Introduction Jersey

Background:

Jersey and the other Channel Islands represent the last remnants of the medieval Dukedom of Normandy that held sway in both France and England. These islands were the only British soil occupied by German troops in World War II. Jersey is a British crown dependency, but is not part of the UK. However, the UK Government is constitutionally responsible for defense and international representation.

Economy Jersey

Economy - overview:

Jersey's economy is based on international financial services, agriculture, and tourism. In 2005 the finance sector accounted for about 50% of the island's output. Potatoes, cauliflower, tomatoes, and especially flowers are important export crops, shipped mostly to the UK. The Jersey breed of dairy cattle is known worldwide and represents an important export income earner. Milk products go to the UK and other EU countries. Tourism accounts for one-quarter of GDP. In recent years, the government has encouraged light industry to locate in Jersey, with the result that an electronics industry has developed alongside the traditional manufacturing of knitwear. All raw material and energy requirements are imported, as well as a large share of Jersey's food needs. Light taxes and death duties make the island a popular tax haven. Living standards come close to those of the UK.

@Jordan

Introduction Jordan

Background:

Following World War I and the dissolution of the Ottoman Empire, the UK received a mandate to govern much of the Middle East. Britain separated out a semi-autonomous region of Transjordan from Palestine in the early 1920s, and the area gained its independence in 1946; it adopted the name of Jordan in 1950. The country's long-time ruler was King HUSSEIN (1953-99). A pragmatic leader, he successfully navigated competing pressures from the major powers (US, USSR, and UK), various Arab states, Israel, and a large internal Palestinian population, despite several wars and coup attempts. In 1989 he reinstated parliamentary elections and gradual political liberalization; in 1994 he signed a peace treaty with Israel. King ABDALLAH II, the son of King HUSSEIN, assumed the throne following his father's death in February 1999. Since then, he has consolidated his power and undertaken an aggressive economic reform program. Jordan acceded to the World Trade Organization in 2000, and began to participate in the European Free Trade Association in 2001. After a two-year delay, parliamentary and municipal elections took place in the summer of 2003. The prime minister appointed in November 2005 stated the government would focus on political reforms, improving conditions for the poor, and fighting corruption.

Economy Jordan

Economy - overview:

Jordan is a small Arab country with insufficient supplies of water, oil, and other natural resources. Debt, poverty, and unemployment are fundamental problems, but King ABDALLAH, since assuming the throne in 1999, has undertaken some broad economic reforms in a long-term effort to improve living standards. Since Jordan's graduation from its most recent IMF program in 2002, Amman has continued to follow IMF guidelines, practicing careful monetary policy, and making substantial headway with privatization. The government also has liberalized the trade regime sufficiently to secure Jordan's membership in the WTO (2000), a free trade accord with the US (2001), and an association agreement with the EU (2001). These measures have helped improve productivity and have put Jordan on the foreign investment map. Jordan imported most of its oil from Iraq, but the US-led war in Iraq in 2003 made Jordan more dependent on oil from other Gulf nations, and has forced the Jordanian Government to raise retail petroleum product prices and the sales tax base. Jordan's export market, which is heavily dependent on exports to Iraq, was also affected by the war but recovered quickly while contributing to the Iraq recovery effort. The main challenges facing Jordan are reducing dependence on foreign grants, reducing the budget deficit, and creating investment incentives to promote job creation.

Introduction Kazakhstan

Background:

Native Kazakhs, a mix of Turkic and Mongol nomadic tribes who migrated into the region in the 13th century, were rarely united as a single nation. The area was conquered by Russia in the 18th century, and Kazakhstan became a Soviet Republic in 1936. During the 1950s and 1960s agricultural "Virgin Lands" program, Soviet citizens were encouraged to help cultivate Kazakhstan's northern pastures. This influx of immigrants (mostly Russians, but also some other deported nationalities) skewed the ethnic mixture and enabled non-Kazakhs to outnumber natives. Independence in 1991 caused many of these newcomers to emigrate. Current issues include: developing a

cohesive national identity; expanding the development of the country's vast energy resources and exporting them to world markets; achieving a sustainable economic growth outside the oil, gas, and mining sectors; and strengthening relations with neighboring states and other foreign powers.

Geography Kazakhstan

Location:

Central Asia, northwest of China; a small portion west of the Ural River in eastern-most Europe

Geographic coordinates:

48 00 N, 68 00 E

Map references:

Asia

Area:

total: 2,717,300 sq km

land: 2,669,800 sq km

water: 47,500 sq km

Area - comparative:

slightly less than four times the size of Texas

Land boundaries:

total: 12,012 km

border countries: China 1,533 km, Kyrgyzstan 1,051 km, Russia 6,846 km, Turkmenistan 379 km, Uzbekistan 2,203 km

Coastline:

0 km (landlocked); note - Kazakhstan borders the Aral Sea, now split into two bodies of water (1,070 km), and the Caspian Sea (1,894 km)

Maritime claims:

none (landlocked)

Climate:

continental, cold winters and hot summers, arid and semiarid

Terrain:

extends from the Volga to the Altai Mountains and from the plains in western Siberia to oases and desert in Central Asia

Elevation extremes:

lowest point: Vpadina Kaundy -132 m

highest point: Khan Tangiri Shyngy (Pik Khan-Tengri) 6,995 m

Natural resources:

major deposits of petroleum, natural gas, coal, iron ore, manganese, chrome ore, nickel, cobalt, copper, molybdenum, lead, zinc, bauxite, gold, uranium

Land use:

arable land: 8.28%

permanent crops: 0.05%

other: 91.67% (2005)

Irrigated land:

35,560 sq km (2003)

Natural hazards:

earthquakes in the south, mudslides around Almaty

Environment - current issues:

radioactive or toxic chemical sites associated with former defense industries and test ranges scattered throughout the country pose health risks for humans and animals; industrial pollution is severe in some cities; because the two main rivers which flowed into the

Aral Sea have been diverted for irrigation, it is drying up and leaving behind a harmful layer of chemical pesticides and natural salts; these substances are then picked up by the wind and blown into noxious dust storms; pollution in the Caspian Sea; soil pollution from overuse of agricultural chemicals and salination from poor infrastructure and wasteful irrigation practices

Environment - international agreements:

party to: Air Pollution, Biodiversity, Climate Change, Desertification, Endangered Species, Hazardous Wastes, Ozone Layer Protection, Ship Pollution, Wetlands
signed, but not ratified: Climate Change-Kyoto Protocol

Geography - note:

landlocked; Russia leases approximately 6,000 sq km of territory enclosing the Baykonur Cosmodrome; in January 2004, Kazakhstan and Russia extended the lease to 2050

note: administrative divisions have the same names as their
administrative centers (exceptions have the administrative center
name following in parentheses); in 1995, the Governments of
Kazakhstan and Russia entered into an agreement whereby Russia would
lease for a period of 20 years an area of 6,000 sq km enclosing the
Baykonur space launch facilities and the city of Bayqongyr
(Baykonur, formerly Leninsk); in 2004, a new agreement extended the
lease to 2050

Economy Kazakhstan

Economy - overview: Kazakhstan, the largest of the former Soviet republics in territory, excluding Russia, possesses enormous fossil fuel reserves and plentiful supplies of other minerals and metals. It also has a large agricultural sector featuring livestock and grain. Kazakhstan's industrial sector rests on the extraction and processing of these natural resources and also on a growing machine-building sector specializing in construction equipment, tractors, agricultural machinery, and some defense items. The breakup of the USSR in December 1991 and the collapse in demand for Kazakhstan's traditional heavy industry products resulted in a short-term contraction of the economy, with the steepest annual decline occurring in 1994. In 1995-97, the pace of the government program of economic reform and privatization quickened, resulting in a substantial shifting of assets into the private sector. Kazakhstan enjoyed double-digit growth in 2000-01 - 8% or more per year in 2002-06 - thanks largely to its booming energy sector, but also to economic reform, good harvests, and foreign investment. The opening of the Caspian Consortium pipeline in 2001, from western Kazakhstan's Tengiz oilfield to the Black Sea, substantially raised export capacity. Kazakhstan in 2006 completed the Atasu-Alashankou portion of an oil pipeline to China that is planned to extend from the country's Caspian coast eastward to the Chinese border in future construction. The country has embarked upon an industrial policy designed to diversify the economy away from overdependence on the oil sector by developing light industry. The policy aims to reduce the influence of foreign investment and foreign personnel. The government has engaged in several disputes with foreign oil companies over the terms of production agreements; tensions continue. Upward pressure on the local currency continued in 2006 due to massive oil-related foreign-exchange inflows.

Introduction Kenya

Background:

Founding president and liberation struggle icon Jomo KENYATTA led Kenya from independence in 1963 until his death in 1978, when President Daniel Toroitich arap MOI took power in a constitutional succession. The country was a de facto one-party state from 1969 until 1982 when the ruling Kenya African National Union (KANU) made itself the sole legal party in Kenya. MOI acceded to internal and external pressure for political liberalization in late 1991. The ethnically fractured opposition failed to dislodge KANU from power in elections in 1992 and 1997, which were marred by violence and fraud, but were viewed as having generally reflected the will of the Kenyan people. President MOI stepped down in December 2002 following fair and peaceful elections. Mwai KIBAKI, running as the candidate of the multiethnic, united opposition group, the National Rainbow Coalition (NARC), defeated KANU candidate Uhuru KENYATTA and assumed the presidency following a campaign centered on an anticorruption platform. KIBAKI's NARC coalition splintered in 2005 over the constitutional review process. Government defectors joined with KANU to form a new opposition coalition, the Orange Democratic Movement, which defeated the government's draft constitution in a popular referendum in November 2005.

Economy Kenya

Economy - overview:

The regional hub for trade and finance in East Africa, Kenya has been hampered by corruption and by reliance upon several primary goods whose prices have remained low. In 1997, the IMF suspended Kenya's Enhanced Structural Adjustment Program due to the government's failure to maintain reforms and curb corruption. A severe drought from 1999 to 2000 compounded Kenya's problems, causing water and energy rationing and reducing agricultural output. As a result, GDP contracted by 0.2% in 2000. The IMF, which had resumed loans in 2000 to help Kenya through the drought, again halted lending in 2001 when the government failed to institute several anticorruption measures. Despite the return of strong rains in 2001, weak commodity prices, endemic corruption, and low investment limited Kenya's economic growth to 1.2%. Growth lagged at 1.1% in 2002 because of erratic rains, low investor confidence, meager donor support, and political infighting up to the elections. In the key December 2002 elections, Daniel Arap MOI's 24-year-old reign ended, and a new opposition government took on the formidable economic problems facing the nation. In 2003, progress was made in rooting out corruption and encouraging donor support. Since then, however, the KIBAKI government has been rocked by high-level graft scandals. The World Bank suspended aid for most of 2006, and the IMF has delayed loans pending further action by the government on corruption. The scandals have not seemed to affect growth, with GDP growing more than 5% in 2006.

Transnational Issues Kenya

Disputes - international:

Kenya served as an important mediator in brokering Sudan's north-south separation in February 2005; Kenya provides shelter to approximately a quarter of a million refugees including Ugandans who flee across the border periodically to seek protection from Lord's Resistance Army (LRA) rebels; the Kenya-Somalia border is open to pastoralists and is susceptible to cross-border clan insurgencies; Kenya's administrative limits extend beyond the treaty border into the Sudan, creating the Ilemi Triangle

Refugees and internally displaced persons:

refugees (country of origin): 150,459 (Somalia), 76,646 (Sudan), 14,862 (Ethiopia)

IDPs: 431,150 (KANU attacks on opposition tribal groups in 1990s) (2006)

Trafficking in persons:

current situation: Kenya is a source, transit, and destination country for men, women, and children trafficked for forced labor and sexual exploitation; children are trafficked within the country for domestic servitude, street vending, agricultural labor, and sexual exploitation; men, women, and girls are trafficked to the Middle

East, other African nations, Western Europe, and North America for domestic servitude, enslavement in massage parlors and brothels, and manual labor; Chinese women trafficked for sexual exploitation reportedly transit Nairobi and Bangladeshis may transit Kenya for forced labor in other countries

tier rating: Tier 2 Watch List - Kenya is placed on the Tier 2 Watch List due to a lack of evidence of increasing efforts to combat severe forms of trafficking

Illicit drugs:

widespread harvesting of small plots of marijuana; transit country for South Asian heroin destined for Europe and North America; Indian methaqualone also transits on way to South Africa; significant potential for money-laundering activity given the country's status as a regional financial center; massive corruption, and relatively high levels of narcotics-associated activities

@Kiribati

Introduction Kiribati

Background:

The Gilbert Islands were granted self-rule by the UK in 1971 and complete independence in 1979 under the new name of Kiribati. The US relinquished all claims to the sparsely inhabited Phoenix and Line Island groups in a 1979 treaty of friendship with Kiribati.

Geography Kiribati

Location:

Oceania, group of 33 coral atolls in the Pacific Ocean, straddling

the Equator; the capital Tarawa is about one-half of the way from Hawaii to Australia; note - on 1 January 1995, Kiribati proclaimed that all of its territory lies in the same time zone as its Gilbert Islands group (GMT +12) even though the Phoenix Islands and the Line Islands under its jurisdiction lie on the other side of the International Date Line

phosphate (production discontinued in 1979)

Land use: arable land: 2.74% permanent crops: 47.95% other: 49.31% (2005)

Irrigated land:

NA

Natural hazards:

typhoons can occur any time, but usually November to March;
occasional tornadoes; low level of some of the islands make them
very sensitive to changes in sea level

Environment - current issues:

heavy pollution in lagoon of south Tarawa atoll due to heavy
migration mixed with traditional practices such as lagoon latrines
and open-pit dumping; ground water at risk

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto
Protocol, Desertification, Hazardous Wastes, Law of the Sea, Marine
Dumping, Ozone Layer Protection, Whaling
signed, but not ratified: none of the selected agreements

Geography - note:

21 of the 33 islands are inhabited; Banaba (Ocean Island) in
Kiribati is one of the three great phosphate rock islands in the
Pacific Ocean - the others are Makatea in French Polynesia, and Nauru

Economy Kiribati

Economy - overview:

A remote country of 33 scattered coral atolls, Kiribati has few natural resources. Commercially viable phosphate deposits were exhausted at the time of independence from the UK in 1979. Copra and fish now represent the bulk of production and exports. The economy has fluctuated widely in recent years. Economic development is constrained by a shortage of skilled workers, weak infrastructure, and remoteness from international markets. Tourism provides more than one-fifth of GDP. The financial sector is at an early stage of development as is the expansion of private sector initiatives. Foreign financial aid from UK, Japan, Australia, New Zealand, and China equals more than 10% of GDP. Remittances from seamen on merchant ships abroad account for more than \$5 million each year. Kiribati receives around \$15 million annually for the government budget from an Australian trust fund.

Introduction Korea, North

Background: An independent kingdom for much of its long history, Korea was occupied by Japan in 1905 following the Russo-Japanese War. Five years later, Japan formally annexed the entire peninsula. Following World War II, Korea was split with the northern half coming under Soviet-sponsored Communist domination. After failing in the Korean War (1950-53) to conquer the US-backed Republic of Korea (ROK) in the southern portion by force, North Korea (DPRK), under its founder President KIM Il-so'ng, adopted a policy of ostensible diplomatic and economic "self-reliance" as a check against excessive Soviet or Communist Chinese influence. The DPRK demonized the US as the ultimate threat to its social system through state-funded propaganda, and molded political, economic, and military policies around the core ideological objective of eventual unification of Korea under Pyongyang's control. KIM's son, the current ruler KIM Jong Il, was officially designated as his father's successor in 1980, assuming a growing political and managerial role until the elder KIM's death in 1994. After decades of economic mismanagement and resource misallocation, the DPRK since the mid-1990s has relied heavily on international aid to feed its population while continuing to expend resources to maintain an army of 1 million. North Korea's long-range missile development, as well as its nuclear, chemical, and biological weapons programs and massive conventional armed forces, are of major concern to the international community. In December 2002, following revelations that the DPRK was pursuing a nuclear weapons program based on enriched uranium in violation of a 1994 agreement with the US to freeze and ultimately dismantle its existing plutonium-based program, North Korea expelled monitors from the International Atomic Energy Agency (IAEA). In January 2003, it declared its withdrawal from the international Non-Proliferation Treaty. In mid-2003 Pyongyang announced it had completed the reprocessing of spent nuclear fuel rods (to extract weapons-grade plutonium) and was developing a "nuclear deterrent." Since August 2003, North Korea has participated in the Six-Party Talks with China, Japan, Russia, South Korea, and the US designed to resolve the stalemate over its nuclear programs. The fourth round of Six-Party Talks were held in Beijing during July-September 2005. All parties agreed to a Joint Statement of Principles in which, among other things, the six parties unanimously reaffirmed the goal of verifiable denuclearization of the Korean Peninsula in a peaceful manner. In the Joint Statement, the DPRK committed to "abandoning all nuclear weapons and existing nuclear programs and returning, at an early date, to the Treaty on the Non-Proliferation of Nuclear Weapons and to IAEA safeguards." The Joint Statement also commits the US and other parties to certain actions as the DPRK denuclearizes. The US offered a security assurance, specifying that it had no nuclear weapons on ROK territory and no intention to attack or invade the DPRK with nuclear or other weapons.

The US and DPRK will take steps to normalize relations, subject to the DPRK's implementing its denuclearization pledge and resolving other longstanding concerns. While the Joint Statement provides a vision of the end-point of the Six-Party process, much work lies ahead to implement the elements of the agreement.

Economy Korea, North

Economy - overview: North Korea, one of the world's most centrally planned and isolated economies, faces desperate economic conditions. Industrial capital stock is nearly beyond repair as a result of years of underinvestment and shortages of spare parts. Industrial and power output have declined in parallel. Due in part to severe summer flooding followed by dry weather conditions in the fall of 2006, the nation has suffered its 12th year of food shortages because of on-going systemic problems, including a lack of arable land, collective farming practices, and chronic shortages of tractors and fuel. Massive international food aid deliveries have allowed the people of North Korea to escape mass starvation since famine threatened in 1995, but the population continues to suffer from prolonged malnutrition and poor living conditions. Large-scale military spending eats up resources needed for investment and civilian consumption. In 2004, the regime formalized an arrangement whereby private "farmers markets" were allowed to begin selling a wider range of goods. It also permitted some private farming on an experimental basis in an effort to boost agricultural output. In October 2005, the regime reversed some of these policies by forbidding private sales of grains and reinstating a centralized food rationing system. By December 2005, the regime terminated most international humanitarian assistance operations in the DPRK (calling instead for developmental assistance only) and restricted the activities of remaining international and non-governmental aid organizations such as the World Food Program. Firm political control remains the Communist government's overriding concern, which will likely inhibit the loosening of economic regulations.

Transnational Issues Korea, North

Disputes - international:

China seeks to stem illegal migration of tens of thousands of North Koreans escaping famine, economic privation, and political oppression; North Korea and China dispute the sovereignty of certain islands in Yalu and Tumen rivers and a section of boundary around Paektu-san (mountain) is indefinite; Military Demarcation Line within the 4-km wide Demilitarized Zone has separated North from South Korea since 1953; periodic maritime disputes with South over the Northern Limit Line; North Korea supports South Korea in rejecting Japan's claim to Liancourt Rocks (Tok-do/Take-shima)

Refugees and internally displaced persons:

IDPs: 50,000-250,000 (government repression and famine) (2006)

Trafficking in persons:

current situation: North Korea is a source country for men, women, and children trafficked for the purposes of forced labor and sexual exploitation; North Korea's own system of political repression includes forced labor in a network of prison camps where an estimated 150,000 to 200,000 persons are incarcerated; the illegal status of North Koreans in China and other countries increases their vulnerability to trafficking schemes and sexual and physical abuse; North Koreans forcibly returned from China may be subject to hard labor in prison camps operated by the government

tier rating: Tier 3 - North Korea does not fully comply with minimum standards for the elimination of trafficking and is not making significant efforts to do so

Illicit drugs:

for years, from the 1970s into the 2000s, citizens of the Democratic People's Republic of (North) Korea (DPRK), many of them diplomatic employees of the government, were apprehended abroad while trafficking in narcotics, including two in Turkey in December 2004; police investigations in Taiwan and Japan in recent years have linked North Korea to large illicit shipments of heroin and methamphetamine, including an attempt by the North Korean merchant ship Pong Su to deliver 150 kg of heroin to Australia in April 2003

Introduction Korea, South

Background:

An independent Korean state or collection of states has existed almost continuously for several millennia. Between its initial unification in the 7th century - from three predecessor Korean states - until the 20th century, Korea existed as a single independent country. In 1905, following the Russo-Japanese War, Korea became a protectorate of imperial Japan, and in 1910 it was annexed as a colony. Korea regained its independence following Japan's surrender to the United States in 1945. After World War II, a Republic of Korea (ROK) was set up in the southern half of the Korean Peninsula while a Communist-style government was installed in the north (the DPRK). During the Korean War (1950-53), US troops and UN forces fought alongside soldiers from the ROK to defend South Korea from DPRK attacks supported by China and the Soviet Union. An armistice was signed in 1953, splitting the peninsula along a demilitarized zone at about the 38th parallel. Thereafter, South Korea achieved rapid economic growth with per capita income rising to roughly 14 times the level of North Korea. In 1993, KIM Yo'ng-sam became South Korea's first civilian president following 32 years of military rule. South Korea today is a fully functioning modern democracy. In June 2000, a historic first North-South summit took place between the South's President KIM Tae-chung and the North's leader KIM Jong Il.

Economy Korea, South

Economy - overview:

Since the 1960s, South Korea has achieved an incredible record of growth and integration into the high-tech modern world economy. Four decades ago, GDP per capita was comparable with levels in the poorer countries of Africa and Asia. In 2004, South Korea joined the trillion dollar club of world economies. Today its GDP per capita is equal to the lesser economies of the EU. This success was achieved by a system of close government/business ties, including directed credit, import restrictions, sponsorship of specific industries, and a strong labor effort. The government promoted the import of raw materials and technology at the expense of consumer goods and encouraged savings and investment over consumption. The Asian financial crisis of 1997-99 exposed longstanding weaknesses in South Korea's development model, including high debt/equity ratios, massive foreign borrowing, and an undisciplined financial sector. GDP plunged by 6.9% in 1998, then recovered 9.5% in 1999 and 8.5% in 2000. Growth fell back to 3.3% in 2001 because of the slowing global

economy, falling exports, and the perception that much-needed corporate and financial reforms had stalled. Led by consumer spending and exports, growth in 2002 was an impressive 7%, despite anemic global growth. Between 2003 and 2006, growth moderated to about 4-5%. A downturn in consumer spending was offset by rapid export growth. Moderate inflation, low unemployment, an export surplus, and fairly equal distribution of income characterize this solid economy.

Introduction Kuwait

Background:

Britain oversaw foreign relations and defense for the ruling Kuwaiti AL-SABAH dynasty from 1899 until independence in 1961. Kuwait was attacked and overrun by Iraq on 2 August 1990. Following several weeks of aerial bombardment, a US-led, UN coalition began a ground assault on 23 February 1991 that liberated Kuwait in four days. Kuwait spent more than \$5 billion to repair oil infrastructure damaged during 1990-91. The AL-SABAH family has ruled since

returning to power in 1991, and reestablished an elected legislature that in recent years has become increasingly assertive.

Economy Kuwait

Economy - overview:

Kuwait is a small, rich, relatively open economy with self-reported crude oil reserves of about 96 billion barrels - 10% of world reserves. Petroleum accounts for nearly half of GDP, 95% of export revenues, and 80% of government income. Kuwait's climate limits

agricultural development. Consequently, with the exception of fish, it depends almost wholly on food imports. About 75% of potable water must be distilled or imported. Kuwait continues its discussions with foreign oil companies to develop fields in the northern part of the country. High oil prices in recent years have helped build Kuwait's budget and trade surpluses and foreign reserves. As a result of this positive fiscal situation, the need for economic reforms is less urgent and the government has not earnestly pushed through new initiatives.

Transnational Issues Kuwait

Disputes - international:

Kuwait and Saudi Arabia continue negotiating a joint maritime boundary with Iran; no maritime boundary exists with Iraq in the Persian Gulf

Trafficking in persons:

current situation: Kuwait is a destination country for men and women who migrate legally from South and Southeast Asia for domestic or low-skilled labor, but are subjected to conditions of involuntary servitude by employers in Kuwait including conditions of physical and sexual abuse, non-payment of wages, confinement to the home, and withholding of passports to restrict their freedom of movement; Kuwait is reportedly a transit point for South and East Asian workers recruited for low-skilled work in Iraq; some of these workers are deceived as to the true location and nature of this work, and others are subjected to conditions of involuntary servitude in Iraq; in past years, Kuwait was also a destination country for children exploited as camel jockeys, but this form of trafficking appears to have ceased

tier rating: Tier 2 Watch List - Kuwait is placed on the Tier 2 Watch List because its efforts are based largely on pledges of future actions

Introduction Kyrgyzstan

Background:

A Central Asian country of incredible natural beauty and proud nomadic traditions, Kyrgyzstan was annexed by Russia in 1864; it achieved independence from the Soviet Union in 1991. Nationwide demonstrations in the spring of 2005 resulted in the ouster of President Askar AKAYEV, who had run the country since 1990. Subsequent presidential elections in July 2005 were won overwhelmingly by former prime minister Kurmanbek BAKIYEV. The political opposition organized demonstrations in Bishkek in April, May, and November 2006 resulting in the adoption of new constitution that transferred some of the president's powers to parliament and the government. Current concerns include: privatization of state-owned enterprises, expansion of democracy and political freedoms, reduction of corruption, improving interethnic relations, and combating terrorism.

Economy Kyrgyzstan

Economy - overview:

Kyrgyzstan is a poor, mountainous country with a predominantly agricultural economy. Cotton, tobacco, wool, and meat are the main agricultural products, although only tobacco and cotton are exported in any quantity. Industrial exports include gold, mercury, uranium, natural gas, and electricity. Following independence Kyrgyzstan was progressive in carrying out market reforms, such as an improved regulatory system and land reform, but political instability during 2005-06 has undercut the investment climate. Kyrgyzstan was the first CIS country to be accepted into the World Trade Organization. Much of the government's stock in enterprises has been sold. Drops in production had been severe after the breakup of the Soviet Union in December 1991, but by mid-1995, production began to recover and exports began to increase. The economy is heavily weighted toward gold export and a drop in output at the main Kumtor gold mine sparked a 0.5% decline in GDP in 2002, but GDP growth bounced back the following year. In 2005 Kyrgyzstan again experienced a decline in GDP, this time 0.6%. The government has made steady strides in controlling its substantial fiscal deficit, virtually balancing revenues and expenditures in 2006. The government and international financial institutions have been engaged in a comprehensive medium-term poverty reduction and economic growth strategy; in 2005 Bishkek agreed to pursue much-needed tax reform and in 2006 became eligible for the heavily indebted poor countries (HIPC) initiative. Progress fighting corruption, further restructuring of domestic industry, and success in attracting foreign investment are keys to future growth.

Introduction Laos

Background:

Modern-day Laos has its roots in the ancient Lao kingdom of Lan Xang, established in the 14th Century under King FA NGUM. For three

hundred years Lan Xang included large parts of present-day Cambodia and Thailand, as well as all of what is now Laos. After centuries of gradual decline, Laos came under the control of Siam (Thailand) from the late 18th century until the late 19th century when it became part of French Indochina. The Franco-Siamese Treaty of 1907 defined the current Lao border with Thailand. In 1975, the Communist Pathet Lao took control of the government ending a six-century-old monarchy and instituting a strict socialist regime closely aligned to Vietnam. A gradual return to private enterprise and the liberalization of foreign investment laws began in 1986. Laos became a member of ASEAN in 1997.

Economy Laos

Economy - overview:

The government of Laos, one of the few remaining official Communist states, began decentralizing control and encouraging private enterprise in 1986. The results, starting from an extremely low base, were striking - growth averaged 6% per year in 1988-2006 except during the short-lived drop caused by the Asian financial crisis beginning in 1997. Despite this high growth rate, Laos remains a country with a primitive infrastructure. It has no railroads, a rudimentary road system, and limited external and internal telecommunications, though the government is sponsoring major improvements in the road system with possible support from Japan. Electricity is available in only a few urban areas.

Subsistence agriculture, dominated by rice, accounts for about half of GDP and provides 80% of total employment. The economy will continue to benefit from aid by the IMF and other international sources and from new foreign investment in hydropower and mining. Construction will be another strong economic driver, especially as hydroelectric dam and road projects gain steam. Several policy changes since 2004 may help spur growth. In late 2004, Laos gained

Normal Trade Relations status with the US, allowing Laos-based producers to benefit from lower tariffs on exports. Laos is taking steps to join the World Trade Organization in the next few years; the resulting trade policy reforms will improve the business environment. On the fiscal side, a value-added tax (VAT) regime, slated to begin in 2008, will streamline the government's inefficient tax system.

Military - note:

Laos is one of the world's least developed countries; the Lao People's Armed Forces are small, poorly funded, and ineffectively resourced; there is little political will to allocate sparse funding to the military, and the armed forces' gradual degradation is likely to continue; the massive drug production and trafficking industry centered in the Golden Triangle makes Laos an important narcotics transit country, and armed Wa and Chinese smugglers are active on the Lao-Burma border (2005)

Transnational Issues Laos

Disputes - international:

Southeast Asian states have enhanced border surveillance to check the spread of avian flu; talks continue on completion of demarcation with Thailand but disputes remain over islands in the Mekong River; concern among Mekong Commission members that China's construction of dams on the Mekong River will affect water levels

Trafficking in persons:

current situation: Laos is a source country for men and women trafficked for the purposes of forced labor and sexual exploitation; a significant number are economic migrants who are subjected to commercial sexual exploitation or conditions of forced or bonded labor in Thailand; to a lesser extent, Laos is a transit and destination country for women who are trafficked for sexual exploitation including a small number of victims from China and Vietnam trafficked to work as street vendors and for sexual exploitation in prostitution

tier rating: Tier 3 - Laos does not fully comply with the minimum standards for the elimination of trafficking and is not making significant efforts to do so

Illicit drugs:

estimated cultivation in 2004 - 10,000 hectares, a 45% decrease from 2003; estimated potential production in 2004 - 49 metric tons, a significant decrease from 200 metric tons in 2003 (2005)

Economy Latvia

Economy - overview:

Latvia's transitional economy recovered from the 1998 Russian financial crisis, largely due to the government's budget stringency and a gradual reorientation of exports toward EU countries, lessening Latvia's trade dependency on Russia. The majority of companies, banks, and real estate have been privatized, although the state still holds sizable stakes in a few large enterprises. Latvia officially joined the World Trade Organization in February 1999. EU membership, a top foreign policy goal, came in May 2004. The current account deficit - 15.7% of GDP in 2006 - remains a major concern. The perception that many of Latvia's banks facilitate illicit activity could damage the country's vibrant financial sector.

Transnational Issues Latvia

Disputes - international:

Russia refuses to sign the 1997 boundary treaty due to Latvian insistence on a unilateral clarificatory declaration referencing Soviet occupation of Latvia and territorial losses; Russia demands better Latvian treatment of ethnic Russians in Latvia; as of January 2007, ground demarcation of the boundary with Belarus was complete and mapped with final ratification documentation in preparation; the Latvian parliament has not ratified its 1998 maritime boundary treaty with Lithuania, primarily due to concerns over oil exploration rights; as a member state that forms part of the EU's external border, Latvia must implement the strict Schengen border rules with Russia

Illicit drugs:

transshipment point for opiates and cannabis from Central and Southwest Asia to Western Europe and Scandinavia and Latin American cocaine and some synthetics from Western Europe to CIS; despite improved legislation, vulnerable to money laundering due to nascent enforcement capabilities and comparatively weak regulation of offshore companies and the gaming industry; CIS organized crime (including counterfeiting, corruption, extortion, stolen cars, and prostitution) accounts for most laundered proceeds

@Lebanon

Introduction Lebanon

Background:

Following the capture of Syria from the Ottoman Empire by Anglo-French forces in 1918, France received a mandate over this territory and separated out a region of Lebanon in 1920. France granted this area independence in 1943. A 15-year civil war (1976-1991) devastated the country, but Lebanon has since made progress toward rebuilding its political institutions. Under the Ta'if Accord - the blueprint for national reconciliation - the Lebanese established a more equitable political system, particularly by giving Muslims a greater voice in the political process while institutionalizing sectarian divisions in the government. Since the end of the war, Lebanon has conducted several successful elections, most militias have been disbanded, and the Lebanese Armed Forces (LAF) have extended authority over about two-thirds of the country. Hizballah, a radical Shi'a organization listed by the US State Department as a Foreign Terrorist Organization, retains its weapons. During Lebanon's civil war, the Arab League legitimized in the Ta'if Accord Syria's troop deployment, numbering about 16,000 based mainly east of Beirut and in the Bekaa Valley. Damascus justified its continued military presence in Lebanon by citing Beirut's requests and the failure of the Lebanese Government to implement all of the constitutional reforms in the Ta'if Accord. Israel's withdrawal from southern Lebanon in May 2000, however, encouraged some Lebanese groups to demand that Syria withdraw its forces as well. The passage of UNSCR 1559 in early October 2004 - a resolution calling for Syria to withdraw from Lebanon and end its interference in Lebanese affairs - further emboldened Lebanese groups opposed to Syria's

presence in Lebanon. The assassination of former Prime Minister Rafiq HARIRI and 20 others in February 2005 led to massive demonstrations in Beirut against the Syrian presence ("the Cedar Revolution"). Syria finally withdrew the remainder of its military forces from Lebanon in April 2005. In May-June 2005, Lebanon held its first legislative elections since the end of the civil war free of foreign interference, handing a majority to the bloc led by Saad HARIRI, the slain prime minister's son. Hizballah kidnapped two Israeli soldiers in July 2006 leading to a 34-day conflict with Israel. UNSCR 1701, which passed in August 2006, called for the disarmament of Hizballah.

Economy Lebanon

Economy - overview:

The 1975-91 civil war seriously damaged Lebanon's economic

infrastructure, cut national output by half, and all but ended Lebanon's position as a Middle Eastern entrepot and banking hub. In the years since, Lebanon has rebuilt much of its war-torn physical and financial infrastructure by borrowing heavily - mostly from domestic banks. In an attempt to reduce the ballooning national debt, the Rafiq HARIRI government began an austerity program, reining in government expenditures, increasing revenue collection, and privatizing state enterprises, but economic and financial reform initiatives stalled and public debt continued to grow despite receipt of more than \$2 billion in bilateral assistance at the Paris II Donors Conference. The Israeli-Hizballah conflict caused an estimated \$3.6 billion in infrastructure damage in July and August 2006, and internal Lebanese political tension continues to hamper economic activity.

