*INTERVIEW WITH*

# Del Bigtree

*The* **TRUTH** *About*  
**VACCINES** 2020™

**Del Bigtree:** So later today I'm going to be discussing my issue, my wheelhouse, which is vaccines and vaccine safety. Back in 2017 I gave the talk about the Vaccine Safety Project. Something that we had created, Bobby Kennedy and I, in working for a meeting at the National Institute of Health that had been set up by Donald Trump. It's two years later now, and so my nonprofit, Informed Consent Action Network, we have been suing government agencies. So we've won lawsuits because the National Institute of Health, Health and Human Services, the FDA. So what I'm going to talk about is sort of the journey since we went out with information and proof that vaccines are not safe, which was really the entire discussion that I was involved in. When we hear about vaccines, we hear vaccines are safe and effective. We have been focused only on that one word, safety. And so what I'm going to do today is really show a lot more videos of real scientists and the real people that are behind.

**Del Bigtree:** Some of them are on our side, some of them are not on our side, but I get accused all the time of spreading misinformation. If you read articles in the Washington Post, New York Times, they say, "Del Bigtree is spreading misinformation." Today, I'm going to let the scientists speak for themselves so that you can hear what they are actually saying and doing out in public or actually in some cases behind closed doors so that today will be the proof and today it will be the calling for everybody to rise up now because this vaccine issue I believe affects everyone at The Truth About Cancer though there's many people, and obviously the focus is always on another way of healing, finding new ways to get through these difficult life and physical experiences at Behind The Scenes. And I think if you really stop everybody here, we have a real problem with the pharmaceutical industry.

**Del Bigtree:** The pharmaceutical industry is driving where health is supposed to be going and I think a lot of people at The Truth About Cancer think, "Well, what does vaccines have to do with that?" And I think vaccines is the frontier. I think it is the battleground as we speak. They're going to attempt to force vaccinate every adult and child, not only in America, but around the world. It's already on Health and Human Services website. If pharma gets control of us at that level where they can forcibly inject us with products we have no control over by buying our politicians and passing laws that enforce these products upon us, there will be no alternative medicine. There will be no chiropractors, there will be no acupuncturists. There will be no alternative way. We will see more and more medical kidnapping like we're seeing.

**Del Bigtree:** This is the moment, I believe. This vaccine discussion is the attempt by the pharmaceutical industry to take over our lives once and for all. So today I'll be calling for everybody to stand up because the war has begun. We are in I believe a spiritual war. We are against an idea that our bodies are not sound and only the pharmaceutical industry can keep us alive. If we believe that our bodies want to heal and that nature has the answers or, for many of us God, then we have to stand up just as our founding fathers did and make a difference now.

**Speaker 2:** Wow, that's incredibly powerful. So we talked earlier about you being interviewed by Ty, which was about vaccines. Now, since that time, which was about two years ago. What do you think has happened in the world of vaccines since then?

**Del Bigtree:** Since I first spoke with Ty and I first spoke with The Truth About Cancer I think everyone has seen what has happened. This was not really an issue that was on the radar. Not many people were talking about vaccines. No one in the news was really talking about it. In the last two years, really since I presented, I would say that this vaccine discussion and anti-vaxxers and how the World Health Organization has come out since then and said that vaccine hesitancy is one of the 10 greatest threats to global health in the world, that's a massive statement, a terrifying statement. But what we've seen is this issue of forced vaccinations, I would say is now the second biggest discussion in major news around the world whereas nobody was talking about it before. Now, people could say that it looks really negative and they're calling anti-vaxxers names and the World Health Organization is saying we're a threat to the world, but that's what it was going to take. Before, they were just going to push forward with their agenda and no one was going to say anything.

**Del Bigtree:** What we've proven now is that we are becoming a movement and we are becoming a threat to the pharmaceutical idea of world health and that is I think epitomized by media coverage. So we're there. We're where we want to be. They are now having to talk about us and even though it's negative, more and more people every day are waking up, opening their newspapers, and saying, "You mean there's people that actually don't believe in vaccines and why? And who's this Dell Bigtree guy? Who are Ty and Charlene Bollinger? Who's Robert Kennedy Jr.? Who's this Andy Wakefield guy?" And they're going and starting to do research. Also though, we're seeing on the other side, censorship and book burning. We are returning to a dark age. Adam Schiff, I'm going to talk about this in my talk, Adam Schiff reached out and said, "I want Instagram, Facebook, you know, Twitter to start censoring anyone that's questioning the safety of vaccines."

**Del Bigtree:** He wrote a letter to Amazon saying, "You need to remove all books and movies that question the safety of vaccines or that say that there's other ways to heal your kids with autism." And so my film *Vaxxed*, which is what started this whole thing for me, has been removed from Amazon. You can't find my film anywhere, excepted at [vaxxedthemovie.com](http://vaxxedthemovie.com), which is the distributor's website whereas it used to be free with Amazon Prime. So for the first time in a really long time, certainly in America, censorship and book burning is now the approach, and what that says to me is that this agenda and this mindset, this government and the way it's working now, is on its way out the door. There's never been a regime that's decided that burning literature and burning ideas was the way to win. Every time that's ever happened in the world, that marked the end of that paradigm. So I believe we're coming to the end of that paradigm. But boy, it's going to be intense.

**Speaker 2:** So what about the CDC? Why does the CDC and containing to increase their list of mandated vaccines when they've never been proven to be safe in the first place? So it's like every year you talk to [inaudible 00:06:54] people, it's like, "I was born in the 80s so I know it was a relatively short amount of vaccines. And now if I was born today, it's three to five times the amount and the quantity keeps going up and they've never been proven to be safe because they don't have to be tested."

