## FLYING THE WORLD'S LONGEST AIR-MAIL ROUTE

From Montevideo, Uruguay, Over the Andes, Up the Pacific Coast, Across Central America and the Caribbean to Miami, Florida, in 67 Thrilling Flying Hours

BY JUNIUS B. WOOD

AUTHOR OF "SEEING AMERICA FROM THE 'SHENANDOAH,'" "RUSSIA OF THE HOUR," "St. MALO, ANCIENT CITY OF CORSAIRS," ETC., ETC., IN THE NATIONAL GEOGRAPHIC MAGAZINE

**M**ERELY a wave of the hand by the field superintendent, the pilot gave the big plane the gun, and we were off. It all was so casual and matter of fact, starting a flight by air which would cover between 7,000 and 9,000 miles, an arc between continents, from budding springtime in South America, across the balmy Tropics to another half of the hemisphere, where autumn frosts are tinting the leaves in North America. The United States post office makes it possible every week; eventually it will be three times a week.

### EARTH AND WATER UNROLL LIKE A REEL

History tells of the days, not so long ago as history goes, when a ship outfitted for a year to make a voyage like that, and even to-day some bustle and plan for nearly as long. But this is as nonchalant as it is quick—grab a suitcase, step into the plane, a curt signal to start, a second more and into the air, and only a few days later the voyage finished in another clime.

Those hardy explorers, acclaimed as history's heroes, came back with thrilling

stories of cities they had seen, strange people and stranger civilizations, great rivers discovered, mountains climbed, secrets wrested from Nature, all by weary months of plodding over the earth's surface.

In this age earth and water unroll like a reel below, a reel which can stretch a thousand miles in a day, over peaks so high that they have never been climbed, mines and rivers, turbulent seas and fever-ridden jungles, thriving cities and fertile plains, secrets of man and Nature glimpsed by a bird on the wing.

A cold drizzle, last defy of waning winter, had been falling for two days, and Gral. Pacheco Field, outside of Buenos Aires, was a soggy plain of puddles and dripping grass when we took off, on the morning of October 19, 1929. Only an optimist with the sunniest of souls or an air-mail pilot would soar into the threatening clouds on such a day. But a plane travels far and fast, and, cheering thought, to-night, on the other side of the continent, along the Pacific, the sun will be shining.

And that was about all of sunshine! Rain at the start, rain at the finish, and

MONTEVIDEO HAS AT POCITOS ONE OF THE FINEST BEACHES IN SOUTH AMERICA

Ocean bathers at the Uruguay capital revel on a smooth stretch of sand that extends for miles. When Maj. Herbert A. Dargue was here, on his epic flight around Latin America (see "How Latin America Looks from the Air," by Maj. Herbert A. Dargue, in the *NATIONAL GEOGRAPHIC MAGAZINE* for October, 1927), one of his planes was disabled and drifted toward some rocks offshore. Scores of spectators went to the rescue, plunging into the water to pull on a long rope attached to the imperiled amphibian. Montevideo is at present the Southern Hemisphere terminus of the air-mail route between the two Americas.

rain in between—springtime showers and tropical cloud-bursts—the heavens wept along 8,000 miles, for it was the rainy season.

#### A CURTAIN-RAISER FOR THE REAL FLIGHT

It had rained the day before, when I flew across from Montevideo to Buenos Aires. That was a curtain-raiser for the real flight, crossing the broad mouth of the Río de la Plata, 120 miles wide between the two cities. Between showers the plane took off from Montevideo, straight across the bay, a tower gleaming like a beacon over the city behind and ships in the harbor dropping below—bizarre oval white decks on a background of muddy-brown river.

We turned the corner around Villa del Cerro, whose old fort once guarded the mouth of the bay and protected the city on the opposite side. This is now a park, and the ponderous muzzle-loading guns

of the Triple Alliance of 65 years ago, when Uruguay, Argentina, and Brazil were united against Paraguay, look down on winding roads and peaceful sight-seers.

The little hill was a sentinel 200 years before Montevideo was more than a stretch of sandy beach, for it was what Diaz de Solis and Magellan first sighted four centuries ago (the latter dubbed it a mountain), and sailed up the broad river believing they had at last found the strait which would take them across the continent to the Pacific and on to the riches of India.

Straight ahead, still below the horizon, was Buenos Aires, the skies above glowing red in the setting sun. Between was a wall of black, another storm rushing on to meet the speeding plane, blotting out sun and sky, as it spread over the river.

The plane swung past the plant of one of the Chicago meat packers, big buildings like little white cubes, and followed along the Uruguayan shore. It tossed and

#### IT RODE THE WINDS FOR 9,000 MILES ON THE TRAIL-BLAZING FLIGHT

A part of the first air dispatch from Buenos Aires, this communication came to Washington for 90 centavos, about 37 cents. Argentina does not fix a minimum rate on 10 grams or on a half ounce, as do other countries, but collects air-mail postage on the exact weight of each letter.

lumped as a wing of the cloud-burst caught it. A coating of water covered the windows and the big drops spattered and broke on the wings, fringing them with flying spray.

Then a few minutes of sunshine, then a heavier storm, and Colonia, another city with massive Portuguese ruins, could be seen through the rain. The plane made a sharp turn and cut across the narrowing river. Fifteen minutes later it was circling off the Yacht Club, ships and harbor seeming to tilt eerily as it banked at 45 degrees and cut the surface with a wake of foam.

We climbed out through the trapdoor in the roof into the rain. All night it rained, and when the night porter pounded on my door and in mixed Spanish and German mumbled, "Fünf Uhr, señor!" the graveled walks and flower beds of Plaza de Mayo were dripping under a reluctant dawn.

A taxicab to the railroad station and then a train to Morón—such a name for

an aviation terminal—and another automobile jolting and slithering for half an hour over a muddy road to the field.

The big, trimotored, metal Ford loomed large at the side of a little shed. Its 75 feet of wingspread was the only shelter from the drizzle which had increased to a steady downpour, punctuated with bursts of lightning. Boots were soggy and high-heeled slippers sank ankle deep in mud.

"NEVER MIND THE LIGHTNING!"

"How about the lightning?" was my only contribution to the bustle of preparations, officials signing papers, mailmen and policemen counting neat little canvas bags, mechanics untying raincoats from shafts, and the pilot warming up the motors. My companion was a former pilot, now a vice-president, and very busy, also wet and without his warming morning coffee.

"Never mind the lightning; let's get off; no danger then," he snapped.

Once before I'd heard something like that. It was in Soviet Russia, one moon-

Drawn by James M. Duffley

#### THE LONGEST AIR-MAIL ROUTE

The author started from Montevideo, Uruguay, at 4 p. m., on Friday, and landed at Miami, Florida, the following Monday week, at 3:55 p. m.—an elapsed time of nine days, 23 hours, and 55 minutes. The flying time was 66 hours and 50 minutes. Eight planes were used on the flight—three amphibians and five land planes. Pilots and crews (copilots, mechanics, radio operators) were changed eight times.

light night, around 10 o'clock, when the entire village was out to assist in my start across the snow behind a reindeer team. "How about the wolves?" I suddenly inquired. "Never mind the wolves," the schoolmaster answered. When you meet one, just give it a cold stare, I suppose. He also was staying home.

The pilot waved, and I dashed through the rain and blast from the motor into the open cabin door. The vice-president walked out abreast the tip of one wing, watch in one hand, the other raised. His hand dropped—8 o'clock—the motors jumped to a roar, yellow waves splashed over the windows, as the 13,500-pound "bird" dashed over the muddy field, a short and quick take-off, and with a crash of thunder and jagged flash of lightning we left the ground.

Sparks played from the ends of the metal wings. The vice-president was right; enough electricity was going harmlessly to waste to light a fair-sized town. The explanation is that, without a ground connection, only a direct bolt will destroy a plane. Chances of hitting one head-on seem small.

#### CLOUDS ABOVE, BELOW, AND AROUND

What looked from the ground like a low hanging ceiling of dripping clouds separated into layers as the plane climbed. The first was of big, irregular patches, between which the water-soaked land could be seen 1,000 feet below, square brown and black fields, acres of timber and pasture, narrow roads like threads, little houses in barnyard ponds of mud and herds of cattle as small as wriggling water bugs.

Upward through the second layer of clouds, and a solid curtain of white stretched beneath us. A couple of hundred feet above was another, but the pilot did not risk going higher. He might not find a hole when he wanted to start down again, but reach the ground quicker than he expected. Clouds above, clouds below, and rain on all sides, the scenery was *nil* and I went to sleep.

This morning, flying low, the air was free of pockets and bumps. The plane took a couple of zigzags and found the railroad. Laboulaye was the sign on the first

## PLAZA DEL CONGRESO ADDS CHARM TO THE GRACEFUL ARGENTINE CAPITOL

One of the most attractive spots in Buenos Aires is this formal park before the magnificent State building, which is modeled somewhat after that at Washington, D. C. With its more than 2,000,000 population, untold wealth, and magically growing commerce, the city is one of the truly splendid capitals of the world.

station passed, some 300 miles from Buenos Aires. The drizzle had started again and the curious, attracted by the hum in the skies, did not venture beyond open doors. Rarely one would wave, for the Argentine is not at home to strangers, even to those who flit by in airplanes.

## ARGENTINA IS A LAND OF WINDMILLS

"We'll follow the railroad; it hasn't any windmills," said the pilot, and not two seconds later he went up another hundred feet to clear a water tank which had one. Argentina is a land of windmills. One stuck up through the haze at every *estancia*. The railroad, uncurving over the pampas, also showed our route.

The foothills of the Andes had been reached and we were slowly climbing an hour later. The cultivated fields, pastures, and *estancias*, in their groves of trees, with straight roads stretching away until they

dipped over the horizon, changed into miles of pampas, with scattered brush suggesting Arizona, and an occasional bare ridge of rocks.

The altimeter registered 3,000 feet, but we were only a few hundred from the ground and ears were feeling clogged. A signboard said José Nestor Lencinas (Las Catitas)—conductors must be grateful they do not call it for many trains—and the square fields of sprouting grain had started again, with tree-lined roads cutting them into an unending checkerboard.

Mendoza, 2,500 feet above sea level, was only twenty minutes farther. The city is proud of Tamarindos Field, between 200 and 250 acres, and three civilian aviation companies are preparing to use it and start services with other distant cities of Argentina.

We had made the flight in  $5\frac{3}{4}$  hours, compared to  $20\frac{1}{2}$  hours required by the

EVERYWHERE ON THE PAMPAS THE WINDMILL LIFTS ITS ARMS

These tall steel towers, chiefly manufactured in the United States, add their bit to the hazards of low flying across the great cattle ranches of Argentina (see text, page 265).

Photograph by Capt. Collingwood Ingram

WITH A STICK FOR A GUN, THE GAUCHO (COWBOY) BAGS HIS GAME

The skillful horseman of the Argentine pampas has ridden a partridge to cover, killed it by a sharp blow on the head with his long hunting rod, which resembles a fishing pole, and picked it up by catching its neck in a notch in the butt of the staff. A keen sportsman, giving the bird a run for its life, he has completed the whole performance without dismounting. Like the nomads of Mongolia, the South American cowboy never leaves his saddle if he can avoid doing so.

#### ROPING AN UNRULY BULL ON THE ARGENTINE PAMPAS

Wearing sombreros and leggings and riding with reckless daring, the Gauchos recall the "bronco busters" of the old Wild West of the United States.

Photograph by Capt. Collingwood Ingram.

#### EVEN THE GUANACO OF THE PAMPAS SUBMITS TO THE GAUCHO RIDER

This wild creature of the camel family has been captured on the open plains by means of the *boleadora*, a throwing device consisting of three thongs bound together at one end and attached at the loose extremities to leather-covered weights, two round and about the size of billiard balls, the third slightly elongated for use as a handle. The user, going full tilt on horseback, whirls the instrument about his head and flings it at his fleeing quarry in such a manner as to entangle its legs and bring it to earth.

#### RIDING ALONG THE WORLD'S HIGHEST AIRWAY

Wild and forbidding are the cold peaks of the Andes near Aconcagua, the loftiest mountain of the Western Hemisphere. This view was taken by the author at an altitude of 20,700 feet (see text, pages 277-299).

fastest train. Not so many years ago ox-carts trundled along for weeks over the same trail and Gauchos of exceptional strength, by using relays of horses, made it in seven days.

"Yesterday was a beautiful, clear day and we could see every peak from here," said one of the local air-minded enthusiasts, as the pilot looked toward the cordillera of the Andes, which was yet to be crossed. When rain has soaked the picnic pies or broken up the baseball game, some-

body always remembers that the weather was fine yesterday.

#### LAS CUEVAS FORECASTS AVIATION WEATHER

"What does Las Cuevas say?" the pilot asked.

"Snowing, blowing a gale, and 38 degrees below zero," the local agent for the aviation company replied.

"The snow would turn to ice on the wings and bring us down. We'll ask them again in an hour."

Photograph by Jacob Gayer

#### SANTIAGO SWIMMERS ENJOY SPORT IN CHARMING SURROUNDINGS

With a delightful climate and some of the loveliest public parks in the world, the Chilean capital offers year-around recreation for lovers of the outdoors. This pool is in the grounds of the Quinta Normal Park.

It was cold, windy, and wet, even on the level of Mendoza. One of the hospitable *Argentinos* found a youngster with a battered but steaming granite-ware pot of coffee and a tin cup, which made the circuit while we waited.

Mendoza, in Argentina, and Santiago, in Chile, are close on the edge of the towering peaks, and Las Cuevas is the highest of the Argentine Transandine railroad stations, 10,250 feet up on the edge of the frontier. It is also an office of an American cable company and its unsung operator there is the weather forecaster, on whose word the aviators who make

this daring dash across Nature's wall of a continent pin their fate.

Before they start from either side, a message goes to Las Cuevas. Almost instantly, rarely more than a couple of minutes, the answer is back, for the line is direct. On it depends whether the attempt shall be made. Storms whirl around the peaks and pass along. At that height their approach can be seen with reasonable certainty.

When the operator reports that one shows no sign of breaking, the planes stay on the ground, no matter how much pilots or passengers may fret. When he says

#### VALPARAISO DOES MORE BUSINESS ON THE PACIFIC THAN ANY OTHER SOUTH AMERICAN PORT

Principal gateway of Chile, this crescent-shaped bay teems with commerce. Though breakwaters and piers have been built, most ocean-going vessels stand far offshore while fleets of lighters carry their cargoes to and from the wharves. The city was benefited greatly by the opening of the Panama Canal. Plans now under way provide for a harbor that will give safe anchorage to 7,000,000 tons of shipping.

#### WATER "TAXIS" SOLICIT PATRONAGE AT COQUIMBO

At this important Chilean port, outlet for extensive iron and other valuable mineral deposits, ocean-going vessels must anchor at some distance offshore. Native passenger carriers do a thriving business with little boats built like canoes, pointed at bow and stern, to facilitate their navigation in rough weather.

that it is passing or that the sun is shining, they take off. It has its risk. Sometimes a storm comes which was not expected, and the flyers are forced to turn back. Sometimes a pilot may not be able to turn back, and the ice-burdened wings will crash and stay on one of those peaks which nobody has climbed. It is a gamble, none better, for crossing the Andes has thrills all its own.

#### SNOW IS THE ENEMY OF THE MAIL PLANES

Wind and cold do not stop the planes, or the towering mountains would never

be crossed. They are always there. Snow is the barrier, and this day the drizzle in Mendoza was a driving blizzard high up in the frozen chasms of Uspallata Pass.

Sunday morning, skies had cleared and the white-capped peaks awaiting us stood out in the west when our automobile reached the field. A gendarme with a rifle, who had guarded plane and mail, was the only sign of life. He shivered, and he had a right to, for the night had been cold and wet. He wished us a pleasant trip.

Waterproofs were untied from the motors, a few minutes for warming up, and we were off. The agent waved a good-

Photograph by Jurub Geyer

#### WATER PIPED 100 MILES KEEPS ANTOFAGASTA'S PARK GREEN

Strangely enough, in the region which produces the world's greatest supply of the important fertilizer, nitrate of soda, no vegetation will grow without irrigation. Commerce has created a city of more than 50,000 at this arid point on the coast of Chile, bringing down from the high Andes the flow of Siloli Spring to supply all domestic needs.

bye and climbed into his car—home for breakfast; not much fuss about getting away in an airplane. Mendoza was already dropping out of sight below.

The plane went steadily upward, at first over cultivated fields, getting farther and farther below, and then over the first ridges of the mountains, which suddenly jumped up as if to catch us, with their cold tops seeming only a few feet below the fat rubber wheels.

The altimeter registered 7,000 feet at 8:20; 9,500 at 8:22—passed the 10,000 and started a second circuit—13,500 at 8:33,

15,000 at 8:43, 20,000 at 9:03—the ceiling for the plane is listed at only 19,000—and 20,500 at 9:10, climbing slower and dropping farther in every pocket of the rarefied air.

The world is far below, under a broken floor of clouds. Aviators always refer to the clouds as a ceiling; but why shouldn't they be a floor, once the plane is above them?

Thoughts are becoming chaotic and rebellious in that brain-drugging altitude. Actually the earth is not so far below, for the jagged, menacing surface has fol-

Photograph by Junius B. Wood

#### CHILEAN WASTES, BARE AS SAHARA

Salinitas lies in a desert upon which rain never falls, where there is not a tree nor any other green thing—a place of rocks, sand, and salty particles that reflect blindingly the torturing rays of the tropical sun; yet during the World War the value of exports of nitrate of soda from this desolate country was equivalent to \$45 for every person in the Chilean Republic.

lowed us as we climbed. Here and there it still is with us, bare white peaks rising above the clouds, as if stretching out to snare invaders of the passage they have held inviolate since the world was formed.

#### A WORLD OF DREAMS

The clouds stretch white as far as the eye can see—soft, inviting, sparkling in the sun like a floor of cotton—hiding the death beneath. Big black patches show in gaping holes on a frozen sea. The sun strikes through them—all else must be gloom below; we in the bright sunshine, and darkness right beneath us, under that white mantle—painting a panel of mountain side miles high (see page 270).

Peaks of frozen white, which never melt, drop into streaks of black and white; snow in the crevices, and the jutting black faces between, swept bare by the constant gales. The snow-packed gullies change to shiny black, flecked with white; then scrubby trees of pine, which look like bushes, and, so far beneath that it seems the bottom

of a pit, a level patch of green or a snow-filled canyon which the sun never reaches.

My head is aching, muscles seem taut; I've a great longing to sleep; that's amusing—sleep while crossing the Andes, the trip of a lifetime; like going to see Niagara Falls and sitting in the hotel reading a magazine, or talking to the girl at the cigar counter—equally stupid.

The brain grows dazed, as if going under ether, but without a girl in white saying, "Keep your thumb moving, mister," or a dentist brandishing a forceps and ready to pounce as soon as eyes close.

The hum of the motors changes to a soothing, far-away refrain, but the eyes see everything—the marvelous scenery, every changing detail of plane and men, the vast, indescribable emptiness—and the brain throbs as under a powerful stimulant, ideas flashing through without relevancy, reason, or coherence. Four miles into the void and one is still alive, but in a world of dreams.

The hand on the altimeter is pushing

Photograph by Jacob Gayer

ANTOFAGASTA NITRATE EXPORTS AMOUNT TO A BILLION POUNDS ANNUALLY

This busy Chilean port is the chief gateway to Bolivia, the treasure vaults of the Andes, and a desert under whose surface are seemingly inexhaustible stores of rich fertilizer. Out of it pass vast quantities of copper, tin, and much of the world's supply of borax.

hard, like one of those old lung-testing machines in a penny arcade—Bill trying to blow a pound more than Sam; neither would register much in this thin air. It touches 20,700; hard climbing, getting harder every minute, as the air gets thinner. This dial has only ten figures on its face, each 1,000 feet. Some have twenty. One with ten is easier to read—great observation! Hand just keeps on going around; it has staggered around twice already. Anybody can tell by his headache whether he's up 10,000 or 20,000 feet; before it went around three times he'd be unconscious or dead. Yes, a ten-figure dial is better than twenty.

The smaller phosphorescent dial of the clock on the other side shows 9:25. Funny clocks in airplanes—only 3, 6, and 9 on their faces. People don't read figures on dials anymore than they spell out the letters in a word. Most persons can't tell whether their wrist watch has Arabic or Roman figures. Wrigley clock, in Chicago, has all II's, and a million people a day tell time by it and never notice. Must

be a reason, though. Perhaps too many phosphorous figures would dazzle the pilot's eyes. Let it go at that.

THIRTY-EIGHT BELOW ZERO

Riding along the world's highest highway, that's something for a Sunday morning spin between coffee and dinner, and no traffic blockades; nothing like those boulevards outside every city in the United States on a springtime Sunday. Springtime in the Andes ought to be a song. Thirty-eight below zero, the pilot says; he looks it, out there in front.

Other planes have been higher—not so many at that—but this is a regular highway, very exclusive, for those crowded off the earth's surface. Anyway, we have it all to ourselves, and those cold white peaks sticking out don't extend any hospitable welcome.

Better take some notes about all this; perhaps I can read them when I get down to earth. Been taking notes for 20 years—dopes, dummies, and geniuses; never took any of a dream; sound very foolish when

you wake up. Well, photographs are upside down when they're taken; look all right afterward—sometimes. Nobody knows what a nut took them. Why not notes?

Might be easier if the plane wasn't bumping so; like trying to write a letter in an automobile, only we're dropping hundreds of feet with each bump; then the pilot catches it and we crawl up again. Certainly plenty of wind; that's why we're so high. It's the pilot's worry, not mine. He knows his job or he wouldn't be here, and he's not going to commit suicide. He's just paid his wife's fare to come from the United States. Not my worry. Never be a back-seat driver, either in an oxcart or in an airplane four miles up in the air!

Four miles—not quite; some volunteer auditor will question that—but almost four miles—420 feet less. A normal city block is 600; less than a block to go; but we won't bother about that; we're not making a record; merely delivering the mail. Think about this when you get your letter from Buenos Aires; it had some ride for 37 cents! (See illustration, page 263.)

Up in front the pilot and mechanic, who yesterday showed two red heads and shirt sleeves, are muffled in leather helmets and coats. Their pilot house is inclosed, but it is colder than in the cabin. They are exercising as in a football scrimmage.

"DON'T ROCK THE PLANE!"

The big plane lurches and plunges in every direction, like a ship in a Chinese typhoon. Four hands and feet are not too much for a pilot, as he fights to keep it steady. Even gasoline is sluggish in that Arctic cold; the rarefied air is weak and the mechanic is pumping with both hands. He opens the door of the cockpit and steps gingerly back into the big, lonesome 14-passenger cabin.

"Don't move from your seat!" he shouts into my ear. "The last time you looked out the other side we dropped 1,500 feet."

He yells at the top of his lungs to be heard above the roaring motors. My ears are not stuffed with cotton, but his voice sounds faint. He sneaks an extra minute to shuffle his numb feet gently on one of

the hot-air radiators in the floor, just like the radiator in the old tin jitney on the farm—handle kicked off; couldn't close it in summer and couldn't get it open in winter.

"Lordy, it's cold out there!" he starts shouting again. "The pilot's got two pairs of woolen socks on, but he'll be tell'n' again to-night about his toes being frozen. Long's his noodle doesn't freeze, we're all right. This's no place to crash."

With that reassuring statement, he was tiptoeing back. Don't rock the plane. My head is going around like a pinwheel and seems splitting; no enthusiasm for moving, without any warning to sit tight. Must be getting very dopey, for we seem upside down; hope the pilot doesn't get the same idea. We'd give one of those mountains an awful bump; that's what aviators say happens in fogs—think they're going up when they're going down; never get orientated until they smash the side of a mountain; ought to have oxygen tanks for pilots on these planes; let the passengers go into a trance; they've no responsibility except to sit still.

The sliding windows are frozen shut and streaked with frost. Window panes? No, pains; it's a soupy scrawl, but I'll know when I get down to earth, pains or panes; both look natural. What's the difference? A copy-reader can correct it; that's what he's for. Great age we're living in! Columbus came over and wasn't heard from for a year. To-day, misspell a word in Chile and half an hour later a copy-reader is correcting it in New York, 8,000 miles away. Rather expensive, though—50 cents to cable the wrong word—but cheaper than carrying a dictionary at \$1 a pound excess baggage. One of those books weighs 15 pounds and might fall out of a window and hit somebody!

#### PASSING ACONCAGUA—HIGHEST PEAK ON THE WESTERN HEMISPHERE

Twelve miles off to the right, Aconcagua, highest point on the Western Hemisphere, pierces the floor of clouds, a hill of ice on a white cloud plain. Mariners miles at sea can sight the majestic peak, looming high behind the Chilean coast; but here, as we drove ahead, around its

Photograph by Jacob Gayer

STEAMERS TAKE ON NITRATE WHERE MOUNTAINS COME DOWN TO THE SEA.

Small Chilean ports have none of the pomp of the world's great harbors, yet the small boats that carry the spoils of the desert to the ships anchored offshore bear cargoes of fabulous value.

Photograph by Richard D. Hoyt

#### PRODUCE VENDERS LEAD LADEN BURROS THROUGH ARICA STREETS

Old customs still prevail in this important port of northern Chile. The panniers in which the fruits and vegetables are carried from door to door are woven from a flat reed or grass resembling raffia.

ice cap at more than 100 miles an hour, we were slowly pivoting in infinity, and Aconcagua's projecting top seemed small in that unending empty horizon of white.

Our plane was the only sign of life in the vast void above the world, higher than anything which moves, except man with his machine-made wings; higher than all else there, except Aconcagua's frozen 23,098-foot tip. Only a few peaks in the Himalayas and elsewhere in Asia are higher than Aconcagua.

The pilot turned suddenly and pointed to the left. There, flashing into view—only a flash and it was gone—passing at 200 miles an hour, was another plane, the French air mail bound for Europe via speedy naval destroyers from Natal, Brazil. Millions of sparks twinkled in front of aching eyes, and the little blue speck in that hollow, unearthly world seemed unreal, a torpid brain unable to sense the significance that here three continents were being linked through the air.

The myriad of sparks recalled Lappland, in Soviet Russia, a couple of winters ago.

Lost on a sled on an ice-stilled lake, reindeer teams plunging in aimless circles, trying to find the trail; the same sparks before the eyes, and the stocky Lapp driver insisting it wasn't snow, only frost. There we were level with the sea, and here more than 20,000 feet above it, but the waste of unblinking snow was the same.

#### DROPPING FOUR MILES IN EIGHT MINUTES

"We're over the worst," the mechanic shouted, coming back and sitting down. It had not seemed so bad to me, braced comfortably in a seat. In the cockpit the pilot stretched and shook his shoulders. Nothing more to do but come down, and we came. The little clock said 10:15 when the finger on the altimeter was still hanging on to 20,700. Then he turned the nose down. A moment of oblivion, as we cut through the clouds, suds of cold steam, and then Santiago was right ahead. The clock pointed to 10:23 as the tail caught the ground at Los Cerrillos Field, only 1,700 feet above the sea.

Down 19,000 feet in 8 minutes is a

#### TACNA YOUNGSTERS PLAY WHERE BATTLES ONCE WERE FOUGHT

History records few struggles more bitter than that between Chileans and Peruvians for possession of this now peaceful city of pleasant homes, busy streets, and shady parks. In the final settlement of the dispute, on July 28, 1929, it was definitely given to Peru, while the port of Arica (see illustration, page 282), also an object of controversy, went to Chile.

sudden change. Ears were cracking like a battery of machine guns, and the back of the head seemed squeezed in a hydraulic vise. Even the thickest skull would feel that change; but the agonizing pain is quickly cured. Lessons of childhood days, when mamma held a handkerchief and said, "Blow hard!" come back. Just hold a nose tight shut with one hand and blow an imaginary blast. The heavier air of the lower altitude forces out the rarefied ozone in brain and ears and the pain goes as quickly.

A smaller, but faster, single-motor plane was waiting, already warmed up. We

should have been in Santiago before dark on the night before, making the trip from Buenos Aires in a day. Three-quarters of an hour for the change, mostly conversation, and we were spiraling off the field, turning north over alluring Santiago, of parks, mountains, and gushing mountain torrents,\* to follow the fertile, longitudinal valley of Chile.

As we climbed to 10,000 feet the green carpeted plain beneath spread between the mountains, tabloid farms two miles below.

AT TIABAYA THE DESERT MEETS THE SOWN

Photograph by Junius B. Wood

Irrigation has created a veritable garden spot about this Peruvian city, 8,000 feet above the sea. From the air the contrast between the cultivated fields and the arid waste appears in striking sharpness. A long, unbroken line of trees protects the watered lands from the sand-laden winds that sweep constantly across the barrens.

Photograph by Ewing Galloway

THOUGH THE SECOND SEAPORT OF PERU, MOLLENDO HAS NO HARBOR FOR LARGE SHIPS

Here, as elsewhere on the Pacific coast of South America, vessels of deep draft cannot approach the wharves, but must anchor far offshore. A small breakwater affords protection for cargo lighters and other small craft. The town serves as an ocean gateway for Arequipa, as does Callao for Lima (see illustration, page 300).

Photograph by Jacob Gayer

#### EMBARKING AT MOLLENDO AFFORDS A REAL THRILL

Even in calm weather the swell in the harbor is so heavy that small boats are bounced up and down like corks. It is no mere matter of walking up a gangplank for passengers to go aboard a steamer. Often they must be lifted from a tender to the deck in a chair operated by a steam crane.

patches of trees, and a dry river bed, stretching on the west to the coastal cordillera and on the east to the first range of the Andes, with Aconcagua's white peak, which we had circled only a few minutes earlier, towering over all and seeming close at hand.

#### FLYING BETWEEN OCEAN AND MOUNTAINS

In 45 minutes the Pacific was in sight on the left, a line of white surf along the rocky shore, and we were flying midway between ocean and mountains, over a 120-mile-wide ledge on the edge of the con-

continent. Even that shrunk narrower in the next hour and a half and the green grew smaller. We crossed high over a river at the foot of a steep bluff, turned and came down on the Army field, with its gaudy yellow hangar, on the high plateau at Ovalle.

