of HUANG Yung-sung and JUNG I-jong. The aim of these reportage photographers was to discover the neglected arenas of life in Taiwan, and they played a pioneering role in this wide-spread cultural phenomenon, which also attracted the contribution of novelists and other artists. These photographers were also involved in organizational and editorial works.

In 1973, GAO Shin-jiang, the editor of the section of Art and Literature in *The Times* in Taiwan,

devoted several columns to reportage photography. This was the first newspaper in Taiwan to strongly advocate photojournalists and present their various documentations on Taiwanese culture and Taiwanese minorities.

In 1985, the novelist CHENG Yin-jen published a magazine called *Renjian*—literally, “the world that human beings live”—which specialized in text and images for an intellectual Taiwanese audience. This magazine sought to characterize reportage photography as humanistic and truthful, dedicated to providing critical insight into what had become an overwhelmingly materialistic culture and consumer society. The magazine did not focus exclusively on Taiwan, but also covered, among other issues, Ethiopia’s critical problem of hunger. Although the magazine ran for just four issues, ending in 1989, it nonetheless served, along with other publications, to foster the emergence and development of reportage photography in the 1980s.

The cover photo of the launch issue of *Renjian* was GUAN Shiao-rung’s “Bachrmen,” from his series on Orchid Island aboriginals. Guan Shiao-rung exclusively photographed on this island for almost 10 years, moving there to live, his work veering more towards an ethnographic documentary. Later, he helped found an aboriginal foundation and was even personally involved in aboriginal protests in the 1990s. In “Bachrmen,” he documented a community of aboriginals who, drawn by its low cost of living, had illegally inhabited this place.

JUNG I-jong, another active photojournalist, was trained as a printmaker in wood cut technique; an active editor and writer, he had no professional training in photography. *Man and Land* (1974–1986) was his first work of reportage, inspired by his memories of youth and its implications on his adult life. *Taipei Tumor* focuses on the city of Taipei, depicting its rapid and chaotic development. *Szu Chin* (1980–1985) records the rural Taipei preserved community for aboriginals. Motivated by his experiences growing up near this area and his encounter with a mysterious saying about this community, and influenced by Henri Cartier-Bresson’s concept of “the decisive moment,” Jung utilizes a snapshot style in this series. In 1992, he founded *Photographers*, which introduced international photography to Taiwan and vice versa. The magazine has been an essential source for aspiring photographers to understand the works of the masters. He has also published numerous books on photography, which benefit those both in Taiwan and Mainland China.

Female photographers are less common in Taiwan than Mainland China, WANG Shin being the first woman photographer dedicated primarily to reportage. She studied photography in Japan and worked on a series of photographs about a violent incident in an aboriginal community during the Japanese occupation of Taiwan.

Taiwan has also seen an exodus as some photographers left the island to study and work in America.

Contemporary Photography in Connection with Digital Technology in the 1990s

Daniel Lee (1945–) relocated to Philadelphia, Pennsylvania to study photography and film in 1970, after his college training in oil painting. He then worked for a decade at a commercial studio in New York. In the early 1990s, he entered into the field of digital photography. Today, he is hailed as one of the pioneering photographers in the world, and his early works have inspired many Taiwanese to experiment with digital photography.

Motivated by the emergence of new technologies in everyday life, Lee views the use of digital imaging tools as a way to have more freedom in selecting subjects, expressing his concept, and controlling the outcome.

He created his first series with digital means in 1993. Entitled *Manimals*—a word combining the words man and animal—in this series of 12 riveting yet disturbing images Lee accentuates various human features to evoke an animal’s to create the 12 animal signs of the ancient Chinese Zodiac associated with birth years, such as “1949—Year of the Ox.” The concepts of Lee’s works are associated with Buddhism and Taoism, and the cycles of life and reincarnation of the religious beliefs which he encountered during his life in Taiwan. He is also interested in Darwin’s theory of evolution. Other of his works include *108 Windows* (1996–2003), *Origin* (1999–2001) and *Judgement* (2002). *Origin* refers to the origin of the human being as proposed by Charles Darwin. The concept of *Judgement* was taken from Taoist folklore about the underworld. In this myth, each individual is presented to the judge of the court in the underworld after death. This work is associated with the cycle of life and reincarnation.

Contemporary Photography in Taiwan

As in the People’s Republic, digital photography and video are popular contemporary art forms

Zhang Huan, from Family Tree, 2000, C-Print, 40 × 50".

CHINA AND TAIWAN, PHOTOGRAPHY IN

in Taiwan. CHEN Chieh-jen (1960–) is interested in violent events that occurred in modern Chinese history, depicting his interpretations of the Japanese invasion of China in the 1930s. Using digital techniques to mimic historical photographs that depict horrific acts, including decapitations, Chen Chieh-jen is concerned with the issues of body, national identity, and political power. His works, in their depiction of the life cycle and the afterlife, are also inspired by notions of Chinese Taoism.

HUNG Tung-lu (1968–) is interested in cyber culture and figures that represent this culture in Taiwan and Japan, creating figures based entirely on his imagination through digital techniques which deal with what human beings might become in the advancing cyber culture. He has explored answers to this question in Buddhist tenets and incorporates the idea of nirvana into his cyber creations, which are holographic in nature and mounted in light boxes. WU Tien-chang (1956–) uses digital photography to mimic posters that

might be found in Shanghai, incorporating aspects of ancient Chinese myth, folklore, and Taoism into the narrative of his works.

CHEN Shun-chu (1963–) is concerned with the concept of family. He has taken portraits of his family members and others since 1992 and has accumulated hundreds of photos. In his works, he addresses social relations and their connection to the concept of family, and expanding this concept, to the idea of home.

YAO Jui-chung (1969–) a pioneer of Taiwanese contemporary photography, remains a leading photographer. He is also very active in the curatorial field and is known for his critical writing on the contemporary art and photography of Taiwan. In an early photographic series, he made upside-down self-portraits as a parody of Taiwan's national identity in relation to China. He is also interested in landscape that is ruined or abandoned in Taiwan, and the issues of cultural identity generated by these landscapes.

WILLIAM CHRISTENBERRY

American

Among the most significant post-World War II color photographers, William Christenberry came upon photography nearly by accident. He began his career as a painter, earning a fine arts degree in 1959 from the University of Alabama in Tuscaloosa, where he was born and raised. At the urging of his instructor, Mel Price, Christenberry traveled to New York City in 1958, where he quickly became enamored of the energetic, avant-garde canvasses of the Abstract Expressionists, namely painters Willem de Kooning and Arshile Gorky. He was later drawn towards the iconic works of Pop artists Claes Oldenburg and Jim Dine, as well as others who incorporated signage into their work. These artists encouraged him to consider the vernacular—the materials of everyday life—as an appropriate subject for his art. He was increasingly drawn to representation in his paintings; and upon his move to Memphis, Tennessee for a teaching position the following year, Christenberry began using an old Kodak Brownie camera as a tool to record the colors, shapes, and forms of his native landscape. On a practical level, the camera's casual, instantaneous, 3 × 5" drugstore prints functioned as preliminary sketches for paintings; but they also served as a repository for memories of a distant time and place that the artist would collect and nurture over the years.

In 1960, a seminal moment occurred in which Christenberry discovered the Depression-era *Let Us Now Praise Famous Men* (1941) with its text

by James Agee and photographs by Walker Evans. Originally commissioned for publication in *Fortune* magazine, the now-classic work, chronicled the landscape and milieu that Christenberry knew so well: Hale County, Alabama, the heart of the South's Black Belt region known for its cotton and slave plantations. In 1936, coincidentally the year of Christenberry's birth, *Fortune* had sent the two men in search of a story, and they returned with an opus. Evans's stark and yet elegiac pictures of the sharecropper families he came to know, their homes, and routines of daily life have since been identified with a modern, documentary style of photography. By refusing to sentimentalize his subjects, he instead presented them with a quiet dignity. Christenberry was captivated by Evans's images as well as Agee's text, which reminded him of another inspiration, that of the Southern literature of William Faulkner and Eudora Welty. Still shooting the Brownie images as studies for painted works, it was not until Christenberry met Evans in October 1961 that he decided to turn his attention to photography as an endpoint.

Evans, then an editor at *Fortune*, helped Christenberry obtain a job as a picture file clerk at Time-Life and remained a close friend until the elder photographer's death in 1975. Evans found the young Christenberry's Brownie prints to have a purity of vision, breathtaking candor, and a poetic quality unlike most color photography, which he found "vulgar" (Southall 1990). Evans strongly encouraged Christenberry to continue with photo-

graphy. In 1968, Christenberry, using *Let Us Now Praise Famous Men* as a guide, sojourned to Hale County to re-photograph the sites that Evans had memorialized 32 years earlier. He has continued to make the annual pilgrimage ever since.

Christenberry photographed exclusively with the Brownie until 1977, when he turned to the more professional and technically daunting large-format, 8 × 10" Deardorff view camera. The simplicity of the Brownie format freed the photographer from technical concerns, allowing him to focus on the immediacy of his subject matter and achieve an impressionistic, snapshot aesthetic. The elaborate view camera, which had to be carefully positioned, each frame laboriously composed, resulted in an entirely different but equally beautiful image. The variability of aperture and focus allowed for a fine-grained negative with precise, crisp detail. Christenberry retained his frank, frontal compositions, although the camera's depth of field required him to stand at a greater distance from his subject, thereby incorporating more of the space surrounding buildings (Southall 1990). He has continued to use both photographic formats to achieve different ends.

While the younger photographer shared some of his predecessor's concerns for capturing the poetic qualities of time and place that characterized rural Alabama, he was not simply recreating or quoting Evans's vision. Christenberry felt a deep personal relationship to Evans's and Agee's work based on his childhood experiences and intimate knowledge of the places and even the distant relatives of the families the two men visited. However, Christenberry desired his pictures to imbue something of the losses of past, as well as speak to the present and the renewal of the South, all while encapsulating the regions rich textures and mysteries. Perhaps because his works achieve such a formal purity in their direct compositions, clear contours, and colors, they evoke timelessness or the slow passage of time rather than simply nostalgia. In fact, Trudy Wilner Stack has described the photographer's intention as a reconstruction and discovery of his own impressions alongside those of modernism's prodigies, namely his wide-ranging artistic and literary influences (Stack 1996).

It is noteworthy that Christenberry was never drawn to the languid antebellum mansions, many of which remained in the Hale County environs. Under his watchful eye, Christenberry's subject matter—the Palmist Building, the Green Warehouse, Sprott Church, the cotton gin of Havana Junction, the humble, gravelly gravesites of Hale County—seems to come alive with a vibrant

energy, despite the fact that most of these sites have been long abandoned as relics of their oft-troubled past. In fact, the 20-mile radius that comprises Christenberry's focus has remained virtually unchanged since Evans's time (Southall 1990). Although one might expect strip malls, billboards, neon signs, and the other outcroppings of postwar development to have long since invaded and taken over, no McDonald's or its like exists in Hale County. In Christenberry's photographs, the old buildings and landscapes seem to mythically reappear—year after year—as they are inextricably intertwined with Christenberry's memories and the viewers' own associations. Past and present are thus married in these lyrical portraits of the American Deep South. Metaphorically speaking, the images reference life cycles and suggest the residue of human existence, despite the fact that the human figure rarely appears. According to Rebecca Walker, "Courageously, methodically, he [Christenberry] documents one hundred little deaths as the houses and roads and general stores of his childhood change form and face and, eventually, disappear" (Reynolds and Walker 1996).

As an illustration of his working process, consider *Kudzu and House, Tuscaloosa County, Alabama* (1989), a structure that he photographed over a 13-year period. The kudzu, a fast-creeping green vine that grows over much of the Southeast, had nearly engulfed the modest tenant's shack on a hill in 1990. Then, one year later, Christenberry returned, fully expecting the house to be buried under the persistent vines; however, the kudzu had been cut back. And in 1992, the structure had been razed, preparing the reddened, virgin land for something else. His 1991 and 1992 photographs of the site document this narrative. In relation to this and other subjects, Christenberry has spoken of a desire to "possess" his subjects (the buildings in particular), to make material and tactile what is fleeting and evanescent. Alongside his photographs, he has continued to make paintings and small, free-standing sculptures of the various buildings he visits. He memorialized the "kudzu shack" two years later with such a sculpture.

Christenberry's iconography finds form in many media, including paintings and drawings collaged with found objects, sculptural reincarnations of the photographed sites, as well as the more troubling mixed-media installation known as *The Klan Room*, begun in 1962. He has spoken about his desire to memorialize the fullest history of his Southern roots, a place rife with conflicts between good and evil, black and white,

rich and poor. In part due to the influence of the Civil Rights movement but also as a means of grappling with his more personal experiences as a Southerner, Christenberry began to look at the Ku Klux Klan in Hale County and use its rhetoric of hate and violence as a means of offering a white man's critique of Southern racism. In 1963, he began making sculptures of Klan figures from G.I. Joe action figures who wore the sumptuously colored satin robes of their group. The dolls were often situated in pairs or groups within built architectural tableaux, and then photographed. Over 40 years later, the sculptures have become part of an ongoing installation comprising over 300 objects and images. Cognizant of the discomfort with which many viewers and even his fellow artists have viewed this body of work, Christenberry insists that *The Klan Room* is a vital part of his oeuvre, stating that "there are times when an artist must examine and reveal such strange and secret brutality" (Christenberry quoted in Stack 1996).

As a consummate photographer of the South—Christenberry has never photographed in Washington, D.C., where he has lived since 1968—he shares with his peers William Eggleston, Emmet Gowin, and others the desire to capture the essence of a culture as he both recognizes and yet transcends its stereotypes. Christenberry is both a part of and a critic of the tradition, the landscape, and the culture of the South, its myths and realities. Although often associated with a regionalist perspective (sometimes pejoratively) Christenberry's photography succeeds in finding the universal within a highly personal language of symbols and signs.

Biography

Born November 5, 1936 in Tuscaloosa, Alabama. Earned MA, University of Alabama, Tuscaloosa, Alabama, 1959; BA, University of Alabama, Tuscaloosa, Alabama, 1958. Traveled to New York City for the first time, 1958–59 where he saw Abstract Expressionist work; moved to New York, 1961; left to teach in Memphis one year later. Married Sandra Deane, August 19, 1967; the couple moved from Memphis to Washington, D.C., 1968. That same year began annual sojourns to Hale County, Alabama and its environs (for the next three decades) inspired by the work and friendship of Walker Evans. Had first solo show in New York's Zabriskie Gallery of photography and sculpture, 1976; first solo show in Washington, D.C. at Sander Gallery, 1977.

Associate and then Professor of Art, The Corcoran School of Art, Washington, D.C., 1968 to present; Assistant and then Associate Professor of Art, Memphis State University, Memphis, Tennessee, 1962–68; Instructor of Art, University of Alabama, Tuscaloosa, Alabama, 1959–61. Selected awards and honors include: Doctor of Humane Letters (Honorary), University of Alabama, Tuscaloosa, Alabama, 1998; The University of Memphis Distinguished Achievement Award in Memory of Elvis Presley, Memphis, Tennessee, 1996; Art Matters Grant, New York, New York, 1994; Educator of the Year, Society for Photographic Education, 1995; Yale University Summer School of Art and Music, Visiting Artist, Norfolk, Connecticut, 1993; Yale University Summer School of Art and Music, Visiting Artist, Norfolk, Connecticut, 1991; Eudora Welty Professor of Southern Studies, Millsaps College, Jackson, Mississippi, 1991; The Alabama Prize, Alabama, 1989; John Simon Guggenheim Memorial Fellowship, 1984.

LARRY CLARK

American

Larry Clark first came to prominence in the New York art world with the publication of *Tulsa* (1971), a collection of graphic photographs of Clark and his friends hanging out, using drugs, having sex, and playing with guns in the homes and suburbs of that Midwestern city. As a photographer and filmmaker, Clark has concentrated his energies on themes of adolescent angst, self-destruction, physical violence, masculine aggression, raw sexuality, and drug culture. Inspired by the conventions of documentary and the immediacy of montage, Clark either records or creates intimate situations that indict the viewer's voyeuristic fascination with the potential for violence in human subjectivity and with the interactions that linger beyond normative veneers. Clark may be criticized for condoning, exploiting, or enabling destructive activities and for sympathy with white masculine excess, but Clark maintains that his work presents cautionary moral tales of under-explored social and cultural dysfunction and marginalization. Clark's work provokes much discussion, often as a result of censorship, regarding the psychic and physical character of adolescence and widespread unease, silence, and blindness about the tensions in adolescent and adult-adolescent relationships.

Clark began his career as a photographer assisting his mother's business, going door-to-door as a baby portrait photographer in his hometown of Tulsa, Oklahoma. At 18, Clark enrolled in a commercial photography school in Milwaukee, Wisconsin. Influenced by students at a nearby art school and the work of W. Eugene Smith, Clark began to think of his medium as being able to present complex information and narrative. Clark's friends in Tulsa had long been accustomed to seeing him with a camera, and Clark began to photograph unsanitized aspects of adolescence in white suburbia. Alluding to the formal and autobiographical conventions of documentary and using a 35-mm camera, a wide-angle lens, and existing light sources, *Tulsa* records graphic scenes of sex, violence, and drug use in youth culture as naturalized activity. Drafted in 1964, Clark was

in the army through 1966, serving in Vietnam, and he then traveled throughout the United States, with periods living in New York and New Mexico. In 1971, he met Danny Seymour, who had worked with Robert Frank, and Seymour was inspired to finance *Tulsa*. Clark received a National Endowment for the Arts \$5000 "Imprimatur of Excellence" grant for his work on *Tulsa*, but after multiple arrests and convictions due to drug and alcohol abuse, violent acts, and the shooting of a friend during a dispute, Clark served a 19-month term in a maximum security prison, beginning in 1976. *Tulsa*, the first book published by Ralph Gibson's Lustrum fine arts press, became a milestone of photography in the second half of the twentieth century.

Teenage Lust (1983) is more sexual, disturbing, and much more autobiographical than *Tulsa*, with images of adolescents living on the edge without fear of violence, dying, and death, and with photographs that directly locate Clark's experience within the context of his work. Clark confronts his viewers with images of youth culture in self-destruction, and critics have charged that these images of teen lust and sex often normalize male aggression and its unpleasant consequences.

Reflecting Clark's enduring obsession with teenagers and sexuality, *The Perfect Childhood* (1993) examines the influence of mass media on teenagers. *Larry Clark, 1992* (1992), Clark's first photo-essay in color, consists of portraits that emphasize teenage male sexuality and autoerotic play with guns.

As a filmmaker, Clark continues his interest in chronicling the confusion, desire, rage, inhumanity, and potential tenderness that animate human relationships. In narratives dedicated to a realistic imperative, untrained or amateur actors and convincing scenes of physical and sexual violence hint at the flaws in human character, and they challenge cultural veneers regarding the conflicts of adolescence. Clark's films have been banned from many venues because they challenge cultural taboos with images of adolescent nudity, sexuality, self-destruction, and brutality.

Clark's first feature film, *Kids* (1995), continues themes of masculine aggression and drug activity, and features a male protagonist who pursues the

sexual conquest of female virgins. The film follows 24 hours of a group of young New Yorkers in their daily activities of hanging out, skateboarding, doing drugs, being violent, and having sex. The film's narrative is propelled by one of the girl's learning that she is HIV-positive and looking for the boy who seduced and infected her. Clark commissioned the screenplay from Harmony Korine, who was a skateboarder in his last year of high school when he met Clark. Shot in a *vérité* style with mostly untrained actors, *Kids*, reflects Clark's desire to make "the great American teenage movie, like the great American novel." *Kids* won the Golden Palm award at Cannes Film Festival.

Clark's second feature film, *Another Day in Paradise* (1998), is a grim coming-of-age story, set in the 1970s. Based on a novel by ex-convict Eddie Little, the story concerns the conflict between a life of drugs and crime and the desire for family as two aging junkies mentor two young lovers. The everyday life of heroin users with its inherent violence appears almost ancillary to the ordinary pursuit for strong interpersonal relationships. *Bully* (2001), is based on the book *Bully: A True Story of High School Revenge* by Jim Schutze. The film retells the story of an actual murder of a high school bully by a group of high school friends in Hollywood, Florida, in 1993. *Ken Park* (2002), co-directed with Ed Lachman, takes place in suburban Visalia, California. The film focuses on four teenagers and the adults in their lives and exposes the difficult sexual longings and fears that underlie their self-identity, and many aspects of their relationships become vehicles for expression of subconscious emotional responses. The explicit depiction of sexual practice and sexualized violence juxtaposed against normative social veneers suggests insight into the darker aspects of human character.

CHUCK CLOSE

American

Although recognized primarily as a painter, Chuck Close has also been a photographer since college. Photography is integral to his paintings and prints; his photographs are in turn influenced by his approaches to painting.

Close is best known for iconic portraits that are often more than eight feet high. They begin as photographs that he takes with a 20 × 24 Polaroid camera. He overlays the photo with a penciled grid on a sheet of acetate, which he uses to transfer the image in a process he calls “knitting.” Each square in the grid contains a mark that is subtly different from the others and is intriguing for its pattern and value. But when the viewer shifts perspective from the individual mark to the entire painting, the marks meld into a synergistic whole as they begin to define a human face. Close’s *oeuvre* can be viewed in the same way: the subject matter varies little—always head and shoulders of a family member, friend, or fellow artist—yet when viewed as a whole paints a much bigger picture.

Close first studied photography in the early 1960s after attending Yale University’s summer art program. A methodical artist who admits to being a “control freak,” Close earned a B.F.A. and an M.F.A. with highest honors from the Yale University School of Art. There he studied with Philip Guston and Robert Rauschenberg. His classmates included realist painters Rackstraw Downes and Janet Fish, and conceptual and minimalist artists Richard Serra and Nancy Graves, who later became subjects of his portraits. “The trouble is, if it looks like art, it must look like someone else’s art or it wouldn’t look like art,” he has said, referring to early influences that he imitated briefly. “When I met De Kooning I said, ‘How do you do? My name is Chuck Close. I’m the person who’s made almost as many De Koonings as you’ve made.’”

Close says that he used photography to answer questions such as what it means to make a representational painting after the invention of photography. The important distinction of post-war American art, according to Close, was the “sense of overallness” expressed in a painting by Jackson

Pollock or Frank Stella. He intended to apply that sense to portraiture by making every feature as important as the next—to make the mustache hairs as important as the eyes. “The camera is not aware of what it is looking at. It just gets it all down,” he has said.

His portraits are simultaneously confrontational and coolly distant. The large format of the Polaroid image and the grand scale of his prints and paintings create tension between the artificiality of the flat surface and what the viewer eventually recognizes as a human face. By keeping the subject matter consistent, he minimizes the variables, heightening that friction between style and content. He chooses his enormous scale to accentuate the physical characteristics, lighting and posing his subjects not to flatter them but to introduce interesting details. “Every viewer enters the work through the shared humanity of looking in a mirror, or looking at the faces of loved ones, no matter how much art historical baggage they bring,” he explains. Ignoring the emotional aspects of the human face, he heightens its impersonal nature by discouraging any suggestion of expression and by using only the first names of his models in the titles. He refers to his portraits simply as “heads.”

At first, he worked from found photographs; by 1966, he was making paintings based on photographs he had taken himself. In 1975, Close moved to the 20 × 24 Polaroid format because its immediacy generated dialogue with his models and allowed him to make changes as he worked. This interaction let him “slowly sneak up on what I wanted rather than having to predetermine what it was.” The incremental process of responding to and modifying the existing is formalized in a technique he began using in his paintings in the 1970s. Instead of mixing his colors on the palette, Close replicates the dye-transfer process of building images by applying thin layers of magenta, cyan, and yellow directly on the canvas. He then applies “corrections” to achieve his desired result, discovering the color through the process.

He does, however, acknowledge that his portraits are of real people. “When someone lends me their image ... they don’t know what I’m going to do with it, they have no control over it, they’re

CLOSE, CHUCK

not paying for it, so they can't ask for their nose to be straightened. It requires some bravery and generosity on their part."

In December 1988, Close suffered a rupture to a congenitally weak spinal artery. A violent seizure left him paralyzed from the neck down. After months of physical therapy, he regained limited movement in his arms and now paints with a brush Velcro-strapped to his hand. He also continues to explore photography.

In 1996, Close began working with printmaker David Adamson to produce a series of portraits as digital IRIS prints for the Pace/MacGill Gallery in New York. Close also collaborated with Jerry Spagnoli in 1999 to update the daguerreotype process. For two years, Close photographed a score of musicians and artists, including himself, for a handmade book that includes poems by Bob Holman. Adamson scanned the daguerreotypes and made digital prints for the limited-edition series of 75 books titled *A Couple of Ways of Doing Something*, completed in 2003.

Although art critics of the 1970s grouped Close with the nascent Photorealists, the narrow label inadequately describes the scope of his work. The distinguishing characteristic of Photorealism is its reliance on the camera to produce work that is veristic yet hand wrought. Close chafes at the label "realist" because he feels the artificiality of the work deserves equal weight. As an artist who deliberately shows his hand, Close reveals the magic in an attempt to differentiate between illusion and reality. Demystifying the process, according to Close, is the truth behind realism.

RENATA GOLDEN

Biography

Born Charles Thomas Close in Monroe, Washington, July 5, 1940. University of Washington, B.A., magna cum laude, 1964. Attended Yale Summer School of Music and Art, Norfolk, CT, 1961. Graduated from Yale University School of Art and Architecture, B.F.A., 1963 and M.F.A., 1964, both with highest honors. Received numerous honorary degrees and honored by many cultural institutions throughout the United States. Awarded Fulbright Grant to study work of Gustav Klimt and Egon Schiele in Vienna, Austria, 1964–65. Taught painting and photography in the Department of Art at the University of Massachusetts, 1965–67; at the School of Visual Arts in New York, 1967–71; and at New York University, 1970–73. Taught summer school at the University of Seattle, 1970 and the Yale Summer School of Art and Music, 1971 and 1972. Awarded National Endowment for the Arts Fellowship, 1973; Skowhegan Medal for Painting, 1991; University of Washington Alumnus Summa Laude Dignatus, 1997; National Medal of Arts and National

Humanities Medal Award, 2000. Disabled by a spinal blood clot in 1988. Lives and works in New York City and Long Island.

ALVIN LANGDON COBURN

British

Although mostly known today for his month-long venture into abstract photography in 1917, Alvin Langdon Coburn left a broader contribution to the medium's history. Almost a generation younger than his mentors, Coburn seemed to straddle the various "camps" that desired to realize photography as a fine art circa 1900: Alfred Stieglitz's Photo-Secession in New York as well as those associated with his distant cousin F. Holland Day in Boston and London. Nicknamed the "Hustler," Coburn forged connections to Symbolist, Aesthetic, and Arts and Crafts proponents. Although Coburn seemed destined to make a name in photography after receiving his first camera when he was eight, his career was actually quite brief. He essentially abandoned photography in 1919, devoting the rest of his life to esoteric practices. Nevertheless, Coburn's complex career was a virtual cross-section of early-twentieth-century culture.

Born in 1882 into an old Boston family, Coburn was a determined and privileged child from the outset. His father died when he was seven, leaving him and his very ambitious mother with a substantial inheritance. A year after exhibiting in a Boston

studio at the age of 15, he was introduced to Day, who would serve as his guide in photography. When he was 18, Coburn showed nine prints in Day's monumental exhibition, *New School of American Photography*, and helped to hang it at the Royal Photographic Society. While in London, he met a host of important photographers, including Edward Steichen and Frederick H. Evans. After the showing, Day and Coburn transported the work to the Photo-Club de Paris. Once again, Day presented his protégé to notable figures, including Robert Demachy and Frank Eugene, who were masters at gum printing. Variations on this process, which mimicked the tonal effects of impressionistic painting, would become Coburn's preferred photographic method.

Following further European travels, Coburn opened a portrait studio on New York's Fifth Avenue in 1902, not far from what become the headquarters of the Photo-Secession. There, he re-established contact with Stieglitz and Steichen. He also met the mother figure of the Photo-Secession, Gertrude Käsebier, and worked in her portrait studio. Over the course of Coburn's association with the Photo-Secession, he was granted four issues of their journal *Camera Work* and two

one-man shows at their gallery 291, also known as the Little Galleries of the Photo-Secession. Coburn boasted in his autobiography that at the age of 21, he had been elected to “two of the most advanced and artistically conscious groups of internationally-known photographers”: the Photo-Secession and the Linked Ring Brotherhood of England.

Perhaps at Käsebier’s suggestion, Coburn attended Arthur Wesley Dow’s summer school at Ipswich, Massachusetts in 1902 and 1903. Dow, one of the best art teachers in America at the time, had published the great manual *Composition* in 1899, which would run into 20 editions over 40 years. Dow emphasized the Japanese concept of *notan*—a delicate balance of light and dark tones. Especially fascinated by wood-block printing, Dow had been assistant curator to Ernest Fenollosa in the Boston Museum of Fine Arts’s Department of Chinese and Japanese Art. Dow was extremely accepting of photography in his curriculum. Often compared to the painter James McNeill Whistler, Coburn incorporated these oriental tenets into his strikingly balanced arrangements.

In 1904, Coburn persuaded the editor of New York’s *Metropolitan Magazine* to commission him to photograph prominent British writers and artists. His first target was George Bernard Shaw, a successful playwright and dabbler in photography. The two became fast friends, and Shaw posed for over 50 sittings, declaring Coburn “one of the most accomplished and sensitive artists now living.” Among his other sitters were the poets and authors Edward Carpenter, George Meredith, and G. K. Chesterton. Coburn later broadened his scope to include other intellectuals from other countries, eventually collecting the visages into a book, *Men of Mark* (1913). This was followed by *More Men of Mark* (1922) and his never-finished *Musicians of Mark*.

The Arts and Crafts’ ideals of craftsmanship and the blending of all arts played large roles in Coburn’s work. In 1904, he went to study with Frank Brangwyn, an English painter and print-maker who had trained with William Morris. Coburn later became a specialist in photogravure—a type of photomechanical reproduction that complimented Pictorial photography’s soft tone—and he hand-pulled most of his own images. Coburn’s numerous publication credits included his own books, *London* (1909), *New York* (1910), and *Moor Park* (1913), as well as illustrations for some of the leading writers of the day: Maurice Maeterlinck’s *The Intelligence of Flowers* (1907), Henry James’s *The Novels and Tales of Henry*

James (1907–09; 24 volumes), and H.G. Wells’s *The Door in the Wall and Other Stories* (1911).

Coburn always enjoyed experimenting in photography, whether it was mixing gum printing with platinum papers, using a specially designed soft-focus lens, or learning the first color photography process, autochrome, from Steichen in 1907. He also photographed from bold angles, such as in a view from the Metropolitan Tower “The Octopus” (1912), making the ordinary seem foreign in its convergence of lines and shapes. In 1916, Coburn was introduced to writer Ezra Pound and artist Wyndham Lewis, two important figures in England’s Vorticist movement. Using three mirrors bound together, Coburn photographed Pound and bits of wood and crystal to produce enigmatic images that mimicked mineral formations or cubist renditions of light. Coburn produced his *Vortographs* in January 1917 and exhibited them in February, ending his stint into purely non-objective photography.

Coburn retired to North Wales with his wife for a life of freemasonry, mysticism, Eastern thought, goat raising, pianola playing, and painting. Coburn’s interest in spiritual concerns can be seen as an outgrowth of his Symbolist leanings. Indeed, as he later explained, “The greatest artists have always had a spiritual background.” In 1932, Coburn became a naturalized British citizen, making official what had been his residence for over 20 years. In 1966, he worked with photography collectors Helmut and Alison Gernsheim to complete an autobiography, thus bookmaking became his career. Before his photographic calling ended, Coburn was acquainted with, and influenced by, a veritable “who’s who” of international arts and literary circles.

Biography

Born in Boston, Massachusetts, 11 June 1882. Attended Arthur Wesley Dow’s Summer School of Art, Ipswich, Massachusetts, 1902 and 1903; studied with Frank Brangwyn at his London art school, 1904; studied photogravure at London County Council School of Photo-Engraving, 1906. Opened studio in New York, 1903–06; worked in Gertrude Käsebier’s portrait studio, 1903–04. Invited to join the Photo-Secession, New York, 1902; elected to Linked Ring Brotherhood, Eng-

land, 1903. Major holdings of his work are housed at the International Museum of Photography and Film at the George Eastman House, Rochester, New York; the Harry Ransom Humanities Research Center at the University of Texas at Austin; and the Royal Photographic Society, England. Died in Rhos-on-Sea, North Wales, 23 November 1966.

LYNNE COHEN

Canadian

Lynne Cohen is one of contemporary art's strongest practitioners of a vein of photography that descends from observers of the social landscape such as Eugène Atget and Walker Evans and has modern-day lineage in the New Topographic photographers of the 1970s. She photographs interiors with a signature impassive style, subtly underlining the dark absurdity of our built environments and the social forces at work within. Cohen titles her photographs with broad descriptions of the type of space in the photograph, elevating the rooms depicted from specific sites to metaphors for larger social relations. Cohen's early work investigated domestic and accessible communal spaces, such as living rooms, beauty salons, and party rooms. Her subject matter has evolved to primarily include spaces implicated in the regulation and structuring of society and its citizens: restricted-access communal or institutional spaces such as men's clubs, classrooms, laboratories, and observation rooms. The ominous nature of these places inflects the more neutral sites included in her later work, such as halls and spas. While the idea of architecture and built space embodying social power structures and codes is commonly linked to the influential theorist Michel Foucault, Cohen herself has declared more of an affinity to the French slapstick writer/director/actor Jacques Tati. In Cohen's photographs, social critique is subtle, served with a healthy side of black humor.

Lynne Cohen was born in 1944 in Racine, Wisconsin, and she has resided in Canada since 1973. She studied art at the University of Wisconsin, Madison, graduating in 1967, with further study at the University of London's Slade School of Art. It was after receiving a Master's degree in 1969 and working in sculpture, printmaking, and conceptual processes that Cohen began making photographs in 1971. Minimalism and Pop Art were strong early influences, and Cohen was drawn to interior spaces as a kind of Duchampian readymade, both banal and extraordinary. Her mature career interests manifested themselves early on in printmaking projects that incorporated tracings from mail-order catalogs of everyday objects and environments. Her long-

lasting fascination with the banal was evident in the early project *Front and Back*, a 1972 16-mm film created in collaboration with Andrew Lugg that utilized found postcards of terribly ordinary places, juxtaposing the images and the actual text written by anonymous travelers. While Cohen considered projects such as resituating everyday household objects and furniture into a gallery setting, she settled into photography as the most direct medium for accessing the social and political questions that interested her.

The desire for directness and precision led Cohen to work with a large-format view camera, making both 5 × 7 inch negatives and 8 × 10 inch negatives. She continues to work with the 8 × 10 inch camera to this day, a choice that imparts her photographs with a clarity of detail and depth of focus field that are greater than possible with the unaided human eye. This heightening of perception contributes to the overall project of her photographs: to force a viewer to notice the strangeness at the core of everyday spaces and objects. This peculiarity is so pronounced that her work has been mistaken to be constructed or set up, although Cohen always photographs real, "found" places and does not make any significant alterations to the scene before photographing. Her signature frontal, deadpan, symmetrical, wide-angle style was developed early on as a means of achieving the most apparently neutral view possible, and it has remained remarkably constant through to her present work. This style contributes to the atmosphere of a stage set that pervades most of her images, a feeling enhanced by the absence of any people despite the spaces' evident functionality. Objects become stand-ins for bodies. This happens concretely in the paper targets of human forms found in many of the photographs of shooting ranges, or the outlines of bodies demonstrating the proper use of the space in *Model Living Room*, 1976. Human interaction is also introduced more allusively, such as by the trope of two chairs facing each other standing in for human interaction, which is found in *Recreation Room*, 1971, and *Laboratory*, 1983.

For most of her career Cohen has elected to not date her photographs, and although her photographs can now be found with dates, many of

those were assigned retroactively and approximately while working on her book *No Man's Land* (2001) in order to create a traditional chronology. Unlike many photographers, Cohen does not work on series in the conventional sense. Rather, she collects images in a long-term accumulative process. Her images are titled with the type of space depicted (e.g., *Police School*, *Observation Room*, *Library*, and *War Game*). She photographs these rooms as she gains access to them, often a complicated and protracted process, particularly with the institutional spaces. She pursues photographing a type of room as long as her interest remains high, which is often decades. While her photographs are dependent on found, actual things in the world, Cohen is hardly a strict documentarian—collectively, the images are placeless, timeless, and un-situated in any real-world context.

Cohen began her photographic work in black and white and did not begin to make color pictures until the late 1990s. Her early prints were contact printed at the size of the negative, encouraging an intimate viewing experience. In the mid-1980s, she began to enlarge the images, initially to 16 × 20 inches and later as large as 30 × 40 and 40 × 50 inches. She decided early in her career to closely control the framing of her work, thus avoiding the possibility of a gallery or museum framing her photographs with materials that did not reinforce interpretive possibilities. From this point forward, Cohen framed her black-and-white pictures with colored Formica frames as a way of introducing a set of associations carried by color into a particular black-and-white scene. The use of Formica, an inexpensive plastic laminate popular in home and institutional decorating since the 1950s, gives a tactile presence to many of the surfaces depicted within the flat plane of the photograph. Cohen uses the same material to frame her color photographs, using a more limited palette of grays.

Initially arriving in Canada to teach, Cohen is considered one of that country's leading photographers. She has taught at universities and art schools in both countries for as long as she has worked as a photographer and held numerous artist residencies and workshops which have extended her international influence. Cohen's pictures are not rooted in any one nation, but in the modern human experience.

VAN DEREN COKE

American

Van Deren Coke has contributed to the fine art of photography as an educator, editor, writer, collector, curator, historian, and photographer. From his days as a graduate student in art history at Indiana University, where his selected topic of the influences of photography on nineteenth-century painting was rejected by his thesis committee because "the subject did not exist," to his position of director of the department of photography at the San Francisco Museum of Modern Art, where he championed unknown, controversial artists, Coke helped carve photography's place as a fine art.

Coke taught the fledgling field of creative photography at a number of schools, including the University of Florida in 1958, Arizona State University in 1961 and again from 1988–1991, and St. Martin's School of Art in London in 1968. In 1962, he was appointed director of the art museum at the University of New Mexico, where he began collecting photographs for the museum's permanent collection, and the next year he began the university's creative photography department. After Beaumont Newhall joined the faculty in 1971, UNM became the first school in the country to offer a Ph.D. in photo history.

Coke said he created the UNM graduate program in photography to acquaint students with photography as a means of self-expression on a par with painting, sculpture, and printmaking. It was designed, he said, to "open students to an understanding of the responsibilities of the creative person and what was expected from one who seriously practiced photography as an art and a means of philosophic communication." His students have included Ralph Meatyard, Meridel Rubenstein, and Harold Jones. Curators of a 1991 group exhibition titled *Patterns of Influence: Teacher/Student Relationships in American Photography Since 1945* at the Center for Creative Photography in Tucson, Arizona, said, "Coke's students are not limited to those who have attended the universities where he has taught but can be counted as anyone who attended an exhibition he organized or read a book he wrote."

Coke left UNM to take Beaumont Newhall's place as director of the George Eastman House in Rochester, New York, when Newhall decided to retire. An old friend of Newhall's, Coke began his duties at the Eastman House in 1970 to be trained during Newhall's final year as director. After visiting the Southwest, Newhall changed his mind about remaining in Rochester after retirement, and at Coke's suggestion and Nancy Newhall's

urging, he joined the faculty at UNM in 1971, where, by special agreement, Coke was still regarded as a part-time lecturer.

Coke was initially greeted enthusiastically by the board of trustees at Eastman House. Newly independent of Eastman Kodak Company, the museum was growing rapidly. The board hoped that Coke's business and management experience as president of his family's hardware company in Kentucky, where he worked from the time he was discharged from the US Navy at the end of World War II until he began graduate school in 1954, would help them survive as an independent arts institution. As director, however, Coke soon discovered that Kodak still had significant control of Eastman House and did not agree with his vision of the museum as a prominent center of fine art photography. Coke resigned the position in 1972. His legacy was a name change to the International Museum of Photography and Film at George Eastman House, and during his tenure, photo conservation procedures were researched and initiated. He also revived *Image* magazine, an Eastman House publication, after a six-year hiatus.

Coke returned to UNM as chairman of the art department and remained until 1979, when he was hired as director of the department of photography at the San Francisco Museum of Modern Art. Coke mounted many innovative shows in San Francisco that explored the new directions that the medium was taking. In 1985, he curated *Behind the Eyes: Eight German Artists*, the first American exhibition of photography by contemporary German artists who also worked in other media. In 1983, he gave former student Joel-Peter Witkin his first solo exhibition in a major American museum. The same year, Coke also mounted the first in-depth show of Edward Weston's Mexico photos.

Coke had first met Weston in the summer of 1938, when as a teenager he drove his father's Ford from Lexington, Kentucky to Carmel, California to meet his idol. Ten years later, still under Weston's influence as a photographer, Coke studied art in San Miguel de Allende, Mexico. Coke's photographs tend toward the surreal; he was described in a 1992 review in the *New York Times* as "an idiosyncratic photographer with a morbid eye." He experimented with "flashing prints" that involved darkroom manipulation in the 1970s before returning to straight Cibachromes in the 1980s. He demonstrated an interest in photographs that pushed the traditional limits of the medium; "but after finding it," he has said, "I got tired of looking for things that were strange." His students, however, give testa-

ment to his enthusiasm for blurring the lines between photography and other media.

"I always court enigma," Coke has said, adding that he believes enigma is the essence of art. His photographs have been exhibited internationally, and he has championed the fine art of photography in books published in Europe, Central America, Hawaii, and the American Southwest. He has written text to accompany catalogues, both of photo shows he has curated and as a guest contributor, and has compiled and edited essays on diverse subjects relating to photography as fine art. A book of his own photography, *Secular and Sacred: Photographs of Mexico*, has been published.

Coke remained at the San Francisco Museum of Modern Art until 1987, when he retired to Santa Fe. He died on July 11, 2004.

Biography

Born Frank Van Deren Coke in Lexington, Kentucky on July 4, 1921. Had taken courses in sculpture and design as a boy; received a degree in history and art history at the University of Kentucky, Lexington in 1942. Studied photography with Nicholas Haz in 1939; at the Clarence White School of Photography in New York in 1940; and with Ansel Adams in 1952 and 1955. Worked in the wholesale hardware distributing business founded by his grandfather, Van Deren, in the 1940s. Served as a naval officer during World War II, returned to family business after discharge and resigned as company president in 1954. Received MFA in art history and sculpture from Indiana University, Bloomington in 1958. Assistant professor of photography and photo history at the University of Florida, 1958–1961; assistant professor of photography and photo history at Arizona State University, Tempe, in 1961–1962. Appointed director of the art museum at the University of New Mexico (UNM), Albuquerque in 1962. Served as art museum director and professor of art until 1966 and again from 1973–1979; chairman of the UNM Department of Art 1962–1970. From 1970–1972 served first as deputy director and then director of the International Museum of Photography and Film, the George Eastman House, Rochester, New York. Director of Photography at the San Francisco Museum of Modern Art, 1979–1987. Received the Photography International Award, 1955, 1956, 1957; International Prize, *U.S. Camera*, 1957, 1958, 1960. John Simon Guggenheim Fellowship, 1975; Senior Fulbright scholar, Elam School of Fine Arts, University of Auckland, New Zealand, 1989. Awarded the E. Leitz, Inc. Medal of Excellence "Educator of the Year Award," 1988; Distinguished Career in Photography award from the Friends of Photography in San Francisco, 1992. Gal-

COKE, VAN DEREN

lery in his name dedicated at the University of New Mexico, Albuquerque in 1986. Retired to Santa Fe, New Mexico in 1987. Died Albuquerque, New Mexico 11 July 2004.

COLOR TEMPERATURE

Color temperature is the overall measure of the coloration of light. A glowing filament emits this temperature in most light sources from the center of the light bulb. The color of light is dependent upon the temperature of the heated filament, and the range of color temperature moves from low intensity, which is red, through yellow, white, and blue at the highest and most intense setting. This temperature and corresponding color difference is measured on the Kelvin scale, a scale similar to the Fahrenheit or Celsius scales but with 273 degrees added to the Celsius temperature range. On the Kelvin scale, absolute zero is placed at 0°K and the freezing point of water is 273°K.

The color temperature of skylight (bright blue sky) is 11,000°K, an electronic flash 6,000°K, daylight 5,000°K, a flash bulb 4,000°K, a photo flood-

light 3,200°K, a household or tungsten light bulb 2,800°K, and candlelight 1,900°K. The more intense the light source and higher the amount of heat, the cooler and bluer the color cast of the light that is produced from the light source. The lower the intensity of the light source and amount of heat produced, the redder the color cast. This goes against common sense notions of hotter objects having a redder color and cooler objects having a bluer tone because the intensity measured is that of heat and light rather than object and its color hue. Two types of film are available for photographing in all light sources: tungsten film, which is 3,200°K and daylight film, which is 5,500°K. These two types of film provide color balance options that match the colorcast of the light to an appropriate range in the film used for photographing in that

type of light. Using filters on the camera to adjust and color balance can also be used instead of changing the film color temperature to make color-cast corrections.

Daylight film is the most widely used film for photographing indoors and outdoors. It is color balanced for skylight, daylight, and most types of on-camera and off-camera flash units. It is balanced for high heat and intensity on the Kelvin scale, and when used in tungsten light that is lower in heat and intensity, it will produce a blue cast in photographic images. Tungsten film is used for photographing indoors with household or tungsten lights or with photoflood lamps, and is available in two types: Type A and Type B. Type A is balanced for the 3,400°K photoflood lamp, which is the standard lamp, and Type B is balanced for the 3,200°K photoflood lamp. As tungsten film is balanced for low heat and intensity on the Kelvin scale, when used with daylight and flash units it will produce a red cast in photographic images.

Digital cameras, which use CCD sensors (charged-coupled device) and thus do not offer the photographer a choice of tungsten or daylight film, have settings for either daylight or tungsten light. The digital photographer must manually “white balance” the camera or set the camera to check the color cast of the light source or set the sensors to balance automatically. This procedure is called white balancing because the tone white is checked for neutrality in the camera: if the whites of an image have an orange or blue cast, the camera is incorrectly white balanced and must be calibrated to the light color temperature. Often there is a combination of both indoor tungsten light and outdoor daylight or photographic flash lighting, and the most abundant light source will be chosen for calibration purposes.

Fluorescent light is an anomaly in color balance because it does not fit into the red or blue range of the Kelvin temperature scale. Fluorescent tubes emit a discontinuous spectrum, which randomly varies the intensity of colors, and fluorescent tubes are not standardized to a specific color balance or cast but produce a number of slightly varying color shades. Filters can help correct the green cast generally characteristic of fluorescent lights, and a magenta filter (30M) will block the green color cast from the film or digital sensors when placed on a camera lens. Filters can also be used to color balance daylight and tungsten light with

the opposite type of film. To correct the red color cast made when using daylight film in tungsten light, a blue filter (80A) will absorb the red light and balance the resulting scene. Tungsten film used in daylight can be balanced with a yellow filter (85B) and this will absorb the blue light and maintain the neutral white in the image. Images that are incorrectly color balanced can also be corrected through manipulating color printing processes and digital software such as Adobe Photoshop, but these changes are often labor-intensive and difficult. Correcting improper color balance in color slide film is not possible after the film has been exposed and processed because the transparency is the final product, unlike photographic negatives and digital files that are manipulated in the traditional or digital darkroom.

Color and white balance is important when taking photographs to accurately reproduce the color of a specific scene, but can also be used for creative and artistic purposes. The cool blue color cast created when tungsten film is used in daylight is utilized by fine art and fashion photographers, and the warm interior light produced by daylight film in tungsten light is often manipulated by photographers who are capturing architectural or interior shots. The color casts present in reversing the standard film and lighting specifications are not the only creative changes that are used to manipulate the quality of light. Natural daylight changes color as the day progresses, and daylight balanced color film is the most accurate when used between ten in the morning and three in the afternoon, the most neutral time for natural daylight and the color temperature closest to daylight balanced film (daylight at noon is balanced to 5,000°K.) In the early morning the colors of daylight have a cool cast and less saturation, and in the late afternoon and evening daylight is characterized by warm, saturated hues.

COLOR THEORY: NATURAL AND SYNTHETIC

Photographic color theory is based on light and specific colors of light in the visible spectrum, which combine together to form what we call white light. Color can be broken down further into three elements: hue (the wavelength of color), saturation (the intensity of color), and value (the lightness or darkness of a color, sometimes also referred to as brightness). These components make up all photographic light. Black and white photography records light based only on value or brightness, and color photography records light based on two color sets: the additive primaries and the subtractive primaries. These sets are groupings of color that register in the human eye and on the surface of photographic materials. These two color groupings, when mixed together, make up all of the color combinations in photographic imaging.

The color wheel is made up of six colors, and red, green, and blue are placed directly inverse of cyan, magenta, and yellow. The additive primaries are red, green, and blue (also called RGB colors), and when mixed together form white light. The subtractive primaries are cyan (bluish-green), magenta (purplish-pink), and yellow (also called CMY primaries), and when mixed together form black or the absence of light. The six colors in the photographic process create a color wheel with complementary pairs: blue and yellow, green and magenta, and cyan and red. On the color wheel, a triangle is created by both the RGB primaries and the CMY primaries as they are spaced alternately in the six color slots of the color wheel. Mixing the colors on either side of that hue creates each color in the wheel: for example, mixing green and blue creates

cyan. These three-color pairs are linked through all traditional film and digital photographic processes. Each set of three primaries can form all six colors, and the additive primaries are used when taking a picture and affect the film, while the subtractive primaries are used for color printing. This is also true in digital imaging: the RGB primaries are used when reproducing color with light, such as a computer screen or television. The CMY primaries are used for printing with the addition of black.

Early color experimentation consisted of photographic material sensitive to red, green, and blue light. Antoine and Louise Lumière invented the Autochrome process in 1907, based on additive color theory. They covered a glass plate with potato starch grains sensitive to three layers of color: red-orange, green, and violet. When light passed through the glass, it was recorded on emulsion sensitive to only the specific color of the potato starch grain that the light passed through and its corresponding wavelength. This created a color transparency, but the process was labor-intensive and unstable. The subtractive color process was introduced into film with the invention of the Kodachrome process in 1935, developed by Eastman Kodak and Leopold Mannes. This process was popular with professional photographers for advertising and portraits, and rarely used by consumers because of its technical sophistication and expense. The consumer photographic market and fine art photography relied heavily on black and white film and developing until the 1970s, when color film was significantly improved by manufacturers such as Eastman Kodak and Fuji. Aesthetic photographic history also changes in the late 1960s as

photography is combined with other mediums such as silkscreen, and color is more readily accepted as a vehicle for photographic artists from the 1970s to the present.

Kodachrome film was made up of three layers of emulsion on the film, each sensitive to red, green, and blue light. This process was the origin of all subsequent color film. Color film has three layers of emulsion, each sensitive to one-third of the spectrum (red, green, and blue). When the film is exposed, a latent image is created on each layer and the development process of color film produces a multi-layered negative.

The development process of color film creates the colors in the negative or positive image, negative if the film is to be used to create a photographic print; positive if the film is to serve as a slide or larger-format transparency. Color developing of film occurs when the developing agent is added to the film and dye couplers are activated for each color layer: the area sensitive to red light forms a cyan image, the area sensitive to green light forms a magenta image, and the area sensitive to blue light forms a yellow image. These three layers are then bleached to remove excess silver, and a color composite of all three subtractive hues is formed in the film emulsion. This process is similar in photographic paper and both positive and negative color film. The most widely used process for color negative film is Kodak's C-41, which produces a chromogenic color negative created by dye couplers. Color transparency film has a step that reverses the color process and the tonal range of the film. The standard process for transparency film is Kodak's E-6, but Kodachrome film is processed in a slightly different manner, Kodak's K-14 process.

Color film is affected by exposure, and over- or underexposing slides or positive as well as negative film will change the saturation and value of color. Transparency or slide film has less exposure latitude than negative film, and is affected more by exposure variations. Overexposing slide film will desaturate and lighten the colors in the image, while underexposing slide film will saturate and darken the color range of the image. Color negative film has greater exposure latitude than transparency film, and quality color prints can be produced from under- and overexposed negatives that display little difference in hue and saturation from that of a properly exposed negative. Different film types and brands can also skew color balance, and some films produce a warm tone while others lean more to the cool side of the color spectrum. Color is also affected by film speed. Fast films have

less saturation, color contrast, and smoothness than slower color films. Graininess is also an issue with fast film and this texture increases as the film's speed (also known as ISO and ASA) increases. Slow color film has a richer color palette, smoother color forms, and a higher contrast than high-speed film.

Color printing is also a subtractive process. A negative is placed in a color enlarging head, and light is projected through the image onto photographic paper. The filter set of a color enlarging head allows for different amounts of cyan, magenta, and yellow to be adjusted for color balance. The strength of each filter is indicated by its density: the higher the filter number the denser the filter and the less light permeating through that filter. Color balance is achieved by adjusting the filter pack on an enlarger to create an image with neutral shadow and highlight areas. Viewing filters are useful for assessing color balance in color prints and are available in sets of six colors with varying densities for viewing color prints from transparencies and negatives. The subtractive primaries are the only colors used for printing because they make up the rest of the color scale and also merge to form black or the absence of light. In color darkroom printing, yellow is a combination of red and green, magenta is a combination of red and blue, and cyan is a combination of green and blue. Thus, the subtractive printing process in the darkroom allows for all six colors in the photographic spectrum to be created in color prints from negatives or transparencies. Color prints from negatives are often called chromogenic color prints and use a RA-4 color process, and color prints from transparencies use similar processes called Type R, R-3000, or Ilfachrome (formerly Cibachrome). Printing from transparencies produces a higher contrast image with more color saturation than printing from color negatives. Additional color printing processes used in the color darkroom include dye diffusion and dye sublimation prints. Color photographic paper has a variety of qualities, and the paper type instead of the filter pack used in black and white printing affects the contrast range of color paper. Papers are available in a range of subdued to bright and saturated tones, and the photographer can choose the type of paper needed based on his subject matter and vision. By combining color film types and printing papers, a vast color range is available for photographers.

Digital imaging follows a similar process utilizing the additive and subtractive primary colors. The additive primaries correspond to the CCD (charged-coupled device) sensors in a digital cam-

era or scanner and the subtractive primaries, with the added color black, are used for printing digital images. Digital cameras and scanners have CCD sensors that each register red, green, or blue through a grid of translucent image elements. A combination of these three colors will create any of the 256 color possibilities available on a digital screen or computer monitor. RGB colors are transferred to a binary number that is associated with a specific pixel or picture element for each piece of the scanned document or image area, and along with binary information on brightness, value, and tonal range are reassembled by a computer to make a digital picture. The individual red, green, and blue areas are seen together on the screen on a monitor and have a similar breakdown in television broadcasts. Editing digital images with software such as Adobe PhotoShop usually takes place in two color spaces or modes of calibration: RGB mode (red, green, and blue) and CMYK mode (cyan, magenta, and yellow.) CMYK mode is often called process color because black (represented by K) is added to the printer pack. Black is abbreviated by K, which stands for key color, because it is the tone by which all other colors are aligned in the printing press.

Individual color layers called channels make up each mode with the appropriate color breakdown and these channels are displayed as layers of color in a digital imaging program. RGB mode is used for viewing images on the screen, and digital information is captured in this mode through a scanner or digital camera. Most scanners and digital cameras use CCD sensors sensitive to red, green, and blue, but a drum scanner is also capable of creating a digital composite with PMT (photo multiplier tubes) that record more information than traditional CCD film sensors. CMYK mode is used for printing and mimics the cyan, magenta, and yellow tones projected through an enlarger by a filter pack in traditional darkroom color methods. However, in CMYK mode the color black is added because combining cyan, magenta, and yellow does not produce a true black with inkjet pigments. Color balance in digital imaging is also done by using three color pairs in the same manner as traditional darkroom methods: yellow and blue, green and

magenta, and cyan and red are all linked together and manipulate the overall color of a digital image. Hue, saturation, lightness or brightness, and exposure can also be manipulated through advanced imaging software applications.

Color in photography is used for a variety of purposes, including emotional and symbolic reasons and has an effect on the viewer's perception of an image. Color is subjective and arbitrary in many photographic images, and seeing a specific color or group of color hues can affect the mood and composition of an image. Juxtaposing color combinations can also change the reception of specific hues and neutral areas of white or black can take on a colorcast: if a green object is placed next to a white area in a photograph, the white area will take on some of the green hue of the adjacent space. The amount of white and black in an image can also alter how the brightness of specific colors are perceived, and brightness is often an arbitrary and subjective interpretation which is also influenced by the type of light in which an image is viewed. The amount of perceived difference in adjacent colors is called color contrast, and is often separate from an individual color's value. Warm colors, which range in the spectrum from red to yellow, and cool colors that range from green to purple or violet, are called analogous hues. Analogous hues are also seen as having similar qualities, and when used together in a color image lower that image's overall color contrast.

COMPOSITION

Successful composition in a photograph depends on a set of finely tuned responses to an image captured in a moment of time in a format predetermined by the choice of film and equipment. How well a photographer engages the viewer's attention in the image by setting up camera angle, distance, and placement of objects in a film frame is based on the photographer's understanding of the elements of good design. These elements work together to create a harmonious and effective composition that captures both the intent of the photographer's vision and the viewer's imagination.

These elements: placement, line, shape, texture, pattern, scale, perspective, focus, color, contrast, and balance follow basic rules. A deep understanding these rules is the basis of good composition and the intuited speed of a "photographer's eye."

The Rule of Thirds

This is a traditional rule for placement. The picture frame is divided into horizontal and vertical thirds and the subjects and subordinate elements of the picture are grouped near the intersections of those horizontal and vertical section lines. In landscapes, for instance, the horizon line would appear in the top third or bottom third of the image area. If there is an additional subject, such as a tree or house, it would be placed left or right of center, on the vertical thirds intersection.

Lines

Lines are often invisible connections made by the eye to different points in the picture. They often define shapes such as squares or triangles. They can direct the eye far into the scene and establish distance and a sense of depth in an otherwise flat, two-dimensional plane. Lines also establish links between near and distant areas and help direct the viewer's gaze towards an important element in the photograph. Placing an object or the subject near the camera, but off to the side of receding lines adds a strong dynamic to the image. Lines can underscore movement or stability in a scene. For instance: diagonal lines add motion or drama, parallel or perpendicular lines create a sense of serenity

or classic stability, curved lines indicate grace. However, lines, such as a road or a fence, that run parallel to the picture plane can set a different mood by creating a sense of distance and isolation from the subject.