**Del Bigtree:** Yeah.

**Speaker 2:** So why is that?

**Del Bigtree:** You know, why are vaccines not tested? Why do they keep increasing? We have gone from 11 vaccines, the 1980s, by the time you're 18, to now 72 and growing. They're about to mandate the HPV vaccine for every child in New York, so that's an increase. There's 270 vaccines in the pipeline. There are just about in the approval process and there's thousands of vaccine trials going on as we speak. When I hear politicians in government saying, "I'm against the pharma lobby," the pharma lobby is the most powerful in Washington, it's true, it's the number one most powerful lobby, what's it doing there? Yet Bernie Sanders or Elizabeth Warren will say, "I'm anti-pharma lobby. I am pro-vaccine mandate and removing exemptions." I don't understand why they don't see that the fastest growing sector of pharma is vaccines. The future of that industry is vaccines. For many reasons.

**Del Bigtree:** One, you cannot sue them if they injure you because of the 1986 Vaccine Injury Compensation Act that took all liability away from the industry and anyone that gives you a vaccine. Two, it's never been through a safety study at all. This is one of the things that my nonprofit and working with Bobby Kennedy we've proven even with lawsuits that unlike every other drug that goes to a placebo, double blind placebo study, to establish safety, no vaccine ever has and at least certainly none of the ones on our childhood schedule, so that's problematic. So now you have the pharmaceutical industry who loses billion dollar lawsuits almost every week now. It feels like we're seeing these lies being upturned and courtrooms around America and the world. They make a product, we can't get into a courtroom, a product that's given to our children, and the only product of all those being sued that have never been through a safety study.

**Del Bigtree:** And so why is that happening? Why is the CDC supporting this and adding these untested products more and more of them onto the schedule? I've really come to a sort of a brand new real realization on that, which I probably can't even fit into my talk today, but it's more than just that they believe in vaccines, which they do. They have this, it's a loss of the belief in God and it's really science is everything and we are vulnerable and as we have science, they really want to have vaccinations for the millions of bacteria and viruses out there. They dream of a future of being infection free or disease free and so I don't think there's any end to the amount of vaccines they think would be necessary. And all the while, as they pushed more and more vaccines, we get sicker and sicker and sicker. And the same time we've gone from 11 vaccines, we were at 12.8% chronic illness in our children, now that we're at 72 vaccines, technically 54 vaccines, given in 72 doses, we've gone to 54% chronic illness.

**Del Bigtree:** That is the greatest decline in human health in recorded history. The bodies of our children, their own immune systems are attacking their own bodies. That means even if you don't believe in God, evolution is failing. We're actually the first species that is now de-evolving. For the first time ever, our children can't live on this planet, can't drink our water, can't breathe the air, and can't eat the food that has been here since the dawn of man. Something's gone tragically wrong, and I think behind it and why the lack of safety studies is the fact that I believe the biggest agenda, our greatest fear as a nation in America, is a biological weapon. This is all, it all really comes down to the military. They're so terrified that someone's going to weaponize Ebola or weaponize a measles strain that can't be stopped or weaponized smallpox, that's why they took safety studies away.

**Del Bigtree:** What they said is, “We need to have a partnership with the pharmaceutical institutions so that if there is ever an attack using a virus or bacteria that we could just demand that the pharmaceutical industry figure it out, get a vaccine on the market right away. In order to do that, it can’t have any issues with running into safety studies that would slow it down. So therefore we basically live in a state of emergency now as though every disease is a biological weapon and every vaccine needs to be rushed under the market. That’s why it’s happening. That fear is the belief system. And also, in the end, the CDC is refusing to do any safety studies at all because they are concerned that even if they show a slight problem with causing neurological disorders or autoimmune disease, which they know there’s at least a small problem, I believe it’s gigantic, but we won’t know until someone does the studies.

**Del Bigtree:** But they believe that if we saw a weakness that, yes, some children are developing neurological disorders and autoimmune disease, that everyone would question vaccines and then how do they protect America if there’s a biological weapon and no one believes in vaccines anymore? That’s what’s really behind all of this and that’s what we’re working on, how to communicate with the government, how to find a better way. I too, by the way, do not want to see us vulnerable to the possibility of a biological weapon. But that doesn’t mean we should be rushing products that are destroying children’s lives for trivial childhood illnesses. And I think when you tie all this into The Truth About Cancer, there are already studies they’re showing all around the world that people who have measles as children, let me say this the right way, people who did not have measles as children and were vaccinated for measles, they have a 67% increased risk of developing non-Hodgkin’s lymphoma. They have a 333% increased risk of developing Hodgkin’s lymphoma.

**Del Bigtree:** And if a woman had measles and mumps as a child, her risk of ovarian cancer is cut in half. We are talking right there, right there, simply by having these natural infections as children, we just saved tens of thousands of lives if not hundreds of thousand lives in America alone. Yet they want to talk about some immune suppressed child or the one child out there that may get the measles. By the way, no deaths. Measles has killed no one in any of the outbreaks over the last decade. Even though this heightened stress, yet hundreds of thousands of people are dying of these cancers that science is showing, if you just had the childhood measles infection and mumps, your body was actually being primed to protect you from cancers. Heart disease, most of the studies show that at the very minimum you would cut down heart disease by 10% of people who had measles and mumps as children. That right there, that kills, I think, 650,000 people a year. You just saved 65,000 people by simply letting a child get the measles.