The Chilean Army maintains a commercial aviation service, carrying mail and passengers, and eventually the Navy will fly between Puerto Montt and Magallanes (Punta Arenas), linking the entire 2,600 miles of the long, narrow country.\*

Civilian flying is required as a part of Army training, a practical use for military aviation. Private companies are required to carry an Army officer on every flight, to acquaint him with different planes and to prevent outsiders from rambling around the country or photographing military secrets.

At every flying field in Chile the officers were friendly and hospitable. Some of them had trained at Army schools in the United States. They were pleased to have their planes and well-kept airdromes photographed, and the one aboard our plane would have satisfied the most ambitious film salesman, as he zealously pointed out picturesque spots which he thought ought to be "shot."

The Chilean Government not only gave

BIRDS ON THE GUANO ISLANDS SHOW NO FEAR OF MANKIND

In myriad flocks these peculiar creatures, which abound off the coast of Peru, darken the landscape for miles (see illustration, page 294). As the water-carrier passes among them with his burro, they are not frightened, but move aside with dignified slowness to make way for him.

Photograph by Peruvian Naval Air Force, courtesy Capt. H. B. Crow

PERUVIAN VILLAGES NESTLE IN VALLEYS ACCESSIBLE ONLY BY PACK TRAIN  
OR AIRPLANE

Shut in by cordilleras, many peaks of which rise to altitudes of 18,000 to 20,000 feet, these remote settlements have changed little since the days of the Incas, who probably built these terraced farms.

special permission for me to ride in a plane which did not have a permit to carry passengers, but ordered its rural telegraph offices to remain open at night until my cables were sent. The reputed unfriendliness of Latin Americans to the United States may be one of policies, often justified, but it does not extend to the individual who accepts their hospitality in the same friendly spirit with which it is offered.

At Ovalle our northbound plane met

the one, the same make, but painted a hilarious red, bringing that week's mail from the United States. The loads were exchanged and each turned backward. The one from the north brought 70 pounds. We had started from Buenos Aires with 34 pounds and had picked up 20 more in Santiago. That going north carried about \$1,800 in postage stamps, of which around 10 per cent went to the two countries and the balance to the United States Post Office Department.

#### OLD SPAIN SURVIVES IN LIMA

All the romantic charm of bygone centuries lingers about this courtyard of a private home in the Peruvian capital. Although the new part of the city has become ultramodern, the colonial section retains the grace of four-centuries ago.

Photograph by Johannes Bruthers

PIZARRO FOUNDED LIMA 43 YEARS AFTER COLUMBUS DISCOVERED AMERICA

The "City of Kings," as the Spanish general named it, had grown great a century before white men set foot on the site of Chicago, and was the capital of all South America when the United States were still British colonies. To-day, with a population of a quarter million, it is one of the most interesting places of the Western Hemisphere. In the foreground and middle distance is the modern section, with the large Hippodrome, the ovals of the two stadiums, and the Zoological Gardens; the old colonial district lies in the distance. The mummy of the conqueror of Peru is preserved in the cathedral and is still shown to visitors.

The arrival of the two planes is the Sunday event for Ovalle. Introductions were made to the commandant and to those whose local standing permitted them on the field. One whose rounded figure testified to years of faithful effort at many a groaning table singled me out with a twinkle of recognition. His English was perfect.

"When did you get to Santiago?" he asked.

"Only this morning, a few hours ago," I replied.

"But you've been there before?"

"Yes, about three weeks ago."

"Did you eat at the Restaurant Bahia?"

"Yes. Why?"

"My wife and I went over there for five nights and watched you eat lobster," he explained almost reverently.

We were in a distant country village. Seeing a hungry man rend a lobster limb

Photograph by Johnson Brothers

GUANO ISLANDS SHOW WHITE AGAINST THE SEA OFF THE COAST OF PERU

The dark areas are formed by thousands of birds. At the water's edge on the left is a settlement from which enormous amounts of fertilizer are shipped.

from limb in approved New England style, until the last morsel was mixed with sauce and butter, must have been an unforgettable sight for Chileans, who are accustomed to content themselves with a few slices which can be negotiated with a fork.

However, after providing such a run of entertainment for rural visitors to their national capital, one agrees that all novel customs in eating are not seen in strange lands. Its lobster, rather, *langosta* without claws, is the most toothsome of Chile's many sea foods. It comes from Juan Fernández Island,\* about 350 miles from

\* See, also, "A Voyage to the Island Home of Robinson Crusoe," by Waldo L. Schmitt, in the NATIONAL GEOGRAPHIC MAGAZINE for September, 1928.

the coast, and my lifelong sympathy for hungry Robinson Crusoe vanished. That was the island where Alexander Selkirk lived the story, picking lobsters like pebbles off the beach and merely tossing them in the pot when Friday had the water boiling. Defoe held out on the free lobsters.

The third plane in which I had ridden that day rose from the field, made a wicked turn for altitude, and cut across, past the village on a side of the mountains, toward the ocean. Coquimbo, nestling on a blue bay with a white crescent of shore, was below; next La Serena, a square city on a narrow shore of plain at the end of a green valley. We followed along the narrow, wind-blown, sandy shore, buttressed by Nature's black granite breakwater. The white mottled peaks

VISCAS BRIDGE CROSSES A VALLEY 15,100 FEET ABOVE THE SEA

The span is on the Central Railway of Peru, which climbs from Callao, on the Pacific, 140 miles, to Oroya, far up in the Andes, and then turns south to Huancayo. A branch line to the Morococha mines passes over the Continental Divide at an altitude of 15,865 feet, the highest point reached by a standard-gauge track.

Photograph by Peruvian Naval Air Force, courtesy Capt. H. B. Graw.

#### WASTES OF LAND LEAP UP FROM WASTES OF WATER

Along the coast of Peru, Nature has been freakish, hurling desert mountains and rocky islands out of the very sea. Earthquakes are of frequent occurrence in this region.

were in the distance and the parched coast of the Andes had started.

#### COPIAPÓ FOUNDED MANY OF SANTIAGO'S FORTUNES

We passed Carrizal Bajo, known for its copper, with a highway showing back into the hills and a leg of the centipede-like longitudinal railroad reaching to the port. The land bulged out and water was no longer under our wheels. Gashes on the distant hills seemed like cliff swallows' holes, red hills with white cart roads winding down; then a green valley beyond, over a crest, and we were spiraling down on another Army field at Copiapó, back on schedule, where we would have stopped for the night if we had crossed the Andes the day before.

Once Copiapó was the largest city in Chile, after the Chañarcillo silver mines, on the old Inca trail, were rediscovered, in 1832. They are worked out and flooded

now, but they founded many of to-day's big fortunes in Santiago.

Copiapó is now a quiet country town, basking in the sunshine and dust. "Never rains more than twice a year, and then not much," they explain. The rattling open hack still does service, and this Sunday evening the population picked its way over the rough sidewalks to a band concert in the plaza, where a statue of Juan Godoy, a departed miner, stands among the cherished flowers and trees.

The scenic day was finished: Mendoza, cold and wet, at dawn; buffeted over the silent, frozen Andes before noon; Santiago, a picture city among its hills; the fertile green "Vale of Chile"; the Pacific breaking on a rocky coast, and now Copiapó, with its memories of Incas and mining booms and its sunshine and dust. Buenos Aires, the Atlantic, and the miles of Argentine pampas, though seen only yesterday, seemed far in the past.

Photograph by Peruvian Naval Air Force, courtesy Capt. H. B. Crow

#### CHILCA OF THE DESERT GAINS ITS LIVELIHOOD FROM THE SEA

One of many fishing villages of Peru, this little place south of Lima lies north of the nitrate fields which have brought wealth to the coast towns of Chile. Here a rainless waste of sand and rock extends from the ocean to the high Andes, a region seemingly destined to remain barren for all time.

Clouds hid the crests of the bowl-like hills the next morning, as we taxied across the field in a cloud of dust. No break showed, but the pilot knew of an opening, as he rose toward the rim, fog sweeping to meet us through the gap like smoke from a giant stack. We came through, without hitting a corner, into sunshine on the other side, and on up to 7,000 feet.

The earth spread below like an immense relief map—a rolling sea of black and brown and red, with rocky crags and castles and deep-cut dry beds of forgotten mountain freshets, baked by centuries

of sun and cut by winds which never cease. It is the same for hundreds of miles, but its riches have brought life into the desert.

Occasionally we would pass a copper or iron smelter or nitrate works, smoking stacks, broad roofs of mills, a fringe of little houses, and always, off at the side, an adobe-walled cemetery with the crosses of those who had given up the fight.

White lines on the darker waste marked trails over which carts were bringing the ore, or where men had trekked in search of more. All that vast stretch of desert

Photograph by Peruvian Naval Air Force, courtesy Capt. H. B. Grow

DUNES MOVE CEASELESSLY WITH THE SHIFTING WINDS

It would be hard to find a more desolate region than the coastal desert of Peru, where hills of sand seem to walk (see text, page 305). Yet even to this inhospitable shore commerce has come, with fishing villages, harborless and trusting to calm weather to enable freighters to approach their piers.

Photograph by Peruvian Naval Air Force, courtesy Capt. H. B. Grow

#### PIZARRO FOUND THE INCAS ENTRENCHED IN THE FORTRESS OF PARAMONGA

Had the Spanish leader not captured their king, Atahualpa, at Cajamarca and put him to death, thus demoralizing their entire army, the Indians might have held this stronghold on the coast of Peru, about 100 miles north of Lima, as the crow flies. Its painted walls, which stand intact to-day, were thick and had withstood an assault by the conqueror's brother, Hernando. Most of the chiefs, however, surrendered without a show of resistance, after the downfall of their ruler.

Photograph by Peruvian Naval Air Force, courtesy Capt. H. B. Grew

CALLAO, THE PRINCIPAL PORT OF PERU, HAS ONE OF THE FINEST HARBORS ON THE PACIFIC

Adequate docking facilities enable the largest steamers to discharge freight directly on the wharves instead of mooring offshore and lightering cargoes to land, as they must do at many of the other coast cities (see illustrations, pages 272 and 285). Improvements representing an outlay of more than \$6,000,000 are now in progress, and two long breakwaters are being constructed to provide a large body of protected water. The busy, cosmopolitan city of 50,000 is the ocean gateway for Lima, the capital city (see illustrations, pages 291, 292, and 294).

is pockmarked with holes which prospectors have dug, methodical corners of perfect squares.

OVER CHILE'S EARTHQUAKE ZONE

"This was flattened by an earthquake; a few days ago they were hills," the pilot shouted back, pointing below. The wrinkled and broken surface looked like one of those cakes which home bakers take from the oven and exclaim, "It's fell!"

We were over Chile's liveliest earthquake zone, accustomed to a couple of shocks a day, but with serious disturbances not expected more than twice a year. The one the previous week had been serious, but most of its force was felt in the unpopulated area. From my experience with earthquakes, to use an airplane is the best way to see one.

The speeding plane bumped and tossed over the constantly changing surface.

Photograph by Horner

#### CHIMBORAZO LIFTS ITS SNOWY SUMMIT NEAR THE EQUATOR

The giant peak that frowns above Guayaquil has its feet in tropical jungles and its head in an eternal cap of ice. Rich deposits of sulphur are found on its slopes. Near by looms Cotopaxi, the highest active volcano in the world.

Heat waves radiated up from below in waving currents. A lighter-than-air ship would have had a terrible crossing. Dust blew into the cabin 1,000 feet high.

Then came the scattered nitrate plants of Salinitas, with a crisscross of trails spreading out and fading into the distance (see illustration, page 278).

Antofagasta, on the coast, was glimpsed through a break in the hills, as the plane came down on Puertozuñela Field. Four silvered Army planes, a red and white circle with a white star on blue painted on each wing, stood in a straight line in front of the yellow hangars.

We cut across the 40-mile neck of a peninsula and in 20 minutes were passing Mejillones and over the Pacific where Point Angamos crooks out like a thumb and forms a bay.

#### MINERALS KEEP CHILEAN DESERT TOWNS ALIVE

Flying over the ocean through the afternoon was smoother, but over the desert any spot was a landing field, while here was only water. The surf pounded along miles of rocky coast, with rarely even a barren island to break its force. When the cliffs rose straight from the water and

Photograph by Ewing Galloway

#### ECUADOR CLAIMS FIRST HONORS FOR LARGE BANANAS

On a dock at Guayaquil a native boy displays a prize bunch of the fruit for which his country is famous.

a mist rolled in from the sea, we would turn out to give the projecting claws a wider berth. At other places we would see a narrow ledge of shore with a road, occasionally spreading into a little plain, with a town and a wagon road or railroad winding down the hillside in back. Each would have an iron pier and ships anchored in the unprotected roadstead, loading the minerals which justified the town's existence.

Gatico's mills smoked on Cobija Bay; then came Tocopilla, with ships on the anchorage, little brown houses, and smoke-

stacks and a railroad; Pabellón de Pica, with a road like a balcony on stilts around the sugar-loaf cliff; Patillos and a railroad which disappeared between walls of sand, and then Iquique, spreading over a flat spit of land, a dozen ships in the harbor, a highway coming down in six zigzags, and the railroad in two longer gashes across the steep hill behind.

Ten minutes more and we hum past Caleta Buena, its ledge between shore and cliff so narrow that in the distance it seems a line of driftwood cast up by the waves. Junin, with its long iron nitrate pier, has slightly more room, and the road cuts only two zigzags on the cliff.

Half an hour more of unbroken shore and the plane, bucking like a bronco, was fighting the wind whistling around another rocky point. We made it and a broad green valley opened ahead; surf breaking right beneath, on Alacrán

Island, once a Peruvian fortress and now covered so thick with millions of birds that they looked like wriggling worms; two long black piers and two ships farther out. Arica sparkled in the sunshine; Hotel Pacifico facing the bay; cool, straight streets lined with bougainvillea, pepper-trees, and hibiscus; a ready-made iron church from Monsieur Eiffel, of Paris; El Morro's steep black sides towering above, with a golf course on top, 18 holes and not a blade of grass; Tacora's snow-clad peak far ahead, and we were over the city, coming down on El Buitre Field.

Photograph from Pan Americano-Grace Airways

#### ILLIMIZA THRUSTS ITS PEAK TO AN ALTITUDE OF 17,500 FEET

As an airplane in flight from Guayaquil to Quito, in Ecuador, passes over the summit of this snow-capped mountain, the cloud "ceiling" becomes a floor, cutting off vision of the tropical land below.

The Chilean frontier had been reached. Arica, scene of many a battle, has settled down to the piping days of peace. Even the half century of desultory Tacna-Arica dispute has been settled since President Hoover's visit. Both were scenes of sanguinary battles in the Chilean-Peruvian War of 1879-82, also known as the War of the Pacific.

#### ARICA A CITY OF IMPORTANCE EVEN IN INCA TIMES

Arica existed before the Spaniards came, before the Incas. It was the port for the silver from Potosí and its population then was five times its present 9,000. Drake, Cavendish, Spilbergen, Watling, Sharp, and other pirates landed and attacked from El Morro's heights, but none captured it; and Watling, according to legend, was killed by one of the women defending the city (see, also, page 282).

Four earthquakes destroyed it, the last in 1868, accompanied by a tidal wave which not only wiped out the city, but drove the shipping on the shore. The

United States ship *Waterloo*, a side-wheel gunboat, was carried nearly two miles inland.\* Its hull was a hospital during the war between Chile and Peru, and later a lazaret during a plague. The boilers, still on the beach, are pointed out to-day, and the Stars and Stripes again waves from its flagpole in front of the offices of an American shipping company; but the only social event which Arica could offer this Monday evening was to turn out and see the weekly train start its 14,400-foot mountain climb to La Paz, capital of Bolivia.

#### MUD ROOFS SUFFICE IN RAINLESS TACNA

The morning sun was just tinting Alacran as we shot out to the ocean over the sandy mouth of the river, gained altitude, turned back, and twenty minutes later were coming down in a sharp circle over Tacna, a flower garden of red, pink, blue,

Photograph by W. Robert Moore.

QUAINT BUENAVENTURA IS THE CHIEF PACIFIC GATEWAY OF COLOMBIA

On an island at the head of Buenaventura Bay and at the mouth of the Dagua River, this little town is the outlet for the charming city of Cali and the great Cauca Valley, called, because of the politeness of its people, the "Land of the Gentle Yes." A large proportion of the population of the port are Negroes, whose thatched huts line the shores (see, also, text, page 317).

and white houses with roofs of tin or adobe (see, also, page 283).

"There isn't any rain," a passenger explained at my astonished exclamations. Naturally they cannot have rain or an adobe roof would melt. The difficulty is to get enough water from the mountains to make mud bricks for a roof.

Half a dozen Peruvian soldiers, American-cut khaki uniforms with added leather and yellow trimmings on hats and shoulders, stood around, for we were carrying passengers. Over 30 miles of wind-swept plain, frightening a burro pack-train plodding up to Puno and Lake Titicaca; down through a dull haze, through a gully, and we were out over the ocean again. We cut in once more behind the lighthouse on Coles Point, bumping in the air pockets over land and down at Ilo in a broad valley.

Out again over another green valley, no larger than an Iowa cornfield, and the pilot pointed to a whale swimming below. Life has become complicated for whales since the days when men chased them with skin canoes and bone harpoons. Hundreds of sea lions sunned themselves in a little sandy cove, and thousands of frightened birds took to the air as we passed their white guano-covered rocks.\* Level with the plane, they seemed to be flying backward, so much faster were we moving.

Diagonals of irrigation ditches showed in another valley opening to the sea. Balneario de Mejia, with a Moorish mirage of red, green, and blue roofs; and Mollendo, on a ridge between fissures, was ahead, Islay Point jutting into the sea.

Aviators say there is always a current from the Pacific, revolving by the suction of the heated air rising from the pampas striking the mountains and rolling back again to the sea, but leaving a continuous fog on the coastal plateau, which makes flying there impossible.

#### THE THRILLS OF THE DAY ARE AHEAD

A straight white chalk line across the rock-sprinkled plain and a flapping red "wind sock" on a little pole formed the

\* See, also, in the NATIONAL GEOGRAPHIC MAGAZINE, "Peru's Wealth-Producing Birds," by R. E. Coker, June, 1920, and "The Most Valuable Bird in the World," by Robert Cushman Murphy, September, 1924.

aviation field at Mollendo, as insecure for airplanes as the harbor is for ships.

Arequipa is about 7,500 feet higher up, and the thrills of the day were ahead. The plane took off toward the mountains, circled a bank of clouds, and out again over the sea, until Mollendo was 2,000 feet below; then it turned back and pointed upward. At 2,500 feet it was in the thick, soupy mist, the world blotted out and drops pattering on the windshield like rain; 3,000, and a faint blue showed in the glow above; 3,700, sunshine breaking through; 4,000, and the ceiling of clouds stretched white below. Ahead were the snow-covered peaks of the Andes, towering to upwards of 20,000 feet or more: Ampato; Chachani, its black peak flecked with white; El Misti, springtime snow thinning on its graceful cone, and, last, the saw-toothed white ridge of Pichu Pichu.

We were still climbing; 5,000 feet over a dry flood-washed plain; 6,000, 7,000, air getting thinner; 8,000, 9,000, 10,000, and over the first ridge of the Andes to a freshly irrigated green valley in the center of the barren sierras. Tiabaya (see page 284) was below, jewel of a town, with the mausoleums of the dead more noticeable than the homes of the living; and Arequipa a couple of minutes beyond, at the base of El Misti (see pages 287, 288).

#### CREEPING DUNES MAKE PERFECT CRESCENTS

The sandy plain on the plateau was marked by hundreds of dunes, scattered like haphazard earthworks of an army. Of different heights and widths, but all perfect crescents, they faced in the same direction and, according to those who have marveled at them, steadily advance at a rate of 40 to 50 feet a year. That they move before the south wind, centers higher and thicker than the tips, is easy to see; but why they start, or keep up their crawl in irregular skirmish formation, or do not unite into one big crescent, requires longer study than from a speeding airplane. Years later they will reach the mountains and vanish into the air, but man's only way to divert an invasion is by piling rocks on one horn until the dune dissolves.

At that altitude, we took off with the wind, going back, and for 25 minutes fol-

PANAMA MAY JUSTLY BE PROUD OF THE PATIO IN THE PRESIDENT'S PALACE

Pearl-shell columns, palms and other tropical plants, and a central fountain, about which stalk stately white egrets, make this spot one of sheer delight. The building from the exterior is not impressive.

lowed a narrowing ribbon of green in the immense waste. We had reached the coastal range, down to 5,000 feet, with clouds sweeping up from the sea like smoke from a forest fire. We dived into them, flying blind; 4,000 feet, and they were breaking below; 3,800, pilot peering right and left and a rocky tongue of land between two bottomless canyons sticking

across our nose not more than 200 feet below. We cleared it, seemingly by inches, headed toward what looked like a solid wall.

He swerved and dropped, so fast that it was 3,000 feet before I landed on my seat again, and we were in another narrow canyon, sides not far from the tips of the wings, clouds right above and a

AFTER THE RIGORS OF ANDEAN FLIGHT, THE AUTHOR ENJOYS A PIPE AT DAVID

The third city of Panama, situated in a luxuriant valley near Chiriqui Volcano, is a delightful place to rest. In the picture, left to right, are: one of the mechanics for the airline company, Junius B. Wood, the author; Patrick J. Hurley, then Assistant and now Secretary of War; Lieut. Robert B. Williams, of Texas, and Lieut. James Bailey, of Alabama.

little stream far below, flowing toward the ocean. He throttled down and banked, as the plane rocked around a hairpin turn and down to 2,000 feet. Another thousand feet and the sun showed in a dull haze, then broke through, and we were crossing a dry plain; skimmed the ocean and came down at Cananá.

"Good while it lasted," said the pilot, but nobody asked for more.

The little green valley and town were left behind and for an hour we flew over the ocean under a low ceiling of clouds, with thousands of sea lions and birds on the rocks, and once a splashing speck of rowboat below and the barren, rocky shore on our right.

#### OVER THE IRRIGATED COTTON LAND OF PERU

The land came out to meet us, and we were over a great, ghastly plain of wind-swept rocks, shifting sands, and half obliterated wagon tracks. We saw two trucks, white with dust, crawling along.

Across Yauca River valley, a fringe of green in the desert, and another stretch of plain started, just as desolate, but with a new road and traffic moving straight across to the mountains in the east. It ended with Ica River, a fertile valley where the Field Museum of Natural History has been exploring. Irrigated basins became more numerous, for we were reaching the cotton land of Peru.

The ocean jugged in and we came out over Pisco, a novel picture from the air, hexagon in shape, without straggling suburbs, a square plaza in the center and a long tree-lined boulevard stretching to the harbor, which is a thicker straight line along the shore—a Greek cross flat on the earth.

Little towns and a highway strung along the rainless coast, as we flew straight north over the sea.

Chincha Alta sat back, with half a dozen factories. From the little islands of the same name offshore, still white and covered with birds, enough guano has

#### GOLD ENCRUSTS THE ALTAR AND PULPIT OF SAN JOSÉ, PANAMA

Disguised by a coating of white paint, this precious shrine was passed by as worthless by Morgan's buccaneers when they ravaged Old Panama. The unpretentious little church which then housed it was the only one in the city to survive the fires set by the raiders. Later the famous relic was removed to a new but equally obscure and plain structure, where it stands to-day seldom seen by the casual traveler.

been taken to pay the national debt of Peru; Cañete and a river and a row of red adobe houses against the background of green; Asia and the river valley where the country's first irrigation works were started by an American engineer; the big three-story hacienda where the butlers are bred for Lima's bull ring; then Chilca in the distance and more farms of cotton and sugar.

#### A WELCOME TO HISTORIC LIMA

A hill with what looked like adobe houses was pointed out as Inca ruins.\* Callao and the new harbor were off to the left; Fort Real Felipe, where the Spaniards held out for 18 months against the colonists and now restored as a park; Frontón Island, where political and other prisoners who do not have their fare to Europe bask in the sun, and we were over historic Lima—new, broad, straight boulevards and parks and old walls of stone which have withstood the centuries. The motor throttled down and we came to rest on Las Palmas Field (see pages 291-293).

"Rather rough, wasn't it?" the American consul general mused as we stretched our legs while waiting for an automobile to take us into the city.

"About so-so," I agreed, for rough rides by now had become a daily routine.

"Anyway, you've a cut on your forehead," he insisted.

"That's so," as I rubbed it. "Must have gotten it when we took the bumps coming down from Arequipa."

Airplane as well as automobile tops have ribs which crack unwary skulls with every good bump. Riding in an airplane recalls learning to dive. The swimmer teeters on the end of the springboard, as all his experience warns him that his brains will be dashed out below. The first dive wipes out years of intuition, and after that the nervousness is gone. Instinct tells him that anything heavier than air surely will fall. The first flight changes all that—it doesn't—and after that flying seems quite natural.

A week later, over Florida and in an open plane, where talking was impossible, the pilot behind me would shake the plane

as a cat does a mouse, whenever he wanted to attract my attention to pass up a note. A rough passage in the air was no more noticed than, and little different from, a storm at sea.

While we crossed the Argentine pampas and I was soundly sleeping, the plane made a sudden half loop and I awoke, lifted from my seat. Only a few feet below a bull was charging across the field, dignity thrown to the winds, head down and tail as straight as a flagpole. The herd was stampeding in all directions. The plane had come down through the clouds, made a playful dive, and now was going up again.

"That old bull saw the biggest bird he had ever dreamed of swooping down at him out of the clouds," the mechanic laughed. "For a minute he stood with all four feet braced apart, ready to charge as instinct told him. Then he changed his mind, swung in a flash, and tore across the field before the giant hawk could catch him."

Using a 7-ton airplane to play tag with a bull may seem elephantine sport, but it shows how the big planes are responsive to the slightest control and how easily they can be handled. The stunt itself gives confidence.

The haze was breaking over the city when we got away to a late start the next morning, past the sumptuous Country Club, and a couple of minutes later we were out over the Pacific, passing Ancón. The pretty little village, with its green trees, stood out on a sandy plain against a background of black hills. White hangars of the Peruvian Navy were along the shore and three biplanes were on the water, another taking off with a wake of spray. Half the northern coast of Peru would be left behind before our next stop.

A four-master was off Chancay and irrigated fields behind, their adobe fences meandering in strange curves. Next, a wrecked steel hull, half buried in the sand, and, farther out, thousands of birds swimming on the ocean in fishing formation, looking like the bobbing floats of a Nantucket fleet.

It was market day in Huacho, bright with gay-colored dresses of women, loaded burros in the streets, and roofs of the same brown adobe as the walls.

#### AIR TRAVEL IS POPULAR IN THE CANAL ZONE

Passengers are embarking in one of the large airliners at Cristóbal, the Atlantic port of the Republic of Panama, adjoining the American city of Colón, eastern gateway to the canal.

Two piers converged in the Bay of Supe, a lighthouse on the rocky point, sugar mills and fields beyond. Another sugar mill at Paramonga, gray houses and an old fort on a hill (see page 299).

The plane bumped through patches of fog, close to a sheer rocky cliff, breakers at its feet, as uninviting for landing as the side of a 20-story building.

#### ROAD-BUILDING IN PERU IS A STUPENDOUS TASK

We cut back of a granite point, a spidery road around its side, to Samanco, and the sun broke through the clouds. Road-building is one of Peru's many improvement projects, and it is a stupendous task. One stretches along the coast, sometimes on the plateau, again blasting or tunneling through rock or skirting the edges of cliffs on floors of concrete.

Santa, with more salt-drying kilns and in a fertile river valley, dropped behind and another problem of road-building was below. Telegraph poles, fallen or awry, half-buried lines of straight white, what

was once a highway, stretched across the big plain for miles, mute signs of man's losing fight against the drifting sand.

Two schooners, a five-master and a four-master, were a picture off Salaverry's long railroad pier. Five minutes later we were crossing an irrigated plain, keeping inland from the radio aërials and coming down on Trujillo's field, marked by a line of brush. Pizarro founded the city in 1535. If he had seen the mail plane drop out of the clouds to-day, he might have been more surprised than the Incas were when he rode in on a horse.

#### THE FORGOTTEN PASSENGER

Half an hour later we were gliding over Pacasmayo, the pilot digging out a sack of mail with one hand to drop without stopping. Pacasmayo was to get a one-way mail service, when suddenly, above the hum of the motor, insistent shouts were heard: "I must get off! I must get off!" This was the last remaining passenger's station and he had been forgotten. We bumped over the ground

Hides of these creatures find ready sale among manufacturers of leather goods, and great numbers of them are exported to the United States.

to a stop, he jumped nimbly through the door, and we in the air again, motor never stopping.

Another stretch of sandy plain without a sign of life; then over Éten, port for a hinterland rich in coffee and sugar; next, prosperous Chiclayo, and down at Pimentel, its watering place, a few miles beyond.

"Made 140 miles in that hour," said the pilot, as we flew over the same unvarying plain to Piura. Another half hour to Talara, and the derrick-sprinkled oil fields of Peru were in sight.

We landed on a field on a bluff. The versatile pilot took the wheel of an ancient automobile, and 10 minutes later we had bumped over a rough road and through Talara, smelling and stained with oil, to where an amphibian plane stood on the beach. While he warmed it up, a pleasant-faced young official accosted me. He wanted to see my passport, producing a rubber stamp which he felt an urge to use. No other request for a passport was made on the long trip. It was in my suitcase and I protested against getting it.

"But I'm not a dangerous character," I explained in unsafe Spanish, for an idea had come. Searching through a Lima newspaper, I pointed to a paragraph in the official bulletin of that day, recording that President Augusto B. Leguía had given me an audience after my arrival the previous afternoon. He read it carefully.

"Very good," he commented, handing it back with a courteous bow.

"Stamp the newspaper," I suggested.

"No; pleasant voyage," he laughed, and the plane was moving into the water.

#### ROUNDING THE WESTERNMOST POINT OF SOUTH AMERICA

It scurried around the bay like a duck reluctant to leave. Then up, a sharp turn, and we were over the ocean, rounding the most westerly point of the continent. Oil tipples became few, the barren plateau disappeared, and trees came down to meet the shore.