Shape

The basic outline of an area, sometimes subtle, defined only by the intersection of lines, (as in the spaces between tree limbs) or more clearly by the light falling on an object (such as the limbs of the trees) is the first element recognized by the viewer. Shapes are the basic building blocks of an image. Isolating a shape by moving in close and photographing it can create a striking, graphic image. Juxtaposing shapes can create patterns, a sense of scale or distance, and add texture or even tension to an image. The repetition of shapes, through similarly shaped objects or the spaces around them, can reinforce an image or resonate the underlying photographic vision.

Planes

The surface upon which the subject lies is referred to as the picture plane. It is the point of visual contact between the viewer and the picture. Lines, shape, and contrast define planes. For instance, receding mountains are defined by their planes of fading color or contrast. Angled and intersecting planes, such as in aerial photographs, with their vast network of patterns and intersecting lines can provide stunning views. Planes also define perspective.

Perspective

In a two-dimensional picture, perspective can express the depth and vastness of a three-dimensional scene, by establishing the scale and distance of the objects in the scene. The pictorial elements of framing, scale, planes, line, and tonal range (the degree of contrast between light and dark areas) can provide a sense of depth to a photographic image.

Framing

The frame of the image is formed by the edges of the film. Framing is a device that forms a frame within that frame, or using an object or shadow to create a visual direction for the viewer. Overhanging branches in the foreground of a blank sky can help to highlight a distant horizon. The contrast between the near objects and the distant subject can help to establish distance. Following the gaze of a person or an animal in the foreground towards a distant point or the prime subject is another framing device. Using archways and portals to surround an object is an effective means of drawing attention to it. Selective focus, through the choice of lens and aperture can also frame a subject by sharpening the focus on the subject in an unfocused environment.

Scale

Similar to framing is the general use of objects in the foreground as subjects for scale to measure the background or relative size of the subject and to create a sense of distance.

Gaze

Faces and, especially, eyes always lead the viewer through the picture. We will follow the gaze, whether it is human or animal. The eyes do not have to be in focus to follow their gaze, but if the subject is human or animal, focus is critical around the eye area. Another magnet in a photograph are words. They draw the viewer's gaze almost as effectively as faces and eyes. However, they will not redirect the gaze unless carefully placed within the image as elements of pattern or texture.

Strong contrast in black and white, and opposite colors (such as green and red) create tension and drama in a photograph. When photographing in

color, look to see where bright or opposite colors are in the image. They will pull the viewer's eye and are one of the most powerful forces in a composition.

Lighting

The color of the light, its direction, and contrast are all part of the elements of design. Motion and blur, sharpness and vantage point are also devices used in the elements of design.

Balance

A completely balanced, harmonious composition can be very easy to view, but ultimately boring and just as easy to dismiss. Understanding the elements of design and using them to insert drama, asymmetry, tension, point of view, mystery, and emotional resonance will draw the viewer's gaze again and again. If the image has a powerful impact, try analyzing the elements of design within its frame.

CONCEPTUAL PHOTOGRAPHY

Conceptual photography places singular emphasis on the idea or message conveyed by a photographic image, rather than on conventional issues of aesthetics or narrative as they have tradition-

ally been applied to photography. This approach to the photographic image privileges its status as a method of documentation, drawing upon its singular ability to faithfully reproduce elements of

the world around us. It developed in the mid-1960s as a result of artists' interest in deemphasizing the work of art as an object and foregrounding its function as a method of communication. Conceptual photography often employs the use of text and/or the serial presentation of images to articulate a particular premise or make a specific statement. Ironically, the use of the documentary potential of the photograph in conceptual photography has resulted in its acceptance and current ubiquity in the fine arts.

In the early 1960s, artists began to question the material basis of the work of art. The paintings of Andy Warhol and Robert Rauschenberg introduced a level of distance from the artist's physical involvement with the work of art to create a more pictorial continuation of Marcel Duchamp's critique of art's objecthood. These works used photographic reproductions of everything from astronauts, street scenes, and art works to celebrity icons such as Elvis Presley, John F. Kennedy, and Marilyn Monroe to suggest the growing mediation of everyday life by popular culture. In Germany, Bernd and Hilla Becher resurrected the use of photography as typology perfected in the 1920s and 1930s by such photographers as August Sander and Albert Renger-Patzsch, presenting works that examined the similarities and differences between particular architectural forms. Joseph Kosuth's *One and Three Chairs*, 1965, incorporated a photograph of a chair placed alongside a textual description of the chair and the chair itself, demonstrating how photography might be utilized in a work of art not for its own sake but in the service of the articulation of a philosophical principle or ideal. This understanding of the photographic medium as a documentary means towards the expression of a concept, as an infinitely reproducible (and therefore somewhat "dematerialized") image that resisted the status of a precious art object, characterizes conceptual photography.

Conceptual photography flourished in the 1960s, beginning with Ed Ruscha's seminal photo-based books *Twenty-six Gasoline Stations*, 1963, and *Some Los Angeles Apartments*, 1965, now recognized as progenitors of the artists' books genre, and continuing with Dan Graham's photograph and text-based work *Homes for America*, 1965–1970. These works privileged photography's more basic and essential properties to focus on everyday forms of architecture as mere categorical types in the world rather than evoking their individual particularities. Artists such as Bruce Nauman, Douglas Huebler, Jan Dibbets, and Ger Van

Elk employed the photograph towards a different end, creating situations to be documented by the camera towards the expression of ideas about the body and its role in the work of art or the changes that occur within a given situation over a certain period of time. The photograph's ability to record a performance, a given sequence of events, or a linear progression of time or space, resulted in its becoming a central medium for conceptual art practice.

Other conceptual artists approached the circulation of the photograph in popular culture as a means of further distancing the work of art from material production and locating it within a wider cultural sphere. John Baldessari's montage works of the late 1960s and early 1970s, for example, employed images culled from film stills that were arranged to create clever and at times humorous relationships between various cinematic icons or situations. Baldessari also combined banal photographic images with text in his dry, ironic paintings of the 1960s, which contained deadpan observations on everyday life. Many of Gerhard Richter's paintings employ specific photographs as source material, such as his haunting series *Eight Student Nurses*, 1966, (using the portraits of the eight young women slain by Richard Speck in 1965) or *48 Portraits*, 1972, consisting of portraits of prominent composers, writers, scientists, and intellectuals from the late-nineteenth to the mid-twentieth century.

In the early 1970s, conceptual artists such as Vito Acconci, Chris Burden, Gilbert and George, William Wegman, and Bruce Connor focused on performances in the studio, the gallery, and in the expanded field of the world outside, using photography and video to capture these activities. This work often focused on the body in terms of its limits and endurance, its presence as a sexual signifier, and its general role in society. Acconci's *Stretch*, 1969, for example, employs text and photographs taken from the positions described in the text to create a sense of the body's position and physicality even though one never sees the artist himself. Other artists from the 1960s and 1970s, such as Robert Smithson, Richard Long, Hamish Fulton, and Lothar Baumgarten used documentary photography to record their conceptual projects, which concentrated on their personal interactions with the environment. The resulting photographs served to bring the art that was experienced or created in the natural world into the cultural setting of the gallery or museum.

At roughly the same time, a number of women artists used photography to explore identity and

female issues and greatly added to the expansion of the notion of photography, notably the Austrian performance and body artist Valie Export, and American performance and video artists Hannah Wilke, Eleanor Antin, Martha Rosler, Adrian Piper, and Cuban-American sculptor Ana Mendieta.

Towards the end of the 1970s, the influence of feminist theory and poststructuralist philosophy began to make its presence felt in the work of artists such as the Americans Cindy Sherman, Richard Prince, and Sherrie Levine, and Canadian Jeff Wall. These artists followed their 1960s predecessors in viewing the photographic image not as a precious object, but as a cultural “text” which they would re-frame and re-contextualize to make incisive observations about how the mass media and cultural production constructs our sense of reality. Sherman’s landmark 1977 series *Untitled Film Stills* and Wall’s photographic lightboxes address the pervasive impact of cinema on our view of everyday life in their presentation of seemingly “real” scenes, which have been staged for the camera through the kind of meticulous preparation and direction characteristic of mainstream filmmaking. Levine, Prince, and other artists such as Americans Barbara Kruger, Louise Lawler, and Annette Lemieux appropriated pre-existing images from commercial and art culture, furthering Duchamp’s radical use of ready-mades by extending this idea into the world of images. Levine was especially notorious for her “rephotographing” in 1981 of iconic Depression-era Farm Security Administration images by Walker Evans that were identical in every way to the originals except that they had been photographed from book reproductions and titled “*After Walker Evans.*”

The emergence of artists such as Thomas Struth, Thomas Ruff, Candida Höfer, and Andreas Gursky from Germany in the early-to-mid 1980s marked an important shift in the conceptual photograph in terms of subject matter and formal appearance. The artists of this generation had all been students of the Bechers and focused on such time-honored subjects as architecture, everyday people, and landscape. They distinguished themselves through their combination of the rigorous precision and clarity of their mentors and the seductive visual presence of painters such as Richter and Sigmar Polke. Struth’s images of crowded museum interiors, Ruff’s immense head-shots of ordinary German people, and Gursky’s technically dazzling images of crowds, landscapes, and built structures transformed the conceptual photograph into a genre that could at once present images taken to impart a specific meaning while retaining a painterly sense of composition.

Conceptual photography in the late 1980s and early 1990s took the visual style and idea-based intent of the genre to address political issues of gender, race, and sexual identity. Artists such as Americans Glenn Ligon, Catherine Opie, Lorna Simpson, Cuban-American Felix Gonzalez-Torres, and the Canadian collective General Idea often used photography to make provocative, confrontational work about topics that ranged from hardcore gay subcultures, to the position of African-Americans in contemporary society, to the ongoing crisis resulting from the spread of the AIDS virus. Other artists during this period, such as the Americans Cindy Bernard, Sharon Lockhart, and Christopher Williams and English video artist Gillian Wearing, synthesized the interests in documentation, performance, popular culture, sequential presentation, and rigorously aesthetic composition, which have characterized the progression of conceptual photography from its inception in the 1960s. Lockhart’s 1994 series *Auditions*, for example, presents a series of five images of young children embracing for a “first kiss” in a scene taken from the end of Francois Truffaut’s 1976 film *L’Argent Poche* (*Small Change.*) The work combines the documentation of a “performance,” an inquiry into the cinematic process and experience, and a use of serial presentation to define the children’s acts categorically as “auditions” in a way that brings the histories of the conceptual photograph together in a single work. Her complication of this history, and the subsequent reinterpretations of the conceptual photograph by younger artists into the present day, demonstrates how multifaceted the use of photography in idea-based work has become since its beginnings in the early 1960s.

CONDÉ NAST

After emerging as the brainchild of New York publisher Condé Montrose Nast (1873–1942) in the early 1900s, by the end of the century Condé Nast Publications became one of the largest consumer magazine companies in the world. Its earliest publications, *Vogue* and *Vanity Fair*, were among the first to use studio and portrait photography as illustrations. The rise of fashion and product photography, as well as its evolving marriage with graphic design, also influenced the aesthetics and production of images appearing in media and advertising. Condé Nast has been credited with pioneering the editorial format of fashion and lifestyle periodicals, as well as launching and promoting the careers of numerous prominent photographers from the United States and abroad.

The publishing empire known as Condé Nast established its name on the newsstand in 1909, when Nast acquired The Vogue Company and began revamping *Vogue* magazine, which had debuted as a New York society weekly in December 1892. *Vogue* remained the company's flagship publication as Nast purchased *Dress* and *Vanity Fair* (initially merged then shortened to *Vanity Fair*) in 1913, and *House & Garden* in 1915. In 1922, Nast renamed the company Condé Nast Publications, and five years later, it went public. *Glamour of Hollywood* (renamed *Glamour*) joined the Condé Nast magazine roster in 1939, and by 2000, more than a dozen new titles appeared, including: *Allure*, *Architectural Digest*, *Bon Appétit*, *Bride's*, *Condé Nast Traveler*, *Details*, *Gourmet*, *Gentleman's Quarterly* (renamed *GQ*), *Lucky*, *Mademoiselle*, *Self*, *The New Yorker*, *W*, and *Wired*.

Born in New York and raised in the Midwest, Condé Nast studied math and philosophy at Georgetown University, then went on to receive a law degree from Washington University in St. Louis. Through a highly successful stint as the advertising and business manager for *Collier's Weekly* in New York from 1900–1907, Nast created and refined what became his blueprint for marketing and positioning periodicals in an increasingly competitive marketplace. While targeting circulation to an audience of consumers willing to pay more for magazines featuring color covers and double-page layouts, he

aggressively pursued high-end advertisers to fill out more and more pages, thereby maximizing revenue with each new issue. With Nast at the helm as the new publisher of *Vogue*, the magazine's readership expanded from 30,000 in 1910 to 100,000 in 1918.

As Edna Woolman Chase became the *Vogue* editor-in-chief in 1914, she worked closely with Nast throughout its transformation into an internationally visible, fashion-focused, photo-illustrated monthly. Chase's influential tenure with the magazine lasted from 1895 until her retirement in 1952, at the age of 75. The editor-in-chief post of American *Vogue* was subsequently held by Jessica Daves (1952–1962), Diana Vreeland (1963–1971), Grace Mirabella (1971–1988), and Anna Wintour (1988–). In 1916, *Vogue* became the first magazine to spawn international editions, which were published in each country's official language. British *Vogue* debuted in 1916, Spanish *Vogue* in 1918, French *Vogue* in 1920, and German *Vogue* in 1928. Since then, *Vogue* has launched editions elsewhere, including Australia, Brazil, Greece, Italy, Mexico, Russia, Japan, Korea, and Taiwan.

In 1913, Paris-born photographer Adolph de Meyer signed on to contribute exclusively to *Vogue* and *Vanity Fair*, in what was deemed the most generous contract of its kind at the time. In the mid-1920s, *Vogue* opened a photo studio in Paris that served as the source for most of its photographic illustrations. European and American photographers alike brought their artistic concerns to the nascent field of fashion photography. Avant-garde approaches to portraiture, lighting, and composition began to eclipse the tenets of Pictorialism. From the 1920s to the 1930s, the work of photographers such as de Meyer, Horst P. Horst, André Kertész, Man Ray, and Edward Steichen made it into the pages of *Vogue*, by way of the magazine's Paris studio.

Early on, Nast shaped the visual resonance of his fledgling periodicals by approving each photograph for publication. His affinity for and commitment to the photographic medium was further exemplified in a *Vanity Fair* series on modern photographers, which ran in the early 1920s under the art direction of Heyworth Campbell. On the

editorial side, *Vogue* fashion editor Carmel Snow worked collaboratively with photographers like Steichen, who became the chief photographer for *Vogue* and *Vanity Fair* in 1923. Steichen created the first color photograph to appear on a *Vogue* cover in 1932, and Nast hired Horst for the New York edition of *Vogue* that same year. Nast soon began replacing fashion drawings on the covers with photo-illustrations.

One of his favorite artists was John Rawlings, who shot more than 200 cover photographs for *Vogue* and *Glamour* from the mid-1930s up until the 1960s.

Vanity Fair also began bringing a wide audience to photographers who went on to become well-known, as editor Frank Crowninshield published work by Gertrude Käsebier, Alfred Stieglitz, and Clarence White in 1915. Seven years later, Paul Outerbridge, Jr., Steichen, and others produced still-life shots for the magazine. Cecil Beaton, Anton Bruehl, and George Hoyningen-Huene, already established photographers, also began shooting for *Vanity Fair*. Nast's magazines began regularly commissioning fashion, lifestyle, and portrait photography by women in the field in the 1920s, when German photographer Antonie "Toni" von Horn began shooting for *Vanity Fair* and *Vogue* in New York. Von Horn officially joined the Condé Nast staff in 1930. Photographers such as Toni Frissell in the 1930s, Frances McLaughlin Gill in the 1940s, and Diane Arbus and Karen Radkai in the 1950s, created their earliest published work for *Glamour*, *Vogue*, and *Vanity Fair*.

Early on, the Condé Nast publications integrated photography, typography, and editorial themes into a boldly influential blend of content and imagery. As art directors began directly hiring photographers, the fusion of color photography and glossy magazine pages fueled their experimentation with publication layout and design. After joining the company as the art director of *Vanity Fair* in 1929 and *Vogue* the following year, Mehemed Fehmy Agha established a stylistic preference for larger photographs over other illustrations, such as line drawings. As a stable of photographers became an editorial necessity and grew for each magazine under the Condé Nast umbrella, *Glamour* art director Cipe Pineles hired photographers such as Cornell Capa and Herbert Matter. Alexander Liberman, who began as the *Vogue* art director in 1941 and was later the Condé Nast editorial director from 1962 until 1994, brought in Richard Avedon, Gordon

Parks, William Klein, Helmut Newton, and Irving Penn.

Penn was initially an art director at *Vogue* and later became a still life and fashion photographer for the magazine, from 1950 onward. His voluminous body of work has been highlighted in museum exhibitions, as many arts institutions began showing the work of fashion photographers in the 1970s. In 1977, a touring exhibition called *The History of Fashion Photography* opened at the International Museum of Photography at the George Eastman House in Rochester, New York. For the next year, the show traveled to large venues within the United States, including the San Francisco Museum of Modern Art. In 1985, the Victoria and Albert Museum in London held the exhibition *Shots of Style*, curated by *Vogue* and *Glamour* photographer David Bailey. Seven years later, *On the Edge: Images from 100 Years of Vogue* opened at the New York Public Library.

After an acquisition by S.I. Newhouse in 1959, the Condé Nast magazines became part of Advance Publications, Inc., one of the largest media conglomerates in the United States. The company launched CondéNet, the Internet counterpart to its magazine group, in 1994. *Vogue* became the first Condé Nast magazine with a parallel Web site in 1999. The site transformed into Style.com, along with content from *W* magazine, in 2000. Condé Nast also has established an archive of thousands of images from its magazines, spanning nearly a century of fashion, celebrity, candid, still-life, and travel photography. By the time the entire collection is catalogued, more than one million photographs and illustrations will reside in the Condé Nast Archive.

LINDA CONNOR

American

Depictions of landscape are usually interpreted in the United States within the framework of manifest destiny, which declares human dominion over the dense and bountiful wilderness. Since the late 1960s, however, Linda Connor has been the main female photographer redirecting these views of landscape. Her photography makes reference to the spiritual and symbolic in a manner that overrides American notions of land ownership. Rarely working in a series or sequences, her individual works are worldly and engage in a touristic attraction that ultimately belies the experience of the religious pilgrimage. Trips taken to the American West, India, Turkey, and Hawaii materialize photographically as rare proof of the necessity of preserving the phenomenon of the natural world.

During the 1960s and 1970s, as conceptual art was on the rise, a number of photographers migrated to the Southwest, where they began to redefine photography's visual role within the fine arts and larger culture. Earthworks such as Robert Smithson's *Spiral Jetty*, Great Salt Lake, Utah (1970) influenced conservationist sympathies towards the natural environment and generated new practices in the visual arts, including developing the notion of pilgrimage as a fine-arts experience. Known mostly through photography, earthworks depended heavily upon such documentation.

Within the larger sphere of society, in places like Arizona, Utah, California, and New Mexico, where modern subdivisions intersected desert environments, awkward change accompanied the growth of cities such as Albuquerque. No longer standing in for the divine or the sublime, contemporary photographers of the landscape captured instead deformity, an overtaking of nature for corporate

and urban development. Gathered in the famed exhibition organized by William Jenkins, *New Topographics* (1975), photographers (among them Lewis Baltz, Robert Adams, Nicholas Nixon, and Joe Deal) exhibited a new breed of itinerant photographers far removed from the heroic recording of nature's grandeur accomplished by nineteenth-century figures such as Timothy O'Sullivan and others. This is the historical background against which Linda Connor emerged, and bridging these two tendencies, she worked in a style not easily grouped with others. While her photographs insinuate a mythology that is symbiotic with New Topographics photographers' ideals of conserving geological areas, her images tend to be strikingly personal and evocative. Her influence extends to the success of students, including Larry Sultan, William Mebane, and Anthony Aziz, as well as the founding of PhotoAlliance, a member organization based in San Francisco that encourages artistic production and collecting.

Born in New York in 1944, an adopted child, which informs her later work, Connor studied at Rhode Island School of Design with Harry Callahan and moved to Chicago to study under Aaron Siskind and Arthur Siegal, receiving a Master of Science degree from the Institute of Design at Illinois Institute of Technology in 1969. Since then, Connor has resided in San Francisco, and she teaches at San Francisco Art Institute. Although she studied with Callahan and Siskind, known for their crisp, highly detailed styles, Connor predominantly uses a soft-focus lens (sometimes mentioned as a family heirloom) and a view camera. Her 8 × 10 inch negatives are contact printed onto printing out paper and exposed by the sun. Her photographs thus harken back to the early years of the century both in the method of taking the image as well in

their look, which attempts to duplicate that of the platinum print, rich in silver and sepia tones. Lights and darks are not in strong contrast; gray tonalities soften white and black areas.

Rebecca Solnit writes of the notion of the oblique portrait, Connor's ability to materialize spiritual energy to get to the invisible—the energy that reveals a truth, either in the form of ritual offerings, physical environments, or through human activity. In this regard, Connor's work is often compared to the poetic photography of Frederick Sommer. The all-over field of Sommer's eccentric landscapes, often shot in close-up details, creates a similar surreal tonal atmosphere.

Whereas earlier work was mostly romantic, collaging dream-like vignettes in exterior environments to invoke a type of reverie, from the late 1970s onward her work shifted to capturing the petroglyphs and other Native American spiritual sites of the West and Southwest. *Great Gallery, Horseshoe Canyon, Utah* (1982), *Dots and Hands, Fourteen Window Ruin, Utah* (1987), or *Petroglyphs, Sears Point, Arizona* (1985) insinuate the physiological relationship between human existence and nature, which became Connor's main subject. The photographs are reminders of the ancient and continuing life forces that underlie contemporary experience. Images of overlaid and intertwined hands, "Family" (1988) and "My Hand with My Mother's" (1987), are from the same period, a period in which she found her birth family.

Working more in the vein of her colleague Mark Klett, with whom she published a 1986 portfolio *Nepal*, and his Rephotographic Project, Connor's projects such as *Critical Mass* (1993), which tied the New Mexican birthplace of the atomic bomb, Los Alamos, to the landscape of the Pueblo Indians or the National Endowment for the Arts-funded photographic survey *Marks and Measures: Pictographs and Petroglyphs in a Modern Art Context* (1988) stress the effects of human incursion upon natural landmarks.

Entwined Buddha, Ayuthaya, Thailand (1988), one of her best-known images, demonstrates this tendency in Connor's work. Her titles typically read as anthropological notations where subject and location are inseparable because the two are more than just related; together, they are evidence of the human (endeavor) projected as nature incarnate. *Petroglyphs and Star Trials, Sonora, Mexico* (1991) is demonstrative in this regard. A long exposure from a stationary angle causes a streaked star pattern. Light and lens supply the frame of her camera, which is a material space for gathering

this information, these spiritual and unifying truths that Connor's Buddhist training underscores.

Photographer Jack Welpott once stated that the definition of self in nature is within the bounds of the universe, necessarily transforming many landscape photographers into philosophers. Connor's trip to India in 1979 and later trips to Nepal, Taiwan, and Hawaii, reveal such religious longings. Initially arriving in India as an observer, Connor was intrigued by yogin religion and their common practices. Aware that Connor is but a visitor to most of the sites she photographs, her work may seem to reflect the romantic leanings of nineteenth-century photography seen in the work of Felix Teynard, Gustave Le Gray, or Johnathan Greene. Most of her photographs, however, are about the modern traveler in search of religious grounding, the reason for the pilgrimage being enlightenment or the search for the sacred, which is not necessarily revealed by the photographer. Her photographs capture these sites as potent moments for significant experience rather than merely securing the picturesque.

Connor's cosmological and spiritual interests are conflated in the 1997 work *The Heavens*, shown at the San Francisco Art Institute. The exhibition included five glass-plate negatives of lunar solar eclipses taken between 1893 and 1922 from the archive of the University of California's Lick Observatory in San Jose that Connor reprinted, original scratches and handwritten notations intact. These vintage works were flanked by a series of diptychs—prints of astronomical occurrences juxtaposed by photographs of religious figures photographed by Connor. Egypt, Tahiti, Chile, the United States, Zimbabwe, and France were cited as locations, but *The Heavens* emphasized cosmic relationships rather than the exotic. Linda Connor provides the best summation:

Our minds seem to be wired for some kind of beliefs or rituals, or superstitions, some way of formulating experience that is far greater than we can deal with. To mitigate that experience, we ritualize it into forms that we can relate to. And my form is photography.

(Webster 1992, 5)

CONSERVATION

Since its invention in 1839, photography has been practiced using numerous techniques and processes, some of which lasted for many decades and some that survived only for a brief period. Photography has become so commonplace that it is easy to take it for granted and treat photographs casually and with little respect. Whether one is looking after holiday snaps, caring for professional photographs, or working as a professional conservator in charge of historical material there are important considerations for prolonging the life of images and preventing unnecessary deterioration. Some of the most basic and effective methods of preserving images are often the most obvious and the most often overlooked: namely correct handling, good housekeeping, and proper storage.

Photographic materials consist of complex physical and chemical structures, each of which reacts differently to temperature, humidity, environment, and handling. Conservation procedures must take into account all these factors, and knowledge of the image type—platinum print, silver gelatin, and so on—and its particular physical and chemical make-up is essential.

In general terms the conservation of photographs, whether amateur or professional, is problematic and conservation treatment should only be undertaken by a qualified conservator. While some companies offer restoration services for old photographs, these services are generally pointed at the amateur market and should be engaged with caution. Restoration is not conservation. Restoration techniques often use powerful oxidizing agents and extremes of pH in the form of reprocessing, refixing, bleaching, and redevelopment. These processes are irreversible, introduce contaminants, and can permanently damage the image.

Photographs are made up of three main layers: the base; the light sensitive image forming material; and the medium or matrix used to bind the light sensitive material to the base. Together, the light sensitive material and binder make up the emulsion, named after the fluid nineteenth century photographers used to coat glass and metal plates. The most common bases in use in the twentieth century are glass, plastic, and paper, with paper being standard for prints. For negatives glass was in widespread usage from 1851 until the 1950s, although flexible bases for film were introduced as early as the 1880s.

Today the most usual emulsion consists of gelatin with silver as the basis for the most common light sensitive compound, including dyes and filters for color materials, but others include platinum, iron, and carbon. Some processes are identifiable with the naked eye or under a microscope, but professional advice from a trained conservator is the safest course of action. Incorrect identification and treatment can make the problem worse and even destroy the object being conserved.

Common Conservation Problems

Exposure to Light

The processes of developing and fixing have a direct effect on the permanence and durability of the finished image, whether in the form of a negative or the finished print. As inadequate fixing will leave the image prone to deterioration from exposure to light, correct processing is the first step in good conservation practice. Even so nearly all photographs continue to be light sensitive to some degree and prolonged exposure will eventually fade or selectively darken the image (some color pro-

CONSERVATION

cesses will even deteriorate in the dark). This must be taken into account when exposing negatives, viewing transparencies, and displaying prints. The brightness of light, the length of time the image is exposed, and the type of light can all have an adverse affect. Brightness and duration are related as prolonged exposure in low lighting can be as harmful as a brief flash of bright light. Sunlight contains the most damaging type of light in the form of ultraviolet (UV) rays. These should be filtered out where possible and tungsten lamps are preferable for display and exhibition. Resin or plastic coated prints are more susceptible to light than archivally processed fiber prints. In order to maximize the life of a black and white print, illumination at 50 lux is recommended during display; there should be a maximum intensity of no more than 100 lux. Color photographs are particularly vulnerable to light and are ideally illuminated at 30 lux and never more than at 70 lux. Light meters should be used to check ambient light levels. In museum and gallery settings light levels are strictly controlled, and the length of time photographs are on view carefully observed.

Transparencies in the form of slides can fade after only 10 minutes in a projector, and it is advisable to preserve the original by using good quality duplicates for viewing.

Heat and Moisture

Heat and moisture both affect photographic materials. Too much moisture in the air can produce chemical changes in the emulsion and encourage the growth of mould—too little can cause emulsions, and papers and plastics to become brittle, flake, and crack. High temperatures also promote chemical changes, particularly in color film. Again there is a link between moisture content of the air, known as relative humidity (RH) and temperature. A stable RH of 20% to 50%, (20% to 30% for color stock) is most desirable combined with a consistent temperature of no more than 21 C, and even lower (8–12 C) for color, but any reduction is helpful. Fluctuations in temperature and RH are extremely damaging as they constantly stress the materials and maintaining a stable environment is essential. Cold storage, including freezing, is increasingly used for preserving photographs. The photographs are placed in tightly sealed bags or containers to avoid fluctuations in RH. When taken out of cold storage the package should be left at room temperature to acclimatize before opening to prevent condensation forming in the

cold image surface. However this is only really suitable for photographs that are not often accessed.

Collections should be checked for signs of deterioration. Once every five years is appropriate, more often in the case of nitrocellulose film stock. Things to check are: physical damage including tears, cracks, and flaking emulsion; chemical changes such as discoloration and pungent odors; and environmental problems from air pollution, mould, and insect or rodent attack. Damaged items should be stored separately until treated, as mould and gases and pollutants from chemical changes can quickly spread to adjacent images. Temperature and relative humidity should also be carefully and regularly monitored.

Handling

One of the most overlooked, and yet simplest, aspects of preservation is correct handling. In an ideal world photographs would never be handled at all. Obviously this is impractical but a general goal should be a reduction in the handling of both negatives and prints. As fingerprints leave perspiration and oily stains that can permanently mark the image and also cause chemical changes in the emulsion, it is recommended that photographs and negatives be handled with clean hands and preferably lint free cotton gloves. The emulsion surface should be avoided (in negatives the emulsion is the shiny side) and prints should be supported with two hands. Transparent plastic sleeves allow prints and transparencies to be viewed while safely protecting them from direct contact.

Prints should never be rolled as this puts a strain on the emulsion. Conversely attempts to unroll and flatten rolled or curled prints should be avoided, as this can cause the surface to crack or wrinkle. If prints or negatives are stuck together attempts to separate them should be left to the conservator, as should flattening curled prints.

Although historically, many fine art photographers sign their works in ink directly on the photograph, generally it is preferable to keep ink pens, especially felt tip and other water based inks, away from photographs. Ideally any information should be written on the mount or enclosure. If it is necessary write on the back of the print, a soft pencil should be used, and care taken not to mar the print. Paperclips, pins, rubber bands, and pressure sensitive tape should never be used. They can only result in physical damage, rust stains, chemical damage from sulfides in the rubber, and staining from glue residues.

Housekeeping

Good housekeeping is also essential in preventing deterioration. Work areas should be kept clean and dust free as dust can cause scratches on the surface of film and prints. Cover work surfaces with newsprint, which can be replaced when it becomes dirty. Use a soft brush or a vacuum with the nozzle covered with gauze for dusting storage areas. Do not use cleaning agents and solvents—they contain harmful chemicals, and wet cleaning such as mopping can cause fluctuations in humidity levels. Obviously do not place photographs near heat sources such as radiators and pipes. Freshly painted or varnished surfaces can give off harmful peroxides for up to two or three weeks and all but the very latest photocopiers and laser printers emit ozone and should be kept away from photographic materials. Food and drink should never be allowed near photographs—an accident is destined to happen! Even nicotine from cigarette smoke can cause staining.

Storage

Poor storage of negatives and prints is the most common cause of deterioration. Prints, transparencies, and negatives should be stored separately and good quality archival storage materials should be used. Paper should be impurity free and unbuffered, i.e., pH neutral, (pHoton and Silversafe are recommended brands). Some papers and cards are described as ‘acid free’ but still contain alkalines, which can damage photographs. Polyester is the best material for plastic enclosures, but uncoated polypropylene and high-density polythene are acceptable, cheaper alternatives. Polyvinyl chloride (PVC) should be avoided as it contains plasticizers that can migrate to the object. For similar reasons do not use coated, translucent, or opaque plastics. Despite their long tradition as a photographic storage medium, glassine sleeves are not suitable.

Polyester and conservation papers are available as sheets, rolls, and ready-made sleeves and envelopes. Hanging files, museum card boxes, and conservation ring binders make good storage systems, especially for prints, roll film, and transparencies. Cabinets should be made from baked enamel or anodized aluminum finish. Boxes and cabinets made from new wood or freshly painted or varnished wood should be avoided.

Ideally, prints should be stored in transparent sleeves, with unbuffered board if extra support is required, and then placed in folders or museum card boxes. Plastic sleeves should not be used where the emulsion is fragile or flaking, or there is

extensive mould damage or images have been hand colored. Platinum prints should be stored flat in archival boxes.

Glass negatives are most at risk from physical damage resulting in chipping, cracking, breakages, and scratches. The plates should be wrapped in pH neutral conservation paper and stored in museum board boxes vertically along their long edge, adding a board separator every fifth plate to give support. Plates larger than 12 × 10 inches are best stored horizontally, at no more than four per box to prevent the weight crushing the bottom plate. The original wooden boxes for storing lantern slides are usually fine, but do check the condition of the box and its lining material.

Cellulose nitrate film base, invented by the Eastman Kodak Company in the 1880s was quickly copied by others and allowed the development of sheet, roll, and cine film. It was in turn replaced by cellulose acetate and later, polyester supports. Nitrate and acetate bases are both prone to serious chemical deterioration and should be checked regularly for signs of deterioration, as this can quickly spread to affect the entire collection.

Nitrate film stock is the most notorious. Introduced in the 1880s it was in use until the 1950s (although still manufactured abroad in 1960s). It breaks down into harmful and dangerous elements that are very acidic and can fade silver, soften the gelatin emulsion, and rust film cans. Nitrate film is also combustible and gives off highly toxic fumes, a by-product of which is oxygen, making fires difficult to extinguish. In the early days of cinema there were many fatal fires in theatres when the nitrate cine film ignited in the projector. The first stage of deterioration can be seen as an amber brown staining, the film then softens and becomes tacky, producing gas bubbles and gives off a ‘sweet’ odor before the film finally breaks down into combustible powder. Some nitrate can be easily identified by the word “Nitrate” along the edge of the negative but this is by no means conclusive. If nitrate film is suspected, a conservator should be engaged to test a small sample—nitrate film will sink in trichloroethylene. Deteriorating nitrate film should be handled under a fume hood or wearing a respirator. Cold storage in a flameproof lab freezer in a paper enclosure is ideal but be aware that, due to its combustible and toxic nature, storage of nitrate film often invalidates insurance policies. Nitrate film stock is best copied under supervision and either destroyed through the fire department or local authority or stored off-site in specialist facilities.

CONSERVATION

Cellulose acetate film, sometimes known as safety film, was introduced in the early 1930s to replace flammable cellulose nitrate stock. It does not burn easily, however, warmth and moisture cause chemical breakdown producing acetic acid with its telltale vinegary smell, known as “vinegar syndrome.” The film base becomes brittle and starts to shrink while the gelatin layer is softened but remains otherwise unchanged and the two start to separate, causing reticulation—channeling and bubbling in the emulsion layer. For small amounts of film stock or particularly important images a professional conservator can remove the emulsion layer and transfer it to a new support, thus saving the image. However prevention is better than cure—low temperatures and recommended RH levels should be maintained and negatives kept away from acids, especially those found in unsuitable enclosures. Material that is deteriorating should be removed for treatment as vinegar syndrome can rapidly spread to adjacent negatives.

Polyester supports are the most physically and chemically durable—in fact the emulsion is more likely to degrade—and simple to identify. Sandwich the image between two linear polarizing filters (available from camera shops) at right angles to one another. Polyester film produces a “rainbow” effect similar to oil on water but acetate film does not.

Film based negatives most often take the form of single sheets in various sizes or strips, cut into lengths of 4–6 frames. Storing negatives together in a single envelope or box can cause scratches and should be avoided. Negatives should be stored in suitable paper or plastic enclosures, with the exception of nitrate film stock. As there is a danger that toxic gases can be trapped in plastic sleeves, speeding up the process of deterioration, paper enclosures are preferable. Dampness in the air can be trapped as moisture when sleeving negatives, and care should be taken that this procedure is carried out when the relative humidity is low.

Color Photographs and Negatives

Modern color photography was introduced in the 1930s although earlier experiments, mainly in additive processes, have been developed in the nineteenth century. With the exception of the dye transfer, color photographic materials are more sensitive to high RH and temperature than black and white photographs. Color materials are also generally more susceptible to damage during handling and lint-free cotton gloves should always be

worn, with the image protected by plastic sleeves for both casual viewing and storage. Hanging file systems are ideal for transparencies as long as the cabinets are not packed too tightly.

Mounts and Albums

People have lovingly mounted their print collections in albums from the earliest days of photography. Historically albums can be viewed as an integral part of the photographic object and should be treated with equal respect as the photographs they house. Acid free tissue paper can be interleaved between pages to protect images on adjacent leaves, but take care that this does not put additional strain on the binding. The album should be wrapped in conservation paper and stored flat in a museum board box. Albums should not be stacked on top of one another, as the pressure will damage the lowest album. Neither is storing upright on a bookshelf ideal as clasps and raised decorative work can cause scratching and abrasion to adjacent albums. Use a cradle to support the album and prevent damage to the spine when viewing. Most commercially available modern albums are not suitable for storing photographs, especially the type with plastic adhesive sheets, PVC sleeves, or acidic boards. Only conservation photo-corners and hinges should be used for mounting prints.

Conclusion

All of the above are essential in the prevention of deterioration of photographic objects, however, it is inevitable that objects will require treatment at some stage. A qualified conservator should always be consulted before treatment is carried out. Surface dirt can be removed using a soft brush, however, remember that dry cleaning is abrasive and can result in scratches and image loss. If absolutely necessary a Mars Staedtler rubber can be used gently to remove dirt from the surrounds and support, but do not attempt to clean the image surface in this way, especially with processes such as platinum prints where there is no binding layer. The housewife’s tip of using bread is definitely not recommended as bread contains damaging oils. Wet cleaning processes should be approached with caution. Silver-based images deteriorate in moist atmosphere and gelatin emulsions become sticky. Because of this mounts often have to be removed dry; however, this destroys the mount, which can be an integral part of the object. Alcohol based cleaning is also suspect as the gelatin emulsion can swell. Profes-

sional film cleaning fluids are available and can be used carefully with a swab to gently remove dirt. Tears and rips in prints can be repaired with conservation tape, which should always be applied to the back of the picture. Pressure sensitive tapes such as Sellotape or Scotch brand "magic" should be avoided, as they will become brittle with age and leave brown stains that can be virtually impossible to remove. Retouching vintage prints is controversial on ethical grounds, and pigments used in retouching can cause damage from sulfur and other contaminants.

Good processing, a stable environment, and conservation standard storage materials are essential aids for the preservation of photographic objects, supported by common sense, careful handling, and respect. Observation of these rules can ensure that modern photographs should last long after the lifetime of the originator with little recourse to the professional conservator, and will greatly reduce the deterioration of older images until a conservator can assess them. Conservation of photographic images is now entering a new phase with the introduction of digital media. In some cases the image does not exist outside of the computer's hard drive or other storage medium such as CD-ROM or memory cards, until the image is digitally printed. Technical advances mean that both hardware and software quickly become out of date and valuable images may not be retrievable if stored in older formats. In general terms the good conservation practices already mentioned should be followed. CDs should be stored in stable, cool, dark, dry, dust free conditions away from UV radiation, in acid free sleeves. They should be handled with lint-free gloves, avoiding touching the information carrying sur-

face, and cleaned with a lint free cloth from the middle outwards. However only time will tell how stable these 'new' image carrying devices are, and the longevity of digital inks and papers, and only trial and error by the conservator will lead to good care and conservation practices.

CONSTRUCTED REALITY

Generally, there are two types of constructed realities: those that are fabricated and photographs, which are the result of photographing a specifically constructed stage. Fabricated imagery is produced by techniques like combination printing, montage, and photomontage to invent a scene or event that

never existed or took place. "Set-up" or staged photography, also referred to as *tableaux* or directorial photography, involves the artist creating a 'reality' or 'stage' upon which they organize and arrange subjects and/or props in a particular way for the intention of photographing it. While all

CONSTRUCTED REALITY

photographs are set up or produced in some manner, a key distinguishing feature of fabricated and staged images is the reason for the construction: to express the artist's subjective experiences rather than producing objective photographic documents of the world.

There are many historical (nineteenth century) precedents for the both the staged and fabricated image. Julia Margaret Cameron (British, 1815–1879), as part of her leisure activities, staged and photographed specific events, moments, and characters based upon religious, literary, poetic, and mythological sources. She became the director and producer of her images in various ways: creating costumes for her sitters (such as fashioning angel wings from paper), selecting and arranging props, and using dramatic lighting to heighten the theatricality of her tableaux.

In addition to constructing the final image, other photographers, such as Oscar Gustave Rejlander (Swedish, active in England; 1813–1875) fabricated their realities through combination printing where many different negatives were used to produce a photograph of an imaginary event. In *The Two Ways of Life* (1857), Rejlander used as many as 30 negatives layered in his combination print to depict the Victorian notion regarding the choices between good and evil. Henry Peach Robinson (British; 1830–1901), on the other hand, only used five negatives in *Fading Away* (1858) to create a romantic notion of a young woman upon her deathbed. These techniques were particularly evocative of a pictorialist approach that pursued painterly aims in the service of photography.

Early commercial studios, such as the William Notman Studio, offered their patrons a unique type of image in addition to standard portraiture—those created by collage and photomontage. During the 1860s, the Notman studios, whose headquarters were in Montréal (with studios in Toronto, Ottawa, St. John, Halifax, and Boston), became well known for their ambitious indoor studio images that reconstructed winter activities. Dressed in the appropriate attire, clients were positioned in front of elaborately painted backdrops and posed with props to stage sledding, skating, and hunting scenes. Additionally, Notman studios also created complex group scenes consisting of many people participating in, for example, huge skating parties. With a preconceived idea of the final image that was worked out in sketches, separate photographs of people arranged in particular groupings were taken in his studio, and through

combination printing and/or collage, an image of an event that never took place was fabricated.

During the twentieth century, artists and scholars increasingly questioned and challenged traditional photographic practices. Photographers were viewed as more than mediators of the material world, they were constructors of it. Their goal was not limited to making literal translation of the world, capturing the “decisive moment” on film to produce artistic images displaying nature's beauty, or providing documents that supplied information, evidence, or proof. Rather, it was argued that photographs were directly connected to the political, the psychological, and ideology among other aspects of the social world. Photographs were interpreted as a form of representation rather than valued only for their verisimilitude.

In various ways during the first half of the twentieth century, artists used photography to challenge its very definition as well as how their viewers perceived photographs. Disruptions to the image can be seen in the work of Russian Constructivist El Lissitzky, notably *The Constructor* (1924) where a photographic self-portrait is combined with images of the tools, diagrams, and lettering related to architectural design. From the title and the imagery, the man depicted seems to be the creator of his own image rather than simply having his portrait taken. The Dadaists, believing that modern society was essentially irrational thus its art should be equally irrational, used photography in ways that challenged traditional and conventional definitions and uses of photography, including the way that photographs were taken. Rejecting the use of a camera, film, and traditional photographic working methods, Man Ray created “Rayographs” (also known as photograms) arranging objects on photographic paper that were exposed to light. The resulting images were nonrepresentational and characterized by spatial and visual ambiguity. German Dadaist John Heartfield selected and arranged pre-existing photographs into new and specific narratives. His photomontages were accompanied by scathing captions that satirized Nazi Germany as they raised leftist political consciousness.

Since the early twentieth century, particular schools of artists have used staged and fabricated photography within various genres such as portraiture, landscape, still life, and reportage photography. Within these genres, they have addressed various social concerns including issues of gender, class, race, and history. Although staged, manipulated, and artificial images fell out of favor among many modernist photographers at mid-century,

others continued to acknowledge its creative uses. Since the 1960s and to the end of the century, staged photography was resurrected by numerous influential and disparate artists who exploited in particular the political and social uses of this approach.

In contemporary art circles of the 1960s and 1970s, staged photography became a common, at times even preferred working method. Artists turned to creating their subject matter for different reasons: this type of photography provided more time and control to compose the image and make the necessary technical and aesthetic decisions. Additionally artists could enhance the initial image by re-working the elements upon the stage and re-photographing the set. Another reason for using this approach is linked to the aesthetic: staged photographs revealed the ways the image can be un-true, highlighted the constructed and even relative nature of reality and photographic "truth." Revealing and incorporating the artifice of photography and photographs, and using it as an important element to express the artistic message, the photograph is no longer an authorless text, to use the language of philosophers Roland Barthes or Claude Levi-Strauss. By highlighting artifice, artists can create their own narratives and realities based upon their personal experiences drawn from any number of sources including memories, fantasies, and politics, as well as in relation to (or reaction against) external influences such as history, economics, patriarchy, and so forth. Staged (and fabricated) images thus challenge photographic realism, conventions, genres, or disrupt how photography is perceived and interpreted.

To foreground the artifice, clues are incorporated within the pictorial frame to signal the photo is a product of the photographer-artist's imagination. Although this can be accomplished in a variety of ways several techniques predominate. Some photographers allow the signs of the medium, including the equipment or signs of the camera, remain in the image. Having the studio lights, extension cords, or backdrops visible and a part of the photographic composition reveals how the image is technically produced. Conventionally, evidence of the photographic production is disguised or hidden because exposing the production interrupts the seamless realism expected from photographs. A second way to challenge photographic realism is the artist's treatment of the subject matter: having the image somehow defy the laws governing the universe (such as time, space, and gravity), the improbability hence incredulity of

the photo is made apparent. Third, distortions or inconsistencies in scale or volume, playing with horizon lines, the use of unconventional camera angles and perspectives, or cropping the subject matter in a way that inhibits immediate understanding of the imagery prevents the audience from quickly and easily recognizing specific objects. Such ambiguous or obscure imagery places demands upon the viewer: it requires him or her to use imagination to formulate meanings rather than looking to the photograph for information or answers. It should also be mentioned that the context in which the final photograph is viewed (in an art gallery or in a fine art photography book) also contributes to interpreting it as constructed for a specific purpose.

Although various characteristics of the staged photograph are available to the contemporary photography, it is not necessary that all of the aforementioned be present in each image. Furthermore, these elements can be used in an overt or subtle manner; for example, the viewer knows that Sandy Skoglund has constructed her sets prior to be photographed. In *Fox Games* (1989), all the elements in the restaurant (walls, tables, chairs, bread loaves, etc.) are painted in the same monotone gray, which signals that the restaurant itself is not part of the viewer's phenomenal or optical reality. However, it is the many brightly colored red foxes running, walking, or hopping into the frame that simply look unnatural even though they were modeled on actual foxes, but even more from their coloring. From this, the audience quickly recognizes the constructed nature of the image. On the other hand, the work of Jeff Wall uses a subtler approach to his tableau, and sometimes it is difficult to discern his tampering. In the images he made without the use of digital technology, such as *Untangling* (1994), the photo appears more like a snapshot of a garage worker untangling huge blue ropes rather than an obviously constructed image. However, Wall's working method is based on constructing a theatre with all the necessary props and people in place before he captures the decisive moment.

One way that staged photography has been used to comment on its use within scientific circles is found in the work of American artist Patrick Nagatani. Using the field journals of Japanese archeologist Ryoichi, Nagatani created *Excavations*, (2001) in which he stages an archeological dig. The viewers are given glimpses of the top of Volkswagen "Beetle" cars as they are unearthed at Xi'an, Necropolis of Mt. Li, Shanxi Province, China 1988. Nagatani's series uses photography and con-

CONSTRUCTED REALITY

structed realities to draw attention to our perception that historical time is linear.

Working in a similar way, Spanish artists Joan Fontcuberta and Pere Formiguera devise species of fauna and flora, and using scientific documentation such as field notes in conjunction with photographic documents, the artists present the fake plants and animals in a scientific manner—even going so far as to exhibit the ‘evidence’ in museums or museum-like settings. In this ‘mockumentary,’ trust in written evidence supported by photographic documents is challenged.

Tableaux photography has also been used to draw attention to contemporary political issues, as in the work of the Canadian team, Carole Conde and Karl Beveridge, whose collaboration extends to working directly with unions and community groups. Working with nuclear plant workers to produce their 1985–1986 series *No Immediate Threat*, Conde and Beveridge challenge society’s notion that nuclear energy is a safe and clean energy source. In carefully arranged tableaux in which every prop and gesture is meaningful, they articulate the problems of nuclear energy, and bring to the fore the health problems that these plant workers face.

Staged photography has also proven effective for dealing with issues of gender. In her *Tourism* series (1983), Laurie Simmons uses small toy figures of females set against projections of tourist attractions such as the Tower of Pisa, Stonehenge, and the Parthenon. These stiff plastic figures remain outside of the surface of the “picture perfect” images and this is analogous to the place of women in relation to culture.

Cindy Sherman and many other artists, turn the camera upon their own body within a staged environment. Sherman’s early black and white *Film Stills* (1977–1980), quote various female stereotypes from B-movies through costume, posing, and stylization. Sherman shoots the sometimes grainy, filmic images against specific backdrops (outdoors or projected images) that reference already existed cultural images. In these recreations, she draws attention to the female stereotypes in popular film, television, and advertising.

Swiss artists Peter Fischli and David Weiss have been working together since 1979. Among their collaborations, they have created *Wurst-series* (*Sausage series*), which uses a small scale tableaux to recreate and reinvent scenes from everyday life. In *The Accident* (1980), they have used cardboard, cigarette butts, and cold cuts to stage a “car” accident between two sausages complete with “human” victims in the form of cigar-

ette butts. While the content is humorous, the accident scene provides a darker comment on disasters caused by humans.

Other contemporary artists who have worked with constructed reality in photography include Jo Ann Callis (American), Lorna Simpson (American), Carrie Mae Weems (American), Sarah Charlesworth (American), Boyd Webb (British), Evergon (Canadian), Brenda Francis Pelkey (Canadian), Janieta Eyre (Canadian), Diana Thorneycroft (Canadian), Holly King (Canadian), Yasumasa Morimura (Japanese), William Wegman (American), Lucas Samaras (American), and Pierre et Gilles (French).

Although constructing a “reality” enables artists to manipulate photographic elements to create specific readings while simultaneously drawing attention to their role in this production, equally significant is the final form of the photograph. The translation of the installation/stage from its three-dimensional form into the two-dimensional photograph creates new understandings and interpretations of the elements and relationships displayed within the image. The conversion of the actual into the photographic turns the environment and/or actions into photographic codes and conventions, that is, into a visual language that is interpreted in a different manner than if one was viewing the set-up or set *in situ*. The transformation from the actual elements into the pictorial is key for artists: understanding the ways in which a photographed object, relationship, or action can be interpreted by viewers allows artists to arrange the elements to position the audience to create certain understandings. Artists, as manipulators of these representational codes, are able to create and express subjective information. It should be noted that the fabricated pieces or installations were important only insofar as they served the artist’s purposes, that is, for the production of a photograph. Many artists dismantle their constructions after the photo shoot because it was the image and not the installation that was considered the final art work to be exhibited in galleries.

CONTACT PRINTING

A contact print is a print made from positioning a negative in direct emulsion-to-emulsion contact with the photographic paper rather than projecting the negative via an enlarger. This process creates a print that is the same size as the negative. While this might seem, at first, only applicable to being used with large- and some medium-format negatives, there are ways to get an enlarged film negative even from 35-mm or smaller negatives. Both film and paper negatives (thus called even though a positive print can be used to make contact prints) can be used to create contact prints. Contact prints can go through many generations, with each iteration being manipulated or modified between prints.

Contact prints can be made with or without a specific “printing frame” easel. Printing frames are used to hold the negatives firmly against the photographic paper. They are built so that the top side is clear (either plastic or glass), and the base side is opaque. One can accomplish the same result by simply placing the unprocessed photographic paper on the base of the easel and then pressing the negative to it with a heavy piece of smooth glass. In either case, the negative-and-paper stack is then exposed to white light to make the print. One should make sure that the white light is uniformly distributed over the entirety of the photographic paper to ensure consistency in exposure across the whole sheet.

Just like other darkroom uses of unprocessed photographic paper, the paper needs to be handled carefully to avoid fogging or otherwise prematurely exposing it to light. When using black and white paper, a red or orange photographic safelight can be utilized to allow the photographer to see and move around in the darkroom while setting up a contact print. While admittedly limited, the sight allowed by the use of a safelight can help a photographer ensure that his negative-and-unprocessed-paper sandwich is set up neatly. Lowering the top piece of glass must be done carefully so as to avoid disrupting the arrangement of negative and paper.

When making contact prints, one can utilize test strips, which are small strips of photographic paper exposed for different lengths of time in

easily-remembered intervals, processed, and examined in order to determine the best exposure time for the print. In order to make a test strip, the negative is positioned on top of a small strip of unprocessed photographic paper. Shielding most of the strip with something opaque (often, a piece of heavy cardboard or opaque plastic), the unprotected small portion of one end of the strip is exposed to light for a short amount of time (say, two or three seconds). The process is then methodically repeated by moving the opaque shield along the length of the strip as it is exposed in consistent increments of time. The test strip is then developed for approximately the same amount of time judged necessary to develop the final print. At the end of the developing process and after it has been “fixed,” the test strip can be examined under white light to see which exposure time is most desirable to produce the final print. Test-strips are invaluable for allowing the photographer to make an educated guess as to what the correct exposure time for the overall print might be both in making contact prints and in creating enlarged prints as well.

Common Uses for Contact Printing

Most photographers first become acquainted with contact printing when making a contact (or “proof”) sheet of film negatives in order to have a better notion of what the images look like in order to choose which ones to print. This is accomplished by cutting the roll of exposed negatives into manageable lengths (photographic suppliers offer a variety of negative-holding sheets or sleeves, which often require the negatives to be cut into strips of between three and seven frames for insertion) and then placing these negatives together directly atop a piece of photographic paper. If contact printing is regularly used to make proof sheets, after one establishes the best position and exposure time, this same position and time can often be used for subsequent sheets without the need to make test strips each time, especially if the negatives are consistent.

Proof sheets offer a number of advantages. They are especially helpful in cataloging images. Since

the film negatives are laid emulsion-side down onto the unprocessed photographic paper, the information that identifies frame number and film type come out right-side up on the print, which aids in their usefulness as categorizing tools. As well they allow the photographer to use a loupe or magnifying glass to examine the images for focus, composition, and contrast. Proof sheets can also function as a medium for note-taking by photographers, who often mark on the sheets to designate negatives chosen for enlargement or indicate cropping.

Contact printing for final photographic prints is most often practiced with large format negatives, usually 8×10 inch or larger. The resulting prints are extremely detailed and maintain a much higher degree of faithfulness to the negative than enlarged-negative prints do. Also, since the negatives are not being enlarged at all, the prints do not show any of the graininess that can result from over-enlarging a small negative. Many associated with the *f/64* group in the 1920s and 1930s, including Ansel Adams and Edward Weston, used contact printing to create their photographs; in the late twentieth-century, Sally Mann and Emmet Gowin are among many using the technique. Smaller view camera formats, including 5×7 inch and 4×5 inch, are also occasionally contact printed to create the final work. And while contact-printing 35-mm negatives might seem foolish or gimmicky, the amount of detail available in even such a small print is remarkable.

Contact printing can also be done with paper negatives—which are often, actually, positive prints. This method of achieving the final presentation image is common with pinhole photography. Just as with film negatives, the paper negative is pressed emulsion-to-emulsion with the unprocessed photographic paper, and the resulting sandwich is exposed to white light. Sometimes, the paper negative is dampened before being pressed to the unprocessed photographic paper. Doing so and then squeegeeing it against the unprocessed paper helps ensure good contact across the whole area of the print. When the negative and the unprocessed paper are not in good contact, areas of blurry soft-focus and loss of detail will occur.

When a contact print is made from a paper negative, each successive generation of the film-negative print will show degradation, much like successive generations of photocopies. This can be used to the photographer's advantage, as it can be interesting to experiment with the loss of detail and

areas of soft focus that can occur with contact printing with paper negatives. Also, the first generation of paper-negative contact prints is most often negative prints, since they are usually made from a paper positive. If a positive print is desired, another contact print would need to be made to turn the image positive again.

Contact printing with paper negatives can also be a way to manipulate photographs without permanently altering the negative itself. One could make a positive print (with either an enlarged or a contact-printed negative) and then draw, paint, scratch, or otherwise manipulate the print. If this paper is then used to make a contact print, those manipulations will transfer to the new print, which may itself then be manipulated and used to create another contact print. It is interesting to see the differences in opacity of pigments. Often, what appears to be a similar shade of black as the black parts of a black-and-white image will, when contact printed, turn out to be much more opaque than the rest of the black area, resulting in a very noticeable white border or outline on the new print.

Limitations of Contact Printing

Contact printing has a number of limitations. A significant drawback is that, since the negative is in direct contact with the unprocessed photographic paper, the photographer is very limited in his ability to selectively expose areas of the print through such darkroom techniques as dodging and burning-in. It is possible to work in a limited way with dodging and burning tools, but their usefulness is reduced by the fact that the negative and positive are in direct contact with one another. Dodging and burning are especially difficult when using paper negatives to make contact prints. Given that most photographic paper is too thick to see through from the back, it is very hard to dodge or burn a specific area of an image except through trial and error. Paper-negative contact prints are also unaffected by colored filters intended to increase or decrease contrast in black and white photography.

Another drawback with paper-negative contact printing is that some photographic papers come printed with the logo of the manufacturer across the back of the paper. This logo, like the image on the front of the paper, will transfer to the non-processed photographic paper once the sandwich is exposed to white light, and will appear on the final print if used as a paper negative.

CONTACT PRINTING

A third limitation is that photographers making contact prints cannot easily crop the image because the entire negative is pressed onto the unprocessed photographic paper. It is possible to construct some sort of mask to block out areas of the image deemed unnecessary to the final print, but it is much more difficult to crop with contact printing than it is with regular projected/enlarged negative printing.

Contact Printing and Alternative Processes

Contact-printing techniques are used in some alternative-processing photographic techniques, such as gum bichromate printing. In gum bichromate printing, a sheet of otherwise non-photographic paper (or other surface, such as cloth) is coated with a photo-sensitive emulsion of gum arabic and ammonium or potassium bichromate and then exposed to the sun (or other source of white light). Since no type of projector is used, gum bichromate prints are made as contact prints with negatives the same size as the desired final prints.