Introduction Lesotho

Background:

Basutoland was renamed the Kingdom of Lesotho upon independence from the UK in 1966. The Basuto National Party ruled for the first two decades. King MOSHOESHOE was exiled in 1990, but returned to Lesotho in 1992 and reinstated in 1995. Constitutional government was restored in 1993 after 7 years of military rule. In 1998, violent protests and a military mutiny following a contentious election prompted a brief but bloody intervention by South African and Botswanan military forces under the aegis of the Southern African Development Community. Constitutional reforms have since restored political stability; peaceful parliamentary elections were held in 2002.

Economy Lesotho

Economy - overview:

Small, landlocked, and mountainous, Lesotho relies on remittances from miners employed in South Africa and customs duties from the Southern Africa Customs Union for the majority of government revenue. However, the government has recently strengthened its tax system to reduce dependency on customs duties. Completion of a major hydropower facility in January 1998 now permits the sale of water to South Africa, also generating royalties for Lesotho. As the number of mineworkers has declined steadily over the past several years, a small manufacturing base has developed based on farm products that support the milling, canning, leather, and jute industries, as well as a rapidly expanding apparel-assembly sector. The latter has grown significantly, mainly due to Lesotho qualifying for the trade benefits contained in the Africa Growth and Opportunity Act. The economy is still primarily based on subsistence agriculture, especially livestock, although drought has decreased agricultural activity. The extreme inequality in the distribution of income remains a major drawback. Lesotho has signed an Interim Poverty Reduction and Growth Facility with the IMF.

Introduction Liberia

Background:

Settlement of freed slaves from the US in what is today Liberia began in 1822; by 1847, the Americo-Liberians were able to establish a republic. William TUBMAN, president from 1944-71, did much to promote foreign investment and to bridge the economic, social, and political gaps between the descendents of the original settlers and the inhabitants of the interior. In 1980, a military coup led by Samuel DOE ushered in a decade of authoritarian rule. In December 1989, Charles TAYLOR launched a rebellion against DOE's regime that led to a prolonged civil war in which DOE himself was killed. A period of relative peace in 1997 allowed for elections that brought TAYLOR to power, but major fighting resumed in 2000. An August 2003, peace agreement ended the war and prompted the resignation of former president Charles TAYLOR, who was exiled to Nigeria. After two years of rule by a transitional government, democratic elections in late 2005 brought President Ellen JOHNSON SIRLEAF to power. The UN Mission in Liberia (UNMIL), which maintains a strong presence throughout the country, completed a disarmament program for former combatants in late 2004, but the security situation is still volatile and the process of rebuilding the social and economic structure of this war-torn country remains sluggish.

Economy Liberia

Economy - overview:

Civil war and government mismanagement have destroyed much of
Liberia's economy, especially the infrastructure in and around
Monrovia. Many businessmen have fled the country, taking capital and

expertise with them. Some have returned, but many will not. Richly endowed with water, mineral resources, forests, and a climate favorable to agriculture, Liberia had been a producer and exporter of basic products - primarily raw timber and rubber. Local manufacturing, mainly foreign owned, had been small in scope. President JOHNSON SIRLEAF, a Harvard-trained economist, has taken steps to reduce corruption, build support from international donors, and encourage private investment. An embargo on timber exports has been lifted, opening a source of revenue for the government, but diamonds remain under UN sanctions. The reconstruction of infrastructure and the raising of incomes in this ravaged economy will largely depend on generous financial support and technical assistance from donor countries.

Illicit drugs:

transshipment point for Southeast and Southwest Asian heroin and South American cocaine for the European and US markets; corruption, criminal activity, arms-dealing, and diamond trade provide significant potential for money laundering, but the lack of well-developed financial system limits the country's utility as a major money-laundering center

@Libya

Introduction Libya

Background:

The Italians supplanted the Ottoman Turks from the area around Tripoli in 1911 and did not relinquish their hold until 1943 when defeated in World War II. Libya then passed to UN administration and achieved independence in 1951. Following a 1969 military coup, Col. Muammar Abu Minyar al-QADHAFI began to espouse his own political system, the Third Universal Theory. The system is a combination of socialism and Islam derived in part from tribal practices and is supposed to be implemented by the Libyan people themselves in a unique form of "direct democracy." QADHAFI has always seen himself as a revolutionary and visionary leader. He used oil funds during the 1970s and 1980s to promote his ideology outside Libya, supporting subversives and terrorists abroad to hasten the end of Marxism and capitalism. In addition, beginning in 1973, he engaged in military operations in northern Chad's Aozou Strip - to gain access to minerals and to use as a base of influence in Chadian

politics - but was forced to retreat in 1987. UN sanctions in 1992 isolated QADHAFI politically following the downing of Pan AM Flight 103 over Lockerbie, Scotland. Libyan support for terrorism appeared to have decreased after the imposition of sanctions. During the 1990s, QADHAFI also began to rebuild his relationships with Europe. UN sanctions were suspended in April 1999 and finally lifted in September 2003 after Libya resolved the Lockerbie case. In December 2003, Libya announced that it had agreed to reveal and end its programs to develop weapons of mass destruction, and QADHAFI has made significant strides in normalizing relations with western nations since then. He has received various Western European leaders as well as many working-level and commercial delegations, and made his first trip to Western Europe in 15 years when he traveled to Brussels in April 2004. QADHAFI also resolved in 2004 some of the outstanding cases against his government for terrorist activities in the 1980s by compensating some families of victims of the Pan Am 103, French airliner UTA, and La Belle disco bombings. The US resumed full diplomatic relations with Libya in May 2006 and rescinded Libya's designation as a state sponsor of terrorism in June.

Economy Libya

Economy - overview:

The Libyan economy depends primarily upon revenues from the oil sector, which contribute about 95% of export earnings, about one-quarter of GDP, and 60% of public sector wages. Substantial revenues from the energy sector coupled with a small population give Libya one of the highest per capita GDPs in Africa, but little of this income flows down to the lower orders of society. Libyan officials in the past four years have made progress on economic reforms as part of a broader campaign to reintegrate the country into the international fold. This effort picked up steam after UN sanctions were lifted in September 2003 and as Libya announced in December 2003 that it would abandon programs to build weapons of mass destruction. Almost all US unilateral sanctions against Libya were removed in April 2004, helping Libya attract more foreign direct investment, mostly in the energy sector. Libyan oil and gas licensing rounds continue to draw high international interest. Libya faces a long road ahead in liberalizing the socialist-oriented economy, but initial steps - including applying for WTO membership, reducing some subsidies, and announcing plans for privatization - are laying the groundwork for a transition to a more market-based economy. The non-oil manufacturing and construction sectors, which account for more than 20% of GDP, have expanded from processing mostly agricultural products to include the production of petrochemicals, iron, steel, and aluminum. Climatic conditions and poor soils severely limit agricultural output, and Libya imports about 75% of its food.

Introduction Liechtenstein

Background:

The Principality of Liechtenstein was established within the Holy Roman Empire in 1719; it became a sovereign state in 1806. Until the end of World War I, it was closely tied to Austria, but the economic devastation caused by that conflict forced Liechtenstein to enter into a customs and monetary union with Switzerland. Since World War II (in which Liechtenstein remained neutral), the country's low taxes have spurred outstanding economic growth. Shortcomings in banking regulatory oversight resulted in concerns about the use of financial institutions for money laundering. However, Liechtenstein implemented anti-money-laundering legislation over the past several years and a Mutual Legal Assistance Treaty with the US went into effect in 2003.

Economy Liechtenstein

Economy - overview:

Despite its small size and limited natural resources, Liechtenstein has developed into a prosperous, highly industrialized, free-enterprise economy with a vital financial service sector and living standards on a par with its large European neighbors. The Liechtenstein economy is widely diversified with a large number of small businesses. Low business taxes - the maximum tax rate is 20% - and easy incorporation rules have induced many holding or so-called letter box companies to establish nominal offices in Liechtenstein, providing 30% of state revenues. The country participates in a customs union with Switzerland and uses the Swiss franc as its national currency. It imports more than 90% of its energy requirements. Liechtenstein has been a member of the European Economic Area (an organization serving as a bridge between the European Free Trade Association (EFTA) and the EU) since May 1995. The government is working to harmonize its economic policies with those of an integrated Europe.

Introduction Lithuania

Background:

Independent between the two World Wars, Lithuania was annexed by

the USSR in 1940 - an action never recognized by the US. On 11 March 1990, Lithuania became the first of the Soviet republics to declare its independence, but Moscow did not recognize this proclamation until September of 1991 (following the abortive coup in Moscow). The last Russian troops withdrew in 1993. Lithuania subsequently restructured its economy for integration into Western European institutions; it joined both NATO and the EU in the spring of 2004.

Economy Lithuania

Economy - overview:

Lithuania, the Baltic state that has conducted the most trade with Russia, has slowly rebounded from the 1998 Russian financial crisis.

Unemployment dropped from 11% in 2003 to 4.5% in 2006. Growing domestic consumption and increased investment have furthered recovery. Trade has been increasingly oriented toward the West. Lithuania has gained membership in the World Trade Organization and joined the EU in May 2004. Privatization of the large, state-owned utilities, particularly in the energy sector, is nearing completion. Overall, more than 80% of enterprises have been privatized. Foreign government and business support have helped in the transition from the old command economy to a market economy.

Transnational Issues Lithuania

Disputes - international:

Lithuania and Russia committed to demarcating their boundary in 2006 in accordance with the land and maritime treaty ratified by Russia in May 2003 and by Lithuania in 1999; Lithuania operates a simplified transit regime for Russian nationals traveling from the Kaliningrad coastal exclave into Russia, while still conforming, as a EU member state having an external border with a non-EU member, to strict Schengen border rules; the Latvian parliament has not ratified its 1998 maritime boundary treaty with Lithuania, primarily due to concerns over potential hydrocarbons; as of January 2007, ground demarcation of the boundary with Belarus was complete and mapped with final ratification documents in preparation

Illicit drugs:

transshipment point for opiates and other illicit drugs from Southwest Asia, Latin America, and Western Europe to Western Europe and Scandinavia; limited production of methamphetamine and ecstasy; susceptible to money laundering despite changes to banking legislation

Introduction Luxembourg

Background:

Founded in 963, Luxembourg became a grand duchy in 1815 and an independent state under the Netherlands. It lost more than half of its territory to Belgium in 1839, but gained a larger measure of autonomy. Full independence was attained in 1867. Overrun by Germany in both World Wars, it ended its neutrality in 1948 when it entered into the Benelux Customs Union and when it joined NATO the following year. In 1957, Luxembourg became one of the six founding countries of the European Economic Community (later the European Union), and in 1999 it joined the euro currency area.

Economy Luxembourg

Economy - overview:

This stable, high-income economy - benefitting from its proximity to France, Belgium, and Germany - features solid growth, low inflation, and low unemployment. The industrial sector, initially dominated by steel, has become increasingly diversified to include chemicals, rubber, and other products. Growth in the financial sector, which now accounts for about 28% of GDP, has more than compensated for the decline in steel. Most banks are foreign-owned and have extensive foreign dealings. Agriculture is based on small family-owned farms. The economy depends on foreign and cross-border workers for about 60% of its labor force. Although Luxembourg, like all EU members, has suffered from the global economic slump, the country enjoys an extraordinarily high standard of living - GDP per capita ranks first in the world.

Introduction Macau

Background:

Colonized by the Portuguese in the 16th century, Macau was the first European settlement in the Far East. Pursuant to an agreement signed by China and Portugal on 13 April 1987, Macau became the Macau Special Administrative Region (SAR) of China on 20 December 1999. China has promised that, under its "one country, two systems" formula, China's socialist economic system will not be practiced in Macau, and that Macau will enjoy a high degree of autonomy in all matters except foreign and defense affairs for the next 50 years.

Economy Macau

Economy - overview:

Macau's well-to-do economy has remained one of the most open in the world since its reversion to China in 1999. Apparel exports and tourism are mainstays of the economy. Although the territory was hit hard by the 1997-98 Asian financial crisis and the global downturn in 2001, its economy grew 10.1% in 2002, 14.2% in 2003, and 28.6% in 2004 before slowing to 6.7% in 2005. The economic boom was powered by gambling, tourism, and the construction necessary to support such endeavours. China's decision to ease travel restrictions led to a rapid rise in the number of mainland visitors. The opening of Macau's gaming industry to foreign access in 2001 spurred an

increase in public works expenditures. The budget also returned to surplus in 2002 because of the surge in visitors from China and a hike in taxes on gambling profits, which generated about 70% of government revenue. Much of Macau's textile industry may move to the mainland due to the termination in 2005 of the Multi-Fiber Agreement, which provided a near guarantee of export markets, leaving the territory more dependant on gambling and trade-related services to generate growth. The Closer Economic Partnership Agreement (CEPA) between Macau and mainland China that came into effect on 1 January 2004 offers many Macau-made products tariff-free access to the mainland. The range of products covered by CEPA was expanded on 1 January 2005.

Trafficking in persons:

current situation: Macau is a transit and destination territory for women trafficked for the purpose of commercial sexual exploitation; most females in Macau's sizeable sex industry come from the interior regions of China or Mongolia, though a significant number also come from Russia, Eastern Europe, Thailand, and Vietnam; the majority of women in Macau's prostitution trade appear to have entered Macau and the sex trade voluntarily, though there is evidence that some are

deceived or coerced into sexual servitude, often through the use of debt bondage; organized criminal syndicates are reportedly involved in bringing women to Macau, and fear of reprisals from these groups may prevent some women from seeking help
tier rating: Tier 2 Watch List - Macau is placed on the Tier 2 Watch List for failing to show evidence of increasing efforts to address trafficking since 2004

Introduction Macedonia

Background:

Macedonia gained its independence peacefully from Yugoslavia in 1991, but Greece's objection to the new state's use of what it considered a Hellenic name and symbols delayed international recognition, which occurred under the provisional designation of "the Former Yugoslav Republic of Macedonia." In 1995, Greece lifted a 20-month trade embargo and the two countries agreed to normalize relations. The United States began referring to Macedonia by its constitutional name, Republic of Macedonia, in 2004 and negotiations continue between Greece and Macedonia to resolve the name issue. Some ethnic Albanians, angered by perceived political and economic inequities, launched an insurgency in 2001 that eventually won the support of the majority of Macedonia's Albanian population and led to the internationally-brokered Framework Agreement, which ended the fighting by establishing a set of new laws enhancing the rights of minorities. The undetermined status of neighboring Kosovo, implementation of the Framework Agreement, and a weak economy continue to be challenges for Macedonia.

Economy Macedonia

Economy - overview:

At independence in September 1991, Macedonia was the least developed of the Yugoslav republics, producing a mere 5% of the total federal output of goods and services. The collapse of Yugoslavia ended transfer payments from the central government and eliminated advantages from inclusion in a de facto free trade area. An absence of infrastructure, UN sanctions on the downsized Yugoslavia, and a Greek economic embargo over a dispute about the country's constitutional name and flag hindered economic growth until 1996. GDP subsequently rose each year through 2000. However, the leadership's commitment to economic reform, free trade, and regional integration was undermined by the ethnic Albanian insurgency of 2001. The economy shrank 4.5% because of decreased trade, intermittent border closures, increased deficit spending on security needs, and investor uncertainty. Growth barely recovered in 2002 to 0.9%, then averaged 4% per year during 2003-06. Macedonia has maintained macroeconomic stability with low inflation, but it has lagged the region in attracting foreign investment and job

growth has been anemic. Macedonia has an extensive grey market, estimated to be more than 20 percent of GDP, that falls outside official statistics.

Introduction Madagascar

Background:

Formerly an independent kingdom, Madagascar became a French colony in 1896, but regained its independence in 1960. During 1992-93, free presidential and National Assembly elections were held, ending 17 years of single-party rule. In 1997, in the second presidential race, Didier RATSIRAKA, the leader during the 1970s and 1980s, was returned to the presidency. The 2001 presidential election was contested between the followers of Didier RATSIRAKA and Marc RAVALOMANANA, nearly causing secession of half of the country. In April 2002, the High Constitutional Court announced RAVALOMANANA the winner.

Economy Madagascar

Economy - overview:

Having discarded past socialist economic policies, Madagascar has since the mid 1990s followed a World Bank- and IMF-led policy of privatization and liberalization. This strategy placed the country on a slow and steady growth path from an extremely low level. Agriculture, including fishing and forestry, is a mainstay of the economy, accounting for more than one-fourth of GDP and employing 80% of the population. Exports of apparel have boomed in recent years primarily due to duty-free access to the United States.

Deforestation and erosion, aggravated by the use of firewood as the primary source of fuel, are serious concerns. President RAVALOMANANA has worked aggressively to revive the economy following the 2002 political crisis, which triggered a 12% drop in GDP that year.

Poverty reduction and combating corruption will be the centerpieces of economic policy for the next few years.

Introduction Malawi

Background:

Established in 1891, the British protectorate of Nyasaland became the independent nation of Malawi in 1964. After three decades of one-party rule under President Hastings Kamuzu BANDA the country held multiparty elections in 1994, under a provisional constitution which came into full effect the following year. Current President Bingu wa MUTHARIKA, elected in May 2004 after a failed attempt by the previous president to amend the constitution to permit another term, has struggled to assert his authority against his predecessor, who still leads their shared political party. MUTHARIKA's anti-corruption efforts have led to several high-level arrests and one prominent conviction. Increasing corruption, population growth, increasing pressure on agricultural lands, and the spread of HIV/AIDS pose major problems for the country.

Economy Malawi

Economy - overview:

Landlocked Malawi ranks among the world's least developed
countries. The economy is predominately agricultural, with about 90%
of the population living in rural areas. Agriculture accounted for
nearly 36% of GDP and 80% of export revenues in 2005. The
performance of the tobacco sector is key to short-term growth as
tobacco accounts for over 60% of exports. The economy depends on
substantial inflows of economic assistance from the IMF, the World

Bank, and individual donor nations. In late 2000, Malawi was approved for relief under the Heavily Indebted Poor Countries (HIPC) program. The government faces strong challenges, including developing a market economy, improving educational facilities, facing up to environmental problems, dealing with the rapidly growing problem of HIV/AIDS, and satisfying foreign donors that fiscal discipline is being tightened. In 2005, President MUTHARIKA championed an anticorruption campaign. Malawi's recent fiscal policy performance has been very strong, but a serious drought in 2005 and 2006 heightened pressure on the government to increase spending.

Introduction Malaysia

Background:

During the late 18th and 19th centuries, Great Britain established colonies and protectorates in the area of current Malaysia; these were occupied by Japan from 1942 to 1945. In 1948, the British-ruled territories on the Malay Peninsula formed the Federation of Malaya, which became independent in 1957. Malaysia was formed in 1963 when the former British colonies of Singapore and the East Malaysian

states of Sabah and Sarawak on the northern coast of Borneo joined the Federation. The first several years of the country's history were marred by Indonesian efforts to control Malaysia, Philippine claims to Sabah, and Singapore's secession from the Federation in 1965. During the 22-year term of Prime Minister MAHATHIR bin Mohamad (1981-2003), Malaysia was successful in diversifying its economy from dependence on exports of raw materials, to expansion in manufacturing, services, and tourism.

Economy Malaysia

Economy - overview:

Malaysia, a middle-income country, transformed itself from 1971 through the late 1990s from a producer of raw materials into an emerging multi-sector economy. Growth was almost exclusively driven by exports - particularly of electronics. As a result, Malaysia was hard hit by the global economic downturn and the slump in the information technology (IT) sector in 2001 and 2002. GDP in 2001 grew only 0.5% because of an estimated 11% contraction in exports, but a substantial fiscal stimulus package equal to US \$1.9 billion mitigated the worst of the recession, and the economy rebounded in 2002 with a 4.1% increase. The economy grew 4.9% in 2003, notwithstanding a difficult first half, when external pressures from Severe Acute Respiratory Syndrome (SARS) and the Iraq War led to caution in the business community. Growth topped 7% in 2004 and 5% per year in 2005-06. As an oil and gas exporter, Malaysia has profited from higher world energy prices, although the rising cost of domestic gasoline and diesel fuel forced Kuala Lumpur to reduce government subsidies, contributing to higher inflation. Malaysia "unpegged" the ringgit from the US dollar in 2005 and the currency appreciated 6% against the dollar in 2006. Healthy foreign exchange reserves and a small external debt greatly reduce the risk that Malaysia will experience a financial crisis over the near term similar to the one in 1997. The economy remains dependent on continued growth in the US, China, and Japan - top export destinations and key sources of foreign investment.

Transnational Issues Malaysia

Disputes - international:

Malaysia has asserted sovereignty over the Spratly Islands together with China, Philippines, Taiwan, Vietnam, and possibly Brunei; while the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions over the Spratly Islands, it is not the legally binding "code of conduct" sought by some parties; Malaysia was not party to the March 2005 joint accord among the national oil companies of China, the Philippines, and Vietnam on conducting marine seismic activities in the Spratly Islands; disputes continue over deliveries of fresh water to Singapore, Singapore's land reclamation, bridge construction, and maritime boundaries in the Johor and Singapore Straits; in November 2007 the ICJ will hold public hearings in response to the Memorials and Counter memorials filed by the parties in 2003 and 2005 over sovereignty of Pedra Branca Island/Pulau Batu Puteh, Middle Rocks and South Ledge; ICJ awarded Ligitan and Sipadan islands, also claimed by Indonesia and Philippines, to Malaysia but left maritime boundary and sovereignty of Unarang rock in the hydrocarbon-rich Celebes Sea in dispute; separatist violence in Thailand's predominantly Muslim southern provinces prompts measures to close and monitor border with Malaysia to stem terrorist activities; Philippines retains a dormant claim to

Malaysia's Sabah State in northern Borneo; Brunei and Malaysia are still considering international adjudication over their disputed offshore and deepwater seabeds, where hydrocarbon exploration was terminated in 2003; Malaysia's land boundary with Brunei around Limbang is in dispute; piracy remains a problem in the Malacca Strait

Refugees and internally displaced persons:

Trafficking in persons:

current situation: Malaysia is a destination and, to a lesser extent, a source and transit country for men and women trafficked for the purposes of sexual exploitation and forced labor; foreign victims, mostly women and girls from China, Indonesia, Thailand, the Philippines, and Vietnam, are trafficked to Malaysia for commercial sexual exploitation; economic migrants from countries in the region who work as domestic servants or laborers in the construction and agricultural sectors face exploitative conditions in Malaysia that meet the definition of involuntary servitude; some Malaysian women, primarily of Chinese ethnicity, are trafficked abroad for sexual exploitation

tier rating: Tier 2 Watch List - Malaysia is placed on Tier 2 Watch List for its failure to provide evidence of increasing efforts to combat trafficking, particularly its failure to provide protection for victims of trafficking

Illicit drugs:

regional transit point for some illicit drugs; drug trafficking prosecuted vigorously and carries severe penalties

Introduction Maldives

Background:

The Maldives was long a sultanate, first under Dutch and then under British protection. It became a republic in 1968, three years after independence. Since 1978, President Maumoon Abdul GAYOOM - currently in his sixth term in office - has dominated the islands' political scene. Following riots in the capital Male in August 2004, the president and his government pledged to embark upon democratic reforms, including a more representative political system and expanded political freedoms. Progress has been slow, however, and many promised reforms have been delayed indefinitely. Tourism and fishing are being developed on the archipelago.

Economy Maldives

Economy - overview:

Tourism, Maldives' largest industry, accounts for 28% of GDP and more than 60% of the Maldives' foreign exchange receipts. Over 90% of government tax revenue comes from import duties and tourism-related taxes. Fishing is the second leading sector.

Agriculture and manufacturing continue to play a lesser role in the economy, constrained by the limited availability of cultivable land and the shortage of domestic labor. Most staple foods must be imported. Industry, which consists mainly of garment production, boat building, and handicrafts, accounts for about 7% of GDP. The Maldivian Government began an economic reform program in 1989 initially by lifting import quotas and opening some exports to the private sector. Subsequently, it has liberalized regulations to allow more foreign investment. Real GDP growth averaged over 7.5% per year for more than a decade. In late December 2004, a major tsunami left more than 100 dead, 12,000 displaced, and property damage exceeding \$300 million. As a result of the tsunami, the GDP contracted by about 3.6% in 2005. A rebound in tourism, post-tsunami reconstruction, and development of new resorts helped boost GDP by nearly 18 percent in 2006. The trade deficit has expanded sharply as a result of high oil prices and imports of construction material.

Diversifying beyond tourism and fishing is the major challenge

facing the government. Over the longer term Maldivian authorities worry about the impact of erosion and possible global warming on their low-lying country; 80% of the area is one meter or less above sea level.

Introduction Mali

Background:

The Sudanese Republic and Senegal became independent of France in 1960 as the Mali Federation. When Senegal withdrew after only a few months, what formerly made up the Sudanese Republic was renamed Mali. Rule by dictatorship was brought to a close in 1991 by a coup that ushered in democratic government. President Alpha KONARE won Mali's first democratic presidential election in 1992 and was reelected in 1997. In keeping with Mali's two-term constitutional limit, KONARE stepped down in 2002 and was succeeded by Amadou TOURE.

Economy Mali

Economy - overview:

Mali is among the poorest countries in the world, with 65% of its land area desert or semidesert and with a highly unequal distribution of income. Economic activity is largely confined to the riverine area irrigated by the Niger. About 10% of the population is nomadic and some 80% of the labor force is engaged in farming and fishing. Industrial activity is concentrated on processing farm commodities. Mali is heavily dependent on foreign aid and vulnerable to fluctuations in world prices for cotton, its main export, along with gold. The government has continued its successful implementation of an IMF-recommended structural adjustment program that is helping the economy grow, diversify, and attract foreign investment. Mali's adherence to economic reform and the 50% devaluation of the CFA franc in January 1994 have pushed up economic growth to a sturdy 5% average in 1996-2006. Worker remittances and external trade routes for the landlocked country have been jeopardized by continued unrest in neighboring Cote d'Ivoire.

Introduction Malta

Background:

Great Britain formally acquired possession of Malta in 1814. The island staunchly supported the UK through both World Wars and remained in the Commonwealth when it became independent in 1964. A decade later Malta became a republic. Since about the mid-1980s, the island has transformed itself into a freight transshipment point, a financial center, and a tourist destination. Malta became an EU member in May 2004.

Economy - overview:

Major resources are limestone, a favorable geographic location, and a productive labor force. Malta produces only about 20% of its food needs, has limited fresh water supplies, and has few domestic energy sources. The economy is dependent on foreign trade, manufacturing (especially electronics and textiles), and tourism. Continued sluggishness in the European economy is holding back exports, tourism, and overall growth.

@Marshall Islands

Introduction Marshall Islands

Background:

After almost four decades under US administration as the easternmost part of the UN Trust Territory of the Pacific Islands, the Marshall Islands attained independence in 1986 under a Compact of Free Association. Compensation claims continue as a result of US nuclear testing on some of the atolls between 1947 and 1962. The Marshall Islands hosts the US Army Kwajalein Atoll (USAKA) Reagan Missile Test Site, a key installation in the US missile defense network.

Geography Marshall Islands

Location:

Oceania, two archipelagic island chains of 29 atolls, each made up of many small islets, and five single islands in the North Pacific Ocean, about one-half of the way from Hawaii to Australia

Economy Marshall Islands

Economy - overview:

US Government assistance is the mainstay of this tiny island economy. Agricultural production, primarily subsistence, is concentrated on small farms; the most important commercial crops are coconuts and breadfruit. Small-scale industry is limited to handicrafts, tuna processing, and copra. The tourist industry, now a small source of foreign exchange employing less than 10% of the labor force, remains the best hope for future added income. The islands have few natural resources, and imports far exceed exports. Under the terms of the Amended Compact of Free Association, the US will provide millions of dollars per year to the Marshall Islands (RMI) through 2023, at which time a Trust Fund made up of US and RMI contributions will begin perpetual annual payouts. Government downsizing, drought, a drop in construction, the decline in tourism, and less income from the renewal of fishing vessel licenses have held GDP growth to an average of 1% over the past decade.

@Mauritania

Introduction Mauritania

Background:

Independent from France in 1960, Mauritania annexed the southern third of the former Spanish Sahara (now Western Sahara) in 1976, but relinquished it after three years of raids by the Polisario guerrilla front seeking independence for the territory. Maaouya Ould Sid Ahmed TAYA seized power in a coup in 1984. Opposition parties were legalized and a new constitution approved in 1991. Two multiparty presidential elections since then were widely seen as flawed, but October 2001 legislative and municipal elections were generally free and open. A bloodless coup in August 2005 deposed President TAYA and ushered in a military council headed by Col. Ely Ould Mohamed VALL, which declared it would remain in power for up to two years while it created conditions for genuine democratic institutions and organized elections. Accordingly, parliamentary elections were held in December of 2006 and senatorial and presidential elections will follow (January and March 2007 respectively). The newly-elected legislature is expected to assume power following the inauguration of the new president. For now, however, Mauritania remains an autocratic state, and the country continues to experience ethnic tensions among its black population and different Moor (Arab-Berber) communities.

Economy Mauritania

Economy - overview: Half the population still depends on agriculture and livestock for a livelihood, even though many of the nomads and subsistence farmers were forced into the cities by recurrent droughts in the 1970s and 1980s. Mauritania has extensive deposits of iron ore, which account for nearly 40% of total exports. The nation's coastal waters are among the richest fishing areas in the world, but overexploitation by

foreigners threatens this key source of revenue. The country's first deepwater port opened near Nouakchott in 1986. In the past, drought and economic mismanagement resulted in a buildup of foreign debt which now stands at more than three times the level of annual exports. In February 2000, Mauritania qualified for debt relief under the Heavily Indebted Poor Countries (HIPC) initiative and in December 2001 received strong support from donor and lending countries at a triennial Consultative Group review. A new investment code approved in December 2001 improved the opportunities for direct foreign investment. Ongoing negotiations with the IMF involve problems of economic reforms and fiscal discipline. In 2001, exploratory oil wells in tracts 80 km offshore indicated potential extraction at current world oil prices. Mauritania has an estimated 1 billion barrels of proved reserves. Substantial oil production and exports began in early 2006 and averaged 75,000 barrels per day for the year. Meantime the government emphasizes reduction of poverty, improvement of health and education, and promoting privatization of the economy.

Introduction Mauritius

Background:

Although known to Arab and Malay sailors as early as the 10th century, Mauritius was first explored by the Portuguese in 1505; it was subsequently held by the Dutch, French, and British before independence was attained in 1968. A stable democracy with regular free elections and a positive human rights record, the country has attracted considerable foreign investment and has earned one of Africa's highest per capita incomes. Recent poor weather and

declining sugar prices have slowed economic growth, leading to some protests over standards of living in the Creole community.

Economy Mauritius

Economy - overview:

Since independence in 1968, Mauritius has developed from a low-income, agriculturally based economy to a middle-income diversified economy with growing industrial, financial, and tourist sectors. For most of the period, annual growth has been in the order of 5% to 6%. This remarkable achievement has been reflected in more equitable income distribution, increased life expectancy, lowered infant mortality, and a much-improved infrastructure. Sugarcane is grown on about 90% of the cultivated land area and accounts for 25% of export earnings. The government's development strategy centers on expanding local financial institutions and building a domestic information telecommunications industry. Mauritius has attracted more than 9,000 offshore entities, many aimed at commerce in India and South Africa, and investment in the banking sector alone has reached over \$1 billion. Mauritius, with its strong textile sector, has been well poised to take advantage of the Africa Growth and Opportunity Act (AGOA).

Disputes - international:

Mauritius claims the Chagos Archipelago (UK-administered British Indian Ocean Territory), and its former inhabitants, who reside chiefly in Mauritius; claims French-administered Tromelin Island

Illicit drugs:

minor consumer and transshipment point for heroin from South Asia; small amounts of cannabis produced and consumed locally; significant offshore financial industry creates potential for money laundering, but corruption levels are relatively low and the government appears generally to be committed to regulating its banking industry

Economy Mayotte

Economy - overview:

Economic activity is based primarily on the agricultural sector, including fishing and livestock raising. Mayotte is not self-sufficient and must import a large portion of its food requirements, mainly from France. The economy and future development of the island are heavily dependent on French financial assistance, an important supplement to GDP. Mayotte's remote location is an obstacle to the development of tourism.

@Mexico

Introduction Mexico

Background:

The site of advanced Amerindian civilizations, Mexico came under Spanish rule for three centuries before achieving independence early in the 19th century. A devaluation of the peso in late 1994 threw Mexico into economic turmoil, triggering the worst recession in over half a century. The nation continues to make an impressive recovery. Ongoing economic and social concerns include low real wages, underemployment for a large segment of the population, inequitable income distribution, and few advancement opportunities for the largely Amerindian population in the impoverished southern states. Elections held in July 2000 marked the first time since the 1910 Mexican Revolution that the opposition defeated the party in government, the Institutional Revolutionary Party (PRI). Vicente FOX of the National Action Party (PAN) was sworn in on 1 December 2000 as the first chief executive elected in free and fair elections.

Economy Mexico

Economy - overview:

Mexico has a free market economy that recently entered the trillion dollar class. It contains a mixture of modern and outmoded industry and agriculture, increasingly dominated by the private sector. Recent administrations have expanded competition in seaports, railroads, telecommunications, electricity generation, natural gas distribution, and airports. Per capita income is one-fourth that of the US; income distribution remains highly unequal. Trade with the US and Canada has tripled since the implementation of NAFTA in 1994. Mexico has 12 free trade agreements with over 40 countries including, Guatemala, Honduras, El Salvador, the European Free Trade Area, and Japan, putting more than 90% of trade under free trade agreements. The new Felipe CALDERON administration that took office in December 2006 faces many of the same challenges that former President FOX tried to tackle, including the need to upgrade infrastructure, modernize the tax system and labor laws, and allow private investment in the energy sector. CALDERON has stated that his top priorities include reducing poverty and creating jobs. The success of his economic agenda will depend on his ability to garner

support from the opposition.