Low marshes showed off to the left; hard to tell where ocean ended and the island-sprinkled Guayas River started.

SAN JUAN DEL SUR WAS TO HAVE BEEN THE WESTERN EXIT OF A NICARAGUAN CANAL.

The beach of this small town, not far from the border of Costa Rica, presents a perfect curve to the eye of the airman.

*Photograph by Jacob Gayer*

LAKE NICARAGUA MAY ONE DAY BE A PART OF A SECOND ISTHMIAN CANAL.

Navigable throughout for large vessels, this inland fresh-water sea, 100 miles long and 45 miles wide, is connected with the Atlantic Ocean by the San Juan River and with Lake Managua by the Tipitapa River. The system is a waterway of great potential importance. At present it is used for carrying cattle and produce to east-coast markets. It is the largest body of fresh water between the Great Lakes and Lake Titicaca.

*Photograph by Jacob Gayer*

THE ROAD TO GRANADA LEADS THROUGH A FOREST WONDERLAND

With a climate tempered by the proximity of the Atlantic and Pacific oceans and by two mountain ranges, Nicaragua has many advantages over most tropical countries. The region about the isthmus separating Lakes Managua and Nicaragua is little above sea level and is covered with dense growth; yet, because of the porous tufa underlying the top soil, it is by no means unhealthy.

Official photograph, United States Marine Corps

#### CLOUDS HANG LOW OVER LAKE NICARAGUA

Rainfall in Nicaragua is more or less heavy during every month in the year and flying often means braving tropical downpours (see text, page 324). The prevailing winds are from the northeast and come laden with moisture from the Atlantic.

An ocean steamer coming down the river, long, narrow dugout canoes looking like toothpicks, sailboats, thatch-roofed houses on stilts, naked children playing at their doors, palms and bananas around the clearings—the Tropics had been reached.

Thatched roofs changed to tin; then came a couple of sawmills, brick houses with the secrets of inner courtyards bared, and we were over the plaza. Circling down around the latticed radio tower on a rock in the center of the river, we splashed to a stop in front of the imposing city hall of Guayaquil.

Ecuadorian hospitality was boundless and the evening was delightfully cool; but one thing they could not produce—a sight of Chimborazo's snowcapped peak, peer of Fujiyama and Osorno; it was too cloudy (see page 301).

Pablo Sidar, the Mexican good-will flyer, was just taking off on the last leg of his long trip around South America when we reached El Cóndor Field, where another amphibian was waiting the next morning. He did not complete it that

day. The rain was too much, and ours was the only plane of three which started for Buenaventura that got through before night. Flickers of sunshine tipped our wings and were gone, and the showers, which increased to a steady downpour before afternoon, started as soon as we were over the ocean.

We skimmed close to the water between a rocky islet and a point, on across the bay and around Cape San Lorenzo, curving in over Manta, where women in bright-colored dresses on the steps of its old stone church suggested a fiesta or wedding. The plane staggered on and met sunshine again as Jama River showed in a thin white line on the hills.

#### CROSSING THE EQUATOR

"Where's the Equator?" I asked, for it was somewhere hereabout. The pilot, a former Navy officer, looked at his charts and figured.

"We'll be there at 9:33," he promised.

"Crossing the big line now," a note came back a few minutes later. A low

AN UNWILLING PASSENGER FROM CHONTALES PROVINCE STARTS FOR GRANADA

Nicaragua has great possibilities as a stock-raising country, and steps are being taken to replace the half-wild cattle that roam the ranges with animals of more marketable quality.

bluff came down to the shore, forest-covered hills and a valley beyond, but not a signpost in sight to mark where seasons and hemispheres change.

We flew by compass, a straight course, sometimes far out to sea and again bumping over land in the fitful storms, inside of Cape San Francisco, with thatched houses and palms in a valley; past Galera Light; more jungle as lonesome as the sea; a curve downward to wave at a town, and then down at Tumaco, an island in the river, for gasoline and the formalities of entering Colombia. Dugout canoes clustered around the raft, but the little city drowzed on shore.

"Any iguana here?" I asked one of the sight-seers.

"Up there," he replied with a broad grin, pursing his lips in memory of that palatable lizard.

ONE OF THE WETTEST CITIES IN SOUTH AMERICA

Showers and sunshine alternated through the afternoon. Swollen brown rivers stained the emerald sea; waves close be-

low, flattened by the rain and dropping behind the flying plane like a mill race—the pilot said they were only 15 feet; black clouds ahead, bucking and quivering into another storm; then a break of sunshine, until finally, down on the river above Buenaventura, Pacific port of Colombia and one of the wettest cities in South America (see page 304). The amphibian inhabitants scorn either umbrellas or waterproofs; rain and sunshine are alike to them, and the local *Pluvius* registered 362 inches last year.

Clouds showed light below the peaks in the east when we took off the next morning; passed Chirambira lighthouse half an hour later, and then straight across 400 miles of water toward Panama City, most of the time driving blind through bursts of tropical deluge.

We came out in the sunshine, with Las Perlas Islands close on our right, a fleeting glimpse of the United States Navy submarine squadron from Coco Solo maneuvering under the water; then pineapple-covered Taboga, where the Spaniards came after Sir Henry Morgan

FROM HAVANA TO KEY WEST IS NOW A 70-MINUTE FLIGHT.

Trimotored airliners have cut the time between the Cuban capital and the United States by more than six hours. On the point of land which the plane has just passed stands historic Morro Castle.

Photograph from Pan-American Airways by Richard B. Hoyt.

**HISTORIC NASSAU HARBOR IS ONLY A SHORT FLIGHT EAST OF MIAMI (SEE ILLUSTRATION, PAGE 322)**

The weekly air-mail service now in operation down the west coast of South America to the Uruguayan and Argentine capitals cuts from four days to a week from the ordinary ocean-traveling time of a letter to those points from New York or Washington. A piece of mail dispatched from either city on Thursday evening will reach Buenos Aires or Montevideo a week from the following Monday, just eleven days later. An even greater saving of time is effected between the United States and many Central American cities. For example, twelve days are required for a letter to travel by steamer from New York to Managua, Nicaragua, whereas the air mail transports it in three.

Photograph from Pan-American Airways

#### AIR PASSENGERS ARRIVING AT MIAMI

The Florida city is linked to Havana and Nassau by regular passenger airlines. A daily air-mail service is also maintained between the south Florida metropolis and the capital city of Cuba, negotiating the 261 intervening miles in two and a quarter hours.

sacked Old Panama; then ahead, ships passing through a black curtain of rain over the entrance to the canal.

Big-gun pits at the bases and aircraft guns stood out on the tops of the three banglelike islands at the end of the long causeway. We entered the canal at Balboa, passing Panama City and Ancón, for the Army's navigation rules for ships of the air are the same as for those of the sea.

Toy ships and locks on a ribbon of water stretched below. It curved through Culebra Cut, the only break in the Continental Divide; past the Chagres, vomiting brown from the hills, and then Gatun Lake, with ghostly branches of dead forests sticking above its surface and in the center the United States Government's haven for wild animals, on Barro Colorado Island.\* Gamboa penitentiary, the

\* See, also, in the NATIONAL GEOGRAPHIC MAGAZINE, "Who Treads Our Trails? A Camera Trapper Describes His Experiences on an Island in the Canal Zone," by Frank M. Chapman, September, 1927.

model infantry barracks of Fort Davis, the golf course on the shore and dozens of dugout *cayucos*, piled high with bananas, converged across the surface toward the railroad and a quick trip to the United States.

#### FROM SPRING TO FALL IN SIX DAYS

Three of the Gatun spillway gates were open, the tropical rainy season was in full swing, and it started again as we came down on France Field at Cristóbal. We left the Atlantic side of South America in a springtime thunderstorm and six days later were back on the Atlantic side of North America in an autumn cloud-burst!

The next day was the same and the big trimotored plane went down the Pacific side, back and forth across the narrow isthmus of continent five times, finally alighting on the Panama Government field at Panama City, only 50 miles farther along the course, after a vain attempt to get through the rain.

Sunday was better, and close to 1,200 miles were covered in more than 10 hours'

#### MODERN AIRLINERS OFFER CLUB-CAR SERVICE

Passengers on this large plane, which is operated between Havana and Miami, have only to call the steward when they wish refreshments. Luxuriously appointed, the cabin affords comfortable accommodations for eight persons.

flying before the long day was finished—two days' flight in one and again on schedule. The plane headed west, along the southern coast of Panama, windows open, pilots in shirt sleeves and bare-headed, much different from Sunday a week ago.

Another plane flashed by, mail going south, just as on that previous Sunday. Two Army planes, with Patrick J. Hurlley, then Assistant and now Secretary of War, escorted us for 225 miles, to David, over the panorama of cultivated valleys and rivers, wooded hills and waterfalls. Managua, Nicaragua, was twice as far, and we went on.

#### INTO NICARAGUA

Costa Rica unrolled below an almost continuous forest, flitting red specks of macaws above the green carpet, always flying in pairs; gashes of red loam on the tree-covered hills; fields of sugar on the plain, and off in the haze, to the left, a white line, where the Pacific broke on the sand. Puntarenas, vastly different from

its namesake in the frigid south, stuck into the sea on a spit of sand, and a sack of mail was dropped without stopping. Liberia was off to the left, and then Lake Nicaragua, with Solentiname Islands, black blotches on its smooth surface, and San Juan River a distant brown line.

Our course was straight across the lake for 70 miles, chasing a moving rainbow just ahead of the whirling propellers. The ridge between lake and ocean narrowed at Salinas Bay, where the United States may some day cut another canal across the continent (see pp. 313-317).

Ometepe and Madera were two squat volcanoes on an island in Lake Nicaragua, and a few minutes later we were at Granada, on shore. It is the terminal of a railroad and has a big church with a stretch of sidewalk varying the muddy roads. A canoe paddling near one of the red-tiled island homes was the only sign of life on the broad lake. It may not be as inviting as it appears from above, for it is credited with the only fresh-water sharks in the world.

Photograph from Pan-American Airways

#### THE GIANT BIRD MAKES READY TO LEAVE MIAMI AIRPORT

Had the author wished, he might have boarded an outgoing airliner upon his arrival in Florida and started back over the long route he had just covered. There is regular service between the United States and Montevideo.

We dropped down in the rain outside of Managua, on Lake Managua's shores. Twenty minutes later, in another plane, we were headed again toward the Caribbean and the Atlantic, driving into a cloud-burst, drops pelting the windshield like bullets and the fish-skin coat of the pilot a bulging balloon in the gale.

An automatic and a belt of cartridges were strapped around his waist and a rifle leaned against the back of his seat. A forced landing might be made and they would help to protect lives as well as mail, for Nicaragua is not too safe along its borders.

A radio operator, key clamped to his leg and earpieces on his head, was clicking off requests for weather reports, more important than bandits. Then the sun came out for a minute.

#### A VOLCANO BELT FROM THE AIR

We were in the volcano belt, some still active and others long sleeping with little lakes in their craters, diamonds in a setting of green. On clear days many of

them can be seen stretching toward Salvador, including Momotombo, Las Pilas, El Viejo, and, far in the distance, Coseguina, guardian of the Gulf of Fonseca. The cordillera was ahead, hidden in the clouds, and the nose of the plane turned suddenly upward.

A gorgeous red, blue, and yellow macaw, which had been standing on one foot and trying to pick the labels off a suitcase, skidded with an indignant squawk. The pilot, who was chaperoning it to his son in Miami, had introduced it as Billy and very intelligent. On every occasion Billy shrieked "Ten o'clock!" in a raucous croak. The pilot explained that was breakfast time. It meant nothing in a plane over Honduras.

The rain had started again and we were circling for altitude: 4,000 feet, and the white clouds stretched below with more ahead and above; a blind climb through them might mean a crash into the mountains: 6,000 feet, and jagged mountain tops showed through fuzzy white, as we circled out again: 7,000, and the sun

tipped the wings; 9,000, a gap of blue sky above the mountains ahead, and then 9,500, and we were over the ridge, mountains crossed for the last time, the Pacific left behind.

Tegucigalpa, capital of Honduras, lay behind, under the clouds, and we were in the sunshine, flying lower, over a picture valley of fields and forests, winding roads, brown villages, and little white cities.

The pilot handed back a NATIONAL GEOGRAPHIC MAGAZINE map, his navigation chart. It located La Paz; two white churches on a plaza and roads winding into the bosque. Comayagua was ahead, a big white church and water tower on its plaza and straight lines of low white houses along its wet, red streets.

Lake Yojoa lay in a cushion of green, soft and alluring, far different from the harsh, barren southern coast, but here a crash meant certain death, while there a landing was possible—the siren lure of the Tropics.

The jungle changed to bananas, millions of trees in regular-shaped fields, the pilot said 30,000 acres, and more being planted, the plantation of an American banana company; a town called Progreso, a railroad running to the near-by coast, and rain-blackened houses of workers in clusters along the tracks.

Tela, midway between Ceiba and the Guatemala border, is too small to be on many maps, and the entire population, starched skirts limp in the rain, must have been out for the Sunday races when we came down outside the track. Half a dozen faces were white, all were happy, but darkness was falling before we could get away.

#### OVER THE CARIBBEAN

The course was straight over the Caribbean to Belize, British Honduras, a bird winging homeward at night, racing with the setting sun. It hung for a moment, a red ball tinting the sea into a blazing plain; another minute and the skies were painted red behind the coast; then shades of water, land, and clouds merged into one deep black, and the quick tropical night had come. A tiny light was in the radio coop, but the pilot shouted to turn that out.

A glow showed in the darkness ahead,

Belize rising to a blotch of white, as we sped over the curving horizon. It separated into a myriad of lights, a searchlight playing on the little landing harbor. That snapped out as we came down with a splash, taxied over the water and up on to the ramp.

A minute for beer at the British Club, then supper, and early to bed at the aviation company's quarters. It had been a hard day.

Another day was breaking as we sped north off the coast of Yucatan, dipping a reply to the lighthouse tender's four youngsters waving a greeting on Point Herrero; then over prim little San Miguel Cozumel, on Cozumel Island, and down on the seaward side.

While the keeper filled the amphibian with gasoline and oil, we disposed of his beans, "corned willie," and coffee. He has nothing to do but fish until another plane tarries for a few minutes to-morrow.

An hour and a half later the Strait of Yucatan had been crossed, Cape San Antonio, westernmost tip of Cuba, was off to the right, and we were passing Point Cajón, tip of the island boot.

We skimmed along the northern coast, over the mouths of Bahia Honda and Cabañas Bay, ships in the harbors, little towns and winding roads; St. Lucia, with the name painted on a roof, disclosing its identity; fields of sugar and tobacco, trees on the hillsides, smoke from tall stacks and from burning fields, and then, two hours later, a golf green, towering hotels and clubs, and we were over Havana and coming down on a flag-decked field.

The strait sparkled in the sun through the hour we crossed to the Florida Keys. The ferry passed midway. We skirted the railroad, over busy little towns and pleasant bungalows, empty checkerboards of subdivisions with unused pavements and posts without lights, squares of orchards and acres of water-covered plains. Monday, 3:55 p. m., we were splashing down on the field at Miami. "Sparks" climbed stiffly out of his coop.

"Florida's all wet," he opined, and I included the rest of the world.

"Any liquor in your suitcase?" the customs man asked. Florida is also dry.

"Not at \$1 a pound excess baggage," I explained.

POETS HAVE SUNG OF THE GRACE AND BEAUTY OF THE STATELY SWAN

Its snow-white plumage, "arched neck," and "oary feet" make it an ornamental bird with few rivals in public and private parks. Costly, unprolific, few are bred in the United States, English importations largely maintaining the supply. In early England the swan was regarded as a "bird royal" and only persons of high station were permitted by the Crown to own it.

Photographs by Lynwood M. Chase

"WATCH MOTHER CLOSELY AND DO AS SHE DOES"

Baby swans are adept pupils. They must be, for a large part of their food is obtained from under the water. In early England the young, or cygnets, were highly esteemed for the table.

# FOWLS OF FOREST AND STREAM TAMED BY MAN

BY MORLEY A. JULL, PH. D.

*Senior Poultry Husbandman, Bureau of Animal Industry, United States Department of Agriculture*

*AUTHOR OF "RACES OF DOMESTIC FOWL" IN THE NATIONAL GEOGRAPHIC MAGAZINE*

MAN'S interest in the wild bird life of the forest, jungle, lake, and river is made manifest by the large number of wild species he has domesticated. His captives have yielded flesh and feathers and in some cases eggs, and the more beautiful ones, with their graceful forms or wonderful combination of plumage colors, have long been a source of esthetic pleasure.

Probably the earliest attempts at domestication were of the geese and the ducks, although the jungle fowl was reclaimed in very early times, relatively speaking. The turkey, peafowl, and guinea fowl have been recent additions to the list. The swan has been tamed most recently of all.

Of the six groups of birds discussed in this article, there are three land birds—the turkey, peafowl, and guinea fowl—and three waterfowl—duck, goose, and swan.

## BILLS AND BODIES DISTINGUISH LAND FROM WATERFOWL

There is a marked difference between land birds and waterfowl. Land birds have beaks for picking up particles of food from the land, while waterfowl have bills, the upper and lower mandibles of which are equipped with toothlike projections alternating and fitting within each other along the edges of the mandibles. This arrangement enables waterfowl to strain water from the food which is frequently obtained under water.

Land birds have claws adapted for scratching purposes, whereas waterfowl have webbed feet and "boat-shaped" bodies adapted for swimming.

The numerous races of chicken that have descended from the jungle fowl have been described in a previous article in the NATIONAL GEOGRAPHIC MAGAZINE.\*

Domestic fowl, peafowl, and guinea fowl are more or less closely related, a fact

borne out by the results obtained in crossing the domestic fowl with the peafowl, the peafowl with the guinea fowl, and the domestic fowl with the guinea fowl. All hybrids obtained from these various crossings, however, are sterile. In so far as known, the turkey has never been successfully crossed with any of the others.

The swans are easily distinguished from the ducks and geese by their long, slender necks and by the space between the eye and bill, which is bare of feathers. It is interesting to note, however, that most naturalists have failed to mention the fact that the Muscovy duck also has the space between the eye and bill bare of feathers.

In ducks the first plumage of the young very closely resembles the adult female in those cases where the adult male and female differ in color, whereas in geese the young do not differ materially in plumage color from that of the adult male and female, which are alike in color for each species.

In ducks the males molt their small feathers twice in twelve months, whereas geese molt but once in the same time. The males in all ducks, except the Muscovy, have two distinctly curved sex feathers at the base of the tail, a character absent in all geese. The voices of ducks and geese differ materially.

Geese and swans are inclined to be monogamous in their sexual relations, while ducks are polygamous in the extreme.

Crosses have been reported between the domestic goose and the Muscovy duck, the Egyptian goose and the wild duck, and between the swan and the goose. By some naturalists the Muscovy duck is regarded as a hybrid between a species of wild duck and a species of wild goose.

## THE PEAFOWL

*(For illustration, see Color Plate 1)*

The most gorgeous of all the feathered tribe of forest and jungle is the peafowl, a close relative of the pheasants and the jungle fowl.

\* See "Races of Domestic Fowl," by M. A. Jull, in the NATIONAL GEOGRAPHIC MAGAZINE for April, 1927.

The peafowl is at home in the dry lower regions of India, Burma, Siam, Java, Ceylon, and the Malay Peninsula. It has not migrated extensively of its own accord, but it has been taken to many parts of the world as a bird of ornament, and thrives in many climes and under a variety of conditions.

The wild peafowl has a varied diet, including fruit, grain, berries, insects, and sprouting buds of many bushes, and it feeds for the most part in open spaces. Snakes are reported to be especially appetizing to it, and it is supposed to be a deadly enemy of reptiles in general.

By night the birds roost securely on the high branches of isolated trees. The cock may roost alone or with his harem, which may number up to five females.

There are two species, the Indian peafowl, *Pavo cristatus*, and the Green peafowl, *Pavo muticus*, the former being the more widely distributed. Seldom is the Green peafowl encountered outside of its native habitat. There is a White peafowl, very beautiful indeed against a green background, but this variety is probably a "sport" from the Indian species.

The sexes differ considerably in plumage, the female Indian peafowl being more somberly colored, in keeping with almost all species of wild fowl.

The peafowl has been a resident of its native haunts for thousands of years, but the Biblical references in 1 Kings, x, 22, and 11 Chronicles, ix, 21, constitute perhaps the first mention of the peacock outside of India. It has been familiar to mankind outside the Orient since the Phoenicians brought it from India to the Pharaohs of Egypt.

Aristotle states that Alexander introduced the peafowl into Greece. In the fourteenth century it was to be found in France, Germany, and England.

#### THE PEACOCK A SYMBOL OF IMMORTALITY

The early Christians adopted the peafowl as a symbol of immortality, and in France and elsewhere, in the Middle Ages, the "Vow of the Peacock" was pronounced at table with the hand held extended over a peacock roasted in his feathers. Thus did each knight proclaim the formula: "I vow to God, to the Virgin Saint, to the Ladies, and to the Peacock," to carry out a certain objective.

In countries where the peafowl was not regarded as sacred, it was often served to guests. The Roman Emperor Vitellius is supposed to have regaled his friends with platters of tongues and brains of the bird.

In the Middle Ages roasted peacock was served at banquets given by English barons, this custom serving as evidence of their wealth. On the other hand, Mohammedans in the Malay States regard the peafowl as unclean, since it is supposed to have "guided the serpent to the Tree of Knowledge in the Garden of Eden," and consequently is living under an eternal curse.

The plumes of peacocks were formerly employed as ornaments on helmets, and in China "eyed feathers have long been used as an order granted as reward of merit to mandarins." Marie Antoinette liked peacock plumes for ornamentation. In different parts of the world they are used for decorating fans and hand screens. India exports considerable numbers of the plumes.

#### DUCKS

The breeding of ducks has been an important enterprise in many countries for several centuries. For the most part, they are raised exclusively for their meat, but in recent years a certain amount of interest has centered on duck-egg production.

That duck meat has been esteemed by man since the dawn of the human race is attested by the discovery of duck bones among the remains of troglodytes of the Stone Age. Drawings on Egyptian monuments dating from 3000 B. C. to 1000 B. C. represent ducks being caught in nets and being killed by boomerangs.

The best evidence available points to the conclusion that, with the exception of the Muscovy, the wild Mallard duck, *Anas boschas*, is the ancestor of all domestic breeds.\*

Undoubtedly the Mallard was domesticated at a very early time, for the Roman writer Varro (110-27 B. C.) describes the procedure to be followed in keeping ducks confined within an inclosure. For many centuries the Chinese have had an extensive duck industry, and

## INDIAN AND WHITE PEAFOWLS

The peafowl is one of the most gloriously colored birds in all feathered creation. Of the two wild species, the Indian and the Green, the former (the peacock and peahen shown in the foreground) is the one usually seen in captivity. The White variety probably came from matings of domesticated colored birds, since there appear to be no wild Whites. The beauty of any landscape setting is greatly enhanced by the presence of a proud peacock.

Painting from Life by Hashime Murayama.

WHITE RUNNER, FAWN AND WHITE RUNNER, COLORED AND WHITE MUSCOVY DUCKS

The White and the Fawn and White Runners (three, upper left) are two of three varieties of the "egg-laying" domestic breeds of ducks. The Muscovy (four, lower right) is different from all other breeds in that the female has no "quack" and both sexes are inclined to roost in trees. The Muscovy drake has no curled sex feathers at the base of the tail, a character common to all other drakes.

© National Geographic Society

BLUE SWEDISH AND AYLESBURY DUCKS

Painting from Life by Hashime Murayama

The Blue Swedish duck (three, lower left) apparently owes its origin to German ancestry. The Aylesbury (three, upper right) is the most popular meat duck in England.

Painting from Life by Hachime Murayama

CRESTED WHITE AND ROUEN DUCKS

The Crested White duck is a novelty, the crest being the most distinguishing feature of the variety. The Rouen (male, center, and two females) is supposed to be descended more or less directly from the wild mallard duck and has the same general color pattern.

© National Geographic Society

BLACK EAST INDIA AND PEKIN DUCKS

Painting from Life by Hashime Murayama

The Black East India duck bears a close resemblance in miniature to the Cayuga (see Color Plate VI). The Black East India is bred for its small size. The creamy-white Pekin is a standard variety in America and is bred extensively for market purposes.

© National Geographic Society

CAYUGA AND KHAKI CAMPBELL DUCKS

Painting from Life by Hashime Murayama

The Cayuga (upper left) is the black breed of the domesticated ducks. The Khaki Campbell (lower right) is of English origin and has been bred extensively for egg production. It is somewhat smaller than the Cayuga.

Painting from Life by Hashime Murayama

**BUFF AND GRAY CALL DUCKS**

The Buff variety (two, lower left) is primarily a novelty and is bred for fancy only, although in America it is recognized as a standard breed. The Gray Call variety is somewhat similar in color to the mallard duck, and also is bred for fancy only. The curled tail feathers in both species identify the males.

Painting from life by Hasekino Murayama

SLATE AND BOURBON RED TURKEYS

The origin of the Slate variety (upper two) has not been established, but it may have come from crosses between the Black and the White (see Color Plates IX and XI). The Bourbon Red, formerly called the Buff, was probably produced from crossings between the Bronze (see Color Plate X) and the White. All turkeys came originally from North America.

throughout Europe new domestic breeds have been developed from time to time.

Probably duck raising on a commercial scale has been practiced for a longer time in China than in any other country.

Many eggs are incubated in wickerwork baskets; others are incubated in primitive, barrellike structures. Heat is sometimes provided by burning charcoal and sometimes the "incubators" are placed in compost heaps.

The young ducks are grown on land with access to the water or they are kept in large duck boats, which transport the birds up and down the rivers in search of new feeding grounds. Canton is an important duck center and two types are recognized commercially in this section, the "Li" and the "Loo" ducks, the former being darker in color, larger and coarser in texture. Some of the duck farms carry upward of 3,000 ducks on as small an area as one-third of an acre.

Ducks are raised extensively in many parts of Europe, especially in Belgium and the Netherlands, where the farms are located on the sides of watercourses communicating with canals.

Remarkable progress has been achieved in breeding heavy-laying strains of ducks in England, Australia, and New Zealand. In 1920-21 a duck in an officially conducted egg-laying contest in New Zealand made the phenomenal record of 363 eggs in 365 days.

In the United States ducks are raised in all parts of the country, especially in the vicinity of the larger eastern cities.

Incubators hatch millions of eggs, and on some of the farms the operations are conducted on such a large scale that trucks on tracks are used to convey the feed to the ducks. A special market has been developed for "green" ducks, those from eight to twelve weeks old. Duck feathers, especially from the Pekin breed, are used extensively in making cushions, pillows, and mattresses.

#### DELICACIES FROM DUCK EGGS

In the Dutch bakeries duck eggs are used to a large extent in the manufacture of an important article for the breakfast of Netherlanders. This is the *beschuit*, or *zwieback*, without which "the average Hollander cannot well begin his day."

The Filipino prefers his duck eggs served as *balut*. The egg is incubated, by various processes characteristic of the country, until the eighteenth or nineteenth day, and boiled. It is then considered delectable.

Most people like their eggs fresh—in fact, the fresher the better—but in this world of paradoxes it is interesting to note that the Chinese coat their duck eggs with a specially compounded preparation, after which their age is a criterion of their delicacy.

#### THE RUNNER

(For illustration, see Color Plate II)

A duck of rather small size, upright in carriage and of relatively little use in the early days, was developed into the Runner breed. Its original prototype was the Penguin duck, said to have been imported into England from Bombay. Just prior to 1894 ducks were exhibited in England as Indian and Canadian Runners, both of which names, however, were misnomers, as they originated across the Channel from England.

In the United States the Runner was recognized as a standard breed in 1898, and now there are three varieties, Fawn and White, White, and Penciled. The body is long and narrow and is carried in a very upright position. The standard weights are: adult drake, 4½ pounds; young drake, 4 pounds; adult duck, 4 pounds; young duck, 3½ pounds.

The Penciled Runner is for the most part fawn in color, with the upper two-thirds of the neck white and the tail in the male dull bronze-green.

#### THE MUSCOVY

(For illustration, see Color Plate II)

The Muscovy duck, *Anas moschata*, differs from all other domestic breeds in that it belongs to a different species, and in Brazil, where it apparently originated, as well as in other parts of South America, it is known as the Pato, or Brazilian duck. It has no "quack" and the drake does not have any curled sex feathers at the base of the tail, a characteristic of all other drakes. Furthermore, the mature drake is considerably larger than the mature duck. Another peculiarity of the Muscovy is the bare skin about the eyes

#### GESE FIGURE IN THE MURAL RELIEFS OF ANCIENT EGYPT

In the sacrificial chamber of the mastaba (a rectangular cut stone tomb) of Ptahhetep at Sakkarā, near Cairo, are reliefs which rank among the highest achievements of ancient Egyptian art. The upper panel shows herdsmen bringing in cattle for inspection; the lower depicts a row of geese, with pigeons below and cranes to the right. Ptahhetep was a prominent man of his day and the author of the "Proverbs of Ptahhetep," the earliest piece of literature known in Egypt.

and at the base of the bill, where the skin projects prominently in the male.

The standard weights are: adult drake, 10 pounds; young drake, 8 pounds; adult duck, 7 pounds; young duck, 6 pounds.

#### THE BLUE SWEDISH

(For illustration, see Color Plate III)

This very attractive duck received the name Blue Swedish from the fact that it came from Pommern (Pomerania), part of which originally belonged to Sweden. It was introduced into England about 1835, and subsequently some of the birds descended from the original stocks were mated with Rouens.

The Blue Swedish was imported into the United States more than 30 years ago and was recognized as a standard breed in 1905.

The standard weights are: adult drake, 8 pounds; young drake, 6½ pounds; adult duck, 7 pounds; young duck, 5½ pounds.