If one does not have access to a large-format camera, but would still like to use large negatives for contact printing (especially for use in alternative processes like gum bichromate printing), a small- or medium-format negative can be enlarged onto sheet film (such as Ortho or Kodalith films), which is then processed in regular (though often much more-diluted) paper developer and chemistry. After processing, the film's emulsion is, like

regular black and white negatives, black and clear. Rather than the unexposed areas remaining white, as they do on black and white photographic paper, the unexposed areas on Ortho film rinse to clear in the developer. Since the first-generation Ortho film print is usually a positive print (since it is achieved by enlarging a negative), a photographer who is interested in ultimately having a positive end-product contact print will first need to make a contact print with Ortho-on-Ortho to achieve a large-size negative. This large sheet film, which can be gotten fairly reasonably-priced in sizes up to 20" × 24", is an affordable halfway-point for photographers interested in working with contact prints with film negatives, but who do not have access to a large-format camera.

A photographer can use contact-printing techniques to make prints from things other than negatives or photographic positives; he can, for instance, contact-print anything that is fairly translucent, such as other papers or vellums. Opaque black (or other dark-colored) ink on those surfaces will appear white on the contact print.

CONTRAST

If it were not for contrast, our visual world would be blank. It is the difference between the color and shade of two things that allows us to separate one from the other. One can regard this as positive versus negative space, changes in tone, or extent of color separation, and the appearance of simple texture. In photography this works out to offer three opportunities to address contrast. The first

is that of subject brightness and the degree of change of this brightness across the area being photographed. The second opportunity comes with the negative. Negative contrast can be controlled by changes in exposure and development as well as other more specialized techniques like masking, chemical reducing, or chemical intensification. Print contrast and the techniques of print-

ing give the third opportunity to influence contrast. This is a complex field and a specialty unto itself. Here one deals with the entire array of darkroom techniques that vary from choice of paper, paper grade, color filtration, light filtration, and a host of specialized "salvage" procedures.

When one views a picture, painting, drawing, sculpture, or whatever the eye is initially drawn to the area of sharpest contrast. Some might say to the brightest area, but there may not be a bright area only an area of relatively sharp contrast. After seeing this, then one moves the eyes about and views the remainder of the subject. It is paramount that the photographer not be drawn to the sharpest contrast in the subject to the exclusion of the background and the other details in the periphery of the photograph. It is often these aspects, which determine the range of contrasts throughout the image, that are essential to consider when exposing the film. The range of contrasts helps determine shape, location, and texture of the various things in the field of the photograph, and is as important in color photography as it is in black and white.

The negative contrast is influenced by the range of tones in the subject being photographed as well as the development of the film. Altering developers and altering the development time are both straightforward methods of changing negative contrast. The speed of the film, that is its sensitivity to light, and its brand also influence both contrast and sharpness of image. Some films produce more grain in the image than others, and the presence of this grain may reduce both sharpness and apparent contrast. The various densities throughout the negative determine the overall contrast of the negative. These can be seen and estimated by eye or they can be measured using a transmission densitometer. The negative is the opposite of the print (the positive), so the lightest area of the negative produces the darkest area of the print. The darkest area of the negative is the most exposed and thusly produces the brightest highlight area in the print. A low contrast negative will have a short or small density range between the highlights and the shadows. It will typically have a sort of flat look and print gray appearing highlights and shadows unless special attention is given in printing. A negative with a large or long density range will conversely print with dark shadows and very light highlights producing a "high-key" image. If the average density range negative is printed, it will appear with bright, detail-contain-

ing highlights, and dark shadows without either appearing in extremes. Unless one is doing research, really enjoys testing film and chemistry, or is working in alternative processes using a densitometer is rarely necessary. Most photographers deal with these issues visually and intuitively.

Photographic print paper contains in the emulsion the elements that determine its contrast. Photo paper may be obtained both in fixed grades of contrast or as variable-contrast paper, variable-contrast papers being more widely available in the late twentieth century than are fixed grade papers. Variable contrast papers depend upon the use of filters or variations in the mixture of colored light being beamed through the negative to expose the print. The filters are typically numbered in a fashion as to approximate the various paper grades. Each photographer must work out the nature of their system, as all of the factors that determine the final output are variables. The enlarger light source, the type or brand of printing paper, the particular set of filters, and the chemical developing process all affect the final print contrast.

The changing of filters or the color of transmitted light is the way in which print contrast is adjusted. There are parts of the paper's emulsion that are sensitive to green light and others that are sensitive to blue light. By changing the amount of blue in the light with filters or by adjusting the light source, silver particles attached to these various dyes are variably activated and different contrasts print during development.

The presence or absence of contrast is what gives a photograph its character and its ability to interest or move the viewer. Highlights without any contrast are just stark whites, often simply the color of the printing paper. As small areas of contrast appear, they impart detail into the highlights and this sense of texture or something being there is, more often than not, desirable. As more color or tone appears, the mid-tones appear and various shapes can be seen. These shapes or objects are defined by the contrast between them and surrounding items. The shadows are the dark areas. The print areas without any contrast are maximum black. The darkest shadows are those that are just discernible from total or maximum black. It is the beginning of contrast that creates this separation and as contrast increases, detail appears in the shadows. As with starting with the highlights, one moves toward the mid-tones so that from darkest

CONTRAST

gray to more medium gray, shadows appear, again imparting detail, shape, and content to the photographic image.

Finding a style is just that. Deciding what contrast a photograph should contain depends upon the tastes of the photographer, the purpose for which the photo will be used, and the methods employed to produce the photo. Currently there is a huge transition to electronic or digital photography, which allows for contrast adjustment, hue and saturation changes, and brightness or darkness to be infinitely altered by computer. This should be seen as a new and powerful tool, just as the advent of variable contrast paper must have seemed to those darkroom technicians limited to one grade of paper.

Regardless of the techniques employed to create and adjust the contrast and tonality of the print, awareness of contrast and how it affects the viewer is essential. Whether in color printing, black and white printing, alternative process printing, or in digital printing the attractiveness and beauty of the final product will rest on contrast and how it is employed.

JOHN COPLANS

American

After a long and influential career as a writer, curator, and founding editor of *Artforum* and *dialogue* art magazines, John Coplans turned to the medium of photography in the early 1980s to create a series of stark, nude self-portraits. He continued to photograph himself in the decades following his sixtieth birthday. His photographic work has become an integral part of contemporary discourse on the subject of the human body in art, culture, and society.

Born on a visit to London by his South African parents in 1920, Coplans was schooled in Cape Town and Johannesburg. He dropped out of high school and made his way to England, where at the age of 18 he volunteered for military service, becoming a pilot in 1939 at the outbreak of World War II. After suffering a head injury, he volunteered for ground duty in 1940 and was stationed in Africa and later Burma and India. His military career continued with three years in Ethiopia and leading African troops as an infantry captain. Coplans lived and fought alongside the African soldiers, learning to speak Swahili and acclimating to the customs and traditions of their

culture. Later in his life, he would cite these experiences as contributing to his attaining what he described as a sublime understanding of humanity. But when the war ended, he was a young man of 26 who found that his eight years spent in the military had robbed him of his youth and any trace of a formal education.

Coplans turned to artistic endeavors in postwar London and took up painting. After seeing an exhibition of contemporary American painting at the Tate Gallery in 1956, he came to the conclusion that artistic innovation in Europe had stalled. Coplans relocated to the United States in 1960, moving first to New York and then to San Francisco. In America, he would embark on a multifaceted career as a painter, museum director, art critic, and writer.

While living in San Francisco, Coplans painted, exhibited, and taught, but critical neglect of the West Coast art scene led him in 1962 to co-found *Artforum* magazine, which was to become in the 1970s the premier contemporary art journal. Eventually, he abandoned his career as a painter, and moved to Southern California accepting an appointment as the Director of the art gallery at the University of California, Irvine in 1965 and later Senior Curator of the Pasadena Art Museum

in 1967. He was an integral part of the group around the now-legendary Ferus Gallery that introduced the emerging group of Los Angeles-based artists including Ed Ruscha. He also taught at the California College of Arts and Crafts and the Chouinard Art Institute, and he wrote for numerous art journals. In his role as a curator, he organized the first museum exhibitions of work by Roy Lichtenstein, Richard Serra, Judy Chicago, and Andy Warhol. His book on this latter figure is a classic of contemporary art scholarship. He also published monographs on contemporary artists, including Ellsworth Kelly, Donald Judd, and Roy Lichtenstein.

In 1971, Coplans took up the mantle of Editor-in-Chief at the magazine he'd founded, *Artforum*, which had relocated to New York City. Working at the publication during what might be termed its Postminimalist phase, he published seminal essays by critics and scholars including Rosalind Krauss, Max Kozloff, and Annette Michelson. Dismissal from the magazine in 1976 led Coplans to a position in the Midwest as director of the Akron Art Institute, Ohio, an appointment he held from 1977 to 1979. While he mounted a variety of exhibitions featuring the work of major contemporary artists, in an attempt to appeal to the region's working class audience, Coplans exhibited forms not thought of at that time as suitable material for exhibition in art museums, including Amish quilts and antique jukeboxes.

As he had done in California, Coplans saw the need to establish a forum for artists, curators, and art critics in the Midwest to discuss and promote their work and exhibitions, particularly the work of regional artists. He founded the Midwest arts magazine, *Dialogue*, with the help of artist Don Harvey, who was gallery director at the University of Akron. Coplans asked museums, arts centers, and universities with galleries to publish essays and reviews of their exhibitions in *dialogue*. The publication gave curators an opportunity to write about regional artists who were not covered by major east- and west-coast publications.

Coplans' interest in photography expanded in the 1970s. Earlier in his career, he had rediscovered the work of nineteenth-century landscape photographer Carleton Watkins, becoming an avid collector and promoter of his work. Coplans' continuing interest in photography led him to organize several exhibitions in addition to teaching himself about the technical aspects of the medium with some assistance from his friend Lee Friedlander. He organized the first American exhibitions of John Heartfield's photomontages and of sculptor Constantin Brancu-

si's photographs, and organized a retrospective of Weegee's photography for the International Center of Photography, New York in 1978. Coplans jettisoned his writing and curatorial career to exclusively pursue the art of photography. His last critical essay about the work of Philip Guston was published in 1980.

By the early 1980s, Coplans had turned to the subject for which he is best known: his own body. With the help of an assistant, Coplans creates compositions featuring large-scale, close-in shots—of his hands, fingers, and feet, back, and so on (but never his head)—that set such formal properties as line, surface, texture, and shape front and center. These qualities can be seen in an early work entitled *Self-Portrait (Feet, Frontal)*, 1984, from his first group of photographs published under the title *A Body of Work* in 1987. Coplans would further explore the formal qualities of the human figure, and he often revealed the body's abstract qualities as well as the sheer mass and weight of the figure as seen in *Self-Portrait (Torso Front)*, both from 1984.

Coplans, however, transcends the mere formal investigation of the human form in his photographs. He presents his body as a subject that is timeless, simultaneously subverting the Western art tradition of the nude as the embodiment of beauty and youth. Coplans' *Self-Portrait (Frieze No. 4, Three Panels)*, 1994, includes nine separate photographs that present an overview of his body from shoulder to knee, in three different angles, right side, back side, left side. Coplans presents his own physical topography in an attempt to reveal humankind in its most primal sense. He noted:

I got the idea that my body was everybody's body. Like my genes were the genes of the whole human race, shared with them.... My photographs became raceless and timeless and about the whole of human beings. It's not (just) about the exterior. It's also about the genetic past of mankind and what we share together.

The images also pose critical questions about social reactions to age, and Coplans commented:

The principal thing is the question of how our culture views age: that old is ugly. Just think of Rodin, how he dealt with people of all ages. I have the feeling that I'm alive, I have a body...I can make it extremely interesting. That keeps me alive and vital. It's a kind of process of energizing myself by my belief that the classical tradition of art that we've inherited from the Greeks is a load of bullshit.

After a career as a writer, curator, and editor, Coplans, in later life, evolved into photography and focused on the commonality of the human form,

shared by all. By greatly enlarging only one portion of the human body surface in his photographs, he emphasized the similarities shared by everyone, rather than their distinctions (such as the face). Coplans developed this technique to de-emphasize youth, (in particular) beauty, race, and the prevailing idea of perfection by never photographing the entire body. In his pictures, Coplans expressed his beliefs that a detailed picture of himself was really a picture of every human, all joined together by shared genetics, with age not a significant factor.

Biography

Born London, England, 24 June 1920; raised in South Africa with frequent trips to England. Served in the British Armed Forces, 1938–46. Moved to San Francisco, California, 1960. Co-founder *Artforum* magazine, 1962. Appointed Director of the art gallery at the University of California, Irvine, 1965, and Senior Curator of the Pasadena Art Museum, 1967. Moved to New York City and became Editor-in Chief of *Artforum* 1971. Recipient of the Frank Jewitt Mather award of the College Art Association, 1974. Moved to Akron, Ohio, after accepting position as Director of the Akron Art Museum, and founded the Midwest arts magazine *Dialogue*, 1978. Recipient of three National Endowment for the Arts fellowships, 1975, 1980, 1992. Awarded two John Simon Guggenheim Memorial fellowships 1969, 1985. Recipient of Officier de l'Ordre des Arts et des Lettres, 2001. Died in August 2003.

Individual Exhibitions

- 1981 *John Coplans: Recent Portraits*; Art Institute of Chicago; Chicago, Illinois
- 1982 *John Coplans: Recent Photographs*; New Gallery of Contemporary Art; Cleveland, Ohio
- 1984 *John Coplans: Photographs*; Emily H. Davis Gallery, The University of Akron; Akron, Ohio
- 1985 Clarence Kennedy Gallery; Cambridge, Massachusetts
John Coplans: Photographs, 1980–85; The Fine Arts Gallery, University of California; Irvine, California

CORBIS/BETTMANN

Otto Ludwig Bettmann was born on October 15, 1903 in Leipzig, Germany to Hans and Charlotte Bettmann. His father was an orthopedic surgeon in Leipzig with his own clinic and his mother was from a prominent and well-to-do Jewish family. As members of the educated upper class, both parents were part of the intelligentsia of Leipzig. Raised in a heady atmosphere of science, music, and the arts, Otto and his older brother Ernst were surrounded by affluence and a dedication to learning in which they thrived.

Early on, Otto Bettmann showed a keen interest in academics and a willingness and desire to learn. A somewhat precocious child, he studied piano with

Fraulein Schutze, a well-respected music teacher, and sang in the St. Thomas's Boys Choir, focusing on the intricate and precise works of J. S. Bach, an interest that persisted throughout his lifetime.

With Leipzig at the center of the European book trade, Otto's father began collecting rare books, eventually amassing a wide-ranging collection of books, manuscripts, and ephemera. Exposed at a young age to the illustrations found in the pages of his father's books, Otto showed an early proclivity in understanding the illustration as narrative. At the age of thirteen he salvaged discarded medical illustrations from his father's wastepaper basket and created a hand-made, one-of-a-kind 'art book' that

he presented to his father on his birthday. This tendency developed into a visual acuity organized with Bachian precision that later served as the basis for Bettmann's career as the well-tempered conductor of a repository of imagery.

At the age of 20 Bettmann enrolled in Leipzig University and majored in cultural history and art. In Germany at that time it was accepted practice to travel from university to university to study under important professors. With this intent, Bettmann travelled to Freiberg where he studied palaeontology, history and philosophy under Edmund Husserl, the famous theorist and proponent of phenomenology; the study of the psychic awareness that accompanies experience and that is the source of all meaning for the individual. Bettmann would admit to never understanding Husserl's teachings then or later.

Bettmann received his Ph.D. in 1927 at the age of 24 from the University of Leipzig for his dissertation *The Development of Professional Ideals in the Book Trade of the Eighteenth Century* (1927). After travelling to England, France, and Italy to pursue his post-doctoral work, he was offered employment with the music publisher C.F. Peters, still in business today. At C.F. Peters he was in charge of maintaining the music archive that, to Bettmann's delight, held many original scores and manuscripts by some of Europe's greatest composers.

He traveled to Berlin, which was then at the height of the modernist movement. Enthralled with the city and its flourishing cultural life, Bettmann was determined to return there to live. In 1932 after receiving a diploma in Library Sciences from the University of Leipzig, he was offered and accepted the post of Rare-Book Librarian at the Prussian State Art Library in Berlin. Once there, he mounted a popular exhibit entitled *The Book in Art* (1933). Organizing and mounting the exhibition gave him the idea of a picture archive organized by subject. He soon began taking 35 mm photographs of the paintings, prints, and illustrations from the rare books that were part of the Library's extensive collection.

In 1934, with Hitler's rise to power, all Jews that held state jobs were relieved of their posts. At the instigation of relatives in Cincinnati who offered to sponsor him, Bettmann decided to immigrate to America. He left Germany with two steamer trunks of the images he had been collecting and a vague idea of being able to do something with such a collection. On November 8, 1935 Bettmann, with his background in the arts and his Ph.D., was welcomed by the immigration authorities in New York City.

With \$200.00 from his Ohio relatives, Bettmann rented a one-bedroom apartment and began seeking and acquiring more images. He was very impressed with the accessibility of the New York Public Library system and began searching through the various libraries' holdings throughout the city in search of more imagery. His arrival in the United States had coincided with the rise of the picture magazines such as *Life* and *Look*. Although an academic by training, his enthusiasm for collecting images and disseminating them gave him the impetus to become an imagery entrepreneur. By literally 'pounding the pavement' with the images he had brought with him and collected since his arrival he began peddling his wares door-to-door. He soon received his first commission to supply 300 photographs for a book titled *The History of the World in Pictures* (circa 1937). Bettmann continued to add images to his archive by photographing old copies of *Harper's* and other magazines and by salvaging images from street vendors, flea markets, and used booksellers.

Bettmann had a 'grand plan' that gave shape to the archive as it was growing. He needed, above all, to develop a retrieval system for the images that he had, and to be able to edit pictures before he collected them, rather than after. His discerning eye, his acquaintance with the past, his awareness of the present, his thoughts on the future, and his Bach-like sense of organization allowed him to analyze images and place them within a context that could be easily accessed. Bettmann gathered a myriad of images, and not only straight photographs, but photographs of graphics from printed sources. He developed a multiple cross-referencing system so that they could be quickly retrieved for different uses when the occasions arose. By being aware of the present and the developing fads of the future, Bettmann was able to anticipate what images would be called for and have them in the archive ready to be extrapolated. His aim was to provide needed imagery to his clients within 24 hours of their request and charged a sliding fee-scale. His business flourished because he filled a niche even as the niche was developing. Using his uncanny sense of what was needed in the commercial world of visuals, his archive developed the niche as much as the niche developed his archive.

In 1936 he met his soon-to-be wife Anne Gray, a widow with three children, who complemented his professorial aura with her all-American forthrightness and practicality. They remained happily married until her death, just short of their fiftieth wedding anniversary in 1988.

Once the archive was on its feet and Bettmann had staff that understood its complexities and

could access it to its fullest potential, he was able to pursue in tandem his academic interests. He began to write more frequently and collaborate in publishing books. Because his mind was subject-oriented, he had always wanted to publish books that were subject-image oriented, and in the course of his lifetime he wrote, compiled, or contributed to 13 major publications.

Bettmann collected both singular images and entire archives. In 1967, Bettmann purchased the Gendreau Collection of Americana. In 1972 he bought the famous Underwood and Underwood Collection of negatives and prints from 1900 to World War II. By 1980 the Bettmann Archive housed over two million images for commercial and academic use.

Bettmann often purchased rare books just to photograph the contents. As he was not a rare book collector, he would then sell them on. In this capacity, he made the acquaintance of H.P. Krause, the famous rare-book dealer in New York who, in the late 1950s offered to buy Bettmann's entire archive. Bettmann at that time was not ready to sell, but he remembered the offer years later when he was considering retirement. Bettmann decided to accept the offer and in 1981 the Bettmann picture archive was acquired by the now Krause-Thompson Archive. By 1984 Krause-Thompson had also acquired the picture archives of the press agencies United Press International (UPI) and Reuters, bringing the number of collective images in the archive into the millions.

After the sale, Bettmann and his wife moved to Boca Raton, Florida, where Bettmann held an adjunct professorship at Florida Atlantic University for several years. At the age of 89 he became the rare-book librarian at FAU's newly constructed S.E. Wimberly Library. In 1992 he published his autobiography *Bettmann: the Picture Man* (1992), and in 1995 published his biography of Bach entitled *Johann Sebastian Bach, As His World knew Him* (1995).

Otto Bettmann died on May 3, 1998. The research files and manuscripts of his last years form the Bettmann Collection and are found in the Special Collections/Archives at the S.E. Wimberly Library at Florida Atlantic University and relate primarily to his tenure at FAU (1978–1996).

In the 1980s, with Microsoft Corporation consuming digitalized images for its software, Bill Gates founded Corbis, now an international picture agency with offices in New York, Los Angeles, Chicago, London, Paris, Düsseldorf, Vienna, Hong Kong, Kuala Lumpur, and Tokyo. The intent was to capture the globalization of advertising markets

using digital imagery. Corbis wanted to provide an agency that offered creative professionals such as filmmakers, publishers, advertisers, and designers, easy access to a wealth of images.

Corbis has access to many outside picture sources and partners itself with individual photographers, image companies, museums, and archives. For film footage Corbis works with Paramount Pictures, Metro-Goldwyn-Mayer, Sharpshooters, CNN, ESPN, Hearst Entertainment, Northeast Historic Film, and Universal Newsreel in addition to several sports-media companies. For illustrations they are partnered with Images.com and QA digital; and for fine art, Alinari, Christie's, the Louis K. Meisel Gallery, Inc., Archivo Iconiografico, S.A., the Philadelphia Museum of Art, the National Gallery in London, the State Hermitage, Russia, and the Brett Weston Archive.

In the mid 1990s Corbis acquired the news agency archives of Sygma, Saba, the celebrity archive 'Outline,' and other smaller photo-journalist archives, stock-houses, and photo agencies. In 1995, Corbis acquired the Thomas/Krause Archive with its holdings from UPI, Reuters, and the famed Bettmann Archive, bringing the Corbis image bank to approximately 70 million. As well, Corbis has access through various agreements, to the Hulton-Deutsche Collection, Newport, Condé Nast Archive, Brand X, and Image 100, the last two holding royalty-free imagery.

The acquisition of the historic Bettmann Archive brought with it, however, the problem of preservation, and in some cases, emergency preservation. Many of the 11 million physical objects housed in antiquated buildings with fluctuating temperatures, acid based filing materials, and water-damage were in danger of disappearing.

All photographic materials are organically based and biodegradable. At the turn of the twentieth century, gelatin, carrying light-sensitized silver, was used to produce individual glass plate negatives, which were the standard form of negative making. Gelatin is still the vehicle for the light-sensitive chemical used in both film and paper. George Eastman, in his entrepreneurial enthusiasm, wanted to simplify the picture making process for the amateur picture maker, and put a camera in everyone's hand by developing a flexible film. His success resulted in tremendous stores of photographs that accumulated in the twentieth century. However, the materials he used for the flexible film base were cellulose nitrate (first marketed in 1889 and very unstable) then cellulose diacetate, more stable than its predecessor but still biodegradable and most recently, a polyester base

film. With the development of colour photography, the impermanence of the colour dyes became an additional issue.

Corbis contracted Henry Wilhelm, the world-renowned photographic conservation expert and the author of *The Permanence and Care of Color Photographs, Traditional and Digital Color Prints, Color Negatives, Slides and Motion Pictures* (1993). Wilhelm produced a 21-page rescue report that advised minus 4 degrees Fahrenheit storage in order to slow the deterioration and extend the life of the material an estimated 5,000 years.

Meanwhile, 65 miles north of Pittsburgh there was an underground storage facility located more than 200 feet below the surface of the earth. Iron Mountain had been a thousand-acre mine supplying limestone to the steel industry. In 1950 it was opened as a storage facility utilizing 30 acres of storage connected by more than twenty miles of passageways. At this writing it is the largest commercially owned underground storage facility in the world and the largest privately owned sub-zero vault.

In 2002, 18 refrigerated trucks were used to transport the entire Bettmann Archive to Iron Mountain to much furor and relief from the opposing camps. On one side were researchers who felt that they would no longer be able to easily access the physical objects or browse through the files. On the other side were conservationists and preservationists who were relieved that the treasure-trove, which spanned virtually the entire visual history of the twentieth century, would be saved for future generations. According to long-time employees at the Bettmann Archive, however, researchers never had had direct access to the files. Files were brought to them by experienced staff who knew where to find and correctly re-file them. This aspect has not changed, and people wishing to do physical picture research are welcome to submit their search requests before visiting the Corbis underground vaults where a staff person will deliver the originals.

The original intent of Bettmann was the commercial licensing of reproduction images for profit and this has not changed, it has only become larger in scope and digitized. Interestingly, the staff at the Bettmann Archive have researched the number of hits made at the archive and noted that of the 7.5 million images (plus 3.5 million duplicates) only 100,000 images had been pulled from the files to be looked at and only 75,000 had been licensed for use.

From 1997 until the move in 2002, the Corbis staff searched the archive for those images most in danger in order to scan and then vault them. In

addition, of the negatives and photographs not in immediate danger, decisions were made about which images should be scanned for historical interest as well as which images might likely be selected in the relatively near future. These images include those that might become 'newsworthy,' such as those likely to die during the upcoming decade, or political figures likely be pushed into the news. With this in mind, 1.3 million images were slated to be digitized with, at the end of the century 225,000 already scanned, catalogued, and filed for instant retrieval.

The images are preserved through digital processes that lend the highest resolution and reproduction capabilities. Once the image or negative is scanned, the digital product is cleaned up, coded, catalogued, and electronically stored. As a library is only as good as its cataloguing system, a catalogue system had to be developed that had a sophisticated cross-referencing system, much like the one Bettmann himself had developed. This problem, however, was minor compared to the problem of "forward migration." As software becomes obsolete, the digital files must be translated into the next generation of software and to keep up with the development of hardware.

In addition to preserving images, Corbis is also attempting to identify the photographers, the subjects, and the events depicted. Corbis has a contact point on their website for people who may be able to identify themselves, the event, or the people in the photographs. Corbis will then add that information to the image.

Corbis has tried to achieve globally what Otto Bettmann achieved nationally—a source for images and the insight and foresight to know what images might be appropriate for which clients' needs. To access the Bettmann Archive or the image bank at Corbis, one need only log onto www.Corbis.com. If a professional has additional needs, Corbis also employs designers and consultants who are available 24 hours a day to assist clients in obtaining the right images and the rights to use those images.

CORPORATE COLLECTIONS

The collecting of photographs began with the invention of the medium. In addition to individual collectors, museums and institutions soon added photographs to their collections and the first “corporate” collections were begun in France when the *Commission des Monuments historiques* formed the *Missions héliographique* in 1851 to photograph buildings and monuments. Baron James de Rothschild then commissioned photographs to be taken along the route of his new railway line between Paris and Boulogne in 1855.

With the constant formation of new companies, it follows that new art collections are forming in the corporate world. Corporations have been collecting art almost as long as there have been corporations, with a recent increase in collections that include photography. Most collections of the late decades of the twentieth century unlike collections of the past, made their acquisitions with the help of curators and art consultants rather than relying on the taste of the president or chief officer of the company. These collections, therefore, are more likely to reflect the ideas and image of the company, becoming an extension of and buttress to the corporation’s identity. In the 1980s and 1990s especially, corporations became very savvy about art, with many companies investing in contemporary artists and new ideas to position themselves as forward-looking companies, to provide a stimulating work environment, and as an investment. Perhaps the best-known corporate collection is that of the Kodak company, which was established as the George Eastman House as a public museum now known as the International Museum of Photography and Film in Rochester, New York.

A comprehensive compilation of corporate collections around the world would be impossible; the following is a selection of the better known North

American corporate collections. It should be noted, however, that there are many other corporations around the globe which have interesting collections that include photographs, many of which can be found in the *International Directory of Corporate Art Collections*. Other corporate collections include the archives of such publications as *The New York Times*, *Condé Nast* and *Time-Life*, among others.

The 7-Eleven Collection

The Southland Corporation in California acquired photographs beginning in the early 1980s in conjunction with other works on paper to furnish a new corporate headquarters. The collection eventually grew to over 2,500 prints by the time Southland was bought out by the 7-Eleven Corporation and the active collecting of art was no longer a primary focus. Most of the photographs were placed in storage and are occasionally loaned to museum exhibitions. A decision was made by the company to decrease its holdings by selling a selection of works at auction. One hundred twenty-six lots of photographs were offered at Sotheby’s New York in April 2000, totaling \$3.6 million with 90% finding buyers. Some of the artists included in the collection were Eugène Atget, Margaret Bourke-White, and André Kertész.

Gilman Paper Company Collection

In 1974 Howard Gilman of the Gilman Paper Company decided to collect and exhibit art in his new Manhattan office. He hired a former curator from the Museum of Modern Art, Pierre Apraxine, to bring his expertise to the collection. Although photography is the strongest part of the collection,

the collection is not exclusively photography. Gilman and Apraxine began the collection with contemporary photographs including those of Robert Frank. The collection then began to work backwards, acquiring more historical works, such as those of Eugène Atget, and nineteenth-century figures Carleton Watkins and Henry Fox Talbot. The company's initial objective, "to make a small selection of photographs that would acknowledge photography's place among other art forms" (*Photographs from the Collection of the Gilman Paper Company*, p. 15) was soon eclipsed by a grander vision.

The collection currently holds over 5,000 images and photographic albums, many of them unique objects. In 1993 a major traveling exhibition, accompanied by a lavish book highlighting the collection, was held at the Metropolitan Museum of Art in New York. In 1997, the Howard Gilman Gallery of the Metropolitan Museum was opened and now holds annual exhibitions showcasing parts of the Gilman collection. The company is no longer actively collecting, but the collection is available for viewing by appointment.

Hallmark Photographic Collection

One of the first corporations to collect only photographs is the Hallmark greeting card company. The Hallmark Photographic Collection began in 1964 with the acquisition of 141 prints by Harry Callahan and currently includes more than 5,000 works by almost 900 artists. The Hallmark Collection is a span of American photography, with vintage works dating back to the late 1880s continuing to the present day. Although there is a focus on older processes, such as daguerreotypes, albumen prints, and salt prints, the many contemporary artists represented provide examples of more contemporary processes included as well. Some of the artists that are showcased in the collection are André Kertész, Dorothea Lange, Ralph Eugene Meatyard, and Todd Webb. The collection is still actively acquiring works.

The company has organized and financed many traveling exhibitions over the last 25 years, including the 1994 blockbuster, *An American Century of Photography: From Dry-Plate to Digital*, *The Hallmark Photographic Collection*, which originated at the Nelson-Atkins Museum of Art, Kansas City, and has printed numerous books and catalogues under the leadership of long-time curator Keith

Davis. The collection is presently held at the Hallmark Headquarters building in Kansas City, Missouri. More information on the collection is available at their website: www.hallmark.com.

JP Morgan Chase Collection

David Rockefeller, president of the Chase Manhattan Bank, began collecting art in 1959. Corporate art collecting at the time was a relatively new concept. His idea was to adorn the Bank's headquarters with the work of contemporary artists. After over 40 years of collecting, as well as six corporate mergers, the company now has a broad international collection with over 20,000 works housed in over 350 locations. The collection consists of many different media with about 20% of the collection comprising photography. Contemporary artists include such well known names in photography as Cindy Sherman and Lorna Simpson. The collection has been shown in such institutions as the Milwaukee Art Museum, the Walker Art Center in Minneapolis and the Center for the Fine Arts in Miami. More information on the collection is available at their website: www.jpmorganchase.com.

LaSalle National Bank Collection

One of the first corporate collections to specialize in collecting photography was LaSalle National Bank, beginning in 1967. Its stated mission is to enrich the lives of those people who visit the bank as well as those who work there. The collection has tried to cover the history of the medium and consists of many important photographers from the early roots of photography, from Henry Fox Talbot to the present with photographers emerging in the 1980s and 1990s, such as Thomas Struth. Some of the important photographers in the collection include Alfred Stieglitz, Walker Evans, and Harry Callahan, among many others. In addition to many important historical photographers, the collection also supports photographers living and working in the Chicago area, including virtually all of the figures associated with the Institute of Design, as well as Dutch artists (due to the affiliation with a Dutch parent company, ABN AMRO). The collection was originally put together with the help of Beaumont and Nancy Newhall as well as the photographer and historian Joel Snyder. The collection has been published in books that highlight various strengths of the collection. More information on

CORPORATE COLLECTIONS

the collection is available at their website: www.lasalle.com.

Microsoft Collection

The computer giant Microsoft began collecting art in 1987, when the company only occupied six buildings in Redmond, Washington. Today the collection represents mostly contemporary artists in many different media. Microsoft began collecting art to put in their offices to represent the idea of a contemporary corporation, as well as to educate customers and employees. The collection currently holds over 4,000 works (not including the over 20 million photographic images purchased as part of the Bettmann Archives by Corbis) and is housed in more than 90 buildings throughout North America. As the company continues to grow, so does the collection. The collection currently holds over 750 photographs by more than 200 artists, approximately 20% of the entire collection.

The photographs in the collection are all twentieth-century and with an emphasis on post-war and contemporary photographers, and represent a broad range of photographic media, such as photomontages, digital prints, and photo transfers. Some of the artists represented include Cindy Sherman, Laura Larson, Eva Schlegel, and Louis Stettner. There are many American artists, as well as artists from around the world, including Mexico, China, Brazil, Cuba, and Japan. Works from the collection are often loaned to institutions, such as the Art Museum at the University of Washington, and the collection is shown in many traveling exhibitions. In addition to exhibitions, the company also hosts educational programs for the general public. More information on the collection is available at their website: www.microsoft.com.

The Polaroid Collection

Polaroid began hiring photographers to test their new instant films in the late 1940s, beginning with Ansel Adams. The company trusted that the opinions of artists would give a point of view from the field, rather than the lab. In the 1950s and 1960s, many more photographers were hired in addition to Adams, including Paul Caponigro, William Clift, John Benson, and Nick Dean. In the late 1960s, the company began acquiring the works that the photographers made during the field tests. Simultaneously, in Europe, the company was acquiring the works of David Bailey, Sarah

Moon, Helmut Newton, and Josef Sudek, beginning the International Polaroid Collection.

The two separate collections were combined in 1990 and the complete collection now holds more than 23,000 images by over 1,000 different artists, and is the most diversified collection of original Polaroid instant images. The collection is housed in Waltham, Massachusetts, and many of the works have been added to the permanent archives of such museums as La Maison Européenne de la Photographie in Paris and Le Musée de l'Elysée in Lausanne, Switzerland.

The company continues to give grants to artists to test its films in exchange for providing images to the collection. Under the supervision of long-time curator Barbara Hitchcock, parts of the collection are frequently exhibited around the world, and the corporation produces books and catalogues on its collection and artists represented in the collection. More information on the collection is available at their website: www.polaroid.com.

Safeco Collection

Safeco, an insurance company, began collecting art for their Pacific Northwest offices in 1973. Their idea was to enrich the workplace while supporting local artists. The collection focuses on contemporary art with a strong local presence and holds over 2,600 works located in over 70 offices in Washington and across the United States. Within the collection is a significant holding of over 500 photographs by 100 artists. The photography collection is quite diverse, having works by many well known artists like Eliot Porter, Berenice Abbott, and Imogen Cunningham, and also including well-regarded Northwest regional artists such as Marsha Burns and Arthur Aubry. The collection also has several early works, including the work by Myra Albert Wiggins, which dates back to 1898. More information on the collection is available at their website: www.safeco.com.

Seagram Collection

The Seagram Company began collecting art in the late 1950s after their landmark building was erected on Park Avenue in Manhattan. Phyllis Lambert, daughter of Samuel Bronfman, the founder of the company, along with photographer Richard Pare, were the principal curators of the collection until the 1980s. In 1972, they began collecting photography. The collection as a whole was put together to adorn the building's executive

offices, lounges, and the Four Seasons bar in its Grill Room. Ms. Lambert had the idea to collect pieces of artwork that the average person, not involved in the art world, could appreciate. The photography collection held works by over 130 artists, including Walker Evans, Garry Winogrand, Berenice Abbott, Weegee, and Robert Frank. The theme of American urban life was apparent in the collection. The complete collection had a total of 2,500 works, of which there were over 700 photographs. When the Seagram Company was acquired by the Vivendi Company in 2000, the entire collection went to auction in 2003, and 100% of the photographs were sold. The total sale price of the photography collection came to over \$2.8 million.

CREATIVE CAMERA

In Britain, photography was not established as a distinct artistic medium until the late 1980s. Technical leanings and camera club alliances still dominated photographic interests in Britain during the twentieth century that printed magazines struggled to overcome. Photography was still succumbing to editorial influences and the social commentary that a printed photograph could offer. *Creative Camera* (London) closed its operation in 2000. Founded in 1966, the magazine was the foremost magazine that demonstrated concern about photography's artistic discourse, which placed Britain in an international debate about photography's progression since World War II.

In 1966, the original magazine *Camera Owner* was bought and redeveloped as *Creative Camera Owner* and then as *Creative Camera*, changing its title to suit a readership with interests diversified from the technical magazine's roots and to establish a site for artistic innovations in British photography. Colin Osman was the second editor after Bill Jay's founding, beginning his tenure in 1968 and leading the magazine's mission until roughly 1986. Located originally on Charles Dicken's

Doughty Street *Creative Camera* established a three-dimensional presence, offering a gallery site and bookstore for its book-order company that mirrored the magazine's spreads. Coo Press Limited distributed *Creative Camera* to an international readership and later purchased Mansfield Books International, enlarging *Creative Camera's* mail-order business to one of the largest book holdings in photography during the late 1960s and early 1970s.

In addition to the mail-order section, the magazine also functioned as a gallery guide and open forum. The front page was Osman's editorial voice, which addressed issues raised about the production of the magazine or responded to letters to the editor. In crisis and reconstruction since the end of the Churchill era, Britain searched for an identity that the legacy of World War II provided, which was mainly through photographic war communication. A public consciousness aware that the war era was the beginning of an unknown start was reflected in public projects such as the Mass Observation project beginning in 1937. The *7 Up* film series (1962), and *The Family* (1974) were media-

related searches intended to question Britain's postwar social and economic developments. The Realist Movement sparked by France's Cinema Verité also echoed this need for identity politics to hit the heart of local interests. Magazines were a central distribution point supported by the thoughts of editors who witnessed much of this public forum. Photography proved crucial. Osman was dedicated to reinterpreting this role for the negotiation of photography's artistic value.

Initially resembling a published newsletter in design with a signature broad-bordered silver cover, *Creative Camera* stood apart from other publications aimed at the fine-arts photography audience such as *Camerawork*, *Aperture*, and *History of Photography*. Spreads featured aspiring British photographers, but many of the photographers were not of international repute and the magazine struggled against international politics of quality. Funding was an additional struggle given its mission to disclaim a technical practice in favor of artistic directions. Still trying to abate commercial aesthetics, the magazine struggled for innovative advertising that could support its artistic aims. Sponsorship rested mostly on subscriptions, individual contributions, gallery and museum announcements, and its mail-order business. Articles were separated from spreads and varied from press releases to commentaries from the editorial staff and internationally written responses about developments in photography and exhibitions.

The photography of Bill Brandt, which was shown by Museum of Modern Art, New York curator John Szarkowski in a landmark exhibition at London's Hayward Gallery (1970) and traveled throughout England, proved inspirational for two decades of photography that *Creative Camera* featured. Among the published artists, Chris Killip and Martin Parr emerged as the most prolific. Straight photography was the main aesthetic among British photographers, causing *Creative Camera* to align in the 1970s with Szarkowski's famous curatorial vision for a defining emphasis of twentieth century photography. His book, *The Photographer's Eye* (1966) and probably his closing exhibition at MoMA, *Photography Until Now* (1989), established modern photography's appeal as having a critical eye that was wholly pluralistic by being unfettered by societal distinctions. The magazine also reflected other areas of interest. In England, nineteenth-century photography was renewed in collections such as the Victoria and Albert Museum's collection during the 1970s and

was part of the quest to examine photography's artistic dimensions. As a result, articles in *Creative Camera* about William Henry Fox Talbot and Julia Margaret Cameron were keenly anticipated. The popularity of American photographers Diane Arbus, Garry Winogrand, and Lee Friedlander initiated a second modernist style of straight photography that assuaged aesthetics with a kind of street smarts that matched the grain and "stylistic grit" of Bill Brandt's legacy and became another following for many photographers displayed in *Creative Camera's* pages.

One of the main issues working against the magazine's success was the separation between the magazine's articles and photographs. *Creative Camera's* readership rose and fell with changes in critical thought. The magazine's editorial bent was initially shaped by ideas based on Henri Cartier-Bresson's aesthetic of "the decisive moment." A synthesis of the theories of John Tagg and Szarkowski about societal systems then dominated the magazine, which was followed with notions based on Victor Burgin's *Thinking Photography* (1982) and French philosophical concerns revolving around deconstruction and semiotics. Burgin's highly influential conceptual photography and writing, as distributed through *Creative Camera* and other venues, inspired a new generation of artists who found their consciousness diversified by greater immigration into England, which read-dressed Britain's colonial roots.

Rather than featuring genres like landscape or street life, or the focusing on black and white photography, in the pages of *Creative Camera* artists such as American James Casebere, known for his deserted interiors, Rineke Djikstra, Ratimi Fani-Kyode, and Uganda-born Zarina Bhimji grew in critical importance. Changes in social politics in general allowed the full effects of Burginian and Foucaultian ideas to take affect upon the magazine by 1986, when Colin Osman negotiated his resignation in exchange for full revenue support by The Arts Council of Great Britain. Redesign of the magazine included transferring decisions from the editorial staff to a board of directors. Selected critics—Ian Jeffrey, Jo Spence, Rebecca Solnit, and Geoffrey Batchen—exemplified this shift in editorial perspectives to supplant newsboard aesthetics. By the 1990s, *Creative Camera* resembled more general art world publications like *Art in America* with its leading critical edge.

Creative Camera honored its founding mission its last issue: the February/March 2000 was a sour-

cebook for photographers. The basic question that had shaped the magazine's history still persisted: How to represent British art photography. Mark Durden's February/March 1998 article "Defining the Moment" reveals that despite the changing opinion, the magazine's subscription base was still true to British photographic traditions. Conceptual and contemporary practices pinned theoretical multimedia practices against straight art photography. The latter was still difficult to define, as explored in articles written by photography critic and professor, David Green. An open forum for debate to the end of its funding reliance, exhibitions such as the Victoria and Albert's *British Photography: Into the 1990s* (1988) and Museum of Modern Art's *British Photography from the Thatcher Years* (1990) paid homage to *Creative Camera's* participation in attempts to decipher the question. David Brittain, the final editor, rechristened the magazine as *DPICT* after its close, which aimed to increase critical influence.

Ultimately, the evidential question for its readership was "what is art photography?" given the succession of movements, theory, attention to certain types of artists, the question of social use, and changes in technology that *Creative Camera*

had championed. Both questions proved amorphous. Discourse and discussion over the photograph as object was still the main topic fueling *DPICT* until its closing in 2002. A cumulative book, *Creative Camera: Thirty Years of Writing* (1999), edited by Brittain, is a demonstrative publication voicing significant British perspectives on such questions.

GREGORY CREWDSON

American

Gregory Crewdson came to the forefront in photography during the 1990s. His photographs—richly detailed yet uncanny color images of American suburbia—build on a tradition of documentary photography that looks closely at quotidian events in the lives of ordinary people. Intrigued by the tension that exists between domesticity and nature, Crewdson transforms his real, suburban settings into entirely fictional worlds, creating single moments in an absurd, fantastic narrative revealing the hidden underbelly of everyday life. "Photography...is not at all about an exact representation of the truth," Crewdson has said, "but is rather a dramatization of something which ought to have remained hidden" (Moody, 2002).

Born in Brooklyn, New York in 1962, Crewdson first learned of Freudian analysis from his father, a psychologist who conducted sessions with his patients at home. As a child, Crewdson would overhear fragments of these conversations through the floorboards in the living room, inventing entire stories based on excerpts of people's dreams, an experience that would later prove essential to Crewdson's use of narrative in photography. It was Crewdson's father who first introduced his son to the medium, taking him to see the 1972 retrospective exhibition of Diane Arbus at the Museum of Modern Art. Arbus' photographs of New York City, which she explored as both familiar and foreign territory, and her use of the camera to challenge preconceived ideas of the city's reality made a

lasting impression on Crewdson and helped shape his concept of photographic truth.

As an art student at State University of New York at Purchase from 1981 to 1985, Crewdson studied photography in a suburban community, an environment that would later serve as the focal point for the majority of his images. During this period, he worked at *Aperture* magazine and did an internship at the Daniel Wolf Gallery in Manhattan. It was at this point that he met Joel Sternfeld, whose photographs of the American landscape he greatly admired, along with those of William Eggleston, Robert Frank, and the paintings of Edward Hopper.

Like these artists, Crewdson developed his aesthetic and artistic technique in response to place. A primary source of inspiration is the natural landscape of western Massachusetts where his family purchased a tract of land on which to build a log cabin when he was a teenager. This area of pristine terrain, which lies adjacent to towns of vinyl siding and subdivisions, has served as a retreat for Crewdson throughout his career. It has also provided him with a model of American life in which an ideal nature collides with ever-encroaching urban blight.

Crewdson first began to photograph suburban life while working on his Master of Fine Arts thesis at Yale University between 1986 and 1988, asking local residents from the nearby town of Lee, Massachusetts to participate in a series of theatrically composed genre scenes. Crewdson orchestrated disquieting, ambiguous situations located within his subjects' homes, with the aim of capturing a furtive moment that usually goes unnoticed.

Crewdson acknowledges that this split second, what he calls "the uncanny aspect of the photograph," is fleeting (Moody 2002). To capture this moment, Crewdson needed to gain greater control over the arrangement and lighting of his compositions. In the late 1980s, he abandoned real life situations to create still-lives and dioramas of natural environments, which he built in his studio and then photographed. Crewdson tightened his focus to feature animals and birds as the protagonists in these vivid, color photographs, which he titled the *Natural Wonder* series (1989), thus creating startling scenes of macabre moments in the underbrush.

The use of minutely detailed, constructed environments, staged events, and theatrical lighting to reveal the unknown aspects of his subjects' lives recurs throughout Crewdson's work. Crewdson cites numerous film directors and several films among his strongest influences. These include David Cronenberg, David Lynch, and Alfred Hitchcock, whose 1958 psychological thriller *Ver-*

tigo, together with Steven Spielberg's paranormal film, *Close Encounters of the Third Kind* (1977), stimulated Crewdson's interest in combining everyday reality with the extraordinary. Often compared to a movie director himself, Crewdson presents a complete yet ambiguous narrative within one photograph, condensing an entire movie into a single frame.

In the late 1970s, Cindy Sherman began taking a series of photographs in which she re-created the promotional stills from Hollywood B-movies. Photographing herself as an actress, a housewife, a prostitute and the like, she created new archetypes from well-honed film stereotypes. In the 1990s, photographers like Crewdson and Jeff Wall expanded on Sherman's concept, creating extensive and elaborate staged tableaux in which they too created a new fiction by subjecting ordinary North American life to intense scrutiny.

Crewdson regularly works with crews of 30 or more production assistants and technicians to fabricate intricate sets and lighting designs, often installed within a rural, suburban environment. In the *Twilight* series (1998–2002), for example, which includes 40 large-format, untitled photographs, Crewdson transformed a quiet neighborhood street lined with 1950s-style houses into a bustling film set. Photographed at the twilight hour, when both natural and artificial lights are available, these pictures present a hybrid space that is at once real and invented.

Despite the enormous scope of his productions, Crewdson's carefully composed scenes and controlled lighting recall the intricate arrangements of early photographic still lifes. In nineteenth century daguerreotypes, for example, objects were positioned with a scientific sensitivity to depth of field and the play of light and shadow within a composition. Crewdson maintains this traditional approach to photography but magnifies it to the largest possible scale. In this way, he turns the real world into a fictional stage, creating complex images of a choreographed reality. As a professor of photography at Yale University since 1994, Crewdson has profoundly influenced a group of artists who combine documentary photography with fictional, staged elements. Crewdson summarizes his aesthetic vision as follows: "In part I see what I'm doing as exploring the American psyche through the American vernacular landscape" (Grant, 2004). Rather than passively observe the world and record the reality he encounters, Crewdson actively creates a world as he imagines it and photographs it for us to see.

CRIME PHOTOGRAPHY

On April 20, 1865, "Wanted" posters were put up all over the United States. Unlike the illustrated ones of the old west, these particular "Wanted" posters featured the photographs of John Wilkes Booth and his two supposed partners in crime, John Surratt and David Harold. Photography, still a fairly new science, had entered the realm of criminal investigation in the 1840s, but the photographs of John Wilkes Booth brought a national legitimacy to this new form of investiga-

tion. Since that time, photography has continued to play a key role in the recording, processing, and prosecuting of criminal activity. There are many different types of crime photography, all of which serve some functional purpose, aiding in the gathering or documenting of evidence either for testimony, records, or for later investigation. There is a distinct division between the actual genesis of the crime photograph (photographs which are usually taken at the scene of the

crime) and the analysis of the photograph (often conducted at highly specialized laboratories).

Perhaps the most common sub-area in criminal photography is the standard "crime scene photograph." From murder to much less serious crimes, investigators typically take photographs in order to aid later investigation. Photographs are used to reconstruct crime scenes at later dates; it is therefore vital that each object even tangentially related to the crime be photographed by itself (a close-up, frame-filling shot), but also in its spatial relationships to the other objects in the crime scene. If this "completeness of scene" is accomplished, when presenting evidence to judges or juries, two groups who did not benefit from witnessing the original crime scene, a prosecutor can either focus on the minutia of the criminal case by showing a picture of the isolated object (such as the murder weapon), or by giving an impression of the scene as a whole. A general philosophy adhered to by most careful criminal photographers is that of thoroughness. For instance, in the case of a murder, the dead body is certainly photographed, but there are other possible clues that could aid the investigators and are therefore just as important to photograph, such as footprints, potential murder weapons, or parts of the room that have clearly been tampered with. A traffic investigator working for the highway patrol does not just take pictures of the accident, but also looks for indicator signs to photograph, such as skid marks and broken glass. Typically, crime scene photographers are tremendously thorough, presenting every possible angle of the scene. The power of an investigator to recall will never be perfect, and it is impossible for a jury to completely picture how a crime scene would look without some form of visual aid. Therefore, many rolls of film are typically exposed, ensuring that absolutely everything of potential importance be portrayed from every possible angle.

In cases of foul play, after the initial crime scene photographs are taken, another arm of criminal photography comes into play: the autopsy record. Autopsies are typically documented in several different ways, one of which remains the photograph. All autopsies are photographed, but this is particularly true of ones where homicide is suspected. The coroner searches for potential causes of death, taking photographs of any exterior markings (bruises) or interior markings (punctured organs) that seem suspicious or may suggest a potential cause of death. Just as with crime scene photographers, coroners attempt to collect as much evidence as possible by using photographs, which could also become valu-

able evidence in court. Victims of crime need not always die in order to have their body photographed, however. In cases of sexual, spousal, or child abuse, various regions of the body that were struck or violated are photographed by specialized police photographers, again in order to ensure a record of the crime, which can be used as evidence at a later date.

A final type of crime photography is surveillance. In 1924, the Federal Bureau of Investigation (FBI) was formed, and J. Edgar Hoover was placed at its helm. Within a decade, the FBI had become a large and powerful force in American crime prevention, due in large part to the freedom of action Hoover was accorded. A large part of Hoover's success was due to his everyday and widespread use of surveillance, a style of investigation that sought to analyze the criminal before he struck. Hoover's personal philosophy of "overkill" when it came to surveillance filtered down through the FBI ranks. Files on suspected criminals often contained pages or pieces of evidence numbering in the thousands. A large component of these substantial files was the photographs, which derived from almost constant surveillance of suspected wrongdoers. If a potential criminal was under surveillance by the FBI, every aspect of that person's life was captured on film, including every place he went and every person he met with. This form of documentation was extreme, but it laid the cornerstone for the contemporary "stakeout," which is used by many different law enforcement agencies. Again, thoroughness is encouraged, as there is no predicting when the important event that needs to be photographed might occur. Surveillance is an arm of photography that takes place before the key event, in anticipation that the camera can be used to capture more than just the aftermath of the crime, but the actual crime itself.

Not all crime photography is conducted by employees of law enforcement agencies, however. There is quite a rich tradition of private photographers who "ambulance chase," who tune their radios to police frequencies hoping to arrive at crime scenes in time to take photographs. Some of the more renowned photographers of all time, such as Weegee, have done their best and most famous work within the field of crime photography. And some of the more shocking and disturbing photographs of all time fall within this genre, including photographs of the murder scenes of Dutch Schultz, the St. Valentine's Day Massacre, the Black Dahlia, and Malcolm X, to name a few.

CROPPING

Cropping is a technique for focusing the eye upon any particular image by means of reduction. The term is commonly used to describe the removal of extraneous visual data (such as unnecessary background or individuals) from photographs or other kinds of images. Often cropping eliminates partial and extra images not germane to the composition, visuals that cannot be fully read or contextually understood (i.e., any out-of-frame, blurry, or rogue image).

Cropping can be as simple as rounding- or squaring-off corners, or can require cutting and shaping images into other forms. In journalism cropping is one technique of “layout and design” involving, as in traditional newspaper layout, the carefully measured addition of strips of black line delineated by width. The layout technician creates columns, boxes, large and small headers, or simply white space, usually in order to market page space, demarcate advertisements, and draw readers’ attention to image or text.

Cropping is also a technique used for building and maintaining scrapbooks, or “scrapbooking,” where photos often assume the fanciful shapes of circles, stars, and hearts, or project-specific shapes such as teddy-bears for a baby album, and horse shapes for an equestrienne’s album. Aiding in the shaping process, templates include squares, rectangles, circles, triangles, hearts, stars, bells, dolls, and animals. Paper piercing patterns, stamps, mattes, and scraps may add information or provide pure decoration by coordinating colours that help to “bring out” or emphasise an element for aesthetic effect. Scrapbookers select photos, determine what constitutes suitable background, what is unimportant and how best to display the desired image by cutting. Background is important as it may provide useful contextual information, particularly if creating an album as an historical record.

Traditionally, cropping was achieved by means of scalpel, Exacto-blade, razor blade, paper-trimmer, *guillotine*, scissors, paper trimmer, box cutter, punch, or some other sharp cutting tool. Nowadays, cropping is accomplished virtually prior to its concrete appearance on paper. Many of these tools are still used professionally in print journal-

ism and advertising. Nowadays cropping is as likely to be thought of as the virtual correction or alteration to an image prior to its concrete or material appearance; computer software programs perform this kind of operation. Thus page-cropping abilities are to be found in Adobe Acrobat, Adobe Photoshop, PageMaker, and other software publishing programs. Many scanners (machines dedicated to “reading” texts as images or symbols, and transporting them onto computers as binary data) have built-in capabilities of automatic image-cropping.

One of the newer associations with cropping occurs in online editing. Microsoft Picture IQ^(TM), a product of software giant Microsoft, allows fades, morphs, texturizing, artistic auto-rendering, and 3D, in addition to the removal of red-eye glare from flashbulbs, scratches, wrinkles, and other unwanted marks on the image. Picture IQ^(TM) PhotoTools^(TM) Version 2.0, a set of online photo editing and enhancement tools, is a product of global digital imaging network company PhotoChannel Networks Inc. PhotoTools^(TM) integrates online advances with cropping controls as well as the standard controls for brightness, contrast, and the omnipresent “clip art” catalogue for illustrating straight text. In addition to permitting cropping changes to the image online (without the interim step of adjusting composition with another software platform), this program enables users to “undo,” removing changes made. (For instance, when using the justifiably popular Adobe Photoshop to combine images one might enable the program by clipping a TIFF image before importing it into QuarkXPress.) This adds a degree of flexibility not found in all photo composer packages. According to the industry’s news release (Seattle Times, 7 Feb. 2001), PhotoIQ features include user controlled “freeform” cropping, one click cropping to industry-standard print-aspect ratios, red-eye removal, online clipart, customized user interface skins, and addition of photo card templates, borders, and clipart. Most photographic platforms now offer “one-click” cropping, making images even more ephemeral. Other methods for image cropping are found in digital imaging map programs.

CROPPING

Cropping originally concentrated on placing the primary image in a central position, either in the middle of the frame or in the “golden triangle” classically perceived as an aesthetically strong position, clearly adhering to classical concepts of painting, especially portraiture, architectural design, and sculptural technique. A general principle for the use of space is that it should not occupy more than a third of the photo. Under the influence of graphic design and advertising, and the quickly changing visual bytes of cable television, in particular MTV, cropping techniques have altered radically. Cropping has become an art

form in itself, drawing attention to an artist’s method and personality, and is now widely accepted as a means of delivering a postmodern point of view with any image. Dislodging the image from a hierarchically powerful position in the centre of any given frame, the desired image might be cropped so severely that the subject (for instance, a person’s face) is only partially revealed, dominated by the matrix, or removed altogether.

IMOGEN CUNNINGHAM

American

Imogen Cunningham’s photography spans 70 years of the twentieth century during which photography became the new way of seeing and interpreting the world. As a master photographer whose compelling portraits of diverse personalities such as Herbert Hoover and Martha Graham appeared in *Vanity Fair* and *Aperture*, she was not interested in developing a philosophy or theory of photography, but was an extremely talented and innovative female artist who strove to search for reality through her lens. Her involvement with her art is reflected in her prolific portfolio, which displays her important role in the history of twentieth-century photography.

Cunningham was born on April 12, 1883 in Portland, Oregon. During her youth, her parents nurtured her artistic talents by paying for summer art lessons. Her interests turned toward photography, and she began experimenting while studying chemistry at the University of Washington in Seattle in 1903. Although there was no official photography department, she learned chemistry as a basis for further study of photography. In 1905, she began experimenting with a 4 × 5 inch format camera that she ordered from a mail order correspondence school. She made her first portraits in 1906—one of which was her own nude body in a field on the university

campus, “Self-Portrait” (1906). To pay for her expenses, she worked as a secretary and made slides for botanists. Her father continued to encourage her, and he built a darkroom for her in a woodshed in which the only light was a candle in a red box. She graduated in 1907 with a major in chemistry; her thesis was entitled “The Scientific Development of Photography.” She then worked for two years for Edward S. Curtis, known for his photographic study *The North American Indian*; from him she learned platinum printing techniques and how to retouch negatives.