Transnational Issues Mexico

Disputes - international:

Abundant rainfall in recent years along much of the Mexico-US border region has ameliorated periodically strained water-sharing

arrangements; the US has intensified security measures to monitor and control legal and illegal personnel, transport, and commodities across its border with Mexico; Mexico must deal with thousands of impoverished Guatemalans and other Central Americans who cross the porous border looking for work in Mexico and the United States

Refugees and internally displaced persons:

IDPs: 10,000-12,000 (government's quashing of Zapatista uprising in 1994 in eastern Chiapas Region) (2006)

Trafficking in persons:

current situation: Mexico is a source, transit, and destination country for persons trafficked for sexual exploitation and labor; while the vast majority of victims are Central Americans trafficked along Mexico's southern border, other source regions include South America, the Caribbean, Eastern Europe, Africa, and Asia; women and children are trafficked from rural regions to urban centers and tourist areas for sexual exploitation, often through fraudulent offers of employment or through threats of physical violence; the Mexican trafficking problem is often conflated with alien smuggling, and frequently the same criminal networks are involved; pervasive corruption among state and local law enforcement often impedes investigations

tier rating: Tier 2 Watch List - Mexico remains on the Tier 2 Watch List for the third consecutive year based on future commitments to undertake additional efforts in prosecution, protection, and prevention of trafficking in persons, and the failure of the government to provide critical law enforcement data

Illicit drugs:

major drug-producing nation; cultivation of opium poppy in 2004 amounted to 3,500 hectares, but opium cultivation stayed within the range - between 3,500 and 5,500 hectares - observed in nine of the

last 12 years; potential production of 9 metric tons of pure heroin, or 23 metric tons of "black tar" heroin, the dominant form of Mexican heroin in the western United States; marijuana cultivation decreased 23% to 5,800 hectares in 2004 after decade-high cultivation peak in 2003; potential production of 10,400 metric tons of marijuana in 2004; government conducts the largest independent illicit-crop eradication program in the world; major supplier of heroin and largest foreign supplier of marijuana and methamphetamine to the US market; continues as the primary transshipment country for US-bound cocaine from South America, accounting for about 90% of estimated annual cocaine movement to the US; major drug syndicates control majority of drug trafficking throughout the country; producer and distributor of ecstasy; significant money-laundering center

Economy Micronesia, Federated States of

Economy - overview:

Economic activity consists primarily of subsistence farming and fishing. The islands have few mineral deposits worth exploiting, except for high-grade phosphate. The potential for a tourist industry exists, but the remote location, a lack of adequate facilities, and limited air connections hinder development. The Amended Compact of Free Association with the US guarantees the

Federated States of Micronesia (FSM) millions of dollars in annual aid through 2023, and establishes a Trust Fund into which the US and the FSM make annual contributions in order to provide annual payouts to the FSM in perpetuity after 2023. The country's medium-term economic outlook appears fragile due not only to the reduction in US assistance but also to the slow growth of the private sector.

Introduction Moldova

Background:

Formerly part of Romania, Moldova was incorporated into the Soviet Union at the close of World War II. Although independent from the USSR since 1991, Russian forces have remained on Moldovan territory east of the Dniester River supporting the Slavic majority population, mostly Ukrainians and Russians, who have proclaimed a "Transnistria" republic. The poorest nation in Europe, Moldova became the first former Soviet state to elect a Communist as its president in 2001.

Economy Moldova

Economy - overview:

Moldova remains one of the poorest countries in Europe despite recent progress from its small economic base. It enjoys a favorable climate and good farmland but has no major mineral deposits. As a result, the economy depends heavily on agriculture, featuring fruits, vegetables, wine, and tobacco. Moldova must import almost all of its energy supplies. Moldova's dependence on Russian energy was underscored at the end of 2005, when a Russian-owned electrical station in Moldova's separatist Transnistria region cut off power to Moldova and Russia's Gazprom cut off natural gas to Moldova in disputes over pricing. The economy achieved six percent or more GDP growth every year from 2000-2005, though this was based largely on consumption fueled by remittances received from Moldovans working abroad. Russia's decision to ban Moldovan wine and agricultural products, coupled with its decision to double the price Moldova paid

for Russian natural gas, slowed GDP growth in 2006 and greatly exacerbated Moldova's economic troubles. Economic reforms have been slow because of corruption and strong political forces backing government controls; nevertheless, the government's primary goal of EU integration has resulted in some market-oriented progress. The economy remains vulnerable to higher fuel prices, poor agricultural weather, and the skepticism of foreign investors. Also, the presence of an illegal separatist regime in Moldova's Transnistria region continues to be a drag on the Moldovan economy.

Introduction Monaco

Background:

The Genoese built a fortress on the site of present-day Monaco in 1215. The current ruling Grimaldi family secured control in the late 13th century, and a principality was established in 1338. Economic development was spurred in the late 19th century with a railroad linkup to France and the opening of a casino. Since then, the principality's mild climate, splendid scenery, and gambling facilities have made Monaco world famous as a tourist and recreation center.

Economy Monaco

Economy - overview:

Monaco, bordering France on the Mediterranean coast, is a popular resort, attracting tourists to its casino and pleasant climate. In 2001, a major construction project extended the pier used by cruise ships in the main harbor. The principality has successfully sought to diversify into services and small, high-value-added, nonpolluting industries. The state has no income tax and low business taxes and thrives as a tax haven both for individuals who have established residence and for foreign companies that have set up businesses and offices. The state retains monopolies in a number of sectors, including tobacco, the telephone network, and the postal service. Living standards are high, roughly comparable to those in prosperous French metropolitan areas.

Introduction Mongolia

Background:

The Mongols gained fame in the 13th century when under Chinggis KHAN they conquered a huge Eurasian empire. After his death the empire was divided into several powerful Mongol states, but these broke apart in the 14th century. The Mongols eventually retired to their original steppe homelands and later came under Chinese rule. Mongolia won its independence in 1921 with Soviet backing. A Communist regime was installed in 1924. The ex-Communist Mongolian People's Revolutionary Party (MPRP) won elections in 1990 and 1992, but was defeated by the Democratic Union Coalition (DUC) in the 1996 parliamentary election. Since then, parliamentary elections returned the MPRP overwhelmingly to power in 2000 and produced a coalition government in 2004.

Economy Mongolia

Economy - overview: Economic activity in Mongolia has traditionally been based on herding and agriculture. Mongolia has extensive mineral deposits. Copper, coal, molybdenum, tin, tungsten and gold account for a large part of industrial production. Soviet assistance, at its height one-third of GDP, disappeared almost overnight in 1990 and 1991 at the time of the dismantlement of the USSR. The following decade saw Mongolia endure both deep recession due to political inaction and natural disasters, as well as economic growth because of reform-embracing, free-market economics and extensive privatization of the formerly state-run economy. Severe winters and summer droughts in 2000-2002 resulted in massive livestock die-off and zero or negative GDP growth. This was compounded by falling prices for Mongolia's primary sector exports and widespread opposition to privatization. Growth was 10.6% in 2004, 5.5% in 2005, and 7.5% in 2006, largely because of high copper prices and new gold production. Mongolia's economy continues to be heavily influenced by its neighbors. For example, Mongolia purchases 80% of its petroleum products and a substantial amount of electric power from Russia, leaving it vulnerable to price increases. China is Mongolia's chief export partner and a main source of the "shadow" or "grey" economy. The World Bank and other international financial institutions estimate the grey economy to be at least equal to that of the official economy, but the former's actual size is difficult to calculate since the money does not pass through the hands of tax authorities or the banking sector. Remittances from Mongolians working

abroad both legally and illegally are sizeable, and money laundering is a growing concern. Mongolia settled its \$11 billion debt with Russia at the end of 2003 on favorable terms. Mongolia, which joined the World Trade Organization in 1997, seeks to expand its participation and integration into Asian regional economic and trade regimes.

Introduction Montenegro

Background:

The use of the name Montenegro began in the 15th century when the Crnojevic dynasty began to rule the Serbian principality of Zeta; over subsequent centuries Montenegro was able to maintain its independence from the Ottoman Empire. From the 16th to 19th centuries, Montenegro became a theocracy ruled by a series of bishop princes; in 1852, it was transformed into a secular principality.

After World War I, Montenegro was absorbed by the Kingdom of Serbs, Croats, and Slovenes, which became the Kingdom of Yugoslavia in 1929; at the conclusion of World War II, it became a constituent republic of the Socialist Federal Republic of Yugoslavia. When the latter dissolved in 1992, Montenegro federated with Serbia, first as the Federal Republic of Yugoslavia and, after 2003, in a looser

union of Serbia and Montenegro. In May 2006, Montenegro invoked its right under the Constitutional Charter of Serbia and Montenegro to hold a referendum on independence from the state union. The vote for severing ties with Serbia exceeded 55% - the threshold set by the EU - allowing Montenegro to formally declare its independence on 3 June 2006.

Economy Montenegro

Economy - overview:

The republic of Montenegro severed its economy from federal control and from Serbia during the MILOSEVIC era and continues to maintain

its own central bank, uses the euro instead of the Yugoslav dinar as official currency, collects customs tariffs, and manages its own budget. The dissolution of the loose political union between Serbia and Montenegro in 2006 led to separate membership in several international financial institutions, such as the European Bank for Reconstruction and Development. On January 18, 2007, Montenegro joined the World Bank and IMF. Montenegro is pursuing its own membership in the World Trade Organization as well as negotiating a Stabilization and Association agreement with the European Union in anticipation of eventual membership. Severe unemployment remains a key political and economic problem for this entire region.

Montenegro has privatized its large aluminum complex - the dominant industry - as well as most of its financial sector, and has begun to attract foreign direct investment in the tourism sector.

Introduction Montserrat

Background:

English and Irish colonists from St. Kitts first settled on Montserrat in 1632; the first African slaves arrived three decades later. The British and French fought for possession of the island for most of the 18th century, but it finally was confirmed as a British possession in 1783. The island's sugar plantation economy was converted to small farm landholdings in the mid 19th century. Much of this island was devastated and two-thirds of the population fled abroad because of the eruption of the Soufriere Hills Volcano that began on 18 July 1995. Montserrat has endured volcanic activity since, with the last eruption occurring in July 2003.

Economy Montserrat

Economy - overview:

Severe volcanic activity, which began in July 1995, has put a damper on this small, open economy. A catastrophic eruption in June 1997 closed the airports and seaports, causing further economic and social dislocation. Two-thirds of the 12,000 inhabitants fled the island. Some began to return in 1998, but lack of housing limited the number. The agriculture sector continued to be affected by the lack of suitable land for farming and the destruction of crops.

Prospects for the economy depend largely on developments in relation to the volcanic activity and on public sector construction activity.

The UK has launched a three-year \$122.8 million aid program to help reconstruct the economy. Half of the island is expected to remain uninhabitable for another decade.

Introduction Morocco

Background:

In 788, about a century after the Arab conquest of North Africa, successive Moorish dynasties began to rule in Morocco. In the 16th century, the Sa'adi monarchy, particularly under Ahmad AL-MANSUR (1578-1603), repelled foreign invaders and inaugurated a golden age. In 1860, Spain occupied northern Morocco and ushered in a half century of trade rivalry among European powers that saw Morocco's sovereignty steadily erode; in 1912, the French imposed a protectorate over the country. A protracted independence struggle with France ended successfully in 1956. The internationalized city of Tangier and most Spanish possessions were turned over to the new country that same year. Morocco virtually annexed Western Sahara during the late 1970s, but final resolution on the status of the territory remains unresolved. Gradual political reforms in the 1990s resulted in the establishment of a bicameral legislature, which first met in 1997. Lower house elections were last held in September 2002 and upper house elections were last held in September 2006.

Economy Morocco

Economy - overview:

Moroccan economic policies brought macroeconomic stability to the country in the early 1990s but have not spurred growth sufficient to reduce unemployment that nears 20% in urban areas. Poverty has increased due to the volatile nature of GDP, Morocco's continued dependence on foreign energy, and its inability to promote the growth of small and medium size enterprises. However, GDP growth

rebounded to 6.7% in 2006 due to high rainfall, which resulted in a strong second harvest. Despite structural adjustment programs supported by the IMF, the World Bank, and the Paris Club, the dirham is only fully convertible for current account transactions and Morocco's financial sector is rudimentary. Moroccan authorities understand that reducing poverty and providing jobs is key to domestic security and development. In 2004, Moroccan authorities instituted measures to boost foreign direct investment and trade by signing a free trade agreement with the US, which entered into force in January 2006, and sold government shares in the state telecommunications company and in the largest state-owned bank. Long-term challenges include preparing the economy for freer trade with the US and European Union, improving education and job prospects for Morocco's youth, and raising living standards, which the government hopes to achieve by increasing tourist arrivals and boosting competitiveness in textiles.

claims and administers Western Sahara whose sovereignty remains unresolved - UN-administered cease-fire has remained in effect since September 1991, but attempts to hold a referendum have failed and parties thus far have rejected all brokered proposals; Morocco protests Spain's control over the coastal enclaves of Ceuta, Melilla, and Penon de Velez de la Gomera, the islands of Penon de Alhucemas and Islas Chafarinas, and surrounding waters; discussions have not progressed on a comprehensive maritime delimitation setting limits on resource exploration and refugee interdiction since Morocco's 2002 rejection of Spain's unilateral designation of a

median line from the Canary Islands; Morocco serves as one of the primary launching areas of illegal migration into Spain from North Africa

Introduction Mozambique

Background:

Almost five centuries as a Portuguese colony came to a close with independence in 1975. Large-scale emigration by whites, economic dependence on South Africa, a severe drought, and a prolonged civil war hindered the country's development. The ruling Front for the Liberation of Mozambique (FRELIMO) party formally abandoned Marxism in 1989, and a new constitution the following year provided for multiparty elections and a free market economy. A UN-negotiated peace agreement between FRELIMO and rebel Mozambique National Resistance (RENAMO) forces ended the fighting in 1992. In December 2004, Mozambique underwent a delicate transition as Joaquim CHISSANO stepped down after 18 years in office. His newly elected successor, Armando Emilio GUEBUZA, has promised to continue the sound economic policies that have encouraged foreign investment.

Economy Mozambique

Economy - overview: At independence in 1975, Mozambique was one of the world's poorest countries. Socialist mismanagement and a brutal civil war from 1977-92 exacerbated the situation. In 1987, the government embarked on a series of macroeconomic reforms designed to stabilize the economy. These steps, combined with donor assistance and with political stability since the multi-party elections in 1994, have led to dramatic improvements in the country's growth rate. Inflation was reduced to single digits during the late 1990s although it returned to double digits in 2000-06. Fiscal reforms, including the introduction of a value-added tax and reform of the customs service, have improved the government's revenue collection abilities. In spite of these gains, Mozambique remains dependent upon foreign assistance

for much of its annual budget, and the majority of the population remains below the poverty line. Subsistence agriculture continues to employ the vast majority of the country's work force. A substantial trade imbalance persists although the opening of the Mozal aluminum smelter, the country's largest foreign investment project to date, has increased export earnings. In late 2005, and after years of negotiations, the government signed an agreement to gain Portugal's majority share of the Cahora Bassa Hydroelectricity (HCB) company, a dam that was not transferred to Mozambique at independence because of the ensuing civil war and unpaid debts. More power is needed for additional investment projects in titanium extraction and processing and garment manufacturing that could further close the import/export gap. Mozambique's once substantial foreign debt has been reduced through forgiveness and rescheduling under the IMF's Heavily Indebted Poor Countries (HIPC) and Enhanced HIPC initiatives, and is now at a manageable level.

Introduction Namibia

Background:

South Africa occupied the German colony of South-West Africa during World War I and administered it as a mandate until after World War II, when it annexed the territory. In 1966 the Marxist South-West Africa People's Organization (SWAPO) guerrilla group launched a war of independence for the area that was soon named Namibia, but it was not until 1988 that South Africa agreed to end its administration in accordance with a UN peace plan for the entire region. Namibia won its independence in 1990 and has been governed by SWAPO since. Hifikepunye POHAMBHA was elected president in November 2004 in a landslide victory replacing Sam NUJOMA who led the country during its first 14 years of self rule.

Economy Namibia

Economy - overview:

The economy is heavily dependent on the extraction and processing of minerals for export. Mining accounts for 20% of GDP. Rich alluvial diamond deposits make Namibia a primary source for gem-quality diamonds. Namibia is the fourth-largest exporter of nonfuel minerals in Africa, the world's fifth-largest producer of uranium, and the producer of large quantities of lead, zinc, tin,

silver, and tungsten. The mining sector employs only about 3% of the population while about half of the population depends on subsistence agriculture for its livelihood. Namibia normally imports about 50% of its cereal requirements; in drought years food shortages are a major problem in rural areas. A high per capita GDP, relative to the region, hides the world's worst inequality of income distribution. The Namibian economy is closely linked to South Africa with the Namibian dollar pegged one-to-one to the South African rand. Privatization of several enterprises in coming years may stimulate long-run foreign investment. Increased fish production and mining of zinc, copper, uranium, and silver spurred growth in 2003-06.

@Nauru

Introduction Nauru

Background:

The exact origins of the Nauruans are unclear, since their language does not resemble any other in the Pacific. The island was annexed by Germany in 1888 and its phosphate deposits began to be mined early in the 20th century by a German-British consortium. Nauru was occupied by Australian forces in World War I and subsequently became a League of Nations mandate. After the Second World War - and a brutal occupation by Japan - Nauru became a UN trust territory. It achieved its independence in 1968 and joined the UN in 1999 as the world's smallest independent republic.

Economy Nauru

Economy - overview:

Revenues of this tiny island have traditionally come from exports of phosphates, now significantly depleted. An Australian company in 2005 entered into an agreement intended to exploit remaining supplies. Few other resources exist with most necessities being imported, mainly from Australia, its former occupier and later major source of support. The rehabilitation of mined land and the replacement of income from phosphates are serious long-term problems. In anticipation of the exhaustion of Nauru's phosphate deposits, substantial amounts of phosphate income were invested in trust funds to help cushion the transition and provide for Nauru's economic future. As a result of heavy spending from the trust funds, the government faces virtual bankruptcy. To cut costs the government has frozen wages and reduced overstuffed public service departments. In 2005, the deterioration in housing, hospitals, and other capital plant continued, and the cost to Australia of keeping the government and economy afloat continued to climb. Few comprehensive statistics

on the Nauru economy exist, with estimates of Nauru's GDP varying widely.

@Navassa Island

Introduction Navassa Island

Background:

This uninhabited island was claimed by the US in 1857 for its guano. Mining took place between 1865 and 1898. The lighthouse, built in 1917, was shut down in 1996 and administration of Navassa Island transferred from the Coast Guard to the Department of the Interior. A 1998 scientific expedition to the island described it as a unique preserve of Caribbean biodiversity; the following year it became a National Wildlife Refuge and annual scientific expeditions have continued.

Introduction Nepal

Background:

In 1951, the Nepalese monarch ended the century-old system of rule by hereditary premiers and instituted a cabinet system of government. Reforms in 1990 established a multiparty democracy within the framework of a constitutional monarchy. A Maoist insurgency, launched in 1996, gained traction and threatened to bring down the regime, especially after a negotiated cease-fire between the Maoists and government forces broke down in August 2003.

In 2001, the crown prince massacred ten members of the royal family, including the king and queen, and then took his own life. In October 2002, the new king dismissed the prime minister and his cabinet for "incompetence" after they dissolved the parliament and were subsequently unable to hold elections because of the ongoing insurgency. While stopping short of reestablishing parliament, the king in June 2004 reinstated the most recently elected prime minister who formed a four-party coalition government. Citing dissatisfaction with the government's lack of progress in addressing the Maoist insurgency and corruption, the king in February 2005 dissolved the government, declared a state of emergency, imprisoned party leaders, and assumed power. The king's government subsequently released party leaders and officially ended the state of emergency in May 2005, but the monarch retained absolute power until April 2006. After nearly three weeks of mass protests organized by the seven-party opposition and the Maoists, the king allowed parliament to reconvene on 28 April 2006. In November 2006, the government and Maoists signed the Comprehensive Peace Accord to end the ten-year insurgency.

Economy Nepal

Economy - overview:

Nepal is among the poorest and least developed countries in the world with almost one-third of its population living below the poverty line. Agriculture is the mainstay of the economy, providing a livelihood for three-fourths of the population and accounting for 38% of GDP. Industrial activity mainly involves the processing of agricultural produce including jute, sugarcane, tobacco, and grain. Security concerns relating to the Maoist conflict have led to a decrease in tourism, a key source of foreign exchange. Nepal has considerable scope for exploiting its potential in hydropower and tourism, areas of recent foreign investment interest. Prospects for foreign trade or investment in other sectors will remain poor,

however, because of the small size of the economy, its technological backwardness, its remoteness, its landlocked geographic location, its civil strife, and its susceptibility to natural disaster.

Introduction Netherlands

Background:

The Dutch United Provinces declared their independence from Spain in 1579; during the 17th century, they became a leading seafaring and commercial power, with settlements and colonies around the world. After a 20-year French occupation, a Kingdom of the Netherlands was formed in 1815. In 1830 Belgium seceded and formed a separate kingdom. The Netherlands remained neutral in World War I, but suffered invasion and occupation by Germany in World War II. A modern, industrialized nation, the Netherlands is also a large exporter of agricultural products. The country was a founding member of NATO and the EEC (now the EU), and participated in the

introduction of the euro in 1999.

Economy Netherlands

Economy - overview:

The Netherlands has a prosperous and open economy, which depends heavily on foreign trade. The economy is noted for stable industrial relations, moderate unemployment and inflation, a sizable current account surplus, and an important role as a European transportation hub. Industrial activity is predominantly in food processing, chemicals, petroleum refining, and electrical machinery. A highly mechanized agricultural sector employs no more than 2% of the labor force but provides large surpluses for the food-processing industry and for exports. The Netherlands, along with 11 of its EU partners, began circulating the euro currency on 1 January 2002. The country continues to be one of the leading European nations for attracting foreign direct investment. Economic growth slowed considerably in 2001-06, as part of the global economic slowdown, but for the four years before that, annual growth averaged nearly 4%, well above the EU average.

@Netherlands Antilles

Introduction Netherlands Antilles

Background:

Once the center of the Caribbean slave trade, the island of Curacao was hard hit by the abolition of slavery in 1863. Its prosperity (and that of neighboring Aruba) was restored in the early 20th century with the construction of oil refineries to service the newly discovered Venezuelan oil fields. The island of Saint Martin is shared with France; its southern portion is named Sint Maarten and is part of the Netherlands Antilles; its northern portion is called Saint-Martin and is part of Guadeloupe (France).

Economy Netherlands Antilles

Economy - overview:

Tourism, petroleum refining, and offshore finance are the mainstays of this small economy, which is closely tied to the outside world. Although GDP has declined or grown slightly in each of the past eight years, the islands enjoy a high per capita income and a well-developed infrastructure compared with other countries in the region. Almost all consumer and capital goods are imported, the US and Mexico being the major suppliers. Poor soils and inadequate water supplies hamper the development of agriculture. Budgetary problems hamper reform of the health and pension systems of an aging population.

@New Caledonia

Introduction New Caledonia

Background:

Settled by both Britain and France during the first half of the 19th century, the island was made a French possession in 1853. It served as a penal colony for four decades after 1864. Agitation for independence during the 1980s and early 1990s ended in the 1998 Noumea Accord, which over a period of 15 to 20 years will transfer an increasing amount of governing responsibility from France to New Caledonia. The agreement also commits France to conduct as many as three referenda between 2013 and 2018, to decide whether New Caledonia should assume full sovereignty and independence.

Economy New Caledonia

Economy - overview:

New Caledonia has about 25% of the world's known nickel resources.

Only a small amount of the land is suitable for cultivation, and food accounts for about 20% of imports. In addition to nickel, substantial financial support from France - equal to more than 15% of GDP - and tourism are keys to the health of the economy.

Substantial new investment in the nickel industry, combined with the recovery of global nickel prices, brightens the economic outlook for the next several years.

Introduction New Zealand

Background:

The Polynesian Maori reached New Zealand in about A.D. 800. In 1840, their chieftains entered into a compact with Britain, the Treaty of Waitangi, in which they ceded sovereignty to Queen Victoria while retaining territorial rights. In that same year, the British began the first organized colonial settlement. A series of land wars between 1843 and 1872 ended with the defeat of the native peoples. The British colony of New Zealand became an independent dominion in 1907 and supported the UK militarily in both World Wars. New Zealand's full participation in a number of defense alliances lapsed by the 1980s. In recent years, the government has sought to address longstanding Maori grievances.

Economy New Zealand

Economy - overview:

Over the past 20 years the government has transformed New Zealand from an agrarian economy dependent on concessionary British market access to a more industrialized, free market economy that can compete globally. This dynamic growth has boosted real incomes (but left behind many at the bottom of the ladder), broadened and deepened the technological capabilities of the industrial sector, and contained inflationary pressures. Per capita income has risen for eight consecutive years and was more than \$25,500 in 2006 in

purchasing power parity terms. Consumer and government spending have driven growth in recent years, and exports picked up in 2006 after struggling for several years. Exports are equal to about 28% of GDP, down from 33 percent of GDP in 2001. Thus far the economy has been resilient, and the Labor Government promises that expenditures on health, education, and pensions will increase proportionately to output.

Introduction Nicaragua

Background:

The Pacific coast of Nicaragua was settled as a Spanish colony from Panama in the early 16th century. Independence from Spain was declared in 1821 and the country became an independent republic in 1838. Britain occupied the Caribbean Coast in the first half of the 19th century, but gradually ceded control of the region in subsequent decades. Violent opposition to governmental manipulation and corruption spread to all classes by 1978 and resulted in a short-lived civil war that brought the Marxist Sandinista guerrillas to power in 1979. Nicaraguan aid to leftist rebels in El Salvador caused the US to sponsor anti-Sandinista contra guerrillas through much of the 1980s. Free elections in 1990, 1996, and 2001, saw the Sandinistas defeated, but voting in 2006 announced the return of former Sandinista President Daniel ORTEGA Saavedra. Nicaragua's infrastructure and economy - hard hit by the earlier civil war and by Hurricane Mitch in 1998 - are slowly being rebuilt.

Economy Nicaragua

Economy - overview:

Nicaragua, the second poorest country in the Western Hemisphere, has low per capita income and widespread underemployment. Distribution of income is one of the most unequal on the globe. While the country has progressed toward macroeconomic stability in the past few years, GDP annual growth has been far too low to meet the country's needs, forcing the country to rely on international economic assistance to meet fiscal and debt financing obligations. Nicaragua qualified in early 2004 for some \$4.5 billion in foreign debt reduction under the Heavily Indebted Poor Countries (HIPC) initiative and in November 2006 obtained over \$800 million in debt relief from the Inter-American Development Bank. In October 2005, Nicaragua ratified the US-Central America Free Trade Agreement

(CAFTA), which will provide an opportunity for Nicaragua to attract investment, create jobs, and deepen economic development. Energy shortages, however, are a serious bottleneck to growth.

@Niger

Introduction Niger

Background:

Niger became independent from France in 1960 and experienced single-party and military rule until 1991, when Gen. Ali SAIBOU was forced by public pressure to allow multiparty elections, which resulted in a democratic government in 1993. Political infighting brought the government to a standstill and in 1996 led to a coup by Col. Ibrahim BARE. In 1999 BARE was killed in a coup by military officers who promptly restored democratic rule and held elections that brought Mamadou TANDJA to power in December of that year. TANDJA was reelected in 2004. Niger is one of the poorest countries in the world with minimal government services and insufficient funds to develop its resource base. The largely agrarian and subsistence-based economy is frequently disrupted by extended droughts common to the Sahel region of Africa.

Economy Niger

Economy - overview:

Niger is one of the poorest countries in the world, ranking last on
the United Nations Development Fund index of human development. It
is a landlocked, Sub-Saharan nation, whose economy centers on
subsistence crops, livestock, and some of the world's largest
uranium deposits. Drought cycles, desertification, and a 2.9%
population growth rate, have undercut the economy. Niger shares a
common currency, the CFA franc, and a common central bank, the
Central Bank of West African States (BCEAO), with seven other
members of the West African Monetary Union. In December 2000, Niger
qualified for enhanced debt relief under the International Monetary
Fund program for Highly Indebted Poor Countries (HIPC) and concluded
an agreement with the Fund on a Poverty Reduction and Growth
Facility (PRGF). Debt relief provided under the enhanced HIPC
initiative significantly reduces Niger's annual debt service
obligations, freeing funds for expenditures on basic health care,

primary education, HIV/AIDS prevention, rural infrastructure, and other programs geared at poverty reduction. In December 2005, Niger received 100% multilateral debt relief from the IMF, which translates into the forgiveness of approximately \$86 million USD in debts to the IMF, excluding the remaining assistance under HIPC. Nearly half of the government's budget is derived from foreign donor resources. Future growth may be sustained by exploitation of oil, gold, coal, and other mineral resources. Uranium prices have increased sharply in the last few years. A drought and locust infestation in 2005 led to food shortages for as many as 2.5 million Nigeriens.

Introduction Nigeria

Background:

British influence and control over what would become Nigeria grew

through the 19th century. A series of constitutions after World War II granted Nigeria greater autonomy; independence came in 1960. Following nearly 16 years of military rule, a new constitution was adopted in 1999, and a peaceful transition to civilian government was completed. The president faces the daunting task of reforming a petroleum-based economy, whose revenues have been squandered through corruption and mismanagement, and institutionalizing democracy. In addition, the OBASANJO administration must defuse longstanding ethnic and religious tensions, if it is to build a sound foundation for economic growth and political stability. Although the April 2003 elections were marred by some irregularities, Nigeria is currently experiencing its longest period of civilian rule since independence. The general elections set for April 2007 would mark the first civilian-to-civilian transfer of power in the country's history.

Economy Nigeria

Economy - overview: Oil-rich Nigeria, long hobbled by political instability, corruption, inadequate infrastructure, and poor macroeconomic management, is undertaking some reforms under a new reform-minded administration. Nigeria's former military rulers failed to diversify the economy away from its overdependence on the capital-intensive oil sector, which provides 20% of GDP, 95% of foreign exchange earnings, and about 65% of budgetary revenues. The largely subsistence agricultural sector has failed to keep up with rapid population growth - Nigeria is Africa's most populous country - and the country, once a large net exporter of food, now must import food. Following the signing of an IMF stand-by agreement in August 2000, Nigeria received a debt-restructuring deal from the Paris Club and a \$1 billion credit from the IMF, both contingent on economic reforms. Nigeria pulled out of its IMF program in April 2002, after failing to meet spending and exchange rate targets, making it ineligible for additional debt forgiveness from the Paris Club. In the last year the government has begun showing the political will to implement the market-oriented reforms urged by the IMF, such as to modernize the banking system, to curb inflation by blocking excessive wage demands, and to resolve regional disputes over the distribution of earnings from the oil industry. In 2003, the government began deregulating fuel prices, announced the privatization of the country's four oil refineries, and instituted the National Economic Empowerment Development Strategy, a domestically designed and run program modeled on the IMF's Poverty Reduction and Growth Facility for fiscal and monetary management. In November 2005, Abuja won Paris Club approval for a debt-relief deal that eliminated \$18 billion of debt in exchange for \$12 billion in payments-a

total package worth \$30 billion of Nigeria's total \$37 billion external debt. The deal requires Nigeria to be subject to stringent IMF reviews. GDP rose strongly in 2006, based largely on increased oil exports and high global crude prices.

Joint Border Commission with Cameroon reviewed 2002 ICJ ruling on the entire boundary and bilaterally resolved differences, including June 2006 Greentree Agreement that immediately cedes sovereignty of the Bakassi Peninsula to Cameroon with a phase-out of Nigerian control within two years while resolving patriation issues; the ICJ ruled on an equidistance settlement of Cameroon-Equatorial Guinea-Nigeria maritime boundary in the Gulf of Guinea, but imprecisely defined coordinates in the ICJ decision and a sovereignty dispute between Equatorial Guinea and Cameroon over an island at the mouth of the Ntem River all contribute to the delay in implementation; only Nigeria and Cameroon have heeded the Lake Chad Commission's admonition to ratify the delimitation treaty which also includes the Chad-Niger and Niger-Nigeria boundaries

Introduction Niue

Background:

Niue's remoteness, as well as cultural and linguistic differences between its Polynesian inhabitants and those of the rest of the Cook Islands, have caused it to be separately administered. The population of the island continues to drop (from a peak of 5,200 in 1966 to about 2,166 in 2006), with substantial emigration to New Zealand, 2,400 km to the southwest.

Economy Niue

Economy - overview:

The economy suffers from the typical Pacific island problems of geographic isolation, few resources, and a small population. Government expenditures regularly exceed revenues, and the shortfall is made up by critically needed grants from New Zealand that are used to pay wages to public employees. Niue has cut government expenditures by reducing the public service by almost half. The agricultural sector consists mainly of subsistence gardening, although some cash crops are grown for export. Industry consists primarily of small factories to process passion fruit, lime oil, honey, and coconut cream. The sale of postage stamps to foreign collectors is an important source of revenue. The island in recent years has suffered a serious loss of population because of emigration to New Zealand. Efforts to increase GDP include the promotion of tourism and a financial services industry, although the International Banking Repeal Act of 2002 resulted in the termination of all offshore banking licenses. Economic aid from New Zealand in

2002 was about US\$2 million. Niue suffered a devastating typhoon in January 2004, which decimated nascent economic programs. While in the process of rebuilding, Niue has been dependent on foreign aid.

@Norfolk Island

Introduction Norfolk Island

Background:

Two British attempts at establishing the island as a penal colony (1788-1814 and 1825-55) were ultimately abandoned. In 1856, the island was resettled by Pitcairn Islanders, descendants of the Bounty mutineers and their Tahitian companions.

@Northern Mariana Islands

Introduction Northern Mariana Islands

Background:

Under US administration as part of the UN Trust Territory of the Pacific, the people of the Northern Mariana Islands decided in the 1970s not to seek independence but instead to forge closer links

with the US. Negotiations for territorial status began in 1972. A covenant to establish a commonwealth in political union with the US was approved in 1975, and came into force on 24 March 1976. A new government and constitution went into effect in 1978.

Economy Northern Mariana Islands

Economy - overview:

The economy benefits substantially from financial assistance from the US. The rate of funding has declined as locally generated government revenues have grown. The key tourist industry employs about 50% of the work force and accounts for roughly one-fourth of GDP. Japanese tourists predominate. Annual tourist entries have exceeded one-half million in recent years, but financial difficulties in Japan have caused a temporary slowdown. The agricultural sector is made up of cattle ranches and small farms producing coconuts, breadfruit, tomatoes, and melons. Garment production is by far the most important industry with the employment of 17,500 mostly Chinese workers and sizable shipments to the US under duty and quota exemptions.

@Norway

Introduction Norway

Background:

Two centuries of Viking raids into Europe tapered off following the adoption of Christianity by King Olav TRYGGVASON in 994. Conversion of the Norwegian kingdom occurred over the next several decades. In 1397, Norway was absorbed into a union with Denmark that lasted more than four centuries. In 1814, Norwegians resisted the cession of their country to Sweden and adopted a new constitution. Sweden then invaded Norway but agreed to let Norway keep its constitution in return for accepting the union under a Swedish king. Rising

nationalism throughout the 19th century led to a 1905 referendum granting Norway independence. Although Norway remained neutral in World War I, it suffered heavy losses to its shipping. Norway proclaimed its neutrality at the outset of World War II, but was nonetheless occupied for five years by Nazi Germany (1940-45). In 1949, neutrality was abandoned and Norway became a member of NATO. Discovery of oil and gas in adjacent waters in the late 1960s boosted Norway's economic fortunes. The current focus is on containing spending on the extensive welfare system and planning for the time when petroleum reserves are depleted. In referenda held in 1972 and 1994, Norway rejected joining the EU.