**Del Bigtree:** Those are the discussions we should be having and so when we talk about trivial childhood illness, it’s not only taking vaccines that are toxic, incredibly toxic, for a trivial childhood illness like measles or chicken pox or rotavirus or things like this that really don’t kill people living in a modern country like we live in. It’s worse than that. Not only are we adding toxins to our body, we’re stopping our body from being designed to protect us from much more serious issues in our future.

**Speaker 2:** So what do you think is the number one thing that we can do to protect our freedom of choice, specifically when it comes to vaccines?

**Del Bigtree:** I just moved from Los Angeles where I developed my film and television career, where my children were born, and moved to Texas because I believe I'm a refugee now from California. I'm a refugee in my own country. People from New York are also finding themselves in the same situation. Child Protective Services being called into hospitals where somebody's child fell out of a tree, broke their arm, they just want to take them in to get the arm fixed and then it's, "Well, you need a Tdap vaccine now." "Oh, I don't need that." And then, "Well, why? Why are you not getting it?" Then they look into your vaccine record and now because you're not vaccinated, they're talking about taking your child away from you. People want to make me worry about the border between Mexico and America. I'm not happy with what I'm seeing there, but I'm watching citizens have their children taken away from them because they don't vaccinate, because they don't want to give their child chemotherapy and things like that. This is a terrifying, scary time that the pharmaceutical industry is making decisions, political decisions, police decisions, and legislative decisions about our lives.

**Del Bigtree:** So what do people need to do? People better wake up. We have to wake up right now. This is not something that is going to be, "Oh, I'm worried what's going to happen to my grandchildren," or, "This future, where is it going to be?" In our lifetime, in fact, I believe in the next three to five years we have either won this battle against the pharmaceutical take over of our bodies, we are talking about the idea, when you look at California and New York, they just removed every exemption there is, California took it a step further to remove essentially the medical exemption. A doctor cannot even use your family history, knowing you and say, "I'm writing an exemption. This child shouldn't be vaccinated." There's a kid up in New York right now in a wheelchair with cerebral palsy who developed seizures from vaccinations. The leading neurologist at the children's hospital said, "You cannot vaccinate this child," yet the school will not let him go to school because a school board is overriding a neurologist.

**Del Bigtree:** That is terrifying and the fact that we find ourselves in that position means we, first of all, have got to start speaking aloud. We have got to start talking. We cannot sit here and say, "Oh, I don't like talking about that vaccine issue. It's weird for my friends or the people around me," or, "It creates a difficulty." Our founding fathers were not afraid to talk about freedom and that's why we have it. We cannot be afraid to talk about freedom now because that's all this is. We are talking about the idea that our children are simply property of the United States government. That's what California has just decided. That's what New York has just decided, and it's about to be all of us. When they passed the adult mandate, which looks like it's supposed to come online in 2020 in attachment with the REAL ID. So what happens when all of us are lined up and injected with products we have no control over? It means we no longer have body autonomy. We have absolutely no independence. We are simply slaves of the U.S. government or world government or whoever is really behind this.

**Del Bigtree:** So what do people need to do? I think recognize that that's your future and it may be two to three years away. If you know that and you've studied your history, we all asked ourselves the same question, when we look at Nazi Germany, why didn't the people leave? Didn't they see it coming? Didn't they recognize that slowly but surely they weren't allowed in this store or weren't allowed in this town or weren't allowed in this state or there is a train now that they're forcing you to get on? At what point do we recognize that we're back in that position and we live in a country where we still get to vote for our elected officials. We need to start demanding that our elected officials speak to this issue. Speak to body autonomy and stand up for parental rights, human rights, physical rights, body autonomy, and if you don't, you're fired, and I'm not going to be afraid to talk about it with anybody. That's what I'm demanding here at The Truth About Cancer today.

**Del Bigtree:** If you do not speak, if you are afraid to speak, then you are a part of the problem and you will never ever forgive yourself if we lose this and you watch your children getting sick because they're being lined up to be injected with things they have no control over and you're getting Parkinson's and Alzheimer's and dying earlier and sicker, sicker on more and more drugs because you can't stop the injections the government is giving you. When you're laying in your bed and that's happening and you say to yourself, "You know what? I probably should've said something." Let's not find ourselves in that position. We're being called upon right now the way our founding fathers were called upon, to stand up for what this country believes in, why we're here, and what this world should be celebrating, which is pure, complete, total liberty and freedom.

**Del Bigtree:** I think this vaccination program does violate the U.S. Constitution. In fact, it sort of knowingly does. As these laws and exemptions get removed, they admit we're taking away liberty, we are taking away freedom, we are taking away your right to body autonomy, but they believe that the fear is so great. I mean, the Constitution allows for an emergency situation. We have to take extreme measures and sometimes those extreme measures are going to have to impinge upon your rights. It's happened before. There's times when those things matter, but this fear is unreasonable and the lack of checks and balances on the industry that is creating the product that the government has mandated upon us is almost nonexistent. And so these things have to change. The government should know this. I don't know why it doesn't, but it believes in the fear of disease so much that it's writing away all of our rights, everything we dreamed about. It's unreasonable.

**Del Bigtree:** I mean, I happen to think about movies about Howard Hughes and people who wouldn't touch doorknobs and were afraid to be around kids with runny noses. We used to make fun of that person. Now we're electing those people to run our country. That's the problem. We live in a world driven by hypochondriacs that have absolutely lost all sense of the brilliance of the human body and how spectacular and powerful we really are. That's our job. We've made a mistake. We've hired and elected the wrong people. They shouldn't be in control of our rights. They shouldn't be deciding what happens to the Constitution. And so also beyond just speaking, more of us that actually know have got to stop being detested by government and get involved in government.