#### THE AYLESBURY

(For illustration, see Color Plate III)

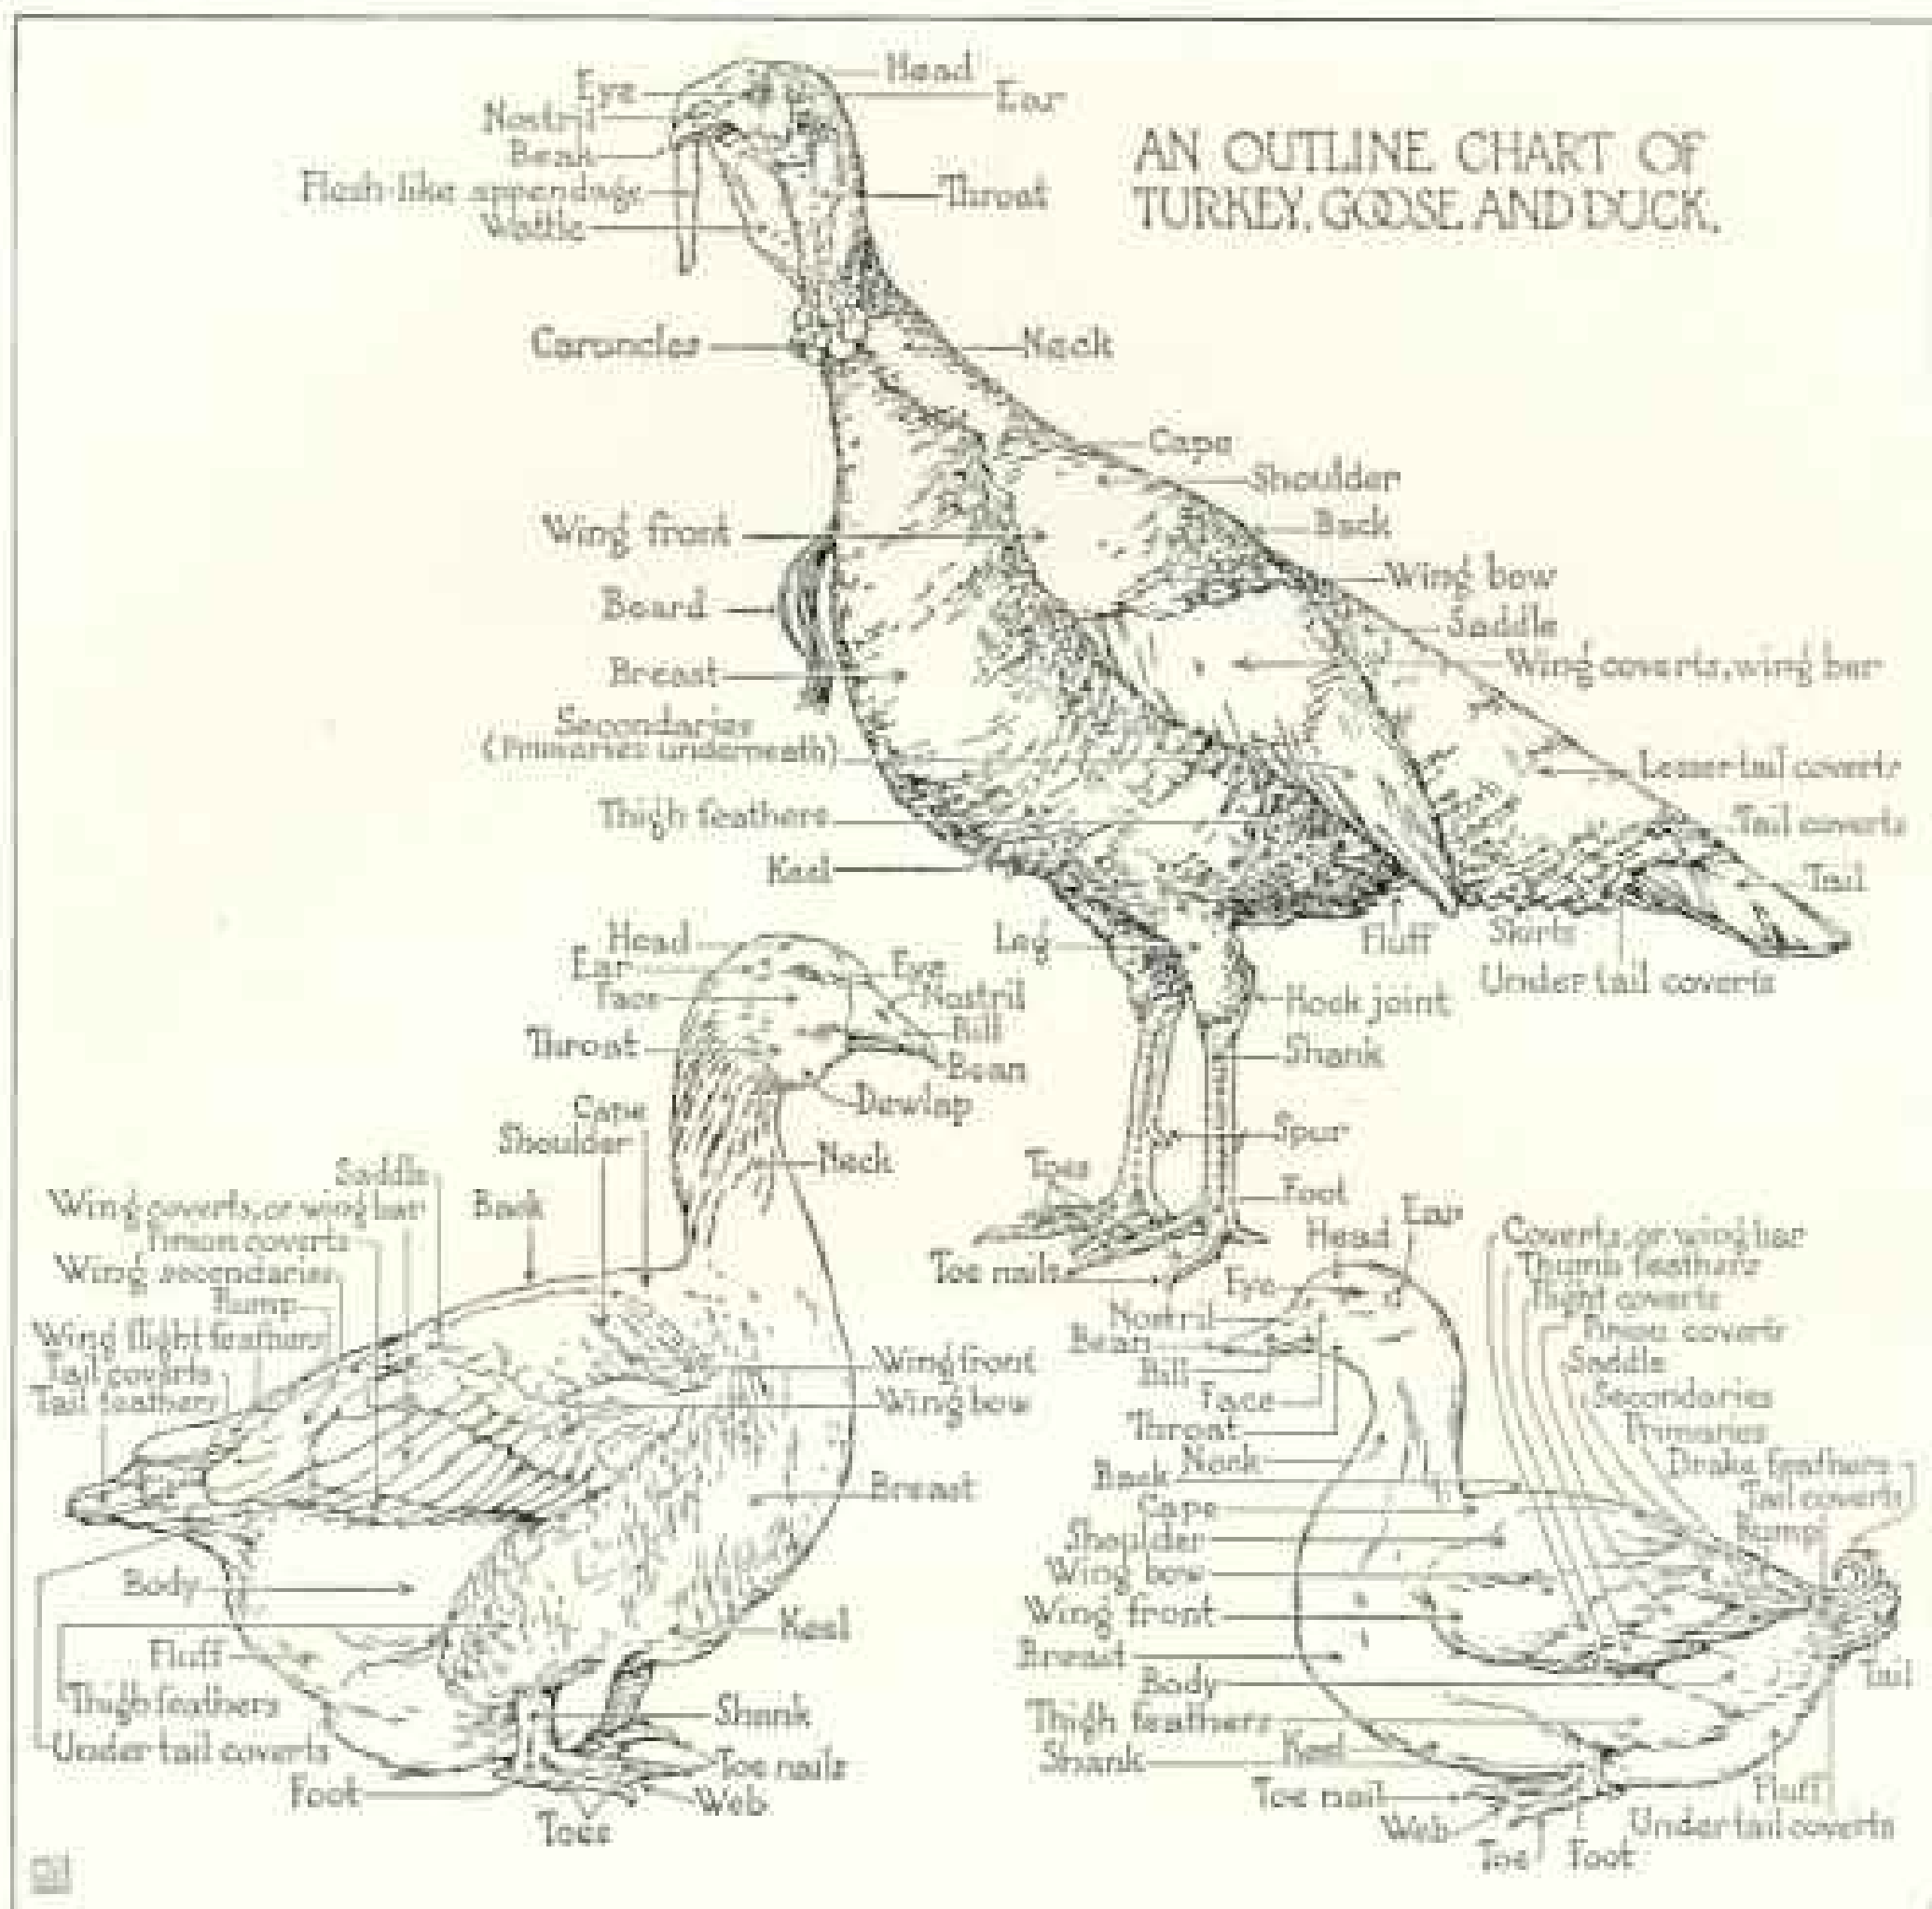

A large white duck, first known as the White English and later as the Aylesbury, was well known in England as early as 1815. It was developed as a large meat-producing breed and was apparently somewhat larger than the present-day Aylesbury in America. It was first shown in the United States in Boston in 1849. Its standard weights are: adult drake, 9 pounds; young drake, 8 pounds; adult duck, 8 pounds; young duck, 7 pounds.

Its heavy weight makes the Aylesbury an excellent market duck, and in England it is still popular, although in the United States it has been almost entirely superseded by the Pekin (see Color Plate V).

#### THE CRESTED WHITE

(For illustration, see Color Plate IV)

The Crested White is simply a white duck with a novel characteristic in the

Drawn by Hashime Murayama

**DIFFERENCES IN THE STRUCTURES OF TURKEYS, GEESSE, AND DUCKS**

For the purposes of this chart, the Bronze turkey, the Toulouse goose, and the Rouen duck were selected as typical of their respective species.

form of a prominently developed crest. There are colored ducks with crests, but in the United States they are not recognized as standard.

The Crested White is kept largely for fancy, although it is a bird of good size.

**THE ROUEN**

*(For illustration, see Color Plate IV)*

For a century a duck derived from the wild Mallard, which it resembles in color, has been known under the name Rouen. It was bred extensively in France for many years, was later improved in England, and now is bred everywhere.

The plumage colors shown in the illustration are of the adult drake and the duck, but the drake assumes practically the same plumage coloration as the female during the summer months after the annual molting. In the fall of the year the drakes resume their normal plumage color.

The standard weights of the Rouen are the same as those of the Aylesbury. The Rouen was very popular years ago for the quality of its flesh, but it is not bred as much as either the Aylesbury or the Pekin for market purposes now. It is one of the most attractive breeds in existence.

Photograph from Wide World.

#### NO DEARTH OF CHRISTMAS GOOSE FOR BERLIN

The Germans' favorite holiday birds are fattening by thousands in pens at Friedrichsfelde, near Potsdam. Most of the fattening is done in the autumn, but a new industry is being developed by hatching the goslings in winter and fattening the young geese in the spring. Hamburg is the center for this new industry (see, also, text, page 350).

#### THE BLACK EAST INDIA

(For illustration, see Color Plate V)

The Black East India is one of the bantam breeds of the duck family and is prized for its small size. It is sometimes referred to as the miniature Cayuga (see Color Plate VI and text on opposite page), although it is possible that it descended from the wild Black Mallard, *Anas obscura*.

The Black East India duck is entirely black, including the bill and shanks and toes. It is a very desirable ornamental breed, for which no standard weights have been accepted.

#### THE PEKIN

(For illustration, see Color Plate V)

The duck industry of the United States owes a great deal to the Pekin breed, a fast grower, now raised for commercial purposes almost to the exclusion of other breeds.

The Pekin was first imported into the United States from Shanghai in 1873 and was recognized as a standard breed in 1874. It was taken to England from China about the same time. The Pekin as bred in America has gained such wide recognition that Japan has made importations from this country.

Photograph by H. Armstrong Roberts

#### A WATCHFUL CROOK RESTRAINS THE WANDERER

Though more goose meat per capita is consumed in Germany than in any other country, the goose population of France assumes large proportions from Strasbourg down to Grenoble, in the southeast, and from Carcassonne to Mont-de-Marsan, in the southwest (see, also, text, page 346). In many European countries, goosherds gather up the individual birds and flocks of the community and take them to pasture on land adjacent to rivers, brooks, and lakes. In the evening the birds are returned to their respective homes.

When the Aylesbury (see text, page 338) was at the height of its popularity in England, several importations to America were made for the purpose of mating with the Pekin, but eventually the Aylesbury blood was eliminated entirely and the pure strain restored.

That the Pekin is a good market duck may be judged from its body conformation, as shown in Color Plate V, and from its standard weights: adult drake, 9 pounds; young drake, 8 pounds; adult duck, 8 pounds; young duck, 7 pounds.

#### THE CAYUGA

(For illustration, see Color Plate VI)

The Cayuga breed originated from a pair of wild black ducks caught in Dutchess County, New York State, in 1809. Whether they were variants of the wild Mallard, *Anas boschas*, or of the wild Black Duck, *Anas obacura*, is not known. Descendants of the Dutchess County domesticated stocks were taken to Orange County in 1840 and soon became widely distributed in Cayuga County, whence the name. The Cayuga grew in popularity

"THAT ROYAL BIRD, WHOSE TAIL'S A DIADEM," WALKS ABROAD IN ALL ITS GLORY.

Only the male peafowl presents the gorgeous spectacle at the left; the female (center) is more somberly colored. On the lawn at Ranelagh, England, during a golf tournament.

Photograph courtesy U. S. Department of Agriculture

**"QUACK, QUACK" IS PROFITABLE MUSIC TO THE EARS OF DUCK FARMERS**

New York has more duck farms than any other State, and many establishments market from 50,000 to 100,000 birds the first six months of every year. Farms along the coast, both on Long Island and in Rhode Island, usually have sandy yards, cleansed by the rise and fall of the tide. To facilitate the feeding of enormous numbers of birds, this farm has an elevated feed track along the left side of the water.

Photograph by H. Armstrong Roberts

#### THE TOULOUSE IS THE MOST POPULAR GOOSE IN FRANCE

Long famous in southern France, the gray bird represents the utmost development of size and table quality (see, also, text, page 361). It is the largest of all the standard breeds and is probably the most popular in the United States to-day.

for a time, but was soon supplanted by the Pekin. Nowadays it is bred largely for the fancy.

#### THE KHAKE CAMPBELL

(For illustration, see Color Plate VI)

A new breed of duck was shown, presumably for the first time, by Mrs. A. Campbell in England at the time of the Khaki election, so called because of the number of voters in uniform at the close of the Boer War. It was developed as an egg-producer. The demand for duck eggs for table purposes in England had been on the increase, particularly since many Runner breeders had taken pains to

produce ducks that laid eggs without the characteristic strong flavor. The success of the Khaki Campbell as an egg-producer is borne out by the fact that in a recent laying trial 17 pens of them produced an average of 231.4 eggs per bird and a single duck of this breed laid 357 eggs in 365 days.

The Khaki Campbell is not recognized as a standard breed in the United States, although it is being raised in this country to some extent, as well as in Egypt, Burma, Persia, Australia, and several European countries. English authorities state that 4½ pounds is the average weight of a mature bird of either sex.

Photograph by Dr. Fritz Hoenningstorff

#### GERMANY "NOODLES" TURKEYS AS WELL AS GEESE

In the special fattening process known as "noodling," the noodles are dipped into warm milk before being fed to the birds (see, also, illustration, page 349).

#### THE BUFF

(For illustration, see Color Plate VII)

The Buff breed was originally developed some twenty years ago, as the Buff Orpington duck, by the originator of the Buff Orpington chicken, Mr. William Cook, of England, who intercrossed the Rouen, Cayuga, Runner, and Aylesbury breeds. The Buff Orpington was first shown in England about 1907 and in the United States in 1908-9. It was admitted to the American Standard of Perfection in 1915, under the name of the Buff, but it has not become very popular. In England it has made some good egg records:

The standard weights are: adult drake,

8 pounds; young drake, 7 pounds; adult duck, 7 pounds; young duck, 6 pounds.

#### THE GRAY CALL

(For illustration, see Color Plate VIII)

The Gray Call is a very small decorative duck, descended directly from the Mallard. Its plumage pattern resembles somewhat that of the Rouen (see Color Plate IV), and, like the Rouen drake, the Gray Call drake assumes a plumage color approximating that of the female during the summer months.

Besides the Gray Call, there is a White Call variety recognized as standard. The plumage is white and the bill, shanks, and toes are bright orange.

Photograph by Holmes from Galloway

#### MEXICO KNEW THE TURKEY LONG BEFORE COLUMBUS CAME

To what extent the Aztecs had domesticated the wild bird before the Spaniards arrived is not certain, but undoubtedly it was kept in captivity and had been known to the Montezumas for centuries. In Mexico City turkeys are brought alive to the market for the housewife to buy "on the hoof." The scientific family name of the six races of wild turkey is *Meleagridae*.

There are raised in America eight or ten domestic breeds of ducks in addition to those illustrated in the accompanying color plates, but they are of less importance.

#### GEESE

The goose that laid the golden egg, the "cackling" geese that saved Rome from the attacking Gauls in the fourth century B. C., and the modern domestic goose, through the various services rendered to mankind, have all contributed to the high esteem in which these fowls have long been held.

Naturalists are in general agreement that the wild Graylag goose, *Anser anser*, is the ancestor of all of the domestic breeds of geese known to-day, with the

exception of the Canadian and the Egyptian geese.

When man first entered Europe the Graylag goose apparently existed in great numbers. It has a vast summer range, from Iceland, Scandinavia, and Finland as far south as the Caspian and Black Sea districts in Russia, across Asia as far as Kamchatka. Its winter range includes Central Europe, the Mediterranean, India, and China.

The wild Canadian, or Canada, goose, *Branta canadensis*, is the ancestor of a domesticated breed known by the same name. In the summer it ranges as far north as Alberta and Saskatchewan, farther northward to the limit of trees, and as far south as Oregon on the west and Tennessee

Photograph by R. B. Sallows

### "GETTING IT IN THE NECK"

As "National Thanksgiving Bird," the turkey is well named, for various countries in addition to the United States regard this truly American bird as essential in the proper celebration of certain holidays.

Photograph courtesy U. S. Department of Agriculture

### THE PROPER WAY TO CARRY A TURKEY

This mode of handling will not harm the bird or permit it to do any damage. Heavy birds, if carried by the feet, are liable to serious injury. The value of the turkey as food is due not only to the excellent flavor of the flesh, but because of the enormous size which it attains. A bird weighing 60 pounds or more is not phenomenal.

Photograph courtesy U. S. Department of Agriculture

#### THE "TURKEY TROT" IS FAMILIAR TO CERTAIN SECTIONS OF THE WEST

In areas where the turkey population is large, dealers send buyers into the country to gather up a drove of several hundred birds. They stop at farms, weigh the birds the farmers want to sell, add them to the drove, and drive them like cattle to the dressing plants. This practice is being discontinued, however, as the turkeys lose too much weight on long drives.

Photograph courtesy Nebraska Agricultural Experiment Station

#### "TALKING TURKEY" IN NEBRASKA

This truckload of crates contains 432 birds. Turkeys are raised in nearly every part of the United States, but Texas, Missouri, Oklahoma, California, Kentucky, and Virginia take the lead. Texas alone usually ships each year approximately 1,200 cars containing about 2,000 birds each, a total of 2,400,000.

on the east. The principal winter range includes the southern half of the Mississippi Valley west of the Mississippi River. The color is the same as that described for the domesticated breed (see Color Plate XIV).

The wild Egyptian goose, *Chenalopex aegyptiacus*, is the progenitor of the domesticated breed of the same name. It ranges north well over Europe and breeds in England and Scotland as well as farther south. The color description of the domesticated breed (see Color Plate XIII) applies to the wild species.

#### THE GOOSE IN DOMESTICATION

With the possible exception of the chicken, the goose was probably the first bird domesticated. It was regarded as a sacred bird in Egypt 4,000 years ago, and it is seen on some of the ancient mural reliefs of that country (see illustration, page 338).

In the tomb of Tutankhamen delineations of geese in some of the decorations were found to be in such perfect condition that different kinds are plainly recognizable. Victor Hehn, a German scientist, has found references to geese in Sanskrit writings.

Penelope, in Homer's *Odyssey*, in that beautiful passage in which she relates her dream to her disguised husband, is pictured as deriving much pleasure from a flock of 20 geese. Then, again, in the *Edda*, Gudrun's geese scream when she laments over the corpse of Sigurd.

Very early the Romans learned the

Photograph by Jacques Boyer

#### CRAMMING THE GOOSE FOR THE EPICURE'S PÂTE DE FOIE GRAS

The size of the liver obtained by such forcible feeding is sometimes almost incredible—two and a half to three pounds (see, also, text, page 352).

value of goose liver as a delicacy, and enormous numbers of birds were placed in goose pens, called *chenobosca*, and forcibly fattened—poor thanks for having saved Rome!

Varro (see, also, text, page 328) gives a lengthy discussion concerning the breeding and rearing of geese. In Pliny's time geese were driven in flocks from Belgium and France to Italy. This writer says: "Messalinus Cotta, the son of Messala, the orator, discovered the method of cooking the webs of the goose's feet and frie-asseeing them in small dishes, along with cocks' combs."

Photograph courtesy U. S. Department of Agriculture

#### PLUCKING DUCKS IS HARD WORK

The large duck farms have pickers who devote their entire time to dressing birds during the marketing season. They are highly proficient, the average worker being able to pick from 30 to 70 ducks in a day. A busy scene at Eastport, Long Island.

Early in the Christian era the domestic goose had become well distributed over Europe.

The Romans first learned the use of feathers for filling cushions and mattresses from the Celts and the Germans, among whom goose culture became an extensive enterprise. In lower Languedoc (France) the keeping of geese was conducted on such economical lines that each small farmer kept two or three females only, the keeping of ganders being avoided because of the cost of feeding them. In the spring of the year the farmer led the female to the male, which was kept on the larger farms. Toulouse, in the south of France, became not only one of the most important centers of goose culture in all France, but developed one of the best breeds kept to-day.

Goose raising is still an important enterprise in France.

In Germany more goose meat is consumed per capita than in any other country. Geese in small flocks are raised throughout the Republic, yet enormous numbers of birds are imported annually

from Poland, Russia, and Lithuania. There are goose-fattening establishments in many places, one of the largest being in the Oder Bruch, where seven million fowls are fattened annually.

Most of the fattening is done in the fall of the year, but a new industry is being developed by hatching the goslings in winter and fattening the young geese for market in the spring. Hamburg is the center for this new industry, and the Diepholzer goose is especially adapted to its development.

#### GOOSE CULTURE IN ENGLAND

Goose raising is an important industry in many other European countries, especially Hungary, where there is readily available much pasture land. If provided with an abundance of grass and water, geese require little else in the way of feed. Girls and boys take the feathered flocks of the community to pasture on land adjacent to the rivers, brooks and lakes, and in the evenings the individual geese or groups of geese are returned to their respective homes.

Photograph by Graham Romeyn Taylor

#### THE "GOOSE STEP" IN HANGCHOW

"The foolishlest geese I ever beheld"—so George Washington characterized the Chinese geese which Gouverneur Morris sent him in 1788 (see text, page 364). They were long known as Swan geese because of their long, slender neck and the resemblance of the White variety to the swan when on the water. They are bred chiefly for ornament and exhibition.

In the first century B. C., when the Romans first invaded Britain, they found domesticated geese. In the course of time geese were pastured on the public lands as well as on private property, the rental charges per goose being fixed by law.

Geese were frequently driven from district to district to feed on the waste grain in the fields after the harvest. Large flocks, numbering from 2,000 to 3,000 each, were driven to market in London by gooseherds, each of whom was attended by two or three boys, who carried crooks for catching lame or wandering birds.

In 1740 the Duke of Queensberry wagered that a flock of geese could travel from Norwich to London faster than an equal number of turkeys. The race was staged and the geese won by two days, by virtue of the fact that upon the approach of nightfall the turkeys took to the trees, whereas the geese moved along steadily from early dawn till dark.

The custom of driving geese to market ceased many years ago, however, because

it was found that they could be fattened to better advantage near home.

#### GOOSE CULTURE IN AMERICA

Goose culture in America had its beginnings with the arrival of the early settlers from those European countries where goose raising had been practiced for centuries. The industry did not develop rapidly, however, probably because of the relative abundance of wild ducks and wild geese as well as other game.

As the country became settled and farms were hewn out of the wilderness, farm flocks were established. Then, as cities grew, commercial goose farms were started.

As early as 1800 goose raising had become an important enterprise in Connecticut, Massachusetts, and Rhode Island, especially in the Little Compton section of Rhode Island. The industry thrived for approximately 100 years, and then began to decline for no apparent reason except that with the improvement of market fa-

cilities many farmers found the production of vegetables and other crops, as well as chicken eggs, more economical.

In other parts of the country, especially in northwestern Ohio and in sections of Illinois and Wisconsin, commercial goose raising was developed extensively, and it is still important in parts of Wisconsin. In the Canadian provinces of Nova Scotia and Prince Edward Island many geese are raised and shipped to the Boston market.

#### DECLARATION OF INDEPENDENCE WRITTEN WITH A QUILL

From time immemorial the goose has been a generous benefactor of mankind, giving feathers to lie upon, quills with which to feather arrows, pens to transfer man's thoughts to paper, flesh to sustain man's body, fattened livers for the epicurean, and fat to flavor the peasant's soup and for baking purposes.

Even in the time of Pliny the delicate white feathers plucked from live geese were highly prized. That chronicler relates that Roman soldiers campaigning in Germany frequently strayed from the regular routes of march in order to pluck goose feathers, and that military expeditions were sometimes demoralized by the practice.

As countries advanced in civilization, the demand for goose feathers increased. Geese were plucked twice a year, and, in case there are some who might think this a cruel practice, be it noted that the female goose herself plucks feathers and down from her breast when she leaves her nest of hatching eggs in search of food.

During the seventeenth century in England geese were sometimes shorn just as sheep are shorn to-day. In later times plucking was done as often as five times a year, and flocks of several thousand birds were kept primarily for the production of feathers.

In 1417 a royal order commanded that six feathers be plucked from the wings of every goose in England and given to the king, so urgent was the demand for quills at that time.

With the introduction of gunpowder the demand for quills with which to feather the shafts of arrows ceased.

But goose quills also served a less war-

like purpose; until recent times they were in great demand for pens.

The slit reed was used as a pen from the beginning of the art of writing among the Egyptians to the fall of the Roman Empire. The quill superseded it and was in use until the development of the steel pen in the nineteenth century. Thus the thoughts of the mighty minds of the Middle Ages and the Renaissance have come down to us chiefly through the medium of the goose quill. Thomas Jefferson used a quill in writing the Declaration of Independence.

In the early days of the domestication of the goose, its flesh was regarded as a luxury to be served only at the banquet tables of the more wealthy citizens. Then, as the domestic birds increased in numbers, the flesh came to play a prominent part in the diet of peasants. Roast goose is popular among all classes in many countries. To-day the popular Christmas bird in France and Germany is not the turkey, but the goose. Smoked breast of goose is sold in both these countries, as is also a canned product which is made by cutting the flesh from the carcass, half cooking it, and putting it in earthenware pots in layers intermixed with goose grease.

In America, as well as in France and Germany, a large market trade in "green" geese—young geese marketed at from eight to twelve weeks of age—has been developed. Green geese are very popular for roasting purposes.