Economy Norway

Economy - overview:

The Norwegian economy is a prosperous bastion of welfare capitalism, featuring a combination of free market activity and government intervention. The government controls key areas such as the vital petroleum sector (through large-scale state enterprises). The country is richly endowed with natural resources - petroleum, hydropower, fish, forests, and minerals - and is highly dependent on its oil production and international oil prices, with oil and gas accounting for one-third of exports. Only Saudi Arabia and Russia export more oil than Norway. Norway opted to stay out of the EU during a referendum in November 1994; nonetheless, it contributes sizably to the EU budget. The government has moved ahead with privatization. Although Norwegian oil production peaked in 2000, natural gas production is still rising. Norwegians realize that once their gas production peaks they will eventually face declining oil and gas revenues; accordingly, Norway has been saving its oil-and-gas-boosted budget surpluses in a Government Petroleum Fund, which is invested abroad and now is valued at more than \$250 billion. After lackluster growth of less than 1% in 2002-03, GDP growth picked up to 3-4% in 2004-06. Norway's economy remains buoyant. Domestic economic activity is, and will continue to be, the main driver of growth, supported by high consumer confidence and strong investment spending in the offshore oil and gas sector.

Introduction Oman

Background:

The inhabitants of the area of Oman have long prospered on Indian Ocean trade. In the late 18th century, a newly established sultanate in Muscat signed the first in a series of friendship treaties with Britain. Over time, Oman's dependence on British political and military advisors increased, but it never became a British colony. In 1970, QABOOS bin Said al-Said overthrew the restrictive rule of his father; he has ruled as sultan ever since. His extensive modernization program has opened the country to the outside world while preserving the longstanding close ties with the UK. Oman's moderate, independent foreign policy has sought to maintain good relations with all Middle Eastern countries.

Economy Oman

Economy - overview:

Oman is a middle-income economy in the Middle East with notable oil and gas resources, a substantial trade surplus, and low inflation.

Sustained high oil prices in recent years have helped build Oman's budget and trade surpluses and foreign reserves. Oman joined the World Trade Organization in November 2000 and continues to liberalize its markets. To reduce unemployment and limit dependence on foreign labor, the government is encouraging the replacement of foreign expatriate workers with local workers. Oman actively seeks private foreign investors, especially in the industrial, information technology, tourism, and higher education fields. Industrial development plans focus on gas resources, metal manufacturing, petrochemicals, and international transshipment ports.

@Pacific Ocean

Background:

The Pacific Ocean is the largest of the world's five oceans (followed by the Atlantic Ocean, Indian Ocean, Southern Ocean, and Arctic Ocean). Strategically important access waterways include the La Perouse, Tsugaru, Tsushima, Taiwan, Singapore, and Torres Straits. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth ocean, the Southern Ocean, removed the portion of the Pacific Ocean south of 60 degrees south.

Geography Pacific Ocean

Location:

body of water between the Southern Ocean, Asia, Australia, and the Western Hemisphere

Geographic coordinates:

0 00 N, 160 00 W

Map references:

Political Map of the World

Area:

total: 155.557 million sq km

note: includes Bali Sea, Bering Sea, Bering Strait, Coral Sea, East China Sea, Gulf of Alaska, Gulf of Tonkin, Philippine Sea, Sea of Japan, Sea of Okhotsk, South China Sea, Tasman Sea, and other tributary water bodies

Area - comparative:

about 15 times the size of the US; covers about 28% of the global surface; larger than the total land area of the world

Coastline:

135,663 km

Climate:

planetary air pressure systems and resultant wind patterns exhibit remarkable uniformity in the south and east; trade winds and westerly winds are well-developed patterns, modified by seasonal fluctuations; tropical cyclones (hurricanes) may form south of Mexico from June to October and affect Mexico and Central America; continental influences cause climatic uniformity to be much less pronounced in the eastern and western regions at the same latitude in the North Pacific Ocean; the western Pacific is monsoonal - a rainy season occurs during the summer months, when moisture-laden winds blow from the ocean over the land, and a dry season during the winter months, when dry winds blow from the Asian landmass back to the ocean; tropical cyclones (typhoons) may strike southeast and east Asia from May to December

Terrain:

surface currents in the northern Pacific are dominated by a clockwise, warm-water gyre (broad circular system of currents) and in the southern Pacific by a counterclockwise, cool-water gyre; in the northern Pacific, sea ice forms in the Bering Sea and Sea of Okhotsk in winter; in the southern Pacific, sea ice from Antarctica reaches its northernmost extent in October; the ocean floor in the eastern Pacific is dominated by the East Pacific Rise, while the western Pacific is dissected by deep trenches, including the Mariana Trench, which is the world's deepest

Elevation extremes:

lowest point: Challenger Deep in the Mariana Trench -10,924 m
highest point: sea level 0 m

Natural resources:

oil and gas fields, polymetallic nodules, sand and gravel aggregates, placer deposits, fish

Natural hazards:

surrounded by a zone of violent volcanic and earthquake activity sometimes referred to as the "Pacific Ring of Fire"; subject to tropical cyclones (typhoons) in southeast and east Asia from May to December (most frequent from July to October); tropical cyclones (hurricanes) may form south of Mexico and strike Central America and Mexico from June to October (most common in August and September); cyclical El Nino/La Nina phenomenon occurs in the equatorial Pacific, influencing weather in the Western Hemisphere and the western Pacific; ships subject to superstructure icing in extreme north from October to May; persistent fog in the northern Pacific can be a maritime hazard from June to December

Environment - current issues:

endangered marine species include the dugong, sea lion, sea otter, seals, turtles, and whales; oil pollution in Philippine Sea and South China Sea

Geography - note:

the major chokepoints are the Bering Strait, Panama Canal, Luzon Strait, and the Singapore Strait; the Equator divides the Pacific Ocean into the North Pacific Ocean and the South Pacific Ocean; dotted with low coral islands and rugged volcanic islands in the southwestern Pacific Ocean

Economy Pacific Ocean

Economy - overview:

The Pacific Ocean is a major contributor to the world economy and particularly to those nations its waters directly touch. It provides low-cost sea transportation between East and West, extensive fishing grounds, offshore oil and gas fields, minerals, and sand and gravel for the construction industry. In 1996, over 60% of the world's fish catch came from the Pacific Ocean. Exploitation of offshore oil and gas reserves is playing an ever-increasing role in the energy supplies of the US, Australia, NZ, China, and Peru. The high cost of recovering offshore oil and gas, combined with the wide swings in world prices for oil since 1985, has led to fluctuations in new drillings.

Transportation Pacific Ocean

Ports and terminals:

Introduction Pakistan

Background:

The separation in 1947 of British India into the Muslim state of Pakistan (with two sections West and East) and largely Hindu India was never satisfactorily resolved, and India and Pakistan fought two wars - in 1947-48 and 1965 - over the disputed Kashmir territory. A third war between these countries in 1971 - in which India capitalized on Islamabad's marginalization of Bengalis in Pakistani politics - resulted in East Pakistan becoming the separate nation of Bangladesh. In response to Indian nuclear weapons testing, Pakistan conducted its own tests in 1998. The dispute over the state of Kashmir is ongoing, but discussions and confidence-building measures have led to decreased tensions since 2002.

Economy Pakistan

Economy - overview:

Pakistan, an impoverished and underdeveloped country, has suffered from decades of internal political disputes, low levels of foreign investment, and a costly, ongoing confrontation with neighboring India. However, IMF-approved government policies, bolstered by generous foreign assistance and renewed access to global markets since 2001, have generated solid macroeconomic recovery the last five years. The government has made substantial macroeconomic reforms since 2000, most notably privatizing the banking sector. Poverty levels have decreased by 10 percent since 2001, and Islamabad has steadily raised development spending in recent years, including a 52-percent real increase in the budget allocation for development in fiscal year 2007, a necessary step toward reversing the broad underdevelopment of its social sector. The fiscal deficit - the result of chronically low tax collection and increased spending, including reconstruction costs from the October 2005 earthquake - appears manageable for now. GDP growth, spurred by gains in the industrial and service sectors, remained in the 6-8% range in 2004-06. Inflation remains the biggest threat to the economy, jumping to more than 9% in 2005 before easing to 7.9% in 2006. The central bank is pursuing tighter monetary policy - raising interest rates in 2006 - while trying to preserve growth. Foreign exchange reserves are bolstered by steady worker remittances, but a growing current account deficit - driven by a widening trade gap as import growth outstrips export expansion - could draw down reserves and dampen GDP growth in the medium term.

Transnational Issues Pakistan

Disputes - international:

various talks and confidence-building measures cautiously have begun to defuse tensions over Kashmir, particularly since the October 2005 earthquake in the region; Kashmir nevertheless remains the site of the world's largest and most militarized territorial dispute with portions under the de facto administration of China (Aksai Chin), India (Jammu and Kashmir), and Pakistan (Azad Kashmir and Northern Areas); UN Military Observer Group in India and Pakistan (UNMOGIP) has maintained a small group of peacekeepers since 1949; India does not recognize Pakistan's ceding historic Kashmir lands to China in 1964; India and Pakistan have maintained their 2004 cease fire in Kashmir and initiated discussions on defusing the armed stand-off in the Siachen glacier region; Pakistan protests India's fencing the highly militarized Line of Control and construction of the Baglihar Dam on the Chenab River in Jammu and Kashmir, which is part of the larger dispute on water sharing of the Indus River and its tributaries; to defuse tensions and prepare for discussions on a maritime boundary, India and Pakistan seek technical resolution of the disputed boundary in Sir Creek estuary at the mouth of the Rann of Kutch in the Arabian Sea; Pakistani maps continue to show the Junagadh claim in India's Gujarat State; by

2005, Pakistan, with UN assistance, repatriated 2.3 million Afghan refugees leaving slightly less than a million, many of whom remain at their own choosing; Pakistan has proposed and Afghanistan protests construction of a fence and laying of mines along portions of their porous border; Pakistan has sent troops into remote tribal areas to monitor and control the border with Afghanistan and stem terrorist or other illegal activities

Refugees and internally displaced persons:

refugees (country of origin): 1,084,208 (Afghanistan)

IDPs: undetermined (government strikes on Islamic militants in South Waziristan), 34,000 (October 2005 earthquake, most of those displaced returned to their home villages in the spring of 2006) (2006)

Illicit drugs:

opium poppy cultivation declined 58% to 3,147 hectares in 2005; federal and provincial authorities continue to conduct anti-poppy campaigns that force eradication - fines and arrests will take place if the ban on poppy cultivation is not observed; key transit point for Afghan drugs, including heroin, opium, morphine, and hashish, bound for Western markets, the Gulf States, and Africa; financial crimes related to drug trafficking, terrorism, corruption, and smuggling remain problems

Introduction Palau

Background:

After three decades as part of the UN Trust Territory of the Pacific under US administration, this westernmost cluster of the Caroline Islands opted for independence in 1978 rather than join the Federated States of Micronesia. A Compact of Free Association with the US was approved in 1986, but not ratified until 1993. It entered into force the following year, when the islands gained independence.

Economy Palau

Economy - overview:

The economy consists primarily of tourism, subsistence agriculture, and fishing. The government is the major employer of the work force, relying heavily on financial assistance from the US. Business and tourist arrivals numbered 63,000 in 2003. The population enjoys a per capita income twice that of the Philippines and much of Micronesia. Long-run prospects for the key tourist sector have been greatly bolstered by the expansion of air travel in the Pacific, the rising prosperity of leading East Asian countries, and the willingness of foreigners to finance infrastructure development.

Introduction Panama

Background:

Explored and settled by the Spanish in the 16th century, Panama broke with Spain in 1821 and joined a union of Colombia, Venezuela, and Ecuador - named the Republic of Gran Colombia. When the latter dissolved in 1830, Panama remained part of Colombia. With US backing, Panama seceded from Colombia in 1903 and promptly signed a treaty with the US allowing for the construction of a canal and US sovereignty over a strip of land on either side of the structure (the Panama Canal Zone). The Panama Canal was built by the US Army Corps of Engineers between 1904 and 1914. In 1977, an agreement was signed for the complete transfer of the Canal from the US to Panama by the end of the century. Certain portions of the Zone and increasing responsibility over the Canal were turned over in the subsequent decades. With US help, dictator Manuel NORIEGA was deposed in 1989. The entire Panama Canal, the area supporting the Canal, and remaining US military bases were transferred to Panama by the end of 1999. In October 2006, Panamanians approved an ambitious plan to expand the Canal. The project, which is to begin in 2007 and could double the Canal's capacity, is expected to be completed in 2014-15.

Economy Panama

Economy - overview:

Panama's dollarised economy rests primarily on a well-developed services sector that accounts for three-fourths of GDP. Services include operating the Panama Canal, banking, the Colon Free Zone, insurance, container ports, flagship registry, and tourism. A slump in the Colon Free Zone and agricultural exports, the global slowdown, and the withdrawal of US military forces held back economic growth in 2000-03; growth picked up in 2004-06 led by export-oriented services and a construction boom stimulated by tax incentives. The government has implemented tax reforms, as well as social security reforms, and backs regional trade agreements and development of tourism. Unemployment remains high. In October 2006, voters passed a referendum to expand the Panama Canal to accommodate

ships that are now too large to cross the transoceanic crossway. Not a CAFTA signatory, Panama in December 2006 independently negotiated a free trade agreement with the United States, which, when implemented, will help promote the country's economic growth.

Transnational Issues Panama

Disputes - international: organized illegal narcotics operations in Colombia operate within the remote border region with Panama

Illicit drugs:

major cocaine transshipment point and primary money-laundering center for narcotics revenue; money-laundering activity is especially heavy in the Colon Free Zone; offshore financial center; negligible signs of coca cultivation; monitoring of financial transactions is improving; official corruption remains a major problem

@Papua New Guinea

Introduction Papua New Guinea

Background:

The eastern half of the island of New Guinea - second largest in the world - was divided between Germany (north) and the UK (south) in 1885. The latter area was transferred to Australia in 1902, which occupied the northern portion during World War I and continued to administer the combined areas until independence in 1975. A nine-year secessionist revolt on the island of Bougainville ended in 1997 after claiming some 20,000 lives.

Economy Papua New Guinea

Economy - overview:

Papua New Guinea is richly endowed with natural resources, but exploitation has been hampered by rugged terrain and the high cost of developing infrastructure. Agriculture provides a subsistence livelihood for 85% of the population. Mineral deposits, including oil, copper, and gold, account for nearly two-thirds of export earnings. The economy has improved over the past three years because of high commodity prices following a prolonged period of instability. The government of Prime Minister SOMARE has expended much of its energy remaining in power and should be the first government in decades to serve a full five-year term. The government has also brought stability to the national budget thus far, largely through expenditure control. Numerous challenges still face the government including regaining investor confidence, restoring integrity to state institutions, promoting economic efficiency by privatizing moribund state institutions, and balancing relations with Australia, the former colonial ruler. Other socio-cultural challenges could upend the economy including a worsening HIV/Aids

epidemic and chronic law and order and land tenure issues. Australia annually supplies \$240 million in aid, which accounts for nearly 20% of the national budget.

@Paraguay

Introduction Paraguay

Background:

In the disastrous War of the Triple Alliance (1865-70), Paraguay lost two-thirds of all adult males and much of its territory. It stagnated economically for the next half century. In the Chaco War of 1932-35, large, economically important areas were won from Bolivia. The 35-year military dictatorship of Alfredo STROESSNER was overthrown in 1989, and, despite a marked increase in political infighting in recent years, relatively free and regular presidential elections have been held since then.

Economy Paraguay

Economy - overview:

Landlocked Paraguay has a market economy marked by a large informal sector. This sector features both reexport of imported consumer goods to neighboring countries, as well as the activities of thousands of microenterprises and urban street vendors. Because of the importance of the informal sector, accurate economic measures are difficult to obtain. A large percentage of the population derives its living from agricultural activity, often on a subsistence basis. The formal economy grew by an average of about 3% annually in 1995-97, but averaged near-zero growth in 1998-2001 and contracted by 2.3 percent in 2002, in response to regional contagion and an outbreak of hoof-and-mouth disease. On a per capita basis, real income has stagnated at 1980 levels. Most observers attribute Paraguay's poor economic performance to political uncertainty, corruption, lack of progress on structural reform, substantial

internal and external debt, and deficient infrastructure. Aided by a firmer exchange rate and perhaps a greater confidence in the economic policy of the DUARTE FRUTOS administration, the economy rebounded between 2003 and 2006, posting modest growth each year.

Introduction Peru

Background:

Ancient Peru was the seat of several prominent Andean civilizations, most notably that of the Incas whose empire was captured by the Spanish conquistadors in 1533. Peruvian independence was declared in 1821, and remaining Spanish forces defeated in 1824. After a dozen years of military rule, Peru returned to democratic leadership in 1980, but experienced economic problems and the growth of a violent insurgency. President Alberto FUJIMORI's election in 1990 ushered in a decade that saw a dramatic turnaround in the economy and significant progress in curtailing guerrilla activity. Nevertheless, the president's increasing reliance on authoritarian measures and an economic slump in the late 1990s generated mounting dissatisfaction with his regime, which led to his ouster in 2000. A caretaker government oversaw new elections in the spring of 2001, which ushered in Alejandro TOLEDO as the new head of government - Peru's first democratically elected president of Native American ethnicity. The presidential election of 2006 saw the return of Alan GARCIA who, after a disappointing presidential term from 1985 to 1990, returned to the presidency with promises to improve social conditions and maintain fiscal responsibility.

Economy Peru

Economy - overview:

Peru's economy reflects its varied geography - an arid coastal region, the Andes further inland, and tropical lands bordering Colombia and Brazil. Abundant mineral resources are found in the mountainous areas, and Peru's coastal waters provide excellent fishing grounds. However, overdependence on minerals and metals subjects the economy to fluctuations in world prices, and a lack of infrastructure deters trade and investment. After several years of inconsistent economic performance, the Peruvian economy grew by more than 4 percent per year during the period 2002-2006, with a stable exchange rate and low inflation. Risk premiums on Peruvian bonds on secondary markets reached historically low levels in late 2004, reflecting investor optimism regarding the government's prudent fiscal policies and openness to trade and investment. Despite the strong macroeconomic performance, underemployment and poverty have stayed persistently high. Economic growth continues to be driven by the Camisea natural gas megaproject and by exports of minerals, textiles, and agricultural products. Upon taking office, President GARCIA announced the formation of Sierra Exportadora, a program aimed at promoting economic growth in Southern Peru and the highlands.

Transnational Issues Peru

Disputes - international:

Chile and Ecuador rejected Peru's November 2005 unilateral legislation to shift the axis of their joint treaty-defined maritime boundaries along the parallels of latitude to equidistance lines which favor Peru; organized illegal narcotics operations in Colombia have penetrated Peru's shared border; Peru rejects Bolivia's claim to restore maritime access through a sovereign corridor through Chile along the Peruvian border

Refugees and internally displaced persons:

IDPs: 60,000 (civil war from 1980-2000; most IDPs are indigenous peasants in Andean and Amazonian regions) (2005)

Trafficking in persons:

current situation: Peru is primarily a source country for women and children trafficked internally for the purposes of sexual exploitation and forced domestic labor; most victims are girls and young women moved internally from rural to urban areas, or from city to city, and lured or coerced into prostitution in nightclubs, bars, and brothels; Peruvians have also been trafficked for sexual exploitation to Spain, Japan, the United States, and Venezuela; the government acknowledges that sex tourism occurs, particularly in the Amazon region of the country
tier rating: Tier 2 Watch List - Peru is placed on the Tier 2 Watch List for failure to show evidence of increasing efforts to eliminate trafficking in 2005

Illicit drugs:

until 1996 the world's largest coca leaf producer; cultivation of coca in Peru fell 15% to 31,150 hectares between 2002 and the end of 2003; much of the cocaine base is shipped to neighboring Colombia for processing into cocaine, while finished cocaine is shipped out from Pacific ports to the international drug market; increasing amounts of base and finished cocaine, however, are being moved to Brazil and Bolivia for use in the Southern Cone or transshipped to Europe and Africa

Introduction Philippines

Background:

The Philippine Islands became a Spanish colony during the 16th century; they were ceded to the US in 1898 following the Spanish-American War. In 1935 the Philippines became a self-governing commonwealth. Manuel QUEZON was elected President and was tasked with preparing the country for independence after a 10-year transition. In 1942 the islands fell under Japanese occupation during WWII, and US forces and Filipinos fought together during 1944-45 to regain control. On 4 July 1946 the Philippines attained their independence. The 20-year rule of Ferdinand MARCOS ended in 1986, when a widespread popular rebellion forced him into exile and installed Corazon AQUINO as president. Her presidency was hampered by several coup attempts, which prevented a return to full political stability and economic development. Fidel RAMOS was elected president in 1992 and his administration was marked by greater stability and progress on economic reforms. In 1992, the US

closed its last military bases on the islands. Joseph ESTRADA was elected president in 1998, but was succeeded by his vice-president, Gloria MACAPAGAL-ARROYO, in January 2001 after ESTRADA's stormy impeachment trial on corruption charges broke down and widespread demonstrations led to his ouster. MACAPAGAL-ARROYO was elected to a six-year term in May 2004. The Philippine Government faces threats from an armed Communist insurgency and from Muslim separatists in the south, as well as from impeachment attempts by political elites and civil groups unhappy with the current administration.

Economy Philippines

Economy - overview: The Philippines was less severely affected by the Asian financial crisis of 1998 than its neighbors, aided in part by its high level of annual remittances from overseas workers, and no sustained runup in asset prices or foreign borrowing prior to the crisis. From a 0.6% decline in 1998, GDP expanded by 2.4% in 1999, and 4.4% in 2000, but slowed to 3.2% in 2001 in the context of a global economic slowdown, an export slump, and political and security concerns. GDP growth accelerated to about 5% between 2002 and 2006 reflecting the continued resilience of the service sector, and improved exports and agricultural output. Nonetheless, it will take a higher, sustained growth path to make appreciable progress in the alleviation of poverty given the Philippines' high annual population growth rate and unequal distribution of income. The Philippines also faces higher oil prices, higher interest rates on its dollar borrowings, and higher inflation. Fiscal constraints limit Manila's ability to finance infrastructure and social spending. The Philippines' consistently large budget deficit has produced a high debt level, and this situation has forced Manila to spend a large portion of the national government budget on debt service. Large unprofitable public enterprises, especially in the energy sector, contribute to the government's debt because of slow progress on privatization. Credit rating agencies have at times expressed concern about the Philippines' ability to service the debt, though central bank reserves appear adequate and large remittance inflows appear stable. The implementation of the expanded Value Added Tax (VAT) in November 2005 boosted confidence in the government's fiscal capacity and helped to strengthen the peso, making it East Asia's best performing currency in 2005-06. Investors and credit rating institutions will continue to look for effective implementation of the new VAT and continued improvement in the government's overall fiscal capacity in the coming year.

a joint accord to conduct marine seismic activities in the Spratly Islands; Philippines retains a dormant claim to Malaysia's Sabah State in northern Borneo based on the Sultanate of Sulu's granting the Philippines Government power of attorney to pursue a sovereignty claim on his behalf; maritime delimitation negotiations continue with Palau

@Pitcairn Islands

Introduction Pitcairn Islands

Background:

Pitcairn Island was discovered in 1767 by the British and settled in 1790 by the Bounty mutineers and their Tahitian companions. Pitcairn was the first Pacific island to become a British colony (in 1838) and today remains the last vestige of that empire in the South Pacific. Outmigration, primarily to New Zealand, has thinned the population from a peak of 233 in 1937 to less than 50 today.

Economy Pitcairn Islands

Economy - overview:

The inhabitants of this tiny isolated economy exist on fishing,

subsistence farming, handicrafts, and postage stamps. The fertile soil of the valleys produces a wide variety of fruits and vegetables, including citrus, sugarcane, watermelons, bananas, yams, and beans. Bartering is an important part of the economy. The major sources of revenue are the sale of postage stamps to collectors and the sale of handicrafts to passing ships. In October 2004, more than one-quarter of Pitcairn's small labor force was arrested, putting the economy in a bind, since their services were required as lighter crew to load or unload passing ships.

@Poland

Introduction Poland

Background:

Poland is an ancient nation that was conceived near the middle of the 10th century. Its golden age occurred in the 16th century. During the following century, the strengthening of the gentry and internal disorders weakened the nation. In a series of agreements between 1772 and 1795, Russia, Prussia, and Austria partitioned Poland amongst themselves. Poland regained its independence in 1918 only to be overrun by Germany and the Soviet Union in World War II. It became a Soviet satellite state following the war, but its government was comparatively tolerant and progressive. Labor turmoil in 1980 led to the formation of the independent trade union "Solidarity" that over time became a political force and by 1990 had swept parliamentary elections and the presidency. A "shock therapy" program during the early 1990s enabled the country to transform its economy into one of the most robust in Central Europe, but Poland still faces the lingering challenges of high unemployment, underdeveloped and dilapidated infrastructure, and a poor rural underclass. Solidarity suffered a major defeat in the 2001 parliamentary elections when it failed to elect a single deputy to the lower house of Parliament, and the new leaders of the Solidarity Trade Union subsequently pledged to reduce the Trade Union's political role. Poland joined NATO in 1999 and the European Union in 2004. With its transformation to a democratic, market-oriented country largely completed, Poland is an increasingly active member of Euro-Atlantic organizations.

situation has improved since 1989 due to decline in heavy industry and increased environmental concern by post-Communist governments; air pollution nonetheless remains serious because of sulfur dioxide emissions from coal-fired power plants, and the resulting acid rain has caused forest damage; water pollution from industrial and municipal sources is also a problem, as is disposal of hazardous wastes; pollution levels should continue to decrease as industrial establishments bring their facilities up to EU code, but at substantial cost to business and the government

Economy Poland

Economy - overview: Poland has steadfastly pursued a policy of economic liberalization since 1990 and today stands out as a success story among transition economies. Even so, much remains to be done, especially in bringing down the unemployment rate - still the highest in the EU despite recent improvement. The privatization of small- and medium-sized state-owned companies and a liberal law on establishing new firms has encouraged the development of the private business sector, but legal and bureaucratic obstacles alongside persistent corruption are hampering its further development. Poland's agricultural sector remains handicapped by surplus labor, inefficient small farms, and lack of investment. Restructuring and privatization of "sensitive sectors" (e.g., coal, steel, railroads, and energy), while recently initiated, have stalled. Reforms in health care, education, the pension system, and state administration have resulted in larger-than-expected fiscal pressures. Further progress in public finance depends mainly on reducing losses in Polish state enterprises, restraining entitlements, and overhauling the tax code to incorporate the growing gray economy and farmers, most of whom pay no tax. The previous Socialist-led government introduced a package of social and administrative spending cuts to reduce public spending by about \$17 billion through 2007, but full implementation of the plan was trumped by election-year politics in 2005. The right-wing Law and Justice party won parliamentary elections in September, and Lech KACZYNSKI won the presidential election in October 2005, running on a state-interventionist fiscal and monetary platform.

Poland joined the EU in May 2004, and surging exports to the EU contributed to Poland's strong growth in 2004, though its competitiveness could be threatened by the zloty's appreciation. GDP per capita roughly equals that of the three Baltic states. Poland benefited from nearly \$23.2 billion in EU funds, which were available through 2006. Farmers have already begun to reap the rewards of membership via booming exports, higher food prices, and EU agricultural subsidies.

Introduction Portugal

Background:

Following its heyday as a world power during the 15th and 16th centuries, Portugal lost much of its wealth and status with the destruction of Lisbon in a 1755 earthquake, occupation during the Napoleonic Wars, and the independence in 1822 of Brazil as a colony. A 1910 revolution deposed the monarchy; for most of the next six decades, repressive governments ran the country. In 1974, a left-wing military coup installed broad democratic reforms. The following year, Portugal granted independence to all of its African colonies. Portugal is a founding member of NATO and entered the EC (now the EU) in 1986.

Economy Portugal

Economy - overview:

Portugal has become a diversified and increasingly service-based economy since joining the European Community in 1986. Over the past two decades, successive governments have privatized many state-controlled firms and liberalized key areas of the economy, including the financial and telecommunications sectors. The country qualified for the European Monetary Union (EMU) in 1998 and began circulating the euro on 1 January 2002 along with 11 other EU member economies. Economic growth had been above the EU average for much of the 1990s, but fell back in 2001-06. GDP per capita stands at roughly 70% of the EU-25 average. A poor educational system, in particular, has been an obstacle to greater productivity and growth. Portugal has been increasingly overshadowed by lower-cost producers in Central Europe and Asia as a target for foreign direct

investment. The budget deficit surged to an all-time high of 6% of GDP in 2005 but was reduced to 4.6% in 2006. The government faces tough choices in its attempts to boost Portugal's economic competitiveness while keeping the budget deficit within the eurozone's 3%-of-GDP ceiling.

@Puerto Rico

Introduction Puerto Rico

Background:

Populated for centuries by aboriginal peoples, the island was claimed by the Spanish Crown in 1493 following COLUMBUS' second voyage to the Americas. In 1898, after 400 years of colonial rule that saw the indigenous population nearly exterminated and African

slave labor introduced, Puerto Rico was ceded to the US as a result of the Spanish-American War. Puerto Ricans were granted US citizenship in 1917. Popularly-elected governors have served since 1948. In 1952, a constitution was enacted providing for internal self government. In plebiscites held in 1967, 1993, and 1998, voters chose not to alter the existing political status.

Economy Puerto Rico

Economy - overview:

Puerto Rico has one of the most dynamic economies in the Caribbean region. A diverse industrial sector has far surpassed agriculture as the primary locus of economic activity and income. Encouraged by duty-free access to the US and by tax incentives, US firms have invested heavily in Puerto Rico since the 1950s. US minimum wage laws apply. Sugar production has lost out to dairy production and other livestock products as the main source of income in the agricultural sector. Tourism has traditionally been an important source of income, with estimated arrivals of nearly 5 million tourists in 2004. Growth fell off in 2001-03, largely due to the slowdown in the US economy, recovered in 2004-05, but declined again in 2006.

@Qatar

Introduction Qatar

Background:

Ruled by the al-Thani family since the mid-1800s, Qatar transformed itself from a poor British protectorate noted mainly for pearling into an independent state with significant oil and natural gas revenues. During the late 1980s and early 1990s, the Qatari economy was crippled by a continuous siphoning off of petroleum revenues by the amir, who had ruled the country since 1972. His son, the current Amir HAMAD bin Khalifa al-Thani, overthrew him in a bloodless coup in 1995. In 2001, Qatar resolved its longstanding border disputes with both Bahrain and Saudi Arabia. Oil and natural gas revenues enable Qatar to have one of the highest per capita incomes in the world.

Economy Qatar

Economy - overview:

Oil and gas account for more than 60% of GDP, roughly 85% of export earnings, and 70% of government revenues. Oil and gas have given Qatar a per capita GDP about 80% of that of the leading West

European industrial countries. Sustained high oil prices and increased natural gas exports in recent years have helped build Qatar's budget and trade surpluses and foreign reserves. Proved oil reserves of more than 15 billion barrels should ensure continued output at current levels for 23 years. Qatar's proved reserves of natural gas exceed 25 trillion cubic meters, more than 5% of the world total and third largest in the world. Qatar has permitted substantial foreign investment in the development of its gas fields during the last decade and is expected to become the world's top liquefied natural gas (LNG) exporter in 2007. Qatar is also trying to attract foreign investment in the development of its non-energy projects by further liberalizing the economy. Qatar has become one of the world's fastest growing and highest per-capita income countries.

Trafficking in persons:

current situation: Qatar is a destination country for men and women from South and Southeast Asia who migrate willingly, but are subsequently trafficked into involuntary servitude as domestic workers and laborers; the problem of trafficking of foreign children as camel jockeys was thoroughly addressed by government action in 2005, but independent confirmation of the problem's complete elimination is not yet available

tier rating: Tier 2 Watch List - Qatar has made noticeable progress in rescuing and repatriating child camel jockeys, establishing a shelter for abused domestic workers, and creating hotlines to register complaints; however, Qatar is placed on the Tier 2 Watch List for its failure to provide sufficient evidence of increasing efforts to combat trafficking in persons in 2005, particularly with regard to labor exploitation

Introduction Romania

Background:

The principalities of Wallachia and Moldavia - for centuries under the suzerainty of the Turkish Ottoman Empire - secured their autonomy in 1856; they united in 1859 and a few years later adopted the new name of Romania. The country gained recognition of its independence in 1878. It joined the Allied Powers in World War I and acquired new territories - most notably Transylvania - following the conflict. In 1940, Romania allied with the Axis powers and participated in the 1941 German invasion of the USSR. Three years later, overrun by the Soviets, Romania signed an armistice. The post-war Soviet occupation led to the formation of a Communist "people's republic" in 1947 and the abdication of the king. The decades-long rule of dictator Nicolae CEAUSESCU, who took power in 1965, and his Securitate police state became increasingly oppressive and draconian through the 1980s. CEAUSESCU was overthrown and executed in late 1989. Former Communists dominated the government until 1996 when they were swept from power. Romania joined NATO in 2004 and the EU in 2007.

Economy Romania

Economy - overview:

Romania began the transition from Communism in 1989 with a largely obsolete industrial base and a pattern of output unsuited to the country's needs. The country emerged in 2000 from a punishing three-year recession thanks to strong demand in EU export markets. Despite the global slowdown in 2001-02, strong domestic activity in

construction, agriculture, and consumption have kept GDP growth above 4%. However, macroeconomic gains have only recently started to spur creation of a middle class and address Romania's widespread poverty, while corruption and red tape continue to handicap the business environment. Romanian government confidence in continuing disinflation was underscored by its currency revaluation in 2005, making 10,000 "old" lei equal 1 "new" leu. The economy grew at 6.4% in 2006, the strongest growth in the last decade. Romania joined the European Union on 1 January 2007, and the IMF has praised the country's recent reform efforts in preparation for EU accession.

Introduction Russia

Background:

Founded in the 12th century, the Principality of Muscovy, was able to emerge from over 200 years of Mongol domination (13th-15th centuries) and to gradually conquer and absorb surrounding principalities. In the early 17th century, a new Romanov Dynasty continued this policy of expansion across Siberia to the Pacific. Under PETER I (ruled 1682-1725), hegemony was extended to the Baltic Sea and the country was renamed the Russian Empire. During the 19th century, more territorial acquisitions were made in Europe and Asia. Defeat in the Russo-Japanese War of 1904-1905 contributed to the Revolution of 1905, which resulted in the formation of a parliament and other reforms. Repeated devastating defeats of the Russian army in World War I led to widespread rioting in the major cities of the Russian Empire and to the overthrow in 1917 of the imperial household. The Communists under Vladimir LENIN seized power soon after and formed the USSR. The brutal rule of Iosif STALIN (1928-53)

strengthened Communist rule and Russian dominance of the Soviet Union at a cost of tens of millions of lives. The Soviet economy and society stagnated in the following decades until General Secretary Mikhail GORBACHEV (1985-91) introduced glasnost (openness) and perestroika (restructuring) in an attempt to modernize Communism, but his initiatives inadvertently released forces that by December 1991 splintered the USSR into Russia and 14 other independent republics. Since then, Russia has struggled in its efforts to build a democratic political system and market economy to replace the social, political, and economic controls of the Communist period. While some progress has been made on the economic front, and Russia's management of its windfall oil wealth has improved its financial standing, recent years have seen a recentralization of power under Vladimir PUTIN and democratic institutions remain weak. Russia has severely disabled the Chechen rebel movement, although sporadic violence still occurs throughout the North Caucasus.