**Del Bigtree:** We've got to start bringing intelligent people and scientists. People who really understand the truth have got to get involved. I mean, that's where it's at. I think we all know that, don't we? I mean, when you watch the news, it really feels like you're watching what we call the Republicans and Democrats, but it looks like third graders all screaming and yelling and pulling each other's hair. And that's what it's descended into, so I don't think I'm making any outrageous statement to say this government is not working and they certainly do not deserve to be making the types of choices that are going to affect our bodies and our lives and this species going into the future. I think vaccinations is the most important discussion period.

**Del Bigtree:** I was a Progressive Liberal my whole life. I grew up in Boulder, Colorado. I'm an environmentalist. I think that we are polluting our air and our water and our food supply and the earth, and I think we should care about that. Our children have to grow up in it. But right now, for my friends that are arguing with me that while I'm just going to vote for Democrats because they care about the environment, unfortunately right now, Democrats, as a pillar of their party, are going to push forced vaccinations for all. It's essentially the writing's on the wall and so I say to them, "I get it, the earth is a problem. We should be looking at it. I don't want polluted air and water, but we're talking about the very elements we're trying to keep out of our air and our water and our food being injected directly into our bodies, and that is something that will affect us."

**Del Bigtree:** As I said, I think the next President of the United States in the next four years, if we hire the wrong person, we will see that forced adult mandate on board. Once that happens, it's all over. There will be no live in control group. We will never, after that, be able to do the comparative study which would end all of this. If they're right, this is what I say to the government, to the CDC, to Health and Human Services, if you're right, simply take your database of 10 million people, one of them is called the Vaccine Safety Data Link that's right inside the CDC, just compare all the vaccinated individuals with the fully unvaccinated individuals ask simple questions. Who has more cancer? Who has more diabetes? Who has more add ADHD? Who has more Multiple Sclerosis? All of these things are on a massive increase right now. So prove that I'm wrong. Prove that Andy Wakefield's wrong. Prove that Bobby Kennedy's wrong. Do the easiest study known to man.

**Del Bigtree:** They won't. That should make everybody terrified. Is there another issue? I don't know what it would be because if you are so sick that you can only live with pharmaceutical intervention, if we are walking around, lose fertility rates are plummeting through the floor, one of the major side effects complained about by the girls that get HPV vaccine is ovarian failure, what happens if we wipe ourselves off the face of the planet? What if one of these vaccines, one of the 270 that are about to be approved, they haven't been through safety studies, what if they don't ruin your fertility but they ruin your daughter's fertility? We've seen it before. We've seen drugs like thalidomide, we've seen things that have been through. There's a reason why you were supposed to have a freedom of choice. There's a reason why we should actually be celebrating that 3% to 5% now growing of unvaccinated individuals.

**Del Bigtree:** Because what if we make a mistake? Don't we want to be able to go back to the original DNA line that wasn't mutated, wasn't contaminated, and say, "We made an error and only your bodies contain the natural solution"? If we get to a place where none of those people exist then I think the human species is looking at an obvious end somewhere in the future, because scientists just aren't that smart. When will we ask ourselves as journalists, why has something happened? What's the motivation? I think first you have to follow the money. The pharmaceutical institution right now and the industry is the number one most powerful lobby in Washington. They are outspending. They are buying more politicians and laws than any other industry in the world.

**Del Bigtree:** I would always say that, I said that the first time I was at The Truth About Cancer, but it really sunk in on me when I realized, wait a minute, for every dollar oil and gas is spending, pharma is spending twice that. We fight wars in the Middle East for the money that oil and gas are supplying to our government. What is pharma getting? Is this push for vaccines really because they're worried about 2% to 3% of unvaccinated children across the country, pockets, pockets of 5%? I mean, essentially those numbers, even when you hear them, don't add up because they tell you herd immunity is 95% and most of the time it's a 3% unvaccinated rate, so what are we even talking about? This is why I'm trying to wake people up. Just listen to what they're saying. It doesn't make sense when they say it, if you really hold them accountable.

**Del Bigtree:** But what I'm saying is that it is about money. You're not the number one most powerful lobby in Washington, you're not going to get that money back because you got 2% more children vaccinated, a couple million more. What happens when they get every adult mandated into a vaccine program? Now think about an industry where there's 16 vaccines already on an adult schedule at the CDC and 340 million people are forced to use them. How about 270 vaccines in the approval stage that every adult, 340 million, have to use? And once America goes, the rest of the world will follow. We are the scientific minds of the world. "America said it was okay. They forced their citizens into it. So should we." America alone, if we have an adult mandate, that industry overnight goes from being a \$50 billion industry to a multi trillion dollar industry. Overnight in America alone. I think that that's all the motivation you have to look at.

**Del Bigtree:** The pharmaceutical industry is on the verge of being the world power industry of the planet and all they have to do is use fear. All they have to do is make every government in the world think, "Hey, you could die from a biological attack," or, "Measles is killing everybody. We eradicated it but now these crazy anti-vaxxers are taking it away. Look at this measles outbreak. Worst measles ever. Deadly measles. Deadly measles." Even though no one dies, people still run around with their hair on fire. In fact, I just did a show last week on my Talks With The High Wire about Tamron Hall. We have a talk show on ABC. She decides to cover the vaccine issue. An African American woman walks up to a teenage boy and her mom, says to the teenage boy, "My baby's around the corner. I wouldn't even want my child to hug you because of science, because you're dangerous."