#### EARLY ROMANS FORCIBLY FED GEESE TO ENLARGE LIVERS

In Wisconsin geese are fattened by a special process called "noodling," which consists of the forced feeding on noodles made of a grain mixture moistened with milk or water and run through a sausage press, which molds it into "ropes."

The ropes are cut into noodles two or three inches long, which are then boiled. Small flocks of geese are confined in pens and each bird is hand-fed, first about four times daily and then every three hours, night and day. The feeding period usually lasts from two to three weeks, after which the geese are in prime condition and their livers are considerably enlarged.

From early Roman times geese have been especially fattened to produce greatly

BLACK AND WHITE SWANS

The swan is one of the most beautiful of all waterfowl. The two color varieties are descended from one of the European wild species and have more gracefully curved necks than any of the American species. The swan is used extensively to adorn ponds and lakes on private estates and in public places.

enlarged livers. During the first part of the fattening period the feed is given in troughs, but for some days before the geese are to be killed they are forcibly fed, a funnel-like apparatus being used to force the nourishment down the birds' throats. The forced fattening of geese is depicted on mural reliefs in one of the tombs at Sakkara (Egypt).

In France it used to be the custom to fatten geese in casks, in which holes were bored to allow the fowls to put their heads through for feeding and watering. The process used by the Poles in early times was to place each goose in an inverted earthenware pot large enough to accommodate the victim comfortably. After being fattened for even two weeks many of the geese could be removed only after the pots had been broken.

The livers, which become enlarged to an almost incredible size, are sold separately and command a good price. In Germany, in particular, goose liver is served in a variety of ways. In Strasbourg and in other places the livers are prepared for the table in the form of *pâté de foie gras*, a delicacy to tickle the palate of the epicurean.

#### DOMESTIC BREEDS OF GESE

The domestic breeds of geese that have descended from the wild Graylag goose are relatively few in number, and they do not vary much in type, nor is there such diversity of color pattern, as in the case of ducks. Concerning the goose, Darwin states that "hardly any other anciently domesticated bird or quadruped has varied so little." Other than breeds descending from the Graylag, there are only two recognized as standard, the Egyptian and the Canadian.

The domesticated Egyptian goose (see Color Plate XIII) is descended directly from the wild Egyptian goose and has the same color pattern. The Egyptian is the smallest of all domestic breeds.

The Sebastopol (see Color Plate XIII) is not recognized as a standard breed in the United States, although it is widely distributed in countries bordering on the Black Sea and in Hungary, where it is known as the Danubian Rippled goose. The chief characteristic of this pure white bird is the wavy condition of its plumage.

The domesticated Canadian, or Canada,

goose (see Color Plate XIV) is a counterpart of its wild progenitor. The standard weights are: adult gander, 12 pounds; young gander, 10 pounds; adult goose, 10 pounds; young goose, 8 pounds.

The Canadian goose is sometimes used to cross with domestic stocks, the "blood" of the former being much in evidence in many of the geese imported into the United States from the Maritime Provinces of Canada.

The Embden, a pure-white breed (see Color Plate XIV), originated in Hanover, Germany, but it seems to have been improved considerably in England. It is bred extensively in England as well as in all parts of Europe.

In western Germany the Embden was sometimes referred to as the Bremen and as such was imported into the United States in 1820. Later Embden importations were made from England.

The standard weights of the Embden are: adult gander, 20 pounds; young gander, 18 pounds; adult goose, 18 pounds; young goose, 16 pounds. Because of its size and its white plumage, the Embden is particularly well adapted for market purposes.

The Gray African goose (see Color Plate XIV), in spite of its name, appears to have come from China.

One of its outstanding characteristics is the presence of a well-developed knob at the base of the bill. There is also a prominently developed fold of pendulous skin, called the dewlap, under the throat.

The standard weights are: adult gander, 20 pounds; young gander, 16 pounds; adult goose, 18 pounds; young goose, 14 pounds.

In the early part of the nineteenth century large gray geese were being bred extensively in France in the Toulouse district. They came to be known as Toulouse geese (see Color Plate XV), and were exported to England, Ireland, and other countries, where, in some cases, they were improved considerably. To-day the Toulouse is probably the most popular breed in America, as well as the largest, the standard weights being: adult gander, 26 pounds; young gander, 20 pounds; adult goose, 20 pounds; young goose, 16 pounds.

Because the Chinese goose (see Color Plate XV) has a different body structure

#### DIVING FOR HIS LIVING

The Canadian goose "tipping up" to get a morsel of food from the shallow bottom of the pond. Some 5,000 of these birds are bred in the United States each year for the ornamentation of private and public parks and for use as decoys by hunters. The wild ganders are frequently crossed with certain species of domestic geese to produce the so-called "mongrel goose," whose meat is of fine quality.

and is more upstanding than other domestic breeds and has a prominently developed knob at the base of the bill, together with a dewlap under the throat, it was long regarded by naturalists and early poultry writers as a distinct species. It crosses readily with other domestic breeds, the progeny being fertile, and by this test is regarded as having descended from the wild Graylag species. That this should determine its real origin does not follow, however, because the Canadian goose crosses readily with domestic stocks, the progeny being fertile, in so far as is known,

"The earliest record of Chinese geese in America," says John H. Robinson, "is in the correspondence of George Washington, and was first published in Haworth's 'George Washington—Farmer,' in 1915.

"It discloses that in 1788 he received from Gouverneur Morris two Chinese pigs and with them 'a pair of Chinese geese, which are really the foolishest geese I ever beheld; for they choose all times for setting but in the spring, and one of them is even now (November) actually engaged in that business.'"

Photograph by Maynard Owen Williams

TO EGYPTIANS GEESE HAVE LONG BEEN AS FAMILIAR AS THE PYRAMIDS:

They were regarded as sacred 4,000 years ago, and, chickens possibly excepted, were probably the first birds domesticated (see, also, text, page 349). The forcible-feeding process was also known to the Egyptians, for it is pictured on the mural reliefs in the tomb of Ti at Sakkara (see, also, page 351). Cranes as well as geese were fattened in this way.

### TURKEYS

It is interesting that one of the largest wild game birds which has been domesticated should become known as "The National Thanksgiving Bird" of various countries. Such is the rôle the turkey has played for many decades.

As a wild bird in North America, the turkey supplied the numerous tribes of Indians and the early white settlers with "game" fowl in great abundance, whereas in later times the domesticated turkey has provided kings and presidents, as well as the more lowly in rank, in various nations with a class of meat that has come to be regarded as essential in the proper celebration of certain holidays.

The turkey is the only race of poultry

that originated in the United States. When Francisco Fernández, under the patronage of Philip II of Spain, arrived at the northern coast of Yucatan in 1517, turkeys were observed to have been domesticated by the natives. In 1518 Grijalva discovered Mexico and found domesticated turkeys in great numbers. Gómara and Hernández refer to wild as well as domesticated forms.

Various Indian tribes fed freely upon turkey meat, obtained from both wild and domesticated flocks. The Aztecs were more inclined to domesticate the turkey than the northern Indians, but all tribes hunted the wild birds.

The flesh was not the only part of the turkey used by the Indians. Feathers

#### IN CANADA THE GOOSE MAY WEAR A "RUFF"

In parts of rural Quebec and other provinces, a wooden yoke is sometimes put around the neck of the gander, as leader of the flock, to keep the birds from slipping through the fences and robbing a neighbor's grainfields. Nova Scotia and Prince Edward Island raise many geese for the Boston market.

served to adorn the wearing apparel, and they were also made into robes and blankets, being twisted separately into strands of wild hemp and then woven together.

In its original habitat the wild turkey ranged from the Atlantic coast to as far north as the Dakotas, and from southern Ontario to southern Mexico. It was not a native of the three Pacific Coast States, nor of Idaho, Montana, Utah, Nevada, and Wyoming.

With practically a whole continent for his home, the more favored haunts of the wild turkey were the forests and brush lands, where food was abundant and there was some protection from natural enemies. He fed on acorns, seeds, berries, grass and insects, especially grasshoppers.

The clearing of the forests and brush lands for agricultural purposes and the shooting of thousands of birds by hunters were two of the most important factors contributing to the gradual retreat of the wild turkey from Northern and Eastern States.

It is still to be found in Arizona, New Mexico, Kentucky, Tennessee, Pennsylvania, Maryland, Arkansas, Colorado, Oklahoma, Missouri, Mississippi, Louisiana, Alabama, Georgia, Florida, Texas, Virginia, West Virginia, and Mexico. Various State game departments are reintroducing the bird, and restocking depleted areas.

#### WHENCE CAME THE NAME?

Although there is no doubt that the wild turkey originated in America, there is much doubt as to how it got its name. Some early writers have suggested that the name "turkey" was adopted because of the supposed resemblance between the adornments of the fowl's head and the fez worn by Turkish citizens. But the most widely accepted explanation is that the name bears some resemblance to the bird's repeated call-notes—"turk, turk, turk."

The turkey is not a migratory bird in the sense that ducks and geese migrate

#### THE PEKIN IS THE FOUNDATION OF LONG ISLAND'S DUCK INDUSTRY

This fast grower is raised for commercial purposes to the exclusion of almost all other breeds (see text, page 340). They are timid birds and easily frightened, and therefore strangers are usually discouraged from visiting the farms. Their feathers are used extensively in making cushions, pillows, and mattresses. Feeding time on a Pekin farm at Speonk, Long Island.

hundreds of miles from the south to the north in the spring and return in the fall, much to the delight of thousands of hunters.

The wild turkey is a handsome bird of stately carriage. His glossy plumage is mostly greenish bronze, with gold and copper reflections. In the sunlight the effect is a delight to the eye. The feathers of the neck, breast, body, and back are tipped with a band of velvety black, thus accentuating the glowing sheen of the remainder of the plumage.

One outstanding characteristic of the turkey is that the upper portion of the neck and the head are bare of feathers, the skin being rich purple or blue. The folds or lumps of bare skin are called caruncles. There is a single wattle, and from the crown of the head there hangs a pencil-like projection of the skin, which reddens when the gobblers make love to the hens.

Another outstanding character of the turkey is the tuft of wiry, hairlike "beard"

springing from the center of the breast. In some old male wild turkeys the beard trails to the ground.

The feet of the wild turkey are light purple. They are equipped with short, heavy spurs, but while the male chicken fights principally with his spurs, the turkey fights almost entirely with his beak.

The wild gobbler is provided with an interesting appendage, which is not found on the females or on young gobblers. John James Audubon, writing in 1831, speaks of it as the "breast sponge," and it serves a very important function. In the spring, during the gobbling season, this sponge is filled with fat and serves to sustain the bird; he usually eats little while strutting, gobbling, and otherwise making love to the females.

As the mating season advances the gobbler usually becomes quite thin, as the reservoir of fat is used up.

There is no pairing off in couples, as in the case of many other wild birds, for the wild turkey male is polygamous in the

## THE "SWAN SONG" OF WEYMOUTH

One of the noteworthy sights at this English south-coast watering place is the vast number of swans which inhabit the river and lakes in the vicinity. They have become quite tame and upon the approach of a visitor they immediately put in an appearance to beg for food.

extreme and loves a large harem. Bitter fights among the old males are common, the victor claiming the harem of the vanquished. The defeated male must perforce seek battle with another for the possession of another flock of females, or he is obliged to join a group of disconsolate "bachelors."

The females select secluded spots for their nests and make a slight depression in the ground, into which a few dry leaves are scratched. From eight to fifteen eggs, somewhat smaller and more pointed than those of the domestic varieties, are laid.

After four weeks of incubating, the baby turks, or poults, appear, covered with gray down, dotted with dusky spots, and with two dusky stripes running from the top of the head down the sides of the back. The down is soon replaced by feathers, which are replaced by another

coat of feathers when the birds molt. The molting season begins in August, and by the latter part of December all of the old feathers have been replaced by new ones.

The young gobbler acquires his "beard" in the center of the breast by November and it continues to grow rapidly until the third year, and thereafter more slowly.

The young turkeys receive the care of their mother until they are four or five months old, after which they look after themselves. At six or seven months of age the young gobblers separate from the young and old hens and range by themselves. The old gobblers also range by themselves, usually in flocks of about fifteen. The sexes roost apart.

This large and magnificent wild bird has always had numerous enemies, such as the fox, coon, mink, skunk, wolf, lynx, and coyote. Its bird enemies include owls,

SNOWY SWANS ENHANCE THE TIME-MELLOWED BEAUTY OF OLD ENGLAND

This pair is swimming at Ightham Mote, a charming manor house in a Kentish village southeast of London. Portions of it, with the moat, date from the 14th century. There is a tradition that Richard Cœur de Lion introduced the swan into England.

eagles, and hawks. As Edward A. McIlhenny says, "There is never a moment in the poor turkey's life that eternal vigilance is not the price of its existence." Not only must the turkey be on guard every hour of the day, but it must also seek roosting places that are more or less inaccessible to its natural enemies. For this reason turkeys favor trees growing in shallow water, which seems to provide some protection from night prowlers.

In early colonial days wild turkeys were very numerous in Massachusetts; and at the beginning of the nineteenth century they could be purchased for 6 cents each,

while large birds, ranging from 25 to 30 pounds, sold for 25 cents. When Cortez first visited the capital of Mexico, "no less than 500 turkeys, the cheapest meat in Mexico, were allowed for the feeding of the vultures and eagles kept in the Royal aviaries."

The turkey was first introduced into Spain in 1519 by Francisco Fernández. From that country it spread throughout Europe and England, being introduced into the latter country in 1524. There is a verse to the effect that:

"Turkeys, carps, hoppes, picarel and beer,  
Came into England all in one year."

Photograph by Lynwood M. Chase

#### WHITE MUSCOVY YOUNGSTERS TAKE THEIR FIRST DIP

These South American birds are bred chiefly as curiosities. The bare skin about the eyes and base of the bill makes them look savage, but in reality they are fairly docile and free from shyness. Their natural color is black, with some parts broken with white. The all-white is an albino variety.

That the domestic turkey was still relatively rare in 1541 is emphasized by the fact that in that year "Archbishop Cranmer prohibited the appearance at State festivals of more than one dish of turkey cocks; the female was too precious to be cooked at that period. Fourteen years later two turkeys and two turkey poults were served at a grand law dinner. Twenty years afterwards the turkey became a Christmas dish with the farmer."

According to Konrad von Heresbach, the turkey was introduced to Germany in 1530. The first mention of the bird in Italy was in an ordinance issued by the magistrate of Venice in 1556, "repressing the luxury of serving turkeys." In 1570 Bartolomeo Scappi, cook to Pope Pius V, published receipts for cooking turkey.

In recent years dressed turkeys have been imported into the United States from Hungary, Russia, Austria, and Ireland, and large numbers come from Argentina. Such is the irony of fate; being indige-

nous to the United States and existing here in countless numbers, the wild turkey was domesticated and later taken to other countries, from which it is now imported in the "dressed" form.

In Texas, Colorado, and the Dakotas many flocks of a thousand or more birds are raised annually. Frequently these large flocks are herded on the prairies in much the same manner as are sheep and cattle.

From the original wild stocks man has developed a number of useful varieties which differ largely in respect to plumage color. There are six standard varieties recognized by the American Poultry Association: the Slate (Color Plate VIII), the Bourbon Red (Color Plate VIII), the Black (Color Plate IX), the Narragansett (Color Plate IX), the Bronze (Color Plate X), and the White Holland (Color Plate XI).

The Ronquières, a little-known variety bred in Belgium and France, is worthy of more attention than it has received.

### THE GUINEA FOWL

(For illustration, see Color Plate XII)

Of all the breeds and varieties of domestic poultry, the guinea fowl is the only one that had its origin in Africa. The best account of it is by Prof. Alessandro Ghigi, who concludes that the guinea fowl as known to-day has descended from a West African species known as *Numidia meleagris*, rather than from an East African species, *Numidia ptilorhyncha*, as suggested by Darwin.

The two species can be crossed, the progeny being intermediate and unlike those of the domestic guinea fowl. Moreover, experience has shown that the East African species is an erratic form difficult to domesticate, whereas the West African species is sedentary by nature.

The West African species was brought to Europe by the Portuguese toward the end of the Middle Ages. Though it had been known to the Romans, it had not survived the fall of the Roman Empire and there are very few statements regarding it in medieval literature.

The Romans regarded the meat of the guinea fowl as a delicacy. In Greece the bird was used for sacrificial purposes, rather than for food. The Greeks probably imported it from Cyrene or Carthage.

The distant explorations of the Portuguese and Spaniards, conducted by Bartholomeu Diaz, Vasco da Gama, and others, led to a reintroduction of the western species, but up to 1600 it had not reached Italy for the second time.

The Portuguese called the imported fowl *pintada* (painted bird). The same name was taken over by the Spaniards and the French, *pintada* and *pintade* respectively, whereas the English called it "Guinea fowl," or the fowl of Guinea. To the Italians it is the *gallina di Faraone*.

There are three domestic varieties—the Pearl, the White, and the Lavender—the last of which is probably the result of a cross between the first two. The Pearl variety is by far the most common and is the direct descendant of the West African species. The White is probably a "sport" from the Pearl variety.

Guinea fowls are bred in many countries and are highly prized for the delicate quality of their flesh.

### SWANS

(For illustration, see Color Plate XVI)

Black and White swans were domesticated more for man's pleasure than for economic value, although the down is very soft and in early days was highly prized for stuffing cushions and pillows. The quills taken from the wing feathers were often used in making pens and as tubes in which to place messages carried by pigeons.

The skins of swans were formerly sold extensively as a source of supply of down and in some cases were used as "chest protectors." The records of the traffic in swan skins in America reveal only too clearly the decrease in the number of wild swan from decade to decade.

There are some eight or ten species of swan, including three prominent European species, two American species, the Black swan of Australia, *Chenopsis atrata*, and the Black-necked White swan of South America, *Cygnus nigricollis*.

The Mute swan, *Cygnus olor*, breeds throughout Denmark, in southern Sweden, northern Germany, central and southern Russia, on the lower Danube, and eastward through Siberia and Mongolia. Its winter range includes the greater part of Europe and as far south as Algeria and from the Caspian region to northwest India. It is pure white and has a long, slender neck and a knob at the base of the bill. Most of the domesticated white swans in Europe and probably most of those in America are descended from the Mute swan. This is the species shown in Color Plate XVI.

The Whooper swan, *Cygnus cygnus*, is a European white species, sometimes referred to as the Whistling swan, which is also listed as an American species, *Olor columbianus*. These two have a wide range. They are pure white and do not have a knob at the base of the bill.

The Trumpeter, *Olor buccinator*, an American species, is pure white. It inhabits interior North America from the Mississippi Valley westward and northward over Ontario and Hudson Bay territory. It breeds from Wyoming to the Dakotas and winters from Washington State to southern California, Arizona, and the Gulf of Mexico.

# APPROACHING WASHINGTON BY TIDEWATER POTOMAC

BY PAUL WILSTACH

AUTHOR OF "HOLIDAYS AMONG THE HILL TOWNS OF UMBRIA AND TUSCANY" AND "THE STONE BEEHIVES OF THE ITALIAN HEEL," IN THE NATIONAL GEOGRAPHIC MAGAZINE

**I**N STARTING to explore the Potomac River, there are two points of departure. One is the point of departure of our interest, and the other is the point of departure of our trip.

Interest in the Potomac is on the march instantly one realizes that it is the river of Washington; of Washington the man, the greatest figure of our national history, and of Washington the city, the capital of the Nation, the focus of our national administration, and the city of our history in the making.

And our interest is accelerated as we realize that the old river presents other great names of celebrities who lived on the plantations along its shores: the Lords Baltimore, who planted the first settlement of Maryland, near the river's mouth; the Calverts, the Lees, the Carters, the Hansons, the Stones, the Fitzhughs, the Masons, the Mercers, and the Fairfaxes.

## A DIVERSITY OF POTOMACS

The point of departure of the trip, however, appears at first less simple. There seem to be several Potomacs.

There is fresh-water and there is tidewater Potomac. The former is all that water coming down from the mountains and over the Falls above Washington City.\* That water is soon lost in the brine of tidewater Potomac, which extends from the point of mingling to the mouth of the river, at Chesapeake Bay. Here strong tides rise and fall, sometimes more than three feet about the wharves of Washington. Here, too, the water is briny. It is so impregnated with the salt of the sea that, even at the head of tidewater, steamer captains dare not introduce it into the boilers of their ships. This briny reach is really not a river; it is an arm of the Chesapeake.

Then there is the surface Potomac and a secret river hidden in its depths. The surface waters express themselves in broad

\* See "The Great Falls of the Potomac," by Gilbert Grosvenor, in the NATIONAL GEOGRAPHIC MAGAZINE for March, 1928.

reaches between banks of engaging loveliness. They vary in width from one to seven miles. The hidden river is often only a few hundred feet wide, and unseen it serpentine its way back and forth from one shore to the other in a way that teases and often wrecks the inexperienced mariner. It is called "the channel." Up it ocean-going vessels of considerable size come to the docks of Washington City.

If the sources of the fresh water which comes down from the mountains over the Falls were to dry up, and thus the Potomac above the Falls were to cease to exist, it would not mean the drying up of Tidewater Potomac. The channel at least would remain, shallower by only a few feet, and it would still permit the ocean-going vessels to reach Washington harbor.

It is in Tidewater Potomac that one finds the river of the greater interest, the Potomac of history, of the landings, of the old plantations, of the celebrities who have made it one of the most distinguished rivers in America.

Curiously, the better way to see this river is not to start where it appears to begin, and so float down on its currents to where it ends in merging with the bay; but rather to start where it ends and be carried up by its tides and by that interesting tide of its history which entered here, at its mouth, three hundred years ago.

## ICELAND, SPAIN, AND ENGLAND CONTEND ABOUT THE POTOMAC

The story of this trip up the broad reaches of Tidewater Potomac is actually a composite of many trips, by many kinds of land and water craft, but here, for brevity's sake, reduced to its simplest terms without the inconvenience of delays, whether of boat schedules or motor trails, without the disappointments of weather or of the many futile side trips which anyone must make in order to find out where are the points of genuine interest and how to reach them.

Approaching the mouth of the river, one speculates on such questions as, who was the first white man who ever came into it, where did the river get its name, and where in it is the dividing line between Maryland and Virginia?

The last question troubled the dwellers on both shores for more than 250 years. Then, in 1877, a commission of arbitration finally placed the waters of the river wholly within the boundary of Maryland. The actual boundary line between the two States is low-water mark on the Virginia side; but the citizens of both States have equal fishing rights in its waters.

The name Potomac is Indian. The first explorers found a tribe of that name living on the river's shores; but one cannot be quite sure whether the tribe took its name from the river or the river took its name from the tribe. It is now generally accepted that Potomac is the Indian word for Traders; hence the Potomac River means the River of the Traders.

Who was the first white man to enter the river is a question less easily answered. At one time a claim was set up, based on "a runic inscription" said to have been found below the Falls, for "an Icelandic widow buried here in 1051." Rather more credence has been given to the claim that Spanish explorers, known to have come into the Chesapeake between 1565 and 1570, sailed up the Potomac as far as Occoquan. The contention is based largely on the appearance of the place name Axacan in the Spanish chronicles and its assumed identity with Occoquan.

There is better evidence that an English explorer may have been in the river before 1585, for its existence at least was known at that date, as revealed by a map published in London in that year, on which Tidewater Potomac, though unnamed, was sketched in with recognizable lines. But

Photograph by James P. Hughes Company

#### "THE GOOD SHIP CALLED THE 'ARKE'"

The largest of Maryland's *Mayflowers* was a ship of something more than 300 "tunnes"; the *Dove*, a pinnace, was 50 tons. In comparison, the *Sarah Constant*, the *Goodspeed*, and the *Discovery* of the Jamestown settlers were vessels of 100, 40, and 20 tons respectively. The *Mayflower* was a craft of about 180 tons. This model of the *Ark* is owned by the Maryland Historical Society, in Baltimore (see page 374).

how did the map-maker get his sketch—at first hand, on a visit to the river, or at second hand, from descriptions from the Indians?

#### CAPT. JOHN SMITH FISHED WITH A FRYING PAN

As we sail into the mouth of the river, however, we are reminded of the first white man definitely known to have sailed into these waters. On our left, the south lip of the mouth of the Potomac, is Smiths Point, named for the original authenticated white pioneer here, the gallant explorer, Capt. John Smith.

Smith came to the James River in 1607, and the next spring, "as soon as corn was planted," he sailed up the bay to explore and spent some time visiting much of Tidewater Potomac.

Smith really put the Potomac on the map, for it was on his chart that the name first appeared, and in connection with this

Photograph by Clifton Adams

#### CHESAPEAKE BAY IS THE WORLD'S GREATEST OYSTER GROUND

These delicious bivalves are also found up the Potomac as far as Popes Creek, 45 miles from the river's mouth and about 55 miles below Washington. The oysters taken at this point, however, are used only for seed, as the water is too fresh to produce any of marketable size. Ten miles below, however, they are sufficiently large for market purposes. Dinner-time on a schooner at Cambridge, an oyster center on Maryland's Eastern Shore.

trip, two of his companions told the first fish story associated with the river.

"We found that abundance of fish lying so thicke with their heads above the water, as for want of nets we attempted to catch them with a frying pan; but we found it a bad instrument to catch fish with. Neither better fish, more plenty or variety, had any of us ever seene in any place, swimming in the water, but there not to be caught with frying pans."

#### ST. MARYS, LORD BALTIMORE'S CAPITAL, HAS DISAPPEARED

Having come to this conclusion, it is interesting to find that when, by reason of the ebb tide, his boat was left aground on the channel bank, the captain started "sporting himself to catch them by nailing them to the ground with his sword." He set all his companions to fishing in this original way, and they "tooke more in an houre than we all could eat."

A few years after Smith, in 1634, there

came into the river two other ships, the *Ark* and the *Dove*, with Lord Baltimore's colonists to found Maryland, on the north side of the Potomac. Even now we can feel these pioneers' cautious apprehension in an unknown wilderness inhabited by savages. They did not at first trust themselves to the mainland; they sailed up the river for 31 miles, until they came to a small island, now called Blakistone Island, where an attacking enemy might at least be seen.\*

Here Lord Baltimore's brother, Leonard Calvert, left the *Ark*, and in the *Dove* and another boat, procured in Virginia, sailed up into the narrower reaches, where, at Piscataway, just opposite the hilly banks where later rose Mount Vernon, he found

\* See, also, "A Maryland Pilgrimage: Visits to Hallowed Shrines Recall the Major Rôle Played by this Prosperous State in the Development of Popular Government in America," by Gilbert Grosvenor, LL. D., Litt. D., in the NATIONAL GEOGRAPHIC MAGAZINE for February, 1927.

the Indian emperor, with whom he wished to discuss a site for his colony's capital.

Calvert found only Indians on the river. Their occasional towns were indicated by the clearings in the forests, where they raised their corn and tobacco. In one such town dwelt those Potomac Indians who gave their name to the river or perhaps took it from the river. They dwelt in an inlet called Potomac Creek. The town and the Indians have long since disappeared, but Potomac Creek still bears that name, and all train travelers between Washington and Richmond cross it and may look down its picturesque vista out on the wide river beyond.

Each of the Indian towns had a king and collectively they owed allegiance to the old emperor on the Piscataway.

It is not known precisely what that imperial party said to Calvert, but obviously it was something so poisonous that the newcomer couldn't settle far enough from that Indian. He returned to his ships and sailed them into the last inlet on the northern side of the river, just ten miles above its mouth.

This beautiful body of water he called St. Marys River, and there he began to build his capital, which he called St. Marys City. Within 35 years St. Marys City was laid out with streets and a square and, in addition to its frame and log structures, it had more than 60 brick buildings, which included the Statehouse, the Governor's mansion, churches, public office, private dwellings, and commercial buildings.

#### TWO FAMOUS MARYLAND HOMES

To-day not one of the buildings of old St. Marys survives; not a trace of one of them. The visitor finds grain and tobacco fields, a few green pastures, and a graveyard where the first Maryland lawmakers sat in the midst of the sprightly colonial life of their capital city.

Where the plow has turned over the soil, or where a well or cellar has been dug, a few bricks have come to the surface, the only physical vestige of the brick capital of 300 years ago. Those from Maryland's first Statehouse have been used in building little Trinity Church on a part of the site of the vanished city.

Among the hospitable homes on St. Marys River one finds at least two of en-

during interest. One is Cross Manor, its original lines somewhat obscured behind a modern veranda, still standing on the shore of St. Inigoes Creek, across which in the early days it looked at the busy capital city. It is the oldest house in Maryland, and was built by Deputy Governor Thomas Cornwaleys in 1642.

In another direction is Cartagena, a modest little brick house which has a double attraction. It illustrates an old custom of the colonial planters here, on the lower Potomac, who sometimes put their initials in glazed brick headers in the front walls of their houses. On the sides of the front door of Cartagena we find a W and an H, the initials of William Hebb, who built here early in the eighteenth century.

When a young man, Will Hebb joined the British expedition fighting in the West Indies under Admiral Vernon. Among his companions were the sons of several other Potomac families. One of them was a lad whose family lived across the river in Virginia, in Westmoreland County. His name was Lawrence Washington.

When, after the war, these young men came home to the Potomac, Will Hebb named his house Cartagena, after the siege of that city in which they all participated, and Lawrence Washington, having married and built himself a house up near the head of tidewater, named his estate, after their commander, Mount Vernon.

#### SURVIVALS OF 17TH CENTURY LIFE ON THE POTOMAC

Except for the curious and complete disappearance of St. Marys, one finds that life at the mouth of the Potomac presents surviving phases which were familiar there in the 17th century. Tobacco, which once was the currency and paid all the bills, is still a staple crop and continues to pay a goodly percentage of the bills.

As in the beginning, so now, the tobacco casks are seldom hauled—"carried" is the local word—to the landings for shipment. They are even now oftener rolled along the roads by hand. The first roads here were private clearings from the tobacco barns, in the fields, down to the ship landing, over which the hogsheads were rolled to the vessel; from which these first roads were called "rolling roads."

In spite of Maryland's great advance in road-building and its vast motor traffic, one finds yoked oxen still dragging the plows across the fields and still hitched to hay wagons and wood wagons on their way down to the wharves.

