## Partial List of Products that are True Silver Colloids

The list of products below are "true silver colloids". The silver content in these products consist of both **silver ions** and **silver particles**. The majority of the silver content is in the form of **silver particles** which makes these products *true colloids*.

Effectiveness of a colloid is determined by the *particle surface area* making it the single most important metric for comparing colloids.

Product Name & PPM on Label <a href="#">Click on product name to go to website</a>	PPM (from Lab Report)	Particle Surface Area cm <sup>2</sup> /mL
<a href="#">Advanced Colloidal Silver (Utopia Silver) 20 ppm</a>	13.2	12.20
<a href="#">Kelly Colloidal Silver 20 ppm</a>	11.6	1.42
<a href="#">Mesosilver 20 ppm</a>	20.0	104.7
<a href="#">Vitol Super Colloidal Silver 5 ppm</a>	2.24	0.286
<a href="#">Wellness Colloidal Silver 30 ppm</a>	36.3	0.88

Higher values are better.

PPM values shown in red are less than 75% of the labeled silver content.