**Del Bigtree:** That's the languaging the Nazis used. That was the languaging that White Supremacists used in the middle of the Civil Rights discussion. That was the languaging against gay rights. "You're dangerous. You shouldn't be around my children." That's what's happening. It's really just proof that we have fallen asleep. We're asleep at the wheel. We're asleep to our spiritual life. God doesn't want this. Humanity doesn't want this. Science doesn't even want this. But who will make a difference if the people don't care? It's up to us. It's a great moment to be alive. This is not a moment to be afraid. This is that moment we all dreamt about. I remember reading about our history and our founding fathers and thinking, "Man, that must've been amazing to be alive in a time that was that important." This will go down as having been even more important.

**Del Bigtree:** Our children, our grandchildren, will one day read about this generation sitting here right now visiting The Truth About Cancer, that come from all around the world, tune in from all around the world, to hear about another way, because everything else has failed them. They have been drawn together to the light. That generation and those people are our future world. We are the world leaders and history will shine on us and say, "Thank God they started to talk. Thank God they woke up, and thank God they stood for every being, even those that were asleep, and saying, 'We are one nation. We were even one world under God, indivisible, with liberty and justice for all.'"

*INTERVIEW WITH*

# Dr. Billy DeMoss

*The TRUTH About*  
**VACCINES 2020**™

*Dr. Billy*

**DeMoss:** Why is cannabis illegal when it has so many health benefits, including kills cancer cells, not only kills cancer cells, it's good about preventing osteoporosis. It's great for pushing people from sympathetic dominance to parasympathetic dominance, which is fight or flight into rest and digest, which is instrumental in getting people healthier. It's also neuro-protective, so it protects brain cells. It's neurodegenerative. It helps regrow new brain cells.

*Dr. Billy*

**DeMoss:** To me, again, it's not a panacea for everything, but what it does is, it does balance the endo cannabinoid system, which is a system in the body, which really has receptors almost on every cell in your body and this system really is the master controller. For years, as a chiropractor, I've always taught that the nervous system is the master controller, but really the endo cannabinoid system really helps orchestrate everything in the body and also it controls even the nervous system.

*Dr. Billy*

**DeMoss:** So, I feel it's important as a practitioner, again, most people are endo cannabinoid deficient for multiple reasons because we're under so much more stress, but also it used to be ubiquitous in the environment, used to grow everywhere. Birds would eat the seeds, animals would eat the plant. And again, the body makes less and less of its own endo cannabinoid. So that's why taking phytocannabinoids from cannabis is essential if you really want to live at a higher level. And it's great for lowering anxiety and helping people sleep. It's great for appetite for anybody that maybe was doing chemotherapy.

*Dr. Billy*

**DeMoss:** Again, and what this plant has done is it really minimizes the need for people to take a lot of pharmaceuticals, everything from blood pressure medication to sleeping pills, to anxiety medications to depression. It's really great for PTSD. It's great for pain. I forgot that one. That's like the number one thing.

*Dr. Billy*

**DeMoss:** And again, it's illegal. We got opioids, which are still legal, that kill 70,000 people a year. And then we now have cannabis, which is still illegal on the federal level because of the fact that it goes against big brother. Big brother doesn't want people healthy people. They want them sick and dependent on pharmaceuticals. And again, it's only common sense to know that, if the people want it, which they do because we voted for it in probably most every other state including California where I'm at right now. As I tell people, it's a plant, God put it here. Sure you can abuse it. You can abuse friggin' sugar. But they don't make sugar illegal. So I get people to understand the, I don't want to use medicinal benefits because I don't like the word medicine. The health benefits of cannabis and why I think really almost everyone would benefit from taking it.

**Speaker 2:** Great. Why are chiropractors thought of as quacks today?

*Dr. Billy*

**DeMoss:** I don't think chiropractors are really considered that much quacks anymore. I've been in practice for 34 years and that's one of the things I've really noticed. When people come in and their first visit, I usually get their preconception or perceptions as a patient coming into a chiropractic office. And I want to know if they've got any stigmas or any concerns. And so I usually ask that. So if there is the issue like afraid of they're getting their neck adjusted or they don't like adjustments that are too firm or hard. So I like to find out so I can help calm them down and get rid of whatever concern they've got.

*Dr. Billy*

**DeMoss:** But, I think it's just been over the years, anything that goes against Orthodox mainstream medicine, which is the drugging and carving up of people and injecting them through vaccines. That whole system's done, dude. They're hanging on by just a thread and the only thing that's keeping them alive is the controlled media and the bought out politicians.

*Dr. Billy*

**DeMoss:** So again, it's only a matter of time that more and more people wake up. Because if you can't see that sinking ship, which it is, and again, let me give kudos to medicine where they deserve it. They are great at emergency crisis. Like you get burned, third degree burns or you're having a heart attack or you just get crushed in a car accident, you're going to go to emergency room. That's what they're great at. They're good at emergency crisis care, but they should stay the heck out of healthcare because they have nothing to provide health to anybody unless they've gravitated to our side, which is more functional medicine, where we understand that living congruent to gene expression is really going to potentiate actual health and drugs and flu vaccines and mammograms and all the scams of the medic profession continually throws at people that they for some reasons just can't see through.

*Dr. Billy*

**DeMoss:** Again, more and more people are waking up and I'm not concerned if 100% of the people don't get it, but if we get 16%, we get to that tipping point, that's when, as I say, the monkeys all start washing their potatoes. So it's looking real good. We're probably at 15 and three quarters right now. And that's why they're so desperate right now. That's why you see all these measures of censorship because they know they're losing the game because there's no way you can perpetuate this myth anymore. It's done. And people are waking up, and again, I say it all the time. If you want to take drugs, take drugs, I'm not here to... You want to be healthy? Get some decent advice. Not only for me. I'm not the only one telling the story. Everybody's telling the same story. It's the same story, dude. Live congruent to genes, eat healthy exercise, be happy, get proper sleep, get adjusted.