Maritime claims: territorial sea: 12 nm contiguous zone: 24 nm exclusive economic zone: 200 nm continental shelf: 200-m depth or to the depth of exploitation

Climate:

ranges from steppes in the south through humid continental in much of European Russia; subarctic in Siberia to tundra climate in the polar north; winters vary from cool along Black Sea coast to frigid in Siberia; summers vary from warm in the steppes to cool along Arctic coast

Terrain:

broad plain with low hills west of Urals; vast coniferous forest and tundra in Siberia; uplands and mountains along southern border regions

Elevation extremes:

lowest point: Caspian Sea -28 m

highest point: Gora El'brus 5,633 m

Natural resources:

wide natural resource base including major deposits of oil, natural gas, coal, and many strategic minerals, timber

note: formidable obstacles of climate, terrain, and distance hinder exploitation of natural resources

Land use: arable land: 7.17% permanent crops: 0.11% other: 92.72% (2005)

Irrigated land:

46,000 sq km (2003)

Natural hazards:

permafrost over much of Siberia is a major impediment to development; volcanic activity in the Kuril Islands; volcanoes and earthquakes on the Kamchatka Peninsula; spring floods and summer/autumn forest fires throughout Siberia and parts of European Russia

Environment - current issues:

air pollution from heavy industry, emissions of coal-fired electric plants, and transportation in major cities; industrial, municipal, and agricultural pollution of inland waterways and seacoasts; deforestation; soil erosion; soil contamination from improper application of agricultural chemicals; scattered areas of sometimes intense radioactive contamination; groundwater contamination from toxic waste; urban solid waste management; abandoned stocks of obsolete pesticides

Environment - international agreements:

party to: Air Pollution, Air Pollution-Nitrogen Oxides, Air Pollution-Sulfur 85, Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Endangered Species, Environmental Modification, Hazardous Wastes,

Economy Russia

Economy - overview: Russia ended 2006 with its eighth straight year of growth, averaging 6.7% annually since the financial crisis of 1998. Although high oil prices and a relatively cheap ruble are important drivers of this economic rebound, since 2000 investment and consumer-driven demand have played a noticeably increasing role. Real fixed capital investments have averaged gains greater than 10% over the last five years, and real personal incomes have realized average increases over 12%. During this time, poverty has declined steadily and the middle class has continued to expand. Russia has also improved its international financial position since the 1998 financial crisis. Over the past several years, Russia has used its stabilization fund based on oil taxes to prepay all Soviet-era sovereign debt to Paris Club creditors and the IMF. Foreign debt has decreased to 39% of GDP, mainly due to decreasing state debt, while commercial debt to foreigners has risen strongly. Oil export earnings have allowed Russia to increase its foreign reserves from \$12 billion in 1999 to some \$315 billion at yearend 2006, the third largest reserves in the world. These achievements, along with a renewed government effort to advance structural reforms and fiscal restraint, have raised business and investor confidence in Russia's economic prospects. Russia's economy grew 6.6% in 2006 and inflation growth was below 10% for the first time in the past 10 years. Russia shows signs of increasing its ties to the global economy, having signed a bilateral market access agreement with the US as a prelude to possible WTO entry. Nevertheless, serious problems persist. Oil, natural gas, metals, and timber account for more than 80% of exports, leaving the country vulnerable to swings in world commodity prices. Russia's manufacturing base is dilapidated and must be replaced or modernized if the country is to achieve broad-based economic growth. The banking system, while growing at a high rate and increasing consumer

lending, is still small relative to the banking sectors of Russia's emerging market peers. Domestic and foreign investor sentiment is tempered by political uncertainties ahead of elections, corruption, and widespread lack of trust in institutions. President PUTIN continues to grant more influence to forces within his government that desire to reassert state control over the economy. Government spending has increased and risks becoming populist, most notably in the form of the four "national projects" of agriculture, education, housing, and medicine. Russia has made little progress in building the rule of law, the bedrock of a modern market economy.

Transnational Issues Russia

Disputes - international: China and Russia have demarcated the once disputed islands at the Amur and Ussuri confluence and in the Argun River in accordance with the 2004 Agreement, ending their centuries-long border disputes; the sovereignty dispute over the islands of Etorofu, Kunashiri, Shikotan, and the Habomai group, known in Japan as the "Northern Territories" and in Russia as the "Southern Kurils," occupied by the Soviet Union in 1945, now administered by Russia, and claimed by Japan, remains the primary sticking point to signing a peace treaty formally ending World War II hostilities; Russia and Georgia agree on delimiting all but small, strategic segments of the land boundary and the maritime boundary; OSCE observers monitor volatile areas such as the Pankisi Gorge in the Akhmeti region and the Kodori Gorge in Abkhazia; Azerbaijan, Kazakhstan, and Russia signed equidistance boundaries in the Caspian seabed but the littoral states have no consensus on dividing the water column; Russia and Norway dispute their maritime limits in the Barents Sea and Russia's fishing rights beyond Svalbard's territorial limits within the Svalbard Treaty zone; various groups in Finland advocate restoration of Karelia (Kareliya) and other areas ceded to the Soviet Union following the Second World War but the Finnish Government asserts no territorial demands; in May 2005, Russia recalled its signatures to the 1996 border agreements with Estonia (1996) and Latvia (1997), when the two Baltic states announced issuance of unilateral declarations referencing Soviet occupation and ensuing territorial losses; Russia demands better treatment of ethnic Russians in Estonia and Latvia; Estonian citizen groups continue to press for realignment of the boundary based on the 1920 Tartu Peace Treaty that would bring the now divided ethnic Setu people and parts of the Narva region within Estonia; Lithuania and Russia committed to demarcating their boundary in 2006 in accordance with the land and maritime treaty ratified by Russia in May 2003 and by Lithuania in 1999; Lithuania operates a simplified transit regime for Russian nationals traveling from the Kaliningrad coastal exclave into Russia, while still conforming, as an EU member state with an EU external border, where strict Schengen border rules apply; preparations for the demarcation delimitation of land boundary with Ukraine have commenced; the dispute over the boundary between Russia and Ukraine through the Kerch Strait and Sea of Azov remains unresolved despite a December 2003 framework agreement and

on-going expert-level discussions; Kazakhstan and Russia boundary delimitation was ratified on November 2005 and field demarcation should commence in 2007; Russian Duma has not yet ratified 1990 Bering Sea Maritime Boundary Agreement with the US

Refugees and internally displaced persons:

IDPs: 25,000-180,000 (displacement from Chechnya and North Ossetia)
(2006)

Trafficking in persons:

current situation: Russia is a source, transit, and destination country for men, women, and children trafficked for various purposes; it remains a significant source of women trafficked to over 50 countries for commercial sexual exploitation; Russia is also a transit and destination country for men and women trafficked from Central Asia, Eastern Europe, and North Korea to Central and Western Europe and the Middle East for purposes of forced labor and sexual exploitation; internal trafficking remains a problem in Russia with women trafficked from rural areas to urban centers for commercial sexual exploitation, and men are trafficked internally and from Central Asia for forced labor in the construction and agricultural industries; debt bondage is common among trafficking victims, and child sex tourism remains a concern

tier rating: Tier 2 Watch List - Russia is placed on the Tier 2 Watch List for a third consecutive year for its continued failure to show evidence of increasing efforts to combat trafficking, particularly in the area of victim protection and assistance

Illicit drugs:

limited cultivation of illicit cannabis and opium poppy and producer of methamphetamine, mostly for domestic consumption; government has active illicit crop eradication program; used as transshipment point for Asian opiates, cannabis, and Latin American cocaine bound for growing domestic markets, to a lesser extent

Western and Central Europe, and occasionally to the US; major source of heroin precursor chemicals; corruption and organized crime are key concerns; heroin increasingly popular in domestic market

Introduction Rwanda

Background:

In 1959, three years before independence from Belgium, the majority ethnic group, the Hutus, overthrew the ruling Tutsi king. Over the next several years, thousands of Tutsis were killed, and some 150,000 driven into exile in neighboring countries. The children of these exiles later formed a rebel group, the Rwandan Patriotic Front (RPF), and began a civil war in 1990. The war, along with several political and economic upheavals, exacerbated ethnic tensions, culminating in April 1994 in the genocide of roughly 800,000 Tutsis and moderate Hutus. The Tutsi rebels defeated the Hutu regime and ended the killing in July 1994, but approximately 2 million Hutu refugees - many fearing Tutsi retribution - fled to neighboring Burundi, Tanzania, Uganda, and the former Zaire. Since then, most of the refugees have returned to Rwanda, but several thousand remain in neighboring Democratic Republic of the Congo and formed an extremist insurgency bent on retaking Rwanda, much as the RPF tried in 1990. Despite substantial international assistance and political reforms - including Rwanda's first local elections in March 1999 and its first post-genocide presidential and legislative elections in August and September 2003 - the country continues to struggle to boost investment and agricultural output, and ethnic reconciliation is complicated by the real and perceived Tutsi political dominance.

Kigali's increasing centralization and intolerance of dissent, the nagging Hutu extremist insurgency across the border, and Rwandan involvement in two wars in recent years in the neighboring Democratic Republic of the Congo continue to hinder Rwanda's efforts to escape its bloody legacy.

Economy Rwanda

Economy - overview:

Rwanda is a poor rural country with about 90% of the population engaged in (mainly subsistence) agriculture. It is the most densely populated country in Africa and is landlocked with few natural resources and minimal industry. Primary foreign exchange earners are coffee and tea. The 1994 genocide decimated Rwanda's fragile economic base, severely impoverished the population, particularly women, and eroded the country's ability to attract private and external investment. However, Rwanda has made substantial progress in stabilizing and rehabilitating its economy to pre-1994 levels, although poverty levels are higher now. GDP has rebounded and inflation has been curbed. Despite Rwanda's fertile ecosystem, food production often does not keep pace with population growth, requiring food imports. Rwanda continues to receive substantial aid money and obtained IMF-World Bank Heavily Indebted Poor Country (HIPC) initiative debt relief in 2005. Kigali's high defense expenditures have caused tension between the government and international donors and lending agencies. Rwanda obtained debt relief from the IMF and World Bank in 2006. Rwanda also received Millennium Challenge Account Threshold status in 2006. Energy shortages, instability in neighboring states, and lack of adequate transportation linkages to other countries continue to handicap growth.

Disputes - international:

fighting among ethnic groups - loosely associated political rebels, armed gangs, and various government forces in Great Lakes region transcending the boundaries of Burundi, Democratic Republic of the Congo, Rwanda, and Uganda - abated substantially from a decade ago due largely to UN peacekeeping, international mediation, and efforts by local governments to create civil societies; nonetheless, 57,000 Rwandan refugees still reside in 21 African states, including Zambia, Gabon, and 20,000 who fled to Burundi in 2005 and 2006 to escape drought and recriminations from traditional courts investigating the 1994 massacres; the 2005 DROC and Rwanda border verification mechanism to stem rebel actions on both sides of the border remains in place

Refugees and internally displaced persons:

Introduction Saint Helena

Background:

Saint Helena is a British Overseas Territory consisting of Saint Helena and Ascension Islands, and the island group of Tristan da Cunha.

Saint Helena: Uninhabited when first discovered by the Portuguese in 1502, Saint Helena was garrisoned by the British during the 17th century. It acquired fame as the place of Napoleon BONAPARTE's exile, from 1815 until his death in 1821, but its importance as a port of call declined after the opening of the Suez Canal in 1869. During the Anglo-Boer War in South Africa, several thousand Boer prisoners were confined on the island between 1900 and 1903.

Ascension Island: This barren and uninhabited island was discovered and named by the Portuguese in 1503. The British garrisoned the island in 1815 to prevent a rescue of Napoleon from Saint Helena and it served as a provisioning station for the Royal Navy's West Africa Squadron on anti-slavery patrol. The island remained under Admiralty control until 1922, when it became a dependency of Saint Helena.

During World War II, the UK permitted the US to construct an airfield on Ascension in support of trans-Atlantic flights to Africa and anti-submarine operations in the South Atlantic. In the 1960s the island became an important space tracking station for the US. In 1982, Ascension was an essential staging area for British forces during the Falklands War, and it remains a critical refueling point in the air-bridge from the UK to the South Atlantic.

Tristan da Cunha: The island group consists of the islands of Tristan da Cunha, Nightingale, Inaccessible, and Gough. Tristan da Cunha is named after its Portuguese discoverer (1506); it was garrisoned by the British in 1816 to prevent any attempt to rescue Napoleon from Saint Helena. Gough and Inaccessible Islands have been designated World Heritage Sites. South Africa leases the site for a meteorological station on Gough Island.

Geography Saint Helena

Location:

islands in the South Atlantic Ocean, about midway between South

America and Africa; Ascension Island lies 700 nm northwest of Saint Helena; Tristan da Cunha lies 2300 nm southwest of Saint Helena

@Saint Kitts and Nevis

Introduction Saint Kitts and Nevis

Background:

First settled by the British in 1623, the islands became an associated state with full internal autonomy in 1967. The island of Anguilla rebelled and was allowed to secede in 1971. Saint Kitts and Nevis achieved independence in 1983. In 1998, a vote in Nevis on a referendum to separate from Saint Kitts fell short of the two-thirds majority needed. Nevis continues in its efforts to try and separate from Saint Kitts.

Economy Saint Kitts and Nevis

Economy - overview:

Sugar was the traditional mainstay of the Saint Kitts economy until the 1970s. The government closed the sugar industry following the 2005 harvest after decades of losses at the state-run sugar company. To compensate, the government has embarked on a program to diversify the agricultural sector and to stimulate other sectors of the economy. Activities such as tourism, export-oriented manufacturing, and offshore banking have assumed larger roles in the economy. Tourism revenues are now the chief source of the islands' foreign exchange; about 341,800 tourists visited Nevis in 2005. Additional

tourist facilities, including a second cruise ship pier, hotels, and golf courses are under construction.

@Saint Lucia

Introduction Saint Lucia

Background:

The island, with its fine natural harbor at Castries, was contested between England and France throughout the 17th and early 18th centuries (changing possession 14 times); it was finally ceded to the UK in 1814. Even after the abolition of slavery on its plantations in 1834, Saint Lucia remained an agricultural island, dedicated to producing tropical commodity crops. Self-government was granted in 1967 and independence in 1979.

Economy Saint Lucia

Economy - overview:

Changes in the EU import preference regime and the increased competition from Latin American bananas have made economic diversification increasingly important in Saint Lucia. The island nation has been able to attract foreign business and investment, especially in its offshore banking and tourism industries. Tourism is the main source of foreign exchange, with more than 700,000 arrivals in 2005. The manufacturing sector is the most diverse in the Eastern Caribbean area, and the government is trying to revitalize the banana industry. Economic fundamentals remain solid, even though unemployment needs to be cut.

Economy Saint Pierre and Miquelon

Economy - overview:

The inhabitants have traditionally earned their livelihood by fishing and by servicing fishing fleets operating off the coast of Newfoundland. The economy has been declining, however, because of disputes with Canada over fishing quotas and a steady decline in the number of ships stopping at Saint Pierre. In 1992, an arbitration panel awarded the islands an exclusive economic zone of 12,348 sq km to settle a longstanding territorial dispute with Canada, although it represents only 25% of what France had sought. The islands are heavily subsidized by France to the great betterment of living standards. The government hopes an expansion of tourism will boost economic prospects. Recent test drilling for oil may pave the way for development of the energy sector.

@Saint Vincent and the Grenadines

Introduction Saint Vincent and the Grenadines

Background:

Resistance by native Caribs prevented colonization on St. Vincent until 1719. Disputed between France and the United Kingdom for most of the 18th century, the island was ceded to the latter in 1783.

Between 1960 and 1962, Saint Vincent and the Grenadines was a separate administrative unit of the Federation of the West Indies.

Autonomy was granted in 1969 and independence in 1979.

Economy Saint Vincent and the Grenadines

Economy - overview:

Economic growth in this lower-middle-income country hinges upon seasonal variations in the agricultural and tourism sectors.

Tropical storms wiped out substantial portions of crops in 1994, 1995, and 2002, and tourism in the Eastern Caribbean suffered low arrivals in the immediate aftermath of 11 September 2001. The islands had more than 160,000 tourist arrivals in 2005, mostly to the Grenadines. Saint Vincent is home to a small offshore banking sector and has moved to adopt international regulatory standards. Saint Vincent is also a producer of marijuana and is being used as a transshipment point for illegal narcotics from South America.

Introduction Samoa

Background:

New Zealand occupied the German protectorate of Western Samoa at the outbreak of World War I in 1914. It continued to administer the islands as a mandate and then as a trust territory until 1962, when the islands became the first Polynesian nation to reestablish independence in the 20th century. The country dropped the "Western" from its name in 1997.

Economy Samoa

Economy - overview:

The economy of Samoa has traditionally been dependent on development aid, family remittances from overseas, agriculture, and fishing. The country is vulnerable to devastating storms. Agriculture employs two-thirds of the labor force, and furnishes 90% of exports, featuring coconut cream, coconut oil, and copra. The fish catch declined during the El Nino of 2002-03, but returned to normal by mid-2005. The manufacturing sector mainly processes agricultural products. One factory in the Foreign Trade Zone employs 3,000 people to make automobile electrical harnesses for an assembly plant in Australia. Tourism is an expanding sector, accounting for

25% of GDP; about 100,000 tourists visited the islands in 2005. The Samoan Government has called for deregulation of the financial sector, encouragement of investment, and continued fiscal discipline, while at the same time protecting the environment. Observers point to the flexibility of the labor market as a basic strength for future economic advances. Foreign reserves are in a relatively healthy state, the external debt is stable, and inflation is low.

Introduction San Marino

Background:

The third smallest state in Europe (after the Holy See and Monaco), San Marino also claims to be the world's oldest republic. According to tradition, it was founded by a Christian stonemason named Marino in A.D. 301. San Marino's foreign policy is aligned with that of Italy; social and political trends in the republic also track closely with those of its larger neighbor.

Introduction Sao Tome and Principe

Background:

Discovered and claimed by Portugal in the late 15th century, the islands' sugar-based economy gave way to coffee and cocoa in the 19th century - all grown with plantation slave labor, a form of which lingered into the 20th century. Although independence was achieved in 1975, democratic reforms were not instituted until the late 1980s. Though the first free elections were held in 1991, the political environment has been one of continued instability with frequent changes in leadership and coup attempts in 1995 and 2003. The recent discovery of oil in the Gulf of Guinea is likely to have a significant impact on the country's economy.

Economy Sao Tome and Principe

Economy - overview:

This small, poor island economy has become increasingly dependent on cocoa since independence in 1975. Cocoa production has substantially declined in recent years because of drought and mismanagement, but strengthening prices helped boost export earnings in 2003. Sao Tome has to import all fuels, most manufactured goods, consumer goods, and a substantial amount of food. Over the years, it has had difficulty servicing its external debt and has relied heavily on concessional aid and debt rescheduling. Sao Tome

benefited from \$200 million in debt relief in December 2000 under the Highly Indebted Poor Countries (HIPC) program, which helped bring down the country's \$300 million debt burden. In August 2005, Sao Tome signed on to a new 3-year IMF Poverty Reduction and Growth Facility (PRGF) program worth \$4.3 million. Considerable potential exists for development of a tourist industry, and the government has taken steps to expand facilities in recent years. The government also has attempted to reduce price controls and subsidies. Sao Tome is optimistic about the development of petroleum resources in its territorial waters in the oil-rich Gulf of Guinea, which are being jointly developed in a 60-40 split with Nigeria. The first production licenses were sold in 2004, though a dispute over licensing with Nigeria delayed Sao Tome's receipt of more than \$20 million in signing bonuses for almost a year. Real GDP growth exceeded 4% in 2006, as a result of increases in public expenditures and oil-related capital investment.

@Saudi Arabia

Introduction Saudi Arabia

Background: Saudi Arabia is the birthplace of Islam and home to Islam's two holiest shrines in Mecca and Medina, and the king's official title is the Custodian of the Two Holy Mosques. The modern Saudi state was founded in 1932 by ABD AL-AZIZ bin Abd al-Rahman AL SAUD (Ibn Saud) after a 30-year campaign to unify most of the Arabian Peninsula. A male descendent of Ibn Saud, his son ABDALLAH bin Abd al-Aziz, rules the country today as required by the country's 1992 Basic Law. Following Iraq's invasion of Kuwait in 1990, Saudi Arabia accepted the Kuwaiti royal family and 400,000 refugees while allowing Western and Arab troops to deploy on its soil for the liberation of Kuwait the following year. The continuing presence of foreign troops on Saudi soil after the liberation of Kuwait became a source of tension between the royal family and the public until all operational US troops left the country in 2003. Major terrorist attacks in May and November 2003 spurred a strong on-going campaign against domestic terrorism and extremism. King ABDALLAH has continued the cautious reform program begun when he was crown prince. To promote increased political participation, the government held elections nationwide from February through April 2005 - for half the members of 179 municipal councils. In December 2005, King ABDALLAH completed the process by appointing the remaining members of the advisory municipal councils. The country remains a leading producer of oil and natural gas and holds approximately 25% of the world's proven oil reserves. The government continues to pursue economic reform and diversification, particularly since Saudi Arabia's accession to the WTO in December 2005, and promotes foreign investment in the kingdom. A burgeoning population, aquifer depletion, and an economy largely dependent on petroleum output and prices are all ongoing governmental concerns.

Economy Saudi Arabia

Economy - overview:

This is an oil-based economy with strong government controls over major economic activities. Saudi Arabia possesses 25% of the world's

proven petroleum reserves, ranks as the largest exporter of petroleum, and plays a leading role in OPEC. The petroleum sector accounts for roughly 75% of budget revenues, 45% of GDP, and 90% of export earnings. About 40% of GDP comes from the private sector. Roughly 5.5 million foreign workers play an important role in the Saudi economy, particularly in the oil and service sectors. The government is encouraging private sector growth to lessen the kingdom's dependence on oil and increase employment opportunities for the swelling Saudi population. The government is promoting private sector and foreign participation in the power generation, telecom, natural gas, and petrochemical industries. As part of its effort to attract foreign investment and diversify the economy, Saudi Arabia acceded to the WTO in December 2005 after many years of negotiations. With high oil revenues enabling the government to post large budget surpluses, Riyadh has been able to substantially boost spending on job training and education, infrastructure development, and government salaries.

Introduction Senegal

Background:

Independent from France in 1960, Senegal was ruled by the Socialist Party for forty years until current President Abdoulaye WADE was elected in 2000. Senegal joined with The Gambia to form the nominal confederation of Senegambia in 1982, but the envisaged integration of the two countries was never carried out, and the union was dissolved in 1989. A southern separatist group sporadically has clashed with government forces since 1982, but Senegal remains one of the most stable democracies in Africa. Senegal has a long history of participating in international peacekeeping.

Economy Senegal

Economy - overview:

In January 1994, Senegal undertook a bold and ambitious economic reform program with the support of the international donor community. This reform began with a 50% devaluation of Senegal's currency, the CFA franc, which was linked at a fixed rate to the French franc. Government price controls and subsidies have been steadily dismantled. After seeing its economy contract by 2.1% in 1993, Senegal made an important turnaround, thanks to the reform program, with real growth in GDP averaging over 5% annually during 1995-2006. Annual inflation had been pushed down to the low single digits. As a member of the West African Economic and Monetary Union (WAEMU), Senegal is working toward greater regional integration with

a unified external tariff and a more stable monetary policy. High unemployment, however, continues to prompt illegal migrants to flee Senegal in search of better job opportunities in Europe. Senegal was also beset by an energy crisis that caused widespread blackouts in 2006. Senegal still relies heavily upon outside donor assistance. Under the IMF's Highly Indebted Poor Countries (HIPC) debt relief program, Senegal will benefit from eradication of two-thirds of its bilateral, multilateral, and private-sector debt.

Introduction Serbia

Background: The Kingdom of Serbs, Croats, and Slovenes was formed in 1918; its name was changed to Yugoslavia in 1929. Various paramilitary bands resisted Nazi Germany's occupation and division of Yugoslavia from 1941 to 1945, but fought each other and ethnic opponents as much as the invaders. The military and political movement headed by Josip TITO (Partisans) took full control of Yugoslavia when German and Croatian separatist forces were defeated in 1945. Although Communist, Tito's new government and his successors (he died in 1980) managed to steer their own path between the Warsaw Pact nations and

the West for the next four and a half decades. In 1989, Slobodan MILOSEVIC became president of the Serbian Republic and his ultranationalist calls for Serbian domination led to the violent breakup of Yugoslavia along ethnic lines. In 1991, Croatia, Slovenia, and Macedonia declared independence, followed by Bosnia in 1992. The remaining republics of Serbia and Montenegro declared a new Federal Republic of Yugoslavia (FRY) in April 1992 and under MILOSEVIC's leadership, Serbia led various military campaigns to unite ethnic Serbs in neighboring republics into a "Greater Serbia." These actions led to Yugoslavia being ousted from the UN in 1992, but Serbia continued its - ultimately unsuccessful - campaign until signing the Dayton Peace Accords in 1995. MILOSEVIC kept tight control over Serbia and eventually became president of the FRY in 1997. In 1998, a small-scale ethnic Albanian insurgency in the formerly autonomous Serbian province of Kosovo provoked a Serbian counterinsurgency campaign that resulted in massacres and massive expulsions of ethnic Albanians living in Kosovo by FRY forces and Serb paramilitaries. The MILOSEVIC government's rejection of a proposed international settlement led to NATO's bombing of Serbia in the spring of 1999 and to the eventual withdrawal of Serbian military and police forces from Kosovo in June 1999. UNSC Resolution 1244 in June 1999 authorized the stationing of a NATO-led force (KFOR) in Kosovo to provide a safe and secure environment for the region's ethnic communities, created a UN Administration Mission in Kosovo (UNMIK) to foster self-governing institutions, and reserved the issue of Kosovo's final status for an unspecified date in the future. In 2001, UNMIK promulgated a constitutional framework that allowed Kosovo to establish institutions of self-government and led to Kosovo's first parliamentary election. FRY elections in September 2000 led to the ouster of MILOSEVIC and installed Vojislav KOSTUNICA as president. A broad coalition of democratic reformist parties known as DOS (the Democratic Opposition of Serbia) was subsequently elected to parliament in December 2000 and took control of the government. The arrest of MILOSEVIC by DOS in 2001 allowed for his subsequent transfer to the International Criminal Tribunal for the Former Yugoslavia in The Hague to be tried for crimes against humanity. (MILOSEVIC died at The Hague in March 2006 before the completion of his trial.) In 2001, the country's suspension from the UN was lifted, and it was once more accepted into UN organizations. In 2003, the FRY became Serbia and Montenegro, a loose federation of the two republics with a federal level parliament. Violent rioting in Kosovo in 2004 caused the international community to open negotiations on the future status of Kosovo in January 2006. In May 2006, Montenegro invoked its right under the Constitutional Charter of Serbia and Montenegro to hold a referendum on independence from the state union. The referendum was successful and Montenegro declared itself an independent nation on 3 June 2006. Two days later, Serbia declared that it was the

successor state to the union of Serbia and Montenegro. In October 2006, the Serbian parliament unanimously approved - and a referendum confirmed - a new constitution for the country.

Economy Serbia

Economy - overview:

MILOSEVIC-era mismanagement of the economy, an extended period of economic sanctions, and the damage to Yugoslavia's infrastructure and industry during the NATO airstrikes in 1999 left the economy only half the size it was in 1990. After the ousting of former Federal Yugoslav President MILOSEVIC in October 2000, the Democratic Opposition of Serbia (DOS) coalition government implemented stabilization measures and embarked on a market reform program. After renewing its membership in the IMF in December 2000, a down-sized Yugoslavia continued to reintegrate into the international community by rejoining the World Bank (IBRD) and the European Bank for Reconstruction and Development (EBRD). A World Bank-European Commission sponsored Donors' Conference held in June 2001 raised \$1.3 billion for economic restructuring. In November 2001, the Paris Club agreed to reschedule the country's \$4.5 billion public debt and wrote off 66% of the debt. In July 2004, the London Club of private creditors forgave \$1.7 billion of debt, just over half the total owed. Belgrade has made only minimal progress in restructuring and privatizing its holdings in major sectors of the economy, including energy and telecommunications. It has made halting progress towards EU membership and is currently pursuing a Stabilization and Association Agreement with Brussels. Serbia is also pursuing membership in the World Trade Organization. Unemployment remains an ongoing political and economic problem. The Republic of Montenegro severed its economy from Serbia during the

MILOSEVIC era; therefore, the formal separation of Serbia and Montenegro in June 2006 had little real impact on either economy. Kosovo's economy continues to transition to a market-based system and is largely dependent on the international community and the diaspora for financial and technical assistance. The euro and the Serbian dinar are both accepted currencies in Kosovo. While maintaining ultimate oversight, UNMIK continues to work with the EU and Kosovo's local provisional government to accelerate economic growth, lower unemployment, and attract foreign investment to help Kosovo integrate into regional economic structures. The complexity of Serbia and Kosovo's political and legal relationships has created uncertainty over property rights and hindered the privatization of state-owned assets in Kosovo. Most of Kosovo's population lives in rural towns outside of the largest city, Pristina. Inefficient, near-subsistence farming is common.

Transnational Issues Serbia

Disputes - international:

as the final status of the Serbian province of Kosovo approaches resolution through the six-nation contact group, the several

thousand peacekeepers from the UN Interim Administration Mission in Kosovo (UNMIK) since 1999, continue to keep the peace between Kosovar Albanians overwhelmingly supporting Kosovo independence and the Serb minority in Kosovo and Serbian officials in Belgrade, who oppose independence for the province; ethnic Albanians in Kosovo oppose demarcation of the boundary with Macedonia based on the 2000 Macedonia-Serbia and Montenegro delimitation agreement; Serbia and Montenegro delimited about half of the boundary with Bosnia and Herzegovina, but sections with Serbia along the Drina River remain in dispute

Introduction Seychelles

Background:

A lengthy struggle between France and Great Britain for the islands ended in 1814, when they were ceded to the latter. Independence came in 1976. Socialist rule was brought to a close with a new constitution and free elections in 1993. President France-Albert RENE, who had served since 1977, was re-elected in 2001, but stepped

down in 2004. Vice President James MICHEL took over the presidency and in July 2006 was elected to a new five-year term.

Economy Seychelles

Economy - overview:

Since independence in 1976, per capita output in this Indian Ocean archipelago has expanded to roughly seven times the old near-subsistence level. Growth has been led by the tourist sector, which employs about 30% of the labor force and provides more than 70% of hard currency earnings, and by tuna fishing. In recent years the government has encouraged foreign investment in order to upgrade hotels and other services. At the same time, the government has moved to reduce the dependence on tourism by promoting the development of farming, fishing, and small-scale manufacturing. Sharp drops illustrated the vulnerability of the tourist sector in 1991-92 due largely to the Gulf War, and once again following the 11 September 2001 terrorist attacks on the US. Growth slowed in 1998-2002, and fell in 2003, due to sluggish tourist and tuna sectors, but resumed in 2004. Growth turned negative again in 2005-06. Tight controls on exchange rates and the scarcity of foreign exchange have impaired short-term economic prospects. The black-market value of the Seychelles rupee is half the official exchange rate; without a devaluation of the currency, the tourist sector may remain sluggish as vacationers seek cheaper destinations such as Comoros, Mauritius, and Madagascar.

@Sierra Leone

Introduction Sierra Leone

Background:

The government is slowly reestablishing its authority after the 1991 to 2002 civil war that resulted in tens of thousands of deaths and the displacement of more than 2 million people (about one-third of the population). The last UN peacekeepers withdrew in December 2005, leaving full responsibility for security with domestic forces, but a new civilian UN office remains to support the government. Mounting tensions related to planned 2007 elections, deteriorating political and economic conditions in Guinea, and the tenuous security situation in neighboring Liberia may present challenges to continuing progress in Sierra Leone's stability.

Economy Sierra Leone

Economy - overview:

Sierra Leone is an extremely poor African nation with tremendous inequality in income distribution. While it possesses substantial mineral, agricultural, and fishery resources, its economic and

social infrastructure is not well developed, and serious social disorders continue to hamper economic development. About two-thirds of the working-age population engages in subsistence agriculture. Manufacturing consists mainly of the processing of raw materials and of light manufacturing for the domestic market. Alluvial diamond mining remains the major source of hard currency earnings, accounting for nearly half of Sierra Leone's exports. The fate of the economy depends upon the maintenance of domestic peace and the continued receipt of substantial aid from abroad, which is essential to offset the severe trade imbalance and supplement government revenues. The IMF has completed a Poverty Reduction and Growth Facility program that helped stabilize economic growth and reduce inflation. A recent increase in political stability has led to a revival of economic activity, such as the rehabilitation of bauxite and rutile mining.

Economy Singapore

Economy - overview:

Singapore, a highly-developed and successful free-market economy, enjoys a remarkably open and corruption-free environment, stable prices, and a per capita GDP equal to that of the four largest West European countries. The economy depends heavily on exports, particularly in consumer electronics and information technology products. It was hard hit in 2001-03 by the global recession, by the slump in the technology sector, and by an outbreak of Severe Acute Respiratory Syndrome (SARS) in 2003, which curbed tourism and consumer spending. Fiscal stimulus, low interest rates, a surge in exports, and internal flexibility led to vigorous growth in 2004-06, with real GDP growth averaging 7% annually. The government hopes to establish a new growth path that will be less vulnerable to the global demand cycle for information technology products - it has attracted major investments in pharmaceuticals and medical technology production - and will continue efforts to establish Singapore as Southeast Asia's financial and high-tech hub.

Introduction Slovakia

Background:

The dissolution of the Austro-Hungarian Empire at the close of World War I allowed the Slovaks to join the closely related Czechs to form Czechoslovakia. Following the chaos of World War II, Czechoslovakia became a Communist nation within Soviet-ruled Eastern Europe. Soviet influence collapsed in 1989 and Czechoslovakia once more became free. The Slovaks and the Czechs agreed to separate peacefully on 1 January 1993. Slovakia joined both NATO and the EU in the spring of 2004.

Economy Slovakia

Economy - overview:

Slovakia has mastered much of the difficult transition from a centrally planned economy to a modern market economy. The DZURINDA government made excellent progress during 2001-04 in macroeconomic stabilization and structural reform. Major privatizations are nearly complete, the banking sector is almost completely in foreign hands, and the government has helped facilitate a foreign investment boom with business-friendly policies, such as labor market liberalization and a 19% flat tax. Foreign investment in the automotive sector has been strong. Slovakia's economic growth exceeded expectations in

2001-06, despite the general European slowdown. Unemployment, at an unacceptable 18% in 2003-04, dropped to 10.2% in 2006, but remains the economy's Achilles heel. Slovakia joined the EU on 1 May 2004.