Up many a creek one finds the skeleton of an old mill. In the early days every plantation had its mill, where the planter ground his corn for johnnycake and batter bread, and ground his wheat for flour for the English market, and made his mash for domestic articles now prohibited by a certain celebrated amendment.

Adjacent to these old mills we still find mossy-banked mill ponds, often reaching inland far out of sight. However much they may resemble upland mill ponds, they were fed on a different principle. Here, for the first 50 miles from the mouth of the Potomac, land is almost on a level with the water, and hence there are almost no streams to feed such ponds. Whence, then, the source of the supply of water for them? Their water all comes from the sky. The ponds are really open-air reservoirs of rain water preserved for release over the great wheel as the occasion demands.

#### SHAD FISHING ON THE POTOMAC AT NIGHT

In the inlets, which are numerous in Tidewater Potomac, nearly every one of them sheltering one or more landings served by the Baltimore and Washington steamers, we find the Potomac terrapin in his native lair, the oyster tongs busy at the richest yield of this district, and the fishermen spreading their nets—nets often so vast as to require a gas engine to land them—for the river's generous yield of rock and herring and shad.

But one has not seen the most picturesque feature of the Potomac fisheries who has not seen shad fishing at night. The nets are laid for every run of the tide, by night as well as by day. By day the line of huge corks sustaining the nets across the channel is easily seen and avoided by passing steamers. At night these same reaches of nets would be invisible were it not that the "gillers," as fishermen are called on the Potomac, have extra-large floaters at both ends of each net and on them make fast lighted lanterns.

To look across the broad waters of the

river on nights when the shad are running is to mistake the vision for a bit of Venice, a fairy city twinkling in the darkness.

When we sailed from St. Marys River, over the seven miles of water to the opposite Virginia shore, we found at Lodge, on Yeocomico River, a family which has had an intimate contact with every single one of the 120,000,000 people in the United States. Father and son, they have for many years engraved the steel canceling stamps used in every post office, everywhere, under United States jurisdiction.

Zigzagging back to the Maryland side, one finds, at the head of Breton Bay, the little city of Leonardtown, named, of course, for the first governor at St. Marys. But that was a somewhat ironic compliment which Leonard Calvert died too early to sense. The transfer of the capital to Annapolis was the first drain on the life blood of St. Marys. The removal of the county seat from it to Leonardtown ended its last claim to life.

#### THE BIRTHPLACE OF THREE PRESIDENTS

As one sails out of Breton Bay the Virginia shore opposite, as far as the eye can see in each direction, is historic Westmoreland County. It has a distinction unrivaled by any other in America, for it was the birthplace of three Presidents of the United States—the first, the fourth, and the fifth—George Washington, James Madison, and James Monroe.

Here, in their many ramifications and over a period of more than 250 years, lived the great Carter, Lee, and Washington families. Here, though few survive, were some of the finest mansions of colonial America. The distinction of social and intellectual life in Westmoreland before the Revolution earned it the title of Athens of Virginia.

The most distinguished survival of all these old houses rises on the crest of Nomini Cliffs, 150 feet above the water, higher than any other land in Tidewater Potomac before the river narrows to the width of a single mile. It is called Stratford Hall and it is the ancestral seat of the Lee family.

The patent to the estate dates to the middle of the seventeenth century. The first considerable house was built here early in the eighteenth century, but fell

THIS FLORAL DIADEM OF PINK AND WHITE IS THE SUPREME GLORY OF WASHINGTON'S SPRINGTIME

The annual blooming of the Japanese cherry trees along the Tidal Basin stands out as the finest natural display of the year and attracts tens of thousands of visitors to admire their delicate beauty.

the victim of flames about 1729. There-upon the present huge pile was erected.

We found it about to celebrate its 200th birthday, still a notable structure, built as solid as a fortress; and, like a fortress, it was set in the center of a square, at the four corners of which were strong brick buildings, each united to the other by high and strong brick walls.

Here, at Stratford, lived a constant succession of distinguished men. The builder was the only Virginian who exercised the prerogatives of governor in absence of the royal appointee. Here, in one generation, in the middle of the eighteenth century, were born six Lee brothers, of whom two were members of the Virginia House of Burgesses; two others, Richard Henry Lee and Francis Lightfoot Lee, were signers of the Declaration of Independence, and another two, Arthur Lee and William Lee, represented the colony diplomatically in Europe. Though born farther up Tidewater Potomac, at Leesylvania, Gen. "Light Horse Harry" Lee, a relative, lived at Stratford, and here was born his son, the ranking Confederate general, Robert E. Lee.\*

#### STRATFORD'S PRESERVATION ASSURED

Stratford has waited a long time for the public appreciation which it deserves; but such appreciation has reached it at last and in tangible and practical form. It is the latest of the historic colonial houses to be taken over for preservation against decay, for restoration to a semblance of its early character, and for maintenance as a national shrine to the memory of the great men who were born or lived there. Stratford is now the property of the Robert E. Lee Memorial Foundation, a national patriotic organization of volunteer workers with active chapters already established in nearly half of the States of the Union. The Foundation took title to Stratford on July 19, 1929.

Only five miles above Stratford is an estate called Wakefield, where George Washington was born on February 22 (new style), 1732. A monument has stood on this property, in commemoration

\* See, also, "Virginia—A Commonwealth That Has Come Back," by William Joseph Showalter, in the NATIONAL GEOGRAPHIC MAGAZINE for April, 1929.

of this fact, for many years. Otherwise the birthplace of Washington has been without recognition until the organization, a few years ago, of the Wakefield National Memorial Association, which has undertaken the restoration and care of this appealing spot.

In anticipation of the 200th anniversary of the birth of Washington, in 1932, the Wakefield Association has caused drawings to be made for rebuilding, as nearly as surviving evidence makes possible, the house which formerly stood on the ruins of the foundations near the monument.

Monroe was born on the creek next above, which now bears his name. Madison's birthplace is eight miles away, at Port Conway.

Crossing again to Maryland, the broad mouth of the deep bay called Wicomico River welcomes us. There are many to whom the Wicomico is known only as the one of the best duck-hunting reaches on the Potomac, so famous for its canvas-back, redhead, and mallard; but, to anyone with an eye to them, the Wicomico has another kind of interest from the estates which flank it. On the estate called Bushwood lived the first of the family of Key who came to America, the great-grandfather of Francis Scott Key, author of "The Star-Spangled Banner."

#### A FASCINATING MIGHT-HAVE-BEEN

For one who cares to indulge his imagination, one of the most interesting spots on the river is the north lip of the mouth of the Wicomico. Here was the home of the Neales. Their name is not so well known to-day as it was some 300 years ago. At that time Capt. James Neale of the Potomac was a friend of King Charles I of England. His wife was a lady-in-waiting to Queen Henrietta Maria, who was godmother to one of the Neale girls. This, however, is only background to recalling how nearly the Potomac came to being the home of two of the conspicuous figures of 17th-century England.

Shortly after the English dropped the head of King Charles into the waiting basket, Sir William Davenant was appointed Lieutenant Governor of Maryland and had his passage engaged on a ship about to start for St. Marys, on the Potomac. This gentleman claimed to be no one less than the son of the great poet and

Photograph by Gerard Halliard.

BOXWOOD HEDGES SCREEN THE GARDENS WHICH GAVE ROSE HILL ITS NAME.

Dr. Gustavus Brown, one of the three physicians who attended General Washington on his deathbed, and the author of the remarkable letter to Dr. Craik (see text, page 387), grew the hedges at this mansion, near Port Tobacco, Maryland, in a design which is unique among all the estates along the Potomac.

dramatist, William Shakespeare. Actually booked to sail with him was Queen Henrietta Maria, the beheaded King Charles's widow, coming, it was said, to make her home here with her friends the Neales, on the Maryland shores of the Potomac. Neither of them came. Nevertheless, their plan provided an interesting might-have-been in the lore of the river.

Just ten miles above the mouth of the Wicomico the Potomac narrows, momentarily only, to a width of only one mile, and here Congress has authorized the building of a bridge. At present there is no bridge across the Potomac below Washington.

If ever this bridge is built, it will, in a general way, connect Popes Creek, the only place where a railroad reaches the Maryland side of the river below the capital, with the Virginia shore near the Naval Proving Ground at Dahlgren, where every gun destined for a United States naval ship is brought and tested before final emplacement.

Such a bridge would unite an almost due-north-and-south road from the National Capital to the city of Norfolk, across the four rivers of that region, so rich in history and natural beauty, known as Tidewater Virginia.

#### PORT TOBACCO, A DERELICT CITY

Farther ascending the river here, the stranger finds a confusing vision before him. The course up from Wakefield has been almost due north, but now there is a wide opening stretching to a watery western horizon. Which is Potomac, straight ahead or to the left? A passing steamer would answer that question, for it would swing round Mathias Point to the west on its way farther "up river." But we would miss one of the rich interests of the region if we did not steer straight ahead into what must then be another of the Potomac's numerous "creeks."

Such it is, its name is Port Tobacco, and at its head we find the remains of the colonial brick city of the same name, another of the vanished 17th-century cities of the Potomac.

Like St. Marys, the former Port Tobacco is a derelict, a ghost of its former self. But, looking up at the surrounding hills, one finds a circle of richly associated estates: Causine's Manor, St. Thomas

Manor, Mulberry Grove, La Grange, Rose Hill, and Habre de Venture.

#### A FAMOUS PHYSICIAN'S LETTER ABOUT WASHINGTON'S LAST ILLNESS

La Grange and Rose Hill are two handsome, now somewhat gaunt, mansions, whose appearance seems to confirm the tradition that they were built in competition with each other. Another point of identity is that the competitive builders were fast friends, two physicians, who were both called to the bedside of General Washington in his last illness.

La Grange was built by Dr. James Craik, Rose Hill by Dr. Gustavus Brown. One would like Dr. Brown for his house; one would like him even more for his extensive and imaginative planting of his box-bordered rose gardens; but his irresistible challenge to our admiration is this extraordinary, candid, and generous letter which he wrote to Dr. Craik soon after returning from Washington's deathbed:

"I have lately met Dr. Dick again, in consultation, and the high opinion I formed of him when we were in conference at Mount Vernon last month, concerning the situation of our illustrious friend, has been confirmed.

"You remember how, by his clear reasoning and evident knowledge of the causes of certain symptoms, after the examination of the General, he assured us that it was not really quinsy, which we supposed it to be, but a violent inflammation of the membranes of the throat, which it had almost closed, and which, if not immediately arrested, would result in death.

"You must remember he was averse to bleeding the General, and I have often thought that if we had acted according to his suggestion when he said, 'He needs all his strength—bleeding will diminish it,' and taken no more blood from him, our good friend might have been alive now. But we were governed by the best light we had; we thought we were right, so we were justified."

Habre de Venture—a little hard to spell and to pronounce, but not easy to forget—was the home of Thomas Stone, a signer of the Declaration of Independence for Maryland. Although enriched by some good interior paneling, it is a modest house. Its other conventional features are surpris-

#### A VETERAN OF THE POTOMAC DUCK BLINDS

He rows out to place his decoys, which he anchors against the drift of the stream by means of a short string and lead weight. The broad mouth of the deep bay called Wicomico River is known to many sportsmen as one of the best duck-hunting reaches on the Potomac, famous for its canvashack, redhead, and mallard (see, also, text, page 385).

ingly relieved by the fact that its ground line is actually bent, for it is built on the arc of a circle!

An amusing house, with an amusing name, is old Habre de Venture; but I have found that there are no end of funny place names surviving from colonial Maryland. To recall only a few, there are: Hard Bargain, Bachelor's Hope, Internment (with Resurrection Manor hard by, on the Patuxent), Governor's Gust, Clear Doute, Heart's Desire, New Bottle, Damfrit (with no key to whether the name

referred to what the owner gave for it or cared for it), No Design, Come By Chance, Bread and Cheese Hall, and Want Water.

Returning to the broad sweep of the great river, the tide takes us westward past 15 miles of Virginia shore long known as Chotank. Two hundred years ago it was the domain of the single family of Fitzhugh. One of their estates here, Bedford, embraced more than 45,000 acres along the river. One of their surviving mansions, Marmion, yielded its paneled and painted drawing room to the collection of the celebrated early American interiors in the Metropolitan Museum, New York City.

#### FRANTIC COURTSHIP

Eagle's Nest was built by William Fitzhugh, who accompanied the other Potomac boys into that West Indian campaign under Admiral Vernon, but I found him more interesting for his original method of winning a wife. He fell in love with the young widow Rousby, who lived over on Patuxent, whither he used to go to court her.

She seemed not to have been sufficiently yielding to his impatient nature. One day he was taking leave of her at her landing when the nurse appeared with her baby. Fitzhugh was desperate enough to take a desperate measure. He is reported to have seized the child, jumped into his boat, put off some distance, and then held the child over the water with the threat to the

#### HAULING IN THE CROP AT PORT TOBACCO, MARYLAND

One of the surviving phases of 17th-century life along the banks of the Potomac is that tobacco, which once was currency and which paid all the bills, is still a staple crop and continues to pay a goodly percentage of the bills (see, also, text, page 375).

young mother ashore that if she did not at once consent to marry him he would drop the child into the water to drown before her eyes.

Her reply is not preserved. It is sufficiently satisfactory, however, to know that she did become Mrs. Fitzhugh, and the baby lived to become Mrs. George Plater, wife of the sixth State Governor of Maryland.

As the river turns north it seems for some miles to lose touch with its own past. The smoke and roar on the Virginia shore indicate that here the railway touches the Potomac at several points. It is the railway between Richmond and Washington. But it is much more, for it is the road over which every traveler passes on his way between the North and the South Atlantic States—the roadway of all that vast winter traffic from Boston and New York and Philadelphia and their neighborhoods on its way to Florida.

On this line, at one of its meetings with the waterside, is the military city of Quantico, the principal barracks of the United

States Marine Corps. On the Maryland side, not far above, we see the tall, smoking chimneys of Indian Head, where the Navy has a powder factory.

#### SHIP BELLS TOLL WHEN PASSING MOUNT VERNON

As we sweep up, past these evidences of a somewhat prosaic present, the romantic past of the river comes to the surface again, and it is quiet and peaceful and remote, as in the early days. A turn to the left and a bend to the right bring us into a long reach, framed in high green hillsides, where the greatest glory of the river comes into view. Every ship tolls its bell as it passes the white mansion with the eight slender columns, surrounded by its village of minor domestic buildings, high on the Virginia bank, for it is the home and last resting place of George Washington, his and our Mount Vernon.

During Washington's lifetime Mount Vernon was the focus of the hopes and plans for the independence of the Colonies, as well as of the historic characters who

*Photograph courtesy U. S. Bureau of Fisheries*

TO COLONIALS, AS TO MODERNS, THE NAME OF POTOMAC SHAD IS ONE TO CONJURE WITH

There is no fish roe so delicious as that of the shad, and a planked shad garnished with roe and bacon is as much a gustatory delight in the Nation's capital to-day as it was almost two centuries ago, when the beloved master of Mount Vernon and the owner of Marshall Hall were friends. These fishermen are taking shad from a commercial seine at Bryan Point, Maryland. The United States Bureau of Fisheries formerly had a station here for the propagation of shad and yellow perch, but two years ago it was moved across the river to Fort Humphreys.

clustered about Washington in their work of liberating them and making them into a nation.

In the 131 years since his death, not a foreigner of any distinction has come to America who has not come to this spot to pay his homage to the great character and the lofty ideals it represents. I would not venture to say how many Americans have visited Mount Vernon during this same time, but the number has increased year by year, until now Washington's home and tomb are visited annually by nearly 500,000 pilgrims.

Both shores of the Potomac and of its creeks in Mount Vernon neighborhood are rich in association with Washington and other celebrated men. Near by is Pohick Church, of which the General was a vestryman and which the Mount Vernon family and guests attended, their number making something of a Sunday morning cavalcade, with the great coach and four, a chaise or two, and a sprinkling of young people mounted on riding horses.

#### A BIT OF WASHINGTON REPARTEE

On the way to Pohick we pass Woodlawn, from its hilltop looking down Dogue Creek onto the blue river beyond. This estate was once a part of Mount Vernon's 8,800 acres; but Washington cut off 2,500 acres and gave them to his nephew, Lawrence Lewis, and his wife, Nellie Custis, and there they built Woodlawn Mansion, after the plans drawn for them by Dr. William Thornton, the architect of the Capitol of the United States and of other buildings in the Capital City.

Thornton was a wag as well as an artist. He told, and it seems to have remained unreported for 125 years, an anecdote which reveals, as does no other, how ready Washington could be at repartee. The General, it seems, was seated with other gentlemen at a hunt supper. His chair was directly before the fireplace, in which was a roaring fire. He politely endured the heat until supper had been dispatched and the port and pipes were put on the table. Then he explained his situation and rose to change his location.

"Why," spoke up one of the gentlemen, "it doesn't behoove a general to retire under fire."

"No," replied Washington, "and it

doesn't become him to take fire from behind."

Looking down to the river from Woodlawn, the vast stretches of land on the left of the creek were all a part of Mount Vernon, and the high lands on the right of the creek were Belvoir, the domain of Lord Fairfax, under whose patronage young George Washington learned to be a surveyor.

Belvoir occupied a long peninsula between Dogue Creek and Gunston Cove, containing about 3,600 acres; yet, nearly surrounded by water as it was, the fence line it required, along its northwestern border, was only a mile long. The tract is now owned by the Government and is the Army Engineers' Fort Humphreys.

On the other side of Gunston Cove from Belvoir is Gunston Hall, built by George Mason. Here was a singular and able man, self-educated, the friend and adviser of Washington, Jefferson, and other contemporaries, and himself the author of the Fairfax Resolves, of the Virginia Bill of Rights, and of the Constitution of the State of Virginia.

#### NEIGHBOR DIGGES MADE MAJOR L'ENFANT AT HOME

Other places built by George Mason's sons and their families sprinkle the banks of this end of the Potomac, even as far as Analoatan Island, below Georgetown.

Opposite Mount Vernon, on Piscataway Creek, where Calvert met the Indian emperor (see text, page 374), once stood Warburton Manor, since transformed into Fort Washington. Here lived Washington's friends and neighbors, the Digges, a family scarcely more at home on the Potomac than in London, where Thomas Atwood Digges sat for a portrait attributed to Sir Joshua Reynolds.

Neighbor Digges made at home, here at Warburton, a young French engineer, Maj. Pierre Charles L'Enfant, at the time when that young gentleman was actively engaged in drawing the since-realized plans for Washington.

Nine miles above Mount Vernon one's interest is arrested by Alexandria, for it and Georgetown, now a part of the Capital City, are two of the most interesting surviving settlements on Tidewater Potomac. Both are storied old neighborhoods,

THE MEMORIAL BRIDGE TO THE NATIONAL DEAD NEARS COMPLETION AT WASHINGTON

Between the Lincoln Memorial and the National Cemetery at Arlington, this magnificent structure, begun in 1926, will be formally opened in 1932, probably as a part of the George Washington Bicentennial Celebration. Beyond, and in a line with the Lincoln Memorial, are the shaft of the Washington Monument and the dome of the Capitol. In the background, at the extreme right, is the many-windowed Bureau of Printing and Engraving. The extensive buildings adjoining the Lincoln Memorial on the left are the temporary homes of the War and Navy Departments, while just across the street from them, and to the left, rises the white façade of the Pan-American Building.

rich in American history and in specimens of good early American architecture.

A little way down the river we left Mount Vernon, with all the actualities that remain of Washington the man. Ahead rises the panorama of the Capital City of our Nation, representing the actuality of Washington's ideals and hopes. Above its green skyline rise the lofty cornice of the Lincoln Memorial, the Par-

thenon of the Western World, and the white dome of the Capitol, where focus the lawmaking national Congress and the law-sustaining Supreme Court. Between the two, its tip touching the blue high above every other detail of its environment, is the Monument dedicated to the memory of Washington himself and a fitting apotheosis of the greatest of the great sons of Tidewater Potomac.

## ORGANIZED FOR "THE INCREASE AND DIFFUSION OF GEOGRAPHIC KNOWLEDGE"

TO carry out the purposes for which it was founded forty-two years ago the National Geographic Society publishes this Magazine monthly. All receipts are invested in the Magazine itself or expended directly to promote geographic knowledge.

ARTICLES and photographs are desired. For material which the Magazine can use, generous remuneration is made. Contributions should be accompanied by addressed return envelope and postage.

IMMEDIATELY after the terrific eruption of the world's largest crater, Mt. Katmai, in Alaska, a National Geographic Society expedition was sent to make observations of this remarkable phenomenon. Four expeditions have followed and the extraordinary scientific data resulting given to the world. In this vicinity an eighth wonder of the world was discovered and explored—"The Valley of Ten Thousand Smokes," a vast area of steaming, spouting fissures. As a result of The Society's discoveries this area has been created a National Monument by proclamation of the President of the United States.

AT an expense of over \$50,000 The Society sent a notable series of expeditions into Peru to investigate the traces of the Inca race. Their

discoveries form a large share of our knowledge of a civilization waning when Pizarro first set foot in Peru.

THE Society also had the honor of subscribing a substantial sum to the expedition of Admiral Peary, who discovered the North Pole, and has contributed \$53,000 to Commander Byrd's Antarctic Expedition.

NOT long ago The Society granted \$25,000, and in addition \$75,000 was given by individual members to the Government when the congressional appropriation for the purpose was insufficient, and the finest of the giant sequoia trees of California were thereby saved for the American people.

THE Society has conducted extensive excavations at Pueblo Bonito, New Mexico, where prehistoric peoples lived in vast communal dwellings before the days of Columbus; it is sponsoring an ornithological survey of Yunnan, and is maintaining an important photographic and botanical expedition in Yunnan Province, China.

TO further the study of solar radiation in relation to long range weather forecastings, The Society has appropriated \$65,000 to enable the Smithsonian Institution to establish a station for five years on Mt. Brukkaros, in Southwest Africa.

# Where minutes mean miles and miles mean life or death!

**T**HE one place in the world you might think Time would be unimportant is at the South Pole. But that is not true. Byrd *had* to know the exact time every minute, every day, to navigate properly. That's why 60 Hamiltons were selected as the official watches of the Byrd Antarctic Expedition — and four of them charted the Expedition plane across the icy wastes of the Pole.

Barring their winter trappings, these Hamiltons are just like those that time our country's fastest trains . . . and snuggle in the pockets of our most successful business chiefs.

Whether it is at the Poles, with the country's air-mail pilots, in *your* pocket or on *your* wrist, every Hamilton is an accurate timepiece you would be proud to own.

Let us send you "The Timekeeper", an illustrated booklet, showing an assortment of beautiful new Hamilton models. Address Hamilton Watch Company, American manufacturers of high-grade watches, 882 Columbia Avenue, Lancaster, Pa.

**Hamilton** *The Watch of Railroad Accuracy*

Above—The "Masterpiece", Model C. The dial of sterling silver has raised numerals of solid gold and solid gold hands. In 18k white or green gold with 23 jewels, \$250. Below—The "Flora Bassett"—In 14k yellow or white gold, with 19 jewels, \$150. Other pocket, strap and wrist models for men and women from \$40 to \$685.

FOR A SPRING HOLIDAY  
or A VOYAGE TO EUROPE

Raymond - Whitcomb  
**MEDITERRANEAN  
SPRING CRUISE**

Sailing April 8 on the 20,000 ton liner  
"Carinthia." Rates, \$725 and upward

☞ A six weeks' cruise through the Western Mediterranean at its pleasantest season . . . With visits to the French Riviera, Naples and Venice; Seville and Carcassonne, Algiers and Tunis—all told to twenty-four places on the Mediterranean shores and islands.

☞ Or you may take it as a three weeks' voyage to Naples, arriving there for the Italian Spring . . . or a four weeks' voyage to Venice, convenient starting for Oberammergau and the Passion Play. It assures passage on an uncrowded liner when the pleasant southern route across the Atlantic is at the height of its popularity. The cruise rates include return passage to America at any time during the year.

Send for the booklet, "Mediterranean Spring Cruise"

**NORTH CAPE CRUISE**

☞ The favorite summer cruise. More complete this year than ever before—with visits (without extra charge) to Moscow and Leningrad—as well as to Iceland, the North Cape, the Norwegian Fjords, Stockholm and Copenhagen. Sailing on June 24, on the S. S. "Carinthia." Rates, \$800 and upward.

**A New Round the World Cruise**

Sailing January 21, 1931, on the S. S. "Columbus"

**RAYMOND-WHITCOMB**

126 Newbury Street, Boston, Mass.

New York, 670 Fifth Avenue; New York, 225 Fifth Avenue.

**EUROPE**

Raymond - Whitcomb  
**Tours with Escort**

☞ The easiest way to see Europe ▲ Raymond-Whitcomb have arranged tours that are comprehensive, thorough and easy to make. You have only to select one that suits you in time and route and price . . . secure your passport and pack your trunks. From the day you sail until you land in America again, everything that enters into foreign travel will be provided . . . railroad tickets, hotel rooms, automobiles for sight-seeing, guides. A Tour Manager will go with you to attend to all the details and to see that you have a pleasant trip.

☞ Raymond-Whitcomb invented tours of this sort and have run them regularly for half a century. For the coming Spring and Summer there are fifty-seven Raymond-Whitcomb European Tours. They vary in length from seven weeks to three months. They cost from \$725 to \$2890. They cover all Europe, including Russia, Scandinavia, Czecho-Slovakia and Spain. Most of them visit Oberammergau—for the Passion Play.

Send for the booklet, "EUROPEAN TOURS"

Raymond - Whitcomb  
**Independent Trips**

☞ This is individualized travel. Instead of taking an escorted tour, planned and run by a travel company, you will make a trip which is planned especially for you. It is your own idea of where you want to go and how long you want to stay translated into a feasible program of travel . . . with reservations with European hotels and railroads made for you. Your railroad tickets are secured, your hotel rooms are engaged and everything that can be done in advance is attended to. A chain of Raymond-Whitcomb representatives in European cities and resorts will help you as you travel along.

Send for the Raymond-Whitcomb  
"GUIDE TO EUROPEAN TRAVEL"

# THEY WILL NEVER FORGET

*What They Learn for Themselves  
in The Book of Knowledge Way*

**C**HILDREN learn with amazing ease, when they are really interested. Boys and girls who have The Book of Knowledge, The Children's Encyclopedia, in their homes are learning all the time. They find here the answers to all their questions, with explanations so clear, direct and attractive that they cannot fail to remember. Thus their own curiosity teaches them. Beginning with the Wonder Questions, they go from one to another of the 18 departments: The Earth, Familiar Things, Animal Life, Plant Life, Our Own Life, United States, All Countries, Men and Women, Stories, Poetry, Literature, Fine Arts, Helps to Learning, Things to Make and Do, etc.—the interesting, essential knowledge of the world.

## 15,000 Pictures

The natural method of learning is eye-learning. Your children ask, "Where does the day begin?" "Why is it dark at night?" "What holds a bubble together?" When you explain, what is it you do? You try to

**FREE** to Parents—  
—This Big

make them SEE. You draw a mental picture for them, because pictures are shortcuts to understanding. There are, in The Book of Knowledge, 15,000 striking educational pictures, in color, gravure and black and white. Interestingly, vividly, at a glance they show the life-stories of plants and animals, the deeds of history, the treasures of art, the workings of machinery and the discoveries of science, in a way that words alone could never do.

## Told in the Words Children Know

The pictures lead the children's attention naturally to the text, and they will spend hours at a time reading one after another of the fascinating chapters. This wonderful educational plan is the idea of a father who loved his child and was determined to give him the best possible start in the race for knowledge. Now

The Book of Knowledge is in the homes of close upon 3,000,000 children, has been translated into five foreign languages, won eleven great international medals and is endorsed by parents and educators everywhere. As one mother writes: "There is something missing from the lives of children who grow up without it."

# Twenty-four years of SUCCESS

The advancing years of the  
**POSTAL LIFE** tell a story of  
 most pleasing results for its policyholders

## IS YOUR LIFE INSURANCE QUOTA FILLED?

*Adequate Life Insurance is Most Important for everyone.*

Adding to your Insurance Estate during your productive years should receive your attention from time to time. Some persons add \$1,000 each year as their income increases; others \$2,000, \$3,000, \$5,000.

In the Postal Life Insurance Company you may deposit your premiums monthly if desired. Nowhere can a small sum of money be invested so advantageously as in standard life insurance issued by this Company: for a life policy, less than \$2.00 a month for the younger ages will add \$1,000—if you are thirty, \$1.91, which is also reduced by dividends—guaranteed (9½%) and contingent.

On its "Start-Off" Policy, the premium charge is about one-half these figures.

### Profit by Its Direct Method

Deal with this most modern Company: avail yourself of the economies of its direct method. A knowledge of its benefits is now spread not only throughout this community, but nation-wide.

glow of a personal satisfaction in acting for yourself and saving money. The Company's twenty-four years of experience have given more than in-looks; they record the results of careful tests put into practice in every department of the Company.

Write for information. Get the

# The Britannia drops Anchor in Boston Harbor

## And CHARLES DICKENS Aights

The Old TREMONT HOUSE where Dickens stayed

“THE indescribable interest with which I strained my eyes, as the first patches of American soil peeped like molehills from the green sea . . . can hardly be exaggerated . . . On Saturday, the twenty-second of January, an American pilot-boat came alongside, and soon afterwards the Britannia, steam-packet from Liverpool, was telegraphed at Boston,”—so wrote the immortal Dickens of his visit to America in 1842.

Concerning the good ship Britannia herself, Dickens had this to say! “There she is! all eyes are turned to where she lies . . . every finger is pointed in the same direction, and murmurs of interest and admiration as ‘How beautiful she looks!’ ‘How trim she is!’—are heard on every side.” And he spoke of her officers, “smartly dressed,” and of her “huge red funnel, smoking bravely.”

Indeed, all America shared Dickens’ enthusiasm at the first of all the *steam* ships to establish regular passenger and shipping contact with Europe.