Two events that led her to focus on photography as a career occurred between 1907 and 1910. The first was an article she read in April 1907 about the work of New York photographer Gertrude Käsebier in a periodical called *The Craftsman*. Käsebier’s studies of mother and child deeply moved Cunningham, and the article’s point that photography could capture an emotional moment—that it was more than just a scientific chemical process—affected the young artist immensely. The second event was a trip she took to Dresden in the fall of 1909 after receiving a fellowship from her university sorority. In Germany, she studied with photo chemist Robert Luther at the Technische Hochschule and viewed the *International Photographic Exposition* where she had her first chance to view some of the best European and American photographic art of the time. Although she took

few photographs on her travels, she was inspired by the great museums of Europe and by the artists that she came into contact with in Paris and London. After a stop in New York, she returned to Seattle in September 1910, opened a portrait studio, and began to exhibit her work, which was often portraits of close friends.

As a female photographer, Cunningham took some risks early in her photographic career. One risk was her avid interest in nude photography in an era in America still suffering from the conservatism of the Victorian era. In support of the idea of the modern, independent female, she also published an article called "Photography as a Profession for Women" in her sorority's journal *The Arrow* in 1913 in which she urged women to develop their own style in photography and other professions rather than merely trying to copy what men were doing. This conviction—risky for its time—she held throughout her life.

One of the most notable influences on her work during this early formative period was the art she viewed in the avant-garde periodical *Camera Work* published by Alfred Stieglitz. In this quarterly, she was introduced to many of the new young, experimental photographers that Cunningham would later come to know personally. Although Stieglitz discontinued publishing *Camera Work* in 1917, and she never made it into the journal herself, the type of photographic work illustrated—the beginnings of the clean, modern style—influenced her work throughout the 1920s and 1930s. In addition to *Camera Work*, *Vanity Fair* also drew her attention during her mid-teens with its progressive studies of nudes and its pages portraying avant-garde culture.

In 1914, her first solo exhibition was displayed at the Brooklyn Institute of Arts and Sciences. In February the following year, she married Seattle etcher Roi Partridge, with whom she had corresponded by letter for two years while he was in Europe studying art. When the war forced him to return to the United States, he became Cunningham's husband and model. Their first son, Gryfyd, was born in December of that same year. The following year, she published what was then considered a risqué nude photograph of her husband in the Christmas issue of Seattle's *The Town Crier*.

The family moved to San Francisco in 1917, where Cunningham gave birth to twin sons Rondal and Padraic; she spent the next few years with her three young children, restricting herself to photographing close friends, family, and the plants in her garden, which would be a focal point of her experimental work throughout the 1920s.

She returned to commercial portraiture in 1921 after her family moved to Oakland and her husband took a teaching position at Mills College. During these years, she and Partridge became part of a group of artists that included Edward Weston, Dorothea Lange, and Anne Brigman. Cunningham stretched her artistic horizon toward avant-garde experimentalism; and, like many other young artists, she was greatly influenced by publications such as *Vanity Fair*'s October 1922 issue which included Man Ray's now infamous portrait of the Marchesa Casati. This double exposure influenced Cunningham's portraiture and turned her focus to more abstract details apparent in photographs such as *Two Callas* (1929). She was also affected by Marcel Duchamp's famous Dada painting *Nude Descending a Staircase (No. 2)*.

By the end of the 1920s, her works were routinely made as double-exposures, and she experimented with different techniques, using plants and portraiture as her subjects. She also continued her studies of the nude—often using her husband Partridge and three children as models.

The end of the decade was punctuated by a local exhibition at the Berkeley Art Museum, in which she showed works from her plants series, and, more importantly, by her participation in the seminal *Film und Foto* exhibition in Stuttgart, Germany, in which she displayed 10 prints of what have become some of her best-known photographs, including studies of fleshy, spiky agave, aloe plants, and calla lillies.

In the 1930s and 1940s, Cunningham moved away from the close-up, sharply focused studies of plants and avant-garde experimentalism of the 20s toward celebrity portraiture and then street photography. In 1931, she exhibited at the M.H. de Young Memorial Museum, and after two photographs of the dancer Martha Graham were published in the December 1931 issue of *Vanity Fair*, the editors asked her to take assignments photographing personalities including actors Spencer Tracy, Cary Grant, Joan Blondell, and James Cagney, and President Herbert Hoover. She divorced Partridge in 1934 and moved to New York for a short time to shoot more for *Vanity Fair* including photographs of President Franklin Delano Roosevelt's mother, Mrs. James Roosevelt, but she soon returned to California to her to be closer to her sons. She continued her portraiture, which included such varied personalities as the writer Gertrude Stein, Mexican painter Frida Kahlo, and writer Upton Sinclair, who was then seeking the California governorship.

She joined Group f/64, organized by Willard Van Dyke in 1932 and including Edward Weston

and Ansel Adams as members. This group was a very casual gathering of members primarily interested in realism and truth in their work. This aim is reflected in the name Group f/64, which represents the aperture setting on a camera which yields both the most depth and the sharpest focus. In the late 1930s, she began what would become a later life focus on street photography as her work shifted to subject matter concentrating more on the social circumstances of America in the mid-century and the civil strife of the postwar years in the urban and rural centers.

Cunningham opened her own studio on Green Street in San Francisco in 1947, and for the next 13 years her work was exhibited across America as she continued taking street photographs when not hired to take portraits. In these postwar years, she began teaching intermittently at the California School of Fine Arts (San Francisco Art Institute). At this time, she befriended Lisette Model, a photographer for *Harper's Bazaar*, who greatly influenced her portraiture. Together, the two women searched for radical and unusual imagery in the backstreets of San Francisco. Unlike Model's often unforgiving and stark photography, Cunningham's images reveal a mutual respect between her and her subjects, often the homeless or the downtrodden who inhabited San Francisco's seedier neighborhoods.

By the 1960s, Cunningham was running a portrait gallery, teaching portrait classes and photographing the beat generation and flower children in the Bay area. In her work at this time, Cunningham not only reveals the everyday life of this counterculture, but also considers the role of interracial relationships in the time of segregation, as demonstrated by a photograph of a couple in a San Francisco cafe in *Coffee Gallery, San Francisco* (1960). This same year, she was recognized by The International Museum of Photography and Film at the George Eastman House in Rochester, New York, which purchased a collection of her work. She used the money to travel and photograph in Western and Eastern Europe.

In 1964, Minor White devoted an entire winter issue of *Aperture* to her work and reproduced 44 images from her early work and several new portraits. She was elected a fellow of the National Academy of Arts and Sciences in 1967, and near the end of the decade she was awarded an honorary Doctor of Fine Arts by the California College of Arts and Crafts in Oakland.

In 1973, Cunningham turned 90, and these last years seemed to have been the busiest in her life. She received a Guggenheim fellowship to reprint her early glass plate negatives, was given a major

exhibition at New York's Metropolitan Museum of Art, and was declared Artist of the Year by the San Francisco Art Commission. During the last year of her life, she made a guest appearance on Johnny Carson's *Tonight Show*, and CBS produced a documentary celebrating her work and life.

Although she became a celebrity, she still worked, and her last and perhaps most intriguing project was a series of work called *After Ninety*, which was a study of the lives of nonagenarians. For this project about old age, she re-photographed people from her own past, including her ex-husband, Roi Partridge, and Ansel Adams. The most moving portraits in this last series are her intimate portraits of women such as *Irene "Bobbie" Libarry 3* (1976)—a nude of a former carnival woman whose entire body had been tattooed—and melancholy studies of the inhabitants of convalescence homes and convents, such as the pensive woman depicted in *Woman in Convalescent Center, Berkeley* (1975). Cunningham died on June 23rd, 1976 at the age of 96 in San Francisco while still working on this final project.

D

DADA

Dada was a visual and literary arts movement known for promoting an anti-art agenda that began in Zurich, Switzerland, during World War I. However, there were many independent Dada groups in other cities, particularly Berlin, Paris and New York. In 1916, Hugo Ball and Emmy Hennings founded the Cabaret Voltaire in Zurich and quickly attracted the participation of Richard Huelsenbeck, Tristan Tzara, Hans Arp, Marcel Janco, and Hans Richter. Later that year, a periodical sharing the name, *Cabaret Voltaire*, published the first use of the term Dada. Huelsenbeck claimed that the term was selected by the random act of stabbing a dictionary with a knife and adopting the pierced word. Tzara emphasized the term's polyglot appeal in his "Dada Manifesto 1918":

We read in papers that the negroes of the Kroo race call the tail of the sacred cow: DADA. A cube, and a mother, in a certain region of Italy, are called: DADA. The word for a hobby-horse, a children's nurse, a double affirmative in Russian and Romanian, is also: DADA.

(Huelsenbeck 123)

At its essence, Dada initiated an anti-art aesthetic. The dehumanizing violence of World War I forced these artists to question the rationalism of European culture and call for a radical revolution,

informed by both Anarchism and Communism. Expressing revulsion with socio-political ideologies that justify reactionary nationalism and rampant materialism, Dada artists sought to shock the bourgeoisie by questioning the values and motives of dominant social institutions. To accomplish these goals, many Dadaists experimented with photographic materials and processes.

In 1917, Christian Schad, associated with Dada in Zurich, used photomechanical materials to contest conventional art-making strategies. By placing various textured materials onto photosensitive paper and exposing the arrangements to light, Schad made cameraless images that defied artistic conventions. These art works embraced chance and recalled the sudden shifts in scale and abrupt juxtapositions associated with Cubist and Futurist collages. Tzara, who acquired many of these works, named them "Schadographs," which exemplifies the Dadaists' penchant for word play; the term is both a homophone for "shadowgraph," a process used by William Henry Fox Talbot, and an echo of the German word "schaden," which means damaged and thereby epitomizes the group's despair (Marien 247).

The Berlin Dada group, more than other manifestations of Dada, embraced the technique of montage. By cutting, arranging, and pasting frag-

ments of photographs published in magazines and newspapers, artists such as Hannah Höch, Raoul Hausmann, John Heartfield, and George Grosz illustrated the pace of the machine age and the uncertainties of modernity. Using mass-produced images in a technique borrowed from folk traditions—recombinations of photo fragments in family albums is a custom that began in the 19th century—the Berlin Dadaists undermined the aura of aesthetic elitism. These artists hoped that their startling compositions of fragments of reality would provoke responses from spectators inured by mass media's propagandistic use of photographs.

Claims for the origins of this art form were hotly debated: Hausmann and Höch claimed to have been inspired by a composite image of the Kaiser and his ancestors they saw in 1918; Heartfield and Grosz asserted they began making photomontages on postcards they sent from the warfront in 1915 and 1916; the Russian constructivist George Klutis also claimed to invent the form. Regardless of who first used cut photographs in their art, the technique clearly resonated with numerous artists seeking ways to effectively critique social institutions. By bringing together disparate photographic shards, the Berlin Dada Group conveyed distortions in time and space that defined the modern city. Given that photographs expose the immediate and fragmentary nature of urban life, photomontages enabled practitioners to produce satirical social commentaries rich with sardonic irony. Although Hausmann and Grosz both produced compelling photomontages, the works of Heartfield and Höch have received the greatest scholarly attention.

John Heartfield created photomontages to counter the veil of veracity ascribed to photographs: "I found out how you can fool people with photos" (Pachnicke, 14). Heartfield's photomontages were used by the Malik Verlag, his brother Wieland Hertzfeld's publishing house. The earliest of these was "Everyone his own Football," the cover image for the first issue of *Illustrierte Halbmonatsschrift*. Published in 1919, the cover included images of German political figures arranged on a paper fan below the caption "Who's the Prettiest of them All?" Heartfield quickly dispensed with this straightforward approach and adopted a more sophisticated technique during the 1920s and 1930s. From 1929–1939, Heartfield contributed 237 full-page photomontages to *Workers' Illustrated Newspaper*, a Communist publication. These images were sharply critical of Hitler and the National Socialist party as typified by works such as *Adolf, the Superman: Swallows Gold and Spouts Junk* (1932), which uses a photo

of Hitler speaking at a political rally with an image of gold coins delineating his esophagus and stomach; in *Hurray, the Butter is All Gone!* (1935) Heartfield depicts a German family eating a bicycle in a dining room wallpapered with the swastika emblem and a portrait of Hitler looming in the corner. Heartfield did not take photographs himself, but used images from newspapers, magazines, books, and photograph archives and occasionally had photographs taken when he could not find an image that met specific needs.

Hannah Höch's photomontages were more intuitive and startling in their random shifts in scale and eclectic assortment of source material. She sought to reveal the superficiality of the images she used by suggesting possible alternative realities. Höch's photomontages challenged the seductive surface of photographic reality and thereby the status quo of the bourgeoisie. Her *Cut with the Kitchen Knife Dada through the Last Weimar Beer Belly Cultural Epoch of Germany* (1919–1920) typifies this effort. The image, far larger than most photomontages, is densely packed with images of political leaders, athletes, Dada artists, and leading cultural figures, including Albert Einstein. Consistent with Höch's concerns regarding women's rights, females are granted prominent roles. For instance, an exotic dancer tickles Wilhelm II under the chin, and the central figure around which the composition oscillates is an amalgamation of a dancer's body and Käthe Kollwitz's face, which has been pierced by a spear. The playfulness of the dancing body adjacent to the pain implied by the penetrating spear exemplifies a dialectic between hostility and joy that resonates throughout Höch's work. In an effort to liberate women from their limited societal roles, Höch's work often juxtaposes fashionably dressed females with machinery to achieve a metonymic effect, whereby women are presented as something other than a sexual object, mother, or wife (Lavin 19–22). From 1924 to 1934, Höch worked on *From an Ethnographic Museum*, which combined images from German ethnographic collections with contemporary women. Although Höch was not critical of contemporary ethnographic attitudes, she used these images to continue her critique of European gender definitions.

The New York and Parisian Dada groups also used photography, if not photomontage, specifically. Notable among these artists were Man Ray and Marcel Duchamp. In 1921, these two figures met in New York and collaborated on the only issue of *New York Dada*. The cover depicted a perfume bottle to which a photograph by Man Ray of Duchamp dressed as his female alter ego Rose Sélavy had been affixed. The magazine was a commercial failure

and both men went to Paris in the same year to work alongside other Dada artists. The Paris Group included many who went on to establish Surrealism, notably André Breton, Louis Aragon, Frances Picabia, and Max Ernst. While in Paris, Man Ray adopted a cameraless practice similar to Christian Schad's "Schadographs" in the early 1920s. However, unlike Schad, Man Ray used three-dimensional objects to produce his "Rayographs," or photograms. These works typify the Dada spirit by effecting an unexpected dialectical synthesis between abstraction and figuration.

Man Ray later was associated with Surrealism, whereas Duchamp continued exploring chance operations typifying Dada anti-art irreverence. In this effort, Duchamp created numerous enigmatic self-portraits. One such image showed the artist's face covered in shaving cream arranged to suggest the beard and horns of a satyr. This photograph was montaged with a photographic detail of a roulette table to create thirty fake 500 franc bonds. These "bonds," described as "artificial drawings" by Duchamp, were issued in an elaborate, half-joke, half-serious effort to win money gambling at Monte Carlo (1924). Such works illustrate many of the strategies and techniques of Dada. The photomontaged "bonds" were attempts to destabilize and undermine the status quo upon which the bourgeoisie's social dominance relied. Although

Dada's anti-art efforts were short-lived, their influence persists to this day.

LOUISE DAHL-WOLFE

American

When Louise Dahl-Wolfe joined the ranks of *Harper's Bazaar* in 1936—a professional association that would last 22 years—fashion photography was still a fledgling field. At the turn of the century, publishers had only begun to realize the benefits of magazines geared towards women. The lavishly illustrated monthlies were equally slow to accept photographs in their pages. Moreover, of the handful of commercial photographers who focused on fashion at the time—from Baron de Meyer, Edward Steichen, and George Hoyningen-Huene to Horst P. Horst—there were few women. During her long career, Dahl-

Wolfe recorded highly modern visions of feminine apparel and, by extension, sophisticated glimpses into society's mores at a time when the role of the "American woman" was undergoing radical change.

The youngest of three daughters, Dahl-Wolfe was born in Alameda, California in 1895. Believing it was lucky to have initials that spelled a word, her mother named her Louise Emma Augusta Dahl. The Dahls had come to America from Norway in 1872. A marine engineer, Dahl-Wolfe's father had taken her to shipyards, fostering in her a sense of adventure and the knowledge that there was no place a woman couldn't go. Desiring to be an artist from an early age, Dahl-Wolfe was urged by her sister to attend the

San Francisco Institute of Art. Beginning in 1914 and over the next six years, Dahl-Wolfe studied drawing, anatomy, design, and painting—subjects that would form the foundation for her subsequent career in photography. She learned the nuances of color arrangement, which she later put to use in her work with Kodachrome, one of the first commercially available color films. Her studies with the figure would also pay off, helping her to realize how the body's form behaves beneath clothes.

During the early twentieth century, California was undergoing a cultural renaissance and San Francisco was its epicenter. Besides a cadre of fellow Californian painters, Dahl-Wolfe was exposed to masters such as Pablo Picasso and Henri Matisse at the 1915 Panama-Pacific International Exposition held in San Francisco. A year later, she attended a performance of the experimental Ballets Russes, featuring sets by Picasso, Georges Braque, and Andre Derain, music of Claude Debussy and Igor Stravinsky, and choreography by Vaslav Nijinsky. This fertile cross-disciplinary climate seemed to foster in Dahl-Wolfe an appreciation of all art forms that would later manifest itself in her work: she posed models in front of avant-garde artworks and the leading visual, performing, and literary artists—including Isamu Noguchi, Jean Cocteau, and Colette—numbered among her portrait sitters.

It was in 1921, however, that Dahl-Wolfe was first introduced to the power of photography as an art form. She had been working as an electric sign designer when a friend introduced her to Anne Brigman, a photographer whom had been a member of Alfred Steiglitz's Photo Secession. Dahl-Wolfe visited Brigman's Oakland studio and was "bowled over" by Brigman's daring images of nude female figures posed in harmony with nature. Subsequently, Dahl-Wolfe and a few other art students made their own "Anne Brigmans" using a Brownie box camera.

Inspired, Dahl-Wolfe practiced photography whenever and wherever she could, even producing a makeshift enlarger from a Ghiradelli chocolate box as well as a darkroom light powered by a Ford Model A car battery. She wandered the streets of San Francisco with photojournalist Consuela Kanaga, meeting other Bay Area photographers of import, including Francis Bruguière, Dorothea Lange, and Edward Weston. Some of her best training involved photographing store models from a friend's showroom. "Those girls were at least forty years of age," she wrote in her autobiography *A Photographer's Scrapbook* (1984), "I practiced lighting on them, to get them to look chic, elegant, beautiful, and yet natural—and that took work."

In 1923, Dahl-Wolfe left for New York to study interior design and architecture, returning to work in a California decorating firm. At Kanaga's insistence following her mother's death, Dahl-Wolfe left for an excursion abroad. While in North Africa, she spotted Tennessee sculptor Meyer (Mike) Wolfe from a train window and was immediately enamored. The couple wed a year later and spent time in the Great Smoky Mountains. Some of Dahl-Wolfe's most moving portraits were taken during her time in Tennessee, including *Mrs. Ramsey—Tennessee Mountain Woman* (her first published photograph in 1933 in *Vanity Fair*) and sensitive images of African-Americans. Indeed, her observant portraits of Nashville self-taught sculptor William Edmondson helped him to secure a 1937 exhibition at the Museum of Modern Art, New York, as the first African-American to have a solo show at that institution.

While other designers and photographers translated the machine aesthetic into fashion or sought to capture Greek statues anew, Dahl-Wolfe preferred to show active women who paralleled the increasing freedom they (and she) found in society; what was dubbed the "New Woman" in public became the "New Look" in fashion. Together with her husband, Dahl-Wolfe created sets that she wove into daring, sometimes surrealistic, compositions. At the same time women were leaving the home and entering into the workforce, Dahl-Wolfe also pioneered the practice of photographing in exotic locales, including Guatemala, Cuba, Brazil, and Spain.

Throughout her career, Dahl-Wolfe repeatedly turned down offers to work for *Vanity Fair* and *Condé Nast*, accepting only *Harper's Bazaar's* situations because it offered her the freedom to work in her own studio. In fact, when a newly hired art director peered through her viewfinder to check on a shot in 1958, she promptly quit, retiring altogether in 1960. All told, *Harper's Bazaar* published over 600 of her photographs, plus the 86 that graced their covers. Nonetheless, Dahl-Wolfe never believed photography to be equal to painting. "Photography's not a fine art," she explained, "though you can use it to interpret in artistic ways....Some people are just better at it than others." Dahl-Wolfe certainly was; she was the living example of the daring forthright women she captured with her camera. As Richard Avedon, the leader of the next generation of fashion photographers, put it, "She was the bar we all measured ourselves against."

DARKROOM

Film photography's science is about the interplay of light, emulsion, and chemicals working in unison, with the aid of the human hand and eye, to create a masterful print ready for framing and mounting. To understand the history of photography it is also important to grasp the craft and science behind creating a photography print from negative film. Yet at the end of the twentieth century, many were bidding farewell to photography's traditional darkroom techniques, welcoming the world of digital photography and its computerized darkroom.

The darkroom is the setting for two processes: developing film and printing and developing photographs. The pleasure that can be experienced in producing—from start to finish—a perfect negative and a perfect photographic print is one that has driven photographers since the medium's inception. Some photographers, like Ansel Adams, earned a reputation as being obsessive about creating the perfect photographic print and preached technical perfection as the highest form of photographic artistry, creating systems (the zone system) and a school (Group f/64) dedicated to the pursuit of photographic perfection.

There are of course opportunities for myriad frustrations in the darkroom as well and a wide range of practices that reflect photographer's relationships to

the darkroom can be noted. Many professional photographers specialize in shooting film only, send to commercial laboratories for development, and supervise the printing of their photographs by the same labs or by an assistant. Some gladly give over the developing of film to commercial labs, yet create their own prints in the darkroom.

Even if one is never going to use a darkroom, in order to understand and appreciate all facets of photography, it is helpful to understand basic darkroom equipment and how this equipment is utilized. If one is a photographer, it is essential knowledge. Setting up a darkroom comes with no short supply of equipment or expense. Film processing and print processing require specialized equipment and spaces. Chemical mixing, film processing, the creation of proof sheets, the enlarging process, and print processing, fixing, drying, and finally, mounting are the steps required to turn the exposed film into a finished photograph.

Film Processing

A pitch-black closet or space is needed to process film. This space cannot be penetrated by even the smallest amount of light or undeveloped film will be ruined. Even a safelight suitable for print proces-

sing offers too much illumination and will wreak havoc on unprocessed film.

Traditional black-and-white film processing requires a sink with a faucet, processing tanks for roll film, trays for sheet film, timers (with a second hand), thermometers for the processing tanks, chemicals, sponges, scissors, a negative carrier, a squeegee, and a drying cabinet. To develop roll film, a bottle opener is generally used to open the film cartridge. In complete darkness, the photographer carefully and gently extracts the film and rolls it onto a reel, which fits inside a light-tight processing tank. The reel is a small stainless steel spiral. Hand placement is very important to avoid scratches or fingerprints on the negative, and the film must be touching only along its sprocket hole edges when transferring from cartridge to steel reel. The film should rest as smoothly as its original position within the cartridge, as lumps in the film will be developed irregularly by the developing agent. Black streaks, blotches, rows of spaced marks, transparent negatives, and streaks indicate problems when the developer touched (or did not touch) the film. These problems may also indicate that light reached the negative during the loading, light leaked in the developing tank, the temperature of the developer was miscalculated, or the film was not left in the developer for the proper length of time. Student photographers practice loading a roll of old negative film onto the reel in daylight until the motion and task become easier.

After transfer to the reel, the film is inserted into the sealed, lightproof development tank. The film developer generally provides instructions regarding chemical ratios, the number of times to agitate the tank, and the amount of time in each stage of development, none of which is strictly standard. For example, a photographed subject might lend itself nicely to cross processing for intensity of contrast. "Cross processing" is the use of color slide film chemicals to develop negative film and vice versa. So called "push processing" is used for overexposed or underexposed film, increasing graininess and contrast, and decreasing details in shadows. "Pull processing" intentionally overexposes the film to bring out details in the dark areas. Cross, push, and pull processing are experimental techniques to consider once one is confident in processing film. After processing with the developer, it is discarded and the film is washed with water introduced into the tank until all developer has been removed. Sheet film is similarly processed, using trays instead of tanks.

Upon the completion of film processing, the negatives are no longer light-sensitive and generally are

placed in a dust-free cabinet to dry, with roll films weighted to prevent curling. Once the negatives are dry, a light box and a loupe are helpful to decipher the quality of the negatives. "Thin" negatives with little detail indicate that the film was underexposed, underdeveloped, or both; "thick" negatives with dense areas of blackness and few fully transparent (white) areas indicate the film was overexposed, overdeveloped, or both. Recognizing the quality of the negative suggests adjustments available through further darkroom techniques to create the optimum print from that negative. Roll negatives are traditionally cut into strips of five or six frames and stored in archival sleeves (traditionally waxed paper, which has been supplanted by plastic), then placed in an indexed book of some sort. Larger format films are also stored in archival sleeves.

Print Processing

During the print process, light projected through the negative film strikes the surface of the light-sensitive photographic paper, most commonly silver bromide and gelatin. The simplest way to make a print, however, is by direct exposure to light, which results in a photogram. Most photographs, however, result from the transfer of the image on a negative to the photographic paper, either through direct contact (contact printing) or enlargement, which requires a relatively complicated piece of equipment that combines changeable lenses with a built-in light source.

Yet no matter what method is used to expose the photographic paper, the developing process is consistent: the exposed paper is placed in a bath where the chemicals react with the silvers in the papers, producing patterns of light and dark that must be stabilized with further chemical treatments.

Most darkrooms for processing prints are painted white to reveal chemical stains, which show up as brownish, indicating areas that have been contaminated. Ideally a darkroom has both hot and cold running water, good ventilation, a minimum of natural light, and electricity, although many a fine photograph was created under less than optimal darkroom conditions, including many early photographs, which were developed literally "in the field." Black paper is generally sufficient to block out light remnants and light leakage can easily be accessed by standing in the darkroom for about five minutes. Many photographers work at night if light control is a problem. For the home darkroom, while bathrooms or kitchens provide many of the necessary features, these areas should be avoided for obvious health reasons: the chemicals used in traditional

DARKROOM

photography can be toxic if not properly handled, are corrosive, and emit fumes. A properly ventilated darkroom continuously extracts fumes and brings in dust-free air, has proper plumbing to handle the corrosive chemicals, and stands apart from everyday activities to prevent contamination.

Most home and all professional darkrooms feature “dry” and “wet” areas. The dry area of the darkroom ideally is dust-free and contains the enlarger, timer, paper trimmer, and cabinet for negatives and paper storage. The wet area houses the mixed chemicals, including developer, stop bath, fixer and toners, water, various trays, a sink, and drying racks.

For print processing, the entire darkroom can be illuminated with the safelight. This light is generally a red or a low-wattage amber filtered bulb, which relies on the fact that most photographic papers are not sensitive to this end of the light spectrum. Yet any safelight too close to photographic paper will fog it to some degree, and papers left exposed for prolonged time periods will also fog.

When working with film, most photographers' first step is to create contact or proof sheets, which provide a one-to-one record of the image on the negatives. Specialized holders are available to flatten the negatives against a glass frame into which is inserted a sheet of photo paper; the holder is then placed under the light of the enlarger. A short burst of light from the enlarger exposes the paper, which then is processed. The contact sheet is not only used to better judge which frames are best to be printed, but provides a record of the exposed film.

When working with films that require enlargement (generally 35 mm and 2 ¼ and 4 × 5 formats, although any film can be enlarged), the negative is inserted into a holder, which is placed between the enlarger's light source, a large lens called a condenser that focuses or diffuses the light, and its interchangeable lens with an aperture to control sharpness and depth-of-field. The photographic paper is generally placed in an easel frame, which holds the paper flat, preventing distortion of the image as it is projected through the enlarger. Many modern enlargers have built-in timers, or an independent timer is coordinated with the manual switching on and off of the light source. Many photographers use trip strips where a piece of paper is exposed in increasingly longer settings through the same negative in order to determine the optimal exposure for the final print.

Enlargers traditionally have been manufactured as “diffuser” or “condenser” enlargers. The diffuser enlarger spreads the light more evenly across the negative; hence, the contrast is not as apparent.

A diffuser enlarger is used to make color prints, but offers satisfactory black and white capabilities, whereas the condenser enlarger offers excellent capability for sharp, high contrast images. The condenser enlarger focuses the light, directing it straight through the negative to the lens. Among the enlarger's capabilities is changing the distance between the lens and the paper and thus controlling the size of the final image. A sharp, well-exposed negative allows a greater range of size of the final print, yet even a perfectly-exposed negative becomes “softer” as the distance between the negative and the photographic paper is increased.

As well, during the enlargement exposure, dodging, burning-in, and cropping can be employed. The aperture of the enlarger can be set at a smaller opening requiring a longer light exposure, and thus allowing further manipulation of the amount of light falling on any given area of the photo paper.

All manner of specialized filters and screens to create specialized effects may also be employed, such as filters that increase contrast or provide textures (such as “stone-washed”) or patterns (such as “herringbone”). Fogging or solarization can also be affected before the paper has been further processed.

After the paper has been exposed, it is “fixed” generally in a bath of commonly called “hypo” that stops the developing process by dissolving any remaining sensitive silver from the print. Some photographers use a stop bath between the developer and fixer. The stop bath neutralizes the developing agent. Advanced darkroom printmakers often mix their own chemicals for effects rather than adhere to the prepackaged instructions. Darkroom photography is about experimenting with the science of light and chemical reactions.

As these chemicals break down in the light they must be stored in tightly sealed and lightproof plastic jugs. Disposal of used or unneeded photographic chemicals should be done with extreme care. Kodak offers helpful information on its web site.

Once the print is chemically processed, it must be carefully washed to remove all traces of the various chemicals in which it has been bathed. Further manipulation by toning agents may be employed while the print is still wet. While some of these effects are strictly aesthetic, some, like gold-toning, increase the final print's archival qualities. The print is then dried in a dust-free environment.

The color darkroom follows the same basic procedures, with added attention on the variety of chemicals used, their optimal specific temperatures and use of filters to achieve and modulate the color. Commercial darkrooms feature all processes in

fully automated systems, which generally allow for less intervention for various artistic effects.

JUDY DATER

American

Judy Dater's career in photography as an artist and teacher spans nearly 40 years. Beginning with black-and-white portraits in the 1960s, Dater's work has richly evolved alongside the changing technologies of photography. Although primarily known for nude portraiture, Dater's work inherently defies narrow classification due to the complexity and range of her subjects, the emphasis she places on the photographic event itself, and the mental exchanges between artist and subject. These aspects of physical and psychological dialogues turn the traditional posing of portrait photography into an event or performance that is memorialized in the photograph. Throughout the 1960s and 1970s, Dater's cutting-edge style and impulse for an image to act as something or someone, rather than to merely represent it, led to comparisons to artists such as Diane Arbus and Richard Avedon.

Born in Hollywood, California in 1941 to a middle-class family, Dater's exposure to image and performance in Hollywood coincided with her father's work as a movie theater owner. To pursue her interest in the arts, Dater attended the University of California, Los Angeles as a student of drawing and painting in 1959. Three years later, she transferred to San Francisco State University where she studied under photographer Jack Welpott, and by 1966, Dater graduated with a mas-

ter's degree in photography. Welpott and Dater worked very closely together, and in 1964, Welpott introduced Dater to Imogen Cunningham, a photographer noted for her pioneering male nudes. Cunningham would prove to be a singular inspiration in Dater's life and work. During this period of study, Dater had her first exhibition at the Aardvark Gallery and Bindery in San Francisco, where her nude portraits addressed America's questioning of cultural values and norms in the 1960s.

Dater's work gained widespread recognition following her 1972 exhibition at the Witkin Gallery in New York. The open and direct confrontation or relationship between Dater and the subjects of her portraits bore evidence that her work inspired reactions. The nude portraits expressed personal confrontations and an intense self-awareness that led Dater to expand her understanding of the portrait, and she began a quest to further expose the psychological aspects of her subjects. Two of her most recognizable photographs include several characteristic elements of Dater's work. In *Twinka* (1970), a photograph of the model Twinka Theibaud, the image implies that the nude in the sheer dress has been caught in some sort of urgent exchange with the camera. Dater also photographed the woman whom she most admired, Imogen Cunningham, as one of her subjects in *Imogen and Twinka* (1974). This photograph documents the tenuous relationship between artist (Cunningham)

and nude subject (Twinka) as the model hesitantly peeks out from behind a tree, encountering or confronting the photographer.

In 1971, Dater and Welpott married, and their professional and personal lives intertwined further with their most significant collaboration: the 1975 publication of photographs, *Women and Other Visions*. This collaboration occurred amidst the 1970s feminist movement and culminated in a series of photographs of women taken by both Dater and Welpott. This event resulted in identifying the differences between the two artists' styles and effects on their nude subjects, read specifically in the socio-sexual context of the time. Dater deduced that when she was the photographer, the female subjects emitted a certain self-realization. Focusing vigilantly on the photo shoot's time and place, Dater selected the photograph's precise moment while also carefully observing her subjects' expressions and body language. She aimed to reveal an inner emotion in her women sitters; an image that could invoke what the sitter felt about her relationship to the photographer. This project reinforced that Dater's style focused on the psychological elements of a portrait rather than the aesthetics or singularity of the subject. The clothes, environment, face, and body appeared to disconnect with the subject's inner psyche. Dater's interest in the action of revealing reduced the body to a part, rather than the whole, of the image. This implied that the whole could not be viewed without acknowledging the exchange between the viewer and the subject.

In contrast, the women of Welpott's photographs have been described as noticeably aware of their bodies. For Dater, this self-awareness reduced the possibility of expressing psychological elements that do not stem from the sexual or sensual. Welpott's subjects appeared to project an image of themselves, rather than exposing the reality of themselves.

After divorcing Welpott in 1977, Dater began exploring the use of color photography. Her first color photographs were taken during a trip to Egypt between 1979 and 1980. The resulting images placed emphasis on the aesthetics of color and contrast in relationship to the subject's psyche. The images from this period included many of daily life and landscape, while others are portraits of surprising depth in Dater's exchanges with unfamiliar faces. While focusing on the changes that color photography brought to her work, Dater continued to draw inner emotion from her spontaneous encounters with Egyptian subjects.

The 1980s welcomed strong recognition for Dater throughout the United States and Europe.

Her consistent inquiry into the elements of performance and character studies continued to broaden her body of work. She moved to New Mexico in 1980 with her partner, artist Sam Samore, and began looking at herself as a subject, developing works that portrayed herself as a variety of female archetypes. Like Cindy Sherman, Dater's self-portraits examined the full embodiment of social stereotypes, acknowledging the body's role in social exchanges. The series of photographs from 1982 includes *Ms. Clingfree* as the sexy housewife, *Leopard Woman* as the carnal vamp, and *The Magician* as the woman who works miracles. Studying these female archetypes, Dater engaged in an exchange of control as both the photographer and as the subject. Dater performed in a self-designed environment, offering her body and character only as much as, or possibly as far as, the camera and photographer would allow. Other self-portraits depict a nude Dater, returning to the idea that the body is only a part, not the whole, of any exchange, event, or environment. Her nude self-portrait sequence, also from 1982, shows Dater's body as an active object among the desert landscape of New Mexico, recalling the earth performances of artist Ana Mendieta. In acknowledging the complex psychological elements of self-realization and the relationship between photographer and subject, Dater produced photographs of unshakable character. In 1983, she returned to San Francisco and continued exploring new technologies of photography. In 1996, Dater toured the world for her 30-year retrospective, *Cycles*.

BRUCE DAVIDSON

American

Although *Life* had already published Bruce Davidson's work, his position within the photography world truly solidified with the publication of four of his photographs in the June 1960 issue of *Esquire* under the title "Brooklyn Minority Report" and supplemented with an essay by novelist Norman Mailer. Through this work, Davidson revealed his early interest in the photo-essay as well as his use of photography to intimately study a group of people from the "inside." Both themes have continued to preoccupy him throughout his photographic career.

Motivated both by his disillusionment with photojournalism and his desire to move beyond Robert Frank's seminal book *The Americans*, in the summer of 1959 Davidson turned to a group of "troubled" youth in Brooklyn as a means of making a new photographic statement. With the help of a social worker, he contacted a gang of teenagers who called themselves "the Jokers" and whose "rumbles" frequently appeared in the newspaper headlines. For 11 months, the gang members agreed to let Davidson photograph their daily lives, and the resulting images provide both an intimate portrait of the teenagers as well as a probing examination of the restlessness and alienation of youth culture in 1950s America. Davidson explains:

What I was photographing was not the gang, but a sense of isolation and tensions within teenagers.... I never felt a separation between myself and what I was photographing because I was really down to the feeling. But that doesn't mean that I didn't feel guilty because I could go home to a motel and they were sleeping on the ground. I just never felt apart. With the gang, I was in the same mood as they were.

(Livingston 330)

Born in Oak Park, a suburb of Chicago, in 1933 to a Jewish family of Polish origins, Davidson developed an early interest in photography; he owned a Brownie camera and had a rudimentary darkroom set up by the age of ten. In high school, he continued to involve himself with photography, working weekends and summers as a stock boy in a camera shop and later as an apprentice to

a commercial photographer. In 1951, Davidson entered Rochester Institute of Technology where he studied under Ralph Hattersley. In 1955, he decided to pursue graduate studies at Yale University, studying philosophy, painting, and photography under graphic designer Herbert Matter, photographer and designer Alexey Brodovitch, and painter Josef Albers. A class project at Yale led to his first publication in *Life*, "Tension in the Dressing Room," which Davidson photographed at one of the Yale football games and submitted to the editors at *Life*. The photo-essay appeared in the October 31, 1955 issue.

After one semester at Yale, the U.S. Army posted Davidson to Supreme Headquarters Allied Powers in Europe, just outside Paris. Working as a photographer for the army gave Davidson the opportunity to spend many weekends in Paris, and he soon befriended the widow of the impressionist painter Leon Fauché, a contemporary of Paul Gauguin, Henri de Toulouse-Lautrec, and Pierre-Auguste Renoir. For this project, Davidson devoted weekend after weekend photographing Madame Fauché while she walked to the market or sat in her garret surrounded by her husband's paintings. The images became the subject of his second photographic essay entitled "The Widow of Montmartre," published in *Esquire* in 1958. In Paris, Davidson also met Henri Cartier-Bresson whose work he had been introduced to while at Rochester and who would become not only his mentor but also a personal friend.

In 1957, the army discharged Davidson and he returned to New York to begin working as a freelance photographer for *Life*. In 1958, Magnum Photos offered him an associate membership and a year later he became a full member. He liked the open atmosphere of Magnum much better than the magazine industry, and, in 1961, he accepted an assignment given to him through Magnum by *The New York Times* to cover the Freedom Riders in the South. As a result of this job, Davidson began a documentary project on the Civil Rights movement, and, in 1962, he received a Guggenheim Fellowship to assist him with his work. John Szarkowski at the Museum of Modern Art included photographs from the project in a 1966 one-man exhibition, and they were also included in *The Negro American* (1966), a

collection of essays dealing with the situation of African-Americans in the United States.

Davidson's interest in the position of African Americans continued with his project *East 100th Street*, a photographic work that explored one city block of Spanish Harlem. He began the two-year project in 1966 using a large format 4 × 5 inch view camera mounted on a tripod instead of a hand-held camera in order to avoid being perceived as an "intruder" who seized images without interacting with his subjects. For the project he made over 1,000 negatives and in March 1968, *Du* published a portfolio with a text by Davidson. On August 15, 1969, *Life* published a four-page spread on the project. Davidson chose the block largely for its reputation of being one of the worst blocks in the city, and, since its inception, the project has elicited a great deal of controversy. Critics such as A. D. Coleman accused Davidson of exploiting a repressed subculture while supporters like Hilton Kramer praised him for elevating his subject matter to the status of high art. In 1970, the Museum of Modern Art held an exhibition featuring 43 photographs from the project.

Having photographed "inner space" in his *East 100th Street* project, in 1980, Davidson began to document "underground space" through his color photographs of the New York subway, and from 1991–1995 he worked on a project of "open space" with his photographs of New York's Central Park shot with a panoramic camera. Although most of Davidson's work centers on human isolation, *Portraits*, published in 1999, focuses on a diverse range of celebrities, many of whom Davidson photographed while on assignment for magazines and newspapers.

Photography, however, was not the only medium to attract Davidson. From the late 1960s until the mid-1970s Davidson turned to filmmaking, shooting documentaries *Living off the Land* (1969) and *Zoo Doctor* (1971) as well as a fiction film, *Nightmare and Mrs. Pupko's Beard* (1972), based on short stories of Nobel Laureate Isaac Bashevis Singer. Davidson continues to practice photography today, and, although he prefers to work on personal projects, occasionally he still accepts commercial assignments.

BARON ADOLPH DE MEYER

American, born French

Adolph (or Adolf) de Meyer, first a highly influential Pictorialist photographer, later a renowned fashion photographer, magazine editor, and tastemaker, cultivated an enigmatic persona. Many details of his life are obscure because he deliberately fabricated them. He even varied the style and spelling of his name, augmenting the uncertainties about his unusual life. According to the memoirs of the painter Jacques-Émile Blanche, Adolf Meyer was born in the Paris suburb of Auteuil of a Jewish mother and a Scottish father named Watson. Others said the father was German and that the family name was Von Meyer; alternatively, Cecil Beaton claimed that de Meyer was born in Austria. Yet other sources suggested a Finnish lineage. The 1905 *Who's Who* states that Adolf Edward Sigismund de Meyer, a baron of the kingdom of Saxony, was born in Paris, the son of Adolphus Meyer and Adele Watson. In a 1915 interview, de Meyer claimed that his father was Russian.

Adolf Meyer-Watson was raised in Paris by his mother, then studied in Germany at a time when photography was being energized both by technical advances and an increasingly dynamic and sophisticated artistry, on view in photographic salons and exhibitions. As a young man he was deeply inspired by the lifestyle and work of the painter James McNeill Whistler, and became accepted into high society largely because of his personal beauty, style, and manners and was both an example of and an exponent of the cult of beauty. Some have observed similarities between de Meyer and Marcel Proust's fictional Swann, in being both half-Jewish and a member of "café society" whose devotion to the "chic" was almost a religion. Panache, glamour, chic, and snobbery were born in a changing society in which aristocrats, artists, and celebrities intermingled.

De Meyer gained entry to the British royal circle (and photographed King Edward VII and his family), largely through his wife Olga Caracciolo, whom he married in either 1896, 1897, or possibly 1899, and who was the godchild of the king—if not also his illegitimate daughter. De Meyer's marriage to Olga was reputedly unconsummated and platonic;

he may in fact have been encouraged to marry because, in the wake of the Oscar Wilde scandal and the Dreyfus affair, he sought to disguise his homosexuality and his Jewish background, both of which had become unpopular and risky liabilities. Olga's mother was the Duchessa de Caracciolo and it was thought that the Prince of Wales, who became King Edward VII, was her father, as they were often seen together. De Meyer was granted the title of baron by the King of Saxony so that he and Olga could attend the coronation of Edward as members of the nobility.

Olga inspired him to learn from some of the great painters, and he was especially influenced by the Symbolists. The de Meyers were wealthy, sophisticated members of café society who had homes in Paris, London, Constantinople, Venice, and eventually New York City. Olga had been preceded as de Meyer's patron, favorite model, and close friend by Constance Gladys, Lady de Grey, who had helped introduce him to London society.

In 1898, de Meyer joined the Linked Ring Brotherhood. Beginning in 1903, he exhibited at their London Salon. Eventually he became bored with the group and helped form the Vienna Secession. During these formative years he enjoyed the friendships of a number of important photographers, especially Edward Steichen and Gertrude Käsebier, and it appears that the latter had a significant influence on his work. Other photographic friends included Frances Benjamin Johnston and Alvin Langdon Coburn. He corresponded with Alfred Stieglitz, and they enjoyed an intellectual and artistic intimacy.

In a 1906 letter to Alfred Stieglitz he insisted on showing his work only in solo rather than group exhibitions. Stieglitz published some of his work as photogravures in *Camera Work*, and reproductions of his color Autochromes could be found in *The Studio*. In 1909, after years of letters and business interaction, the two finally met. Although he had been praised by Cecil Beaton for his soft-focus Pictorialism, he told Stieglitz that he believed in "straight" photography, especially in the form of platinum and silver prints. Although he was briefly fascinated with the Autochrome process shortly after its 1907 introduction and exhibited his work

in the new medium, he lost interest by 1909 and returned to his silver and platinum imagery.

After King Edward died in 1910, the de Meyers began to make a transition. No longer just a society photographer, he emerged as a fine photographic craftsman, a skilled and highly paid professional. He was both a Symbolist and an Orientalist. He photographed ballet, one of his favorite subjects, and helped bring the Ballets Russes to England in 1911, where he photographed the great dancer Nijinsky.

In 1916 an astrologer gave the couple new names—Mhahra for her, Gayne for him, so sometimes he styled himself as Baron Gayne de Meyer.

When World War I broke out, de Meyer's German title meant that remaining in England would lead to his internment as a prisoner of war, so the couple emigrated to the United States, where Condé Nast had offered him a post as photographer for his magazines *Vogue* and *Vanity Fair*. Much of his fashion work was highly original and innovative, and he influenced other fashion photographers, as well as avant-garde artists like Man Ray.

De Meyer was staff photographer for *Vogue* and *Vanity Fair* magazines from 1913–1922; he also began writing editorials for *Vogue* in 1915. In 1922 he joined *Vogue*'s competitor *Harper's Bazaar* and put his distinctive imprint on the magazine until 1929. He not only had revolutionized fashion photography through his magazine work, but modified the look and format of the magazines themselves. Although he had greatly influenced other fashion photographers, the prevailing style of fashion photography was rapidly changing in the 1930s, taking on a more hard-edged realism, and his style, which had never really escaped soft-focus Pictorialism, became obsolescent.

The baron's photographs helped "establish" women in society. He photographed celebrities in a high-key, soft-focus style, which won him great notoriety. His pictures of Olga are elegant but superficial. Arthur Ollman wrote that "for de Meyer, Olga was a religious icon, an image of perfection, existing on a different plane, a transcendent goddess." She died in 1930.

After Olga's death, de Meyer felt free to move to Hollywood with his heir and lover, Ernst. He destroyed most of his original prints before he left Europe in 1938, but these casualties did not include his portraits of Olga. When preparing a 1940 retrospective at the home of actor Edward G. Robinson, however, he could locate only 40 prints. In 1988, however, the photography dealer G. Ray Hawkins bought a trunk containing de Meyer's belongings and discovered a trove of unpublished photographs of Olga.

In his final years de Meyer abandoned photography, and tried his hand unsuccessfully at writing, leaving behind unpublished novels, plays, and memoirs, but he never recaptured the brilliance of his years as both a photographer and guru of fashion and taste. He died of coronary thrombosis in Los Angeles in 1946. His obituary in the Los Angeles *Times* did not even mention his profession as a photographer.

JOHN DEAKIN

British

The British photographer John Deakin died in relative obscurity at age 60 in 1972. His work was likely to have been forgotten if not for exhibitions and books assembled posthumously from the prints and negatives (many of them in very poor condition) left scattered with various archives, collections, friends, and clients. Since his death his importance as a photographer has been recognized and championed for two distinct reasons. The content of his work has been acknowledged as a perfect illustration of a time and place within British cultural history; the post-war 1940s and 1950s of artistic, bohemian London, while the stark, realist style of his photographs are now admired for their directness in execution and for the frank portrayal of his subjects, while still holding within their bleakness a cruel beauty. Coming from a tradition where photographers complemented their sitters, still at times airbrushing towards perfection, John Deakin reveled in portraying life as monochromatic, blemished, and very real.

He was born on May 8, 1912 in Cheshire. His parents had recently moved from Liverpool to be nearer his father's workplace in a soap factory. Not much is known or recorded about Deakin's early life. Later he was to embellish or fabricate the details of his formative years, often referring to himself as "the slum boy from Liverpool." However, records

show him to have been an excellent student at his grammar school, his behavior exemplary as well as being a keen swimmer whose chosen career was to join his father in the factory. Instead, by the time he was 18 he had moved to Dublin where he had a succession of jobs including window dressing and possibly a stint in the theatre as well as undertaking some art education. His first passion was for painting which he pursued on moving to London in the early 1930s hoping to make a career as an artist. A wealthy American collector, Arthur Jeffries, became his benefactor and the two traveled widely for several years to the United States, Europe, South America, and the South Seas, allowing Deakin the chance to live in relative luxury, paint, and eventually exhibit in London in 1938.

Deakin started to photograph in the late 1930s while living in Paris. At the outbreak of war he enlisted in the British army as a photographer and was stationed in Cairo, Syria, Malta, Palestine, and Lebanon, rising to the rank of Lieutenant. He enjoyed his military service and returned to London after the war starting his career as a photographer. He opened a studio shooting portraits for *Tatler* and *Lilliput* magazines but achieved little success. Again he drifted until his documentary work, notably his photographs of Paris, came to the attention of British *Vogue's* editor Audrey Withers who offered him the position of staff

photographer in July 1947. His work was divided between fashion, which he did not enjoy and portraiture, in which he was to excel. His photographs were direct and demanded attention through their unadorned simplicity. In most cases the contrast of the print increased the severity of his images. Deakin was entering his busiest and most creative period as a photographer though personally and health-wise he was starting a slow decline. His heavy drinking had inevitably led to alcoholism and he had thrown himself fully into London's Soho drinking culture, frequenting the bars and clubs populated by the artists, writers, musicians, and actors of the day as well as members of the vice and criminal fraternity. His list of friends (or often just acquaintances) included important painters such as Lucien Freud, John Minton, and importantly, Francis Bacon. Though defended by Withers, Deakin was not a popular member of the *Vogue* staff. His drunkenness, rudeness, and lack of regard for *Vogue* equipment led to his dismissal in 1949, after only 14 months' work. However, again he opened a studio, worked for various magazines, and had his first book, *London Today*, published, documenting his impressions of the city. Withers employed him once more in 1951, and he managed to stay with *Vogue* for three years concentrating on portraiture and documentary work, having shown little aptitude or admiration for fashion. His first commission on his return was to photograph Picasso and for the next three years he continued to photograph artists and celebrities.

In retrospect Deakin is now seen as a chronicler of Soho's artistic life of the late 1940s and early 1950s. He stopped photographing sometime in the early 1960s. He had become increasingly unreliable as his health deteriorated, and returned to painting in his last years. Though diagnosed with lung cancer, he continued to travel, accompanying Francis Bacon to the painter's retrospective exhibition in Paris in 1971. His links and friendship with Bacon were one constant in his life. Photographs were important to Bacon as a visual reference and inspiration for his work and he often employed Deakin to provide this source material, having a great admiration for the brutal qualities of the photographers work. John Deakin died of heart failure in May 1972, having been sent by Bacon to Brighton on the South Coast of England to recuperate from his last visit to hospital.

Deakin had originally wanted to be a painter and had died with little regard and care for his photographic work. When his first posthumous exhibition, *The Salvage of a Photographer*, was shown at the Victoria and Albert Museum in London in 1984, prints were selected from the little he had left to his friend, the art historian Bruce Bernard. The next year his archive of prints and negatives at *Vogue* was rediscovered, many frayed and damaged. When his work was next exhibited in 1996 at the National Portrait Gallery in London, these two collections were augmented by the creased, paint-spattered prints found within Francis Bacon's studio. The condition of these prints had not detracted from the content; indeed some critics have seen their deterioration and heritage as a supplement to their aesthetic value and given a new importance to the photography of John Deakin.

MIKE CRAWFORD

Biography

Born in England, 18 May 1912. Lived and worked in Dublin, early 1930s before moving to London. Traveling during mid-1930s. Starts to photograph while living in Paris, 1939. Serves as photographer in the British Army during World War II, 1939–1945. Staff photographer for British *Vogue*, 1947–1948. Second employment with British *Vogue*, 1951–1954. Died in Brighton, England, May 1972.

ROY DECARAVA

American

Personal expression shapes the modernist photography of Roy DeCarava. Raised in Harlem in the 1920s, the Harlem Renaissance—a period that called for the self-representation of the Black experience—profoundly influenced his photographs. By the early 1950s, DeCarava produced such poignant prints as *Graduation* (1949) and *Man Coming Up Subway Stairs* (1952), photographs that characterize his humanity and aptitude for juxtaposition. Their vitality aligned him early in his career with important figures in American photography, leading to inclusion in such monumental exhibitions as *The Family of Man* (1955), organized at the Museum of Modern Art (MoMA) by Edward Steichen. His inclusion exemplifies DeCarava's work as an overall expression of the human experience, told through the lives of New York's city laborers and the glimpses of life that are often taken for granted when passing through the urban landscape.

When discussing his work, DeCarava confronts the dilemma of categorization:

The major definition has been that I am a documentary photographer, and then...I became a people's photographer, and then I became a street photographer, and then I became a jazz photographer and oh, yes, I mustn't forget, I am a black photographer...and there is nothing wrong with any of those definitions. The only trouble is that I need all of them to define myself.

(Blue c. 1984)

In postwar America, focus on city living and advancements in the hand-held camera created a rise in photographic consciousness and the phenomena called "street photography." Attention shifted from the war's aftermath to changes witnessed on America's urban streets. Photographers Robert Frank, Helen Levitt, and Lisette Model grew to acclaim during the 1950s for this instantaneous snapshot that presented the fringe of American culture. For DeCarava, his urban vision was inspired by personal concerns to dignify his community, but also by the technical challenge of a given situation. Similar to Henri Cartier-Bresson, DeCarava was the man on the street, responding to

the conditions of his environment. He used the camera's mechanics to evoke particular responses to light and shadow. With suspended manipulation, his images allow for unfocused passages, as in *Coltrane on Soprano* (1963), where the camera's shutter has remained open long enough to capture the instrument in a blur from John Coltrane's rhythmic playing. Yet he also created strikingly intimate views of everyday family life, couples dancing in a kitchen, a father holding his baby.

DeCarava was born in 1919. His mother emigrated from Jamaica to New York during the Great Migration and raised her only son during a period when economic depression effected the optimism of the Harlem Renaissance. Despite the hardships, he attended lower Manhattan's Textile High School where his exposure to Vincent Van Gogh taught him expressionism, which he later applied to photography. In 1938, he entered the Cooper Union School of Art and studied painting and printmaking. He later transferred to the Harlem Community Center in 1940, a dynamic location for young African-American artists. His return to Harlem included participation in the Works Progress Administration's workshops and introduced him to painters Romare Bearden, Jacob Lawrence, Norman Lewis, and Charles White.

Initially DeCarava experimented with photography's formal abilities to crop and provide light contrasts to inform his silkscreens. By 1949, DeCarava solely fixed his camera, loaded with black and white film, on the streets of Harlem. In 1950, gallerist Mark Perper offered him a solo exhibition and introduced him to Homer Page, a seasoned technician and protégé of Edward Steichen. Page taught DeCarava to print with less contrast and to use a narrower range of blacks in favor of gray tonalities to enhance spatial relationships and evoke stronger expression. As a result, defined whites are separated from shadows to enhance the subject. *Hallway* (1953), one of his most acclaimed images, exploits these tonalities in favor of symbolic meaning. The range of grays contrast the softened glare of the single light bulb dangling in a narrow hallway, communicating the housing situation that many people emigrating to urban cities encountered. Page introduced him to Stei-

chen, head of MoMA's Department of Photography, who purchased three of DeCarava's prints for the collection. In 1952, Steichen sponsored DeCarava's receipt of the John Simon Guggenheim Memorial Fellowship, the first received by an African-American. The fellowship allowed him to work full-time as a photographer, resulting in the completion of some of his most renowned images.

The documentary aesthetic is often used to describe DeCarava's style, but his publications of photographic stories about the independent rhythms of cultural communities reveal his poetic interests. *The Sweet Flypaper of Life* (1955) is an international phenomenon in this regard. Published in English, German, and Czech languages, the book merged DeCarava's photographs and their characteristic straightforward, descriptive titles with Langston Hughes' fictional narrative that related issues of family, marriage, and individual experience in 1950s' Harlem. During a time when integration occupied the Supreme Court, DeCarava's images embodied a revolutionary spirit. During the 1950s, DeCarava also began the project of photographing the legendary figures of jazz and bebop, including Count Basie, Duke Ellington, Billie Holiday, Thelonius Monk, Elvin Jones, and Ornette Coleman. As an active participant, he saw jazz and his photography as improvisation—something you do all at once and that melds looking with listening. DeCarava envisioned this series as an intermeshing of prose and image bearing the title *The Sound I Saw: Improvisations on a Jazz Theme* (1962, 2001). The project first materialized in 1983 as an exhibition organized by the Studio Museum in Harlem and was later completed as a publication in 2001 through Phaidon Press.

During the Civil Rights Movement, DeCarava traveled to the March on Washington. Photographs such as *Mississippi Freedom Marcher, Washington, D.C.* (1963) demonstrate that despite the momentous event, capturing human promise rather than documentation was the main subject. As an activist, DeCarava was most vocal during the controversy of the New York Metropolitan Museum of Art's 1969 exhibition *Harlem on My Mind* (1969). The exhibition aimed to represent Harlem through documents and photographic enlargements yet included few African-American artists. Although he was asked to participate, DeCarava declined and wrote a statement in *Popular Photography*, voicing his concerns over misrepresentation and the lack of foresight in presenting photography.

Regardless of racial opposition, DeCarava pioneered organizations throughout his career. From 1955 to 1957, he opened A Photographer's Gallery,

one of the first photography galleries in New York City. Exhibited artists included Ralph Eugene Meatyard, Minor White, Van Deren Coke, Harry Callahan, and Berenice Abbott. In 1958, he began work as a freelance photographer for magazines such as *Sports Illustrated*, *Good Housekeeping*, and *Scientific American* and on film and television sets as a still photographer. In 1960, the actor Harry Belafonte produced a CBS television series "New York 19," which used DeCarava's expressionistic images to connect segments of the hour-long program. By the 1970s DeCarava's public presence influenced many younger black artists. He served on the board of American Society of Magazine Photographers, which fostered the Committee to End Discrimination Against Black Photographers. Frustrations with the committee led to the spearheading of the Kamoinge Workshop. The group effort opened a gallery on 125th Street in Harlem. This photography consortium provided an atmosphere of discussion and opportunity by producing group seminars and portfolios. Photography critic A. D. Coleman supported DeCarava for his mentoring and ability to surpass the exclusion that many non-White photographers received during the 1970s.