Introduction Slovenia

Background:

The Slovene lands were part of the Austro-Hungarian Empire until the latter's dissolution at the end of World War I. In 1918, the Slovenes joined the Serbs and Croats in forming a new multinational state, which was named Yugoslavia in 1929. After World War II, Slovenia became a republic of the renewed Yugoslavia, which though Communist, distanced itself from Moscow's rule. Dissatisfied with the exercise of power by the majority Serbs, the Slovenes succeeded in establishing their independence in 1991 after a short 10-day war. Historical ties to Western Europe, a strong economy, and a stable democracy have assisted in Slovenia's transformation to a modern state. Slovenia acceded to both NATO and the EU in the spring of 2004.

Economy Slovenia

Economy - overview:

With a GDP per capita substantially greater than the other transitioning economies of Central Europe, Slovenia is a model of economic success and stability for its neighbors in the former Yugoslavia. The country, which joined the EU in 2004 and joined the eurozone on 1 January 2007, has excellent infrastructure, a well-educated work force, and an excellent central location. Privatization of the economy proceeded at an accelerated pace in 2002-05. Despite lackluster performance in Europe in 2001-05, Slovenia maintained moderate growth. Structural reforms to improve the business environment have allowed for greater foreign participation in Slovenia's economy and have helped to lower unemployment. In March 2004, Slovenia became the first transition country to graduate from borrower status to donor partner at the World Bank. Despite its economic success, Slovenia faces growing

challenges. Much of the economy remains in state hands and foreign direct investment (FDI) in Slovenia is one of the lowest in the EU on a per capita basis. Taxes are relatively high, the labor market is often seen as inflexible, and legacy industries are losing sales to more competitive firms in China, India, and elsewhere. The current center-right government, elected in October 2004, has pledged to accelerate privatization of a number of large state holdings and is interested in increasing FDI in Slovenia. In late 2005, the government's new Committee for Economic Reforms was elevated to cabinet-level status. The Committee's program includes plans for lowering the tax burden, privatizing state-controlled firms, improving the flexibility of the labor market, and increasing the government's efficiency.

Disputes - international:

the Croatia-Slovenia land and maritime boundary agreement, which would have ceded most of Piran Bay and maritime access to Slovenia and several villages to Croatia, remains unratified and in dispute; Slovenia also protests Croatia's 2003 claim to an exclusive economic zone in the Adriatic; as a member state that forms part of the EU's

@Solomon Islands

Introduction Solomon Islands

Background:

The UK established a protectorate over the Solomon Islands in the 1890s. Some of the bitterest fighting of World War II occurred on this archipelago. Self-government was achieved in 1976 and independence two years later. Ethnic violence, government malfeasance, and endemic crime have undermined stability and civil society. In June 2003, Prime Minister Sir Allen KEMAKEZA sought the assistance of Australia in reestablishing law and order; the following month, an Australian-led multinational force arrived to restore peace and disarm ethnic militias. The Regional Assistance Mission to the Solomon Islands (RAMSI) has been very effective in restoring law and order and rebuilding government institutions.

Economy Solomon Islands

Economy - overview:

The bulk of the population depends on agriculture, fishing, and forestry for at least part of its livelihood. Most manufactured goods and petroleum products must be imported. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold. Prior to the arrival of the Regional Assistance Mission to the Solomon Islands (RAMSI), severe ethnic violence, the closing of key businesses, and an empty government treasury culminated in economic collapse. RAMSI's efforts to restore law and order and economic

stability have led to modest growth as the economy rebuilds.

Introduction Somalia

Background: Britain withdrew from British Somaliland in 1960 in order to allow its protectorate to join with Italian Somaliland and form the new nation of Somalia. In 1969, a coup headed by Mohamed SIAD Barre ushered in an authoritarian socialist rule that managed to impose a degree of stability in the country for a couple of decades. After the regime's overthrow early in 1991, Somalia descended into turmoil, factional fighting, and anarchy. In May of 1991, northern clans declared an independent Republic of Somaliland that now includes the administrative regions of Awdal, Woqooyi Galbeed, Togdheer, Sanaag, and Sool. Although not recognized by any government, this entity has maintained a stable existence, aided by the overwhelming dominance of a ruling clan and economic infrastructure left behind by British, Russian, and American military assistance programs. The regions of Bari, Nugaal, and northern Mudug comprise a neighboring self-declared autonomous state of Puntland, which has been self-governing since 1998, but does not aim at independence; it has also made strides toward reconstructing a legitimate, representative government, but has suffered some civil strife. Puntland disputes its border with Somaliland as it also claims portions of eastern Sool and Sanaag. Beginning in 1993, a two-year UN humanitarian effort (primarily in the south) was able to alleviate famine conditions, but when the UN withdrew in 1995, having suffered significant casualties, order still had not been restored. The mandate of the Transitional National Government (TNG), created in August 2000 in Arta, Djibouti, expired in August 2003. A two-year peace process, led by the Government of Kenya under the auspices of the Intergovernmental Authority on

Development (IGAD), concluded in October 2004 with the election of Abdullahi YUSUF Ahmed as President of the Transitional Federal Government of Somalia and the formation of a transitional government, known as the Somalia Transitional Federal Institutions (TFIs). The Somalia TFIs include a 275-member parliamentary body, known as the Transitional Federal Assembly (TFA), a transitional Prime Minister, Ali Mohamed GEDI, and a 90-member cabinet. The Transitional Federal Government (TFG) has been deeply divided since just after its creation and until late December 2006 controlled only the town of Baidoa. In June 2006, a loose coalition of clerics, business leaders, and Islamic court militias ? known as the Supreme Council of Islamic Courts (SCIC) ? defeated powerful Mogadishu warlords and took control of the capital. The Courts continued to expand, spreading their influence throughout much of southern Somalia and threatening to overthrow the TFG in Baidoa. Ethiopian and TFG forces ? concerned over suspected links between some SCIC factions and al-Qa?ida ? in late December 2006 drove the SCIC from power, but the joint forces continue to fight remnants of SCIC militia in the southwestern corner of Somalia near the Kenyan border. The TFG, backed by Ethiopian forces, in late December 2006 moved into Mogadishu, but continues to struggle to exert control over the capital and to prevent the reemergence of warlord rule that typified Mogadishu before the rise of the SCIC.

Government - note:

although an interim government was created in 2004, other regional and local governing bodies continue to exist and control various cities and regions of the country, including the self-declared Republic of Somaliland in northwestern Somalia, the semi-autonomous State of Puntland in northeastern Somalia, and traditional clan and faction strongholds

Economy Somalia

Economy - overview: Somalia's economic fortunes are driven by its deep political divisions. The northwestern area has declared its independence as the "Republic of Somaliland"; the northeastern region of Puntland is a semi-autonomous state; and the remaining southern portion is riddled with the struggles of rival factions. Economic life continues, in part because much activity is local and relatively easily protected. Agriculture is the most important sector, with livestock normally accounting for about 40% of GDP and about 65% of export earnings, but Saudi Arabia's ban on Somali livestock, due to Rift Valley Fever concerns, has severely hampered the sector. Nomads and semi-nomads, who are dependent upon livestock for their livelihood, make up a large portion of the population. Livestock, hides, fish, charcoal, and bananas are Somalia's principal exports, while sugar, sorghum, corn, qat, and machined goods are the principal imports. Somalia's small industrial sector, based on the processing of agricultural products, has largely been looted and sold as scrap metal. Despite the seeming anarchy, Somalia's service sector has managed to survive and grow. Telecommunication firms provide wireless services in most major cities and offer the lowest international call rates on the continent. In the absence of a formal banking sector, money exchange services have sprouted throughout the country, handling between \$500 million and \$1 billion in remittances annually. Mogadishu's main market offers a variety of goods from food to the newest electronic gadgets. The SCIC has opened Mogadishu's main port and airport - closed for 15 years - and now controls most of the ports and airfields in southern Somalia. Hotels continue to operate, and militias provide security. The ongoing civil disturbances and clan rivalries, however, have interfered with any broad-based economic development and international aid arrangements. Somalia's arrears to the IMF continued to grow in 2006. Statistics on Somalia's GDP, growth, per capita income, and inflation should be viewed skeptically. In late December 2004, a major tsunami caused an estimated 150 deaths and resulted in destruction of property in coastal areas.

Transnational Issues Somalia

Disputes - international:

Ethiopian forces invade southern Somalia and rout Islamist courts from Moghadishu in January 2007; "Somaliland" secessionists provide port facilities in Berbera to landlocked Ethiopia and have established commercial ties with other regional states; "Puntland" and "Somaliland" "governments" seek international support in their secessionist aspirations and overlapping border claims; the undemarcated former British administrative line has little meaning as a political separation to rival clans within Ethiopia's Ogaden and southern Somalia's Oromo region; Kenya works hard to prevent the clan and militia fighting in Somalia from spreading south across the border, which has long been open to nomadic pastoralists

Refugees and internally displaced persons:

IDPs: 400,000 (civil war since 1988, clan-based competition for resources) (2006)

@South Africa

Introduction South Africa

Background:

After the British seized the Cape of Good Hope area in 1806, many of the Dutch settlers (the Boers) trekked north to found their own republics. The discovery of diamonds (1867) and gold (1886) spurred wealth and immigration and intensified the subjugation of the native

inhabitants. The Boers resisted British encroachments, but were defeated in the Boer War (1899-1902). The resulting Union of South Africa operated under a policy of apartheid - the separate development of the races. The 1990s brought an end to apartheid politically and ushered in black majority rule.

Economy South Africa

Economy - overview:

South Africa is a middle-income, emerging market with an abundant supply of natural resources; well-developed financial, legal, communications, energy, and transport sectors; a stock exchange that ranks among the 10 largest in the world; and a modern infrastructure

supporting an efficient distribution of goods to major urban centers throughout the region. However, growth has not been strong enough to lower South Africa's high unemployment rate, and daunting economic problems remain from the apartheid era - especially poverty and lack of economic empowerment among the disadvantaged groups. South African economic policy is fiscally conservative, but pragmatic, focusing on targeting inflation and liberalizing trade as means to increase job growth and household income.

with the end of apartheid and the establishment of majority rule, former military, black homelands forces, and ex-opposition forces were integrated into the South African National Defense Force (SANDF); as of 2003 the integration process was considered complete

Transnational Issues South Africa

Disputes - international:

South Africa has placed military along the border to apprehend the thousands of Zimbabweans fleeing economic dysfunction and political persecution; as of January 2007, South Africa also supports large numbers of refugees and asylum seekers from the Democratic Republic of the Congo (33,000), Somalia (20,000), Burundi (6,500) and other states in Africa (26,000); managed dispute with Namibia over the location of the boundary in the Orange River

Refugees and internally displaced persons:

refugees (country of origin): 10,609 (Democratic Republic of Congo), 7,548 (Somalia), 5,764 (Angola) (2006)

Trafficking in persons:

current situation: South Africa is a source, transit, and destination country for men, women, and children trafficked for forced labor and sexual exploitation; women and girls are trafficked

internally - and occasionally to European and Asian countries - for sexual exploitation; women from other African countries are trafficked to South Africa and, less frequently, onward to Europe for sexual exploitation; men and boys are trafficked from neighboring countries for forced agricultural labor; Asian and Eastern European women are trafficked to South Africa for debt-bonded sexual exploitation

tier rating: Tier 2 Watch List - South Africa is placed on the Tier 2 Watch List for its failure to show increasing efforts to address trafficking in 2005

Illicit drugs:

transshipment center for heroin, hashish, marijuana, and cocaine; cocaine consumption on the rise; world's largest market for illicit methaqualone, usually imported illegally from India through various east African countries; illicit cultivation of marijuana; attractive venue for money launderers given the increasing level of organized criminal and narcotics activity in the region

@Southern Ocean

Background:

A large body of recent oceanographic research has shown that the Antarctic Circumpolar Current (ACC), an ocean current that flows from west to east around Antarctica, plays a crucial role in global ocean circulation. The region where the cold waters of the ACC meet and mingle with the warmer waters of the north defines a distinct border - the Antarctic Convergence - which fluctuates with the seasons, but which encompasses a discrete body of water and a unique ecologic region. The Convergence concentrates nutrients, which

promotes marine plant life, and which in turn allows for a greater abundance of animal life. In the spring of 2000, the International Hydrographic Organization decided to delimit the waters within the Convergence as a fifth world ocean - the Southern Ocean - by combining the southern portions of the Atlantic Ocean, Indian Ocean, and Pacific Ocean. The Southern Ocean extends from the coast of Antarctica north to 60 degrees south latitude, which coincides with the Antarctic Treaty Limit and which approximates the extent of the Antarctic Convergence. As such, the Southern Ocean is now the fourth largest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, and Indian Ocean, but larger than the Arctic Ocean). It should be noted that inclusion of the Southern Ocean does not imply recognition of this feature as one of the world's primary oceans by the US Government.

Geography Southern Ocean

Location:

body of water between 60 degrees south latitude and Antarctica

Geographic coordinates:

60 00 S, 90 00 E (nominally), but the Southern Ocean has the unique distinction of being a large circumpolar body of water totally encircling the continent of Antarctica; this ring of water lies between 60 degrees south latitude and the coast of Antarctica and encompasses 360 degrees of longitude

Map references:

Antarctic Region

Area:

total: 20.327 million sq km

note: includes Amundsen Sea, Bellingshausen Sea, part of the Drake Passage, Ross Sea, a small part of the Scotia Sea, Weddell Sea, and

other tributary water bodies

Area - comparative:

slightly more than twice the size of the US

Coastline:

17,968 km

Climate:

sea temperatures vary from about 10 degrees Celsius to -2 degrees Celsius; cyclonic storms travel eastward around the continent and frequently are intense because of the temperature contrast between ice and open ocean; the ocean area from about latitude 40 south to the Antarctic Circle has the strongest average winds found anywhere on Earth; in winter the ocean freezes outward to 65 degrees south latitude in the Pacific sector and 55 degrees south latitude in the Atlantic sector, lowering surface temperatures well below 0 degrees Celsius; at some coastal points intense persistent drainage winds from the interior keep the shoreline ice-free throughout the winter

Terrain:

the Southern Ocean is deep, 4,000 to 5,000 meters over most of its extent with only limited areas of shallow water; the Antarctic continental shelf is generally narrow and unusually deep, its edge lying at depths of 400 to 800 meters (the global mean is 133 meters); the Antarctic icepack grows from an average minimum of 2.6 million square kilometers in March to about 18.8 million square kilometers in September, better than a sixfold increase in area; the Antarctic Circumpolar Current (21,000 km in length) moves perpetually eastward; it is the world's largest ocean current, transporting 130 million cubic meters of water per second - 100 times the flow of all the world's rivers

Elevation extremes:

lowest point: -7,235 m at the southern end of the South Sandwich Trench

highest point: sea level 0 m

Natural resources:

probable large and possible giant oil and gas fields on the continental margin, manganese nodules, possible placer deposits, sand and gravel, fresh water as icebergs; squid, whales, and seals - none exploited; krill, fishes

Natural hazards:

huge icebergs with drafts up to several hundred meters; smaller bergs and iceberg fragments; sea ice (generally 0.5 to 1 meter thick) with sometimes dynamic short-term variations and with large annual and interannual variations; deep continental shelf floored by glacial deposits varying widely over short distances; high winds and large waves much of the year; ship icing, especially May-October; most of region is remote from sources of search and rescue

Environment - current issues:

increased solar ultraviolet radiation resulting from the Antarctic ozone hole in recent years, reducing marine primary productivity (phytoplankton) by as much as 15% and damaging the DNA of some fish; illegal, unreported, and unregulated fishing in recent years, especially the landing of an estimated five to six times more Patagonian toothfish than the regulated fishery, which is likely to affect the sustainability of the stock; large amount of incidental mortality of seabirds resulting from long-line fishing for toothfish
note: the now-protected fur seal population is making a strong comeback after severe overexploitation in the 18th and 19th centuries

Environment - international agreements: the Southern Ocean is subject to all international agreements regarding the world's oceans; in addition, it is subject to these agreements specific to the Antarctic region: International Whaling Commission (prohibits commercial whaling south of 40 degrees south [south of 60 degrees south between 50 degrees and 130 degrees west]); Convention on the Conservation of Antarctic Seals (limits sealing); Convention on the Conservation of Antarctic Marine Living Resources (regulates fishing) note: many nations (including the US) prohibit mineral resource exploration and exploitation south of the fluctuating Polar Front (Antarctic Convergence) which is in the middle of the Antarctic Circumpolar Current and serves as the dividing line between the very cold polar surface waters to the south and the warmer waters to the north

Geography - note:

the major chokepoint is the Drake Passage between South America and Antarctica; the Polar Front (Antarctic Convergence) is the best natural definition of the northern extent of the Southern Ocean; it is a distinct region at the middle of the Antarctic Circumpolar Current that separates the very cold polar surface waters to the south from the warmer waters to the north; the Front and the Current extend entirely around Antarctica, reaching south of 60 degrees south near New Zealand and near 48 degrees south in the far South Atlantic coinciding with the path of the maximum westerly winds

Economy Southern Ocean

Economy - overview:

Fisheries in 2003-04 landed 136,262 metric tons, of which 87% (118,166 tons) was krill and 8% (11,182 tons) Patagonian toothfish, compared to 142,555 tons in 2002-03 of which 83% (117,728 tons) was krill and 12% (16,479 tons) Patagonian toothfish (estimated fishing from the area covered by the Convention of the Conservation of Antarctic Marine Living Resources (CCAMLR), which extends slightly beyond the Southern Ocean area). International agreements were adopted in late 1999 to reduce illegal, unreported, and unregulated fishing, which in the 2000-01 season landed, by one estimate, 8,376

metric tons of Patagonian and Antarctic toothfish. In the 2004-05 Antarctic summer 28,202 tourists, most of them seaborne (approximately 97%), visited the Southern Ocean and Antarctica, compared to 14,762 in 1999-2000.

Transportation Southern Ocean

Ports and terminals:

McMurdo, Palmer, and offshore anchorages in Antarctica
note: few ports or harbors exist on southern side of Southern Ocean; ice conditions limit use of most to short periods in midsummer; even then some cannot be entered without icebreaker escort; most Antarctic ports are operated by government research stations and, except in an emergency, are not open to commercial or private vessels; vessels in any port south of 60 degrees south are subject to inspection by Antarctic Treaty observers (see Article 7); The Hydrographic Committee on Antarctica (HCA), a special hydrographic commission of International Hydrographic Organization (IHO), is responsible for hydrographic surveying and nautical charting matters in Antarctic Treaty area; it coordinates and facilitates provision of accurate and appropriate charts and other aids to navigation in support of safety of navigation in region; membership of HCA is open to any IHO Member State whose government has acceded to the Antarctic Treaty and which contributes resources and/or data to IHO Chart coverage of the area; members of HCA are Argentina, Australia, Chile, China, France, Germany, Greece, India, Italy, NZ, Norway, Russia, South Africa, Spain, and the UK (2005)

Transportation - note:

Drake Passage offers alternative to transit through the Panama Canal

Transnational Issues Southern Ocean

Disputes - international:

Antarctic Treaty defers claims (see Antarctica entry), but Argentina, Australia, Chile, France, NZ, Norway, and UK assert claims (some overlapping), including the continental shelf in the Southern Ocean; several states have expressed an interest in extending those continental shelf claims under the United Nations Convention on the Law of the Sea (UNCLOS) to include undersea ridges; the US and most other states do not recognize the land or maritime claims of other states and have made no claims themselves (the US and Russia have reserved the right to do so); no formal claims exist in the waters in the sector between 90 degrees west and 150 degrees west

@South Georgia and the South Sandwich

Introduction South Georgia and the South Sandwich Islands

Background:

The islands, which have large bird and seal populations, lie approximately 1,000 km east of the Falkland Islands and have been under British administration since 1908 - except for a brief period in 1982 when Argentina occupied them. Grytviken, on South Georgia, was a 19th and early 20th century whaling station. Famed explorer Ernest SHACKLETON stopped there in 1914 en route to his ill-fated attempt to cross Antarctica on foot. He returned some 20 months later with a few companions in a small boat and arranged a successful rescue for the rest of his crew, stranded off the Antarctic Peninsula. He died in 1922 on a subsequent expedition and is buried in Grytviken. Today, the station houses scientists from the British Antarctic Survey. Recognizing the importance of

preserving the marine stocks in adjacent waters, the UK, in 1993, extended the exclusive fishing zone from 12 nm to 200 nm around each island.

Economy South Georgia and the South Sandwich Islands

Economy - overview:

Some fishing takes place in adjacent waters. There is a potential source of income from harvesting finfish and krill. The islands receive income from postage stamps produced in the UK, sale of fishing licenses, and harbor and landing fees from tourist vessels. Tourism from specialized cruise ships is increasing rapidly.

@Spain

Introduction Spain

Background:

Spain's powerful world empire of the 16th and 17th centuries ultimately yielded command of the seas to England. Subsequent failure to embrace the mercantile and industrial revolutions caused the country to fall behind Britain, France, and Germany in economic and political power. Spain remained neutral in World Wars I and II, but suffered through a devastating civil war (1936-39). A peaceful

transition to democracy following the death of dictator Francisco FRANCO in 1975, and rapid economic modernization (Spain joined the EU in 1986), have given Spain one of the most dynamic economies in Europe and made it a global champion of freedom. Continuing challenges include Basque Fatherland and Liberty (ETA) terrorism and relatively high unemployment.

Economy Spain

Economy - overview:

The Spanish economy boomed from 1986 to 1990, averaging 5% annual growth. After a European-wide recession in the early 1990s, the Spanish economy resumed moderate growth starting in 1994. Spain's mixed capitalist economy supports a GDP that on a per capita basis is 80% that of the four leading West European economies. The center-right government of former President AZNAR successfully worked to gain admission to the first group of countries launching the European single currency (the euro) on 1 January 1999. The AZNAR administration continued to advocate liberalization, privatization,

and deregulation of the economy and introduced some tax reforms to that end. Unemployment fell steadily under the AZNAR administration but remains high at 8.7%. Growth averaging 3% annually during 2003-06 was satisfactory given the background of a faltering European economy. The Socialist president, RODRIGUEZ ZAPATERO, has made mixed progress in carrying out key structural reforms, which need to be accelerated and deepened to sustain Spain's strong economic growth. Despite the economy's relative solid footing significant downside risks remain, including Spain's continued loss of competitiveness, the potential for a housing market collapse, the country's changing demographic profile and a decline in EU structural funds.

@Spratly Islands

Background:

The Spratly Islands consist of more than 100 small islands or reefs. They are surrounded by rich fishing grounds and potentially by gas and oil deposits. They are claimed in their entirety by China, Taiwan, and Vietnam, while portions are claimed by Malaysia and the Philippines. About 45 islands are occupied by relatively small numbers of military forces from China, Malaysia, the Philippines, Taiwan, and Vietnam. Brunei has established a fishing zone that overlaps a southern reef, but has not made any formal claim.

Economic activity is limited to commercial fishing. The proximity to nearby oil- and gas-producing sedimentary basins suggests the potential for oil and gas deposits, but the region is largely unexplored. There are no reliable estimates of potential reserves. Commercial exploitation has yet to be developed.

Transnational Issues Spratly Islands

Disputes - international:

all of the Spratly Islands are claimed by China, Taiwan, and Vietnam; parts of them are claimed by Malaysia and the Philippines;

in 1984, Brunei established an exclusive fishing zone that encompasses Louisa Reef in the southern Spratly Islands but has not publicly claimed the reef; claimants in November 2002 signed the "Declaration on the Conduct of Parties in the South China Sea," which has eased tensions but falls short of a legally binding "code of conduct"; in March 2005, the national oil companies of China, the Philippines, and Vietnam signed a joint accord to conduct marine seismic activities in the Spratly Islands

@Sri Lanka

Introduction Sri Lanka

Background:

The Sinhalese arrived in Sri Lanka late in the 6th century B.C., probably from northern India. Buddhism was introduced beginning in about the mid-third century B.C., and a great civilization developed at the cities of Anuradhapura (kingdom from circa 200 B.C. to circa A.D. 1000) and Polonnaruwa (from about 1070 to 1200). In the 14th century, a south Indian dynasty seized power in the north and established a Tamil kingdom. Occupied by the Portuguese in the 16th century and by the Dutch in the 17th century, the island was ceded to the British in 1796, became a crown colony in 1802, and was united under British rule by 1815. As Ceylon, it became independent in 1948; its name was changed to Sri Lanka in 1972. Tensions between the Sinhalese majority and Tamil separatists erupted into war in 1983. Tens of thousands have died in the ethnic conflict that continues to fester. After two decades of fighting, the government and Liberation Tigers of Tamil Eelam (LTTE) formalized a cease-fire in February 2002, with Norway brokering peace negotiations. Violence

between the LTTE and government forces intensified in 2006, but neither side has formally withdrawn from the cease-fire.

Economy Sri Lanka

Economy - overview:

In 1977, Colombo abandoned statist economic policies and its import substitution trade policy for more market-oriented policies, export-oriented trade, and encouragement of foreign investment. Recent changes in government have brought some policy reversals, however. Currently, the ruling Sri Lanka Freedom Party has a more statist economic approach which seeks to reduce poverty by steering investment to disadvantaged areas, developing small and medium enterprises, promoting agriculture, and expanding the already enormous civil service. The government has halted most privatizations. Although suffering a brutal civil war that began in 1983, Sri Lanka saw GDP growth average 4.5% in the last ten years, with a brief interruption during the global downturn in 2001. In late December 2004, a major tsunami took about 31,000 lives, left more than 6,300 missing and 443,000 displaced, and destroyed an estimated \$1.5 billion worth of property. Growth, partly spurred by reconstruction, reached 5% in 2005 and more than 6% in 2006. Sri

Lanka's most dynamic sectors now are food processing, textiles and apparel, food and beverages, port construction, telecommunications, and insurance and banking. In 2005, plantation crops made up only about 15% of exports (compared with more than 90% in 1970), while textiles and garments accounted for more than 60%. About 800,000 Sri Lankans work abroad, 90% in the Middle East. They send home about \$1 billion a year. The struggle by the Tamil Tigers of the north and east for a largely independent homeland continues to cast a shadow over the economy.

Introduction Sudan

Background:

Military regimes favoring Islamic-oriented governments have dominated national politics since independence from the UK in 1956. Sudan was embroiled in two prolonged civil wars during most of the remainder of the 20th century. These conflicts were rooted in northern economic, political, and social domination of largely non-Muslim, non-Arab southern Sudanese. The first civil war ended in 1972, but broke out again in 1983. The second war and famine-related effects resulted in more than 4 million people displaced and, according to rebel estimates, more than 2 million deaths over a period of two decades. Peace talks gained momentum in 2002-04 with the signing of several accords; a final Naivasha peace treaty of January 2005 granted the southern rebels autonomy for six years, after which a referendum for independence is scheduled to be held. A separate conflict that broke out in the western region of Darfur in 2003 has resulted in at least 200,000 deaths and nearly 2 million displaced; as of late 2005, peacekeeping troops were struggling to stabilize the situation. Sudan also has faced large refugee influxes from neighboring countries, primarily Ethiopia and Chad, and armed conflict, poor transport infrastructure, and lack of government support have chronically obstructed the provision of humanitarian assistance to affected populations.

Economy Sudan

Economy - overview:

Sudan has turned around a struggling economy with sound economic policies and infrastructure investments, but it still faces formidable economic problems, starting from its low level of per capita output. From 1997 to date, Sudan has been implementing IMF macroeconomic reforms. In 1999, Sudan began exporting crude oil and in the last quarter of 1999 recorded its first trade surplus, which, along with monetary policy, has stabilized the exchange rate. Increased oil production, revived light industry, and expanded export processing zones helped sustain GDP growth at 10% in 2006.

Agricultural production remains Sudan's most important sector, employing 80% of the work force, contributing 35% of GDP, and accounting for most of GDP growth, but most farms remain rain-fed and susceptible to drought. Chronic instability - resulting from the long-standing civil war between the Muslim north and the Christian/pagan south, adverse weather, and weak world agricultural prices - ensure that much of the population will remain at or below the poverty line for years.

Transnational Issues Sudan

Disputes - international:

the effects of Sudan's almost constant ethnic and rebel militia fighting since the mid-twentieth century have penetrated all of the neighboring states; as of 2006, Chad, Ethiopia, Kenya, Central African Republic, Democratic Republic of the Congo and Uganda provided shelter for over half a million Sudanese refugees, which includes 240,000 Darfur residents driven from their homes by Janjawid armed militia and the Sudanese military forces; Sudan, in turn, hosted 20,000 Chadians, 122,000 Eritreans, 14,810 Ethiopians, 7,900 Ugandans and 5,000 Congolese as refugees; in February 2006, Sudan and DROC signed an agreement to repatriate 13,300 Sudanese and 6,800 Congolese; Sudan accuses Eritrea of supporting Sudanese rebel groups; efforts to demarcate the porous boundary with Ethiopia proceed slowly due to civil and ethnic fighting in eastern Sudan; the boundary that separates Kenya and Sudan's sovereignty is unclear in the "Ilemi Triangle," which Kenya has administered since colonial times; while Sudan claims to administer the Hala'ib Triangle north of the 1899 Treaty boundary along the 22nd Parallel, both states withdrew their military presence in the 1990s and Egypt has invested in and effectively administers the area; periodic violent skirmishes with Sudanese residents over water and grazing rights persist among related pastoral populations from the Central African Republic along the border

Refugees and internally displaced persons: refugees (country of origin): 116,746 (Eritrea), 20,000 (Chad), 14,633 (Ethiopia), 7,901 (Uganda) IDPs: 5,300,000 - 6,200,000 (internal conflict since 1980s; ongoing genocide in Darfur region, IDP registration for return to South Sudan started in 2005) (2006)

Trafficking in persons: current situation: Sudan is a source country for men, women, and children trafficked for the purposes of forced labor and sexual exploitation; Sudan may also be a transit and destination country for Ethiopian women trafficked for domestic servitude; boys are trafficked to the Middle East, particularly Qatar and the United Arab Emirates, for use as camel jockeys; small numbers of girls are reportedly trafficked within Sudan for domestic servitude, as well as for commercial sexual exploitation in small brothels in internally displaced persons (IDP) camps; the terrorist rebel organization "Lord's Resistance Army" (LRA) continues to abduct and forcibly conscript small numbers of children in Southern Sudan for use as cooks, porters, and combatants in its ongoing war against Uganda; some of these children are then trafficked across borders into Uganda or possibly the Democratic Republic of the Congo; children are utilized by rebel groups and the Sudanese Armed Forces and associated militias in the ongoing conflict in Darfur; during the decades of civil war, thousands of Dinka women and children were enslaved by members of Baggara tribes and subjected to various forms of forced labor without remuneration, as well as physical and sexual abuse; with the cessation of the North-South conflict and the ongoing peace process, there were no known new abductions of Dinka by Baggara tribes during 2005; however, inter-tribal abductions of a different nature continue in Southern Sudan and warrant further investigation tier rating: Tier 3 - Sudan does not fully comply with the minimum standards for the elimination of trafficking and is not making significant efforts to do so

Introduction Suriname

Background:

First explored by the Spaniards in the 16th century and then settled by the English in the mid-17th century, Suriname became a Dutch colony in 1667. With the abolition of slavery in 1863, workers were brought in from India and Java. Independence from the Netherlands was granted in 1975. Five years later the civilian government was replaced by a military regime that soon declared a socialist republic. It continued to exert control through a

succession of nominally civilian administrations until 1987, when international pressure finally forced a democratic election. In 1990, the military overthrew the civilian leadership, but a democratically elected government - a four-party New Front coalition - returned to power in 1991 and has ruled since, expanding to eight parties in 2005.

Economy Suriname

Economy - overview:

The economy is dominated by the mining industry, which accounts for more than a third of GDP and subjects government revenues to mineral price volatility. The short-term economic outlook depends on the government's ability to control inflation and on the development of projects in the bauxite and gold mining sectors. Suriname's economic prospects for the medium term will depend on continued commitment to responsible monetary and fiscal policies and to the introduction of structural reforms to liberalize markets and promote competition. The government of Ronald VENETIAAN, in his first term, implemented an austerity program, raised taxes, and attempted to control spending. Economic policies are likely to remain the same during VENETIAAN's second term. Prospects for local onshore oil production are good, as a drilling program is underway. Offshore oil drilling was given a boost in 2004 when the State Oil Company (Staatsolie) signed exploration agreements with Repsol, Mearsk, and Occidental. Bidding on these new offshore blocks was completed in July 2006.

Economy Svalbard

Economy - overview:

Coal mining is the major economic activity on Svalbard. The treaty of 9 February 1920 gives the 41 signatories equal rights to exploit mineral deposits, subject to Norwegian regulation. Although US, UK, Dutch, and Swedish coal companies have mined in the past, the only companies still mining are Norwegian and Russian. The settlements on Svalbard are essentially company towns. The Norwegian state-owned coal company employs nearly 60% of the Norwegian population on the island, runs many of the local services, and provides most of the local infrastructure. There is also some hunting of seal, reindeer, and fox.

@Swaziland

Introduction Swaziland

Background:

Autonomy for the Swazis of southern Africa was guaranteed by the British in the late 19th century; independence was granted in 1968. Student and labor unrest during the 1990s pressured King Mswati III, the world's last absolute monarch, to grudgingly allow political reform and greater democracy, although he has backslid on these promises in recent years. Swaziland recently surpassed Botswana as the country with the world's highest known rates of HIV/AIDS infection.

Economy Swaziland

Economy - overview:

In this small, landlocked economy, subsistence agriculture occupies more than 80% of the population. The manufacturing sector has

diversified since the mid-1980s. Sugar and wood pulp remain important foreign exchange earners. Mining has declined in importance in recent years with only coal and quarry stone mines remaining active. Surrounded by South Africa, except for a short border with Mozambique, Swaziland is heavily dependent on South Africa from which it receives more than nine-tenths of its imports and to which it sends 60% of its exports. Customs duties from the Southern African Customs Union and worker remittances from South Africa substantially supplement domestically earned income. The government is trying to improve the atmosphere for foreign investment. Overgrazing, soil depletion, drought, and sometimes floods persist as problems for the future. More than one-fourth of the population needed emergency food aid in 2004-05 because of drought, and nearly two-fifths of the adult population has been infected by HIV/AIDS.

@Sweden

Introduction Sweden

Background:

A military power during the 17th century, Sweden has not participated in any war in almost two centuries. An armed neutrality was preserved in both World Wars. Sweden's long-successful economic formula of a capitalist system interlarded with substantial welfare elements was challenged in the 1990s by high unemployment and in 2000-02 by the global economic downturn, but fiscal discipline over the past several years has allowed the country to weather economic vagaries. Sweden joined the EU in 1995, but the public rejected the introduction of the euro in a 2003 referendum.

Economy Sweden

Economy - overview:

Aided by peace and neutrality for the whole of the 20th century, Sweden has achieved an enviable standard of living under a mixed system of high-tech capitalism and extensive welfare benefits. It has a modern distribution system, excellent internal and external communications, and a skilled labor force. Timber, hydropower, and iron ore constitute the resource base of an economy heavily oriented toward foreign trade. Privately owned firms account for about 90% of industrial output, of which the engineering sector accounts for 50% of output and exports. Agriculture accounts for only 1% of GDP and 2% of employment. The government's commitment to fiscal discipline resulted in a substantial budgetary surplus in 2001, which was cut by more than half in 2002, due to the global economic slowdown, declining revenue, and increased spending. The Swedish central bank (the Riksbank) focuses on price stability with its inflation target of 2%. Growth remained sluggish in 2003, but picked up during 2004-06. Presumably because of generous sick-leave benefits, Swedish workers report in sick more often than other Europeans. In September 2003, Swedish voters turned down entry into the euro system, concerned about the impact on the economy and sovereignty.