Samuel Cunard had made history. It was Ezra Gannett, man of vision and leader in the rejoicing, who bestowed upon Cunard the sobriquet—“Builder of America.” And Gannett flung wide the doors of the old Federal Street Meeting House and to the assembled Bostonians addressed these burning words:

“No event since the commencement of the present century involves more important consequences to this nation than the coming of Mr. Cunard’s *steam* ship Britannia. It means that our wealth will be augmented, our activities quickened, and means of employment created. How great is its value in spreading civilization over the world!”

THAT WAS IN THE YEAR 1840.

### And now after 90 YEARS

Cunard’s “huge red funnels” throughout the world are testimonials to Samuel Cunard’s far-sightedness. The 1,000 ton Britannia evolves into the regally sized, royally appolloed Berengaria, Aquitania, Mauretania—Cunard’s famous express service. What a history is this of Cunard accomplishment!

C. S. & Co.

# CUNARD

1840 . NINETY . YEARS . OF . SERVICE . 1930

A copy of the sermon of Ezra Gannett, upon “The Coming of the Britannia” in facsimile form, as originally printed in 1840, will be sent on request, Cunard Steam Ship Co., Ltd., 25 Broadway, N. Y.

## Fading memories or fadeless movies ... which will you bring back?

Words cannot tell, occasional snapshots cannot capture the moving splendor of your travels. Bring back a record, adequate and imperishable, in priceless, personal movies.

But choose your movie camera carefully. It will be too late to reconsider when you have returned from your travels. Choose the personal model of the Bell and Howell professional studio cameras that film producers have relied upon for more than 25 years in making theater movies. Choose Filmo.

Several Filmo models serve well every personal movie requirement. All are mechanical masterpieces; each one so simple that it can be operated by a child. Filmo 70-D, illustrated, with three-lens

rutter, seven speeds and variable spy-glass viewfinder, costs \$245 and up in its Sesamee-locked Mayfair case. Others range from \$120. Good camera dealers will recommend and demonstrate them for you. Or write today for the illustrated folder, "Travel with Filmo."

*Filmo 70-D*

All Filmos Use 50 or 100 ft. Films

*For black and white pictures, Filmo Cameras use Eastman Safety Film (16mm.) in the yellow box—both regular and panchromatic—obtainable at practically all dealers handling cameras and supplies. Filmo Cameras and Filmo Projectors are adaptable, under license from Eastman-Kodak Company, for use of Eastman-Kodachrome film for home movies in full color. Cost of film covers developing and return postpaid, within the country where processed, ready to show at home or anywhere with Filmo Projector.*

# BELL & HOWELL Filmo

"WHAT YOU SEE, YOU GET"

BELL & HOWELL CO., DEPT. O, 1804 LARCHMONT AVENUE, CHICAGO, ILLINOIS  
NEW YORK • HOLLYWOOD • LONDON (B. & H. CO., LTD.) ESTABLISHED 1907

**T**HE industrial nation today is sixteen times as big as in 1880. Such astounding progress is a spur to leadership and leadership is itself a spur to new achievement; better service; sounder products. Progressiveness is a necessity to any company which assumes leadership in America.

Grinnell leadership in 1880 covered principally automatic fire extinguishing. It has added the fields of high pressures and high temperatures, humidification, unit heaters, and various supplies to meet the new demands of industrial piping.

In Grinnell laboratories today are being developed inventions which will become necessities in industry tomorrow. Such leadership today rests on these seven developments.

1 The new and higher standard of pipe fittings demanded today, is met by Grinnell — stronger fittings with perfect threads. They are being adopted everywhere for steam and other pipe lines because they make better jobs with less labor.

2 Because they are the only line of hangers easily adjustable after the piping is in place, Grinnell hanger inventions are today being used for all sizes of pipe work throughout the industrial piping world.

3 Constantly increasing steam pressures demand stronger pipe joints and better expansion bends, with safety factors far beyond the immense pressures being covered. Today, this necessity is fully met by the Grinnell Triple XXX line of fabricated products for super power work.

4 Modern buildings demand more economical heat and better heat than can be wrong from radiators and pipe ends. Thermolier, the new Grinnell copper suit heater, is

the long sought solution, controlled heat, instant and automatic. The patented cooling leg simplifies the whole piping problem.

5 Complete systems for humidification are furnished through American Moistening Company, a subsidiary. A unique automatic control — maintains proper air conditions more accurately than ever before.

6 The remarkable Thermoflex radiator trap is offered by Grinnell. Its famous Hydron bellows, will stand an accidental shut of high pressure, and pulsations into the hundreds of millions.

7 Increasing fire danger demands today a quicker acting sprinkler head, and one which cannot become inoperative through incrustations of foreign matter. The Grinnell Quartz ball head is a scientific achievement fully meeting this demand.

# The Alexander Hamilton Institute

# ANNOUNCES

## New Executive Training for men who want to be independent in the next five years

**T**HE next five years in American business will offer more opportunity and more danger than any similar period for a long time.

More men will achieve independence. More men who might achieve it will fail because of a failure properly to analyze the facts.

A right program will be more profitable than it has ever been. A wrong decision will be far more costly.

To put it in other words, the organization of business, the tempo of business, the speed of business are all in process of rapid change. The evidence is everywhere. In a brief period of thirty days between October 15th and November 15th, 1929, thousands of men who supposed that they were secure for life found themselves suddenly ruined. Thousands had their confidence so shaken that they are dazed and wondering. They have no plan. "What will happen to business in the next few years?" they are asking. "What program should we lay out for ourselves?"

### The Institute foresaw the trend

Two years ago the Alexander Hamilton Institute, from its nation-wide contact with business leaders, sensed the tremendous

changes which were about to come, and began to make preparations to meet them.

The Institute's original Course and Service in business was a great Course and did a great work. More than 398,000 men made it a part of their business equipment, and are far ahead because they did.

But the Institute saw that revolutionary changes were in prospect. Little business units were being merged into big units. Industries were reaching out into foreign markets. Security prices were about to become subject to a whole new set of conditions. Production methods were being revolutionized. The sales organization and strategy of the past were entirely unfitted for the new competition. The responsibilities of guiding the new business could not be discharged by men whose training had been in the old.

The Institute said: "We must prepare a wholly new Course to meet the new conditions. We must engage the co-operation of authorities whose business success belongs to the present, and not to the past. They must be the biggest and most successful men of the present—the men who will be the leaders during the coming five years."

Without regard to cost, the

Institute went out to enlist the co-operation of the nation's business leaders. The response was even beyond its most sanguine expectations. In effect, these men said:

"The greatest need of all is for trained leadership. Count on us. Any contribution we can make to this New Executive Training will be a contribution to our own best interests, because it will furnish us with more of the sort of executives we need."

It is impossible in this page to give detailed facts about the New Course and Service. It is new from start to finish—so new that the latter part will not be entirely off the presses for some months. Every unit will come to you fresh and live and breathing—straight from the very inner sanctums of this new business world.

We invite you to send for the full facts in a new book entitled: "What an Executive Should Know." It is a booklet that should be read by every man who expects to win a secure place for himself in the next five years. It is well worth an hour of your time. And it is free.

Send for your copy today. You cannot gain a proper perspective on what lies ahead unless you look at the picture through the eyes of the country's biggest men.

Alexander Hamilton Institute, 310 Astor Place, New York City. (In Canada address Alexander Hamilton Institute, Ltd., C. P. R. Building, Toronto)

Please send me "What an Executive Should Know," which describes the new Modern Business Course and Service.

DE LUXE TRAINS

John G. Shedd Aquarium.  
Graham, Anderson, Probst & White  
Architects

## The Sea comes to Chicago

COUNTLESS thousands of midlanders will soon secure a close-up view of sea-horses, dolphins, and other strange creatures that inhabit the five oceans, the rivers and streams of America and foreign lands.

The John G. Shedd Memorial Aquarium, just completed in Grant Park, Chicago, and built of White Georgia Marble, is said to be the largest aquarium in the world. It is not only a wonderfully interesting marine museum, but is an architectural gem as well, in keeping with the other imposing edifices in Grant Park.

Georgia Marble has played an important part in the beautifying of Chicago's lake front, being used also for the Field Museum and the Buckingham Memorial Fountain. Where beauty, permanence and artistic character are desired, Georgia Marble is chosen.

# Ripening oranges - giant snow peaks

*An often-repeated picture in Southern California's Orange Empire*

**H**ERE'S a winter vacation thriller! In Southern California at this season you can look upon this spectacular picture . . . thousands of acres of ripening oranges and valleys aflame with flowers protected from the cold by mile-high snow-capped mountains! Everywhere about you it is like the mild spring days at home. This, too, is the season the desert bursts into bloom.

Every vacation hour here pays a dividend . . . out of doors in the warm, energizing sunshine. Golf on always-green courses . . . hill saddle trails . . . sun baths on the beaches . . . polo matches in the afternoon sunshine! Entertainment is unending!

All the year, people from all over the world are vacationing in Southern California. There are no "peak prices" of short season resorts. Your expenses can be moderate . . . no more than when home. Decide to come NOW. If you can't make it, plan to spend next summer's vacation here.

We have published a beautiful book picturing this Southland. It contains 71 camera studies by the best men of this land of "pictures." The cover is in full color. You may have a copy for the postage cost.

**EXECUTIVES:** Los Angeles County oil fields represent an investment of 750 millions . . . the agricultural industry over 400

millions. The port of Los Angeles is second only to New York in volume of export tonnage.

## DAVEY TREE SURGERY

Reproduction from a painting made on the campus of the Sweet Briar College, Sweet Briar, Va., by Frank Swift Chase © The D. T. E. Co., Inc., 1930

## Half a century since John Davey originated the science of Tree Surgery

FIFTY YEARS ago John Davey began experimenting with his new theory that trees could be saved by curative processes. Were they not living things? Were they not subject to disease, injury and other ills? And yet to most men they were just trees, destined to die whenever circumstances took them.

Countless millions of people had seen trees die—if they saw trees at all—without ever a thought that they could be saved. John Davey saw sick and injured trees with understanding and sympathy. He conceived the idea that a system of methods and treatment could be devised that would save innumerable trees that were being lost unnecessarily.

What gave him the idea no one knows. John Davey passed away suddenly nearly seven years ago without disclosing the source of his inspiration. He did a comparatively rare thing; he gave the world a new idea.

As with most new ideas, John Davey endured the long and bitter struggle against ridicule and cynicism and

inertia and established habits of thinking. He struggled forward with remarkable determination and with sublime courage. He lived long enough to see his new science a proven success both from a practical and a commercial standpoint.

Like most geniuses John Davey did not care much for money. He had a profound love of nature and was not only thoroughly trained in horticulture, but was an eager student of the related sciences. He not only gave to the world a new idea, but he gave a fine philosophy also. To him the whole development became a great ideal of usefulness and constructive service. His spirit impressed itself indelibly and is a living force in the organization that he founded and inspired.

*Tune in Davey Tree Golden Anniversary Radio Hour*  
Every Sunday afternoon, 3 to 4 Eastern time; 4 to 5 Central time;  
over the Red Network National Broadcasting Company. Fea-  
turing the old-time songs that everyone knows and loves. Listen  
to Chandler Goldthwaite on the Skinner Residence Organ.

THE DAVEY TREE EXPERT CO., Inc. 415 City Bank Bldg., Kent, Ohio, and all Principal Cities

# It is not only quiet now .. but will remain quiet *always*

*because all the machinery is sealed up tight, hermetically sealed . . . and permanently oiled*

What a lot of claims you hear these days about quiet refrigerators! Almost *any* good refrigerator is quiet—when it is new. But how are you going to pick the one that will *remain* quiet?

Step into a General Electric showroom, and your question will be answered *forever*. There you will see how quietly a General Electric Refrigerator may be expected to run in your own home—not merely for a week or two, but *always*.

On top of each General Electric Refrigerator you will see a round steel casing scarcely bigger than a hat box. Within that casing there is sealed the entire mechanism that will operate the General Electric Refrigerator for *years*—quietly, economically, dependably—without a thought or worry.

And sealed up with it is a *permanent* oil supply, which assures you of that same smooth quietness, that faultless operation, that utterly

dependable service *always*. Dirt, that causes wear and noise, is shut outside forever. Moisture, rust—the beginnings of breakdowns and repairs—can never get within. General Electric mechanism is sealed up tight—*hermetically* sealed—not only against noise, but against trouble and expense.

For descriptive booklet, and our easy terms, write Section R-3, Electric Refrigeration Department, General Electric Company, Hanna Building, Cleveland, Ohio.

Is  
 your home  
 smaller  
 in winter?

**T**HE cold rooms which cut down living space  
 in so many homes during winter can usually be  
 warmed by enclosing heater pipes with J-M Im-  
 proved Asbestocel. This is a pipe insulation which  
 encloses thousands of air cells between corruga-  
 tions and cross corrugations of asbestos paper. Its  
 use reduces heat loss and insures hot water or  
 steam reaching every radiator.

Gives comfort and pays  
 for itself in short order

Asbestocel is an investment. It will pay for itself  
 in fuel saving in two winters. If you are planning a  
 new home be sure that J-M Asbestocel is specified.  
 If the pipes in your present home are bare, you can  
 have those which are accessible covered with J-M  
 Asbestocel. In either case, you are only loaning  
 yourself the money which it costs for the short  
 time it will take your fuel savings to repay it.

Ask your plumber for Asbestocel. Look for the  
 red band on the inner end of each section. This  
 identifies it as the product of Johns-Manville, world  
 leader in the production of insulations for all con-  
 ditions of heat or cold. Write to Johns-Manville,  
 292 Madison Avenue, New York City, for our free  
 booklet, "More Heat From Less Fuel."

**Johns-Manville**

IMPROVED  
 ASBESTOCEL

"WHAT I WANT TO KNOW  
—before I buy furniture"

"I AM through with being  
old furniture. Now I  
want to buy some.

"I am no expert, though I do know  
something about period styles and  
can tell a Queen Anne from a Sheraton  
at forty paces. But I want to know  
more about workmanship, more about  
materials, more about the value of  
furniture and not so much about its  
price and the agreeable arrangements  
for deferred payment."

This sort of inquiry comes to us daily  
from hundreds and thousands of  
women. We cannot give them as much  
information as they might get from a  
reputable dealer, but we can point out  
to anyone who buys furniture a few  
of the short-cuts to assured quality.

In the first place, concentrate on fur-  
niture of American Walnut. There are  
other beautiful woods, of course, but  
there is no other which so combines  
good taste, enduring stylishness,  
beauty and long life as does Ameri-  
can Walnut.

In the second place, look for that furniture in which  
American Walnut is used for legs, for framework, and  
for panels. Such use of American Walnut is a guarantee  
of excellent workmanship—for manufacturers would not  
slight craftsmanship when they use the best materials.  
And, "all-walnut" furniture is the best possible assurance  
of long life. The beauty of American Walnut panels is  
enduring—the interest and variety of figure, the mellow-  
ness of color make American Walnut furniture harmo-

nious in any decorative scheme, charming in any setting.

In the third place, send to us for our forty-eight page  
booklet\* which will give you simple and positive in-  
formation with which you may always identify  
American Walnut and distinguish it from its substi-  
tutes. You will also find in this booklet interesting  
facts on the various styles in furniture, on construc-  
tion points to watch out for, and on the best ways to  
keep furniture looking its best in your own home.  
A copy is yours for the asking.

# Suppose you are going to EUROPE

## What should you do?

The answer is—confer with Cook's—they will treat your problem as an individual one; Cook's will outline the most suitable route, make all steamship reservations—have you met on your arrival abroad—and escorted if you so desire. They will reserve hotel accommodations, will insure your baggage, aid you in securing your passport—in short, Cook's service simplifies travel to the highest degree.

They may suggest Individual Travel, one of their special features, enabling the fullest expression of your own ideas—or, your requirements may be best served by joining one of their limited Group tours. These are many and varied—whether you wish to emphasize luxury or economy.

Cook's will discuss with you—private or group automobile travel—special air cruises or general air trips.

89 years of experience—200 offices in Europe—a service station for you at every important point. Cook's Travellers' Cheques are welcome everywhere.

### OBERAMMERGAU

Following their practice since 1860 the Oberammergau Passion Play Committee have again appointed Thos. Cook & Son as their Official Agents; applications for accommodations and seats, should be made promptly.

## Britain

Stretching from London away to the North-east is a country rich in Britain's early history. To know her she must be seen in the quaint old villages that date back centuries before the Norman conquest; along roads that once resounded to the passing of Roman chariots; by the wall of Hadrian; or in some little sea-besieged coast town that witnessed the coming of the Danes. She must be studied in the subdued light of old cathedrals and abbeys.

The London & North Eastern Railway traverses this enchanting land. It takes you in speed and comfort to the many centres of historic interest and scenic beauty. It is, too, the track of the World's Most Famous Train—The "Flying Scotsman," the swiftest train over the shortest route between London and Edinburgh, accomplished in 8½ hours without a stop.

And when you have completed your tour of Britain the daily and nightly steamship services via Harwich provide the most comfortable routes to Continental Europe.

Call or write for the new Guide No. 69 which tells you where to go and what to see.

# SHAVING IS NOW FUN

... so easy, smooth,  
quick ... with **Barbasol**

\*"Shaving gets a laugh out of me now, instead of a man. It's all fun. No brush. No lather. No hairs that miss their exit cues—and a face as smooth as a baby's. How? Just Barbasol and a trusty blade, nothing else . . . Shakespeare said, 'There's the rub,' but he wore a beard. You don't have to rub in Barbasol; just another reason it's so quick, clean and comfortable, I guess . . . I'm one of the Barbasol boys and proud of it—every time the spotlight hits me."

*Phil Baker*

THERE'S something about Barbasol that makes men want to yell with joy. Hundreds write us all the time telling how Barbasol takes the tussle out of beards . . . Here's one: "I never really enjoyed a shave until I used Barbasol—no pull."—W. C., Illinois. And another: "It leaves the skin so wonderfully smooth. I get more shaves per blade."—J. E. S., New York. Again: "Barbasol is a boon to shavers—a revelation."—J. T. B., Pennsylvania. (Yes, names on request if you want.)

*Follow these directions and you follow the crowd*

Get this straight—Barbasol doesn't make a lather. You don't need it. Barbasol is entirely different . . . 1 Wet your face well. *Leave it wet.* 2 Spread on Barbasol. Don't rub it in. 3 Hone up, strop up, wet the blade and—*shave.*

Who'd believe this quick, simple method could perform such wonders? The beard is soft, but crisp. Blade slides along *easily.* Whiskers come off clean, close. Face is soft, refreshed. No lotions needed and the blades last longer.

You can only prove this about Barbasol *on your own face!* Try it tomorrow morning. Generous tubes, 35¢ and 65¢ at all drug stores. Buy it now and give your face a glad surprise! The Barbasol Company, Indianapolis, Indiana.

\*Barbasol testimonials are not paid for.

PHIL BAKER, the bright boy who makes his accordion talk, and makes his talk—accordingly. Entertainer and star of more good shows than almost any other songster. He's wise-cracking in "Pleasure Bound" these days and, from all reports, is producing a laugh a minute as usual.

## BARBASOL SKIN FRESHENER

Here's a bracer for the face, morning, noon or night. Slap it on face and neck when tired. It tingles; rejuvenates. Makes a new man of you. Try it!

# Barbasol

*For Modern Shaving*

No brushing—No lathering—No rubbing

# LAST CHANCE to SAVE on the NEW WORLD BOOK Encyclopedia

THE old joke—"don't give him a book—he has a book"—might well apply to millions of homes, offices, libraries and schools—where old-type encyclopedias rest in peace on the book shelves, because they no longer serve our needs.

Those who own THE WORLD BOOK use it, constantly. They like the non-technical, simple, interesting story form in which facts are presented. In the space of only a few years, THE WORLD BOOK has achieved the rating "best of popular-priced non-technical reference works" by unanimous verdict of thousands of educators and authorities.

## Now—a NEW WORLD BOOK

### RATED FIRST!

Committees of the American Library Association and the National Education Association—State Superintendents of Education—Wilson catalogs for grade and high school—and thousands of leading educators and librarians call THE WORLD BOOK "best of its type."

Edited by Prof. M. V. O'Brien, Department of Education, University of Wisconsin, and a brilliant staff of 201 authorities.

Progressive teachers will tell you that children in grade and high schools need the NEW WORLD BOOK at home, in order to look up subjects they encounter in their textbooks and classes.

Twelve volumes instead of ten—thousands more pages—many thousands more illustrations (of the quality you see in "National Geographic"), finer paper—colorful bindings—a 13th volume that organizes all human knowledge into 40 major departments and gives you an outline and page references for each topic—abolition of the "index in the back" and instead listing every topic in its proper alphabetical place—

These are just a few of the features of the new edition—so new it isn't in the press as you read this.

## Smaller and more convenient . . . *but just as safe*

American Express Travelers Cheques have been made smaller, more compact, and less bulky. No larger than the palm of your hand, enough of this safe and worry-proof "money" for a long journey will fit daintily into a woman's handbag, taking up no more than a compact's worth of space. Or slide snugly into a man's inside pocket like a card-case.

The new Travelers Cheques, approximately the size of the new U. S. dollar bill, have the same familiar blue color which is recognized all over the world and the same signature method of identification. The size only has

been changed. Should these Cheques be lost or stolen before the second signature is made, their value is refunded to you.

Carrying American Express Travelers Cheques automatically entitles you to the Helpful Hand of American Express Service in this country and in foreign lands...making your journeys more comfortable and smoothing your pathway at principal ports, stations, and frontier points...Spendable everywhere, they are issued in denominations of \$10, \$20, \$50, and \$100. Cost 75c for each \$100. Now on sale at 22,000 Banks, American Express and Railway Express offices. Merely ask for the blue color American Express Travelers Cheques.

It may *not* save  
your money . . .  
but it may save  
your *teeth*

**F**ORHAN'S has always been made with the feeling that people are far more anxious to have a good dentifrice than a cheap one.

In so vital a matter as good teeth, you need all the protection that the *finest* dentifrice can give.

In fact, the origin of this dentifrice was a preparation devised by R. J. Forhan, D. D. S., and employed by dentists for years in the successful treatment of pyorrhea.

But dentists realized that, in frequent cases, more than office treatment was required. So the question was raised, "How can the benefits of this treatment be extended to the home?"

Dr. Forhan was finally successful in combining his widely known treatment with tested ingredients for cleaning teeth—and the product soon became known as *the dentist's dentifrice*.

Forhan's cleans teeth and cleans them thoroughly. But it is also beneficial to the gums. Applied with massage at the time of brush-

ing, it firms up the gums and helps keep them in the glow of health.

Even in the healthiest mouth, the use of Forhan's is important—for it is always better to prevent disease from getting a start than to treat it afterwards.

Adopt Forhan's as your dentifrice. It helps you keep the mouth of youth, well into middle age. Forhan's comes in two sizes, 35¢ and 60¢—just a few cents more and well worth it. Forhan Company, Inc., New York.

---

Any mouth may have  
pyorrhea and at forty  
the odds are  
*4 out of 5*

# Authorized to save a life ... but not to send a bill

**A** CRASH at the corner. A gathering crowd. Somebody hurt. "Take her in there!" ... "In there" is the drug store.

The Druggist is not a physician. But because he has been carefully educated in many of the things the physician must know, he is authorized by law to administer first aid when immediate medical attention cannot be had.

He is not allowed to take pay for this. Nor does he want to. It is not his business—the public interest forbids any division of the physician's burden of responsibility. The Druggist is merely performing one more phase of the endless service that we have come to expect of him. How constantly we use this service

How seldom we pay for it even in thanks!

Every community breathes more easily because there is a Druggist at the corner. And there is an added assurance, full of comfort, in the fact that on his shelves are the trusted products of Bauer & Black, America's foremost producer of sterile surgical dressings—an institution identified these thirty-five years with a high and unbending standard of quality.

Sterile gauze and cotton, adhesive plaster, mercurochrome swabs and bandages—these are only a few of the many invaluable Bauer & Black articles that your physician approves and your Druggist keeps ever ready for your call.

BAUER & BLACK Zinc Oxide Adhesive Plaster. Buy the five yard spool for greatest economy.

BAUER & BLACK Handy Fold Gauze . . . ready-cut sterile squares in germ-proof envelopes.

BAUER & BLACK Sterile Absorbent Cotton in the handy package. Soft, fluffy, highly absorbent.

## Buy when you're convinced

We claim that, if you will accept our free 7-day shaving test, our chances are 86 in 100 it will win you. Will you take us up?

**P**ALMOLIVE Shaving Cream, in a few short years, has become the fastest selling in the world. Millions of men who have sent for our free test have been won by it. 86% of those who try it never return to old methods.

Our problem is to convince you of the importance of making this test.

Our laboratories, for 68 years creating world leaders in the soap field, felt that olive oil in a shaving cream would do much, by its cosmetic emollience, to relieve the irritation and chafing of daily shaving.

Time and again they tried to make a shaving cream worthy of the name Palmolive. 129 formulas were rejected before success came. Then we offered men for a convincing test, a product which embodied 5 important improvements.

### 5 Features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes.
4. Strong bubbles hold the hairs erect.
5. Fine after-effects due to olive oil content.

## A SIMPLE Way to Bring the Song Birds

AMERICA'S foremost bird authority for 50 years, has written an interesting book, beautifully illustrated with 55 actual photographs—"Your Bird Friends and How to Win Them." Tells you how to have birds on your premises the year round—explains styles of houses, baths and shelters they prefer. Send for this FREE book today.

Birds are useful. They keep the garden free from cut-worms, bugs, moths and other destructive insects. Martins feed from the air. One colony will destroy thousands of mosquitoes a day.

**Birds Bring Cheer**  
 A melody of bird songs will add to the attractiveness of any home. Naturally, birds go where they are most welcome—have good places to nest, plenty of fresh water and are not molested by their enemies. Write for free book.

## People Who Do Not Believe in Risking Their Principal

IN the past year, when talk and attention have centered as never before upon speculative securities, we have gained 14,183 new customers for bonds.

This seems to us highly significant. It reminds us once again that, despite the hue and cry, the great majority of conservative people is just as cautious and just as insistent on safety of principal as ever.

It has been our privilege to serve these thrifty, far-sighted investors ever since our business was founded in 1882, and our steady growth tells us we are making a stronger appeal every year to the people who do not believe and cannot be made to believe in risking their principal.

Write for our booklet, "How to Invest Money."

# Want to Get Ahead?

The great English writer, Arnold Bennett, said, "I suppose that for the majority of men the suspension of income for a single month would mean either bankruptcy, the usurer, or acute inconvenience".

Metropolitan Life Insurance Co.,  
Dept. 330-N  
One Madison Avenue, New York

Please mail, without charge, booklet "Let Budget Help" which shows how to make incomes cover necessary expenditures—with something left over—and gives full details relating to budgeting incomes ranging from \$100 to \$800 a month.

Name \_\_\_\_\_

Street \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_

A MAN has small chance to get somewhere and be somebody if he is entirely dependent upon his next pay-check. He is likely to be as helpless as a child if his income stops.

Many a man finds himself in a rebellious frame of mind and sorry for himself because he is "broke". He feels bottled-up, half stifled, almost shackled and handcuffed. Unhappy in his work, he does it half-heartedly, badly.

He wants to quit his job but he doesn't dare. His boss would like to discharge him but waits because he is sorry for him and his family.

If a man has not learned how to live within his income, it makes little difference whether he earns \$1,000 or \$10,000—he will always be in trouble. But budgeting his weekly or monthly salary to cover expenses for the necessities and comforts of life will show him how to live within his income whatever it may be.

Do you know how the experts arrange a budget for salaries from \$1,000 to \$10,000? Do you know what per cent of the income should be spent for each of the general expense items—food, shelter, clothing, household operating expense, insurance, education, entertainment and investment?

When speculation is substituted for in-

© 1930 Metropolitan Life Insurance Co.

vestment the last hope for safety usually vanishes.

Budgets have solved money problems in many homes. A typical illustration is furnished by a woman who provided a good home for husband, high school daughter and 12-year-old son on \$200 a month. She reported that when they attempted to live without a budget they were always in debt and worst of all in mental and physical distress. Since their conversion to "the budget way" they have found they are able to live better and save 10%.

Have you ever experienced the peace of mind and satisfaction that result from an intelligent budgeting of your income? With necessities provided for and a little money left over you have a far better chance to get ahead.

Send for booklet entitled, "Let Budget Help", which was written with a full understanding of the problems of those with limited incomes. Use coupon above.

# Prestige

All that Whitman's have learned in eighty-eight years about making good chocolates is summed up in this box of Prestige Chocolates.

The pieces are small, shaped with care, beautiful as well as tasteful.

Centers are new confections, covered with three kinds of those distinctive Whitman's chocolate coatings, vanilla, milk and semi-sweet.

The metal box containing the Prestige pieces is a step forward in the combination of art and utility.

Sold everywhere by the selected stores — usually drug stores — that sell the Sampler and other Whitman's candies.

THE WESTERN ELECTRIC COMPANY SEARCHES THE WORLD FOR MATERIALS, AND FASHIONS THEM INTO THE EQUIPMENT OF A NATION-WIDE TELEPHONE SYSTEM

## That time and distance may be subject to your voice

*An Advertisement of the American Telephone and Telegraph Company*

THE Bell Telephone System shapes the stuff of the earth to your communication needs. It delves into the forces and methods that enable you to project your voice where you wish. It searches the world for the materials needed to put its discoveries at your command, and fashions them into the connected parts of a nation-wide system.

It has dotted the nation with exchanges, and joined them and the connecting companies with the wires and cables which enable you to talk with anyone, anywhere.

Each of the 24 operating companies of the Bell System is attuned to the needs of its area. Each is local to the people it serves and backed by national resources in

research, methods and manufacture. Each has the services of the staff of the American Telephone and Telegraph Company, which is continually developing improvements in telephone operation. Each has the advantage of the specialized production of the Western Electric Company. This production embodies the results achieved by the scientific staff of the Bell Telephone Laboratories, one of the great industrial research institutions of the world.

Your telephone company is in a position to offer you the service which you have today because the Bell System is organized to meet your growing communication needs with increasing satisfaction and economy.

# FOR INDIVIDUAL AND INSTITUTIONAL INVESTORS

Every investment account, whether made up entirely of fixed interest-bearing securities or including a proportion of equity issues, should have a foundation of high-grade bonds. Government, State, Municipal and the best Corporation bonds are the recognized media for the conservation of capital, and are just as suitable investments for individuals as for savings banks, insurance companies and other institutions.