After his marriage to art historian Sherry Turner in 1971 DeCarava's work included domestic themes and botanicals. In 1975, DeCarava created his first major body of work taken outside of New York City when the Corcoran Gallery of Art in Washington, D.C. sponsored *The Nation's Capital in Photographs*, a series of solo exhibitions based on commissions. In 1981, the Friends of Photography in Carmel, California, mounted *Roy DeCarava, Photographs*, an important exhibition that highlighted Turner's archival research of her husband's work. The exhibition catalogue serves as a monograph and includes her authoritative essay, "Celebrations." The Museum of Modern Art organized, to international acclaim, the photographer's next major exhibition, *Roy DeCarava: A Retrospective* in 1996. DeCarava's editorial photographs, however, were excluded from this survey, which had the result that even greater interest focused on his contributions to and influence on commercial photography. Today, DeCarava's visions of urban communities are seen as foundational to the work of contemporary photographers such as Carrie Mae Weems and Nikki S. Lee. Production of his photographs are managed by Sherri Turner DeCarava, who presides as Executive Director of The DeCarava Foundation and The DeCarava Archive, which holds reproduction rights to his work. Since 1975, DeCarava has taught full-time at Hunter College of the City Uni-

versity of New York and currently teaches as a Distinguished Professor of Photography.

THE DECISIVE MOMENT

Unlike many terms in the history of photography, the decisive moment has a clear definition and a precise origin. Most surprising is that the coining of the term occurred so late. It comes from the enormously influential book by Henri Cartier-Bresson, *The Decisive Moment*, published by Simon and Schuster in 1952. In the text he defined the term succinctly thus, "To me, photography is the simultaneous recognition, in a fraction of a second, of the significance of an event as well as of a precise organization of forms which give that event its proper expression."

In a sense, every successful photograph is a decisive moment, from the first photograph made in 1822, reportedly a three-day-long exposure, to images made in the burst of a strobe light in a thousandth of a second in the 1930s. All are records of a particular moment in time. But implicit in the definition is that the photographer is capturing subjects in motion. Such images have been made since Daguerre's 1842 daguerreotype of a man having his boots polished on a busy Paris boulevard. By the 1860s, instantaneous photographs were being made regularly. In the early twentieth century, there were photographers such as André Kertész, active since 1912, who like Cartier-Bresson after him, used a small handheld camera loaded with fast plates or sensitive film to capture life on the move and usually in geometric compositions.

The term became a convenient handle for the kind of photography that Henri Cartier-Bresson had been practicing since 1929, which had been called variously over the years, "poetic accident," "anti-graphic photography," and "fleeting moments." But in the context of the book filled with Cartier-Bresson's own photography there is the further implication that "the decisive moment" is not only of perfect arrangements of peak moments with a strong underlying geometry but the final image is also printed full negative without cropping.

It would be two decades before Henri Cartier-Bresson would define in writing the type of photography that he and his colleagues had been doing all those years. His work gained notice in the 1930s and was exhibited at the Julien Levy Gallery in New York. The young curator of photography, Beaumont Newhall, befriended Cartier-Bresson at that time and later published the first collection of his work in the catalogue for his exhibition at the Museum of Modern Art in New York in 1947. Newhall wanted to publish a book of his friend's photographs. In a letter from Beaumont Newhall to Henri Cartier-Bresson dated 29 October 1949 he wrote,

I am thinking of doing a new book, to be called "Fleeting Image," which will deal entirely with what you so aptly call slices of 1/100 of a second.... I would like to use a good many of your things [photographs] to develop the thesis.

In another letter from BN to HCB dated 10 February 1951: "I haven't forgotten, and neither has [Richard] Simon, about our plans for a book." Richard Simon of Simon and Schuster, also an amateur photographer, collaborated with the art critic and publisher, Teriade, to realize the book. Teriade was a long-time friend and supporter of Cartier-Bresson. In the late 1930s, he had planned to publish a book of photographs by Cartier-Bresson and several other photographers including Brassã and André Kertész but the war made it impossible. In 1952, with the assistance of Marguerite Lang, Teriade compiled the photographs, prepared the layout, and published the book in Paris in a style and format similar to his deluxe art review, *Verve*. With the book in preparation, Teriade and Simon pushed Cartier-Bresson to put down in words his approach to photography. That lucid text has been nearly as influential as the photographs in the book.

In formulating his ideas, Cartier-Bresson drew on his studies in the 1920s with the cubist painter and theorist, Andre Lhote, who stressed the balance of compositions based on the golden section. He was also inspired by Maurice Tabard's texts on geometric composition in photography.

This book of photographs and its text had an immediate and far-reaching impact on numerous photographers ranging from Elliott Erwitt to William Eggleston. The book was reviewed by such disparate artists as Walker Evans and Aaron Siskind. In addition to being one of the most important influences on photography for decades, "the decisive moment" quickly became something to react against as well. After Cartier-Bresson's book, the next most important and influential publication of the mid-twentieth century was Robert Frank's *The Americans*. It is filled with images that, in opposition to Cartier-Bresson's, might be characterized as random moments, non-events depicted in ways that seem off-balance. Horizon lines are tilted, figures are cut off

at the edges of the frame or partially obscured by objects in the picture. The world appears to be glanced at quickly and without artifice. Frank believed that "the decisive moment" was an artificial way of seeing, that perfect arrangements of peak moments were removed from real life and were in some way dishonest. He said, "I don't want that in photography, the world moves very rapidly and not necessarily in perfect images." There are some skeptics who say that the only "decisive moment" occurs when the time comes to decide which one of the many exposures to make into the finished print. This term and the book's title owe their distinctive name to the fact that the original title selected for the simultaneous French publication of the book, *Images la sauvette*, is impossible to translate adequately into English. According to Cartier-Bresson it is roughly equivalent to, "Images on the Sly." Richard Simon of Simon and Schuster derived the English title for the book from the quote from Cardinal de Retz that Cartier-Bresson selected to be placed on the page before the beginning of his text: "There is nothing in this world that does not have a decisive moment."

DECONSTRUCTION

Over the last four decades, the term deconstruction has infiltrated academic fields, notably philosophy and literary criticism. Deconstructive thinking has partially transformed architectural practice, theo-

logical inquiry, and popular culture. The thinker responsible for the term, Jacques Derrida, argues that deconstruction occurs in the works of Karl Marx, Friedrich Nietzsche, and the myriad writers

Derrida queries to establish that deconstruction has been happening since and before Plato. For Derrida, deconstruction is simply what happens. This essay discusses three thinkers, Jacques Derrida (b. 1930), Roland Barthes (1915–1980), and Jean Baudrillard (b. 1929), to introduce some ways deconstruction intersects photography.

The Photographic Text

Deconstruction intersects photography when one recognizes photos as texts. How are photos texts? Looking at a photo constitutes an act of reading. Photos solicit interpretations. A caption accompanying a photo attempts to direct reading toward a specific interpretation in part because interpretations might occur other than the interpretation the caption's author intends, even if the author is the photographer herself or himself. A photographer's intention might irrevocably control a photo's interpretation if, rather than texts, photos were windows opening upon existence. Neither does the reader's intention control the photographic text's interpretation. The illusion of such control requires the reader to ignore a photo's singular textuality.

One might argue that Ansel Adams's *El Capitan, Merced River, Clouds, Yosemite Valley* (c. 1952), requires little if any interpretation since the photo simply presents sublime nature: a spectacular cliff face towering in the background, clouds floating high to the distant horizon, and a turbulent river crossing the foreground. But such an argument forgets that the concept "nature" occurs in a nature/culture opposition laden with philosophical assumptions. The account of nature as a hallowed presence unpolluted by culture constitutes one such assumption. The impression that Adams's photo gives of presenting nature bears witness to an irreducibly textual effect: the persuasiveness of the nature/culture opposition.

Deconstruction involves the dismantling of major conceptual oppositions like the nature/culture opposition. In Adams's photo one reads an account of nature tied to the nature/culture opposition. Yet in reading the photo, when one remarks such an account's cultural specificity, the nature/culture opposition begins to dismantle. Adams's use of black and white film to conjure the impression of a starkly pristine natural landscape emerges as a cultural enterprise informed by a certain kind of preservationist environmentalism. Destabilizing the nature/culture opposition it evokes, the photo opens readers to questions that the nature/culture opposition muffles. This oppo-

sition supports narrating Yosemite Valley as a healing refuge free of urban stresses. Of course, tourists experience Yosemite Valley as such a refuge only by way of the tourist industry's urbanizing interventions: roads, public toilets, tour buses, a supermarket, a hotel, and so on. In deconstructing the nature/culture opposition, the photo moves one to ask: How can one's desire for the landscape to which the photo refers avoid being the desire for the consumer object Yosemite Valley threatens to become?

Deconstruction: A Variety of Postmodernism?

Redefining philosophical systems, political circumstances, and cultural artifacts (photographs, for example) as irreducibly textual is a postmodern gesture. Is deconstruction a variety of postmodernism? A leading scholar of deconstruction, Christopher Norris, argues against confusing Derrida's rigorous engagement with philosophical tradition for what Norris calls postmodernism. For Norris, postmodernism's irresponsible relativism flees from the duty to make ethical and political distinctions and decisions. As Norris correctly points out, rather than voiding ethical and political decisions, Derrida elaborates their intricate conditions of occurrence, however daunting and complex Derrida shows those conditions to be. Derrida insists on rethinking the European Enlightenment; on Norris's reading, postmodernism urges the Enlightenment's abandonment. For Norris, postmodernists are pursuing a questionable aesthetic rather than anything comparable to what Derrida calls deconstruction.

Norris's partition of deconstruction from postmodernism has some validity. But photography's crossing from modernism to postmodernism does entail deconstructive processes. One relevant comparison would be between Walker Evans's *Brooklyn Bridge, New York City* (c. 1929) and David Hockney's photo-collage *Brooklyn Bridge, November 28 1982* (1982). Both photographers took advantage of the pedestrian walkway that centrally traverses the bridge. The walkway allows the camera's lens to follow the unexpectedly thin suspension cables as they sweep gracefully from the photographer's standpoint to their convergence at one of the bridge's monumentally solid Gothic-arched towers.

Influenced by Alfred Stieglitz's photographic aesthetic of Pictorialism, Evans aspires to a high-art image of an icon of American modernity celebrated as such by Joseph Stella's paintings *The Voice of the City of New York Interpreted: The Bridge* (1920–1922) and *Brooklyn Bridge: Night* (1922). Evans's photo depicts the walkway

scene Stella's paintings investigate. Evans produced his photo to be an illustration for his friend Hart Crane's poem *The Bridge* (1930). In Stella's, Evans's, and Crane's wake, Georgia O'Keeffe's modernist painting *Brooklyn Bridge* (1948) also offers a stylized rendition of the walkway perspective.

Evans helped to make the Brooklyn Bridge a must-see artwork. Amateur photographers often seek out the walkway scene inspired by Evans's photograph, by O'Keeffe's painting, or by popular images based on such modernist works. Countless visitors have meandered the walkway, snapped photos capturing a shot similar to Evans's, and framed their Brooklyn Bridge photographs for display in homes and offices worldwide. The frisson of "art" these framed snapshots provide amateur photographers stems from yet deconstructs the modernist aura Evans, Stella, Crane, and O'Keeffe gave the Brooklyn Bridge. However inadvertently, tourist photography quotes the Evans's photo, displacing it from the context of modernism to various contexts that open the walkway scene to divergent interpretations. In the process, the opposition between elite and popular culture deconstructs, raising questions concerning the socio-political values embedded in the distinction between "high" and "low" art. Postmodernism embraces the playful iteration of modernist works for democratized enjoyment.

Postmodern photographers investigate the modernist legacy in experimenting with and questioning representation. The postmodernism of *Brooklyn Bridge, November 28 1982* embraces amateur photography's deconstructive effects on Evans's photo. Hockney quotes the Brooklyn Bridge's modernist photographic representation in the idiom of casual tourist photography to produce an artistically ambitious work available to a popular audience. Standing on the walkway approximately where Evans stood, Hockney took dozens of photos: of the cables, of the tower, of the walkway, and of his own feet on the walkway. After having these "snaps" developed at a one-hour processing shop such as amateur photographers use, Hockney then assembled the photos into a collage. This "joiner," as Hockney calls his photo collages, evokes time and space, argues Hockney, in ways a single photo cannot but that a painting can. *Brooklyn Bridge, November 28 1982* playfully deploys the amateur iteration of Evans's modernist gesture while enacting Pictorialism's postmodern return.

Postmodernism and deconstruction do overlap in questioning representation. This questioning can have serious ethical and political implications. Cindy Sherman and Barbara Kruger are two photographers who make the postmodern inquiry

into representation sharply political. Sherman and Kruger mimic and satirize the representational conventions of painting, film, advertising, pornography, and fashion photography to interrogate issues of gender, power, and exploitation. But one would be mistaken to think that Sherman and Kruger are merely suggesting that justice demands more benign representations of women. These photographers implicitly raise a more difficult issue: How is one to evaluate the category "representation" itself?

Derrida: Representation's Deconstruction

Is representation a value-neutral category? For Derrida, "representation" bears questionable philosophical assumptions that inform troublesome institutional practices. Rather than calling photographs representations, one should welcome representation's deconstruction.

The definition of representation as the recovery of presence emerges from "Western" philosophical tradition's dominant self-understanding. This tradition would found itself on a presence. Philosophy has claimed, among other entities, the good, spirit, and the human as foundational presences. (Notice that these presences assume their opposites: evil, matter, and the animal.) Philosophical texts want to recover a foundational presence for readers. When these texts ask, "See what I mean?," they are claiming to have represented a presence. Philosophy defines the text as a sign representing a presence that controls the sign's meaning. Paul, for example, knows Christ as the presence that controls what Paul's Letter to the Romans means.

For philosophy, one finally leaves signs behind in retrieving a presence that one sees, intuits, or knows. Knowledge arrives the moment reading ends. This is the "See what I mean?" moment. In this moment, signs recover a presence uncontaminated by signs. Signs, argues philosophy, are detours on the way to the full presence (say, of spirit) that is knowledge's origin and goal.

Philosophy grasps foundational presences as answers to the question: What is being? Philosophy's various answers to this question tend to conflate being with presence, yielding what Derrida calls the "metaphysics of presence." This metaphysics inheres in philosophy's understanding of language as representation. But Derrida finds that philosophical texts question this representational assumption in dismantling philosophy's binary oppositions. A metaphysic's coherence depends on an opposition that favors one term at the other's expense. To function as a founding presence, spirit

must exclude matter. The spirit/matter binary defines spirit in opposition to matter while privileging spirit over matter. Additional oppositions include soul versus body and male versus female.

Such binaries deconstruct when the opposed entities turn out to contaminate each other. When humanity includes animal traits and animals merit an ethical consideration previously reserved for humans, the human/animal binary has undergone deconstruction. Deconstructing the oppositions they posit, texts release the abject terms from subordination to the privileged terms and so redefine both. As the human/animal opposition deconstructs, humanity's relation to animals will never be the same.

In deconstructing themselves, philosophical texts undercut presence's foundational status. Presence emerges as interminably contaminated by representation, deconstructing the presence/representation opposition. When this opposition deconstructs, the sign becomes presence's trace. And presence reconfigures as a trace woven into a textual fabric that presence neither founds, controls, nor escapes. Rather than merely representing being as presence, traces refer to an alterity or otherness irreducible to presence and so unavailable for representation.

For the presence/representation binary, the only possible referent is presence. This binary's logic precludes reference to otherness, rendering alterity unthinkable. This whitening out of alterity's traces reduces others to the same, a homogenization that facilitates such institutional violence as "racial" profiling. Another example: In defining singular others as a presence's mutually substitutable representations, many but certainly not all "multiculturalisms" homogenize those others in the name of "diversity." A violence at work in educational, governmental, and corporate institutions seeking to know, govern, and manage "the diverse" profitably, such homogenizing reduction is virtually inescapable yet always deconstructable.

Understanding photographs through the presence/representation binary risks collaborating with such violence and closing thought to otherness. The trace underscores deconstruction's political implications. Photos refer to alterity in deconstructing representation. Reading photographs as singular others' traces, Barthes and Baudrillard dismantle representational assumptions about photography in quite distinct ways.

"Punctum": Roland Barthes on the Trace

Roland Barthes's *Camera Lucida: Reflections on Photography* (1981) specifies how reading photo-

graphs with sensitivity to the trace departs from representational reading. Barthes describes his initial "'ontological' desire" to know what photography is (3). This philosophical craving seeks a foundational presence, an ontological basis, on which to ground knowledge of photography. But Barthes recounts how his "'ontological' desire [...] to learn at all costs what Photography was 'in itself'" gave way to the traces marking the photos he found intriguing (3).

Unthinkable in representational terms, these traces prompt Barthes to ask: "why mightn't there be, somehow, a new science for each object? *A mathesis singularis* (and no longer *universalis*)?" (8). Deconstructing "'ontological' desire," Barthes argues that to do justice to the singular trace of alterity marking a photo, one must invent a singular science. Barthes invents such a science to read what he calls the *Winter Garden Photograph*, a photo of Barthes's mother. Barthes relates how this photo "achieved for [him], utopically, *the impossible science of the unique being*" (71). With this "*impossible science*," the irreplaceable otherness to which the *Winter Garden Photograph* refers becomes thinkable.

In *Camera Lucida* Barthes names the trace a photo's "*punctum*" and distinguishes it from the photo's "*studium*" (26–27). The category *studium* defines photographs through a presence/representation binary. The *studium* entails any photographic content thinkable in representational terms. Reducing a photo to its *studium* reads the photo as a sign that represents a presence. For example, ethnographers read photos as representing "ethnicity." One can exchange any photo one reads as representing ethnicity for any other such photo in that one reads them all as representing substitutable instances of the same presence: being Irish, being Jewish, and so on. One homogenizes singular others in knowing them through the predicates that constitute one's answer to the question, for example: "What is Chicano being?" A general science of ethnographic photography may be inseparable from a representational understanding of photographs and the concomitant reduction of others to the same.

Barthes's "*impossible science of the unique being*" reads a photo as irreplaceable in that its utterly singular *punctum* evades representation's homogenizing logic. To read a photo's *punctum* may be impossible, but deconstruction traverses impossibility. As Derrida's *The Deaths of Roland Barthes* (2001) underlines, deconstruction happens in *Camera Lucida* as the other's impossible haunting of the same. A singularity's trace, the *punctum*

is nowhere photographable in a photo's *studium*, yet the *punctum* supplements and mobilizes every element of the *studium*. The border between *punctum* and *studium* deconstructs even as the *punctum* remains heterogeneous to and breaches the *studium*'s representational closure. *Camera Lucida* marvelously demonstrates how, in representation's deconstruction, otherness becomes thinkable as otherness.

Jean Baudrillard: Hyperreality and the Trace

In the late 1960s, influenced by Marx, Baudrillard published sociological analyses of post-1945 consumer society. Baudrillard's analyses define objects, rather than commodities' producers, as sociological inquiry's locus. These objects form a "system of commodities" that is also a "system of signs" (Gane, Jean Baudrillard, 12). This concern with "the object" continues in Baudrillard's later writings but mutates dramatically in the 1970s as Baudrillard investigates contemporary societies characterized by global information technologies, biological cloning, and "reality" TV shows.

Baudrillard describes pre-modern societies as having engaged in symbolic exchanges characterized by semantic ambivalence and excessive, wasteful expenditure. The potlatch ceremony of the native peoples of North America's Pacific coast is an example. In contrast, Baudrillard correlates modern political economy with a subject-centered definition of reality as the representable. What one calls the real, Baudrillard argues, is largely European modernity's invention. For example, the gaze of Renaissance perspective "realized" the object in cleansing it of any symbolic dimension. Modernity relentlessly pursues the world's realization or objectification. The enchanting birds medieval hunting manuals depict become real in John James Audubon's disenchanting ornithological illustrations. While yielding exploitable knowledge, the real, the objective, is what the subject's gaze masters as representable. The real is an object's modern representational simulation, but in post-modern society the simulation of the real virtually subsumes reality.

In effect, Baudrillard understands the uneasy feeling that "if X is not on television X does not exist" as implying the following paradoxical answer to philosophy's "what is being?" question: what is the simulation of the real. Already an aggressive "take" on the object, reality now collapses into a hyperreality more real than reality. Digital photographic simulations of Audubon's illustrations posted on the World Wide Web are

hyperreal. Digitalization can cleanse marks of deterioration and enhance faded colors to produce a virtual replica of each illustration more real than any of them. If science takes the crow's genome to encode the crow's biological reality, the digital mapping of that genome renders it hyperreal. Modifying DNA to conform to digitally "perfected" model genomes, biologists may soon clone birds whose defining antecedents are hyperreal simulations. Even time itself becomes hyperreal. What cable news shows and high-tech military command centers call "real time" is a hyperreal co-presence that simulates a reality one never encounters in reality: One will never simultaneously be in Washington D.C., London, and Baghdad.

In simulating objects as more than real "virtual" realities, the hyperreal constitutes an almost "perfect crime." This crime attempts the world's complete and final realization as a hyperreality free of (reference to) otherness. Fortunately, the crime is never perfect: Singular traces of otherness remain. In the photo, Baudrillard finds a trace of the object's singular alterity that marks the disconcertingly smooth and claustrophobic hyperreal.

Photos register the object's singularity in bypassing the representational subject's imposition of an objective meaning. Objects do not pose themselves to meet the composing eye's expectations. Photography may give one a glimpse of the object when no one is looking at or objectifying it, suggesting one's disappearance as a subject and one's release from subjective identity's boundaries. Rather than simulating time or movement, the photo, unlike film, video, or computer animation, allows for an "objectality" distinct from subject-centered "objectivity." "Objectality" deconstructs the subject/object binary while seducing us into the vitally illusionary play of a world disillusioned by reality's hyperreal simulation.

For Baudrillard, by insisting on an aesthetic "vision" or a moralistic documentary purpose, photographers retreat from photography's seductive potential and impose a signification onto the photo. Baudrillard is himself a photographer, and several galleries have exhibited his photos. These photos tend to be of things or city scenes exhibiting their "objectality." For example, Baudrillard's *Covered by Hoarfrost* series includes color close-ups of a car coated with hoarfrost and backlit by the early morning sunlight glowing through the windshield and front window with tree trunks and branches in the background. Each photo lingers over the unique pattern of light and color that the chaotic variations in the frost's thickness and texture produce. With the windshield and windows

DECONSTRUCTION

covered with frost, the car is a useless object. In this uselessness, the car's "objectivity" emerges.

JACK DELANO

American

Jack Delano (1914–1997) was a documentary photographer who photographed social and economic conditions for the Farm Security Administration (FSA) through the 1930s, but later moved to Puerto Rico where he became a major postwar visual artist, working in illustration, photography, and film and as a composer. His photographic body throughout his career exemplify the FSA mission to use photography to make a social argument, to inform and educate, using the conventions of that documentary vision but also expanding them stylistically and thematically.

Schooled as a classical musician and as a fine artist, Delano's first photographic study of coal miners in Schuylkill County, Pennsylvania, for the Works Progress Administration (WPA) reflects his earliest attempt at critical engagement with his

photographic subjects. He became intimately involved in their lives and lived in the miner's homes and was thus able to photograph with compassion rather than detached objectivity. He knew about being an outsider from his experience as an immigrant born in the Ukraine and raised in Philadelphia where he learned to be "Americanized" including changing his name. This powerful exhibition, informed by the aesthetic values of the popular front highlighting the achievement of workers, was acclaimed by many, including photographer Paul Strand, and led to his hiring by Roy Stryker for the coveted job of staff photographer for the Historical Division in 1939. There, Delano worked closely with his wife Irene whom he married shortly after starting to work for the FSA until 1942. Irene assisted him with shooting scripts, making contact with subjects, and was a lifelong collaborator and artist in her own right.

Delano's work for the FSA was prolific, often focusing on workers' lives and detailing both work and leisure, expressing the mission of the FSA to create a repository of images of American life. His assignments included migrant workers, Portuguese fishermen in Rhode Island, Scandinavian communities in Minnesota, tobacco farmers in Connecticut, displaced persons as a result of the construction of military facilities and public works during World War II, industrialization in the Virgin Islands, and the economic conditions in Puerto Rico. Following the dictates of Roy Stryker, who provided photographers with shooting scripts, Delano also expanded and focused on racial injustice, a major theme in his work. For instance, his photographic study of the residents of Green County, Georgia, for sociologist Arthur F. Raper's *Tenants of the Almighty* feature rare images of inmates in Greene County jail, who while told to dance and sing for the photographer are also portrayed with dignity rather than exoticism or ridicule.

Delano sought to garner respect for his photographic subjects by highlighting their humanity through composition, framing, and careful lighting; he formed a relationship with the subjects rather than "stealing their image," and finally, included aspects of the person's material culture. His striking frontal portraits of families, workers, and farmers are shot from low angles to convey a sense of power or framing the subject against the sky. When asked, Delano cited Ben Shahn and Walker Evans as two influences on his work: Shahn for his artistic composition and Evans for his crisp attention to detail. Like other FSA photographers, Delano did not develop or print his own film; thus framing, composition, and lighting at the time of exposure were essential to the photographic narrative he constructed. Other influences on Delano's practice were formed during a Guggenheim Fellowship to Europe in 1946, which exposed Delano to religious iconography, some aspects of which found their way into his photographs. Some of his photographs have, for instance, a triptych-like composition or a strong internal narrative, made vivid by depth of field and the equal lighting of background and foreground. This strong depth of field was achieved by using various kinds of lighting, natural and artificial, including the use of bulbs in lamps.

Delano openly defended his decision to pose his subjects since photography was never neutral and always involved a number of decisions, large and small. Indeed, Delano carefully set up pictures, arranging family members, lighting the scene—often towards creating a sense of naturalism. In

some of his photographs he created a feeling of deliberate appeal to the viewer for sympathy or understanding by directing his subject's gaze at the viewer, for example, in the photograph of a preacher and his wife, *Greene County Georgia*. Delano did not feel that this technique detracted from the documentary value of the photograph. Rather, he felt that framing the photograph and attention to composition was an aspect of truth telling. A photograph of Polish tobacco farmers (1940) laughing has been accused of being posed, but Delano argues that he was not posing them rather he was interacting with them. He also used mirrors in unusual ways, such as to expand the visual horizon, as in his photograph at a Thanksgiving dinner (1940).

Working mostly with a 35 mm and occasionally with an 8 × 10 camera, Delano wanted foreground and background to be produced with equal clarity, to view the subject most fully in their environment for which he used a medium shot. He often chose photographs that had vivid singular elements, which could express a universal and shared meaning regardless of the social background of the viewer. Delano's concern with the reception of the image began with his first exhibition of coal miners in which he refused to use frames. He then expanded through his later television and film productions in which reception among the working people whose lives were captured was part of his political project towards the inclusion of people who had been historically marginalized. Although often shooting in black and white, on his assignment to document Puerto Rican sugar growers, he used the newly developed Kodachrome color transparency film.

An effort towards racial and cultural equality underpinned his work in Puerto Rico where he lived and served as director of the Puerto Rican government's radio and television network following the war and Puerto Rico's new status as a Commonwealth.

Delano was active in the country's arts and cultural programs, and is considered a major cultural figure. Specifically, Delano's photographs were used as part of a broad program for social reform enacted by Luis Muñoz Marín, the first elected governor of Puerto Rico. Delano's photographic series of the public mourning of the 1980 funeral of Marín is important as a private and public tribute. In 1998, Delano was honored with the first major retrospective of his work, *The Art of Jack Delano*, a traveling exhibition organized by the Smithsonian Institution accompanied by the publication of his autobiography, *Photographic Memories*.

Biography

Born Jack Ovcharov near Kiev, Russia, 1 August 1914; emigrated to the United States in 1923; naturalized 1928; adopted the name "Delano" 1940. Educated at the Settlement Music School, Philadelphia, 1925–1933; Central High School, Philadelphia, 1928–1932; Pennsylvania Academy of Fine Arts, Philadelphia 1932–1937; photographer with the Works Progress Administration (WPA) Project, New York, 1936–1937; freelance photographer working mainly for the United Fund, New York, 1939–1940; FSA staff photographer 1939–1943; Office of War Information, 1942–1945; director/producer for educational film services, 1946–1952; program director for the education television station in San Juan, 1957–1964, general manager of TV and radio service of Puerto Rico, 1964–1969. Cresson fellowship, 1936–1937. Awards: John Simon Guggenheim Memorial Fellowship, 1946, 1960; UNESCO fellowship to study educational techniques used by television stations in Asia and Europe to see how they could be applied to Puerto Rico, 1961; National Endowment for the Humanities Grant in 1979; Composers Award Institute of Puerto Rican Culture, 1984. Died in Puerto Rico, August 1997.

Individual Exhibitions

1938 *Anthracite Coal Miners*; Pennsylvania Railroad Station Gallery, Philadelphia, Pennsylvania
 1977 Sonnabend Gallery; New York, New York
 1978 Art Students' League; San Juan Puerto Rico
 1984 Daytona Beach Community College; Daytona Beach, Florida
 1986 *Before and After: The FSA*; Daytona Beach Community College, Daytona Beach, Florida (with Arthur Rothstein and Marion Post Wolcott)
 1998 *The Art of Jack Delano*; traveling exhibition organized by the Smithsonian Institution, Washington, D.C., and traveling to Rafael Carrion Pacheco Exhibit Hall, Old San Juan, Puerto Rico; Smithsonian Institution, Washington D.C.; El Museo del Barrio, New York, New York; Chicago Cultural Center, Chicago, Illinois; Orlando City Hall Public Art Program, Orlando, Florida; New Jersey State Museum, Trenton, New Jersey

Selected Group Exhibitions

1955 *The Family of Man*; Museum of Modern Art, New York, New York, and world tour
 1962 *The Bitter Years*; Museum of Modern Art, New York, New York
 1976 *FSA Photographers*; Witkin Gallery, New York, New York
 1977 *Documenta 6*; Kassel, West Germany

1978 *Work*; Fine Arts Museums of San Francisco, San Francisco, California
 1979 F.S.A.; les Annees Ameres de l'Amerique en Crise, 1935–1942, Centre Georges Pompidou, Paris, France, and traveled to Galerie Municipale du Château d'Eau, Toulouse, France
 1981 *Farbe im Photo*; Josef-Haubrich-Kunsthalle, Colgone, Germany
 1982 *Floods of Light*; The Photographers' Gallery, London, England
 2004 *Changes: 50 Years of Transformation in Puerto Rican Life*; Casa de la culture, Chicago, Illinois

Selected Works

Mr. And Mrs. Andrew Lyman, Polish tobacco farmers and FSA clients, Windsor Locks, Connecticut, September 1940
Pumpkin pies and Thanksgiving dinner at the house of M. Timothy Levy Crouch, a Rogaine Quaker, Ledyard, Connecticut, November 1940
A preacher and his wife, who lived in a converted schoolhouse with their two grandchildren. Heard County, Georgia, April 1941
In the home of an FSA borrower, Greene County, Georgia, June 1941
The family of Russell Tombs moving out of their home, which was in the area being taken over by the army, Caroline County, Virginia, June 1941
A farm laborer's widow living on a Farm Security Administration project near Manatí, Puerto Rico, 1941
Boy in sugarcane fields bringing lunch to his father. Guánica, Puerto Rico, 1942

DEPTH OF FIELD

Depth of field refers to the area of critical sharpness within a photographic image. A lens can only focus on one area in an image at a time, and this area is also called the zone of focus and refers to the distance between the closest and farthest parts of an image that are reasonably sharp. Depth of field varies because of a number of factors such as the size of the aperture, the distance between the camera and the subject, and the focal length of the lens. Depth of field is used for creative control and allows the photographer to manipulate the area of focus in a photographic image to a small area of selective focus, a large area of overall sharpness, and any amount in between these two extremes.

A mechanism inside the lens called a diaphragm creates an opening in its center named the aperture, and the diaphragm allows the aperture to change in size creating a variety of aperture settings. The aperture setting is the most influential over depth of field; the larger the aperture in the lens the lower the area of critical sharpness, and the smaller the aperture in the lens the larger the area of critical sharpness. Aperture sizes on most lenses progress through a set of numbers called F-stops, which are numerical values for the opening's area and move from the largest to the smallest in a sequence: $f/1.0$, $f/1.4$, $f/2$, $f/2.8$, $f/4$, $f/5.6$, $f/8$, $f/11$, $f/16$, $f/22$, $f/32$, $f/64$. Setting the aperture at the largest opening is sometimes called "shooting wide open," and the phrase "stopping down" is used to indicate the opening in the lens becoming smaller. If a lens has a variable focal length or a zoom function, the widest aperture may also vary as the focal length of the lens changes. On a darkroom enlarger, the aperture setting of the lens will also affect depth of field in a photographic print. If a print requires more overall sharpness, using a smaller aperture on the enlarger lens will increase the sharpness of the photographic print slightly, while using a large aperture on the darkroom enlarging lens limits the overall range of sharpness projected through the image.

The aperture affects depth of field in a photograph through the formation of small, round image elements called circles of confusion. These circles of confusion are created as light passes through the opening in a lens, and their size is dependent upon the aperture setting. A larger aperture will form big

circles of confusion, and a small aperture will create small individual image elements. Thus, using a small F-stop will create an image made up of small circles of confusion, and using a large F-stop will create an image area made of large circles of confusion. The smaller the circles of confusion, the sharper an image will appear on the photograph. The area in the image that is the sharpest is called the plane of critical focus, and depth of field is measured out from this plane. The larger the area on either side of the plane of critical focus, the wider the degree of sharpness; a large area of depth of field is referred to as wide, and a small area of depth of field is called shallow.

Depth of field can also be controlled by the focal length of a lens and the distance between the subject and the lens. A lens with a longer focal length such as a telephoto will condense space and produce a shallow depth of field, while a lens with a short focal length such as a wide angle or fisheye will produce an image with a wide depth of field. As the focal length of a lens increases in a telephoto lens, the magnification of the image will also increase and result in more image distortion that decreases depth of field. A wide angle lens has a very small amount of magnification and thus creates a minimum amount of distortion in the image, resulting in a wider depth of field. The distance between the subject and the lens will also affect depth of field: The farther the object is from the camera lens, the wider the depth of field. As an object moves away from a camera lens, the overall image area is increased and this allows for a larger area of sharpness in the image. The closer an object is to the lens, the shallower the depth of field.

Depth of field can be determined in a number of ways on a camera, such as using the depth of field scale on a lens, utilizing a depth of field preview function if it is available, and setting the focal distance of the subject through zone focusing or hyperfocal focusing on the lens. A depth of field scale is often placed on manual lenses, and will show the area of sharpness relative to the aperture chosen for an image. Many cameras include a depth of field preview function or show the area of critical sharpness through the lens and the viewfinder of the camera as the aperture, focal length, and distance to subject vary. Zone focusing sets the area of depth of field

DEPTH OF FIELD

relative to the needed sharpness of a subject and the image composition in advance of shooting the picture, while hyperfocal focusing sets the focus of the lens on the hyperfocal distance (the minimum focal distance that will allow infinity to remain sharp in the image.) Selective focusing and manipulating depth of field is used in all photographic imagery to direct the impact of an image's visual composition and theme. Limiting depth of field to a shallow area will isolate a subject from a background, and using a wide depth of field will emphasize the entire image area. Photo-journalists and landscape photographers generally exercise extreme control over depth of field in their genres. Digital darkroom tools such as Adobe Photoshop can also alter the appearance of sharpness in an image through manipulation tools that increase or decrease image sharpness in selective areas.

DEVELOPING PROCESSES

Overview

In order to make visible, stable images, exposed silver-gelatin plates, films, and papers must be processed through the use of various chemical solutions. Most consumer grade prints and fine art prints are made by the negative-positive system; a negative film or plate is exposed in a camera and processed to yield a negative image. This negative image is exposed onto printing paper by contact printing (1:1 size) or projection (enlargement). The exposed paper is processed in a procedure analogous to the film processing but typically with a separate set of chemicals. This printing process reverses the tonal scale again to yield a final positive image.

Processing of black-and-white negative plates, films, and printing papers is generally a sequence of five steps consisting of (1) develop, (2) stop, (3) fix, (4) wash, and (5) dry, but a number of auxiliary treatments may be added. The development step is where a visible image is developed from the invisible latent image contained in films and papers. Stop bath is used to arrest the development process as well as minimize the developer carryover to the next step. The fixing process removes unexposed and

undeveloped parts of photosensitive silver halide from the negative and papers, thereby making the material insensitive to further light exposure. The fixed material is washed to remove the processing chemicals, and then dried for storage.

In silver-gelatin processes, when an individual silver halide crystal (0.1 to 3 μm diameter in size) in the sensitized layer of the photographic material (film or paper) is exposed to light, a tiny speck of metallic silver (photolytic silver) is created, called a latent image center. This speck can be as small as a few silver atoms and is not visible. The latent image is made visible or developed in the development step. Individual developed silver grains contain up to several billion silver atoms. Thus, development is a chemical amplification process with a gain factor on the order of a few billion.

On the other hand, there is a class of silver-gelatin material where development is not used. This is the printing out process (POP, which also stands for print out paper), which is extremely slow contact printing material, mainly used in the early years of silver gelatin photography. In POP, the visible image is formed entirely by photolytic silver, and therefore the exposure must be much more

intense and prolonged in order to create grains of metallic silver that are large enough to form a visible image without chemical amplification.

It is obvious, by comparing the developed out process and printing out process, that the development process is a major technological advance that greatly improved photographic sensitivity. Together with the various sensitizing techniques introduced to silver-gelatin emulsions and improved optics, increased overall photographic sensitivity in the twentieth century enabled the photographing of a far wider range of subjects, such as fast moving objects and dimly lit scenes.

History of Developing Processes

Development is an electrochemical reduction process, where a silver ion gains an electron from a reducing agent, to deposit metallic silver selectively on exposed crystals having a latent image center. Historically, the silver ions were supplied from the developer solution, as in William Henry Fox Talbot's developer for the calotype. Calotype developer consisted of a solution of gallic acid fortified with silver nitrate. Silver ions are reduced by the gallic acid, and the metallic silver was deposited on the latent image to form a visible image. This type of developer is called "solution physical developer," which is very slow working and gives slow photographic speed, and therefore is rarely used in current practice. In modern developers, silver ions are supplied from within the silver halide crystals. This type of developer is called "direct developer" or "chemical developer." These two modes of development are not mutually exclusive, and in fact, solution physical development occurs to limited extents in many modern developer solutions, which predominantly use chemical development. Readers are warned that the terms "physical," "direct," and "chemical" are misleading.

Pyrogallol developer, introduced for the wet collodion process in the 1850s, had been used as a part of physical developer in acidic solutions, but it also started the era of direct development when J. Burgess recommended the alkaline developer pyrogallol in ammonia in 1973. This was soon adapted to development of silver gelatin dry plates, thus entering the years of chemical development.

The decade of the 1880s saw the first surge of intense searching for new developing compounds, with many compounds being introduced as developing agents. Developing agents are chemical reductants, but useful developers must have certain electrochemical properties as well so that the developer can act selectively on exposed crystals. In 1880, Abney introduced hydroquinone developer, and

Eder and Toth catechol developer. They were followed by *p*-aminophenol and *p*-phenylenediamine by Andersen in 1888, Eikonogen (1-amino-2-naphthol-6-sulfonic acid) by Andersen in 1889, Amidol (2,4-diaminophenol) by Andersen and Bogisch in 1891, Glycin (N-methyl-*p*-hydroxyphenylglycine) by Bogisch and Metol (N-methyl-*p*-aminophenol) by Bogisch and Hauff, both in 1891. These developing agents gave images of varying speeds and contrasts. The way images emerged in the developing plates also varied. In hydroquinone developers, the highlights emerged first and grew in density, while midtone and shadow areas after considerable lag slowly appeared. On the other hand, in Metol developers, shadows and highlights appeared almost simultaneously and grew in density together. Since various developing agents worked differently, many solutions were formulated with different agents for diverse applications.

As early as 1889, a developer solution containing two developing agents was formulated. It is quoted by Levenson (1991) that Henry J. Newton reported that he had added hydroquinone to an Eikonogen developer to boost the highlight density. His developer offered the best of both agents. Shortly after, developers of Metol-hydroquinone (MQ) combination were formulated, and it was noted that the MQ developer was more active than the sum of Metol and hydroquinone activities when used alone. There were several speculative explanations and partial proofs for this "superadditive" phenomenon, but convincing proof had to wait for Levenson's work in the late 1940s, indicating that the image is developed by Metol, and the reacted Metol is regenerated to become active again by hydroquinone, demonstrating the "regeneration theory" of superadditive development. However, without waiting for the science, various empirical data were gathered and practical MQ developers were made. One of the most important MQ developers is the Eastman fine grain (D-76) developer by Capstaff in 1926, which remains one of the most important black-and-white film developers today. The MQ combination was found to be very effective, versatile, and capable of producing high image quality, so that most other agents were made obsolete or spared for special purpose applications, with an exception described next.

Another wave of new developing agents came after the discovery of Phenidone (1-phenyl-3-pyrazolidone) by Kendal in 1940. Various chemical derivatives of Phenidone, as well as other compounds containing a similar heterocyclic ring structure were studied. Phenidone is much more potent than Metol and more rapid in developing images

when combined with hydroquinone. The combination of Phenidone and hydroquinone is called the PQ system. It was also less susceptible to accumulation of free bromide ions, a development reaction byproduct that retards further development when used in typical fine grain film developers. These advantages of Phenidone improved several aspects of the development process, especially in volume processing plants, once this compound became commercially available in 1953. Also, since Phenidone is used in such a small quantity, it enabled formulation of packaged developer concentrates, which are ready to use by simply diluting with water. However, original Phenidone (also called Phenidone A) was relatively unstable in alkaline solutions. Thus Phenidone B (4-methyl-1-phenyl-3-pyrazolidone) and Dimezone (4,4-dimethyl-1-phenyl-3-pyrazolidone) were introduced. These compounds solved the instability problem but they had a new shortcoming of not being very soluble in water. Ultimately, Dimezone S (4-hydroxymethyl-4-methyl-1-phenyl-3-pyrazolidone) was introduced, which solved both the stability problem in alkaline solutions and the solubility problem in aqueous solutions. In today's commercial developers supplied as liquid concentrates, Dimezone S is commonly used in a superadditive combination with hydroquinone, with PQ and MQ developer systems covering the majority of black-and-white film and print developers in contemporary use.

Another developing agent from the 1880s that is of current importance is *p*-phenylenediamine. Chemical derivatives of this agent are used in developers for color photography. When exposed silver halide crystals are developed with these agents, the developing agent is oxidized. An oxidized developing agent reacts with a dye coupler to form a dye *in situ*. Dye couplers are usually colorless, but when reacted with oxidized forms of *p*-phenylenediamines, they form dyes whose color depends on the dye coupler molecule. In other words, dye coupler provides one-half of a dye molecule, and *p*-phenylenediamines the other half; the developing reactions of the exposed crystals combine the two halves. The developed metallic silver is then removed, and the resulting image consists of the color dyes. This is the major difference of chromogenic (color) development from black-and-white development.

Practical chemical developer solutions usually contain developing agent(s), an alkaline agent, and a preservative. Many developers also contain an antifogging agent. The alkaline agent in early use was ammonia solution, but it was prone to inconsistent results, and was replaced with more

stable agents such as hydroxides, carbonates, and borates. Carbonates and borates form an effective buffering system in the pH ranges commonly used for developer solutions. Early chemical developers lacked a preservative and had short useful lives. Berkeley introduced sodium sulfite to the developer solution in 1882, which prolonged the useful life of the developer. Sulfite in various forms, including sodium sulfite itself, is extensively used in modern developer solutions. Developers of high developing power often cause fogging that does not appear in developers of lesser powers. This type of fog was suppressed by bromide added to the developer solution. The effect of bromide in developer was studied from the very early days of sensitometric investigation of silver-gelatin materials, and it remains one of the most frequently used antifogging agents today, along with newer agents such as benzotriazoles and 1-phenyl-5-mercaptotetrazole.

With numerous developing agents discovered, and many variables associated with them, a great many developer formulae were concocted and published for pictorial negatives and prints. It is conceivable that each new developer was hoped to improve the image quality, photographic speed, tonal range of the developed image, graininess, and perhaps other aspects of the image quality, as seen in all kinds of advantages claimed for the formulae. However, as photographic scientists and engineers accumulated knowledge and experience, it was realized that the entire range of developer solutions could be formulated with a few standard developing agents (Metol, Phenidone, and hydroquinone) and a few common agents. Today, pictorial photographic films and papers are manufactured to exacting photographic properties and technical specifications, to be processed in one of the standard developers. Modifying some properties of modern material through adjusting the developer formulation is possible only with often unacceptable costs in other aspects of the image quality.

As well, the technical requirement for developers changed over time as photography innovated with both photographic processes as well as equipment, particularly in advances in the camera. In the early years of dry plate photography taken with large-format view cameras, the negatives were printed on papers of generally low contrasts, by contact printing, or with low magnification factors. Therefore, high contrast negatives were preferred and graininess was unimportant. However, when high-contrast print emulsions became common, especially in combination with the 35 mm film format, a low contrast developer with improved fine grain quality became necessary. Eastman D-76 fine grain devel-

oper of Capstaff, previously mentioned in relation to the MQ developer, appeared just at the time this need was realized. Another important requirement was a developer suitable for consistent processing of a large volume of materials, especially in the processing of motion pictures.

Most amateur processing chemicals are used only once, but this practice is wasteful; a number of alternative processing technologies were developed. While small amounts of developing agents are consumed in the process, loss of the agent can easily be supplemented. The main cause of diminished activity in repeatedly used developer solution thus is accumulation of a development reaction byproduct, free bromide ions, and it is the removal of byproducts that presented a major challenge in reusable developers. In the early years of motion picture processing, two-bath development was studied, where the first bath contained developing agent and the second bath, alkaline buffer with no developing agent. The idea is that the film emulsion absorbs the developing agent in the first bath, and the actual development is activated in the second bath, where the byproduct is released. Since the film is not fully developed in the first bath, this more costly solution can be used repeatedly, while the second bath, could be inexpensively replaced.

Although the two-bath development technique yields acceptable results, it provides a limited range of contrast control. The more preferred technique is to replenish the working bath of the developer. The replenishing solution is designed to maintain a stable pH value and other critical parameters of the developer bath as well. The replenishing technique was a major improvement, but later, minilab machine processing increased the pressure to further reduce the amount of waste solution. A later technology takes part of the working developer bath and removes free bromide ions from it by an ion exchange resin, and puts the rejuvenated solution back into the bath, together with a small quantity of the replenishing solution to supplement for the spent agents, greatly reducing the amount of waste solution. This was very important for the convenience of machine operation as well as the cost of proper disposal of industrial waste solutions.

Stop Bath, Fixing, and Subsequent Handling

Following development, the film or paper is usually immersed in an acid stop bath to acidify the adsorbed solution, thereby rapidly arresting the development reaction. In machine processing, adsorbed developer solution is sometimes removed by

a squeegee. In small scale darkrooms, this process is sometimes substituted with a plain water rinse. Despite its name, the stop bath does not literally end the development process. Its most important role is to prevent the developer from being carried over to the fixing bath.

The developed and stopped material is then fixed. The fixing bath contains thiosulfate, which dissolves undeveloped silver halide crystals. In black-and-white processing, acid fixer is traditionally used to minimize the risk of dichroic fog caused by developer carryover. Alum hardener is often added to the fixing bath to minimize the risk of emulsion damage while handling the wet material. However, modern films and papers have generally much more durable coating layers than the time these acid hardening fixers were designed, and therefore hardener is optional and often unnecessary in manual processing. Some fixing solutions are based on sodium thiosulfate and others, ammonium thiosulfate, or a combination of sodium thiosulfate and ammonium chloride. Those that contain an ammonium salt are called "rapid fixer" because they fix materials faster than traditional sodium salt. (Thiosulfates, especially sodium thiosulfate is often called "hypo" but this is a misnomer.)

Each time it is employed, the fixing reaction uses up a small amount of thiosulfate and releases silver-thiosulfate complex ions. The solution becomes exhausted when an excessive amount of silver accumulates in the solution. As in the case of enabling developer to be reused, it is the removal of the silver that is the focus of regenerating fixing bath. There are several practical methods in use for processing on various scales, but because silver is rather precious, methods that maximize its recovery and minimize the volume of waste solution are in widespread use in commercial photofinishing.

After successful fixing of the photographic image, the material must be thoroughly washed because high levels of residual thiosulfate is detrimental to the life of the photograph. The washing time necessary to achieve a level of residual thiosulfate that enables very long life expectancy varies widely, depending on the material, the fixer formula, and the washing water. Impermeable support materials such as polyester film and resin-coated paper can be sufficiently washed in a few minutes of running water. However, traditional fiber-based prints adsorb thiosulfate ions rather stubbornly in both their fibers and sizing materials, and adequate washing requires much longer time. Therefore, fiber-based prints are usually treated with a washing aid, which is a buffered sulfite solution, which

DEVELOPING PROCESSES

accelerates desorption of thiosulfate by an ion exchange mechanism.

In the past, a “hypo eliminator” formula containing peroxide was recommended. This treatment chemically destroys thiosulfate to a harmless form, but this solution is no longer recommended because the treatment is now known to be harmful to the image. Since the necessary washing time to produce prints with good permanence is variable, it is recommended to run a quality control test in each darkroom. One test for residual thiosulfate is called “silver nitrate test” and is facile and sensitive enough for most purposes. The test should be run at regular intervals, emphasizing whenever the new printing paper, fixing solution, or washing water is introduced to the darkroom.

In past decades, conservation scientists or conservators found problems with the permanence of silver-gelatin prints and microfilms that had been properly processed and washed. The problems were attributable to improper storage and display conditions. Silver-gelatin materials enjoy very long life expectancy if they are properly processed, washed, and stored. Good storage conditions require low temperature, low humidity, and absence of environmental pollutants and other oxidizing agents, including those from the storage container materials, such as cardboard, wood, adhesives, and paints. The image is also susceptible to pollutants from industrial exhaust and oxidizing agents from the atmosphere, such as ozone. While it is difficult enough to keep valued photographs under ideal storage conditions, it is virtually impossible if the desire is to have easy access to them or indeed if they are displayed.

In order to make the image more permanent in less than ideal conditions, toning treatments of prints have been found to be effective. In particular, treatment with polysulfide toners (such as Kodak Brown Toner) is convenient as well as inexpensive and has been found to be highly protective in a number of studies. Prints should be toned after fixing and washing. Prints must be thoroughly washed again after toning to remove the toning solution, because residual toner is also detrimental to the image. Although polysulfide toned images have increased stability, proper storage conditions remain the key factor in a photographic print's longevity.

Environmental Concerns

Concerns for preserving the environment have also been raised in recent decades. Volume processors use efficient processing methods where waste solution is minimized, which is important in terms of

minimizing chemical waste and the cost of disposal treatment. On the other hand, attempts were made to reduce environmental impacts from the effluents of small-scale darkrooms, which are discharged directly into municipal sewer systems, by replacing the rather harmful hydroxybenzene compounds (developing agents such as hydroquinone, catechol, and pyrogallol) with harmless ascorbic acid and its isomers. The developing action of ascorbic acid was known in the early 1930s and it was one of the preferred developing agents among modern researchers studying the mechanisms of development. It was known, however, to be difficult to make practical, robust developer solutions using ascorbic acid. Environmental awareness re-directed attention to these harmless compounds (ascorbic acid is in fact vitamin C), and attempts to use ascorbates are seen in patent literature for a range of applications from low contrast, fine grain film developers to high contrast medical imaging. Major manufacturers sold developers that employed ascorbates in place of hydroquinone in PQ developer systems. However at the beginning of the twenty-first century, this effort has lost importance as most standard solutions already have low environmental loads and most amateur, commercial, medical, and scientific photographers and photojournalists have rapidly migrated to digital imaging technology, leaving only a small population of fine art photographers in the world of traditional, wet-processed materials.

There are many ways to look at the developing processes and their history. It is important to note that many darkroom manuals and photography textbooks contain technical errors and repeat outdated misconceptions; interested readers are encouraged to consult original research publications and review articles written by experts in a particular branch of developing processes. Coote (1982) is a darkroom manual rather rich in technical aspects. Mitchell (1984) is an introductory textbook of photography as a general science class at college level. At a more technical level, Keller (1993) and Locker (1996) are encyclopedia sections giving concise accounts of the photographic process. Haist (1979) is a comprehensive book on the chemistry of photographic processing. Sturge (1977) and Proudfoot (1997) are handbooks for those interested in technical aspects of photography. The newer edition of Sturge (1977) has a considerably different content from the seventh edition. James (1977) is a highly specialized technical reference book for photographic chemists. Levenson's papers give overviews of development reactions with emphasis on superadditivity, for which he

made major contributions. Historiography of key technologies and applications in silver gelatin emulsions and processing is one area of void in literature. Jacobson (1991) gives an overview of the progress of the photographic process. Eder (1945) is a book on the history of photography by one of the early active contributors to the silver-gelatin process. Baier (1964) is another comprehensive book on the same topic. Early history is also described in older editions of Neblette (1930). Mees (1961) is a book describing the history of photographic research at Kodak Research Laboratories.

PHILIP-LORCA diCORCIA

American

New York-based Philip-Lorca diCorcia became an essential photographer on the international scene in a few short years in the 1990s. He emerged in the 1980s as conceptual photography had become a significant genre in contemporary photography with pictures that provided an interesting late-century look on the long-standing fiction–reality dialectic that characterizes photography. His work requires careful attention: At first glance his color pictures seem ordinary, not unlike snapshots or amateur efforts. People seem fixed in banality, suspended in their actions, and expressive of stereotypes or cultural prejudices. A closer look, however, reveals clues left by the artist that indicate this is not a captured slice of life, but a well-thought-through scenario, carefully set up and

composed both before the shot is taken and during the process of shooting.

His earliest work was based on his family experience; his best-known early photograph, *Mario*, 1978, was carefully staged by diCorcia and the forlorn young man looking into the refrigerator is in fact his brother. This photo was part of diCorcia's *Family and Friends* series, a fictional "documentary."

diCorcia moved to New York in 1984 to pursue commercial work, including fashion and advertising photography, which do not diverge greatly from his fine-arts work. A 1993 exhibition curated by John Szarkoski at the Museum of Modern Art (MoMA) heralded his international career.

The photographic universe of diCorcia is in tension between microcosm and macrocosm, the private and public worlds where what seems familiar

may not be, and where what seems intimate may, in fact, be artifice. His collection entitled *A Storybook Life* (consisting of pictures taken between 1975 and 1999 presented as a group in 2003) can be read as a retrospective tracing his career in 76 images. Those portrayed are engaged in trivial or everyday activities: a father with his daughter, a cook, a woman laying down on a bed, a man leaning on his elbow on a car door, having a discussion with the female driver. diCorcia, however, makes his subjects appear singular by his treatment of the scene. The woman who cooks seems removed from the reality of what she is doing; her gestures are suspended, the knife in her right hand, food in the other. Artificial and natural lighting is combined, blurring the photograph as a straightforward document a skill developed by diCorcia in his commercial work. The seemingly naturalistic but highly planned set up places his subjects inside a story, albeit an ambivalent or shifting narrative. With this method and the resulting image diCorcia proposes a new approach to Henri Cartier-Bresson's "decisive moment."

In his series *Hollywood* (1990–1992), composed of 20 handsome and haunting ektacolor prints, diCorcia chose those who have dropped out of mainstream society as photographic topics, including male prostitutes, drag queens, and drug addicts found on California's Sunset Boulevard and Santa Monica sidewalks. For this series, diCorcia initially chose sites (streets, motels, restaurant), planned the set up and the lighting, and then sought out models. These models are in the final work identified by their name or nickname, their age, and their hometown, and become "merchandise" in the strict sense of the word because diCorcia also added to the title the amount paid to the model, as in *Eddie Anderson; 21 Years Old; Houston, Texas; \$20*, 1990–1992. Unlike Nan Goldin or Jack Pierson, who incidentally were his classmates at the School of the Museum of Fine Arts, his pictures place each human being in solitude pregnant with a dramatic intensity. Yet diCorcia's working method was in fact subversive, for he paid his models from a grant he received from the National Endowment for the Arts, which at that time had set guidelines in reaction to the controversies that had erupted around Robert Mapplethorpe. diCorcia explained:

I started to think about that particular project in response to social antipathy towards gays and homosexuals at the end of the 80s and to a generally conservative backlash against that aspect of society. ...I was given a government grant on condition my work did not go against moral values. I protested by indicating in the legends how much I had paid the hustlers using money from this government grant.

The series *Two Hours*, composed of 11 large-scale images taken at the same location on the streets of La Havane, and the series *Streetwork*, depict passersby. But diCorcia does not so much take pictures of individuals as he focuses on a new species, the inhabitants of the street. The people photographed by diCorcia are strange hybrid beings characterized by their stereotypical humanity, like the businessman with his newspaper under the arm, umbrella in one hand and mobile phone in the other, yet becoming unreal archetypes that are barely recognizable as real humans. As always, diCorcia's shooting technique accentuates the fictional character of these photographic sequences. In these series the camera is placed level with the ground instead of at eye level, and he uses flash to augment the natural lighting. The mournful unreality of fiction that infuses his work expresses the alienation and dislocation of contemporary urban life in the United States and around the world.

THOMAS CYRIL

Biography

Born 1953 in Hartford, Connecticut. Attended University of Hartford early 1970s; School of the Museum of Fine Arts, Boston, Massachusetts, Diploma, 1975; Post Graduate Certificate, 1976; Yale University, New Haven, M.F.A., 1979. Relocated to New York City; freelance magazine photographer, 1984–present day, shooting for *Esquire*, *Fortune*, *W*, and *Details*. *Strangers* series, shown at Museum of Modern Art, 1993. Recipient Artist Fellowship, National Endowment for the Arts Fellowship, 1980, 1986, 1989; John Simon Guggenheim Memorial Fellowship, 1987. Visiting Critic, Yale University. Living in New York.

DIGITAL PHOTOGRAPHY

"Digital photography" is a widely used term for the various computer-based technologies being employed to substitute for some or all of the chemical-based technologies of traditional photography. The term "digital imaging" is sometimes used interchangeably with "digital photography" but it

has a broader meaning, extending to images of non-photographic origination. An even broader term for the use of the computer with visual materials is "computer graphics."

Digital photography encompasses both direct "digital capture"—that is, the recording of photo-

graphic images by a camera employing an electronic sensor and digital data storage rather than film—and indirect “digital conversion” through the scanning of film-based photographic images or existing prints. Once created—by either method—digital image files (computer data that represent a photographic image) may be easily modified, duplicated, transmitted, displayed on screen, or “output” to printed form by a wide variety of means. Some of the printing technologies used within digital photography are fully digital themselves (computer-driven printers such as dye-sublimation or inkjet, or even mass-production offset) and some are hybrids (using computer-driven lasers, for example, to expose standard photographic printing paper that must then be chemically developed).