Introduction Switzerland

Background:

The Swiss Confederation was founded in 1291 as a defensive alliance among three cantons. In succeeding years, other localities joined the original three. The Swiss Confederation secured its independence from the Holy Roman Empire in 1499. Switzerland's sovereignty and neutrality have long been honored by the major European powers, and the country was not involved in either of the two World Wars. The political and economic integration of Europe over the past half century, as well as Switzerland's role in many UN and international organizations, has strengthened Switzerland's ties with its neighbors. However, the country did not officially become a UN member until 2002. Switzerland remains active in many UN and international organizations, but retains a strong commitment to neutrality.

Economy Switzerland

Economy - overview:

Switzerland is a peaceful, prosperous, and stable modern market economy with low unemployment, a highly skilled labor force, and a per capita GDP larger than that of the big Western European economies. The Swiss in recent years have brought their economic practices largely into conformity with the EU's to enhance their international competitiveness. Switzerland remains a safehaven for investors, because it has maintained a degree of bank secrecy and has kept up the franc's long-term external value. Reflecting the anemic economic conditions of Europe, GDP growth stagnated during the 2001-03 period, improved during 2004-05 to 1.8% annually and to 2.9% in 2006. Even so, unemployment has remained at less than half the EU average.

Introduction Syria

Background:

Following the breakup of the Ottoman Empire during World War I, France administered Syria until its independence in 1946. The country lacked political stability, however, and experienced a series of military coups during its first decades. Syria united with Egypt in February 1958 to form the United Arab Republic, but in September 1961 the two entities separated and the Syrian Arab Republic was reestablished. In November 1970, Hafiz al-ASAD, a member of the Socialist Ba'th Party and the minority Alawite sect, seized power in a bloodless coup and brought political stability to the country. In the 1967 Arab-Israeli War, Syria lost the Golan Heights to Israel, and during the 1990s Syria and Israel held occasional peace talks over its return. Following the death of President al-ASAD, his son, Bashar al-ASAD, was approved as president by popular referendum in July 2000. Syrian troops - stationed in Lebanon since 1976 in an ostensible peacekeeping role - were withdrawn in April 2005. During the July-August 2006 conflict between Israel and Hizballah, Syria placed its military forces on

alert but did not intervene directly on behalf of its ally Hizballah.

Economy Syria

Economy - overview:

The Syrian economy grew by an estimated 2.9% in real terms in 2006, led by the petroleum and agricultural sectors, which together account for about one-half of GDP. Higher crude oil prices countered declining oil production and exports and led to higher budgetary and export receipts. Total foreign assets of the Central Bank and domestic banking system rose to about \$20 billion in 2006, and the government strengthened the private sector foreign exchange rate by about 7 percent from the start of the year. The Government of Syria has implemented modest economic reforms in the past few years, including cutting interest rates, opening private banks, consolidating some of the multiple exchange rates, and raising prices on some subsidized foodstuffs. Nevertheless, the economy remains highly controlled by the government. Long-run economic constraints include declining oil production and exports, weak investment, and increasing pressure on water supplies caused by heavy use in agriculture, rapid population growth, industrial expansion, and water pollution.

Transnational Issues Syria

Disputes - international:

Golan Heights is Israeli-occupied with the almost 1,000-strong UN Disengagement Observer Force (UNDOF) patrolling a buffer zone since 1964; lacking a treaty or other documentation describing the boundary, portions of the Lebanon-Syria boundary are unclear with several sections in dispute; since 2000, Lebanon has claimed Shaba'a farms in the Golan Heights; 2004 Agreement and pending demarcation settles border dispute with Jordan; approximately two million Iraqis have fled the conflict in Iraq, with the majority taking refuge in Syria and Jordan

Refugees and internally displaced persons:

refugees (country of origin): 600,000 (Iraq), 434,896 (Palestinian Refugees (UNRWA))

IDPs: 305,000 (most displaced from Golan Heights during 1967 Arab-Israeli War) (2006)

Trafficking in persons:

current situation: Syria is a destination country for women from South and Southeast Asia and Africa for domestic servitude and from Eastern Europe and Iraq for sexual exploitation; women are recruited for work in Syria as domestic servants, but some face conditions of exploitation and involuntary servitude including long hours, non-payment of wages, withholding of passports and other restrictions on movement, and physical and sexual abuse; Eastern European women recruited for work in Syria as cabaret dancers are not permitted to leave their work premises without permission and have their passports withheld; some displaced Iraqi women and children are reportedly forced into sexual exploitation
tier rating: Tier 3 - Syria does not fully comply with the minimum standards for the elimination of trafficking and is not making

significant efforts to do so

Illicit drugs:

a transit point for opiates and hashish bound for regional and Western markets; weak anti-money-laundering controls and bank privatization may leave it vulnerable to money-laundering

@Taiwan

Introduction Taiwan

Background:

In 1895, military defeat forced China to cede Taiwan to Japan. Taiwan reverted to Chinese control after World War II. Following the Communist victory on the mainland in 1949, 2 million Nationalists fled to Taiwan and established a government using the 1946 constitution drawn up for all of China. Over the next five decades, the ruling authorities gradually democratized and incorporated the local population within the governing structure. In 2000, Taiwan underwent its first peaceful transfer of power from the Nationalist to the Democratic Progressive Party. Throughout this period, the island prospered and became one of East Asia's economic "Tigers." The dominant political issues continue to be the relationship between Taiwan and China - specifically the question of eventual unification - as well as domestic political and economic reform.

Economy Taiwan

Economy - overview:

Taiwan has a dynamic capitalist economy with gradually decreasing guidance of investment and foreign trade by government authorities. In keeping with this trend, some large, government-owned banks and industrial firms are being privatized. Exports have provided the primary impetus for industrialization. The island runs a trade surplus, and foreign reserves are the world's third largest. Despite restrictions cross-strait links, China has overtaken the US to become Taiwan's largest export market and, in 2006, its second-largest source of imports after Japan. China is also the island's number one destination for foreign direct investment. Strong trade performance in 2006 pushed Taiwan's GDP growth rate above 4%, and unemployment is below 4%. Consumer spending recovered following a slowdown early in 2006, when banks tightened lending to address a sharp increase in delinquent consumer debt.

Transnational Issues Taiwan

Disputes - international:

involved in complex dispute with China, Malaysia, Philippines, Vietnam, and possibly Brunei over the Spratly Islands; the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions but falls short of a legally binding "code of conduct" desired by several of the disputants; Paracel Islands are occupied by China, but claimed by Taiwan and Vietnam; in 2003, China and Taiwan became more vocal in rejecting both Japan's claims to the uninhabited islands of the Senkaku-shoto (Diaoyu Tai) and Japan's unilaterally declared exclusive economic zone in the East China Sea where all parties engage in hydrocarbon prospecting

Trafficking in persons:

current situation: Taiwan is primarily a destination for men, women, and children trafficked for forced labor and sexual exploitation; women from China and Southeast Asian countries are trafficked for sexual exploitation and forced labor; women and children, primarily from Vietnam, are trafficked through the use of fraudulent marriages, deceptive employment offers, and illegal smuggling for commercial sexual exploitation and forced labor; a significant share of foreign workers - primarily from Vietnam, Thailand, and the Philippines - are recruited legally for low-skilled jobs, and are subjected to forced labor or involuntary servitude by labor agencies or employers upon arrival in Taiwan; to a much lesser extent, there is internal trafficking of children for sexual exploitation and trafficking of a small and declining number of Taiwanese women to Japan for commercial sexual exploitation

tier rating: Tier 2 Watch List - Taiwan is placed on the Tier 2 Watch List for its failure to show evidence of increasing efforts over the past year to address trafficking, despite ample resources to do so, particularly the serious level of forced labor and sexual servitude among legally migrating Southeast Asian contract workers

Introduction Tajikistan

Background:

The Tajik people came under Russian rule in the 1860s and 1870s, but Russia's hold on Central Asia weakened following the Revolution of 1917. Bolshevik control of the area was fiercely contested and not fully reestablished until 1925. Tajikistan became independent in 1991 following the breakup of the Soviet Union, and it is now in the process of strengthening its democracy and transitioning to a free market economy after its 1992-1997 civil war. There have been no major security incidents in recent years, although the country remains the poorest in the former Soviet sphere. Attention by the international community in the wake of the war in Afghanistan has brought increased economic development assistance, which could create jobs and increase stability in the long term. Tajikistan is in the early stages of seeking World Trade Organization membership and has joined NATO's Partnership for Peace.

Economy Tajikistan

Economy - overview:

Tajikistan has one of the lowest per capita GDPs among the 15 former Soviet republics. Only 6% of the land area is arable; cotton is the most important crop. Mineral resources, varied but limited in amount, include silver, gold, uranium, and tungsten. Industry consists only of a large aluminum plant, hydropower facilities, and small obsolete factories mostly in light industry and food processing. The civil war (1992-97) severely damaged the already weak economic infrastructure and caused a sharp decline in industrial and agricultural production. While Tajikistan has experienced steady economic growth since 1997, nearly two-thirds of the population continue to live in abject poverty. Economic growth reached 10.6% in 2004, but dropped to 8% in 2005, and to 7% in 2006. Tajikistan's economic situation, however, remains fragile due to uneven implementation of structural reforms, weak governance, widespread unemployment, and the external debt burden. Continued privatization of medium and large state-owned enterprises could increase productivity. A debt restructuring agreement was reached with Russia in December 2002, including a \$250 million write-off of Tajikistan's \$300 million debt to Russia. Tajikistan ranks third in the world in terms of water resources per head. A proposed investment to finish the hydropower dams Rogun and Sangtuda I and II

would substantially add to electricity production, which could be exported for profit. If finished, Rogun will be the world's tallest dam. In 2006, Tajikistan was the recipient of substantial Shanghai Cooperation Organization infrastructure development credits to improve its roads and electricity transmission network.

Introduction Tanzania

Background:

Shortly after achieving independence from Britain in the early 1960s, Tanganyika and Zanzibar merged to form the nation of Tanzania in 1964. One-party rule came to an end in 1995 with the first democratic elections held in the country since the 1970s. Zanzibar's semi-autonomous status and popular opposition have led to two contentious elections since 1995, which the ruling party won despite international observers' claims of voting irregularities.

Economy Tanzania

Economy - overview:

Tanzania is one of the poorest countries in the world. The economy depends heavily on agriculture, which accounts for almost half of GDP, provides 85% of exports, and employs 80% of the work force. Topography and climatic conditions, however, limit cultivated crops to only 4% of the land area. Industry traditionally featured the processing of agricultural products and light consumer goods. The World Bank, the International Monetary Fund, and bilateral donors have provided funds to rehabilitate Tanzania's out-of-date economic infrastructure and to alleviate poverty. Long-term growth through 2005 featured a pickup in industrial production and a substantial increase in output of minerals, led by gold. Recent banking reforms have helped increase private-sector growth and investment. Continued donor assistance and solid macroeconomic policies supported real GDP growth of nearly 6% in 2006.

Introduction Thailand

Background:

A unified Thai kingdom was established in the mid-14th century. Known as Siam until 1939, Thailand is the only Southeast Asian

country never to have been taken over by a European power. A bloodless revolution in 1932 led to a constitutional monarchy. In alliance with Japan during World War II, Thailand became a US ally following the conflict. Thailand is currently facing separatist violence in its southern ethnic Malay-Muslim provinces.

Economy Thailand

Economy - overview:

With a well-developed infrastructure, a free-enterprise economy, and pro-investment policies, Thailand appears to have fully recovered from the 1997-98 Asian Financial Crisis. The country was one of East Asia's best performers in 2002-04. Boosted by increased consumption and strong export growth, the Thai economy grew 6.9% in 2003 and 6.1% in 2004 despite a sluggish global economy. Bangkok has pursued preferential trade agreements with a variety of partners in an effort to boost exports and to maintain high growth. In late December 2004, a major tsunami took 8,500 lives in Thailand and caused massive destruction of property in the southern provinces of

Krabi, Phangnga, and Phuket. In 2006, investment stagnated as investors, spooked by the Thaksin administration's political problems, stayed on the sidelines. The military coup in September brought in a new economic team, led by the former central bank governor. In December, the Thai Board of Investment reported the value of investment applications from January to November had declined by 27% year-on-year. On the positive side, exports have performed at record levels, rising nearly 17% in 2006.

Export-oriented manufacturing - in particular automobile production - and farm output are driving these gains.

Introduction Togo

Background:

French Togoland became Togo in 1960. Gen. Gnassingbe EYADEMA, installed as military ruler in 1967, continued to rule well into the 21st century. Despite the facade of multiparty elections instituted in the early 1990s, the government continued to be dominated by President EYADEMA, whose Rally of the Togolese People (RPT) party has maintained power almost continually since 1967. Togo has come under fire from international organizations for human rights abuses and is plagued by political unrest. While most bilateral and multilateral aid to Togo remains frozen, the EU initiated a partial resumption of cooperation and development aid to Togo in late 2004 based upon commitments by Togo to expand opportunities for political opposition and liberalize portions of the economy. Upon his death in

February 2005, President EYADEMA was succeeded by his son Faure GNASSINGBE. The succession, supported by the military and in contravention of the nation's constitution, was challenged by popular protest and a threat of sanctions from regional leaders. GNASSINGBE succumbed to pressure and in April 2005 held elections that legitimized his succession. Legislative elections are scheduled for June 2007.

Economy Togo

Economy - overview:

This small, sub-Saharan economy is heavily dependent on both commercial and subsistence agriculture, which provides employment for 65% of the labor force. Some basic foodstuffs must still be imported. Cocoa, coffee, and cotton generate about 40% of export earnings, with cotton being the most important cash crop. Togo is the world's fourth-largest producer of phosphate. The government's decade-long effort, supported by the World Bank and the IMF, to implement economic reform measures, encourage foreign investment, and bring revenues in line with expenditures has moved slowly. Progress depends on follow-through on privatization, increased

openness in government financial operations, progress toward legislative elections, and continued support from foreign donors. Togo is working with donors to write a PRGF that could eventually lead to a debt reduction plan.

Economy Tokelau

Economy - overview:

Tokelau's small size (three villages), isolation, and lack of resources greatly restrain economic development and confine agriculture to the subsistence level. The people rely heavily on aid from New Zealand - about \$4 million annually - to maintain public services, with annual aid being substantially greater than GDP. The principal sources of revenue come from sales of copra, postage stamps, souvenir coins, and handicrafts. Money is also remitted to families from relatives in New Zealand.

Introduction Tonga

Background:

Tonga - unique among Pacific nations - never completely lost its indigenous governance. The archipelagos of "The Friendly Islands" were united into a Polynesian kingdom in 1845. Tonga became a constitutional monarchy in 1875 and a British protectorate in 1900; it withdrew from the protectorate and joined the Commonwealth of Nations in 1970. Tonga remains the only monarchy in the Pacific.

Economy Tonga

Economy - overview:

Tonga, a small, open, South Pacific island economy, has a narrow export base in agricultural goods. Squash, coconuts, bananas, and vanilla beans are the main crops, and agricultural exports make up two-thirds of total exports. The country must import a high proportion of its food, mainly from New Zealand. The country remains dependent on external aid and remittances from Tongan communities overseas to offset its trade deficit. Tourism is the second-largest source of hard currency earnings following remittances. The government is emphasizing the development of the private sector, especially the encouragement of investment, and is committing increased funds for health and education. Tonga has a reasonably sound basic infrastructure and well-developed social services. High unemployment among the young, a continuing upturn in inflation, pressures for democratic reform, and rising civil service expenditures are major issues facing the government.

@Trinidad and Tobago

Introduction Trinidad and Tobago

Background:

First colonized by the Spanish, the islands came under British control in the early 19th century. The islands' sugar industry was hurt by the emancipation of the slaves in 1834. Manpower was replaced with the importation of contract laborers from India between 1845 and 1917, which boosted sugar production as well as the cocoa industry. The discovery of oil on Trinidad in 1910 added another important export. Independence was attained in 1962. The country is one of the most prosperous in the Caribbean thanks largely to petroleum and natural gas production and processing. Tourism, mostly in Tobago, is targeted for expansion and is growing.

Economy Trinidad and Tobago

Economy - overview:

Trinidad and Tobago, the leading Caribbean producer of oil and gas, has earned a reputation as an excellent investment site for international businesses. Tourism is a growing sector, although not proportionately as important as in many other Caribbean islands. The economy benefits from a growing trade surplus. Economic growth in 2006 reached 12.6% as prices for oil, petrochemicals, and liquefied natural gas remained high, and foreign direct investment continued to grow to support expanded capacity in the energy sector. The government is coping with a rise in violent crime.

agreed to compulsory international arbitration under UNCLOS challenging whether the northern limit of Trinidad and Tobago's and Venezuela's maritime boundary extends into Barbadian waters; Guyana has also expressed its intention to include itself in the arbitration as the Trinidad and Tobago-Venezuela maritime boundary may extend into its waters as well

Introduction Tunisia

Background:

Rivalry between French and Italian interests in Tunisia culminated in a French invasion in 1881 and the creation of a protectorate. Agitation for independence in the decades following World War I was finally successful in getting the French to recognize Tunisia as an independent state in 1956. The country's first president, Habib BOURGUIBA, established a strict one-party state. He dominated the country for 31 years, repressing Islamic fundamentalism and establishing rights for women unmatched by any other Arab nation. Tunisia has long taken a moderate, non-aligned stance in its foreign relations. Domestically, it has sought to defuse rising pressure for a more open political society.

Economy Tunisia

Economy - overview:

Tunisia has a diverse economy, with important agricultural, mining, energy, tourism, and manufacturing sectors. Governmental control of economic affairs while still heavy has gradually lessened over the past decade with increasing privatization, simplification of the tax structure, and a prudent approach to debt. Progressive social policies also have helped raise living conditions in Tunisia relative to the region. Real growth slowed to a 15-year low of 1.9% in 2002 because of agricultural drought and lackluster tourism. Increased rain helped to push GDP growth to an average rate of 5% in 2003-06. However, a recession in agriculture, weak expansion in the tourism and textile sectors, and increasing import costs due to rising world energy prices cut growth to 4% in 2006. Tunisia is gradually removing barriers to trade with the EU. Broader privatization, further liberalization of the investment code to increase foreign investment, improvements in government efficiency, and reduction of the trade deficit are among the challenges ahead.

Introduction Turkey

Background:

Modern Turkey was founded in 1923 from the Anatolian remnants of the defeated Ottoman Empire by national hero Mustafa KEMAL, who was later honored with the title Ataturk, or "Father of the Turks."

Under his authoritarian leadership, the country adopted wide-ranging social, legal, and political reforms. After a period of one-party rule, an experiment with multi-party politics led to the 1950 election victory of the opposition Democratic Party and the peaceful transfer of power. Since then, Turkish political parties have multiplied, but democracy has been fractured by periods of instability and intermittent military coups (1960, 1971, 1980), which in each case eventually resulted in a return of political power to civilians. In 1997, the military again helped engineer the ouster - popularly dubbed a "post-modern coup" - of the then Islamic-oriented government. Turkey intervened militarily on Cyprus in 1974 to prevent a Greek takeover of the island and has since acted as patron state to the "Turkish Republic of Northern Cyprus," which only Turkey recognizes. A separatist insurgency begun in 1984 by the Kurdistan Workers' Party (PKK) - now known as the People's Congress of Kurdistan or Kongra-Gel (KGK) - has dominated the Turkish military's attention and claimed more than 30,000 lives. After the capture of the group's leader in 1999, the insurgents largely withdrew from Turkey, mainly to northern Iraq. In 2004, KGK announced an end to its ceasefire and attacks attributed to the KGK increased. Turkey joined the UN in 1945 and in 1952 it became a member of NATO. In 1964, Turkey became an associate member of the European Community; over the past decade, it has undertaken many reforms to strengthen its democracy and economy, enabling it to begin accession membership talks with the European Union.

Economy Turkey

Economy - overview:

Turkey's dynamic economy is a complex mix of modern industry and commerce along with a traditional agriculture sector that still accounts for more than 35% of employment. It has a strong and rapidly growing private sector, yet the state still plays a major role in basic industry, banking, transport, and communication. The largest industrial sector is textiles and clothing, which accounts for one-third of industrial employment; it faces stiff competition in international markets with the end of the global quota system. However, other sectors, notably the automotive and electronics industries, are rising in importance within Turkey's export mix.

Real GNP growth has exceeded 6% in many years, but this strong expansion has been interrupted by sharp declines in output in 1994, 1999, and 2001. The economy is turning around with the implementation of economic reforms, and 2004 GDP growth reached 9%, followed by roughly 5% annual growth in 2005-06. Inflation fell to 7.7% in 2005 - a 30-year low, but climbed back to 9.8% in 2006. Despite the strong economic gains in 2002-06, which were largely due to renewed investor interest in emerging markets, IMF backing, and tighter fiscal policy, the economy is still burdened by a high current account deficit and high debt. The public sector fiscal deficit exceeds 6% of GDP - due in large part to high interest payments, which accounted for about 37% of central government spending in 2004. Prior to 2005, foreign direct investment (FDI) in Turkey averaged less than \$1 billion annually, but further economic and judicial reforms and prospective EU membership are expected to boost FDI. Privatization sales are currently approaching \$21 billion. Oil began to flow through the Baku-Tblisi-Ceyhan pipeline in May 2006, marking a major milestone that will bring up to 1 billion barrels per day from the Caspian to market.

Military - note:

in the early 1990s, the Turkish Land Force was a large but badly equipped infantry force; there were 14 infantry divisions, but only one was mechanized, and out of 16 infantry brigades, only six were mechanized; the overhaul that has taken place since has produced highly mobile forces with greatly enhanced firepower in accordance with NATO's new strategic concept (2005)

Transnational Issues Turkey

Disputes - international:

complex maritime, air, and territorial disputes with Greece in the Aegean Sea; status of north Cyprus question remains; Syria and Iraq protest Turkish hydrological projects to control upper Euphrates waters; Turkey has expressed concern over the status of Kurds in Iraq; border with Armenia remains closed over Nagorno-Karabakh

Refugees and internally displaced persons:

IDPs: 1-1.2 million (fighting 1984-99 between Kurdish PKK and Turkish military; most IDPs in southeastern provinces) (2006)

Illicit drugs:

key transit route for Southwest Asian heroin to Western Europe and - to a far lesser extent the US - via air, land, and sea routes; major Turkish, Iranian, and other international trafficking organizations operate out of Istanbul; laboratories to convert imported morphine base into heroin are in remote regions of Turkey and near Istanbul; government maintains strict controls over areas of legal opium poppy cultivation and output of poppy straw concentrate; lax enforcement of money-laundering controls

Introduction Turkmenistan

Background:

Annexed by Russia between 1865 and 1885, Turkmenistan became a Soviet republic in 1924. It achieved its independence upon the dissolution of the USSR in 1991. President Saparmurat NIYAZOV retains absolute control over the country and opposition is not tolerated. Extensive hydrocarbon/natural gas reserves could prove a boon to this underdeveloped country if extraction and delivery projects were to be expanded. The Turkmenistan Government is actively seeking to develop alternative petroleum transportation routes in order to break Russia's pipeline monopoly.

Constitution:

adopted 18 May 1992

Legal system:

based on civil law system

Suffrage:

18 years of age; universal

Executive branch:

chief of state: President (Acting) and Chairman of the Cabinet of Ministers Gurbanguly BERDIMUHAMMEDOV; note - President Saparmurat NIYAZOV died in office 21 December 2006 and Gurbanguly BERDIMUHAMMEDOV was named his temporary replacement; the president is both the chief of state and head of government

head of government: President (Acting) and Chairman of the Cabinet of Ministers Gurbanguly BERDIMUHAMMEDOV

cabinet: Cabinet of Ministers appointed by the president

elections: president elected by popular vote for a five-year term; election last held 21 June 1992; note - President NIYAZOV was unanimously approved as president for life by the People's Council on 28 December 1999; deputy chairmen of the Cabinet of Ministers are appointed by the president

election results: Saparmurat NIYAZOV elected president without opposition; percent of vote - Saparmurat NIYAZOV 99.5%

Legislative branch:

under the 1992 constitution, there are two parliamentary bodies, a unicameral People's Council or Halk Maslahaty (supreme legislative body of up to 2,500 delegates, some of whom are elected by popular vote and some of whom are appointed; meets at least yearly) and a unicameral Parliament or Mejlis (50 seats; members are elected by popular vote to serve five-year terms); membership is scheduled to be increased to 65 seats

elections: People's Council - last held in April 2003 (next to be held December 2008); Mejlis - last held 19 December 2004 (next to be held December 2008)

election results: Mejlis - DPT 100%; seats by party - DPT 50; note - all 50 elected officials are members of the Democratic Party of Turkmenistan and are preapproved by President NIYAZOV
note: in late 2003, a new law was adopted, reducing the powers of

the Mejlis and making the Halk Maslahaty the supreme legislative organ; the Halk Maslahaty can now legally dissolve the Mejlis, and the president is now able to participate in the Mejlis as its supreme leader; the Mejlis can no longer adopt or amend the constitution, or announce referendums or its elections; since the president is both the "Chairman for Life" of the Halk Maslahaty and the supreme leader of the Mejlis, the 2003 law has the effect of making him the sole authority of both the executive and legislative branches of government

Judicial branch:

Supreme Court (judges are appointed by the president)

Political parties and leaders:

Democratic Party of Turkmenistan or DPT [Saparmurat NIYAZOV]
note: formal opposition parties are outlawed; unofficial, small opposition movements exist underground or in foreign countries; the two most prominent opposition groups-in-exile have been National Democratic Movement of Turkmenistan (NDMT) and the United Democratic Party of Turkmenistan (UDPT); NDMT was led by former Foreign Minister Boris SHIKHMURADOV until his arrest and imprisonment in the wake of the 25 November 2002 assassination attempt on President NIYAZOV; UDPT is led by former Foreign Minister Abdy KULIEV and is based out of Moscow

Economy Turkmenistan

Economy - overview:

Turkmenistan is a largely desert country with intensive agriculture in irrigated oases and large gas and oil resources. One-half of its irrigated land is planted in cotton; formerly it was the world's tenth-largest producer. Poor harvests in recent years have led to an almost 50% decline in cotton exports. With an authoritarian ex-Communist regime in power and a tribally based social structure,

Turkmenistan has taken a cautious approach to economic reform, hoping to use gas and cotton sales to sustain its inefficient economy. Privatization goals remain limited. In 1998-2005, Turkmenistan suffered from the continued lack of adequate export routes for natural gas and from obligations on extensive short-term external debt. At the same time, however, total exports rose by an average of 15% per year in 2003-06, largely because of higher international oil and gas prices. In 2006, Ashgabat raised its natural gas export prices to its main customer, Russia, from \$66 per thousand cubic meters (tcm) to \$100 per tcm. Overall prospects in the near future are discouraging because of widespread internal poverty, a poor educational system, government misuse of oil and gas revenues, and Ashgabat's unwillingness to adopt market-oriented reforms. Turkmenistan's economic statistics are state secrets, and GDP and other figures are subject to wide margins of error. In particular, the rate of GDP growth is uncertain.

@Turks and Caicos Islands

Introduction Turks and Caicos Islands

Background:

The islands were part of the UK's Jamaican colony until 1962, when

they assumed the status of a separate crown colony upon Jamaica's independence. The governor of The Bahamas oversaw affairs from 1965 to 1973. With Bahamian independence, the islands received a separate governor in 1973. Although independence was agreed upon for 1982, the policy was reversed and the islands remain a British overseas territory.

@Tuvalu

Introduction Tuvalu

Background:

In 1974, ethnic differences within the British colony of the Gilbert and Ellice Islands caused the Polynesians of the Ellice Islands to vote for separation from the Micronesians of the Gilbert Islands. The following year, the Ellice Islands became the separate British colony of Tuvalu. Independence was granted in 1978. In 2000, Tuvalu negotiated a contract leasing its Internet domain name ".tv" for \$50 million in royalties over a 12-year period.

severe tropical storms are usually rare, but, in 1997, there were three cyclones; low level of islands make them sensitive to changes in sea level

Environment - current issues:

since there are no streams or rivers and groundwater is not potable, most water needs must be met by catchment systems with storage facilities (the Japanese Government has built one desalination plant and plans to build one other); beachhead erosion because of the use of sand for building materials; excessive clearance of forest undergrowth for use as fuel; damage to coral reefs from the spread of the Crown of Thorns starfish; Tuvalu is concerned about global increases in greenhouse gas emissions and their effect on rising sea levels, which threaten the country's underground water table; in 2000, the government appealed to Australia and New Zealand to take in Tuvaluans if rising sea levels should make evacuation necessary

Environment - international agreements:

party to: Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Law of the Sea, Ozone Layer Protection, Ship Pollution, Whaling
signed, but not ratified: none of the selected agreements

Geography - note:

one of the smallest and most remote countries on Earth; six of the coral atolls - Nanumea, Nui, Vaitupu, Nukufetau, Funafuti, and Nukulaelae - have lagoons open to the ocean; Nanumaya and Niutao have landlocked lagoons; Niulakita does not have a lagoon

Economy Tuvalu

Economy - overview:

Tuvalu consists of a densely populated, scattered group of nine coral atolls with poor soil. The country has no known mineral resources and few exports. Subsistence farming and fishing are the primary economic activities. Fewer than 1,000 tourists, on average, visit Tuvalu annually. Government revenues largely come from the sale of stamps and coins and remittances from seamen on merchant ships abroad. About 1,000 Tuvaluans are being repatriated from Nauru, with the decline of phosphate resources there. Substantial income is received annually from an international trust fund established in 1987 by Australia, NZ, and the UK and supported also by Japan and South Korea. Thanks to wise investments and conservative withdrawals, this fund has grown from an initial \$17 million to over \$35 million in 1999. The US Government is also a major revenue source for Tuvalu because of payments from a 1988 treaty on fisheries. In an effort to reduce its dependence on foreign aid, the government is pursuing public sector reforms, including privatization of some government functions and personnel

cuts of up to 7%. Tuvalu derives around \$1.5 million per year from the lease of its ".tv" Internet domain name. With merchandise exports only a fraction of merchandise imports, continued reliance must be placed on fishing and telecommunications license fees, remittances from overseas workers, official transfers, and income from overseas investments.

Introduction Uganda

Background:

The colonial boundaries created by Britain to delimit Uganda grouped together a wide range of ethnic groups with different political systems and cultures. These differences prevented the establishment of a working political community after independence was achieved in 1962. The dictatorial regime of Idi AMIN (1971-79) was responsible for the deaths of some 300,000 opponents; guerrilla war and human rights abuses under Milton OBOTE (1980-85) claimed at least another 100,000 lives. The rule of Yoweri MUSEVENI since 1986 has brought relative stability and economic growth to Uganda. During the 1990s, the government promulgated non-party presidential and legislative elections.

Economy Uganda

Economy - overview:

Uganda has substantial natural resources, including fertile soils, regular rainfall, and sizable mineral deposits of copper and cobalt. Agriculture is the most important sector of the economy, employing over 80% of the work force. Coffee accounts for the bulk of export revenues. Since 1986, the government - with the support of foreign countries and international agencies - has acted to rehabilitate and stabilize the economy by undertaking currency reform, raising producer prices on export crops, increasing prices of petroleum products, and improving civil service wages. The policy changes are especially aimed at dampening inflation and boosting production and

export earnings. During 1990-2001, the economy turned in a solid performance based on continued investment in the rehabilitation of infrastructure, improved incentives for production and exports, reduced inflation, gradually improved domestic security, and the return of exiled Indian-Ugandan entrepreneurs. In 2000, Uganda qualified for enhanced Highly Indebted Poor Countries (HIPC) debt relief worth \$1.3 billion and Paris Club debt relief worth \$145 million. These amounts combined with the original HIPC debt relief added up to about \$2 billion. Growth for 2001-02 was solid despite continued decline in the price of coffee, Uganda's principal export. Growth in 2003-06 reflected an upturn in Uganda's export markets.

Introduction Ukraine

Background: Ukraine was the center of the first eastern Slavic state, Kyivan Rus, which during the 10th and 11th centuries was the largest and most powerful state in Europe. Weakened by internecine quarrels and Mongol invasions, Kyivan Rus was incorporated into the Grand Duchy of Lithuania and eventually into the Polish-Lithuanian Commonwealth. The cultural and religious legacy of Kyivan Rus laid the foundation for Ukrainian nationalism through subsequent centuries. A new Ukrainian state, the Cossack Hetmanate, was established during the mid-17th century after an uprising against the Poles. Despite continuous Muscovite pressure, the Hetmanate managed to remain autonomous for well over 100 years. During the latter part of the 18th century, most Ukrainian ethnographic territory was absorbed by the Russian Empire. Following the collapse of czarist Russia in 1917, Ukraine was able to bring about a short-lived period of independence (1917-20), but was reconquered and forced to endure a brutal Soviet rule that engineered two artificial famines (1921-22 and 1932-33) in which over 8 million died. In World War II, German and Soviet armies were responsible for some 7 to 8 million more deaths. Although final independence for Ukraine was achieved in 1991 with the dissolution of the USSR, democracy remained elusive as the legacy of state control and endemic corruption stalled efforts at economic reform, privatization, and civil liberties. A peaceful mass protest "Orange Revolution" in the closing months of 2004 forced the authorities to overturn a rigged presidential election and to allow a new internationally monitored vote that swept into power a reformist slate under Viktor YUSHCHENKO. Subsequent internal squabbles in the YUSHCHENKO camp allowed his rival Viktor YANUKOVYCH to stage a comeback in parliamentary elections and become prime minister in August of 2006.