The National City Company provides conveniently located investment offices in the following cities where recommendations for the employment of current surplus funds will gladly be made:

Albany, N. Y.	Indianapolis, Ind.	Portland, Ore.

STRENGTH

**I**n one important construction feature, the Mohawk Flat Tread Special Balloon differs radically from every other tire. The Tread is buttressed at the shoulders with long, powerful, pillar-like supports which taper up into the pliant, shock-absorbing balloon sidewalls.

These powerful shoulders distribute flexing — they prevent sharp hinge-like tread action which generates heat — rubber's greatest enemy — and this promotes long life and slow, even tread wear.

Look for the buttressed shoulders — the distinguishing marks of a distinguished tire.

NEW CHRYSLER "77" TOWN SEDAN, \$1795 (Special Equipment Extra)

Today, as always, what Chrysler does—or proposes to do—becomes the basic standard of efficiency in the realm of automobiles

## CHRYSLER INSPIRES a pride all its own

**FEATURES:** LARGE, POWERFUL ENGINES . . . SEVEN-BEARING COUNTER-WEIGHTED CRANKSHAFT . . . MULTI-RANGE FOUR-SPEED TRANSMISSION AND GEAR SHIFT . . . RUBBER SPRING SHACKLES . . . CHRYSLER WEATHERPROOF FOUR-WHEEL HYDRAULIC BRAKES . . . ROOMIER BODIES OF DREAD-NOUGHT CONSTRUCTION . . . ADJUSTABLE FRONT SEATS . . . METALWARE BY CARTIER ET CIE.

Chrysler Imperial, "77", "70" and "66" offered in all popular body styles—Prices range from \$995 to \$3575. All prices f. o. b. Detroit (Special equipment extra).

Ownership of a Chrysler brings with it a deep-rooted satisfaction which springs from the firm conviction that, regardless of price, Chrysler is a car that knows no peer.

Up to six years ago, thousands of motorists could be satisfied only with highest-priced motor cars.

Today they are driving Chryslers . . . and with polite boastfulness, for they have been able to find more complete fulfilment of their motoring ideals in a Chrysler than in any other car.

At the same time, because of surprisingly low prices, Chrysler has enabled thousands upon thousands to enjoy this fine motoring.

And because Chrysler gives the best performance motoring affords, Chrysler ownership imparts a certain thrilling pride, the like of which cannot be claimed so universally by any other motor car.

# Heisey's

GLASSWARE  *for your table*

*Glass Perfected Through the Secrets of 4000 Years*

IN ANCIENT CONSTANTINOPLE, mighty seat of empire, skilled craftsmen worked in that section of the city known as the Gateway of Glass. Here during the flourishing period of art called the Byzantine, they developed wondrous secrets of coloring and making glass, so that their rich mosaics have ever since been famous. They also wrought beautiful lamps, vases, bowls and chalices, which are now treasured in museums. Modern American glassware by Heisey is the fruition of the secrets of ages.

**A** TREASURE chest of bountiful health lies open to the Chris-Craft owner. Life on the water offers a multitude of thrills and pleasures unknown on land . . . One may splash about at the swimming raft, take dinner at the distant yacht club, then swing past a dozen miles of shoreline to evening social affair in remarkably short time . . . Chris-Craft days are full of joy. Go fishing, step out and win a race, entertain guests in delightful comfort, or just loiter among wooded islands. A whole new range of pleasures begin at the water's edge and all are spread before the Chris-Crafter for his choice . . . Distinctive among the 24 models of the 1950 Chris-Craft fleet are the 20 and 22-foot runabouts. They are luxurious, deep-cushioned, 9 passenger Chris-Craft. They go like the wind, yet are easily controlled by boy or girl. They start, stop, steer, turn and reverse like an automobile, yet they are infinitely more flexible . . . Priced at \$1895, the 20-foot Chris-Craft runabout is the lowest priced Chris-Craft ever offered. The 22-foot Chris-Craft is listed at \$2195 and \$2595, offering a life-time of dependable water transportation . . . Illustrated catalog may be had by writing Chris Smith & Sons Boat Co., 765 Detroit Road, Algonac, Michigan.

*The 20-foot all-mahogany Chris-Craft runabout is priced at \$1895; the 22-foot runabout at \$2195 and \$2595.*

Don't you find that they help digestion, sweeten the breath, soothe the throat and are very delightful after smoking?

Why not write us your letter today?

# They Have Grown Up Together

*Detroit in 1805 was already  
an active trading center.*

THE history of mutual insurance parallels the history of American business, from its beginnings. There are five mutual insurance companies over 125 years old; twenty-one over 100 years old.

When American business was largely barter—exchange of commodities—mutual insurance was protecting those engaged in it.

And today when American industry surpasses anything the world has ever known, mutual insurance companies are still protecting property, lives and risks to the extent of over 100 billion dollars.

For any casualty risk, corporations or individuals can find no stronger protection, no better service than that offered by out-

standing, legal reserve mutual companies.

On the matter of cost, the mutual casualty policyholder pays no higher rates than those asked by other carriers. Further, he is a part owner of the business and shares in its welfare. Savings that accrue from careful and economical management are passed on to him in annual dividends.

Write today for an interesting booklet on mutual casualty insurance. It will be of value to anyone engaged in business. No solicitation of any kind will follow. Address Mutual Casualty Insurance, Room 2200, 180 North Michigan Avenue, Chicago, Illinois.

MUTUAL PROTECTION IS AVAILABLE FOR THESE CASUALTY RISKS:

*Workmen's Compensation      Fidelity  
Accident and Health      Property Damage  
Automobile (all forms)      Plate Glass  
Burglary and Theft      Liability (all forms)*

# How lovely teeth are best protected

*against destructive, germ-laden film*

*The Film*

the subject of dental research  
of bacteriology and dental  
and tooth, tongue disorders.

## FREE... a 10-day tube of Pepsodent to try

**C**ERTAIN germs are present in tooth decay. Other types in pyorrhea; other kinds in trench mouth. Authorities believe 8 dental troubles out of 10 are caused by bacterial infection.

Germs are covered and imprisoned by a dingy, clinging coating on the teeth and gums called film. There they breed by millions in contact with the teeth.

Germ-laden film fills every tiny crevice in enamel. It clings so tightly that you may brush until you harm the teeth and gums without dislodging it effectively. That is why all the ordinary methods fail in combating film effectively.

### *Remove film a different way*

To reach and remove these germs, film must be combated.

To remove film, dental authorities developed the different acting tooth paste, Pepsodent.

First, Pepsodent curdles film, then light brushing easily removes it... safely, gently. No pumice, harmful grit or crude abrasive, but a fine, creamy paste prescribed for soft teeth and tender gums.

You can tell that Pepsodent is different from all other ways the instant it touches your teeth. You can see the difference in results before your free tube is empty. Write to nearest address immediately for your supply to try.

Use Pepsodent twice a day. See your dentist at least twice a year.

\$1110.

Home Town to Home Town

ON one of the famous President Liners, you enjoy all the freedom, all the luxury of a cruise on a private yacht.

Stop over where you please within the two-year limit of your ticket... visit Japan, China, the East Indies at your leisure, glimpse the fascinating, far-off corners of the world, and then—continue your travels on another President Liner as you would on another train.

And this acme of travel experience—with comfort, accommodations, service second to none—is yours for as little as \$1110! Spacious cabins with real beds, delicious meals, and an unforgettable trip Round the World, in 85 days, or two years, as you like.

## INFORMATION—SAILINGS

You may start from New York, Boston, Seattle, Victoria, B. C., Los Angeles or San Francisco. Every week a palatial President Liner sails from Los Angeles and San Francisco—via the Sunshine

Belt—for Honolulu, Japan, China, Manila and thence fortnightly to Malaya—Java nearby—Ceylon, (India overnight by Pullman), Egypt, Italy, France, New York.

Every two weeks a President Liner sails from Boston and New York for Havana, Panama, California, thence Round the World.

Every fortnight a similar Liner sails from Seattle and Victoria, B. C., for Japan, China, Manila and Round the World.

All staterooms are amidships, outside, with real beds. De luxe Liners, luxurious public apartments, outdoor swimming pool, world-famed cuisine. First Class only, Round the World, as low as \$1110, Home Town to Home Town; with private bath \$1370.

# Play these California days

close to San Francisco  
... and a glorious secret

Days in the Redwoods...  
if you like to play at resting

CLOSE to San Francisco, with its world-known flair for living, California offers you a great vacation... Here are flashing days at high Lake Tahoe... in Yosemite... or down beside the waves that roll from China and beyond. Here is every kind of out-door sport. Here are days in the Redwoods, contemplative, quiet... if you'd rather play at resting. Here are debonair Del Monte and the like... and storied gold-spent towns of '49 for you to browse around in. Here each day can be as different as you care to make it, strenuous or simply lazy... underneath the everlasting sun.

Center of this great vacation-land and *America's coolest summer city*, San Francisco invites you to make this fascinating city your headquarters. *San Francisco!* With the secret of an art it calls its own—a gracious, joyous art of living. Where every phase of life—and opportunity—bring thousands to visit and back again to live!

The coupon below brings an interesting illustrated book. Start planning now.

Beginning May 15 low roundtrip excursion rates will be in effect to San Francisco and the Pacific Coast on all railroads. The Victory and Lincoln Highways will be in good condition. Or come by air, or by steamship via Panama Canal.

Out here white-foamed surf ceaselessly booms on whiter beaches. Out here the sun shines brighter, and a cool, salt breeze whispers a song of far places.

Sit in the sun and loaf and invite your soul. Plunge into the tangy sea and wrestle with tireless, laughing breakers . . .

Come and bring your bathing suit, along with your other sports togs . . . your golf kit, your riding clothes . . . for here's bathing like you've never known. And in

this purer air there's nothing to absorb the needed ultra-violet rays of the sun . . . it's *undiluted*, health-giving sunshine!

The sea, if you prefer it . . . or some high, pine-fringed lake, where mountains with snowy heads gaze tolerantly down on you . . .

Glacier Park and Pacific Northwest, and the Columbia River Country—all reached by sumptuous Great Northern trains—the new *Empire Builder* and the luxurious *Oriental Limited*.

City \_\_\_\_\_ State \_\_\_\_\_

# To California!

Across horizons where rose the seven cities of Cibola

Was it only a prank of the western sun . . . the fleeting silhouette men thought they saw of cities of turquoise, pearl and gold? Was it only a prank or was it prophecy . . . that flashed to gold the cold steel helmets of Coronado's soldiers of Spain when they searched for the fabulous cities of Cibola . . .

Today in this same western sun a new steel flashes in many a league of Coronado's path. Steel rails of Southern Pacific's SUNSET ROUTE.

And the cities that edge its glittering miles out-fable the cities the Spaniards sought. New Orleans, the SUNSET's source. Houston. San Antonio. El Paso. Tucson. Phoenix. San Diego. Los Angeles. San Francisco. These shine today in the bold reality of sky-thrust stone and steel and reclaimed desert that is become acre upon acre of agricultural wealth.

As your train speeds into the golden evening you can forget, if you like, the world that is new and the one that is gone . . . you need only a mind to good living. "Sunset Limited" is a kingly train . . . and yours to enjoy as you will—

a diner the hospitable South has sponsored—club and observation cars with skilled attendants waiting for your wish.

*Sunset Route is not Southern Pacific's only way to California nor is it the only one that lifts horizons. Overland Route, Golden State Route and Santa Fe Route have stories of their own to tell . . . and blue-blood trains for you to travel on.*

*To go West one route, return another is Southern Pacific's way of making the whole Pacific Coast and half the United States a part of one regular round trip ticket. A ticket that finds and interprets the West. For Southern Pacific rails follow natural pioneer pathways . . . It is close to the spirit of the West you are to see. Its vast network of lines explore the whole Pacific Coast. Southern Pacific is the only railroad offering choice of four routes. Go one way, return another. Stopover anywhere.*

*Ladies' lounge and maid—every refinement in travel service distinguishes the famous "Sunset Limited".*

# A THOUSAND EXTRA HOURS OF SLEEP

*The New SPRING-AIR cushion assembly of genuine imported Belgian Damask in four lovely colors is offered at \$50.00, the beautiful and durable new quality product of a Master Bedding Maker.*

A NEW quality has come to sleep—a sweeter, deeper, longer rest in every brief night hour. SPRING-AIR has brought it, in the first luxurious sleeping cushion—beautifully modern!

SPRING-AIR supplants—and completely obsoletes—the old style mattress. Your body pillowed on twice-tampered springs, so designed and so related that all unyielding, creaking framework, all lumpy padding, all

destructive friction wear, are gone. It is a real innovation.

Think of what this means in cleanliness, in lightness, in quiet, and in beauty. Then realize that the supreme quality of all is the comfort quality that has put a thousand extra hours of sleep in every SPRING-AIR Cushion.

For but little more than the cost of standard mattresses, you can have twenty-year guaranteed SPRING-AIR upon your every bed.

CANADIAN NATIONAL—TO EVERYWHERE IN CANADA

# Alaska

*Land of Romance—  
Charm and Mystery*

... Mellow summer days, long hours of bright sunshine, rosy twilight, where the sun sets in a blaze of glory to rise slowly again, blending evening into morning with no thought of night. Range after range of giant snow-capped mountains. Gleaming glaciers. All these—and the comfort and luxury of steamers of the augmented Canadian National Railways Alaska Fleet.

Canadian National's Jasper Park-Pacific Route across Canada prefaces this glorious voyage through the sheltered "Inside Passage," with stops at Ketchikan, past wondrous Taku Glacier, Wrangell, Juneau and Skagway—one of the world's famous rail-and-water cruises.

A tri-weekly service from Vancouver or Prince Rupert affords excellent connections at Skagway for Lake Atlin and Dawson by the White Pass and Yukon Railway, following the famous Klondike Trail of '98—a succession of thrills and a constant panorama of magnificent scenery.

**EXCLUSIVE DESIGNS**  
by **RUSSWIN**

MINERVA

*For the Architect's convenience RUSSWIN Hardware is illustrated and described in Sweet's catalogue, pages C-3137 to C-3216.*

Grecian design is the parent of the classic mode. The Renaissance, the charming Louis XIV, XV and XVI periods together with our own colonial owe their inspiration to this ancient source. RUSSWIN offers its exclusive Grecian designs with the dual character of style-timeliness and service. Every piece of RUSSWIN hardware is built to weather years of use; to give faultless, trouble-free and lasting service. It will faithfully stand to its task in the small house, palatial residence, or public structure. Whether it be a sturdy, handsome door knob, a lock, a door closer, night latch, or even the small hinges and lock for the corner cupboard . . . all will be in perfect accord if you select RUSSWIN. Consult your architect or interior decorator, when making plans, or write to us for descriptive booklet covering RUSSWIN Hardware expressly made for leading periods of design. Russell & Erwin Manufacturing Company (The American Hardware Corporation, Successor) New Britain, Connecticut—New York, Chicago, London.

## Shrines of England's History.

Begin with Exeter, with its white stones drenched in peace and its exquisite carvings looking like a thousand petrified ripples. Glastonbury Abbey lifts its broken arch above the grass in perpetual supplication. Beaulieu, founded by King John, standing like a white spectre in the fields. Exquisitely feminine Wells, a gothic sermon in stone. Winchester, where Edward the Confessor was hailed as king. Canterbury and its priceless relics of early Christianity, the tomb of the Black Prince, the shrine of Thomas a Beckett, and the very stone on which Henry II knelt in penance. Perfectly proportioned Salisbury. Tewkesbury Abbey, named the melancholy, and tragic Tintern, kneeling in a meadow of daisies like a saint at prayer, is an unforgettable sight.

There are many more of these glorious shrines—Chester, Hereford, Gloucester, and Worcester, each a gem of loveliness and interest that will lend fragrance to days ever afterward.

*Write for the new Guide No. 51 which  
will be gladly mailed free*

G. E. ORTON, Gen. Agent, 505 Fifth Avenue, N. Y.

## Great Western and Southern Railways of England.

If you can press a lever you can take movies with this extremely simple little camera.

## An Extremely Simple Movie Camera

that anybody who can press a lever can operate. That even the modest purse can afford!

You can get a Kodascope projector, for showing home movies, as low as \$60.

*Designed for amateurs, by the men who so simplified picture-taking that snapshot-making became easy enough for children.*

**I**F you can look through a finder and press a lever, you can take successful home movies, either in black-and-white or in full color, with this remarkably simple little camera.

You'll get wonderfully clear and interesting movies . . . even if you've never had a camera in your hands before.

And if you can afford the ordinary accessories of modern life, you can afford a Ciné-Kodak.

Imagine the thrill of seeing your own child walking across your home movie screen. Your own loved ones, kept just as they are—never changing, never aging—in motion pictures that you yourself make.

### *Developed by the Men Who Simplified Amateur Picture-Taking*

Unbiased by the precedents and prejudices of professional cinema camera design, the men who made still photography so easy have now made home movie-making equally simple for you.

That's the point to remember. You want the *simplest* movie camera you can get.

With the Ciné-Kodak, all you do is press the lever and you take movies. Then send the film to any Eastman processing station. Developing is included in the price of the film.

And, with the Kodascope, you project the pictures in your own living room—as easily as playing a record on the phonograph.

## Ciné-Kodak

*Simplest of Home Movie Cameras*

With Ciné-Kodak Safety Film, regular or panchromatic, the Ciné-Kodak takes black-and-white pictures. By using Kodacolor Film and the Kodacolor Filter, Ciné-Kodak B or BB *f*.1.9 takes beautiful pictures in full, natural color—every color that the eye can see.

Kodak Cinegraphs, 100-, 200- and 400-foot reels of cartoons, comedy and travel that cost only \$7.50 a hundred feet, are available.

Any Ciné-Kodak dealer will be glad to demonstrate the Ciné-Kodak and to show you Kodacolor on the screen. To permit buying from income rather than capital, many offer an attractive deferred payment plan.

Eastman Kodak Co., Rochester, N.Y.

Please send me, FREE and without obligation, the booklet telling me how I can easily make my own movies.

## Deaf Hear Again Through New Aid

*Earpiece No Bigger Than Dime Wins  
Enthusiastic Following  
Ten-Day Free Trial Offer*

After twenty-five years devoted exclusively to the manufacture of scientific hearing-aids, the Dictagraph Products Co., Inc., Dept. 909-C, 210 West 42nd Street, New York, N. Y., has just perfected a new model Acousticon that represents the greatest advance yet made in the re-creation of hearing for the deaf. This latest Acousticon is featured by a tiny earpiece no bigger than a dime. Through this device, sounds are clearly and distinctly transmitted to subnormal ears with wonderful benefit to hearing and health alike. The makers offer an absolutely free trial for 10 days to any person who may be interested, and a letter will bring one of these remarkable aids to your home for a thorough and convincing test. Send them your name and address today! Advt.

## A CAREFUL JOB

... at lower cost

Ideal Power Mowers mow smooth, close-shaven grass. The Two Roller Type mowers cut a 22" and 30" inch swath. (They roll out bumps as they cut.) The Wheel Type (for heavy or hilly going) cuts a 20" and 25" inch swath.

The Ideal "25" illustrated above cannot be surpassed for general cutting work. It is easily guided around obstructions and over walks. The power is controlled from the handles.

With its fewer workmen are needed. Maintenance and running costs are low on these strong and simple mowers. For private lawn and public park, school grounds and gardens, there is an Ideal that can insure better grass and lower cutting costs. Write for illustrated details.

# Scott's Creeping Bent for Perfect Lawns!

Real in six weeks. A rich, velvety stretch of lawn that chokes out weeds before they can grow. A deep, thick, uniform turf that's everlasting and that makes your home a beauty spot.

### The New Super-Lawn

Instead of sowing seed, you plant stubs or the chopped grass—and in a few weeks you have a luxuriant lawn like the deep green pile of a Turkish carpet. Can be planted any time from early spring until late fall. Grows anywhere except in extreme south. Read all about this unusual grass in our illustrated booklet, "Bent Lawns," which gives full planting instructions and explains soil requirements, stated on packet.

# Eat Bran this way

HERE'S a new . . . a better kind of bran. More delicious—because every bit of bran is concealed in tender, flavory flakes of hot whole wheat. More effective—because it's the entire bran . . . just as Nature intended you to have it. Gentler . . . safer . . . because all the sharp edges of the bran have been softened by cooking.

It is called the "New Pettijohn's." People who ordinarily can't eat bran revel in the crunchy, chewy texture of these golden wheat flakes. Doctors and hospitals prescribe it for stubborn cases. They find it takes the place completely of harsher, less appetizing forms of bran.

Pettijohn's cooks done in from 2 to 5 minutes. It is made by the great Quaker Oats Company, manufacturers of 49 different cereal products, with mills in 12 cities throughout the United States and Canada. Try it tomorrow morning, at the suggestion of The Quaker Oats Company.

## Pettijohn's

Are you interested in new menus for children? In new recipes for whole wheat cookies and desserts? Send for a new Free booklet, "The Truth About Bran." Address The Quaker Oats Company, Chicago.

## STOCKHOLM

THE City Hall of Stockholm—jewel of modern Swedish architecture—lifts its graceful bell tower high over the busy waters of the harbor. Near by, the Opera restaurant lights its pink-shaded lamps against the mystic twilight, while mellow strains of the orchestra give added zest to a delicious meal . . . Center of Northern Europe's playground. Luxurious hotels; smart, intriguing shops; open-air theaters and delightful concerts. Brilliant flowers in spacious parks; blue water glittering everywhere. And close by, gay resorts for perfect week-ends: golfing, horseback riding, swimming, surfing . . . Boat excursions to dreamy Medieval Visby; fast modern trains to historic Dalecarlia or lovely Vermland.

### STOCKHOLM EXPOSITION

May-September, 1930

"More Beautiful Things for Every-day Use."  
Sweden's loveliest creations in glass, china, pewter, silver, textiles and wood.

Eight days direct from New York by the Swedish American Line. From London or Paris by convenient boat or train service—ten hours by air. Through trains from Berlin or Hamburg. Booklet free from any travel bureau, or write

## VARIETY IS HEALTHFUL

WINTER menus are apt to become dull—particularly breakfasts. But you can add variety that will tempt the laziest appetite by serving a crisp, delicious cereal.

Put pep into breakfast with Kellogg's Pep Bran Flakes and milk or cream—then top each bowl with canned or preserved fruit. Wonderful flavor. Refreshing crispness. You'll delight in these *better bran flakes* that have the full flavor of PEP with just enough bran to be mildly laxative. Made by Kellogg in Battle Creek.

# Kellogg's

*Corn Flakes, Rice Krispies, ALL-BRAN, Pep Bran Flakes, Kellogg's Shredded Whole Wheat Biscuit, Whole Wheat Krumbles, Kaffee Hag Coffee—the caffeine-free coffee.*

## Traditions make for Progress

Four great ocean liners, practically new and exceedingly popular, have been withdrawn from service. New engines are being installed to further increase their speed. The passenger accommodations remodelled to provide every element of luxury.

"The best is none too good", has been a Hamburg-American Line tradition for over 80 years, and accounts for the expenditure of millions of dollars for improvements on the ALBERT BALLIN, DEUTSCHLAND, HAMBURG and NEW YORK—the "Famous Four" of the Atlantic.

Seven days to Europe—moderate rates—vibrationless speed—remarkable steadiness due to special anti-rolling equipment—a sailing every Wednesday midnight.

This de luxe Express Service is supplemented by a popular Cabin Service, embracing the new motorships ST. LOUIS and MILWAUKEE, and the steamship CLEVELAND.

## HAMBURG-AMERICAN

## The best way to see Britain

The best way to see the beauty and historical associations of England is to travel by the London Midland & Scottish Railway. When you get to London make your way to Euston Station. From there you will get Circular Tours to the Shakespeare Country, where Kenilworth saw Elizabeth's splendour; to the Lake District; the mountains of North Wales; and to all parts of Scotland and Ireland. Euston Station is the starting point for the beauty and romance of this wonderful land. Make your way there first and plan your trip in England from the tours of the L M S.

Write to the L M S American Agent for details of delightful Circular Tours.

## Walls of the world

The eternal wonder is Yosemite's towering *sheerness!*

Stand at the foot of majestic Glacier Point, look up . . . and a jutting stone lip is two-thirds of a mile overhead. Across the meadows, bold El Capitan and brooding Half Dome, bulwarks of the ages, stand so tall and erect you think they are just within reach . . . yet they're miles away, and this clear, clean air is playing you tricks again!

All year Yosemite has novel new things to do . . . here stalwart peaks go up to the sky, and waterfalls plunge from their shoulders . . . and here even resting, in the utter calm, utter naturalness, is a vast new thrill.

At the aristocratic Ahwahnee you may revel in the comforts of California's finest resort hotel. Rates from \$10 a day, American plan. Other all-year accommodations as low as \$1.50, European.

Plan ahead to stop off at Merced, California, on your next trip West. All-expense tours, for from \$30 to \$76.25, cover 2 to 4 days in Yosemite. Your travel agent will arrange this most important California side-trip. For scenic folders, write Dept. 170, Yosemite Park and Curry Co., Yosemite National Park, California.

California's finest vacation—

## The Finest Speed Boats Money Can Buy Are HACKER Boats

**SYMMETRY**—flashing from every trimly S turned line, from every hull contour and fitting—today stamps Hacker boats with an inimitable air of grace and beauty. Thirty-six years of designing effort and experience give the 1930 series of Hackercraft runabouts and commuter-cruisers a very real superiority. Speeds range from 35 to 44 miles per hour . . . Sizes range from 24 to 38 feet . . . Priced from \$3,150 to \$17,000. Hand-built, of genuine Honduras mahogany, designed by John L. Hacker, N. A., the new Hackercraft are even faster than those famous models which won the title of America's Fastest Runabouts and hold the European records for stock boats during 1929.

**-and This  
a Winter  
Month  
Just Passed  
with Sunshine,  
Health, Comfort**

**W**AS your December, 1929, a month of storms, of fogs, of overcast skies?

In the Pikes Peak Region there was not a day on which the sun did not shine in December. The average maximum temperature for the month was 48 degrees F. On 16 consecutive days an average maximum of over 50 was reached. On 9 other consecutive days over 51. On 10 of these the high was 60 to 66. On only 3 days the high stayed below freezing. Total precipitation only .2 of an inch.

Truly, there's "Sunshine, Health, Comfort" any month in the year in the Pikes Peak Region.

# The Improved QUIET SI-WEL-CLO

*Shaped to conform to Nature's Laws.....*

**M**EDICAL science influenced the unique shape of the Improved Quiet Si-wel-clo. Authorities have agreed that a seat should encourage a natural sitting position. It stands to reason that the organs and muscles of elimination are not easily stimulated to action if forced into a position never intended by nature.

The exceeding comfort of the Si-wel-clo saddle seat minimizes the unhygienic tendency, especially noticeable in children, to grudge sufficient time for proper elimination. The decided dip in the rim elevates the front and rear of the bowl opening, reducing the possibility of soiling.

The Quiet Si-wel-clo water-closet makes a bathroom more sanitary, more beautiful and quieter.

Dripping and gurgling sounds which emanate from ordinary water-closets are almost absent.

The Si-wel-clo is one of many charming and durable plumbing fixtures belonging to the TE-PE-CO family. They all carry the star in the circle trade mark as a guarantee of superb quality. Look for it whenever you equip a bathroom or kitchen. For your guidance we shall send you our booklet, "Bathrooms of Character" V-4, upon receipt of 10c in stamps.

*Is "ALMOST CLEAN"  
clean enough for the baby's bottles?*

**W**HEN you wash the baby's things, scour the bathtub or wash the dishes, you don't give them just a careless surface cleaning. Then why should you with your rugs and carpets?

Floor coverings can be clean from top to bottom—will be, if you clean them with a Hoover. It removes more dirt per minute than any other cleaner—gives faster, deeper cleaning, with less expenditure of human energy—because it gets out dirt that other cleaning methods never reach!

Deep in your rug is embedded grease-caked grit which suction alone simply cannot remove. It takes the deep-beating action of Positive Agitation to shake loose this packed-in dirt and dance it to

the surface to be suctioned away. Only when it is removed, can you call your rugs wholly clean.

Not only does The Hoover get rugs cleaner but it makes them lovelier, removing the unsightly thread and lint, lifting and straightening the nap, brightening the rug colors, giving them thoroughly scientific care.

Ask your Hoover dealer for a free trial or home demonstration of The Hoover and its efficient dusting tools. Two Hoover models, only \$6.25 down, balance monthly; dusting tools; liberal allowance for your old cleaner.

PUT ON THE PEN TAPER

TAKE OFF THE TAPER  
PUT ON THE POCKET CAP

# LIKE TWO PENS for the Price of One

—a Pocket Pen on Going Out, and a Desk Pen on Arriving  
—Guaranteed for Life!

If you buy a Parker Pocket Duofold you now can have a Desk Set without buying a second pen. Or if you buy a Parker Duofold Desk Set you also now receive a Duofold Pocket Pen guaranteed for life. Either way, you save the price of a second pen — \$5, \$7 or \$10, according to the model.

By adding a tapered end, you convert your Duofold Pocket Pen to a Desk Pen in 10 seconds. By removing the taper and putting on the Pocket Cap you restore it to a Pocket Duofold on leaving office or home. Thus every owner of a Parker Pocket Pen owns half a Desk Set. Getting a Desk Base completes it.

And to every buyer of a Parker Desk Set, we now give a Pocket Cap with Clip. Thus his Desk Pen is also a Pocket Pen—like 2 Pens for

the price of one Set. So be sure to ask for the Pocket Cap with your Desk Set.

Parker's new streamline Duofold Pens (and Pencils to match) set lower in the pocket than others because the clip starts at the top — not halfway down the cap. This smart, balanced shape feels "at home" in the hand — and the heavy, hand-ground point writes with our famous 47th improvement—Pressureless Touch.

Go see this revolutionary Convertible Duofold at any nearby pen counter.

THE PARKER PEN COMPANY, Janesville, Wisconsin