Traditional photographic technologies are now often referred to as “analog” to distinguish them from those that are “digital.” Analog recordings retain a physical relationship to the phenomena they record; the densities of film are proportional to the intensities of light that produced them in the same way that the grooves of a record emulate sound waves. Digital recordings, on the other hand—whether of light or of sound—maintain no analogous relationship to what they represent. An image is translated by the digital camera or scanner into a series of numbers (ones and zeros). To again become intelligible to human senses, digital data must be converted back into analog form; this happens as it is being displayed on a monitor or being printed.

In traditional photography, millions of microscopic grains of silver halide molecules dispersed through a film’s emulsion respond proportionally to the intensity of light striking them. In digital photography, millions of microscopic sensors in a grid respond proportionally to the intensity of light striking them. The sensitivity of either a film or a digital capture system may be expressed as an ISO (International Standards Organization) rating; this is a fixed value in the case of film but can be user-adjustable in digital cameras. Generally, the higher the ISO rating of a film, the higher its visible “graininess.” As the ISO rating of a digital sensor is increased, its “noisiness” generally increases. After film has been exposed, no visible image exists; a pattern of changed energy states in the silver halides, known as a “latent image,” must be chemically developed for the image to be revealed. Neither does a visible image exist in a digital sensor after it has been exposed; it is created through sets of calculations—or algorithms—performed within the circuitry of the camera or in a separate computer. After an image has been created using film, the image continues to reside in the film itself as a unique

deposit of silver and/or dyes. After an image has been created by a digital imaging system, it is “written” as a digital image file to some form of digital storage and may be identically reproduced at will.

A digital image is defined by the number of “pixels” (picture elements) that make it up and the numerical value for the brightness of each pixel (or three numerical values in the case of a typical “RGB” color image—one for red, one for green, and one for blue). A five “megapixel” digital camera (five million total sensing elements), for example, will typically produce an image file 2560 pixels by 1920 pixels. In the case of a standard monochrome—or “grayscale”—image, each pixel will be assigned one of 256 possible levels of brightness (represented by numbers from 0, which signifies absolute black, to 255, which signifies absolute white) and the image file will use approximately 5 Mb (megabytes) of computer memory. In the case of a standard RGB color image, there are three brightness values per pixel, each expressed as a number between 0 and 255 (yielding 16.7 million possible color variations at each pixel) and the image file will use approximately 15 Mb of memory. Many digital imaging devices can record an even higher number of tonal variations at each pixel, which may be helpful when photographing scenes of great contrast, but, currently, only 256 variations per pixel are used for screen display. It is worth noting that a higher density of pixels will generally produce an image of higher resolution, but there are other factors affecting image quality, just as in analog photography. Two different five-megapixel cameras may yield very different results, depending upon lens quality and the amount of noise and digital artifacts caused by the sensor and related electronics. To put digital resolution in a traditional photographic context: the largest truly “photo-realistic” color print that could be produced from an RGB image file created by a five-megapixel camera would be about 8×10 inches.

One additional technical consideration is that of file formats. A digital image file, to be readable by more than just one computer, must be written to storage using widely agreed-upon protocols, or “formats.” The most universal file formats for digital images are PICT (from “picture”) and TIFF (“tagged image file format”). Also very popular—virtually ubiquitous—is the JPEG format (named for the “Joint Picture Experts Group” that developed it). JPEG files differ from most PICT or TIFF files in that they are significantly “compressed.” They take up less space in storage media and transmit more quickly across networks. Compression is achieved by using special algorithms to find pat-

terns within images whose compact definitions can substitute for a full pixel-by-pixel description. To decompress images, reverse algorithms are used to reestablish the original pixel structure. Because some of the original detail will be lost in this cycle—and some unwanted image “artifacts” generated—JPEG is counted as a “lossy” compression scheme (in comparison with the more moderate, but “lossless” compression schemes used in other formats). In general, as higher compression is employed, more loss occurs.

History

Digital photography has its roots in wire-service image transmission (a precursor to “fax” technology originating in the 1920s), television (which first used electronic sensors to interpret a lens-formed light-based image), in unmanned space exploration (for which computer technologies were developed that could allow for the conversion of visual data into digital form both for visual enhancement and for its transmission over long distances with frequent interruptions), in satellite espionage photography (requiring extensive image enhancement) and in medical imaging (which developed technologies for interpretation and storage of complex visual data). The first crude computer-controlled image scanners were developed in the mid-1950s. NASA introduced digital image processing in the 1960s and transmission in the 1970s. The monitor screen became the primary computer control interface in the 1970s and was enhanced by graphical user interfaces in the early 1980s. The Associated Press wire service introduced its AP Electronic Darkroom—a digitally-based image transmission and storage system—in 1978. These all set the stage for the rapid development of digital imaging technologies during the 1980s and 1990s.

The first major photographically-based technology to become virtually entirely digital was that of mass-production offset printing. By the late 1980s, the vast majority of photographic illustrations appearing in books and magazines were being created by computer-controlled technologies rather than by traditional photo-process halftone plates. Large, powerful industrial computers, drum scanners and printing equipment were able to handle the daunting challenge of creating, handling, and outputting millions of bits of digital visual information well before home computer systems could do so.

Photojournalism was also at the forefront of the switch to digital technologies. The relatively low resolution requirements for newspaper photo-

graphs allowed digital capture technologies to be adopted earlier than in photographic fields with expectations of higher image quality. Simultaneously, the press’s needs for rapid transmission and distribution of images encouraged development of digital transmission systems. By the early 1990s, the marriage of digital capture and portable, satellite-based digital transmission allowed a newspaper to put a photograph on its front page less than an hour after a photojournalist had taken it in a remote part of the world. Things moved so rapidly in the industry that most major U.S. newspapers were closing their darkrooms by the late 1990s (the *Vancouver Sun* describes itself as the first to go all-digital, in 1995).

At the broader consumer level, two major milestones would be the 1984 introduction of the Apple Macintosh system—which brought a visually-oriented computer to many desktops (usually equipped with a graphically flexible though low-resolution printer)—and the 1990 release of the first version of Adobe Photoshop, the most powerful among a number of early “digital darkroom” programs. Photoshop would, in subsequent releases, go on to become the standard in digital photography software.

On the “capture” side of the developing technologies, Sony introduced its first “Mavica” electronic still video camera in 1981. It wasn’t technically “digital” since it used an “analog” video mini-disk recording system, but it heralded the move towards filmless photography. Most major camera manufacturers developed extensive still video photographic systems through the 1980s; these were precursors to truly digital systems. In 1986, Eastman Kodak introduced the first megapixel image recording sensor (incorporating one million individual sensing elements); in 1991 they released the first professional-level digital SLR, the DCS-100, incorporating a 1.3 megapixel sensor into a Nikon-built camera body. The compact Dycam 1 of 1990 was the first truly digital consumer market camera; it could store 32 compressed images in its 1 Mb of internal RAM and then transfer the images to a computer.

These technologies offered interesting insights into the near future, but desktop computing power and the quality of scanners and printers remained far from truly photographic. For anything approaching professional photographic quality, the early 1990s still demanded expensive computer hardware (such as Kodak’s half-million-dollar Premier System that came complete with a high quality drum scanner, film writer and mini-computer workstation, and was a relative bargain at the time).

Despite the initial limitations, many artist-photographers had begun experimenting with computer technologies in the early 1980s. Some worked with consumer-level equipment, “grabbing” low-resolution images from video cameras, processing them on low-cost but graphically capable Commodore and Atari computers and printing them on “dot matrix” printers. Others, such as Nancy Burson, obtained access to programmers and high-power academic computers, and began creating truly photographic-looking work, often with interesting conceptual aspects. One of her pieces, *Man-kind*, 1983, blended the faces of typical individuals of each of the world’s major “races” in proportion to that race’s portion of the world’s population. The resulting—quite believable—face, looked most strongly Asiatic, but had distinguishable traits of each race.

In 1991, an Eastman Kodak/Apple Computer partnership created the Center for Creative Imaging in Camden, Maine, where many artists went to learn the nascent technologies—and even occasionally get access to a Premier System workstation—until its closing in 1994. Nash Editions, founded in 1990 by musician/photographer Graham Nash and his associate Mac Holbert, with the help of expert print-maker Jack Duganne, modified Iris inkjet printers, originally designed for commercial print-industry proofing, for use as high quality fine-art photo printers. Printing options for photographic artists working digitally began to expand exponentially.

By the mid-1990s, desktop computers were beginning to have enough processing power, memory, and storage to accommodate truly photographic images of moderate size. Desktop scanners and printers were greatly improved and were becoming available at prices affordable to individual photographers (photo-resolution “dye-sublimation” printers, for example, came to be priced under \$10,000). In 1992, Kodak introduced its hybrid “Photo CD” technology that would allow photographers to have film images scanned at relatively high quality and low cost and returned to them—up to one hundred per disk—on the same kind of recording media that had previously been used primarily for music. Also being developed were systems for digital image “color management” that would allow some control over the accuracy of digitized color information and its consistency through the various stages of the digital photography process (capture, manipulation, storage/transmission, and presentation).

During roughly the same period, professional-quality scanning backs capable of near-film resolution and color fidelity had been developed for use on view cameras. Their application was limited,

however, to subject matter that remained perfectly still for several minutes at a time, and the camera had to remain tethered to a computer. The same was generally true for digital-capture backs developed for medium-format studio cameras. Some very high-end digital SLR cameras could capture instantaneous images acceptable for reproduction in newspapers, even magazines; Kodak’s DCS-460, introduced in 1995, raised the image-resolution bar for self-contained camera systems to 6 megapixels. These high-quality digital camera technologies remained very expensive, however, and subject to rapid obsolescence.

One artist who quickly adopted emerging large-format digital capabilities was Stephen Johnson, who married a 4 × 5 inch field camera with a scanning back, a laptop computer, and a van, and took to the back country, updating Ansel Adams’s practice for the digital age. Johnson eventually received official recognition from the National Parks Service and engaged in a five-year documentation of the parks system, from 1994–1999, using increasingly capable digital equipment whenever it became available.

On the professional/commercial side of photography, one of the areas to embrace digital techniques both in the studio and post-capture was that of fashion and glamour. This area had always relied heavily upon highly-staged photo shoots and heavy retouching of images to improve the perfection of its illusions of beauty. Digital technologies made it possible to put less effort into the initial staging, since the images could be easily manipulated in post-production, and made perfection—or even hyper perfection—in the final image more fully attainable. Their contemporary use is typified in the work of Patrick Demarchelier and David LaChapelle, who often push their fashion images into the realm of visual fantasy.

Through the rest of the decade, digital imaging equipment became increasingly powerful and increasingly affordable. Computer processing speed—crucial for the massive calculations required in handling high resolution images—doubled roughly every eighteen months (a pattern predicted by the well known “Moore’s Law” in 1964). The other components of digital imaging systems—from cameras and scanners through computer workstations and storage media, to monitors and printers—kept up a similar pace of improvement. The standard for quality amateur-level digital cameras moved from “VGA” resolution (roughly one-third megapixel) to one megapixel, to two megapixel, to three megapixel. Professional instant-capture systems (for medium-format studio cameras)

approached 20 megapixels and view-camera scan backs approached 100 megapixels. Inkjet printers were developed using increasingly smaller dots and more colors of ink, essentially matching analog photo printing methods. “Writeable” CDs became a common medium of digital image storage and exchange; other kinds of portable storage media evolved from 44 Mb Syquest cartridges to 2 Gb (gigabyte) JAZ cartridges.

One of the qualitative changes that the digital age has brought to photography is that of the mass distribution of images by electronic, rather than print, means. Initially, CD-ROMs were popular, but the rapidly increasing transmission speed of the Internet soon made the WorldWide Web the dominant mode. Mosaic, developed at the University of Illinois and publicly released in 1993, was the first Web “browser” capable of displaying photographic images; subsequent browsers featured increasingly sophisticated image capabilities. Within just a few years, Web-based photographic displays, galleries, auctions, and so on, were quite common.

The first widely acclaimed exhibition of digital fine-art photography was “Iterations: The New Image.” Curated by Timothy Druckery and Charles Stainback, it was mounted in 1993 at Montage ‘93 (an “International Festival of the Image”) in Rochester, New York, and in 1994 at the International Center of Photography in New York City. Included among its artists were MANUAL (a collaboration between Ed Hill and Suzanne Bloom), Michael Brodsky, Carol Flax, Esther Parada, Jim Pomeroy and several others. 1994 also saw the launching of the exhibition *Metamorphoses: Photography in the Electronic Age*, curated by the Aperture Foundation and including Barbara Kasten, Peter Campus, David Byrne, Pedro Meyer and Nancy Burson, among others. It opened at the Fashion Institute of Technology in New York City and then traveled in the United States to Houston, Tampa, Philadelphia, and San Jose, and then to Helsinki, Finland, and several other venues. These exhibitions featured images that displayed considerable digital manipulation. By the end of the decade, virtually all large-scale color photographic prints being displayed in galleries or museums were digitally produced. Sometimes the images were obviously manipulated (Patrick Nagatani, Aziz + Cucher); sometimes the possibility of manipulation lurked just below the surface (Jeff Wall, Andreas Gursky). Often, however, the digital nature of the print wasn’t an issue at all, as digital technologies were increasingly seen as simply another means of producing “photographs.”

Concerns raised by digital photography

Along with the easy duplication and distribution made possible by digital imaging technologies and the Internet came serious concerns about property rights. While no traditional photographer would freely distribute his or her negatives, the digital files being made widely accessible, especially if they were of high resolution, could be seen as “source code” for endless digital copies and even for unauthorized prints. Although there have been ongoing revisions of copyright law and other efforts to protect the authors of images (and other creative materials) in the digital era, these have not been fully successful. Other steps that have been taken include restricting the resolution of digitally distributed images to levels well below the quality of the originals and embedding theoretically unremovable data within image files (“watermarks”—both visible and invisible) that would clearly indicate authorship.

An even more serious concern associated with digital photographic technologies—arising virtually at their inception—has been that of veracity. While traditional photographs have always been susceptible to a variety of manipulations that could distort or modify their apparent meaning, photography has, by and large, enjoyed the popular assumption of truthfulness. On the other hand, digital imaging technologies are widely known for facilitating virtually effortless and undetectable manipulation of the image. In the most extreme case—that of digitally captured photographs—there is not even the equivalent of the original negative to which there might be recourse in the case of claimed manipulation.

Through the 1980s, a number of infamous cases of photographic manipulation came to public attention, including the moving of the Giza Pyramids in a *National Geographic* cover photo, the implied presence of two celebrity actors in one room in a *Newsweek* image when in fact they were photographed separately in New York and Los Angeles, and the placing of one celebrity’s head on another’s body in a cover photo of *T.V. Guide*. In each of these cases, the publication claimed that the context of use did not imply—and therefore did not require—careful adherence to visual truthfulness. Significant movements arose, often involving photojournalists, news organizations, and public interest groups, seeking to establish clear guidelines for permissible use of image manipulation in the media. The importance of maintaining “truthfulness” as a quality of the documentary image was widely endorsed. Several European countries

adopted laws requiring that clearly distinguishable symbols signifying “montage” accompany all significantly manipulated photographs. Despite these movements and regulations, however, actual practice continues to be problematic—no presumption can now be made that any magazine cover image or image in an advertisement has not been manipulated. Even with “editorial” photographs, many cases of manipulation continue to be revealed.

A third area of concern in digital photography has been image permanence. Many digital printing technologies were never designed to produce anything but short-lived products. Early inkjet color prints often faded in a matter of months, to the disappointment of their producers. The printing technologies have matured substantially so that many digitally produced prints can now be expected to last at least as long as their traditional photographic counterparts, if they are kept under the right conditions. (Ink-based prints, especially, tend to be more susceptible to moisture, ultraviolet light, and environmental contaminants than are traditional silver-based photographs). Related to image permanence is the issue of data permanence and accessibility. Many digital image files encoded earlier in the development of digital photography are unreadable by current computers, and this trend towards obsolescence of file formats and storage-media technologies is likely to continue. In addition, the storage media are susceptible to eventual physical degradation, even breakdown. These are problems that the still-young practice of digital photography will have to solve.

In 2003, for the first time, more digital cameras than film cameras were sold in the world, and Eastman Kodak announced that it would no longer engage in film research. It appears that almost all photography will soon be fully or partially digital photography.

RINEKE DIJKSTRA

Dutch

Rineke Dijkstra’s *Beaches* (1992–1996) comprise large-scale, color portraits of adolescents standing in front of the sea. Dijkstra began the project in the Netherlands, and continued to photograph in a variety of locations: America, Belgium, Britain, Croatia, Poland, and the Ukraine. The contrast between her American and European subjects is subtle and poignant. The differences that distinguish the

young people are manifested in their clothing, their expressions, and their body language. For each photograph, Dijkstra provides a location and a date, and these confirm our suspicions and cultural stereotypes; the Eastern European children have less fashionable clothes, the American kids are better groomed and more practiced at posing like models. Nevertheless, what is most striking about these portraits is that, despite the obvious differences in appearance among the adolescents, they are united

through their self-conscious concentration on the camera/photographer. They share in the feelings of vulnerability that accompany such exposure. A photograph made at Hilton Head Island, South Carolina in 1992, depicts a young American in a peach-colored bikini. Her hair is long, blonde, and streaked. Her plump body is smoothly tanned. Her eyes are a deep blue. Everything is how it should be and, yet, her brow is furrowed as if the effort of looking perfect, or the worry of not, takes the pleasure out of life.

It is the tension between self-consciousness and inadvertent self-exposure that characterizes all Dijkstra's portraits: whether they are still photographs or (derived from) videos. Comparisons are often made between Dijkstra's practice and that of Diane Arbus. In an interview with Jessica Morgan (2001), and paraphrasing Arbus's famous statement, Dijkstra claims that she works in "the gap between intention and effect." In fact, Dijkstra's photographic practice acts as a textbook demonstration of Roland Barthes' description of photographic portraiture in *Camera Lucida* (1982). He refers to four competing "image-repertoires" that "intersect," "oppose," and "distort" each other: the person the subject thinks she or he is, the person the subject wants others to think she or he is, the person the photographer thinks the subject is, the person the photographer wants to make use of in his or her art. Each of Dijkstra's portraits is borne out of this intersection of expectations and desire. The significance of this observation is that it refutes a criticism that has been leveled at her portraiture: that her photographs exploit people's powerlessness. On the contrary, what Barthes' point, and Dijkstra's images, reveal is the necessary reciprocity of the gaze in the posed portrait. Photographer and subject confront each other, and it need not be antagonistic or disempowering. Dijkstra's portraits are insightful and empathetic. Hers is not a brutal stare, but a penetrating one. Unlike Thomas Ruff's photographs of young people, which deliberately emphasize surface details over psychological states, Dijkstra tries to get "beneath the skin" of her subjects.

A regularly cited influence on Dijkstra's practice is the German photographer August Sander. Like Sander, Dijkstra photographs types. In addition to the adolescents in *Beaches*, she has photographed bullfighters, new mothers, school children, disco-goers, and soldiers. In doing so, she sets up a further tension: that of the relationship between the general (category) and the specific (individual).

Take, for example, her *New Mothers*, begun in the 1990s. The young women in Dijkstra's portraits share a look of bemused wonder. They hold their babies protectively against their naked bodies. They behave in comparable ways. And, yet, the series of full-length photographs clearly marks each woman's individuality: different body shapes, different facial characteristics, different hairstyles. It is worth noting, here, that in stark contrast to the de-sexualized, idealized nude of western painting, Dijkstra's women are uncompromisingly corporeal. In *Tecla, Amsterdam, Netherlands, May 16, 1994*, a trickle of fresh, red blood runs down the woman's left leg. In *Saskia, Harderwijk, Netherlands, March 16, 1994*, the woman's caesarean scar is painfully apparent. The mothers' commonality and dissimilarity are emphasized formally by the locations in which they pose. Though each place is similar in terms of its neutrality (a plain wall and an uncarpeted floor), the details vary noticeably: wood, linoleum, tiles, an electrical socket, a light switch, the cropped edge of a doorframe.

As with *New Mothers*, Dijkstra's four head-and-shoulder portraits of bullfighters (1994) insist upon the comparative and contrasting signifiers of the individual within a category. Photographed immediately after a fight, with ripped clothes, bruised bodies, and blood-splattered faces, the matadors exhibit an intensity of emotion akin to the young women with babies: a mixture of bewilderment and self-containment.

In 1995, Dijkstra began making video-recordings at clubs in and around Amsterdam, and sometimes in collaboration with Gerald van der Kaap. *Buzz Club/Mysteryworld* (1996–1997) contrasts two venues, a disco in Liverpool, England, and a techno-club in Zandaaam, Netherlands. Dijkstra recorded the adolescents against a white background, in a storage cupboard, from where the music was still audible. The effect was to isolate the teenagers from the chaos and noise of the dance floor, without totally altering their mood. Her subjects smoke, drink, and kiss. They move their bodies to the music and play up to the camera. The video, which lasts 26 minutes and is played on two screens, juxtaposes the venues and the types of young people who attend them. Deliberately selecting adolescents who conform to peer groups, Dijkstra demonstrates national and gender stereotypes, while encouraging her subjects to differentiate themselves from the crowd. In another video piece, *Annemiek* (1997), a young blonde teenager with braces on her teeth, mouths along to a pop song. The video plays on a loop.

The visible oscillation between Annemiek's self-absorption and self-consciousness, in front of the camera, is what makes the work so compelling.

Rineke Dijkstra has exhibited widely in Europe and the United States. She has won several awards that cross the different photographic genres, including the Epica Award for Best European Advertising Photography in 1991 and the Citibank Private Bank Photography Prize in 1998.

DISCURSIVE SPACES

The discussion of discursive spaces in photography must deal with the ambiguity resulting from the mixing of heterogeneous families of concepts, namely the textual and the visual. This ambiguity is inherent to the concept of a discursive space in itself: is it the space created by a form of discourse or is it the space in which a form of discourse is created? The concept of discursive spaces in photography thus contains two angles, as the discourse *on* photography and the discourse *of* photography. Of course the discourse (as meaning or message) *of* photography is always framed by the place attributed to photography as a signifying practice, that is, by the discourse (as conceptualization) *on* photography.

A major shift in the conceptualization of photography between the nineteenth and the twentieth century happened because of an artistic interest in what had been so far a scientific curiosity. Conceptualized as a tool of scientific investigation because of its mechanical and physical (or *indexical*, in the taxonomy of the American philosopher Charles Sanders Peirce) relationship to its subject, photography is a door toward spaces that can then be inventoried and archived according to the logic of scientific discourse. Conceptualized as the expression of an "artist's" vision, the photograph becomes the site, the space of artistic creation functioning within the values of an aesthetic discourse. In a chapter entitled "Photography's Discursive Spaces" in her book *The Originality of the Avant-Garde and other Modernist Myths* (1985), Rosalind Krauss points out the tension between these two discourses in which photography keeps moving. She denounces an effort in the twentieth century to reinscribe photography within the paradigms invented by the discourses of art and its history and to eliminate the purely archival sphere to which nineteenth century photography belonged.

The fact is that photography always participates in a multitude of discourses. Roland Barthes described the photograph as "a message without a code" (as opposed to a textual message, which is an entirely coded way of communication), since it is a perfect analog of the object presented and one does not need an interpreta-

tion, a relay, that is a code, to understand it. As an "image without a code," the photograph becomes the receptacle for a variety of codes as it enters the discourses of many different domains, be it art, sociology, psychoanalysis, anthropology, etc. These discourses with their own jargon, methodology, and scope recuperate the photograph for their own purposes and define it in their own languages. With its cross-disciplinary vocation, the photographic image is thus the postmodern representation *par excellence*.

As an object, a physical space in itself, the flat surface of the photograph follows the vicissitudes of the varying degrees of importance attributed to the cultural concept of depth. The twentieth century opened with the Freudian revolution and the discovery of the unconscious. Any surface became suspect and pregnant with underlying signification. Entering into the modern age of introspection, depth became the warrant of truth as opposed to the deceptiveness of appearances. The belief in the possibility of access to a latent layer of meaning slowly dwindled in the course of the twentieth century. New psychoanalytic frameworks, like Jacques Lacan's reinterpretation of Freud, while recognizing the existence of an unconscious and even the evidence of its structure, denied its readability. Postmodern thinkers like Jean Baudrillard brought the attention back to the surface of things, including images, by searching for working strategies rather than for truth: what works is what is true, and appearances are what we work with. Similarly, the photograph as a space of signification, a place from which meanings are inferred, oscillates between conceptions of it as a flat space or as a deep-layered space. A photograph as a layered space becomes a place of interpretation, of discovery, a space where not only the subject but also the subjectivity of the photographer can be seen, a place of meaning readable like a text. Freudian critics like Victor Burgin see the photograph as being all text, to be deciphered. As a flat surface, the photograph is just a silent reflection and a critic like Roland Barthes tries to see it as just that, all image, purely denotative. Both approaches al-

ways recognize the limitation of their angles and acknowledge the paradox of photography as a silent discourse or a visual text.

The fascination with photography as a discursive space, a locus of meaning, comes from its direct physical link to the reality it represents. It is the presence of the real without being the real itself. Any other type of representation filters the real through conventions and styles; photography frames and reduces the real without changing it. There is always the possibility for the beholder to see something in a photograph that the photographers themselves have not seen. Photographs always function as a window onto a piece of reality, an ever searchable space.

The privileged link to the real bestowed on photographic representation also carries the unique capability of stopping time. A photograph is always a moment of the past extended into the present of the beholder. These two characteristics account for a fascinating and well documented relationship between photography and literature. The art of narrative is, indeed, constantly reworking its treatment of time and space, which are, in a way, always its primary subjects. Photography as the raw space for a variety of discourses receives here, probably, its most extensive exploration. Indeed, literature addresses photography in a number of ways, as an element both external to the text and inherent to it. Photography can be an archival source of inspiration used as a precursor to the text. The French naturalist writer Emile Zola thought that things are not truly seen before they are photographed. The photograph can also become a more intimate part of the text while still not being reproduced in the text. One can conceive of a narration stemming from specific uses of photography: technical achievements like the decomposition of movement, or social practices like photo displays and photo albums can become models for the organization of a narrative. A text then acquires photographic qualities because it borrows practices attributed to or reminiscent of a photograph.

]Narrative texts also add new dimensions to the photographic concept by reinventing or extending its possibilities. Marguerite Duras's best known novel *The Lover* (1984) is organized around a photograph that does not exist but that could have been taken, had one then understood its photographic importance: the photographic moment emblemizes the workings of memory, and photography becomes pure discourse, the space of writing itself. Rarely does one see actual photographs included in a narrative without being reduced to the rank of illustra-

tion, that is, an addition rather than a necessity. An equilibrium between photograph and text in the creation of a narrative is arguably impossible to achieve. Few narrations have been made that necessitate the collaboration of the accompanying photographs. A most famous one in the history of literature is possibly *Nadja* (1928) by the leader of the surrealist movement, André Breton. But, in this case, the use of photographs in the book stems from a desire to annihilate language and literature; the book is therefore staging the heterogeneity of the mediums rather than creating a collaborative space. A narrative discourse that tips the balance in favor of the photographs would be the photo-novel, a genre still striving for respectability. In the only extensive study on this genre, Jan Baetens hopes for the development of a narration in photographs increasingly free of text and for a re-education of the reader. Here again we read the malaise in front of mixed media created by the opposition between text and photograph. To become their own narrative space with a fairly consistent reading, the photographs in a photo-novel need to make concessions, such as being inscribed in a codified layout, and softening their time and space referentiality since the referent is replaced by a staging serving the narrative. The photographs' own discourse possibilities are silenced for the purpose of the narrative since the codes of the expected or recognized staging replace the immediacy of the photographic message.

Any discursive practice in which the photograph seems to inscribe itself as an interpretable text tends as a rule to obscure the photograph. Writing about the uses of photography in discourse will always easily be unfair to the visual hence irreducible and immediate quality of the photograph. Expository prose is by nature non-visual; it explains rather than it shows. One needs to be aware of all the limitations inherent to treating photographs as texts. If we carefully consider the metaphors we live by, such as "you see what I mean," we realize that the plea for visualization is actually an acknowledgement of one's incapacity to explain. The "image" to be seen, as a metaphor for global intuitive comprehension, is supposed to stand for the text, the explanation that should advantageously replace it. The image, thus, only serves as a fix when the formulation proves difficult. Expository prose in the same logic shuns images since they are crutches when the art of elucidation fails. A text is a site of manipulations that one endeavors to disentangle as one deciphers a code. On the other hand, the image is a site of possible illusions and it functions outside of the mechanisms of comprehension, outside of a

text; one can see an image without necessarily making anything out of it. In other words, the image does not explain but opens to explanations.

The theoretical discourse on photography keeps re-articulating the terms in which a photograph enters any type of discourse. W.J.T. Mitchell semi-irritatedly introduces his essay on “pictorial texts” in *Picture Theory* reflecting on the fact that the interpretation of images happens through the medium of different forms of verbal discourse but the interpretation of text is never done by means of pictures (p. 209). Rosalind Krauss, in her preface to *Le Photographique, pour une théorie des écarts* (1990) (a collection of articles written between 1977 and 1984 and only published here as a body, in their French translations with an introduction by Hubert Damish) denies that photography can possibly be, or ever has been, an object of research *per se*. It always becomes an access to something else, a kind of grid or filter through which one can organize the data of another field. She finishes this analysis by peremptorily stating that there is nothing to say, at least on photography, a position which explains her title, *Pour une Théorie des écarts* [for a theory of discrepancies/displacements]. The *on* of “on photography” has more and more become an object of reconsideration since Susan Sontag’s celebrated essay, *On Photography* (1977). The foreword of Abigail Solomon-Godeau’s *Photography at the Dock* (1991) presents the scope of this collection of essays on photographs as a displacement similar to the one advocated by Krauss. It is a sort of metacriticism that “focuses for the most part not on the photographs themselves but on the discourse of photography as it has been constructed in recent past” (p. xiv). In the discursive space of theory, metacriticism or metalanguage, photography seems to be literally always the thing “next to” which there is something to say. The theoretical discourse on photography, a discourse that tries to conceptualize the place and the essence of photography independently from, but also within, all the other discourses (of history, art history, science, sociology, psychology, anthropology, literature, literary criticism) is the only discourse that

repeatedly places photography outside of its scope, outside of the realm of the text, but enacting then in the texts that it produces the very paradox that it seems to denounce. W.J.T. Mitchell who wants to find a way out of the pure image concept or the pure language which both appear at the same time lacking and irreducible comes to this solution in *Picture Theory* (1994): “What if the only adequate formulation of the relation of photography and language was a paradox: photography both is and is not a language” (pp. 281–283). The paradox is however an acceptable state of being when you value appearances, surfaces, strategies above the search for a latent explanation for all things.

Discoursing *with* photography resembles the excitement and vitality of staging a combat. The creation of oppositions and paradoxes fuels the energy of their own discourses. As Baudrillard points out in *Les Stratégies Fatales* (1983), oppositions never resolve themselves, they call each other *ad infinitum*. The discursive spaces of photography are thus ever expanding.

DOCUMENTARY PHOTOGRAPHY

Photography's inclination for documentation was recognized since—or even before—its inception, and even though documentary photography as a genre originated at the end of the nineteenth-century, the term was first widely applied in the 1930s when it in fact dominated the photographic scene. Developed mainly in the United States during the second half of the decade, the style was influenced by the emergence of documentary cinema and several government-sponsored projects, most centrally the Farm Security Administration (FSA), which engendered a style that then became widely imitated. As most of those projects were socially oriented, this contributed to the misconception that documentary photography necessarily embraced a social aspect as a basic precept.

Most literature on the topic also deals with the work of this period and introduces a variety of classifications in an attempt to conceptualize the genre based on the peculiarities of this historical moment. Nevertheless documentary photography did evolve throughout the twentieth century, as did its definition, which today involves a broader sense and direction than mere recording of life with the aim of objectivity in order to educate others or elucidate a truth.

Despite being perceived early on as a tool to explain different cultures, until the end of the nineteenth century photography was most frequently used to simply respond to an interest in the picturesque. Those images were common idealizations composed in tableaux-like scenes with backdrops, often presented on a *cartes-de-visite* form—a sort of predecessor of the postcard. Displaying laborers, street people, and views of distant foreign lands, they served mostly as souvenirs. Some long-term projects were initiated and even though they cannot be truly called documentary, they can be seen as establishing the tenets of its traditional approach. Among them are David Octavius Hill's and Robert Adamson's fishermen images from 1845 made in Newhaven, Scotland; Henry Mayhew's and Richard Beard's *London Labour and London Poor* (1851–1864); Mathew Brady's photographs of the American Civil War (1861–1865); Timothy O'Sullivan's and William Henry Jackson's geographical and geological surveys of the American West in the 1870s, and

John Thompson's *Illustration of China and Its People*, from the same decade.

With the coming of the twentieth century, photographers became more concerned in capturing vanishing customs as well as in tracing a parallel between past and present, embodied in numerous projects carried out in the United States that focused on Native Americans. Edward Curtis's project, begun in 1900, consumed 30 years of his life with trips throughout the United States to Indian settlements. Yet his work is controversial in terms of documentation both for romanticizing the Indians as the “other” as well as for staging his photographs to capture aspects, such as the costumes or ceremonies, of these communities that were long gone at the point that he photographed them.

In 1889, the *British Journal of Photography* stated that a comprehensive photographic archive of the world should be created for its valuable future as documents. Historically seen as evidence and a means of investigation, fused with a growing social reform movement in the late 1800s, photography became an essential element in these campaigns, which were often played out in the fast growing arena of the illustrated press. Its development as a tool for social reform, however, was directly related to its technical evolution. As drawings and wood engravings were not realistic enough, the urgency for further and inexpensive advances of photo reproduction resulted in the invention of halftone printing in the 1880s. The invention of the handheld camera and their increasing availability in 1870–1880 enabled the capturing of candid photographs; from then on photography gradually integrated the printed media.

The Danish immigrant Jacob Riis was one of the first in the United States to put photography at the service for social betterment. Disturbed by the living conditions of immigrants in the 1870s in New York, Riis, a police news reporter, wrote long and detailed articles. Accused of exaggeration, he started to use photography as proof of his claims and as a way to influence public opinion. Yet to reproduce these photographs, photogravures had to be made, and the “documents,” still appearing to be drawings, were received with the same skepticism. It was only

when Riis used his photographs in slide projector lectures and his publication *How the Other Half Lives: Studies Among the Tenements of New York* (1890) came out—in which 17 of the images were halftones—that he convinced Americans to take action. Even though Riis was a photojournalist, his work can be considered social documentary as he developed a straightforward and methodical, recording of a subject with humanitarian concern.

Especially famous for photographing immigrants in the beginning of the twentieth century, specifically children and youths put to backbreaking labor, Lewis Hine began his involvement in photography when teaching natural science at a New York school. It quickly became clear to Hine that photography could be a powerful tool to fight prejudice against immigrants. In 1904, he began his first documentation on the immigrants of Ellis Islands. Three years later and for a decade he concentrated his efforts on child labor; his celebrated images of children, often dirty and with forlorn expressions on their faces, standing close to machinery generated, through their sense of scale, a feeling that they were indeed very young. Hine called his images “photo-interpretations” referring to his creative decisions and to the dual aim to inform and move the viewer. Published as “human documents” and widely distributed in pamphlets, magazines, and books, as well as shown in slide projections and exhibitions, Hine’s photographs in fact achieved the institution of federal legislation regulating child labor. Riis and Hine together are considered the pioneers of social documentary photography.

The photographic scene was dominated by Pictorialism from the end of the nineteenth century until the first years of the 1920s, a movement that produced highly manipulated images intended as fine art. Some photographers, largely overlooked at the time but who took exception to this style, later became emblematic documentarians. After brilliantly documenting his homeland of Hungary during World War I, André Kertész moved to Paris in 1925, where he joined the artistic community and began a photojournalistic career. He then relocated to New York in 1936 where he worked for the next 25 years as a commercial photographer. Kertész’s contemporary reputation is mostly as a street photographer, since he never stopped documenting the ordinary in street life during his spare time, and it is for this work he is one of the most admired photographers of the twentieth century. Eugène Atget’s life is little known but his oeuvre is legendary. His records of the streets, shop windows, and historical buildings of Paris were initially sold as “*documents pour artistes*” (documents for artists) to painters who used them as guide-

lines for their work. When discovered by the Surrealists—who saw his images as fragments of reality free of cultural intentions and thus open to subjective interpretations—Atget saw a few of his images published in 1926 in *La Révolution Surrealiste* magazine. A year later, when he died, the American photographer Berenice Abbott bought his complete work, introducing and promoting it in the United States in the 1930s. In 1968, it was purchased by the Museum of Modern Art of New York (MoMA), and finally, in the 1980s, Atget was definitively established as a leading master of photography.

The German August Sander, a commercial studio photographer, had already started, in the very beginning of the 1920s, his ambitious project *Menschen des 20 Jahrhunderts*. This self-assigned project consisted of documenting people of all classes and occupations, and including some of his early commissioned portraits dating from the 1910s when he first developed the idea. Yet acknowledgment of his achievement came much later with the publication of his book *Antlitz der Zeit* (Face of Our Time) in 1929. A selection of 60 portraits, it inspired enthusiastic critics who ranked him at the top of documentary photography. Influential philosopher Walter Benjamin for one regarded Sander’s photographs highly and wrote about them in his *Kleine Geschichte der Photographie* (1931), a milestone for photography theory.

In the 1920s, as the dominance of Pictorialism began to fade, photographic practice in general moved closer to the idea of document, denying manipulation, soft focus, or retouching, and seeking to explore the purity of the medium. As modernism spread around the world, a straightforward approach in photography became the rule, but not without engendering contradictory interpretations.

Influenced by the Russian Constructivists, the Hungarian-born László Moholy-Nagy, then teaching at the Bauhaus in Weimar, Germany, in the late 1920s, theorized in his book *Von Material zu Architektur* (1929, translated as the *The New Vision* 1932), which would expand and free human perception through pure photography. The recommended wide angles, innovative perspectives, and innovative use of materials, however, did not inspire a documentary, but a more experimental outlook. The *Neue Sachlichkeit* (New Objectivity) of the German avant-garde, as exemplified by Albert Renger-Patzsch, and the American “straight photography” of Paul Strand, Alfred Stieglitz, Edward Steichen, and Edward Weston, among others, tried to rediscover simplicity and austerity as a descriptive tendency. Renger-Patzsch, already known for his book *Die Welt ist Schön* (1928)—

extremely sharp close-ups of natural and man-made things of beauty—received recognition and became the new model of the serious photographer for his apparently impersonal description of the world. At the same time, some American straight photography was shown in the seminal *Film und Foto* exhibition of 1929 in Stuttgart, allowing German critics to project the aspiration of objectivity onto this work as well. In fact, several years earlier, the ideals of directness and simplicity had already been pointed out in European journals as an American issue; many American photographers had been turning away from artifice and creating simpler forms of expression based on sharpness and elegant geometry as evidenced by the publication of Paul Strand's photographs as early as 1916 in Stieglitz's influential journal *Camera Work*. This journal, which had been a proponent of Pictorialism for many years and had in fact helped spread this style worldwide, now helped disseminate the notion that "straight photography" was the new, modern mode.

Although none of the achievements of the practitioners of this new style had at that time been thought of as documentary, later many were, like Weston's Mexican folk art images, and their importance remains as a significant step in the direction of documentary photography. The discovery and wider distribution of Atget's oeuvre in the second half of the 1920s and, a bit later, of Sander's, also worked to question existing photographic ideology.

Another factor decisive for the establishment and growth of the documentary form was the launching of documentary films. *Nanook of the North* (1922), a diary of the lives of Canadian Eskimos by the American filmmaker Robert Flaherty, encountered great success, motivating the big studios to produce films of this kind. Soviet Dziga Vertov, creator of *Man with a Movie Camera* (1929), stated that he was the "film-eye," suggesting that his films showed what and how the eyes see, that is, life as it is. The term "documentary" as a definition of a genre appeared in 1926 in a review on Flaherty's *Moana* (1926) written by the British theorist and filmmaker John Grierson. Similar usage of the term in photography was first applied in 1928 in France and Germany, as affirmed by the French historian Olivier Lugon in his meticulous book *Le Style Documentaire: D'August Sander à Walker Evans—1920–1945* (2001), and around 1930 in the United States.

"Documentary" in fact became a tendency in diverse fields such as the social sciences, literature, and art throughout this era as one legitimated the other. Gisèle Freund asserts in her classic book *Photographie et Société* (1974) that although the

official recognition and public announcement of photography was in January of 1839, this was thirteen years after Joseph Nicéphore Niépce's development of a primitive photographic process. She argues it was only then that photography met a "social element," that theretofore had been absent, which allowed its successful reception; in other words, it was when society was ready to accept it that photography was "invented." It can be argued that the 1930s were the equivalent moment for documentary photography, meeting its social element in the form of the economic disaster of 1929 known as the Great Depression.

As part of President Franklin Roosevelt's New Deal, the Resettlement Administration (RA), later named Farm Security Administration (FSA), was founded in 1935. Its Historical Unit, a small photographic group, had the aim of providing visual documentation that justified the Government's relief and make-work programs and helped the urban public to understand the poverty and difficulties of the rural populations. Roy Stryker, a former economics teacher with little experience of photography, was named director of the project. Although Stryker wrote "scripts" directing what he expected the assignments to achieve, the FSA photographers including Walker Evans, Dorothea Lange, Ben Shahn, Russell Lee, and Arthur Rothstein, had a great deal of freedom in the manner in which they photographed. Evans and Lange, who have been pointed out by historian John Szarkowski as being responsible in great part for FSA's success, used the agency structure to develop their own projects and documentary ideals. Lange's work was clearly humanitarian, centered on people's presence and emotional expressions, which she believed could be socially and politically useful. Evans used the opposite tack with his highly impersonal style to document ordinary things and when he did photograph people, they were presented as anonymous and interchangeable.

Walker Evans's style came to dominate the idea of what documentary photography should be, as "purist" ideas began to dominate photography circles and extend the prohibitions on manipulation of the photographic image to the act of shooting the photographic image. After a short stay in Europe, Evans returned to New York in 1929 willing to employ the experimental precepts of the New Vision, but soon after, influenced by Atget's work, he took up a simpler aesthetic. He concentrated on vernacular architecture, first independently and then by commission, the results comprising the first solo photography exhibition mounted at MoMA in 1933, and in 1938 a selection from it was integrated into his

American Photographs book and exhibition, also at MoMA. Hired by the FSA in 1935, Evans pursued his idea of documenting American society through the everyday environment that gave evidence of but showed no human interaction, like shop windows, advertising signs, and the vernacular architecture.

Evans's work, along with Sander's, thus constitutes a distinct style within documentary photography, presenting images as "types" meant to evoke larger thought rather than inviting the viewer to concentrate on particularities and develop empathy for the individual or circumstance depicted. Evans himself considered the term "documentary" deceiving and suggested in the 1970s that the right term should be "documentary style." By presenting an aesthetic frequently identified as "anti-aesthetic," these bodies of work set up their own theoretical concepts. Embodying the ideals of neutrality and "straight photography's" formal qualities, such as frontality, emphasis on sharpness and brightness, presentation of static elements and balanced compositions with each detail of equal importance to another, the ability of the image to stand on its own without captions or explanations, and presentation of images in series, Evans and Sander created a documentary approach that perhaps too closely mimics actual photo documents. For example, they have been accused of creating works with no more quality than passport pictures. John Grierson clarified, albeit in relation to film, that "documentary was from the beginning...an 'anti-aesthetic' movement...what confuses the history is that we had always the good sense to use the aesthetes. ...We mastered the techniques necessary for our unaesthetic purposes."

As John Szarkowski, whose vision of what photography should be powerfully shaped the postwar aesthetic, wrote "pictures that would look ingenuous and free of guile, that would seem not merely honest but artless...[were] of course an aesthetic choice and an artistic strategy." While the photo document has a strict informational value that was long used to deny that these sorts of photographs could be art, often by the photographers themselves, the documentary style embodies the idea of documentary photography having different possibilities of use and interpretation. Atget's work is a common example of this attitude, even though it is almost certain he was not aware of its potential as an artistic expression and captured his Parisian images because he felt they would not be available for him to enjoy in person as the years passed and progress inevitably changed the face of the city he so loved.

Yet the notions of what constitute a "documentary style" or aesthetic in the realm of fine-arts

photography are not necessarily what documentary photography signifies to the larger public, nor were the finer points of the debate of particular interest as photographs continued to be exponentially consumed by society. In mid-century, it was commonly held that all photographs tell the "truth" and some photographs tell stories, and that the stories as presented in the photographs were in fact accurate and fair, a covenant of faith that was developed by the social documentarians early in the century. After Lange and Evans left the FSA, in 1940 and 1937, respectively, they continued documenting their own projects. While Lange worked on the unjust internment of Japanese-Americans in camps following the attack on Pearl Harbor, Evans embarked on a project with the writer James Agee that resulted in the notorious book *Let Us Now Praise Famous Men* (1941). A study of Alabama tenant farmers, this project became a basic text of the civil rights movement later in the century. The FSA project continued to produce the most comprehensive documentation of America to date, despite its propagandistic intentions, contributing to the establishment of documentary photography as a genre and inspiring countless other projects.

Whereas initially documentary photography called up images of rural life, the urban scene was being documented concurrently by Berenice Abbott and the photographers of New York's The Photo League. Abbott, who had a commercial studio in Paris, returned to New York in 1927, initially shooting, as did Evans, under the influence of the New Vision. Later she adopted Atget's path, and attempted to do in New York what Atget did in Paris. The resulting *Changing New York, 1935–1939* was developed under the auspices of the Art Project of the Works Progress Administration.

The Film and Photo League was formed in 1930, and reorganized in 1936 as The Photo League. A group of politically committed photographers who idealized Lewis Hine joined together in order to support working-class rights—an extension of the German worker photography movement—through the documentation of the life and everyday struggles of the common man. Its board of directors included luminaries such as Berenice Abbott, Paul Strand, W. Eugene Smith, and Nancy and Beaumont Newhall. One of its most extensive projects was The Harlem Document, photographed by various Photo League members under the direction of Aaron Siskind between 1932 and 1940 that captured life in this changing African-American neighborhood. In the 1940s, when there was a general tendency toward a personalized approach, the themes considered acceptable to the goals of The Photo League broadened

DOCUMENTARY PHOTOGRAPHY

and subjects with greater aesthetic appeal were incorporated, attracting photographers known for their advanced fine-art aesthetics like Ansel Adams and Edward Weston. In 1947, The Photo League was harassed as a subversive Communist organization, and was disbanded in 1951.

In Germany as the political situation in the Weimar Republic grew more complex, the admiration of American straight photography transformed, in the eyes of some, a figure such as Renger-Patzch into someone who had sold out and adopted a foreign tendency. The conservatives, who idealized the representation of an authentic German “soul,” criticized the New Objectivity movement for being modernist and internationalist. The leftists decried the same movement as superficial and reflecting bourgeois triviality and called for more socially relevant photographic work. At the end of the 1920s, Renger-Patzch turned to documenting open views of industrial landscapes. This more systematic approach that demonstrated a greater distance from the subject with the idea of thus being more “objective” struck a receptive chord. A peculiarly German style of documentary photography was emerging. Sander surfaced as its epithet in early 1930. Atget’s oeuvre was, as in America, pointed out as a model.

The rise of the Nazis in 1933 immobilized free debate and artistic expression with its pernicious ideology and its adaptation of an exaggerated documentary style as propaganda (Socialist Realism). The development of the documentary genre was not completely stopped, however. Roman Vishniac, exiled in Berlin from the Soviet Union, documented the Jewish Ghettos of Poland. Sander, who saw his book *Antlitz der Zeit* removed from the market and his plates destroyed, persisted with the documentation of landscapes.

In the 1920s and 1930s, leftist European and Russian photographers concerned with their countries’ economic-political scenes and inspired by the “documentary truth” or agitprop of Alexander Rodchenko and El Lissitzky photomontages, turned to urban documentation. In an attempt to make the working classes aware of their deprived conditions and political power, they formed the worker photography movement, which operated in countries like the Netherlands, Belgium, and England in a diversity of styles. This movement was particularly successful in England and is known as the Mass Observation project (MO), which had the intention of producing anthropological-like documentaries. In the 1930s, the British photographer Bill Brandt, despite not taking part in the MO movement and having been involved with

Surrealism, effectively documented the contrasts among classes and the lives of mine workers.

During this same period, Mexico’s capital was an international center for artistic and intellectual exchange, benefiting from the political turmoil in Europe by welcoming its artists, writers, and intellectuals. Encouraged by governmental support and the presence of Edward Weston, Paul Strand, and Tina Modotti, a number of photographers embarked on a series of documentary projects in the modernist style. Mexico’s most famous photographer, Manuel Álvarez Bravo, at the beginning of his career in the 1920s, had experimented with abstraction. During the 1930s, he created Modernist images and documented Mexican life, religious culture, and landscapes. Bravo’s photographic journey was duplicated by others all over the world. In Olivier Lugon’s words, the “growing dominance of the genre was an institutionalized form of political and social reaction.”

During the 1930s and 1940s, the definitions of documentary approach were malleable and varied according to personal or cultural tendencies and interests of the moment, and at times were even contradictory. Documentary photography was thought to be impartial and simply instructive yet able to convince and move the viewer. After moving toward a cooler, nonauthoritative approach, it was supposed to become more emotional and personal, preferably compassionate and humanistic; when capturing social conditions it first was meant to focus on its hardships and later on its positive aspects; it shifted also from presentation with no supporting text to an almost compulsory pairing of image with text, as documentary photography began to be merged with the notion of the photo essay, coming closer to photojournalism and progressively losing its dominance. The rising demand for photojournalistic-based projects fueled by the flourishing of magazines such as *Life* and the decline of governmental sponsorship and commissioning of documentary projects in the 1940s forced many documentarians to shift to news photography. Documentary photography receded in production and importance throughout the 1940s and 1950s.

There remains a common misunderstanding about what divides documentary photography and photojournalism. Both produce documents in a historical sense and are based on existing (“real”) circumstances and issues. Photojournalism, however, is basically factual and has supposed testimonial status as a matter of its own ethics while the documentary image can also be allegorical and not

limited to an informative function. As the name indicates, photojournalistic images are made to fulfill the visual needs of the news, and are severely restricted by time and space restraints. Photojournalists tend to work under short deadlines, having little opportunity to become familiar with, never mind truly understand, their subject matter, and as the flow of information has radically increased with the advent of the internet, these deadlines are virtually instantaneous, with photojournalists downloading images almost literally as they are shot. Documentarians typically spend a great deal of time, even when commissioned, methodically researching, observing, and photographing the chosen theme in order to achieve an in-depth depiction. As FSA Chief Roy Stryker said, “the job is to know enough about the subject matter to find its significance in itself and in relation to its surroundings, its time, and its function.”

Another difference is that photojournalism always relies on words, and often presents only one image that is subjectively judged to best summarize the story. When a photo-essay is presented, its storytelling approach dictates the choice of photographs to tell the best story-in-pictures, but not necessarily the most accurate or in-depth story on the topic. Documentarians’ work is not necessarily accompanied by text or captions, being generally presented as lengthy series. This does not mean, however, that individual photographers cannot be simultaneously photojournalist and documentarian. An example is W. Eugene Smith. Expected to take only weeks, his *Life* magazine assignment *Spanish Village* (1951) took several months to complete and resulted in a revolutionary work as it eliminated the traditional subordination of pictures to words.

Despite its lack of economic viability in the postwar era, documentary photography continued to evolve in America and around the world. Disturbed by growing Americanization, Latin American photographers directed their creativity towards the construction of a visual identity and the exposure of social injustices. Cuban Raúl Colares, for example, documented the evolution of the 1959 Cuban Revolution. A great number of photographers focused on the indigenous peoples of South America, like Brazilian Claudia Andujar who documented the Karajá people in the 1950s and began in the 1970s her Yanomami project. Spanish-born Pedro Mayer and Mexican Graciela Iturbide, among others, photographed Mexican folk rituals and culture, respectively, in the 1960s, and in the 1970s to 1980s.

Japanese photographers, as well, were questioning their identity after defeat in the war. Themes related to devastation surfaced in works such as

Shomei Tomatsu’s and Ken Domon’s *Hiroshima-Nagasaki Document* (1961). Influenced by Harry Callahan, the 1960s street photographs of the American-naturalized-Japanese Yasuhiro Ishimoto transmit the sensation of self-delusion and frivolousness. In Africa, the cameras were often pointed toward political causes. South African Ernest Cole and Peter Magubane exhaustively documented the struggles of apartheid and Ricardo Rangel, from Mozambique, documented Maputo’s nightlife during guerrilla resistance against colonization in the 1960s. In the same decade, Czech photographer Josef Koudelka composed a major documentary on the gypsies of Slovakia.

One of the best-known and highly influential postwar documentary projects, Robert Frank’s *The Americans*, had no overt political or social aspiration. It was amassed by the Swiss-born Frank who traversed the United States documenting various mundane aspects of American society living off a Guggenheim Fellowship he’d received in 1955. The “American dream,” which had been institutionalized during immediate postwar years as a reward for the sacrifices of World War II and used in advertising and other cultural messages to fuel the engines of postwar economic recovery, was not depicted positively. Frank’s images, which featured harsh lighting and scenes dense with grain and evidence of their making, also harshly pointed out a nation alienated in its own rampant consumerism. His resulting book, *The Americans* (1958), was shocking to critics and the American public alike and received an overwhelming negative response. Yet his snapshot aesthetic and critical vision opened a new path for younger generations.

William Klein’s 1954–1955 *Life is Good and Good for You in New York* (1956) was another highly influential private documentary project that found little initial support. An expatriate American living in France with a background in painting, Klein returned to his homeland and started frenetic camerawork throughout the streets of Manhattan. Disregarding the traditional ideals of sharpness, brightness, and composition, Klein produced highly contrasted and grainy images, with obvious blurring due to movement, and radical cropping in his attempt to represent the anxieties of modernity. Although Klein’s achievement was recognized in Europe, it took a very long time for it to be appreciated in America. In different ways, Frank and Klein launched a more subjective and corrosive manner of depicting society that remains a powerful force in both documentary and fine-arts photography.

The 1960s was the decade during which documentary photography regained strength and achieved a

wider distribution. In 1962, Edward Steichen, still curator of photography at MoMA, organized *The Bitter Years 1935–1941: Rural America Seen by the Photographers of the FSA*, introducing this work to a whole new generation. John Szarkowski, who replaced Steichen that same year, quickly demonstrated his predilection for a subjective kind of documentary photography. One of the milestones of the documentary revival was his 1967 exhibition *New Documents*, which showcased the works of Diane Arbus, Garry Winogrand, and Lee Friedlander. According to Szarkowski, their similarity resided in the blending of street documentary photography and psychological investigation. This tendency is at its most dramatic in the photographs of Diane Arbus. Producing most of her work in the 1950s and 1960s, Arbus's large oeuvre did not obey any thematic structure, but is remembered mostly for her images of subcultures considered odd by traditional society, like transvestites, homosexuals, and dwarfs. Inspired by Weegee and with a nod to Brassai, Arbus projected her own internal conflicts through her images by choosing subjects that were opposed to the institutionalized glamour of those decades. She, like Frank and Klein before her, enhanced her expression through technical means by use of hard flash. Although personal and subjective, her portraits at the same time captured certain cultural behaviors.

Greatly influenced by Robert Frank's work, Lee Friedlander's imagery was seen as a "merciless mirror" of American society. His television photographs, juxtapositions, and self-portraits—mostly presented by shadows and reflections—transmit a feeling of displacement, reflecting the distancing and anonymity of modern time. On the other hand, the inclusion of his own representation was meant to remind the viewer that a photograph is a constructed image. Garry Winogrand considered a photograph to be a new fact in the world, not a mere restatement of an existing fact. Also admiring Frank's *The Americans* and making wide use of the snapshot aesthetic, Winogrand shaped, through a massive project of recording of seemingly insignificant moments and ordinary subjects, a psychologically complex oeuvre that goes a long way toward capturing the intangibles of culture.

The depiction of subtle ambiances and ordinary people or situations in a casual, almost sterile way so championed by Szarkowski, had been defined earlier in 1967 in an exhibition at the Rose Art Museum, Brandeis University in Waltham, Massachusetts, *12 Photographers of the American Social Landscape* and the George Eastman House, Rochester, New York 1966 exhibition *Toward a Social Landscape*, which included Lee Friedlander, among

others. "Social landscape" derived from the idea of "private realities," a highly subjective approach toward social issues that is present in the street documentations of Harry Callahan of the 1940s, and was quickly codified as a new documentary approach by which the individual projected his or her own psychological reality onto society, finding resonances between private and public that were valuable to others seeking to understand their own relationship to society.

In the 1970s, the capturing of "social landscape" evolved into an impersonal documentation of the suburbia landscape in a sort of modern echo of nineteenth century American West imagery. This tendency was presented at Eastman House's influential 1975 exhibition *New Topographics—Photographs of a Man-Altered Landscape*. As demonstrated by the works of Lewis Baltz, Frank Gohlke, and Robert Adams, among others, this tendency connected documentary photography to Conceptual Art. The genre was further expanded by William Eggleston. Inspired by Friedlander and Winogrand, Eggleston used color photography, long considered the realm of the amateur or the advertising image, to capture banal images of everyday life and represent, among other things, the loss of identity of American cities. His MoMA exhibition in 1976 strengthened the style and affirmed color photography's potential in the documentary realm.

A totally diverse kind of documentary photography that utilized snapshot-family photography-like images appeared in the 1970s and 1980s in what were literally private pictures with no claim on the part of their makers to connect private with public in an instructive manner. Including graphic violence and sexual imagery, Larry Clark's book *Tulsa* (1973), a portrait of drug-addicted teenagers among whom were friends, acquaintances, and those with whom he had grown up, and Nan Goldin's slide show, *The Ballad of Sexual Dependency* (1986) of her friends, lovers, and her own troubled relationships, after initially shocking became cult items and later mainstream classics.

Social documentary also gained in the 1960s with new sources of governmental funding, especially the National Endowment for the Arts, founded in 1965. Increasing foundation and private support and a larger involvement by photojournalists, who proceeded on their own to develop projects that sometimes they started covering for the press continued to expand the field. Danny Lyon and Bruce Davidson, for example, recorded the civil rights movements of the 1960s on assignment and continued independently to document related subjects. Lyon concentrated on the lives of those excluded

from mainstream society, as in *The Bikeriders* (1968) a study of the Chicago Outlaw Motorcycle Club to which he belonged, and *Conversations with the Dead* (1971), which depicted the inmates of the Texas State Prison. Davidson transited through different aspects of society, notably Black life as captured in *East 100th Street* (1966–1970), the peculiarities of “underground life” in *Subway* (1986), and *Central Park* (1995), which explored open space within urban life.