*Dr. Billy*

**DeMoss:** I talked about birth trauma and that's when these kids get subluxated at birth and that's why they need to be checked as early as birth. So as I always say, you should be checked and adjusted if necessary, from womb to tomb. It's like you brush your teeth, you floss. Same thing with what I do and keeping mobility there, keeping things lined up and just allowing the body to express at its highest level.

*Dr. Billy*

**DeMoss:** Good question. I use cannabis almost every day, and I do use cannabis every day. I also use turmeric every day. I'd use turmeric and cannabis leaves. It's hard to narrow it down to three. I use a turkey tail mushrooms a lot. I like cruciferous vegetables. I'm going to say those are my top four, I want one over. So I would say cannabis, turmeric, turkey tail, and then some cruciferous vegetables, broccoli, cauliflower. What else? Brussels sprouts, I can't think right now, arugula, all the cruciferous vegetables.

*Dr. Billy*

**DeMoss:** The top three are really about decreasing inflammation, I think. Especially the cannabis and the turmeric. The turkey tail really is an immune modulator, so it bumps up immune function, so that's good. And I think the same thing with the cruciferous vegetables, but the thing about cannabis that also it's not only anti-cancer like I said earlier, it's really good for stopping inflammation and also it's neuroprotective, neuro regenerative. It's got so many great attributes that I feel it should be included in people's diet pretty much every day in one form or another. If you don't want to do the juicing thing, you can buy... I have a company called N8 Hemp where sell drops, we sell tubes of just concentrate CBD with all the other constituents in it. That's the whole thing. You want full spectrum. You also want to make sure it's organically grown. Again, as I always say too, start low and then titrate up to get your desired results.

**Speaker 2:** If you're diagnosed with cancer today, what treatment protocol would you follow? What diet would you follow?

*Dr. Billy*

**DeMoss:** All right well I won't even entertain the fact that I would ever get diagnosed with it because I don't want to put that in my brain or my consciousness. But for say, if somebody else had it, I would make them number one, laugh more. That would be number one. I'd also get them to do more right brain activities. These are things that most people don't talk about. Love other people, pray, but then again, I would go for a full ketogenic diet. Because of course if cancer loves sugar, you want to just starve the frigging cancer. I have a hyperbaric chamber at my office. I bought that for me not to treat anything but to make sure that my body's saturated with oxygen. Because we live in a world where we've cut down half the trees and we have lower levels of oxygen in the environment. So to me it just makes sense to do that. I do hyperbaric probably twice a week. I'm also big on the Beamer, which helps open up microcirculation and get oxygen. Because cancer doesn't like oxygen either. So if you can really oxygenate those tissues, that's going to help it as well.

*Dr. Billy*

**DeMoss:** And then, of course the number one thing I would advocate everybody do that's most people don't understand is to get chiropractic adjustments, which frees up the subluxation sub mean less, lux divine, light. The light that flows over the nervous system. By removing the subluxation through a specific chiropractic adjustment, you allow that healing energy to flow through the body from above, down, inside out, and again, chiropractic or really any health or any healer doesn't do the healing or the curing. What we do is we liberate the body's potential to heal itself by enhancing the gene expression.

*Dr. Billy*

**DeMoss:** So again, it's not like you're up regulating above a hundred percent, but most people are subsisting at 60 or 70% of their innate potential and by getting them to eat healthy and eating whole foods and mostly plant-based. I eat mostly raw, all those things and then do some mushrooms. I'm big on doing all kinds of health mushrooms as well and I use those in my different smoothies and juices that I make and I'm pretty much live two thirds of my life out of my Vitamax. Maybe three quarters of my life out of my Vitamax, which I am a self proclaimed blender chef. So stop eating garbage, be happy, exercise, surf, play music, all those things. Yeah, that's why I'll never get cancer.

*Dr. Billy*

**DeMoss:** Yeah, I think most people get so stuck into sympathetic dominance, which is a lot to do with left brain activity. And that's why, for me, I like to read at least an hour every night before I sleep, which also helps your neurons grow new neurons, nerve cells that fire together, wire together. But also I think it's good to balance the brain, the hemispheres of the brain by getting into some right brain activity. To me, for me it's music, whether it's painting or reading poetry or whatever your creative side, creative side, whatever it is that you find that you like to do. And so I like to play guitar. I play at least an hour every day because I love it. It's another thing that I love, of course, my brain does a lot of left brain stuff. So it's good to balance that with right brain stuff. And when you have that balance, again, your body, it elevates it back to where your brain should be. It's not above 100% but let's try and get people from out of the 60 to 70% up to 80, 90, even 100 percent if they can.

*Dr. Billy*

**DeMoss:** My favorite exercise is surfing. I surf literally almost every day. And to me it's not only my form of exercise. You don't see a lot of surfers that are out of shape. I'm telling you that right now. Unless they're riding a longboard. And I'm not saying anything bad about longboards, I just don't ride. I'm 61, I don't ride a longboard yet.

**Speaker 2:** You're not 61 years old.

*Dr. Billy*

**DeMoss:** Yeah, I'm 61. I wouldn't lie about that. But I live the lifestyle that I'm talking about. It's not that hard. And I think surfing really to me is... Chiropractic is super important, eating is super important. But for surfing is really one of those things that puts a smile on my face and Ed Group talked about that earlier today, he asked patients when they came in, "Why do you think you have this disease?" And none of them could figure it out. "What do you do for fun?" None of them could come up with an answer to that. There are so many things that I do for fun. My job. I love my job. I love being a chiropractor. I love being in the trench with my people. I love teaching. That's why I love being here. But I love, I love surfing. Surfing is a huge passion of mine.