Economy Ukraine

Economy - overview: After Russia, the Ukrainian republic was far and away the most important economic component of the former Soviet Union, producing about four times the output of the next-ranking republic. Its fertile black soil generated more than one-fourth of Soviet agricultural output, and its farms provided substantial quantities of meat, milk, grain, and vegetables to other republics. Likewise, its diversified heavy industry supplied the unique equipment (for example, large diameter pipes) and raw materials to industrial and mining sites (vertical drilling apparatus) in other regions of the former USSR. Ukraine depends on imports of energy, especially natural gas, to meet some 85% of its annual energy requirements. Shortly after independence was ratified in December 1991, the Ukrainian Government liberalized most prices and erected a legal framework for privatization, but widespread resistance to reform within the government and the legislature soon stalled reform efforts and led to some backtracking. Output by 1999 had fallen to less than 40% of the 1991 level. Loose monetary policies pushed inflation to hyperinflationary levels in late 1993. Ukraine's dependence on Russia for energy supplies and the lack of significant structural reform have made the Ukrainian economy vulnerable to external shocks. A dispute with Russia over pricing in late 2005 and

early 2006 led to a temporary gas cut-off; Ukraine concluded a deal with Russia in January 2006 that almost doubled the price Ukraine pays for Russian gas, and could cost the Ukrainian economy \$1.4-2.2 billion. Ukrainian Government officials eliminated most tax and customs privileges in a March 2005 budget law, bringing more economic activity out of Ukraine's large shadow economy, but more improvements are needed, including fighting corruption, developing capital markets, and improving the legislative framework for businesses. Reforms in the more politically sensitive areas of structural reform and land privatization are still lagging. Outside institutions - particularly the IMF - have encouraged Ukraine to quicken the pace and scope of reforms. GDP growth was 6% in 2006, up from 2.4% in 2005 mainly because of high steel prices worldwide and strong demand for Ukrainian goods. The privatization of the Kryvoryzhstal steelworks in late 2005 produced \$4.8 billion in windfall revenue for the government. Some of the proceeds were used to finance the budget deficit, some to recapitalize two state banks, some to retire public debt, and the rest may be used to finance future deficits. Although the economy is likely to expand in 2007, long-term growth could be threatened by the government's plans to reinstate tax, trade, and customs privileges and to maintain restrictive grain export quotas.

general assessment: Ukraine's telecommunication development plan, running through 2005, emphasizes improving domestic trunk lines, international connections, and the mobile cellular system

domestic: at independence in December 1991, Ukraine inherited a telephone system that was antiquated, inefficient, and in disrepair; more than 3.5 million applications for telephones could not be satisfied; telephone density is rising slowly and the domestic trunk system is being improved; the mobile cellular telephone system is expanding at a high rate

international: country code - 380; two new domestic trunk lines are a part of the fiber-optic Trans-Asia-Europe (TAE) system and three Ukrainian links have been installed in the fiber-optic Trans-European Lines (TEL) project that connects 18 countries;

additional international service is provided by the Italy-Turkey-Ukraine-Russia (ITUR) fiber-optic submarine cable and by earth stations in the Intelsat, Inmarsat, and Intersputnik satellite systems

Transnational Issues Ukraine

Disputes - international:

1997 boundary delimitation treaty with Belarus remains un-ratified
due to unresolved financial claims, stalling demarcation and

reducing border security; delimitation of land boundary with Russia is complete with preparations for demarcation underway; the dispute over the boundary between Russia and Ukraine through the Kerch Strait and Sea of Azov remains unresolved despite a December 2003 framework agreement and ongoing expert-level discussions; Moldova and Ukraine operate joint customs posts to monitor transit of people and commodities through Moldova's break-away Transnistria Region, which remains under OSCE supervision; the ICJ gave Ukraine until December 2006 to reply and Romania until June 2007 to rejoin in their dispute submitted in 2004 over Ukrainian-administered Zmiyinyy/Serpilor (Snake) Island and Black Sea maritime boundary; Romania opposes Ukraine's reopening of a navigation canal from the Danube border through Ukraine to the Black Sea

Illicit drugs:

limited cultivation of cannabis and opium poppy, mostly for CIS consumption; some synthetic drug production for export to the West; limited government eradication program; used as transshipment point for opiates and other illicit drugs from Africa, Latin America, and Turkey to Europe and Russia; Ukraine has improved anti-money-laundering controls, resulting in its removal from the Financial Action Task Force's (FATF's) Noncooperative Countries and Territories List in February 2004; Ukraine's anti-money-laundering regime continues to be monitored by FATF

Introduction United Arab Emirates

Background:

The Trucial States of the Persian Gulf coast granted the UK control of their defense and foreign affairs in 19th century treaties. In 1971, six of these states - Abu Zaby, 'Ajman, Al Fujayrah, Ash Shariqah, Dubayy, and Umm al Qaywayn - merged to form the United Arab Emirates (UAE). They were joined in 1972 by Ra's al Khaymah. The UAE's per capita GDP is on par with those of leading West European nations. Its generosity with oil revenues and its moderate foreign policy stance have allowed the UAE to play a vital role in the affairs of the region.

Economy United Arab Emirates

Economy - overview:

The UAE has an open economy with a high per capita income and a sizable annual trade surplus. Its wealth is based on oil and gas output (about 30% of GDP), and the fortunes of the economy fluctuate with the prices of those commodities. Since the discovery of oil in

the UAE more than 30 years ago, the UAE has undergone a profound transformation from an impoverished region of small desert principalities to a modern state with a high standard of living. The government has increased spending on job creation and infrastructure expansion and is opening up its utilities to greater private sector involvement. In April 2004, the UAE signed a Trade and Investment Framework Agreement (TIFA) with Washington and in November 2004 agreed to undertake negotiations toward a Free Trade Agreement (FTA) with the US. Higher oil revenue, strong liquidity, and cheap credit in 2005-06 led to a surge in asset prices (shares and real estate) and consumer inflation. Rising prices are increasing the operating costs for businesses in the UAE and degrading the UAE's allure to foreign investors. Dependence on a large expatriate workforce and oil are significant long-term challenges to the UAE's economy.

Transnational Issues United Arab Emirates

Disputes - international:

boundary agreement was signed and ratified with Oman in 2003 for entire border, including Oman's Musandam Peninsula and Al Madhah enclaves, but contents of the agreement and detailed maps showing the alignment have not been published; Iran and UAE dispute Tunb Islands and Abu Musa Island, which Iran occupies

Trafficking in persons:

current situation: the United Arab Emirates is a destination country for men, women, and children trafficked from South and East Asia, Eastern Europe, Africa, and the Middle East for involuntary servitude and for sexual exploitation; an estimated 10,000 women from sub-Saharan Africa, Eastern Europe, South and East Asia, Iraq, Iran, and Morocco may be victims of sex trafficking in the UAE; women also migrate from Africa, and South and Southeast Asia to work as domestic servants, but may have their passports confiscated, be denied permission to leave the place of employment in the home, or face sexual or physical abuse by their employers; men from South Asia come to the UAE to work in the construction industry, but may be subjected to conditions of involuntary servitude as they are coerced to pay off recruitment and travel costs, sometimes having their wages denied for months at a time; victims of child camel jockey trafficking may still remain in the UAE, despite a July 2005 law banning the practice; while all identified victims were repatriated at the government's expense to their home countries, questions persist as to the effectiveness of the ban and the true number of victims

tier rating: Tier 2 Watch List - UAE is placed on the Tier 2 Watch List for its failure to show increased efforts to combat trafficking in 2005, particularly in its efforts to address the large-scale trafficking of foreign girls and women for commercial sexual exploitation

Illicit drugs:

the UAE is a drug transshipment point for traffickers given its proximity to Southwest Asian drug producing countries; the UAE's position as a major financial center makes it vulnerable to money laundering; anti-money-laundering controls improving, but informal banking remains unregulated

Introduction United Kingdom

Background:

As the dominant industrial and maritime power of the 19th century, the United Kingdom of Great Britain and Ireland played a leading role in developing parliamentary democracy and in advancing literature and science. At its zenith, the British Empire stretched over one-fourth of the earth's surface. The first half of the 20th century saw the UK's strength seriously depleted in two World Wars and the Irish republic withdraw from the union. The second half witnessed the dismantling of the Empire and the UK rebuilding itself into a modern and prosperous European nation. As one of five permanent members of the UN Security Council, a founding member of NATO, and of the Commonwealth, the UK pursues a global approach to foreign policy; it currently is weighing the degree of its integration with continental Europe. A member of the EU, it chose to remain outside the Economic and Monetary Union for the time being. Constitutional reform is also a significant issue in the UK. The Scottish Parliament, the National Assembly for Wales, and the Northern Ireland Assembly were established in 1999, but the latter is suspended due to wrangling over the peace process.

Flag description:

blue field with the red cross of Saint George (patron saint of England) edged in white superimposed on the diagonal red cross of Saint Patrick (patron saint of Ireland), which is superimposed on

the diagonal white cross of Saint Andrew (patron saint of Scotland); properly known as the Union Flag, but commonly called the Union Jack; the design and colors (especially the Blue Ensign) have been the basis for a number of other flags including other Commonwealth countries and their constituent states or provinces, and British overseas territories

Economy United Kingdom

Economy - overview:

The UK, a leading trading power and financial center, is one of the quintet of trillion dollar economies of Western Europe. Over the past two decades, the government has greatly reduced public ownership and contained the growth of social welfare programs. Agriculture is intensive, highly mechanized, and efficient by European standards, producing about 60% of food needs with less than 2% of the labor force. The UK has large coal, natural gas, and oil reserves; primary energy production accounts for 10% of GDP, one of the highest shares of any industrial nation. Services, particularly banking, insurance, and business services, account by far for the largest proportion of GDP while industry continues to decline in importance. GDP growth slipped in 2001-03 as the global downturn, the high value of the pound, and the bursting of the "new economy" bubble hurt manufacturing and exports. Output recovered in 2004, to 3.2% growth, then slowed to 1.7% in 2005 and 2.6% in 2006. The economy is one of the strongest in Europe; inflation, interest rates, and unemployment remain low. The relatively good economic performance has complicated the BLAIR government's efforts to make a case for Britain to join the European Economic and Monetary Union (EMU). Critics point out that the economy is doing well outside of EMU, and public opinion polls show a majority of Britons are opposed to the euro. Meantime, the government has been speeding up the

improvement of education, transport, and health services, at a cost in higher taxes and a widening public deficit.

Introduction United States

Background:

Britain's American colonies broke with the mother country in 1776 and were recognized as the new nation of the United States of America following the Treaty of Paris in 1783. During the 19th and 20th centuries, 37 new states were added to the original 13 as the nation expanded across the North American continent and acquired a number of overseas possessions. The two most traumatic experiences in the nation's history were the Civil War (1861-65) and the Great Depression of the 1930s. Buoyed by victories in World Wars I and II and the end of the Cold War in 1991, the US remains the world's most powerful nation state. The economy is marked by steady growth, low unemployment and inflation, and rapid advances in technology.

Geography United States

Location:

North America, bordering both the North Atlantic Ocean and the North Pacific Ocean, between Canada and Mexico

Geographic coordinates:

38 00 N, 97 00 W

Map references:

North America

Area:

total: 9,826,630 sq km

land: 9,161,923 sq km

water: 664,707 sq km

note: includes only the 50 states and District of Columbia

Area - comparative:

about half the size of Russia; about three-tenths the size of Africa; about half the size of South America (or slightly larger than Brazil); slightly larger than China; almost two and a half times the size of the European Union

Land boundaries:

total: 12,034 km

border countries: Canada 8,893 km (including 2,477 km with Alaska), Mexico 3,141 km

note: US Naval Base at Guantanamo Bay, Cuba is leased by the US and is part of Cuba; the base boundary is 28 km

Coastline:

19,924 km

Maritime claims: territorial sea: 12 nm contiguous zone: 24 nm exclusive economic zone: 200 nm continental shelf: not specified

Climate:

mostly temperate, but tropical in Hawaii and Florida, arctic in Alaska, semiarid in the great plains west of the Mississippi River, and arid in the Great Basin of the southwest; low winter temperatures in the northwest are ameliorated occasionally in January and February by warm chinook winds from the eastern slopes

of the Rocky Mountains

Terrain:

vast central plain, mountains in west, hills and low mountains in east; rugged mountains and broad river valleys in Alaska; rugged, volcanic topography in Hawaii

Elevation extremes:

lowest point: Death Valley -86 m

highest point: Mount McKinley 6,194 m

Natural resources:

coal, copper, lead, molybdenum, phosphates, uranium, bauxite, gold, iron, mercury, nickel, potash, silver, tungsten, zinc, petroleum, natural gas, timber

Land use:

arable land: 18.01%

permanent crops: 0.21%

other: 81.78% (2005)

Irrigated land:

223,850 sq km (2003)

Natural hazards:

tsunamis, volcanoes, and earthquake activity around Pacific Basin; hurricanes along the Atlantic and Gulf of Mexico coasts; tornadoes in the midwest and southeast; mud slides in California; forest fires in the west; flooding; permafrost in northern Alaska, a major impediment to development

Environment - current issues:

air pollution resulting in acid rain in both the US and Canada; the US is the largest single emitter of carbon dioxide from the burning of fossil fuels; water pollution from runoff of pesticides and

fertilizers; limited natural fresh water resources in much of the western part of the country require careful management; desertification

Environment - international agreements:

party to: Air Pollution, Air Pollution-Nitrogen Oxides, Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Climate Change, Desertification, Endangered Species, Environmental Modification, Marine Dumping, Marine Life Conservation, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands, Whaling
signed, but not ratified: Air Pollution-Persistent Organic Pollutants, Air Pollution-Volatile Organic Compounds, Biodiversity, Climate Change-Kyoto Protocol, Hazardous Wastes

Geography - note:

world's third-largest country by size (after Russia and Canada) and by population (after China and India); Mt. McKinley is highest point in North America and Death Valley the lowest point on the continent

13 equal horizontal stripes of red (top and bottom) alternating with white; there is a blue rectangle in the upper hoist-side corner bearing 50 small, white, five-pointed stars arranged in nine offset horizontal rows of six stars (top and bottom) alternating with rows of five stars; the 50 stars represent the 50 states, the 13 stripes represent the 13 original colonies; known as Old Glory; the design and colors have been the basis for a number of other flags, including Chile, Liberia, Malaysia, and Puerto Rico

Economy United States

Economy - overview: The US has the largest and most technologically powerful economy in the world, with a per capita GDP of \$43,500. In this market-oriented economy, private individuals and business firms make most of the decisions, and the federal and state governments buy needed goods and services predominantly in the private marketplace. US business firms enjoy greater flexibility than their counterparts in Western

Europe and Japan in decisions to expand capital plant, to lay off surplus workers, and to develop new products. At the same time, they face higher barriers to enter their rivals' home markets than foreign firms face entering US markets. US firms are at or near the forefront in technological advances, especially in computers and in medical, aerospace, and military equipment; their advantage has narrowed since the end of World War II. The onrush of technology largely explains the gradual development of a "two-tier labor market" in which those at the bottom lack the education and the professional/technical skills of those at the top and, more and more, fail to get comparable pay raises, health insurance coverage, and other benefits. Since 1975, practically all the gains in household income have gone to the top 20% of households. The response to the terrorist attacks of 11 September 2001 showed the remarkable resilience of the economy. The war in March-April 2003 between a US-led coalition and Iraq, and the subsequent occupation of Iraq, required major shifts in national resources to the military. The rise in GDP in 2004-06 was undergirded by substantial gains in labor productivity. Hurricane Katrina caused extensive damage in the Gulf Coast region in August 2005, but had a small impact on overall GDP growth for the year. Soaring oil prices in 2005 and 2006 threatened inflation and unemployment, yet the economy continued to grow through year-end 2006. Imported oil accounts for about two-thirds of US consumption. Long-term problems include inadequate investment in economic infrastructure, rapidly rising medical and pension costs of an aging population, sizable trade and budget deficits, and stagnation of family income in the lower economic groups.

@United States Pacific Island Wildlife Refuges

Introduction United States Pacific Island Wildlife Refuges

Background: The following US Pacific island territories constitute the Pacific Remote Islands National Wildlife Refuge Complex and as such are managed by the Fish and Wildlife Service of the US Department of Interior. These remote refuges are the most widespread collection of marine- and terrestrial-life protected areas on the planet under a single country's jurisdiction. They protect many endemic species including corals, fish, shellfish, marine mammals, seabirds, water birds, land birds, insects, and vegetation not found elsewhere. Baker Island: The US took possession of the island in 1857, and its guano deposits were mined by US and British companies during the second half of the 19th century. In 1935, a short-lived attempt at colonization began on this island but was disrupted by World War II and thereafter abandoned. The island was established as a National Wildlife Refuge in 1974. Howland Island: Discovered by the US early in the 19th century, the island was officially claimed by the US in 1857. Both US and British companies mined for guano until about 1890. In 1935, a short-lived attempt at colonization began on this island, similar to the effort on nearby Baker Island, but was disrupted by World War II and thereafter abandoned. The famed American aviatrix Amelia EARHART disappeared while seeking out Howland Island as a refueling stop during her 1937 round-the-world flight; Earhart Light, a day beacon near the middle of the west coast, was named in her memory. The island was established as a National Wildlife Refuge in 1974. Jarvis Island: First discovered by the British in 1821, the uninhabited island was annexed by the US in 1858, but abandoned in 1879 after tons of guano had been removed. The UK annexed the island in 1889, but never carried out plans for further exploitation. The US occupied and reclaimed the island in 1935 until it was abandoned in 1942 during World War II. The island was established as a National Wildlife Refuge in 1974. Johnston Atoll: Both the US and the Kingdom of Hawaii annexed Johnston Atoll in 1858, but it was the US that mined the guano deposits until the late 1880s. Johnston and Sand Islands were designated wildlife refuges in 1926. The US Navy took over the atoll in 1934, and subsequently the US Air Force assumed control in 1948. The site was used for high-altitude nuclear tests in the 1950s and 1960s, and until late in 2000 the atoll was maintained as a storage and disposal site for chemical weapons. Munitions destruction is now complete.

Cleanup and closure of the facility was completed by May 2005. The Fish and Wildlife Service and the US Air Force are currently discussing future management options; in the interim, Johnston Atoll and the three-mile Naval Defensive Sea around it remain under the jurisdiction and administrative control of the US Air Force. Kingman Reef: The US annexed the reef in 1922. Its sheltered lagoon served as a way station for flying boats on Hawaii-to-American Samoa flights during the late 1930s. There are no terrestrial plants on the reef, which is frequently awash, but it does support abundant and diverse marine fauna and flora. In 2001, the waters surrounding the reef out to 12 nm were designated a US National Wildlife Refuge. Midway Islands: The US took formal possession of the islands in 1867. The laying of the trans-Pacific cable, which passed through the islands, brought the first residents in 1903. Between 1935 and 1947, Midway was used as a refueling stop for trans-Pacific flights. The US naval victory over a Japanese fleet off Midway in 1942 was one of the turning points of World War II. The islands continued to serve as a naval station until closed in 1993. Today the islands are a National Wildlife Refuge and are the site of the world's largest Laysan albatross colony. Palmyra Atoll: The Kingdom of Hawaii claimed the atoll in 1862, and the US included it among the Hawaiian Islands when it annexed the archipelago in 1898. The Hawaii Statehood Act of 1959 did not include Palmyra Atoll, which is now partly privately owned by the Nature Conservancy with the rest owned by the Federal government and managed by the US Fish and Wildlife Service. These organizations are managing the atoll as a wildlife refuge. The lagoons and surrounding waters within the 12 nm US territorial seas were transferred to the US Fish and Wildlife Service and designated as a National Wildlife Refuge in January 2001.

Midway Islands and Palmyra Atoll: NA

Geography - note:

Baker, Howland, and Jarvis Islands: scattered vegetation consisting of grasses, prostrate vines, and low growing shrubs; primarily a nesting, roosting, and foraging habitat for seabirds, shorebirds, and marine wildlife

Johnston Atoll: Johnston Island and Sand Island are natural islands, which have been expanded by coral dredging; North Island (Akau) and East Island (Hikina) are manmade islands formed from coral dredging; the egg-shaped reef is 34 km in circumference

Kingman Reef: barren coral atoll with deep interior lagoon; closed to the public

Midway Islands: a coral atoll managed as a national wildlife refuge and open to the public for wildlife-related recreation in the form of wildlife observation and photography

Palmyra Atoll: the high rainfall and resulting lush vegetation make

the environment of this atoll unique among the US Pacific Island territories; it supports one of the largest remaining undisturbed stands of *Pisonia* beach forest in the Pacific

Introduction Uruguay

Background:

Montevideo, founded by the Spanish in 1726 as a military stronghold, soon took advantage of its natural harbor to become an important commercial center. Claimed by Argentina but annexed by Brazil in 1821, Uruguay declared its independence four years later and secured its freedom in 1828 after a three-year struggle. The administrations of President Jose BATLLE in the early 20th century established widespread political, social, and economic reforms that established a statist tradition. A violent Marxist urban guerrilla movement named the Tupamaros, launched in the late 1960s, led Uruguay's president to cede control of the government to the military in 1973. By yearend, the rebels had been crushed, but the military continued to expand its hold over the government. Civilian rule was not restored until 1985. In 2004, the left-of-center Frente Amplio Coalition won national elections that effectively ended 170

years of political control previously held by the Colorado and Blanco parties. Uruguay's political and labor conditions are among the freest on the continent.

Economy Uruguay

Economy - overview:

Uruguay's well-to-do economy is characterized by an export-oriented agricultural sector, a well-educated work force, and high levels of social spending. After averaging growth of 5% annually during 1996-98, in 1999-2002 the economy suffered a major downturn, stemming largely from the spillover effects of the economic problems of its large neighbors, Argentina and Brazil. For instance, in 2001-02 Argentina made massive withdrawals of dollars deposited in Uruguayan banks, which led to a plunge in the Uruguayan peso and a massive rise in unemployment. Total GDP in these four years dropped by nearly 20%, with 2002 the worst year due to the banking crisis. The unemployment rate rose to nearly 20% in 2002, inflation surged, and the burden of external debt doubled. Cooperation with the IMF helped stem the damage. A debt swap with private-sector creditors in 2003 extended the maturity dates on nearly half of Uruguay's then \$11.3 billion of public debt and helped restore public confidence. The economy grew about 12% in 2004 as a result of high commodity prices for Uruguayan exports, a competitive peso, growth in the region, and low international interest rates, and it continued to grow nearly 7% annually in 2005 and 2006.

Introduction Uzbekistan

Background:

Russia conquered Uzbekistan in the late 19th century. Stiff resistance to the Red Army after World War I was eventually suppressed and a socialist republic set up in 1924. During the Soviet era, intensive production of "white gold" (cotton) and grain led to overuse of agrochemicals and the depletion of water supplies, which have left the land poisoned and the Aral Sea and certain rivers half dry. Independent since 1991, the country seeks to gradually lessen its dependence on agriculture while developing its mineral and petroleum reserves. Current concerns include terrorism

by Islamic militants, economic stagnation, and the curtailment of human rights and democratization.

Environment - current issues:

shrinkage of the Aral Sea is resulting in growing concentrations of chemical pesticides and natural salts; these substances are then blown from the increasingly exposed lake bed and contribute to desertification; water pollution from industrial wastes and the heavy use of fertilizers and pesticides is the cause of many human health disorders; increasing soil salination; soil contamination from buried nuclear processing and agricultural chemicals, including DDT

Economy Uzbekistan

Economy - overview: Uzbekistan is a dry, landlocked country of which 11% consists of intensely cultivated, irrigated river valleys. More than 60% of its population lives in densely populated rural communities.

Uzbekistan is now the world's second-largest cotton exporter and fifth largest producer; it relies heavily on cotton production as the major source of export earnings. Other major export earners include gold, natural gas, and oil. Following independence in September 1991, the government sought to prop up its Soviet-style command economy with subsidies and tight controls on production and prices. While aware of the need to improve the investment climate, the government still sponsors measures that often increase, not decrease, its control over business decisions. A sharp increase in the inequality of income distribution has hurt the lower ranks of society since independence. In 2003, the government accepted the obligations of Article VIII under the International Monetary Fund (IMF), providing for full currency convertibility. However, strict currency controls and tightening of borders have lessened the effects of convertibility and have also led to some shortages that have further stifled economic activity. The Central Bank often delays or restricts convertibility, especially for consumer goods. Potential investment by Russia and China in Uzbekistan's gas and oil industry would increase economic growth prospects. In November 2005, Russian President Vladimir PUTIN and Uzbekistan President KARIMOV signed an "alliance" treaty, which included provisions for economic and business cooperation. Russian businesses have shown increased interest in Uzbekistan, especially in mining, telecom, and oil and gas. In December 2005, the Russians opened a "Trade House" to support and develop Russian-Uzbek business and economic ties.

Trafficking in persons:

current situation: Uzbekistan is a source and, to a lesser extent,

a transit country for women trafficked to Asia and the Middle East for the purpose of sexual exploitation; women from other Central Asian countries and China are trafficked through Uzbekistan; men are trafficked for purposes of forced labor in the construction and agricultural industries to Ukraine, Russia, Kazakhstan, and Kyrgyzstan; men and women are also trafficked within the country
tier rating: Tier 3 - Uzbekistan is placed on Tier 3 because it failed to fulfill commitments by the country to take additional steps during 2005, including the adoption of comprehensive anti-trafficking legislation, criminal code amendments to raise trafficking penalties, support to the country's first trafficking shelter, and approval of a national action plan

Illicit drugs:

transit country for Afghan narcotics bound for Russian and, to a lesser extent, Western European markets; limited illicit cultivation of cannabis and small amounts of opium poppy for domestic consumption; poppy cultivation almost wiped out by government crop eradication program; transit point for heroin precursor chemicals bound for Afghanistan

Introduction Vanuatu

Background:

Multiple waves of colonizers, each speaking a distinct language, migrated to the New Hebrides in the millennia preceding European exploration in the 18th century. This settlement pattern accounts for the complex linguistic diversity found on the archipelago to

this day. The British and French, who settled the New Hebrides in the 19th century, agreed in 1906 to an Anglo-French Condominium, which administered the islands until independence in 1980, when the new name of Vanuatu was adopted.

Economy Vanuatu

Economy - overview:

This South Pacific island economy is based primarily on small-scale agriculture, which provides a living for 65% of the population. Fishing, offshore financial services, and tourism, with more than 60,000 visitors in 2005, are other mainstays of the economy. Mineral deposits are negligible; the country has no known petroleum deposits. A small light industry sector caters to the local market. Tax revenues come mainly from import duties. Economic development is hindered by dependence on relatively few commodity exports, vulnerability to natural disasters, and long distances from main markets and between constituent islands. GDP growth rose less than 3% on average in the 1990s. In response to foreign concerns, the government has promised to tighten regulation of its offshore financial center. In mid-2002 the government stepped up efforts to boost tourism through improved air connections, resort development,

and cruise ship facilities. Agriculture, especially livestock farming, is a second target for growth. Australia and New Zealand are the main suppliers of tourists and foreign aid.

Introduction Venezuela

Background:

Venezuela was one of three countries that emerged from the collapse of Gran Colombia in 1830 (the others being Ecuador and New Granada, which became Colombia). For most of the first half of the 20th century, Venezuela was ruled by generally benevolent military strongmen, who promoted the oil industry and allowed for some social reforms. Democratically elected governments have held sway since 1959. Hugo CHAVEZ, president since 1999, has promoted a controversial policy of "democratic socialism," which purports to alleviate social ills while at the same time attacking globalization and undermining regional stability. Current concerns include: a weakening of democratic institutions, political polarization, a politicized military, drug-related violence along the Colombian border, increasing internal drug consumption, overdependence on the petroleum industry with its price fluctuations, and irresponsible mining operations that are endangering the rain forest and indigenous peoples.

Economy Venezuela

Economy - overview:

Venezuela remains highly dependent on oil revenues, which account for roughly 90% of export earnings, more than 50% of the federal budget revenues, and around 30% of GDP. Tax collection-Venezuela's primary source of non-oil revenue-is expected to surpass \$23 billion in 2006, exceeding the yearend collection goal by more than 20%. A nationwide strike between December 2002 and February 2003 had far-reaching economic consequences - real GDP declined by around 9% in 2002 and 8% in 2003 - but economic output since then has recovered strongly. Fueled by higher oil prices, record government spending helped to boost GDP growth in 2004 and 2005 to approximately 18% and 11%, respectively. Economic growth in 2006 reached around 9%. This spending, combined with recent minimum wage hikes and improved access to domestic credit, has fueled a consumption boom - car sales in 2006 increased by around 70% - but has come at the cost of higher inflation. Despite government attempts to withdraw liquidity from the economy, Venezuela's money supply set a record in June 2006, approximately 70% higher than the previous year. Imports have also jumped significantly.

Disputes - international:

claims all of the area west of the Essequibo River in Guyana, preventing any discussion of a maritime boundary; Guyana has expressed its intention to join Barbados in asserting claims before the United Nations Convention on the Law of the Sea (UNCLOS) that Trinidad and Tobago's maritime boundary with Venezuela extends into their waters; dispute with Colombia over maritime boundary and Venezuelan-administered Los Monjes islands near the Gulf of Venezuela; Colombian-organized illegal narcotics and paramilitary activities penetrate Venezuela's shared border region; in 2006, an estimated 139,000 Colombians seek protection in 150 communities along the border in Venezuela; US, France, and the Netherlands recognize Venezuela's granting full effect to Aves Island, thereby claiming a Venezuelan EEZ/continental shelf extending over a large portion of the eastern Caribbean Sea; Dominica, Saint Kitts and Nevis, Saint Lucia, and Saint Vincent and the Grenadines protest Venezuela's full effect claim

Trafficking in persons:

current situation: Venezuela is a source, transit, and destination country for women and children trafficked for the purposes of sexual exploitation and forced labor; women and children from Colombia, China, Peru, Ecuador, and the Dominican Republic are trafficked to and through Venezuela and subjected to commercial sexual exploitation or forced labor; Venezuelans are trafficked internally and to Western Europe, particularly Spain and the Netherlands, and to countries in the Caribbean region for commercial sexual exploitation; Venezuela is a transit country for illegal migrants

from other countries in the region and for Asian nationals, some are believed to be trafficking victims

tier rating: Tier 3 - Venezuela does not fully comply with the minimum standards for the elimination of trafficking and is not making significant efforts to do so

Illicit drugs:

small-scale illicit producer of opium and coca for the processing of opiates and coca derivatives; however, large quantities of cocaine, heroin, and marijuana transit the country from Colombia bound for US and Europe; significant narcotics-related money-laundering activity, especially along the border with Colombia and on Margarita Island; active eradication program primarily targeting opium; increasing signs of drug-related activities by Colombian insurgents on border

Introduction Vietnam

Background:

The conquest of Vietnam by France began in 1858 and was completed by 1884. It became part of French Indochina in 1887. Vietnam declared independence after World War II, but France continued to rule until its 1954 defeat by Communist forces under Ho Chi MINH. Under the Geneva Accords of 1954, Vietnam was divided into the Communist North and anti-Communist South. US economic and military aid to South Vietnam grew through the 1960s in an attempt to bolster the government, but US armed forces were withdrawn following a cease-fire agreement in 1973. Two years later, North Vietnamese

forces overran the South reuniting the country under Communist rule. Despite the return of peace, for over a decade the country experienced little economic growth because of conservative leadership policies. However, since the enactment of Vietnam's "doi moi" (renovation) policy in 1986, Vietnamese authorities have committed to increased economic liberalization and enacted structural reforms needed to modernize the economy and to produce more competitive, export-driven industries. The country continues to experience protests from various groups - such as the Protestant Montagnard ethnic minority population of the Central Highlands and the Hoa Hao Buddhists in southern Vietnam over religious persecution. Montagnard grievances also include the loss of land to Vietnamese settlers.

Economy Vietnam

Economy - overview: Vietnam is a densely-populated, developing country that in the last 30 years has had to recover from the ravages of war, the loss of financial support from the old Soviet Bloc, and the rigidities of a centrally-planned economy. Substantial progress was achieved from 1986 to 1997 in moving forward from an extremely low level of development and significantly reducing poverty. Growth averaged around 9% per year from 1993 to 1997. The 1997 Asian financial crisis highlighted the problems in the Vietnamese economy and temporarily allowed opponents of reform to slow progress toward a market-oriented economy. GDP growth averaged 6.8% per year from 1997 to 2004 even against the background of the Asian financial crisis and a global recession, and growth hit 8% in 2005 and 7.8% in 2006. Since 2001, however, Vietnamese authorities have reaffirmed their commitment to economic liberalization and international integration. They have moved to implement the structural reforms needed to modernize the economy and to produce more competitive, export-driven industries. Vietnam's membership in the ASEAN Free Trade Area (AFTA) and entry into force of the US-Vietnam Bilateral Trade Agreement in December 2001 have led to even more rapid changes in Vietnam's trade and economic regime. Vietnam's exports to the US doubled in 2002 and again in 2003. Vietnam joined the World Trade Organization in January 2007. This should provide an important boost to the economy and should help to ensure the continuation of liberalizing reforms. Among other benefits, accession will allow Vietnam to take advantage of the phase out of the Agreement on Textiles and Clothing, which eliminated quotas on textiles and clothing for WTO partners on 1 January 2005. Agriculture's share of economic output has continued to shrink, from about 25% in 2000 to 20% in 2006. Deep poverty, defined as a percent of the population living under \$1 per day, has declined significantly and is now smaller than that of China, India, and the Philippines. Vietnam is working to promote job creation to keep up with the country's high population growth rate. However, high levels of inflation have prompted Vietnamese authorities to tighten monetary and fiscal policies. Hanoi is targeting an economic growth rate between 7.5 and 8% over the next five years.

Transnational Issues Vietnam

Disputes - international:

southeast Asian states have enhanced border surveillance to check the spread of avian flu; Cambodia and Laos protest Vietnamese squatters and armed encroachments along border; after years of Cambodia claiming Vietnam had moved or destroyed boundary markers, in 2005, after much domestic debate, Cambodia ratified an agreement with Vietnam that settled all but a small portion of the land boundary; establishment of a maritime boundary with Cambodia is hampered by unresolved dispute over offshore islands; in 2004, Laotian-Vietnamese boundary commission agrees to erect missing markers in two adjoining provinces; demarcation of the China-Vietnam boundary proceeds slowly and although the maritime boundary delimitation and fisheries agreements were ratified in June 2004, implementation has been delayed; China occupies Paracel Islands also claimed by Vietnam and Taiwan; involved in complex dispute with China, Malaysia, Philippines, Taiwan, and possibly Brunei over the Spratly Islands; the 2002 "Declaration on the Conduct of Parties in the South China Sea" has eased tensions but falls short of a legally binding "code of conduct" desired by several of the disputants; Vietnam continues to expand construction of facilities in the Spratly Islands; in March 2005, the national oil companies of China, the Philippines, and Vietnam signed a joint accord to conduct marine seismic activities in the Spratly Islands

Illicit drugs:

minor producer of opium poppy; probable minor transit point for Southeast Asian heroin; government continues to face domestic opium/heroin/methamphetamine addiction problems despite longstanding crackdowns

@Virgin Islands

Introduction Virgin Islands

Background: During the 17th century, the archipelago was divided into two territorial units, one English and the other Danish. Sugarcane, produced by slave labor, drove the islands' economy during the 18th and early 19th centuries. In 1917, the US purchased the Danish portion, which had been in economic decline since the abolition of slavery in 1848.

Economy Virgin Islands

Economy - overview:

Tourism is the primary economic activity, accounting for 80% of GDP and employment. The islands hosted 2.6 million visitors in 2005. The manufacturing sector consists of petroleum refining, textiles, electronics, pharmaceuticals, and watch assembly. One of the world's largest petroleum refineries is at Saint Croix. The agricultural sector is small, with most food being imported. International business and financial services are small but growing components of the economy. The islands are vulnerable to substantial damage from storms. The government is working to improve fiscal discipline, to support construction projects in the private sector, to expand tourist facilities, to reduce crime, and to protect the environment.