Yet independently of the financial or social circumstances, certain photojournalists will always seek to develop their work to a greater extent and depth than allowed by news photography. Americans Gor-

don Parks and Eugene Richards, British Philip Jones Griffiths, Czech Antonin Kratochvil, French Henri Cartier-Bresson and Raymond Depardon, Russian Georgi Pinkasov, and Indian Raghubir Singh, are some other remarkable photojournalists and documentarians, who engendered numerous self-motivated projects. The Brazilian Sebastião Salgado, one of the most renowned contemporary photographers, first received international distinction through his dramatic news shot of the attempted assassination of President Ronald Reagan in 1981. Salgado is primarily, however, a social documentarian very much in the tradition of Riis and Hine who exhaustively documents what he believes to be the great

Lewis Wickes Hine, Young knitter in Tennessee knitting mills, 1912, gelatin silver print, 12.6 × 17.7 cm., Gift of the Photo League, New York: ex-collection Lewis Wickes Hine.

DOCUMENTARY PHOTOGRAPHY

problems of the twentieth century—the ravages of war, the brutality of life in poorly-developed countries, and the plight of children.

Today, documentary photography's definition comprises a multiplicity of directions ranging from portraiture to landscape, factual to allegorical, clearly sharp to darkly grainy, social to psychological, neutral to authorial, with major implications for Conceptual Photography and other contemporary art forms. This is particularly demonstrated by the acceptance of certain photographers in the realm of contemporary art that supersedes their reputations within the world of photography. Examples include the Germans Bernd and Hilla Becher with their cool industrial photographs (and who were included in the *New Topographics* exhibition in 1975) or Thomas Struth's clinical urban landscapes. What is common in all trends and a basic tenet of the genre is the figurative and systematic recording of a subject through reality-found images that yet are not reduced as proof or absolute truth.

DODGING

Dodging is a technique employed by photographers to fine-tune the tone and highlights of prints in the darkroom. After using a test strip to establish what the overall exposure of the image should be, the photographer makes a print with that exposure time. After the print is developed, however, there might still be one or more small areas in the image that the photographer wishes were lighter than the rest of the print. Dodging is a way of reducing the amount of light a certain area of the print receives, in order to make that area lighter.

It is important to remember that dodging occurs during the overall exposure of the print—the photographer wants to reduce the amount of light received

by a specific area of the image, and so must be able to selectively reduce light in one area while still allowing the rest of the photographic paper to be exposed. Dodging is usually accomplished with a small tool, simply called a “dodging tool.” A dodging tool can be any small piece of opaque board attached to a thin, stiff wire handle. The photographer uses the handle to move the tool rapidly back and forth between the light and the easel, causing a shadow to fall onto the paper. He should direct this shadow to fall on the place that needs less light, and should continue to move the tool back and forth for the duration of the dodging time to “feather” the light, or prevent hard-edged lines from appearing on the

print where the edges of the shadow fall. The thin wire handle allows the photographer to dodge anywhere on the image—even in the center—without creating a thick shadow that falls to the edge and obstructs more of the image than the photographer intends. The dodging tool can be held closer to the light, which will create a bigger shadow, or closer to the easel, which will create a smaller shadow, depending on the photographer's needs. Dodging tools can be created specific to each print, but a few dodging tools with various-sized pieces of board will generally suffice for any dodging needs.

Dodging is often done to increase the amount of detail seen in dark or shadowed areas of a print or to reduce the darkness of an area of the print. Too much dodging, however, can make an area too light, too grey, or murky. In black and white printing, over-dodging turns black into grey, which can decrease the contrast and make the overall print less appealing. Dodging requires practice, and the dodging time is different with each print.

Once a photographer has decided that an area in a print needs to be dodged, he places an unexposed piece of photographic paper into the easel and exposes the negative again, this time using his dodging tool to block the light in the area that needs dodging for a portion of the overall exposure time. The print is then developed as usual. Dodging often takes more than one try to figure out exactly what portion of the overall exposure time needs to be reduced from the dodged area. One way to make the trial-and-error of dodging easier is to make a test strip only in the area that needs to be dodged, making educated guesses as to what the exposure time in that area would be based on the overall exposure time. If, for instance, a photographer figures out that while his overall exposure time is 16 seconds, the area in question only needs to be exposed for 12 seconds, the photographer would then set his timer for 16 seconds and then simply use a dodging tool to cover the area for four of those seconds. Dodging can be done at the beginning, the end, or in the middle of the exposure time.

The technique of dodging can be used for darkroom effects other than simply fine-tuning a print. If a photographer is double-printing, or blending two negatives into one print, he might use dodging tech-

niques to lighten an area on one negative so that the information on the second negative will show through in that area. Or, if a photographer is printing half of one negative and half of another on the same print, he might use his hand to shade half of the image and create a soft, light border where the other image will overlap. Dodging can also be used to create haloes, if, for instance, the photographer dodges a thin outline and then feathers it outward from a subject in the image.

In most digital image manipulation software, there is a variable-sized dodging tool that can be moved across the image to a similar effect as the dodging tool used in the darkroom. The digital dodging tool will lighten parts of the image, but often results in quickly de-saturating or “washing out” the color in those areas. Even in black and white digital images, the dodging tool often results in turning areas a dull grey. Like its use in the darkroom, the digital dodging tool should be used limitedly, and in small areas.

Generally, the photographer intends that the dodged area blend in with the rest of the image—it is for this reason that it is so important to have continuous movement with the dodging tool, so that a line does not appear at the edge of the shadow. Dodging can be a very useful technique to decrease harsh shadows and increase the amount of information that translates from the negative to the print in dark areas. Dodging is also useful when working with thin or uneven negatives to even out tones in the final print.

ROBERT DOISNEAU

French

Despite a career in commercial photography that included a wide range of industrial, advertising, fashion, and reportage work, Robert Doisneau's true subject was the life of ordinary people on the streets of Paris. About this work he said:

If you're going to work in a life teeming with people you must have a few rock-hard principles to anchor you and you mustn't dissipate your efforts. So I decided to stick to ordinary, everyday life for my source material and steer clear of picturesque effects. When I had to choose between a member of some lunatic sect and a French polisher, I'd choose the French polisher.

(Doisneau, *Three Seconds of Eternity* 1979 & 1990; Paris: Contrejour)

Doisneau held the popular Parisian view that Paris is a theatre. He was a *flâneur*, someone who walks and observes. His method was to immerse himself in street life, strolling and waiting for the photograph to happen. He said that he worked instinctively and was motivated by a desire to share the visual delights he experienced. He knew Paris intimately and for him the streets were full of familiar pleasures.

I only feel at home in the sort of streets where you come across an old-age pensioner with a little white dog, a flower lady, a kid on roller skates, and a fat man, all at the same time' he said. 'I shall always be the last person left sauntering in the street.

However, the Paris he immortalised is the Paris of the popular imagination, and one which had largely disappeared by the end of Doisneau's life. This vision of Paris lives on as a romantic dream in his imagery, which is widely used in advertising and is sold in postcard and poster form. As a result, Doisneau is arguably the most popular and best known of French photographers.

Doisneau was born in Gentilly, a banlieue (suburb) of Paris. His father was a plumber. On leaving school at 13 he studied lithography and engraving at L'Ecole Estienne in Paris and his decision to take up photography was, in part at least, a reaction to the outdated techniques and repressive academicism of the school. It also helped him find his subject matter; he later said he would willingly have swapped the whole cupboardful of Roman Emperors he was

expected to draw at the school for the chestnut seller in the Place d'Italie who was real and alive.

From the beginning Doisneau combined a career in photography with following his own photographic interests independently. He learned photography both through working for an advertising studio and as an assistant and by buying a Rolliflex and taking photographs of the Paris streets on Sundays and in time taken off work. Later he commented that initially no-one was interested in this work. In 1934, he became an industrial photographer at the huge Renault factory in Billancourt where, for five years, he worked taking photographs with a large format camera and a magnesium flash. The pleasure he derived from his work would seem to have come as much from entertaining the workers with the magnesium flash as from the photographs. At the same time he was experimenting with his own secret colour print process in his kitchen at home, which he dreamed might make him independent of the factory. However, it was his frequent lateness, for which he was sacked, which achieved this dream. He began a career as a reportage photographer or photojournalist, signing with Rapho Photo Agency; it was interrupted by the outbreak of World War II in 1939. After military service he returned to occupied Paris where it was difficult for him to work as a photographer, although using the engraving skills he had learned at L'Ecole Estienne he forged documents for the French resistance and eventually photographed the liberation of Paris.

After the war Doisneau was able to take up reportage again. He briefly joined the Alliance photo agency then re-joined Rapho in 1946 and stayed with them despite an invitation from Henri Cartier-Bresson to join Magnum Photos. In this period his photographs were published in magazines which included *Le Point*, *Action*, *Regards*, *Life*, and *Vogue*. He worked for *Vogue* for several years but was uncomfortable with the world of fashion photography. The support of the writer, Blaise Cendrars, whom he had met in a barber's shop in Aix-en-Provence, helped Doisneau get his first book of photographs published in 1949. In 1950, his most famous image, *Baiser de l'Hotel du Ville* (Kiss in front of City Hall), was published in *Life* magazine

as part of a spread on young lovers in Paris and marks the beginning of a period of international recognition with exhibitions in New York and Chicago. This was followed by a more difficult time with the decline of the illustrated magazines in the 1960s, and he returned to commercial photography.

By the early 1980s, however, his work was being introduced to a new generation, mostly through posters and postcards, which caught the contemporary mood of nostalgia for the romance of Paris. This popularity also caused problems for Doisneau since, under French law, an individual owns the rights to their own image and he was sued for damages on more than one occasion by people claiming to be the subjects of his photographs. As a result Doisneau had to admit to using both models and friends in his work and that not all his photographs were as spontaneous or uncontrived as they initially appear.

Doisneau's work was part of a move away from pictorialism; he was influenced by the modernist and surrealist movements current in Paris in the early twentieth century. He was also influenced by his admiration for Brassai, his friendships with other Paris-based photographers including Willy Ronis, Izis, and Cartier-Bresson and by working with writers like Blaise Cendrars and the poet Jacques Prevert. Doisneau said that it was Prevert who taught him to have confidence in photographing the everyday scenes that most people ignored.

His work is both an affectionate portrait of Paris, particularly its suburbs, and about those very ordinary moments in life which, once caught on film, allow space for the viewer's imagination to augment the story. His images capture the beauty and absurdity of life. Reputedly a shy and modest man, Doisneau had a subversive sense of humour and a sharp perception of the ridiculous but his satire is affectionate, never condemnatory. Although he was politically left-wing, and both his politics and his background shaped his interest in working class life, his view is of the love and humour, which make life pleasureable in the most adverse of circumstances rather than the bleakness of poverty. In this it is true to its period and, although Doisneau is frequently accused of sentimentality, this writer would argue that his work is an insider's view of a disappearing place and time and stands as one of the classic documentations of twentieth century photography.

KEN DOMON

Japanese

One of the most influential and respected Japanese photographers, Ken Domon worked from the 1940s, photographing Japanese military activities for the government, to the 1960s, capturing vivid images of contemporary social issues. Throughout his career, Domon pursued several motifs, as he called them, including children, Buddhist statues, and portraits. Although Domon is most famous for advocating “realism photography,” the significance and range of his work and influence extend well beyond this call, manifesting his preeminent stature in the larger sphere of photographic history.

Born in 1909 in Sakata-city, located in the northern part of the Japanese archipelago, Domon dreamt about becoming a painter when he was young. However, after seeing works by Gu Kaizhi, a Chinese literary painter, Domon realized the limitations of his talent in that medium. On his mother’s suggestion, in 1933 Domon apprenticed with a prominent commercial photo studio in Tokyo. During this two-year apprenticeship Domon learned basic techniques of photography and availed himself of the numerous journals stacked in the back of

the studio. He was fascinated by images by László Moholy-Nagy and other artists of the Modernist era. Domon’s position as an apprentice at a commercial portrait studio and his taste for artistic and journalistic photography presented him with a dilemma that he could not resolve, and he decided to leave studio practice.

In 1935, Domon joined *Nihon Kôbô*, a photographic agency led by Natori Yonosuke, an editor known for his difficult personality. Although Natori constantly confronted Domon with harsh criticisms and engaged in accusatory emotional dramas, the experience with their publication *Nippon*, an English magazine designed to promote Japanese culture abroad, equipped Domon with new skills and experience as a photographer. Around this time, Domon began using a 35 mm Leica camera, instead of a medium format view camera. In 1939, Domon left *Nihon Kôbô* over a dispute with Natori and began working for the International Association for the Promotion of Culture, a government-sponsored agency. The trip to Murou-ji temple in Nara at the end of 1939 with the art historian Muzusawa Sumio started Domon’s lifelong pursuit of a motif—Buddhist statues and temples—and the

fruit of his passionate and contemplative approach is evident in numerous publications, such as *Koten Junrei* and *Nihon no Tera*.

In 1940, Domon joined a group from Nihon Mingei Kyôkai (Association of Japanese Folk Art) led by the founder of the “folk movement,” Yanagi Muneyoshi, on a visit to Okinawa. During their two-week stay, his group commented that the imposition of “standard” Japanese language on the Okinawan people was a gesture of disrespect toward Okinawan culture. This caused political friction with their sponsoring officials in an incident that came to be known as “Hôgen ronsô” (controversy of dialect).

During the Pacific War, Domon photographed *bunraku*, traditional Japanese puppet theater, Buddhist statues, and created portraits of Japanese intellectuals. The compilation of these portraits was published in the magazine *Shashin bunka* in 1943, (later published as *Fubo* in 1953), and he won the first Arusu Photographic Culture award for this work.

After the war, Domon served on the jury for photographic contests that targeted amateur and emerging photographers sponsored by the international magazine *Camera*, and in 1949 he published his famous essay “on being a jury member for the contest” as introductory remarks for those submitting their works. As a result of this experience, Domon devoted increasingly more time writing criticism and corresponding with amateur photographers. The publication of this essay, in which he brought attention to the concept of “realism photography,” had an enormous impact not only on the works submitted to the contests and Domon’s own work, but also on the ways that both amateur and professional photographers thought about their work. Controversy followed Domon’s call for “realism photography.”

According to Domon, realism photography is an attitude toward practicing photography and is not to be defined by abstract concepts or a particular style of photograph. To achieve it, he encouraged photographers to establish a “direct connection” between the motif and the camera, by “listening to the voice that the motif shouts and control the camera in accord with it.” He further contended that “when the camera is moved as directed by the motif, there exists a direct connection between the motif and the camera.” Domon wrote another essay entitled “Realism photography that takes absolutely non-directed absolute snap as a basic method,” in 1953. This essay signals a shift toward more social and political motifs in Domon’s own work. Domon stated that “realism photography stares directly at actuality and is a manifestation of a spirit of revolt to change actuality to a correct

direction.” Furthermore, the absolutely non-directed absolute snap “emerges from the body of photographers who attack wholeheartedly social actuality” and “is the solo creative method to add something to society as an artist.” One of the projects that resulted from the exploration and articulation of “realism photography” is *Hiroshima* (1958), and its sequel *Living Hiroshima* (1978), in which Domon illustrated the profound presence of the atomic bomb as an on-going, complicit part of reality in contemporary Hiroshima, refuting the popular tendency to regard Hiroshima as a historical event. Domon suffered a stroke in 1960 that left his right hand paralyzed. This forced him to give up the use of 35 mm cameras, and he turned to the large format view camera, which allowed him to continue photographing Buddhist statues and temples. Domon died in 1990.

Throughout his career, Domon published numerous essays and gave speeches on photography and being a photographer to a wide audience. His often didactic and passionate approach was evident most clearly among the amateur photographers and photographs submitted for contests. Domon also wrote numerous short essays accompanying his photographic images in publications, and his powerful and energetic writings testify to his dedication to the profession and the medium. In 1983, the Ken Domon Museum opened in his birthplace of Sakata, the first museum dedicated solely to the work of one photographer in Japan.

FRANTIŠEK DRTIKOL

Czech

When František Drtikol arrived in Munich in the year 1901 to study photography, it was apparent that the practice of photography in his native Bohemia and its capital, Prague was inferior, technically backward, and artistically insignificant. It was oriented toward conventional styles of portrait photography; innovation was a foreign word. Drtikol became an innovator of Czech photography and one of the most important pictorialist photographers. Efforts, as for instance those of the British photography circle The Linked Ring Brotherhood or the

Vienna Camera Club, to professionalize the practice of photography and lift it to the level of fine art did not find an echo in Prague.

František Drtikol was born in March, 1883 in Příbram (southwest of Prague) in Bohemia. After a short training in one photographic studio in Příbram, he was admitted for a study at the just-opened *Lehr- und Versuchsanstalt für Photographie* in Munich. He left with honor after two years of study. Possible employment as a photographer in Germany or in Switzerland failed. Back in his hometown, in 1907 he created his own studio, which went bankrupt in 1910. Drtikol moved to Prague and opened his own

studio in the center of the city. His outstanding portraits attracted first the clientele from the Prague art circles, soon afterwards Drtikol—with his partner Augustin Škarda (1879–1937)—became the premiere portrait photographer in Prague.

Drtikol is considered to be the founder of the modern Czech photography—in addition to Karel Novák (1882–1952) and Vladimír Jindřich Buřka (1887–1916)—whose works mark an end of the general stagnation of the photography in Bohemia. Drtikol developed a specific form of pictorialist photography, the goal of which was to lift to the level of art by depicting “noble” subject matter (such as allegorical scenes, drama tableaux, nature scenes, and architectural ruins) in complex compositions. However, Drtikol was not of the opinion that photography should move into the proximity of painting. His procedure of the oil, pigment, or rubber prints—used until the late 1920s—served rather in his portrait photography to underline the character of the photographed person as clearly as possible. In nude photography, he wanted to show not only the body but also the soul. In order to elicit more clearly this idea, which had to be inherent—according to his opinion—in each artistic photograph, he worked on his negatives by painting whole picture portions or retouching them, manufacturing cutouts, and using different lighting effects, in order to express his visions.

Drtikol began to work on his series of nude pictures. They made him famous before World War I: The complicated noble prints (bromoil, coal, multi-color pigment prints) belong in their elegance, refinement of lines, and expression of strength of the female body to the most important pictorialist pictures and can easily compete with the work of Constantin Puyo or Robert Demachy, leading members of the Linked Ring Brotherhood.

Drtikol entered consciously into the pictorial tradition of the Photo Secession: his nudes mirrored the themes of the paintings of his countryman and famous painter of the Art Nouveau movement Alphonse Mucha, the Belgian Symbolists Fernand Khnopff and Félicien Rops: *Femme fatale*, *Salome*, *Judith*, and *Cleopatra* were the pictorialist contributions to one of the predominant topics of the *fin de siècle*. Drtikol's participation in the large exhibition in London (International Exhibition of the Salon of London of Photography, 1913) announced the beginning of his international career.

In 1920, under the influence of “straight photography,” Drtikol's concept of nude photography changed. Gradually he gave up the complicated noble print, of which he was the undisputed master in Prague, and devoted himself above all to the

pigment print. Drtikol placed and lit his nudes in front of geometrically arranged window blinds in such a way that the body forms were emphasized. This placement stressed—in contrast to the preceding period, in which the flatness of the noble prints underlined the two-dimensionality and in which space structure was suppressed—the depth and the special light direction characteristic of this second period. Between 1920 and 1925, Drtikol still worked on many photographs with painting and retouching. His 1921 pigmented print *The Bow* emphasized the formal qualities of the nude female form by way of a moody abstraction.

In a manifesto, which he wrote by the end of the 1920s together with Jaromír Funke (1896–1945), Drtikol stressed the primacy of the staging of the photographic picture that was developed before as an “interior (inner) vision”:

We photograph our “inner visions”; although we photograph in such a way as all others, there are only by us composed, arranged subjects, which we take up. We are directors of those subjects, the interiors of which we create by ourselves....Photography is for us an expression of the own and individual aspect.

Under the influence of his wife, the dancer Ervína Kupferová, who practiced free expression dance according to Emile J. Dalcroz (1865–1950) who postulated rhythm and movement as original values of free dance, Drtikol's photographs gained dynamics. Around 1925, he gave up the static conception of the picture, and movement and light direction now stood in the foreground. The female body also was taken up fragmentarily, in order to underline the space structure or the rhythm of movement. Those prints were internationally highly esteemed and sold at expensive prices.

Drtikol's landscape, portrait, and nude photography formed a unit from the beginning. With care and precision, as he had learned in Munich, he worked out every negative. His nude photographs taken between 1910 and 1930 were considered to be revolutionary, sensitive, and absolutely modern. Drtikol was also an outstanding landscape and portrait photographer; his photographs of important personalities of the 1920s and 1930s (Leoš Janáček, Paul Valéry, Rabindranath Tagore, Thomas Garrigue Masaryk, or Josef Čapek) belong to the best of portrait art at this time:

Every person requires another illumination, in order to recognize his character. Not only that everyone has to recognize himself—but he has to do it at first sight. Nevertheless it is difficult to recognize a human being on the street, whom we had met for the first time in

nocturnal light. The lighting, which the portrait photographer selects, must underline all the characteristic face particularities, which one can suppress neither as daily nor as night lighting—they are not to be excluded from the nature of his face.

His art was based not only on an extraordinary sensibility for the light, but also on its tendency to integrate the theosophical knowledge (which was based on his study of eastern philosophy and book translations) into his photographic work. Drtikol wanted to “write” himself into the soul of human beings with his work.

At the beginning of 1931 the Czechoslovakian Republic fell into a deep economic depression. Drtikol had to give photography and painting lessons in order to survive. Since he could not afford to have models (or only rarely), he cut out—quite schematically—from paper or cardboard a silhouetted female body, which however he idealized very strongly. The dynamics, which had distinguished the second period, were lost. Drtikol needed the participation of the living model. This dialogue between the photographer and the model was one of the sources of the originality of his nude photography.

In 1935, he sold his studio, moved from the center of Prague into a peripheral area, and gave up photography; from then on painting and eastern philosophy were his great interests.

Drtikol's modernity consists of successful integration of elements of the Cubo-Futurism into his work; particularly to integrate them into his nude photography, without submitting himself to the prevailing modes. The price for this persistence on his own style, the origins of which were in the painting of the symbolism of the nineteenth century, was isolation and the decades-long forgetting of his great photographic achievements. When he died on 13 January 1961 in complete isolation, only a few of his friends knew that one of the most important photographers of the twentieth century had left them. Not a single exhibition in Czechoslovakia of Drtikol's work occurred during his lifetime.

MILAN CHLUMSKY

Biography

Born in Příbram (Bohemia), on March 3, 1883. Apprenticeship with Antonín Mattas on October 1, 1898. From autumn 1901 at School of Apprentice and Laboratory for Photography in Munich, graduating with honors and a first prize during the exhibition in July 1903 in the Munich Old City. 1904–1907 military service. 1908–1909 own studio in Příbram. After financial failure, removal to Prague in February 1910. Publications *Doly příbramské* (Coalpot in Příbram, 1910) and *Z dvorů a dvořečků staré Prahy* (From yards and back-

yards of the old Prague, 1911). Drtikol starts work in 1912 with nude photography. From 1913 he made portraits of important personalities of Czech and international culture (Paul Valéry, Nobel Prize Winner R. Tagore, etc.). 1914 Drtikol entered the Austrian-Hungarian army, is sent into war where he is blinded in one eye. His studio in Prague continues to operate, led by Jaroslav Roessler and by his partner, Augustin Škarda. 1921 Drtikol separates from Škarda because of financial discrepancies. 1922 patents procedure of photo lithography, which shows also half-tones. 1925 his nude photographs of the dynamic components—under the influence of the expression-dance of E. Dalcroz—were being extended by movement, cutout, and special lighting effects (light modulation). 1929 appear *Les nus de Drtikol* (Préface Claude de Santuel) in Librairie des Arts décoratifs in Paris. Because of the economic crisis 1929 Drtikol turned to teaching his craft. 1935 he sold his studio, giving his photographs and all documents to the Museum of Arts and Crafts in Prague. 1938 a last publication *Žena ve světle* (Woman in the light). He moves from the center to the periphery of Prague, dedicates himself to painting and philosophy. Died on 13 January 1961 in Prague.

DAVID DOUGLAS DUNCAN

American

David Douglas Duncan, one of the twentieth century's most accomplished photojournalists, photographed every major war from World War II to Vietnam. Duncan's career is characterized by his strong-willed commitment to photojournalistic clarity, his insightful portraits of war, and his limitless curiosity, which led to images and publications on diverse subjects ranging from the legendary artist Picasso to sunflowers to the treasures of the Kremlin.

Born in 1916 in Kansas City, Missouri, David Douglas Duncan began his photographic career at age 18. Duncan had been studying archeology at the University of Arizona in 1934; he had recently received a camera as a birthday present. When Tucson's largest hotel caught fire, he made some snapshots. It turned out, however, that the man he photographed running out of the hotel with a suitcase in hand was gangster John Dillinger, America's Public Enemy No. 1. This was the beginning of a lifetime of capturing significant moments on film. Duncan soon transferred to the University of

Miami in Florida where he studied marine zoology and deep-sea diving. After college, Duncan freelanced and was published in a variety of publications including *National Geographic* magazine and worked on several projects in Latin America.

In 1943, Duncan entered the Marine Corps and served as a combat photographer in the South Pacific. On the Solomon Islands, Duncan covered Fijian guerrilla warfare, (*Fijian Guerilla*, 1944) and after witnessing deadly ambushes in Bougainville, he was transferred to Okinawa where he photographed combat aviation. This experience of war forged Duncan's close-up and direct style of photography, which so effectively portrays the human aspects of war. Duncan achieved the rank of Lieutenant Colonel and received the Legion of Merit, Distinguished Flying Cross, Air Medal, and a Purple Heart.

In 1946, Duncan was hired by legendary *Life* magazine editor Wilson Hicks as a staff photographer, a major accomplishment for photojournalists at the time. Duncan spent 10 years at *Life* magazine and saw his images published as cover stories, including photographs of GIs that have become contemporary icons. Duncan's coverage of the Korean War in 1950 with the First Division Marines was featured in a famous *Life* spread titled "This is War!". The poignancy and thus power of Duncan's images frequently lies in the eyes of his subjects. The *Life* story, for example, included striking and intimate images of Captain Ike Fenton and Corporal Leonard Hayworth; the haunted yet guarded look in the men's eyes powerfully communicates the horror of war (*Captain Ike Fenton, Baker Company Commanding Officer, receives report of dwindling supplies during the battle to secure "no-name" ridge*, 1950 and *Corporal Hayworth*, 1950).

Duncan's motto for shooting war photographs was "Be close—be fast—be Lucky, Easy, always remember—be humane, never close-ups of the dead, war is in the eyes" (*Photo Nomad*, 2003, 151). In 1951, Duncan published *This is War: A Photo-Narrative*, a book of these haunting images of the Korean War. Years later a 22 cent U.S. stamp was made to honor those who fought in Korea; "Veterans Korea," based on one of Duncan's images. The stamp, however, crops Duncan's original image, *North Korea, 1950*, so that the dead bodies on the ground below the soldiers could not be seen. Duncan's *Life* images were also technologically pioneering in that they were taken with the newly introduced Nikon lens, which he used on a Leica camera. The positive response to the quality of these images contributed significantly to the popularity of the previously unknown Nikon brand.

Duncan's life as a photojournalist also included trips to Saudi Arabia, where he produced *Riyadh*, 1947, and Turkey, capturing *General "Black Avni" Mizrak commanding Turkish cavalry, guarding wintertime Russian frontier*, 1948. He also covered Iran, Palestine, Bulgaria, India, and the Far East, producing stories that include both remarkable portraits and breathtaking landscapes. Other *Life* assignments of the late 1940s and 1950s include the departure of King Farouk from Egypt, the end of the British Raj in India, and Ava Gardner in Rome filming "The Barefoot Contessa."

Duncan resigned from *Life* magazine in 1956 and became a freelance photographer. His travels included trips to the Middle East and the former Soviet Union, where despite Cold War tensions, he was allowed to extensively document the Kremlin treasures.

Throughout his career, Duncan has been very conscious of staying in control of his images and refused to compromise his photographs for political reasons. His 1953 "Indochina All But Lost" *Life* photoessay provoked conflict with Henry Luce, the magazine's founder and editor-in-chief. Luce considered the story "defeatist and therefore wrong" (*Photo Nomad*, 221). For Duncan, the story was the way he saw things; in fact, he correctly foresaw the fall of Dien Bien Phu in 1954, which led to the division of Viet Nam and America's eventual involvement. Remaining faithful to his convictions, in most of his 24 books, he was responsible for all elements of the publications.

Duncan's work was first exhibited in Edward Steichen's *Memorable Life Photographs* exhibition at the Museum of Modern Art in New York in 1951. His work was also featured in another of Steichen's exhibitions in 1951 titled *Korea* as well as in the seminal 1955 exhibition *The Family of Man*.

The mid-1950s was also the beginning of a long friendship between Duncan and Pablo Picasso. The two men, both masters of their respective visual forms, shared a deep passion for work and life. Duncan gained unprecedented access to the great artist and spent several years photographing Picasso, eventually publishing seven books featuring images of Picasso at work and at play. The works are intimate and charming, frequently focusing on Picasso's intense and expressive dark eyes (*Picasso*, 1957).

Undoubtedly influenced by Picasso, Duncan began experimentation with cameras during the 1960s, using the special effects of prismatic lenses. Duncan states in his book, *Prismatics: Exploring a New World*, 1972, "I wanted to fragment then reassemble the subjects before me, limited only by

my imagination and ability to fulfill it—sometimes ending with fresh images of very old and tired models” (Foreword, 1). One of his many images of “prismatic” Paris is *The Lido*, 1962/1967.

As the Vietnam War unfolded in the 1960s, the legendary war photographer returned to the battlefield for *Life* and ABC News. Duncan’s coverage produced harrowing images of what he quickly came to see as a tragedy, notably the siege of Khe Sanh (*The Snipers of Khe Sanh*, 1968). His “war trilogy” that started with *This is War: A Photo-Narrative* was soon complete with two new books, *I Protest!* (1968) and *War without Heroes* (1970), questioning the role of the American government in Vietnam. In *I Protest!*, he wrote:

I am no kook, hippie, or dove. I am just a veteran combat photographer and foreign correspondent who cares intensely about my country and the role we are playing—and assigning ourselves—in the world of today. And I want to shout a loud protest at what has happened at Khe Sanh and in all of Vietnam.

Duncan’s commitment to accurately recording the story coupled with his human insight and fine composition skills have created a captivating and rich photojournalistic *oeuvre* with many creative and original images to complement the drama of his renowned war photographs. Duncan’s 2003 photo-autobiography, *Photo Nomad*, presents a thorough picture of the evolution of his critical eye. Today, the Harry Ransom Humanities Research Center at the University of Texas at Austin now preserves Duncan’s legacy as one of the finest photojournalists of his time.

DYE TRANSFER

A photographic process capable of making color prints of the highest quality, dye transfer was principally used for commercial work. The quality arises from the fact that the final picture is layered onto and absorbed into archival quality paper from four separate color images, creating a subtle and stable color photograph. The dye transfer process, invented by the Eastman Kodak Company, first came on the market in 1945. Kodak discontinued making materials for dye transfer in 1993, effectively ending the practice at both commercial labs and for the few practitioners of the complicated and expensive process.

Basic Process

The dye transfer process is based on principles of color separation discovered in the mid-nineteenth century. To make a set of dye transfer separations, a color transparency is exposed using filters—red, green, and blue—onto three different black and white film sheets. The exposure through the red filter creates a negative separation of the cyan (blue) image. The green filter creates the negative

separation for the magenta (red) image; the blue creates the negative separation for yellow. The separations are then each exposed onto another black and white film called matrix film to create a positive (which can be enlarged to the desired size). The separation made with the red filter will then, when reversed, be used to print the cyan image; the green will print the magenta image; the blue will print the yellow. The matrix film has a dimensionally stable plastic base coated with a thick layer of silver halide emulsion suspended in a medium of gelatin yellow dye. This dye serves to control the penetration of the light used during the exposure, allowing less exposure in areas of the thick matrix and more in thinner areas.

When the silver has been reduced in the development process, the gelatin hardens adjacent to points on the image where the silver has turned black. Excess gelatin and yellow dye are then removed with repeated baths of hot water, leaving a relief image in gelatin. This process is repeated for each matrix, resulting in a set of three positive matrices each with a gelatin relief image that is thicker where that color will be darker.

DYE TRANSFER

In the presence of acetic acid, gelatin absorbs dye. Each matrix is soaked in its proper color, cyan, magenta, or yellow, then rinsed and rolled individually onto wet paper treated with a gelatin layer and a mordant to hold the dye and to prevent it from bleeding when it hits the paper. Because the paper is much less acid than the dye, the dye migrates from acid to base, transferring from the gelatin on the matrix to the gelatin on the paper. The matrix is peeled away and the next color is rolled down while the paper is still wet. After all three colors are applied, the print is dried and flattened. Because each color is applied separately, precise registration of the matrices is essential.

Manipulating the Process

The contrast range of a transparency is greater than that of a print. Once the separations have been made, masks can be used to control contrast and shadow. Primary masks can be used to lower the contrast in making separations and matrices. Using special lithographic film, several additional sets of three black and white images can be made to mask highlights. These highlight masks can be placed on top of the separations during part or all of the exposure of the matrices, resulting in a brightening of the lighter parts of the print and control of the colors in the highlights. With highlight masks, the highlights can be controlled separately from the mid-tones and shadows. Contrast reducing masks enable the printer to control the density and color of shadows. Additional shadow separations can add contrast to the shadows, and by exposing a sheet of matrix film through all three shadow masks at once, the black parts of the image can be isolated and printed separately. Thus each print can depend on at least fifteen black and white sheets of film used as separations and masks. Because a variation in any one of these can make a print unusable, the developers and trays must be kept within a quarter of a degree of the proper temperature. Moreover, the printer must understand the unique characteristics of the different types of black and white film used to make separations, highlight masks, and contrast reducing masks.

Burning and dodging, the common techniques used in printing black and white photographs, are considerably more difficult with dye transfer

because the alterations would have to be repeated exactly for each of the three separations or matrices. For dye transfer, dodging effects are achieved by painting with a dye called Crocein scarlet on clear film sheets that are placed on top of the separations and masks. Crocein blocks light and can be painted where it is needed. For effects similar to burning, windows can be cut from Amberlith or Rubylith, translucent graphic arts materials that are orange or red. These block the blue light to which the matrix film is sensitive.

Practical Application

Despite its difficulty, dye transfer has distinct advantages as a process for making color prints. Because each color is developed and applied separately, minute alterations can be made to individual colors, resulting in precise control of the final image. The prints have a unique richness and depth, since the dyes actually soak into the fibers of the paper instead of resting on a plastic coating on the surface of the paper. Most important, the prints are archivally stable. Recent research has shown that in dark storage, dye transfer prints would show little deterioration in six hundred years, if properly cared for. Although computer-based digital techniques have replaced the use of dye transfer for commercial photography and only a small handful of art photographers still use the process, existing dye transfer photographs may someday be regarded as some of the most beautiful and enduring color images from our age.

E

EASTMAN KODAK COMPANY

The Eastman Kodak Company was founded in 1892, 12 years after George Eastman, an amateur photographer with barely an elementary school education, invented a machine that put forth pre-coated dry plates and formed a succession of business ventures focused on the new field of consumer photography. The development of this company reflected relentless technical innovation undertaken by Eastman and others, including Thomas Edison. In 1879, Eastman had traveled to London, the intersection of business and photography, and acquired a patent for his new product. By the following year, Eastman began to commercially manufacture pre-coated dry plates in a rented space in Rochester, New York. Successful in this venture, in 1881, Eastman formed a partnership with businessman Henry A. Strong to form the Eastman Dry Plate Company. However, in 1884 this firm evolved into the Eastman Dry Plate and Film Company, with a total of 14 shareholders. Eastman also invented the first transparent roll of film.

From the somewhat unlikely location of Rochester, New York, in the western part of the state, the Eastman Kodak Company ushered in amateur photography, constantly innovating and seeking to keep the price of its products low enough to allow widespread use. The word “Kodak” was first registered

as a trademark in 1888, coined as an easy-to-remember, vigorous word by Eastman himself. The first product aimed at the consumer market was a Kodak camera, unveiled in 1888 and priced at \$25. This camera appeared as a small, handheld structure that contained a roll of film with 100 exposures and cost \$10 to develop at the laboratories in Rochester. Eastman coined the slogan, “you press the button, we do the rest,” when he introduced the Kodak camera and within a year, it had become a well-known phrase.

Prior to Eastman’s discovery in 1880, photographers had worked laboriously, applying fresh chemicals to a metal plate in order to take a single picture. Kodak’s point-and-click novelty not only transformed photography from a complex, artistic method into a common, everyday practice, but it also moved the center of photographic commerce to New York from London. The creation of low-cost mass production combined with international distribution, extensive advertising—Kodak products were advertised in leading papers and periodicals of the day with ads written by Eastman himself—and a focus on the customer were four principles that served as the foundation of the Eastman Kodak Company. In 1896, 100,000 Kodak cameras had been manufactured, signaling a mile-

EASTMAN KODAK COMPANY

stone in the evolution of mass photography. However, Eastman was determined to make the camera even more convenient and introduced the Brownie in 1900 which sold for \$1.00 and consisted of separate removable containers.

Eastman, moreover, sought to bring amateur photography to the world market. The first sales office of Kodak cameras had opened in London five years after the establishment of the Eastman Dry Plate and Film Company. Amateur photography began to flourish world wide, and in 1889 the Eastman Photographic Materials Company, Limited, was incorporated in London and became the main distributor of Kodak products to countries outside of the United States. Two years later, in 1891, the Eastman Kodak Company constructed a factory in Harrow, England, that was second to Rochester in the manufacture and development of camera film. The word "Kodak" was shown in an electric sign in London's Trafalgar Square in 1897, in one of the first uses of such signs for advertising. Kodak rented booths at the great world expositions so popular around the turn of the twentieth century, and developed the trademark "Kodak Girl," whose clothing styles changed every year along with the camera she carried. By 1900, additional distribution centers appeared throughout Europe, in countries such as France, Germany, and Italy.

The entrepreneurial discoveries of George Eastman had a big influence in the invention of the motion picture. After the first transparent roll of film was introduced to the commercial market in 1889, Thomas Edison created the first motion picture camera in 1891. According to Eastman Kodak, all Oscar-winning "Best Pictures" have been shot on Kodak film. Additionally, the company has won a total of eight Academy Awards in the areas of scientific and technical excellence. In 1929, when Eastman Kodak discovered a way to create film that could record sound, the silent movie that had dominated much of popular culture during the early twentieth century immediately became an artifact of history.

The Kodak, despite its emphasis on consumer photography, also became a center for scientific photography inventions. X-rays were first isolated by William Roentgen in 1895; by the next year, Kodak designed paper that would capture X-ray images, revolutionizing medicine. The Eastman Kodak Company was one of the first to set up an industrial research center in the United States, hiring scientists as early as 1912.

The vast technological advancements made by the Eastman Kodak Company did not occur with-

out incident. In 1921, the U.S. government charged that Kodak was a monopoly that controlled the sale of cameras and photographic supplies. As a result Kodak was required to sell all film as "Kodak" through retail outlets that had previously used different brand names. Later in 1954, Eastman Kodak was charged with bundling the sale of its own film with its photofinishing services, thereby prohibiting the growth of independent photographic laboratories. However, because Kodak no longer maintained an unfair dominance within the exchange of photographic services, the U.S. District Court of Appeals terminated both the 1921 and 1954 decrees in August 1994.

During much of the 1950s, color photography dominated the mass media and later experienced a surge in demand from the amateur and commercial markets. Kodak's earliest form of color film, known as Kodachrome, initially appeared in 1930 and consisted of a color-reversal film that was produced in the form of 35 mm slides, which could be viewed through projection. In 1941, Kodak's Minicolor Print allowed paper prints to be made from these transparencies. A color-negative film, called Kodacolor, was introduced in 1942, and by the latter half of 1955, the color print process was simplified with the invention of Ektacolor paper, also known as "Type C." Color prints previously involved a lengthy three-step process, but this new advancement reduced the production of color prints to 45 minutes.

However, in addition to the commercial and amateur markets, the Eastman Kodak Company has also made exceptional contributions to the areas of medicine, science, and technology. After William Roentgen isolated the X-ray in 1895, Kodak designed a particular kind of paper in 1896 that was devised to capture the X-ray image. As the atomic bomb was developed during World War II, Kodak introduced films that detected radiation exposure. Kodak also brought the first microfilm to the market in 1928, used primarily by the government, insurance agencies, libraries, and transportation agencies. Kodak was also a leader in space photography. In the 1960s, NASA launched five Lunar Orbiter spacecraft that used Kodak film to photograph the moon's surface. As the first American to orbit the moon, John Glenn's reactions were also documented with Kodak film as he traveled through space at 17,400 miles per hour. Beyond medicine and science, Kodak developed new display technology in the late 1980s called Organic Light Emitting Diode (OLED) that contained self-luminous pixels. OLED technology appears in everyday utilities such as digital cameras and mobile phones. Currently the East-

man Kodak Company is focused on the enhancement of info-imaging technologies, which combine images with information in order to improve both interpersonal and business communications.

HAROLD EDGERTON

American

Harold E. Edgerton is credited with inventing ultra high speed, stroboscopic, and stop-action photography. He was the first to photograph the invisible and the elusive, events that occurred too fast for the human eye to see, from the stroke of a hummingbird's wings to the detonation of an atomic bomb to action that occurs too slowly to notice, such as the movement of sea urchins. Capturing some events with exposures as short as a hundred-millionth of a second, Edgerton patented innovations that greatly advanced the technology of science, industry, and the arts. As an educator, engineer, and explorer, Edgerton's many inventions further developed and aided the diverse fields of photography, medicine, athletics, journalism, espionage, moviemaking, underwater exploration, sonar, and nuclear research. His inventions and innovations have advanced scientific research and have greatly enlarged the parameters of photography, producing classic images that have become part of the visual culture.

Edgerton was born in 1903 in Fremont, Nebraska. During high school, Edgerton learned photography basics from an uncle and built a home darkroom. In 1925, he received a B.S. in electrical engineering from the University of Nebraska in Lincoln. After working both in Nebraska and New York for power generating companies, Edgerton entered the Massachusetts Institute of Technology (MIT) in

1926. In his graduate studies there, Edgerton first used the strobe light to see whirling engine rotors. He received his M.S. in 1927 and later his doctorate in electrical engineering from MIT, where he became a faculty member and was eventually named Institute Professor, MIT's highest honor.

By synchronizing strobe flashes with the motion of the spinning engine rotors, then taking a series of photos through an open shutter at the rate of many flashes per second, Edgerton effectively had invented ultra-high-speed flash and stop-action photography in 1931. In 1932, Edgerton, ever an entrepreneur, developed and perfected the stroboscope for use in both ultra-high-speed and still photography applications, in partnership with former student Kenneth J. Gernsmaier, an MIT research affiliate. Later, Herbert E. Grier, another former MIT student, joined the partnership, which was formally incorporated as EG&G in 1947. The team began a long series of experiments documenting familiar events and activities that moved at speeds beyond the ability of the human eye to perceive with the newly-perfected high-speed photography using a stroboscope. The stroboscope was a glass tube filled with exotic gases and excited with an electric jolt that would freeze the action of any moving thing onto continuously moving film. The threesome made their first stroboscope patent application in 1933, the first of 45 patents applied for by Edgerton and his team in the next 35 years. EG&G also developed high-powered strobe lights

for commercial use in apparatus ranging from lighthouses to copying machines.

Edgerton's first foray into exhibiting his photographs was at the London Royal Photographic Society's annual exhibition in 1933. The next year, 10 of the photographs made with the stroboscope were exhibited, and Edgerton, Gernsheim, and Grier received their first photography award, a bronze medal, from the Society for the revolutionary new imaging. It was during this time that his achievements first received recognition as fine-arts photography: the photograph *Coronet* (the famous drop of milk frozen in midair splash) was chosen by Beaumont Newhall for inclusion in the Museum of Modern Art's initial exhibition of photography in New York City in 1937.

Edgerton's first book, *Flash! Seeing the Unseen by Ultra High Speed Photography*, co-authored with James R. Killian, Jr., was published in 1939. For the popular audience it was a revelation. E.F. Hall, reviewing *Flash!* in the *New York Times*, wrote, "This whole book...covering the fields of nature, sport, and industry, is a compilation of magic and of things undreamed, calculated to excite the most sluggish mind." Edgerton subsequently published three more books that featured the results of his discoveries.

Always driven to put his inventions to practical use, Edgerton perfected multiframe photography of athletes in action and tried to sell the concept of electronic flash to major U.S. camera manufacturers, but was received with limited interest. He then offered sports photographers his services and equipment. Soon, sports photography was allowing the camera to capture high-speed motion and preserve an unprecedented degree of detail, revolutionizing how sports were portrayed through photography. Electronic flash photographs of sports events were regularly published in major newspapers after 1940.

As World War II broke out in Europe, Edgerton briefly worked for the film industry in Hollywood. At MGM Studios he collaborated on the Academy Award-winning short, *Quicker Than a Wink* (1940), which featured his high-speed photography techniques. Following the United States' entry into the war, the U.S. Army Air Force commissioned Edgerton to design and deliver strobe lamps powerful enough to be used for nighttime aerial photography, and he served in Europe as their technical representative. He directed the use of the strobes, enabling intelligence about troop movements in enemy territory to be collected that had not been obtainable through other means. In the European theater, Edgerton's strobes were

used on the nights immediately preceding the D-day invasion of Normandy and during the Battle of Monte Cassino; they were also applied in campaigns in the Far East. Edgerton received the Medal of Freedom from the War Department in recognition of these achievements.

In 1947, Edgerton, through EG&G Inc., began work toward specialized electronic technology. As a prime contractor for the Atomic Energy Commission, EG&G designed and operated systems that timed and fired U.S. nuclear bomb tests. They also invented a camera (the Rapatron) capable of photographing nuclear explosions from a distance of seven miles.

Edgerton was also important to the development of nature photography. His work reached a wide public through the pages of *National Geographic* magazine, the first of his many articles appearing in 1947. Typical of these is *Hummingbirds in Action*, containing high-speed photographs that for the first time captured the tiny birds' intricate movements.

Edgerton was also a pioneer in the area of underwater photography. Among his innovations were the first undersea time-lapse images and sonar and sounding devices that helped place underwater cameras. He had begun his association with French underwater explorer and fellow inventor Jacques-Yves Cousteau in 1953 and together they explored and photographed a wide variety of sea beds. To position his cameras, he developed a device he dubbed a "pinger" to attach to the submerged camera. The pinger emitted sound waves that bounced off the ocean floor and returned as echoes, indicating the camera's distance to the bottom. He also developed a "thumper" device, which was capable of sub-bottom penetration of the sea floor. Although this was not a photographic technique, the thumper was used to locate ancient rocks from the deepest layers of the earth's crust, advancing scientific research in the arena of geology. Later, Edgerton designed the "boomer," a sonar device useful for continuous seismic profiling of the bottom of the sea.

Using these and other sonar tools, Edgerton pioneered "photo excavation" for the underwater Greek city of Helice, located the sunken warships *Mary Rose*, and the Civil War battleship USS *Monitor*. Later, in 1987, he used the Edgerton-Benthos underwater camera to photograph the sunken RMS *Titanic*, discovered earlier off the coast of Nova Scotia. Edgerton also participated in an inconclusive search for the Loch Ness monster.

Edgerton aimed his camera everywhere. He developed elapsed-time to photograph slow events,

such as the movement of sand dollars and sea urchins. He entered the human body to take motion pictures of capillary blood flow and pointed his cameras to the skies to record solar eclipses.

In the 1960s and 1970s, Edgerton continued teaching and directing research at MIT, and earned the affectionate nickname “Doc” from his students. One of his best-known photographs dates from this period. *Shooting the Apple*, 1964, shows the instant a bullet tears through a bright red apple. Edgerton used this image to illustrate the laws of physics in a popular lecture he titled “How to Make Applesauce at MIT.” During this period he also continued his many research projects and wide travels. In 1971, the Harold E. Edgerton Laboratory (ERL) in the New England Aquarium in Boston, a center for basic and applied science, was dedicated, honoring aquarium trustee Harold Edgerton. In 1975, he ended his daily association with EG&G, Inc., and became the company’s emeritus chairman of the board.

To ensure his pioneering legacy, some of his camera strobe equipment and photographs are installed at the Plainsman Museum in Aurora, Nebraska. The MIT Sea Grant research vessel, a seagoing laboratory and classroom, was commissioned and named *Edgerton*. In 1983, MIT dedicated “Strobe Alley” an 80-foot corridor museum at MIT of Edgerton’s photographs and equipment, as well as artifacts recovered on various voyages. MIT also created and dedicated the EG&G Education Center at MIT, a teaching and conference facility built with gifts from EG&G, Inc. and its three founding partners.

Edgerton remained active, however; in 1985, at age 82 he again accompanied Cousteau aboard *Calypso* on an expedition off Matanzas Harbor, near Havana, Cuba, in search of Spanish shipwrecks. Later that year the PBS Nova series aired “Edgerton and His Incredible Seeing Machines,” a program based on a film originally produced by Nebraska Educational Television that explored the career and inventions of Edgerton and documents the development of stroboscopic photography.

On January 4, 1990, after lunch at the MIT Faculty Club, Harold E. “Doc” Edgerton died at age 86. Edgerton’s inventive genius and his long career allowed all mankind’s eyes to observe and record events never before seen. To solidify his legacy and propagate his love for learning, the Harold E. Edgerton Educational Center (renamed Edgerton Explorit Center) opened in 1995 in Aurora, Nebraska, his childhood home. Although his impetus was at base a scientific one, his photographs are today widely appreciated, exhibited,

and collected for their formal beauty and aesthetic qualities. A number of his best-known images were printed as dye-transfers in the 1980s and have been collected by museums around the world.

Biography

Born April 6, 1903, Fremont, Nebraska. Enrolled at the University of Nebraska, Lincoln, 1921. B.S. in Electrical Engineering, 1925. Enrolled at Massachusetts Institute of Technology (MIT), studied rotating engines using a strobe light, 1926. M.S. in Electrical Engineering from MIT, 1927; joined faculty; married Esther May Garrett, 1928. Announced stroboscope and its use in both ultra high speed and still (or stop-motion) photography; formed partnership with former student Kenneth J. Germeshausen; D. Sc. in electrical engineering from MIT, 1931. First stroboscope-taken photographs appeared in publications, 1932. Applied for U.S. patents for the stroboscope; photographs included in the Royal Photographic Society’s annual exhibition in London (first Edgerton exhibition), 1933. Herbert E. Grier joined the partnership of Edgerton and Germeshausen; partnership received its first photography award, the Royal Photographic Society’s Bronze Medal, 1934. Designed a strobe lamp for night aerial photography for the U.S. Army Air Force; co-authored first book, *Flash!*, 1939. Served in Europe as technical representative for the U.S. Army Air Force, 1944. War Department Medal of Freedom, 1946. Begins association with underwater explorer Jacques-Yves Cousteau, develops pinger and side-scan sonar, 1953. Photographs ocean floor using thumper, 1960. Designs boomer for seismic profiling of sea floor, 1961. Appointed Institute Professor at MIT, 1966. First slow-motion photographs, 1968. Receives U.S. National Medal of Science, awarded by President Richard M. Nixon; MIT establishes the Edgerton Fund, 1973. Named “New England Inventor of the Year,” 1982. “Strobe Alley” and EG&G Education Center, (both at MIT) dedicated, 1983. “Edgerton and His Incredible Seeing Machines” aired by PBS on “Nova,” 1985. Inducted into the National Inventors Hall of Fame by the United States Patent and Trademark Office. Died, 1990. Harold E. Edgerton Educational Center (renamed Edgerton Explorit Center) opened, 1995.

WILLIAM EGGLESTON

American

Often called the “father of color photography,” William Eggleston is credited with helping establish the basic lexicon of contemporary color photography as art. One of several artists to begin working with color photography in the late 1960s, he was the first of this group to have a major museum exhibition of his color work, *Photographs by William Eggleston*, which was held at the Museum of Modern Art (MoMA), New York, in 1976. Eggleston’s subject matter is ordinary life, often presented in simple, centrally organized compositions in a style much like casual snapshots. The similarities of his work to vernacular photography were not lost on his critics, who decried his work following the 1976 exhibition. Nevertheless, Eggleston very quickly became renowned for his deft use of color as an integral element of composition, as well as his unusual perspectives and uncanny ability to monumentalize the minutiae of mundane life.

Eggleston was born in Memphis, Tennessee in 1939. He grew up on a former cotton plantation in Tallahatchie County, Mississippi. At the age of 10, he first toyed with photography using a Brownie Hawkeye. The following year, his father died, leaving his grandfather, a hobbyist photographer, a prominent role in Eggleston’s life. As a student at Vanderbilt

University in Nashville, Tennessee in 1957, Eggleston bought a Canon rangefinder and began to experiment with photography. After leaving Vanderbilt, he attended Delta State College in Cleveland, Mississippi, and the University of Mississippi, Oxford. During this time, he studied photography independently, seeking out published resources.

Eggleston became an independent photographer in 1962, after the work of Henri Cartier-Bresson, a Magnum photographer, first caught his attention. The painterly quality of Cartier-Bresson’s photographs, which bore clear evidence of the influence of artists such as Edgar Degas and Henri de Toulouse-Lautrec, appealed to Eggleston’s personal interest in painting theory. The unusual perspectives, so different from the direct, head-on viewpoint typical of photography prior to the 1960s, gave Eggleston new insight into the creative possibilities of photography.

In 1965, Eggleston began experimenting with color photography. He was working exclusively in color by 1966, when color photography was not yet considered a legitimate art form; prior to 1970 color was accepted only for amateur and commercial photography. The 1959 proclamation of revered American photographer Walker Evans, “Color-photography is vulgar,” reflected a persistent, widespread perception of color photography

as cheap, common, and not artistic. Color photography seemed to distort compositions, exaggerating contrasts, emphasizing certain colors and de-emphasizing others that, in black and white photography, would have held the same visual weight. Color photography necessitates careful consideration of formal elements in more complex terms than those demanded by traditional black and white photography.

Eggleston's earliest color photographs illustrate surroundings familiar to him: friends, family, homes, and neighborhoods, as well as more trivial details from daily life, such as a light fixture on a ceiling, a pile of trash bags leaning against a building, or the inside of an empty oven. As he branched out to less familiar territory, he continued to focus on typically unremarkable visions from daily life, such as the interior of a frosted-over freezer filled with food; a shower stall with a mint green tub and tiles, gleaming stainless hardware, and stained grout; or a shot of shoes, a dime, and a gilt-framed mirror stashed beneath a bed. He is especially well known for his interiors, abandoned landscapes, and lone, centrally-placed figures. Of his photographs, Eggleston says, "I like to think of them as parts of a novel I'm doing" (Knappe 1999, unpaginated).

Eggleston's color photographs of trivial images from mundane life sparked considerable controversy following his MoMA exhibition, the first solo exhibition of an artist using color photography at the museum. *Photographs by William Eggleston* presented 75 dye transfer prints, all shot on transparency film between 1969 and 1971. The snapshot-quality of the images, with commonplace subjects and informal, seemingly offhand compositions, left audiences wondering how the images were different from those taken by any amateur photographer. The stigma against color photographs exacerbated the issue. Harsh critical reviews of the show criticized Eggleston's "snapshot chic" as boring, banal, and unacceptable.

Exhibition curator John Szarkowski, then Director of the Department of Photographs at the MoMA, had first met Eggleston in 1967 at the suggestion of mutual friends Garry Winogrand, Diane Arbus, and Lee Friedlander. Szarkowski immediately liked Eggleston's work, but was unable to secure exhibition funding for several years at least partly because of the historical bias against color photography. According to Szarkowski, color photography prior to the 1970s had "failed" in two ways: either photographers neglected to consider color as an integral element of the composition, or they focused solely on color as a formal element separate from other aspects of a composition. In

neither case did artists consider color holistically. Eggleston's holistic approach to his photographs is what, according to Szarkowski, separated his work from that of other photographers, professional and amateur alike.

The central compositions of Eggleston's photographs also seemed to relate them to amateur photography, in which the casual photographer centers each subject perfectly in the frame. On closer inspection, Eggleston's compositions are complex and highly ordered. As Alfred Barr noted in 1972, Eggleston's compositions seem to radiate from a central point like a wheel, as in *Southern Environs of Memphis*, 1971. Eggleston acknowledged this recurring design and explained it as mimicking the Confederate flag (a comparison for which he has received much criticism).

The apparent simplicity of his compositions belies their complex sources of inspiration: the *ukiyo-e* viewpoint ("pictures of the floating world") of Japanese art mediated through the work of Post-Impressionist painters and printmakers such as Degas and Toulouse-Lautrec. Whether shot from above or below the subject, Eggleston's photographs are not taken from typical eye level. Regarding his photograph *Untitled* (Tricycle), c. 1970, in which the extremely low perspective angle makes a child's tricycle appear monumental, Eggleston said:

Sometimes I like the idea of making a picture that does not look like a human picture. Humans make pictures which tend to be about five feet above the ground looking out horizontally. I like very fast flying insects moving all over and I wonder what their view is from moment to moment. I have made a few pictures which show that physical viewpoint. The tricycle is similar. It is an insect's view or it could be a child's view.

(Holborn 1992, 23–24)

By subverting the viewer's usual viewpoint, Eggleston confers new depth to the mundane subjects individuals take for granted every day.

Following Eggleston's MoMA exhibition, critic Janet Malcolm suggested that such snapshot-style photographs had become acceptable material for an exhibition at MoMA because of the work of the Photorealists of the 1960s and 1970s, who painted large-scale, often mundane subjects with photographic precision. She called photographers such as Eggleston "photo-Photo-Realists." Subsequent critics have refuted her claim of a connection, but the pervasiveness of trivial objects in the art of both groups is surely significant.

Eggleston had spent time in New York in the 1970s with Pop artist Andy Warhol and his circle of friends at the Chelsea Hotel. Eggleston's realist images, full

of rust and decay, counter the Pop images Warhol produced—clean, bright images of commercial products and popular icons. As Warhol's images are about production, Eggleston's are about consumption; as Warhol's images present popular icons of American life, Eggleston presents ordinary, nameless Americans. Eggleston shows the grittier, real-life side of the idealized world Warhol presented.