*Dr. Billy*

**DeMoss:** And what I do is I work my butt off and then I plan a bunch of trips every year and I go, but I stay in shape because you can't go on these surf trips and not be in shape when you get there. You're just going to get pummeled and you're probably going to drown. So, I surf still pretty significant waves and it's such a great form of exercise because it's more like pace training because you'll have to paddle with full intensity because if you don't, you're going to get drilled. And so the pain of getting drilled way more than the pain of just trying to paddle that last stroke and get in.

*Dr. Billy*

**DeMoss:** So a lot of times you get your heart rate way up and then you get a chance to chill, wait for the next set. It's just an amazing sport where you utilize proprioception, but you're also in the ocean, man. You're grounding yourself and you're in the ocean with the dolphins and the pelicans and the sandpipers and the seagulls and the seals. I think sometimes I like animals more than I like people. I've never met an animal I didn't like. Anthony Kiedis said that, I steal that all the time. He's from the Chili Peppers.

*Dr. Billy*

**DeMoss:** So yeah, to me, surfing's my... And again, if there's no waves, which happens periodically, I'll find something to surf. I usually go out just under the most abysmal surfing possible. People go, "You went out surfing today?" I go, "I found a little nugget out there, believe it or not." But I'll run in the sand if I don't. And I'll do chin ups and pull ups in the life course. I try to be, when I'm exercising, I try to do grounding at the same time and be outside. And I think the effects of being near the ocean is huge too. And being in that environment, it's huge.

*Dr. Billy*

**DeMoss:** But yeah, I always come to these things and part of being involved in these events is you learn so much great stuff. And I'm an insatiable learner. That's what I do, I read and read and read, but I love going to... I love this Ed Group. I listened to Sherry Tenpenny today. I've listened to all these speakers where you're just constantly learning new stuff to really help you be a better you and be healthier. So again, I love what Ty and Charlene are doing as far as really getting this cutting edge information out. And again, as I say it all the time, this stuff ain't rocket science. It's pretty common sense. You have to be more brainwashed to do the medical route than anything. And people are seeing that. So again, for me it's just not only I learn new stuff, it reconfirms what I already knew. I love, this is one of the best things about this event, is the fact that I come and it's like a party of all my friends.

*Dr. Billy*

**DeMoss:** Everybody here is like Ed Group and Ty and Charlene and I could go on Sherry Tenpenny and Dr. Kinealy and Andrew Wakefield, it's like the who's who of the coolest people on the planet. They're really pushing against the machine. So it's super fun. Aaron Elizabeth, I could keep going on. But when you're in the pressure to remember names, they don't come as easily as they're supposed to. At least that happens when you get a little older, maybe. Not enough turkey tail. No, no, that's the alliance, man. Excuse me. All right. Sorry.

*INTERVIEW WITH*

# Erin Elizabeth

*The* **TRUTH** *About*  
**VACCINES** 2020™

**Speaker 1:** Didn't you recently have your Facebook pretty much shut down since you post about the vaccines?

**Erin Elizabeth:** Yes, I do have a warning on the page now and the only other person that I could find that is a speaker here at this event who has it on their page as well is Bobby Kennedy. There may be others that have popped up since then that I'm unaware of. But I think it's because, especially whether it be the internet or even still with television with these media channels, whether they're whatever form you're watching them on, they're controlled by the big pharmaceutical companies, big agricultural companies. They don't want the truth getting out there and that's why they're working to suppress it. Because even a quarter century ago, or just about a quarter century ago, we began with pharmaceutical commercials on TV. We're only one of two nations in the world that allow it, New Zealand being the other. And, unfortunately now, I believe that they are controlling what we see and what we hear and they only want us to hear what they want us to hear.

**Erin Elizabeth:** That's a great question. I've watched the ACIP events in Atlanta where the CDC is and it's so frightening to watch now that they even have the Gardasil recommended for adults. Even my age, there are women getting Gardasil shots who may have been married or with their high school sweetheart and only had one partner. It's absolutely insane. I think that's a great idea. I haven't quite figured out what their agenda is, but it's obvious that money is a huge part of it. And I think that these are nothing but puppets, especially some of these doctors in the CDC who just keep this ever-increasing schedule because of money. It's just a multi-billion dollar industry and they don't care at what cost. And it really is the cost of the health of the people, whether it be babies, young adults, and I believe soon that now they're working on the mandatory vaccines, obviously for the children and school-aged kids, but I think it's coming down the pipeline for adults as well.

**Erin Elizabeth:** The number one thing we can do to maintain our freedom of choice in medicine is really, even if you have to go old school and go to the library or something, is to get out there and talk to people and seek out the truth. And that you talk to like minded people. Sometimes it may be even, like I was talking on stage about word of mouth, going to the local health food store and saying which doctor can I go to? But also I think, just beyond that, that you're going to want to be able to have health freedom. It's also sharing some of the speakers who are here at this event and sharing the work that these medical doctors are getting out there and these DOs and these scientists and letting people know. You don't have to talk about it at the dinner table at Thanksgiving, but if you just let your family members know to wake people up and also to wake up our younger generation, that they be aware. I think that's what's really going to make this difference is if the next generation is aware of what's going on. And once we start that momentum, I don't think there's any stopping it.

**Speaker 1:** Do you believe that vaccine freedom should be at the front of people's minds in the next 2020 presidential race?