The creation of iconic imagery attracted Eggleston to Walker Evans, whose work Eggleston praised for "elevating the casual, the everyday and the literal into specific, permanent symbols" (Holborn 1992, 12). Eggleston shared Evans's goal of glorifying the commonplace. Eggleston also points out where their interests diverge: Evans, like most photographers of the mid-twentieth century, used a square-on, perfectly frontal shot, which Eggleston avoids religiously.

The unusual perspectives and angles of Eggleston's photographs work with his uninhabited, stark scenes to create a sense of unease in many of his images. His frequent depictions of neglected buildings, rusty signs, and dirty streets further the sense of a darkness lurking beneath his colorful surfaces, as in *The Louisiana Project*, 1980. In photographs such as *Untitled* (Toilet), 1970, the low perspective, seen as though lying on the floor, casts a menacing shadow on the scene. The harsh juxtaposition of the eerie pool of red light glowing beyond the green wall intensifies the sickly, ominous atmosphere.

The power of color in *Untitled* (Toilet) points to the additional experiences that black and white photography cannot suggest. Color intensifies the emotional dimension of his works—sinister or beautiful—and infuses his photographs with a sense of immediacy: his scenes seem familiar, more directly connected to our own lives than scenes in black and white, which divorce color from content and emphasize the separation between art and reality.

Eggleston is especially well-known for his use of the dye transfer process of color printing, which he first encountered while teaching at Harvard University in 1973–1974. The dye transfer process creates intense, saturated colors on a rich surface created with layers of dyes. Not only does this layering of colors create a luscious, tactile surface, it also allows the artist to adjust each color independent of the others, permitting greater variation of emphasis and subordination in the overall color scheme. Publishing his first portfolio of dye transfer prints, *14 Pictures*, in 1974, Eggleston was one of the earliest photographers to use the dye transfer process for non-commercial purposes.

Also in 1974, Eggleston completed his project *Los Alamos*. He had taken the series of more than 2,000

photographs over the period of 1967–1974, during travels across the United States, from Memphis to New Orleans, Southern California, Las Vegas, and New Mexico. The vast series was named after stopping at the nuclear research site Los Alamos, New Mexico.

Although Eggleston has lived his entire life in the South, he hastens to avoid being dubbed a "Southern" artist. On his extensive travels, which help shield him from the "Southern" label, he has photographed throughout the United States as well as in Austria, the Caribbean, China, England, Egypt, Germany, Japan, Kenya, Poland, Spain, and South Africa. His goal is to treat his photographs as independent of place: to approach images from his native South in the same way as pictures from Poland or Kenya. He purposefully tries to eliminate elements of his photographs that tie them too closely to a place, including elements that characterize his work as "Southern."

Self-imposed constraints are common in Eggleston's oeuvre. In his series *Wedgwood Blue*, Eggleston photographed the sky with the restriction of only directing his camera straight up. This limited viewpoint captured perfectly ordinary but frequently beautiful scenes, including wispy clouds, fragments of tree branches, and portions of power lines, but avoided the more banal photographic subject of the horizon. This unexpected approach to the ordinary is typical of Eggleston's work.

He used a similar limitation when photographing on commission from AT&T in 1978, when he took pictures along the 32nd parallel. The artist removed himself from the process of content selection; instead, he randomly regimented the process by photographing at timed intervals. Two years earlier, Eggleston had further removed himself from the process by shooting pictures without peering through the camera's viewfinder. He would aim and shoot, sensing the angle he desired rather than precisely arranging his composition before his lens. He felt that working away from the viewfinder allowed him to look more intensely at his surroundings.

The Democratic Forest (1989), a project documented by a book of the same name, included over 10,000 prints created "democratically," without respect to the academic hierarchy of subject matter. The "democratic camera" captures each subject with the assumption that everything—whether a person or a clump of grass—is equally valid subject matter, thereby upending traditional hierarchies of subject matter.

Writer Mark Holborn traces the roots of this idea of the democratic camera to Eggleston's experimentation with video, begun in 1973 and continuing in 1978, when Eggleston's friend Ricky

Leacock, a pioneer of video, invited him to work at the Massachusetts Institute of Technology exploring the possibilities of portable color video. His work in video may have inspired Eggleston's increasing reliance on nontraditional subject matter through the 1970s. In the same way that unedited video moves from one focal point to another, documenting the transitory space between intended subjects, Eggleston's democratic camera captures any fleeting, momentary scene and creates a subject deemed equal in importance to more traditional subjects, such as figures or landscapes.

Eggleston is an extremely prolific photographer. He has produced tens of thousands of prints, shooting each composition only once, as he prefers to eliminate the option of choosing between different versions of similar shots. Although he feels that anything can be a legitimate subject Eggleston edits his production ruthlessly; only a small portion of the tens of thousands of prints he has made have ever been shown.

Eggleston once claimed that his subject matter was secondary to his photographs (Szarkowski 1976, 9). Such a formalist declaration on one hand explains his democratic photography and his glorification of the trivial, and on the other shortchanges his work by reducing his photographs to purely aesthetic objects. His own statement, "I am at war with the obvious," points out the much deeper issues at stake in his work: the public's expectations of photography and the artist's independence and authority in establishing standards of legitimate content and modes of presentation.

ALFRED EISENSTAEDT

Polish-American

Alfred Eisenstaedt, the man behind the camera that fixed itself on some of the most enduring images of modern history, was a great popular photographer of the twentieth century. He was a preeminent photo-journalist of his time, a time that spans eight decades, and he has been frequently called "the father of photo-journalism." Until the last years of a life that spanned nearly the entire twentieth century, "Eisie," as he was known, was still shooting and adding to an inventory that included hundreds of thousands of negatives.

His final working days would start at nine in the morning when his sister-in-law, Lulu Kaye, escorted him the five blocks from his apartment to the Time-Life Building. Looking natty in suspenders and often a bow-tie, he answered letters and phone calls long before others had arrived. His days were filled supervising the printing of his photographs for the next exhibit or book project. His five-foot-four frame maneuvered agilely in an office crammed with books and papers and tidy yellow cardboard boxes of prints. His filing system was perhaps inefficiently simple: the boxes marked only "Germany," "Great Americans," "Great Englishmen," "Musicians," and "Miscellaneous." He had no trouble locating pictures, however. His memory was photographic.

Eisie's last project, *95 for 95*, which gathered 95 images in a show for his 95th birthday, was exhibited nationwide in 1993.

Alfred Eisenstaedt was born December 6, 1898, in Dirschau, West Prussia (now part of Poland), one of three sons of Regina and Joseph Eisenstaedt, a merchant. The family moved to Berlin when Alfred was eight, and remained there until Hitler came to power. He may well have followed in his father's footsteps, were it not for an uncle who, when Eisenstaedt was 14, gave the boy an Eastman Kodak no. 3 folding camera in 1912.

Interrupting his studies at the University of Berlin, Eisenstaedt was drafted into the German army in 1916 during World War I, serving at the front until April 1918, when gunfire crippled both his legs. During the year-long recovery, he became fascinated by the local art museums, studying the paintings of the masters.

Although he became a belt-and-button salesman by trade in 1922, with the money he was able to save, he bought photographic equipment. Developing the pictures in his bathroom, Eisenstaedt had yet to learn there was such a thing as an enlarger. In 1927, while vacationing with his parents in Czechoslovakia, he photographed a woman playing tennis. Taken from a hillside 50 yards away, the photo captured the long shadow the woman cast on the tennis court. He wrote:

I took one picture of the scene with a Zeiss Ideal Camera, 9 × 12 with glass plates. I was rather satisfied when I showed it to a friend of mine. 'Why don't you enlarge it?' he asked. And he showed me a contraption of a wooden box with a frosted light bulb inside attached to a 9 × 12 camera, same as mine...When I saw that one could enlarge and eliminate unnecessary details, the photo bug bit me and I saw enormous possibilities.

(Eisenstaedt 1985)

Those possibilities included making a living with his pictures. In 1927, Eisenstaedt sold his first photograph of that tennis player to *Der Weltspiegel* for three marks, about 12 dollars at the time. By age 31, in 1929 he had quit the belt-and-button business to become a full time photographer. In doing so, he would come to define the profession. As a pioneer in his field, Eisenstaedt had few rules to follow. He looked to the work of Martin Munkasci and Dr. Erich Salomon, with whom he had the opportunity to work.

As a freelancer Eisenstaedt worked for Pacific and Atlantic Photos Berlin office in 1928, which

would become part of the Associated Press in 1931. At that time Eisenstaedt began working with the innovative Leica 35 mm camera, which had been developed four years prior. His assignments included portraits of statesmen and famous artists, as well as social events such as the winter season in St. Moritz. In 1933, he was sent to Italy to shoot the first meeting of fascist leaders Hitler and Mussolini. His aggressive yet invisible style of working allowed him to come within arm's reach of the two dictators.

Despite his success in Europe, Eisenstaedt had heard that the greatest opportunity for photo-journalists was now in the United States. Two years after Hitler took power, Eisenstaedt immigrated to America in 1935. He sailed from Le Havre on the *Ile de France*, arriving in New York at the end of November, with a portfolio overflowing with photographs of European politicians, entertainers, and royalty including Hitler, Mussolini, Marlene Dietrich, Gloria Swanson, Bernard Shaw, Charlie Chaplin, Arturo Toscanini, and Sergei Rachmaninoff. Among the impressive variety of photographs in his portfolio was a photo essay Eisenstaedt had made aboard the Graf Zeppelin in 1933, which impressed the editor most.

In New York he was soon hired with three other photographers—Margaret Bourke-White, Thomas McAvoy, and Peter Stackpole—by *Time* magazine founder Henry Luce, for a secret start-up known only as PROJECT X. After six months of testing the mystery venture, it premiered as *Life* magazine on November 23, 1936.

The first 10-cent issue featured five pages of Eisenstaedt's pictures. The second week Eisenstaedt—now dubbed “Eisie” by his peers—had his photo of West Point military academy on the cover. Other early assignments included the recovery of America as the country pulled out of the Depression. He traveled his new homeland sending back images of shacks and abandoned cars in Oregon, skid row derelicts in Los Angeles, and signs advertising beer for a nickel. Because he was not yet a citizen, Eisenstaedt could not be sent to cover the war, and so landed a good deal of celebrity assignments instead.

In 1942, Eisenstaedt at last became a U.S. citizen and was able finally to travel overseas to document the effects of the war. In Japan in 1945 he accompanied Emperor Hirohito on tours to see the destruction caused by the dropping of the atomic bomb on the cities of Hiroshima and Naogasaki. He recalls a particularly memorable experience in Hiroshima.

A mother and child were looking at some green vegetables they had raised from seeds and planted in the ruins. When I asked the woman if I could take her picture, she bowed deeply and posed for me. Her expression was one of bewilderment, anguish and resignation...all I could do, after I had taken her picture, was to bow very deeply before her.

To capture what has become perhaps his most reproduced image, and one of the iconic images of the twentieth century, popularly known as *The Kiss in Times Square on V-J Day*, of 1945. Eisenstaedt had been following the sailor who was

running along the street grabbing any and every girl in sight. Whether she was a grandmother, stout, thin, old, didn't make any difference. None of the pictures that were possible pleased me. Then, suddenly in a flash, I saw something white being grabbed. I turned around and clicked the moment the sailor kissed the nurse.

In 1991, he told a *New York Times* reporter, “Although I am 92, my brain is 30 years old.” To prove it, he recalled that to shoot that victory kiss he used $\frac{1}{125}$ -second exposure, aperture between 5.6 and 8, on Kodak super Double X film.

But this image, he said, was not his personal favorite. That honor goes to a photo of a young woman in a box seat at La Scala opera, 1933. Editors at *Die Dame*, who had assigned Eisie to the opera, did not feel similarly. They never printed the picture.

In 1949, he married Kathy Kaye, a South African whom he met in New York. The 1950s took him to Korea with the American troops, to Italy to show the plight of the poor there, and to England, where Winston Churchill would sit for him. Portrait assignments such as this one often made Eisenstaedt privy to little-known secrets about his subjects.

For *Life's* Fourth of July issue in 1952, actor Charles Laughton was asked to choose his favorite American writing to be read aloud. Eisenstaedt illustrated these verses by traveling across the country—to Minnehaha Falls for Henry Wadsworth Longfellow's *The Song of Hiawatha*, to the Hudson Valley for Washington Irving's *Rip Van Winkle*, and on a riverboat for Mark Twain's *Life on the Mississippi*.

He documented the lighter side of life with no less earnest an approach. “You learn something from every picture you take,” he said after shooting a story on women's underwear for *Life*. In total, he shot nearly 92 covers for the magazine and some 2,500 assignments, amassing some 10,000 prints.

Portraiture remained a constant: Marlene Dietrich smoldering in top hat and tails; Marilyn Mon-

roe vamping in her backyard; John F. Kennedy clowning with his little daughter Caroline; Albert Einstein lecturing to a class of physicists at Princeton; Sophia Loren—Eisie’s favorite model—wearing a negligee in a cover shot that caused some *Life* readers to cancel their subscriptions. No matter how famous or notorious the subject, Eisenstaedt was at ease with them. “In 1938 our picture editor, Wilson Hicks, told me, ‘Alfred, I’m sending you to Hollywood. Don’t be afraid and in awe of these queens—you are a king in your profession.’ I’ve never forgotten that.”

He did, however, allow himself to ask for a few autographs, and treasured a collection that includes notes from artist Norman Rockwell, Secretary of State Henry Kissinger, and actress Lillian Gish.

In 1979, at age 81, Eisenstaedt returned to Germany for the first time. An exhibition of 93 photographs of German life from the 1930s through that year traveled through Europe and the United States. Remarkably, Eisenstaedt’s first major retrospective did not come until 1986 at age 88 when the International Center of Photography in New York presented 125 of his prints.

Eisenstaedt has received numerous awards for his work including the National Medal of the Arts, the International Understanding Award for Outstanding Achievement, the Photographic Society of America Achievement Award, and Photographer of the Year, Encyclopedia Britannica. *Time* heralded Eisenstaedt’s *V-J Day, Times Square, 1945* as one of the 10 greatest images in the history of photojournalism.

The city of New York named an Alfred Eisenstaedt Day in his honor and the International Center for Photography (ICP) recognized Eisenstaedt with its Master of Photography award in 1988. President George H. W. Bush bestowed on him the National Medal of Arts in 1989. Far from resting on his laurels, Eisie continued to take commissions: when President Clinton vacationed on Martha’s Vineyard in Massachusetts in 1994 where Eisie made his home, he was there to photograph the first family, and to present them with their choice of his prints as a gift. Bill Clinton chose *Drum Major at the University of Michigan* of 1951, and his daughter Chelsea picked *Future Ballerinas of the American Ballet Theatre* of 1936.

At the opening of his shows, photographers who looked up to Eisie would ask to take their pictures with him, and perhaps to get some advice. Modestly, Eisie would say, “When the young photographers come...I ask them questions. They know more about the modern cameras than I do.”

In 1994, *Life* and *Vanity Fair* ran portraits of Eisie on the Brooklyn Bridge by Annie Leibovitz. “He was telling me what to do during the entire shoot,” recalled Leibovitz. “But then he’d say this is your picture, do whatever you want.” Eisie did choose the location, though, “because I am still younger than the Brooklyn Bridge,” he told the *New York Times*.

A fellow photographer and later *Life*’s director of photography, John Loengard, explained Eisenstaedt’s enduring success: “He never tries to please editors. He only makes pictures that please him.” For some 60 years, *Life* readers were the beneficiaries of those pictures, a life’s work that was also his pleasure. Alfred Eisenstaedt died in Martha’s Vineyard, Massachusetts, on August 23, 1995. His photographs are in the permanent collections of the Royal Photographic Society, London; the International Center of Photography, New York; the International Museum of Photography and Film, George Eastman House, Rochester, New York; and the National Gallery of Canada, Ottawa.

ED VAN DER ELSKEN

Dutch

Ed van der Elksen was not only an influential Dutch photographer, but also a first-rank filmmaker. At the age of 30 in 1955, he had already gained some international recognition, mainly in the United States. Hot-tempered, van der Elksen stubbornly lived for photography and developed his creative path: on the one hand self-centered, on the other highly diversified geographically and thematically speaking. Although his interests drove him to record the lives of outcasts worldwide, he was never restricted to the subject. Other themes, approached with much empathy and irony, were documented by his joyful, but truly inquisitive personality:

I look at you. How lovely you are. How lovely you were. All your fun. All your misery. I picture. There are things I got to tell you. I prod you in the ribs. I grab you by the arm. I yank your coat-tails. I say, d'you see that? Dammit! Fabulous! Unbelievable! Super! Or. Filthy bastards!

Dirty dogs! What a lousy squirt! They should pass a law...D'you see that! Look at them! Jesus, I'm alive.

(van der Elksen 1966)

Born in Amsterdam in 1925, van der Elksen lived and grew up there until 1944. As he wanted to become a sculptor, he attended the Institute for Applied Arts Education (1943). For fear he would be sent to Germany to work, he fled to the south of the Netherlands, where he hid. After the City of Arnhem had been freed, he joined the allied forces until the war ended.

His formative years (1945–1950) were characterized by an early recognition by his peers. Whilst attending a film operator's preparatory course, he thought he might support himself as a photographer. For this, he took a correspondence course provided by the School of Professional Photography in The Hague. The fact that he failed the exams did not prevent him from absorbing his lessons, as he was

also assisting professional photographers such as Ad Windig in Amsterdam. Van der Elsen also took pictures of his hometown and of a trip from Paris to Marseille (1949). Through such early photographic achievements, he joined, that same year, the GKf, the leading Dutch photographers' organization at which point he also benefited from Kryn Taconis's support. Taconis belonged to the GKf and was associated with Magnum Photos in Paris.

When van der Elsen decided to go to Paris in the summer of 1950, he arrived with Taconis's letter of introduction in hand. Pierre Gassman, the addressee, headed Pictorial Service, a leading photo laboratory that worked for Magnum Photos, and employed him. There he met Ada Kando, a photographer, whom he married in 1954. After six months, however, he left Pictorial Service and started photographing the lives of some of the people he had met. This group of young Bohemians was not the only subject he recorded; many images echoed Parisian street life, comic urban scenes, and his daily life in Sèvres with Ada and her children (1950–1954).

However, this group was the main theme of his first book, *Love on the Left Bank* (1956), published with Edward Steichen's strong encouragement. He had met Steichen in 1953. Steichen, the head of the photography department at the Museum of Modern Art (MoMA) in New York also showed his pictures in two important exhibitions of the time: *Post-war European Photography* (1953) and *The Family of Man* (1955). For *Love on the Left Bank*, van der Elsen composed a love story between Ann and Manuel using short texts followed by a series of images with varying dimensions, which added rhythm to the sequence. Among the last photographs of this visual narration, Vali Myers, alias Ann, lavishly kisses a mirror: van der Elsen knew how to picture sensuality well.

After van der Elsen had come back to Amsterdam and divorced from Ada (1955), he began a life of intense travel while working on photo books and reportages for *Vrij Nederland*, *De Volkskrant*, *Het Parool*. Amsterdam, its neighborhoods and musical life was not neglected. In *Jazz* (1959), his *Chet Baker in Concertgebouw* illustrates how van der Elsen obtained very dark, contrasted, and coarse-grained images. It also shows his shift towards the use of a 35 mm Leica camera equipped with a telephoto lens.

Van der Elsen traveled with Gerda van der Veen whom he married in 1957. Soon after, he accepted the invitation of Gerda's brother, an anthropologist, to come to a small village, Banda, located in French Equatorial Africa. His photographs showing communal life were published in *Bagara* (1958). He and his wife also traveled around the world for 14 months (1959–1960). They went to Sierra Leone,

South Africa, Malaysia, Singapore, The Philippines, Japan, Mexico, and the United States. The book, *Sweet Life* (1966), includes his images and comments about each place. In these images van der Elsen demonstrates how his photographs are able to create an emotional link for the viewer with his subjects. In *Durban* (1959), in which a bench "for Whites only" is shown, van der Elsen reveals another ability: his cunning way of denouncing how absurd a situation can be by utilizing visual irony. As *Sweet Life* took a long time to be published and disappointed by the difficulties in moving this project forward, van der Elsen renounced photography after 1962 for five years and concentrated on filmmaking, an activity he had first taken up in 1955.

A new shift in his career followed his moving in 1971 from Amsterdam to the more rural Edam where he lived with his family on a farm. As the 1971 prizewinning film *De Verliefde Camera* testified, van der Elsen had been working on a private record of his country life both in film and photography in the 1970s. Photographs of his son, *Daan* (1975), or of his horses, *Pravda and Fidelito* (1978), illustrate such interests. His taste for intimacy was also exemplified by the slide exhibition *Eye Love You* (1977). Published in color, the exhibition catalogue was a celebration of love, all kinds of love: images of couples, love scenes, or of pregnant women mingled. These personal works were supported by his intense activity as a photojournalist: van der Elsen published photo reportages in *Avenue*, between 1967 and 1980, and in other Dutch periodicals (e.g., *Margriet*). This led him to travel once again to Africa, South-East Asia, and South Asia. In South Asia he reported on the terrible floods, which had taken place in Bangladesh in 1974. Published in 1975 in *Avenue*, his treatment of the tragedy, was an exception to his established way of photographing: for the first time he engaged the viewer with a clear vision of sorrow.

Between 1979 and 1990, van der Elsen concentrated on editing and publishing books using the photographs he had been taking throughout his life, both in the Netherlands and abroad. *De ontdekking van Japan* (1988) was a special case. It emphasized his fascination for the country that from his international travels had impressed him the most. Another South-East Asian experience, in *Korea* (1988), was short-lived, because he was diagnosed with cancer. This would become the main subject of his last film *Bye* (1990) in which he filmed his illness. His last film illustrated another strand of his work from the 1980s: a focus on photographing and filming his own life, his farm life (see *Avonturen op*

het land), and his revived love with Anneke Hilhorst whom he had married in 1984. Thus Ed van der Elskén followed until the end his motto: “Laat zien wie je bent!” (show us who you are!).

EMULSION

Photographic materials consist mainly of a support base coated with one or more layers of photosensitive material. In silver gelatin photography, this photosensitive material is customarily called an “emulsion.” This term is a misnomer, but is commonly used to refer to the light-sensitive material coated on various substrates including glass plates, flexible films, or papers. However, it is also applied broadly to film and paper products.

Manufacturers and photographers pay great attention to the characteristics of emulsions and sensitized materials because their choice has great influence on the effect and quality of the photographs obtained. Some emulsions are designed to form negative images, and others, positive images. One kind of positive emulsion is designed for reversal processing, where, during processing, a negative image is formed first and then chemically reversed to form a final positive image. The other kind of positive emulsion is the direct positive emulsion, where conventional exposure and processing yield a final positive image. Negative emulsions form negative images, where highlights are rendered dark and shadows light. Negative images are usually printed on another negative material such as printing paper to make final positive images. This is called a negative–positive system.

Photographic speeds of emulsions, that is, sensitivity to light and thus how long the material needs to be exposed to create an acceptable image, vary widely. Contact printing papers are very slow to provide comfortable exposure time in contact printing frames. Enlarging (projection printing) papers are much faster than contact printing papers but much slower than negative emulsions for in-camera use. Document films and duplicating films usually fall between enlarging emulsions and negative emulsions in speed.

Emulsions also vary in contrast. Pictorial photography produces what are called continuous tone reproduction of the original image, consisting of black, white, and many shades of gray; while graphic art processes and reproduction of documents generally use extremely high contrast to produce images of black and white with no gray. In a pictorial negative–positive system, negative films have low contrast to register the subject’s wide gradation range, while print emulsions have

high contrast to make final prints of normal contrast images. This system provides wide exposure latitude at the time of in-camera exposure, while allowing precise control of image darkness and contrast in the darkroom. In reversal and direct positive systems, the films have higher contrast than negative films because the in-camera film forms the final positive image. Exposure accuracy of these materials is more stringent and has narrow latitudes because of the inherently high contrast of the films and the lack of ability to adjust the contrast in the darkroom.

Most emulsions are of “developing out” type, where light exposure forms a latent image, which is made visible through the development process. The other emulsions are of “printing out” type, where prolonged exposure to intense light forms a visible image without the development process. Printing out papers (POP) were in common use in the early years of photography to make contact prints from large-format glass negatives, but are still used by photographers. Along with silver-gelatin-based POP, there are salted papers and other non-silver-based printing techniques such as platinum printing. These materials have inherently low contrast and therefore the original negatives were made rather high contrast to make the final prints have normal contrast.

Silver-gelatin emulsion consists of light sensitive silver halide crystals in a binding medium. An emulsion is made from soluble silver (silver nitrate) and soluble halides (e.g., potassium bromide) in the presence of a protective colloid, such as aqueous dispersion of gelatin. These agents are mixed in a highly controlled way, using a process called precipitation. Crystals thus prepared are physically ripened to desired sizes, chemically digested to increase the light sensitivity, and stabilized to ensure photographic performance of the film and paper until its specified expiration date.

After film or paper is exposed to light, exposed crystals bear tiny specks of metallic silver, called latent image, which renders the entire crystal developable in the developer solution, while crystals without a latent image are not developable. Thus the emulsion registers light exposure by means of latent image from as little as a few metallic silver atoms among several billion silver halide molecules

EMULSION

in a single crystal, and this invisibly registered latent image is chemically amplified by the developer to make a metallic silver grain, which forms the visible image.

Most primitive emulsions are sensitive to blue and ultraviolet light. This is because green and red light do not have sufficient energy to create a latent image on silver halide crystals. Many photographic applications require sensitivity to green or red light, and therefore the spectral sensitivity is extended by sensitizing dyes. Sensitizing dyes allow light of lower energy (longer wavelengths than blue) to form latent images. For example, a sensitizing dye for all visible colors (panchromatic) is used for black-and-white camera negative films so that a natural grayscale is obtained from colored objects.

Enhanced sensitivity is obtained by various means, including optimizing ripening and digestion steps, incorporation of very small amounts of dopants, and use of suitable sensitizing dyes. Optimal formulation improves the efficiency with which the latent image forms upon exposure to light, the stability of the latent image, and the developability of the crystals with latent images. In the past, one could increase photographic speed of emulsion only at the cost of shortening the emulsion's shelf life. This is because chemical reaction will slowly progress in coated, dried materials, until they are for all intents and purposes processed. This appears as elevated fog level, decreased speed, decreased contrast, or a combination of these. Today's high-speed emulsions have excellent photographic properties and long shelf life due to improved technology in sensitization as well as stabilization.

The silver-gelatin process was invented by amateur photographer R. L. Maddox in 1871, in the form of "silver gelatinobromide" plates to be used as in-camera negatives. Maddox's plates were

photographically inferior to then-existing wet collodion plates, but within a few years of his publication of the process, other photographers made important contributions to the field. The silver-gelatin process is thus evolved through continued experiments by scientists and application by engineers and photographers. That is, the silver-gelatin process is a form of applied science that enabled various branches of photography that were previously impossible. Indeed, its influence went beyond photography-related fields; the photographic industry motivated and drove early research on dye chemistry, gelatin chemistry, and other branches of physics and chemistry.

ENLARGER

An enlarger is a device used to project negatives onto light-sensitive materials, most usually photographic paper, which are then processed in appropriate chemistry so that the latent image appears visible. An enlarger can be used to make the image either smaller or larger than the negative itself,

though it is most often used (as the name would suggest) to enlarge negatives. Enlargers are generally set up so that they project the image downward onto a base, though some enlargers can pivot so that they project the image straight ahead. These enlargers are often utilized when the size of the

projected image warrants a greater distance between the lens of the enlarger and the receptive surface than is manageable with an enlarger that projects downward.

An enlarger's lamphouse contains the light source used to make the exposure. Various enlargers employ different types of light sources, including tungsten, quartz-halogen, and fluorescent. Color printing requires that the light source be accessible to color filtration. There are some enlargers that are specially designed for color printing, and have dial-in color and density combinations made available through built-in gelatin or dichronic filters. A few color enlargers employ three differently-colored light sources to make three separate exposures onto the paper: one in red, one in blue, and one in green. In any enlarger, the light source is directed through either a condenser lens or a diffusion screen onto the negative, which is held in place by some type of negative carrier.

The negative carrier is generally one of two types: dustless or glass-sandwich. The dustless type of negative carrier is two plates of either metal or plastic with holes cut for the particular size of film negative being used. The plates hold the negative in position by its edges. Dustless negative carriers are available for film sizes ranging from subminiature to large-format, though are most often used for 4×5 -inch and smaller negatives. Glass-sandwich negative carriers are made of two solid plates of glass, which press the negative flat. These negative carriers are most often used for large-format negatives, which tend to sag or droop in the center if not properly supported.

The light from the lamphouse is distributed evenly across the negative, which leads to equal distribution across the surface of the photo-sensitive material. After passing through the negative, the light enters a bellows and lens, where the photographer may control the focus of the image onto the photo-sensitive material. The bellows should be capable of being opened to twice the focal length of the lens, which will allow for 1:1 reproductions of the negative. If a print smaller than the size of the negative is desired, a longer focal-length lens or a special reducing attachment is required.

Degrees of enlargement of a negative are restricted by the structure of the enlarger and the size of the paper. Occasionally, a photographer might be interested in making a print larger than is possible with the fixed space between his enlarger's lens and baseboard. There are ways around this limit, including removing the baseboard and affixing the enlarger to something stable, as a table or bench, and then projecting the image onto the floor (which should greatly increase the distance between

lens and photo-sensitive material). Some enlargers allow for the possibility of the head being turned around 180° (which would also facilitate projecting the image onto the floor or some other lower-than-baseboard-height base); these should be stabilized with something heavy to offset the weight of the head, which is suddenly insufficiently supported by the vertical column or girder assembly. Others come equipped with heads that pivot so that the lens is parallel to a vertical surface (such as a wall); the negative is then projected horizontally onto this vertical surface. The enlarger can be moved farther away or closer to the wall to achieve the desired enlargement size.

There are also practical considerations of enlargement: after a certain point, even the most well-developed and high-grade negatives will begin to show grain when enlarged overly much. If enlarged full-frame, 35 mm negatives begin to show grain and look out-of-focus when enlarged much more than 8×10 inches, and 120 film negatives begin to show grain and look out-of-focus when enlarged much more than 16×20 inches. If only a small area of a negative is enlarged, considerations should be made as to the maximum size of possible enlargement that will still maintain crisp focus. Even so, the graininess that results from over-enlargement of negatives can be appealing to some photographers.

Most enlargers have both rough- and fine-focus controls. The rough-focusing control moves the whole enlarger head (which is comprised of the lamphouse, the negative carrier, the bellows, and the lens) up or down the vertical column or girder assembly that supports the head. Rough-focusing allows the photographer to determine the size of the projected image on the enlarger's baseboard. Some enlargers have automatic rough-focusing controls that allow the photographer to move the head of the enlarger with the press of a button rather than by manually turning a crank.

Focusing the negative takes place before the photo-sensitive material is placed underneath the lens of the enlarger, as it requires the photographer to turn on the enlarger light. The rough-focus is determined without a focusing aid, and is used to ensure that the enlarged negative is not larger than the area available on the light-sensitive material. The rough-focus also allows the photographer to get the negative as close to focused as possible before relying on the fine-focus control. Once the rough-focus control is set, the photographer uses a focusing aid to complete the focusing with the fine-focus control. The fine-focus control actually moves the bellows between the negative and the lens to achieve clear focus.

ENLARGER

Focusing aids magnify a small section of the projected negative, which helps the photographer adjust the fine-focus control to achieve as clear focus as is possible from his negative. There are several types of focusing aids, one of which is known as a grain finder. Grain finders come in various powers of magnification, and allow the photographer to see individual grains on the projected image rather than relying on a whole section. They are particularly useful for printing images that might not be in sharp focus themselves: as long as the photographer has fine-focused the grains, he can be assured that any areas of soft-focus that occur on his final print come not from the focusing of the projected negative, but are faithful representations of areas of soft-focus on the negative itself.

The projected image from the enlarger falls directly under the lens onto the enlarger's base (unless, of course, the image is being projected horizontally). The photo-sensitive material being exposed is, in the case of photographic paper, generally held in an easel. The easel is comprised of an opaque base and a metal or plastic frame, which is either a fixed-size or adjustable. The frame holds down the edges of the photographic paper to ensure a flat surface for the negative to be projected onto. When focusing the negative, it is prudent to use a piece of the same-thickness paper to focus onto (often the back of a previously developed print works well) so that your focus will not change when you insert the unprocessed photographic paper into the easel before you make your timed exposure.

Enlargers are generally separated into two types: condenser and diffusion. In condenser enlargers, the light from the light source is concentrated and directed straight through the negative by one or more condensing lenses. Condenser enlargers create images that are more sharply focused and show more contrast than images from diffusion enlargers. Scratches and defects on a negative are more difficult to disguise when using a condenser enlarger. Diffusion enlargers employ the use of a diffusion screen or diffusing surface between the light source and the negative. Rather than concentrating the light rays straight down through the negative, diffusion screens, or reflected light from diffusion surfaces, scatter the light so that it is not traveling in parallel rays when it hits the negative. Diffusion enlargers create an overall softening of the focus of the image and help to mask defects on the negative. While much black-and-white printing is done with condenser enlargers, color printing and black-and-white portraiture are often done with diffusion enlargers.

Enlargers come in various sizes to accommodate various sizes of negatives. Also, interchangeable

lenses are available so that the same enlarger can be used to print 35 mm and medium-format 120 film. In general, printing 35 mm negatives requires a 50 mm lens, 120 film requires a 75–105 mm lens, and 4 × 5-inch film requires a 135–150 mm lens.

Enlarger lenses are intended to work at close range and on a flat field, but are generally like camera lenses. Although the photographer cannot control shutter speed because there is no shutter on enlarger lenses, he can control the size of the aperture with *f*-stops like those on his camera. The adjustment of shutter speed that would be made on a camera is replaced by the adjustment of exposure time on an enlarger. Usually, an external timer is employed to ensure consistent exposure time. Some timers, connected directly to the enlarger, automatically turn on and off the enlarger light, though a photographer can also choose to work with a foot pedal that controls the light.

Some enlargers can accommodate below-the-lens filter holders, while others can take above-the-lens filters. Filters are used to achieve a variety of effects; for example, the contrast of black-and-white negatives can be amplified or reduced with graded yellow and magenta filters. Using filters from the yellow end of the spectrum accomplishes a reduction in contrast in a print; this can be useful if the print seems to be overly-contrasted, often from harsh lighting conditions at the time that the film was shot. Filters that are more densely magenta-colored succeed in adding contrast to an image, and are often used if the film was shot on a grey day or is underexposed.

Enlargers are useful not only because they allow for darkroom manipulation of color or contrast of a negative, but because they provide ample opportunity for other darkroom manipulations, such as dodging or burning-in areas on a print. Multiple enlargers (or switching negatives in the same enlarger) can be used to expose multiple images onto one piece of photographic paper before it is processed. Without an enlarger, a photographer is restricted to making contact prints, where the size of the final print is determined by the size of the negative. With an enlarger, the photographer can make final prints of almost any size, regardless of the size of his negative.

HUGO ERFURTH

German

Hugo Erfurth was the most influential German portrait photographer of the first half of the twentieth century. Based in Dresden, then Cologne, Erfurth specialized in portraits of leading artists, writers, and dancers. By the 1920s, the photographer, then middle-aged, became closely associated with many of the leading figures of German avant-garde painting. His ability to capture their personalities, using a minimum of props or special lighting, gave him the reputation of being a “modernist.” In his printing procedures, however, Erfurth ignored contemporary trends, remaining loyal throughout his career to “painterly” Pictorialist techniques that by 1920 were already considered old-fashioned. An experimenter in many photographic genres, Erfurth is known today almost exclusively as a portraitist, due in part to the uneven survival of his oeuvre during the destruction of World War II.

Born in the Saxon city of Halle in 1874, Erfurth by 1884 was sent to school in Dresden, the old capital of the kingdom of Saxony. Between 1892 and 1896 he studied painting at the Kunstakademie in Dresden, an experience that was to have a significant effect on his aesthetics as a photographer. At the same time, Erfurth was learning photographic techniques with the Dresden court photographer Wilhelm Höffert. In 1896 he took over the J.S. Schröder photographic studio, moving his home and studio in 1906 to the larger and more fashionable Palais Lüttichau.

Though Erfurth was making studio portraits by the late 1890s, his early photographic practice was quite diversified. By 1893 he began exhibiting with societies of amateur photographers, showing staged genre scenes of Thuringian peasants in traditional costume. In Stuttgart in 1899, Erfurth submitted five works: a genre scene, two nudes, a landscape, and a still life (locations unknown). He exhibited no portraits. Among Erfurth’s first photographs used as book illustrations were several studio female nudes, as well as outdoor nude studies of children and adolescents for a popular book on pediatrics, Dr. Carl Heinrich Stratz’s *Der Körper deines Kindes* (Stuttgart, 1903).

In his earliest surviving works, Erfurth was already committed to the Pictorialist aesthetic that swept through European photography by the turn

of the twentieth century. Both his landscapes and portraits were often executed as gum bichromate or oil pigment prints, techniques providing loose, atmospheric depictions and emphasizing volumes over detail. Within a few years he began to favor another “painterly” new process, bromoil printing, and he experimented with Louis Lumière’s autochromes, the first commercially viable process for color photography. Throughout his career, however, Erfurth also made gelatin silver prints for portraits of a documentary nature, such as *Otto Dix Teaching a Class in Figure Painting* (1929).

Initially Erfurth’s studio portraits of male artists and intellectuals depicted the subjects against a dark background, often with attributes of their professions, such as a paintbrush, easel, or book. By 1920 Erfurth more often used a light background, eliminating all props and concentrating on the face and upper body. Although Erfurth’s compositions looked back to the traditions of nineteenth-century German portrait painting, the avant-garde considered the photographer “modern” in his ability to record definitively the personal essence of his sitters. Thus Oskar Kokoschka, the youthful-looking creator of the lithographic series *The Dreaming Boys*, turns from the camera with a faraway expression. By contrast, another Expressionist painter, Max Beckmann, glowers balefully and frontally at the camera, filling the picture space in a forceful image. Unlike his contemporary, August Sander, who systematically photographed all German social types, Erfurth had no explicit program. During the 1920s he thought of creating a *Gallery of Portrait Heads of My Time*, but he did not pursue the idea consistently.

By 1908 Erfurth had also begun to take some of the earliest photographs of dancers in motion. Concentrating on modern dance, Erfurth, over the next two decades, photographed more than 20 dancers, all female, some famous, like Mary Wigman, others little remembered today. His goal was to produce a sense of natural movement, even if blurred, using artificial lighting. These images, rare today, influenced younger dance photographers, including Erfurth’s pupil, Charlotte Rudolph. Erfurth also photographed leading opera and theater performers during this period.

Erfurth was probably the best-known portrait photographer in Germany by the late 1920s; he was

the subject of an extensive critical literature and even of a 1927 film that showed him planning, executing, and printing a portrait commission. Possessing strong organizational skills, Erfurth curated a major photography exhibition in Dresden as early as 1904, and he later operated an art gallery in his studio, presenting prints and drawings by the most talented younger German artists. Erfurth also published art criticism, writing for example about the Scottish photographer David Octavius Hill (1802–1870), whom Erfurth admired for suppressing unnecessary detail in his portraits. In 1919, he was a cofounder of an exhibiting group, the Society of German Photographic Artists (GDL), in which he played a dominant role for 20 years. Erfurth continued to have an experimental attitude, producing a series of abstract photographs in the mid-1920s.

In 1934, Erfurth relocated from Dresden to Cologne, evidently seeking new portrait commissions from that city's business elite. Unlike many of his artist subjects, who emigrated soon after the advent of the Hitler government in 1933, Erfurth remained in Germany, where he continued to accumulate honors and awards. His attitude toward the new regime is difficult to determine. Erfurth exhibited and published portraits of Nazi storm trooper (SA) soldiers that were widely noted; he had, however, occasionally portrayed military officers in uniform earlier in his career.

In 1943 an Allied air raid destroyed Erfurth's Cologne studio and part of his photographic archives, though not his portraits. He then moved to Gaienhofen am Bodensee in southernmost Germany, where he maintained a photographic studio until his death in 1948. In 1947, he was honored with a large retrospective exhibition in nearby Constance, Switzerland. His work has continued to be exhibited widely, particularly in Germany, where it forms a virtual history of the country's artistic and intellectual movements during Erfurth's time.

Biography

Born in Halle, Germany, 14 October 1874. In Dresden, studied painting at the Kunstakademie and photography in the studio of Wilhelm Höffert. Active professional photographer, principally as a studio portraitist, from 1896 but also exhibited work in other genres. Taught photography privately, and at the Akademie für Buchgewerbe und Graphische Künste in Leipzig, Germany's leading city for book publication, 1929. Curator of Photographic Section, Internationale Kunst-Ausstel-

lung, Dresden, 1904. Operated gallery showing prints and drawings by younger German artists in his Dresden studio in the early 1920s. From this time, frequent contacts with leading avant-garde painters; subject of portraits by Otto Dix and others. Published numerous albums of his own portrait photographs and some articles about other photographers. From 1919, cofounder and jury chairman of the Society of German Photographic Artists. Awarded bronze medal, Stuttgart, 1899; silver medal (first prize), Photographic Exhibition, Düsseldorf, 1902; achievement award, "Day of German Handicrafts," Frankfurt am Main, 1939. Relocated studio in 1934 to Cologne and in 1943 to Gaienhofen am Bodensee; died there 14 February 1948.

EROTIC PHOTOGRAPHY

Erotic art is the art of sexuality. Webster’s dictionary defines “erotic,” in part, as: “Pertaining to or prompted by sexual feelings or desire.” Photographer Peter Barry wrote in 1983 that eroticism must express desire and excitement. Some state that erotic art is sexual but not explicit, while others attempt to define it by its demeanor or attitude toward sex. These artists and critics typically define erotic as possessing a sense of humor. Where pornography is blatant and obvious, eroticism, they claim, is intelligent and witty. What eroticism is or should consist of has been a topic of debate for philosophers, historians, and artists for countless ages. Erotic imagery in photography is as old as the medium itself with known provocative and nude Daguerreotypes being made at least as early as 1840.

In modern times, erotic imagery in high-art has gone hand-in-hand with the avant-garde. Photography, as a medium, lends itself quite well to the production of evocative imagery by virtue of the medium’s perceived “truthfulness.” According to philosopher Michel Foucault (1926–1984), sexuality and truth are linked in their relationships to society and communication. Erotic art is best when it communicates truthfulness in an intimate but universal manner. For Foucault, this is the communication of

experience and wisdom and is best typified in the erotic pictorial traditions of Eastern civilization. The Western reaction to Eroticism has been defined by shame, constriction, and a need to control its production and dissemination. In French *fin de siècle* society sexuality was linked very closely to what Foucault termed “pornography of the morbid,” where non-procreative sex was sinful, destructive, and deadly. These attitudes would influence social-political reactions to erotic photography in the twentieth century in France, just as lingering Victorian prudishness in the United Kingdom would determine social and legal positions on erotic photography in England well into the late twentieth century.

The production and exhibition of erotic photography in the United States and Great Britain is greatly constrained by the social moralism of the various eras in which it was made. In the early 1900s, puritanical values reigned over the social consciousness of potential art viewers and markets. The production of erotic art existed, but only to the chagrin of the governments and moral conservatives of these nations. Britain was particularly prudish in its laws governing decency and remained so until after 1918. It was the nightmare of the First World War and the terror of a million British dead that effectively

shocked British society loose from their tightly grasped tenants of morality. Literature and the visual arts reacted immediately with a new sense of sexual liberalism. Earlier English publications of erotic photos included magazines such as *Photo Bits*, which became *Photo Fun* in 1906. Magazines such as these couched the nude in socially acceptable naturalistic settings, romanticizing and idealizing the nude form.

During the 1920s, shifting moral values allowed increased sexual liberation and photography of this time put nude imagery firmly into commercial culture. Shorter skirts and haircuts for women at this time became not just acceptable, but fashionable. Burlesque shows of the 1920s and 1930s provided venues for those looking for erotic entertainment. *Ziegfeld's Follies*, *George White's Scandals*, and *Earl Carroll's Vanities* kept nudity and racy content in the paying public's eye and served to legitimize the increasing liberalism of popular culture. Printed photo postcards from these shows not only promoted the careers of the young stage actors, but provided a source of cheap, racy photos readymade for mass consumption. Hollywood began promoting its young starlets with magazines like *Film Fun* providing the public with perhaps the first "pin-ups" as early as the 1920s. Although photos of nude women were very common during this era, artists who did not wish to be discredited or arrested still had to originate their subjects in contrived narrative poses usually imitative of Greek or Roman statuary. Doing so made the images more palatable to the public by making them more "artsy" and less realistic. Implied or even direct eroticism was deemed allowable by virtue of a photo's art-historic context.

It was the advent of the "pin-up" that really brought erotic photography to the general public in the United States and abroad. The term "pin-up" was invented during World War II and applied to the thousands of glossy photos of beautiful women distributed to American soldiers in order to "elevate morale." As a general rule the Second World War pin-up was pretty and her pose suggestive, but she was still innocent and almost never nude. Pin-ups are erotic photography mass produced for commercial distribution, as opposed to thoughtfully crafted, high-art erotic photography with perhaps more specifically aesthetic or conceptual intentions.

Just as the first few decades after the First World War brought radical liberation and changes to social ideas of morality, so too did the first few decades after World War II see sweeping changes in social attitudes towards erotic imagery. The 1950s through the 1970s are often referred to as "the permissive years" in erotic and commercial photography. The

1950s gave birth to a golden age of erotic art, typified by the glossy, well-produced magazine spread found in such men's publications as *Playboy* (first issue published in 1953). The pictorial influence of this magazine's pin-up aesthetic has directly influenced the production of erotic art, fashion photography, and popular advertising up to the present day. *Playboy's* format is probably the most publicly accessible (and arguably the most publicly acceptable) form of erotic photography to date. Noted photographers from *Playboy* include: Peter Gowland, J. Frederick Smith, and later Milton H. Green and Barry O'Rourke. In Britain, a master of post-war erotic photography is George Harrison Marks. His work is pure eroticism with no pretense of aestheticism. He provided naked girls for boys to look at, offering sex for sale with no qualms.

Even with the sexual revolution and rapidly changing social morality of the 1960s and 1970s, any photographs explicitly depicting pubic hair were by and large considered obscene until well into the 1970s. This is even given the earlier legal battles of English photographer Horace Narbeth (known professionally as Roye) who successfully defended his photographic depiction of pubic hair in 1958 by citing issues of artistic integrity. One of the most influential photographers of the 1960s was the Englishman Bill Brandt (1904–1983), whose book *Perspective of Nudes* (1961) was innovative and influential in bringing acceptance of nudity and eroticism to fine art photography.

The inherent problem of defining erotic photography is finding a concise way in which to differentiate the erotic from its more pervasive cousin, pornography. Many commercial and fashion photos are undeniably erotic, ranging from subtly provocative to sexually cliché to startlingly overt. Subjectivity is a problem for the student of any genre of photography trying to find a true interpretation of the image. The intrinsic biases found in the interpretation of sexual art are complicated further by the way and place in which an image is viewed. As artist Rod Ashford wrote in 1998:

However subtle the erotic motif, when viewed in an inappropriate context, even images that have the power to excite can appear crude, obscene, alarming, or even bland. Similarly, a sophisticated erotic image viewed in the testosterone bravado of an all male environment is more likely to be passed over in favor of something more explicit—an immediate image which seeks to objectify its female subject.

(Ashford, "Prurience and Perfection" 1998, 16.)

As noted by photo-historian Robert Sobieszek, erotic photography can be seen as having two

EROTIC PHOTOGRAPHY

potential approaches in its treatment of subject matter. An iconic approach places the substance of an image's erotic content on the figure itself. Typically "straight" in its formalism and unaltered surface, this approach embodies and signifies the erotic in itself. In photography of this mode, the subject carries the meaning of the photo. The other approach is narrative, which is an extension of nineteenth century pictorialism. Erotic photography that is staged, or relies on props or composition to convey its erotic content and meaning is narrative. All erotic art, however, is emotional, meaning that it connects to the viewer in an expressive way. An erotic image can disturb or delight. A photograph by its nature distances the viewer in space and time, but it also draws in the viewer to a space that is real and personal, mentally and physically. Erotic photography may shock, dismay, arouse, or amuse but it will not fail to be noticed. In this way, it can be argued that an erotic photograph can never be purely formal, but must always be considered expressive.

Erotic imagery in photography typically is subjugated by the traditional male-dominated gaze; that is, a gaze preferring to see women as the object of erotic poses. The male nude in art in general and in erotic art in particular poses a variety of problems for artists, mainly socially and in extreme cases, legally. Though the subject matter of these photos is what is ultimately cited as the spark of controversy, many critics agree that the real cause of social uproar lies more in what erotic photographs of men communicate about the artist or perhaps even the viewer. This is to say that negative public reaction is based on a feeling of discomfort with viewing art produced outside conventional norms of communication. The male nude in photographic art has been dealt with successfully, though often still controversially, by artists such as Robert Mapplethorpe and George Dureau (1930–). Equally controversial, for many of the same reasons, is erotic art produced by women artists. Whether photographing women or men, female photographers find themselves under a great deal of scrutiny due to their denial of the traditionally male-defined sense of sexuality. Many of these images are undeniably erotic, while still ascribing to high-art standards of formalist excellence. In this way artists such as Mapplethorpe can claim artistic validity by virtue of their technical and formal artistic standards, notwithstanding the controversy of the subject matter.

Controversy breeds censorship, and nowhere is this more true than with sexually themed photography. Governments across the world have tried

to differentiate what is erotic, and presumably acceptable from what is pornography, and by extension unacceptable. Lawmakers are not always successful in making distinctions clear or guidelines easy to follow. Typically laws define what is erotic as being any sexual art that is not pornographic under legal definition. This kind of definition is problematic because it attempts to define a thing by defining what it is not. Many government-sponsored commissions such as the United States' Attorney General's Commission on Pornography in 1986, usually sweep anything sexual into the same category and attempt to make broad-based judgments founded on prevailing moral and political attitudes as opposed to an attempt to make aesthetic judgments on the works at hand.

The subjective nature of erotic art as discussed above makes any kind of censorship or regulation intrinsically difficult for the reason that censoring agencies typically make the assumption that all representation has equal value to all viewers. Most decency laws also do not allow works to be considered in their proper context.

Whether humorous or disturbing, erotic photography will always have sexuality at the core of its subject. Erotic does not necessarily mean photos of nude people. An erotic photograph can be one of a subject fully or partially clothed. The gaze of the subject can be directed within the picture plane or outward, in direct engagement with the viewer (a typical motif in pin-up photography). An erotic photograph need not show an entire person's body or even a person at all. Eroticism is defined by attitude and context; because of this, erotic photography will always be subjective and reliant upon the very personal reactions of the viewer. The fact that eroticism in photography is as popular and ubiquitous as it is, testifies to the success of artists' universal communication of intimate truths as described by Foucault. The incorporation of erotic photography into commercial, mass culture is indicative of just how universal these truths are, controversial or not.

ELLIOTT ERWITT

American

Elio Romano Erwitt was born in Paris of Russian parents in 1928. His first name was later Americanized to Elliott. The family spent some time in Milan and Rome before returning to Paris after his Jewish father, Boris, who had a doctorate in architectural engineering and was a partner in a management consulting firm, had offended the fascist regime. On 1 September 1939 they escaped the new European war by emigrating to New York. After a few years there, he and his father moved to California, the marriage having disintegrated. He had begun teaching himself photography as a teenager while living alone after his father moved to New Orleans. After graduating from Hollywood High School, he held exhibits of his work in Los Angeles and New Orleans. His photographic work had been part of a series of odd jobs he had tried in order to support himself. He studied photography at Los Angeles City College (1942–1944) and moved to New York in 1948 when he came to the attention of Edward Steichen and several other notables in photography. He was hired by Roy Stryker to work on a project about Pittsburgh for the Mellon Foundation. After Robert Capa viewed his photographs in 1951 and he subsequently was drafted into the Army, he was invited to join Magnum Photos in 1953.

Erwitt proved himself to be a master photojournalist, adept at handling a wide variety of equipment and assignments, often requiring imagination and quick, intuitive responses to stories rapidly unfolding before his eyes. He began doing documentary photography and news stories. One of his most famous early series, while on assignment for Westinghouse in 1959, recorded the "kitchen cabinet debate" between President Richard Nixon and Soviet Premier Nikita Khrushchev in Moscow. He photographed around the world for *Holiday* and other magazines and produced advertising and commercial photographs as well. From 1950 to 1952, Erwitt was a freelance photographer for *Collier's*, *Look*, *Life*, and *Holiday*. He became a Magnum associate in 1953 and a full member in 1954. Erwitt has shot journalistic essays throughout the world and numerous commercial assignments for Air France, KLM, and Chase Manhattan Bank, among many others.

Erwitt has made a good living with advertising and commercial photography, but he has always done his personal work in tandem with it, his personal photographs in large measure having been made possible by his globe-trotting journalistic and commercial assignments. Something of a purist as a candid photographer, he almost always uses black-and-white film, composes in the viewfinder, seldom crops, and demands unposed subjects. Although his

magazine and advertising work dried to a trickle by the late 1980s, his career rebounded with his retrospective exhibition and book, *Personal Exposures*, which kindled renewed interest in his work.

Erwitt is one of the great masters of humor and irony in photography, including what might be called visual puns. Such puns match his in-person verbal style. Usually the humor is gentle, but it can also be biting. His whimsical, story-telling pictures are in the tradition of Robert Doisneau, as well as being grounded in the “decisive moment” aesthetic of Henri Cartier-Bresson. He has been a prolific publisher of books of his photographs, with an emphasis on his humorous views, including the massive, definitive if self-consciously artless *Snaps*. It should be noted, however, that he has frequently recycled some of the same familiar images from book to book. Indeed, some of his “personal” images have even been recycled into his advertising work. A humorous image from one of his nudist series was used as a Barney’s advertisement in 1990, and a 1955 picture of a happy couple reflected in a car mirror was used for a Mitsubishi advertisement in 1998. Even a 1950 photograph of two men in suits, hats, and overcoats having a fistfight on a New York street served as an advertisement in the 1990s. He has devoted special attention to the animal world, especially dogs, resulting in two compilations of canine humor, *Dog/Dogs* and *Son of Bitch*. A great devotee of the single story-telling image, Erwitt has a keen sense of when something interesting is about to unfold before his camera. His innate sense of the absurd drives his interest in recording strange or humorous juxtapositions. Ralph Hattersley wrote of Erwitt, “He made the human comedy easier to bear.”

Not all of his photographs are humorous. One of his earliest photographs starkly portrays the reality of segregation at “White” and “Colored” drinking fountains. He has made tender photographs of mothers with their infants (especially his own wife and child), and poignant records of other intensely human moments. His photograph of Jacqueline Kennedy at President John F. Kennedy’s funeral in 1963 is one of the most memorable records of that national ordeal; earlier he had portrayed Robert Capa’s mother weeping over his grave. A young couple dancing in a kitchen in Valencia, Spain (1952) has great warmth of feeling. Thanks to his own notoriety as a photographer, he has had access to many other famous people in his career, including politicians from Kennedy and Lyndon Johnson to Fidel Castro and Khrushchev, actors Humphrey Bogart, Marilyn Monroe, and Grace Kelly, and writer Jack Kerouac.

His professional work includes magazine and advertising photography. After working for *Holiday* magazine, he deftly shifted to advertising photography when Magnum began receiving such assignments in the mid-1950s. He worked for the French, Jamaican, and Australian governments’ tourism campaigns, airlines, and Chase Manhattan Bank, among others, as well as accounts for industrial giants such as IBM, General Electric, Allied Chemical, Eli Lilly, and General Dynamics.

Beginning in the 1970s, Erwitt channeled much of his energy into movies, putting his early film school training to use. His feature films, television commercials, and documentaries include *Beauty Knows No Pain* (1971), *Red, White and Bluegrass* (1973), and the prize-winning *Glassmakers of Herat, Afghanistan* (1977). Other documentaries are imbued with his ironic and humorous viewpoint. He created short documentaries about the making of the Arthur Penn film, *Little Big Man*, and another about the training of football game half-time entertainers, *Beauty Knows No Pain* (1971). He worked briefly as director of photography for the feature film, *Paper Lion*. There is a link between his films and his photographs, however, as some of them form short sequences.

In the late 1990s and early years of the new century, Erwitt was again active in advertising photography and television commercials.

DAVID HABERSTICH

Biography

Born in Paris of Russian parents, 26 July 1928. Family moved to Milan, Italy, returned to Paris; to New York, 1939; to Los Angeles, California, 1940, graduated from Hollywood High School; took courses at Los Angeles City College (1942–1944) while working in a photographic laboratory. To New Orleans, 1947, where he had an exhibition in an artists’ club on Pirates Alley. To New York, 1948, where he began taking filmmaking courses in the Film School of the New School for Social Research in exchange for taking photographs for the school (1948–1950). Began making portraits of authors for Alfred Knopf book jackets, 1949. Assistant to commercial photographer Valentino Sarra; a documentarian for Standard Oil Company project. Drafted into the Army in 1951 posted to Germany and France, where he showed his work to Robert Capa. Joined Magnum Photos after being discharged from services, 1953. Began working for *Holiday* magazine, 1953. President of Magnum, 1966. Living in New York City.

ETHICS AND PHOTOGRAPHY

Although a comprehensive examination of the ethics of photography has yet to be written, there have been sustained investigations into specific genres within photography, including photojournalism, portraiture, and—to a lesser extent—documentary and street photography in which the question of ethics naturally arises, given the specific intent of the genre.

Photojournalism

The photojournalistic context is that in which the photographer makes a photograph with the aim of informing the public by publication of the image in a newspaper, magazine, or other mass-circulation medium. Famous examples include Eddie Adams's image of the summary execution of a Viet Cong prisoner, and Robert Capa's images made during the Spanish Civil War, particularly that known as "Falling Soldier" (*Loyalist Militiaman at the Moment of Death, Cerro Mur-*

iano, September 5, 1936) and the D-Day invasion at Normandy.

A central ethical consideration in photojournalism is connected with questions about the kind of understanding that such images can engender. At least since Plato's canonical discussion in Book X of the *Republic*, it has been argued that images are incapable of fostering the kind of understanding that is required for knowledge. The contrast is with words, which can provide the sort of narrative that is required for ethical evaluation, or for what Susan Sontag in her essay "In Plato's Cave" calls "ethical or political knowledge."