**Erin Elizabeth:** Yeah, I think it's important. I've never been a one-issue voter, but I do think that it's very important because I believe it's way beyond just the vaccine freedom. So many will think, "Well, with mandatory vaccines, I'm already an adult or my kids are grown. They're 18. I'm all okay." Well first, of course they could do mandatory adult vaccinations, but also I think it's way beyond vaccines. I think this is just the beginning, that's more to come about taking away our individual and our health freedom. So I don't think it will stop with just vaccinations and basically forced or mandated injections. Yeah. So I think that it is important with the next presidential race.

**Erin Elizabeth:** Oh, it's been such a positive. I'm so honored to feel part of almost a family with all these events and just so grateful to Ty and Charlene and all of you that are involved with TTAC and Truth About Cancer and Truth About Vaccines because I think that it's impacted my life because not only some people have been able to find out about my work because of these guys sharing my message, which I greatly appreciate, but also all the wonderful people I have met and get to meet every day and hear from through emails or here at events in person. Just such touching stories. Or meeting other speakers that I didn't know before.

**Erin Elizabeth:** I've had my eyes open so much and been able to help my family too. And that's the great part, where my own family members are tuning in and watching the events and I think really my mom watching The Truth About Vaccines, which I forgot to say on stage, is what opened her eyes. It wasn't any of the movies, not that those aren't great that people've put out, but different things grab different people. And she watched The Truth About Vaccines, and me being vaccine injured, having had encephalitis at three months from the DPT, really, she finally saw the light. And that was so important. So I'm so grateful that it's impacted my lives because it's made it easier for me to coexist with my family members because now they're seeing the light as well.

*INTERVIEW WITH*

# Robert F. Kennedy Jr.

*The TRUTH About*  
**VACCINES 2020**™

*Robert F.*

*Kennedy, Jr.:* Most people don't understand, there's an orthodoxy now that says, that vaccines are safe and effective and you have brilliant scientists and brilliant doctors who will just repeat that, but it's not science based. It's more like our religion and people become angry when somebody challenges that. But the truth is that, this is an industry that is, nobody disagrees that pharmaceutical companies, the four companies that make all 72 of our vaccines, Merck, Novavax, Glaxo and Pfizer, are four of the most corrupt companies in the world.

*Robert F.*

*Kennedy, Jr.:* Those four companies, collectively, they're serial felons. They've paid \$35 billion in last 10 years for falsifying science, for defrauding regulators, lying to doctors, selling drugs that they knew were poisonous and that were going to kill people. Why does anybody believe it? It requires a kind of cognitive dissonance to say, "Yeah, they're doing that with all their other products but they're not doing it with vaccines."

*Robert F.*

*Kennedy, Jr.:* And particularly, since vaccines are the only ones that they can't be sued for, so there is no incentive for them to make a safe vaccine. And there's a lot of incentives for them making unsafe and ineffective vaccines. What happens when they figure out that the measles vaccine does not give you lifetime protection? They order a booster, so they make double the money and they order another booster and another booster.

*Robert F.*

*Kennedy, Jr.:* They quadrupled their money or quintuple it on one vaccine because the vaccine doesn't work. And then when the vaccine makes people sick, by giving them allergies or seizures or ADD or ADHD or rheumatoid arthritis or diabetes, then they're making \$50 billion on the vaccine, those four companies, but they're making \$500 billion selling the Adderall and the Albuterol inhalers and the EpiPens, the diabetes medicine and the anti-seizure meds and the rheumatoid arthritis meds.

*Robert F.*

*Kennedy, Jr.:* So there is actually a huge advantage for them economically, to make vaccines as dangerous and as damaging as possible and people know you can't sue them. But what people don't know is, that vaccines are the only medical product that don't have to be the safety tested. Of the 72 vaccines that are now mandated for our children, not a single one has ever been tested against an inert placebo.

*Robert F.*

*Kennedy, Jr.:* That means there is nobody that can tell you what the risk profile is for that product. There is nobody who can tell you with any scientific basis, if that vaccine is going to avert more problems than it's causing. Oh, you know, there's been a huge global try by the vaccine industry to mandate vaccines and end public debate. So we've had a longterm censorship on network television and in the press, which receives almost \$10 billion a year from the vaccine companies and for advertising, et cetera. That allows them also, to dictate content.

**Robert F. Kennedy, Jr.:** So we've never been able to debate or discuss this issue in the mainstream press, but we were able to go to social media, but in the last year we've been completely shut down in social media. Google has become a vaccine company. Google now has a partnership with Glaxo. Google is making vaccines and they're partnered with Merck and they've completely shut down all discussion, what they call, vaccine misinformation. That is not misinformation. It's information that is critical of a medical product, of a pharmaceutical product.

**Robert F. Kennedy, Jr.:** Facebook has shut us down. Pinterest, MailChimp, all of the major social media platforms have shut us down. And there's also been a push to mandate vaccines. This is a product that they know they could not sell in a marketplace, so they have to mandate them. They know that they can't win the debate so they have to censor it.

**Robert F. Kennedy, Jr.:** So we are in this very odd situation now, with the State of California, has now ended medical exemptions. There's 4,000 children in this state who were told by their doctors, who were familiar with their medical records, their medical history, their families, and knew that child in a context. Those doctors have told those 4,000 children, "You should not be vaccinated because it could kill you or it could permanently injure you."

**Robert F. Kennedy, Jr.:** Now the State of California has stepped in and said, "We're going to force those kids to get vaccinated anyway." And physicians have now become, instead of the confidant of a patient who are focused on healing that particular patient, they've now become agents of this state who are treating that patient, not for their own good, but for the good of the public at large, that's a very, very dangerous place because, where do you end up with that?

**Robert F. Kennedy, Jr.:** You end up like they have China? Where a physician will say, "It's better for the state if you don't have a baby because you already have too many, therefore we're going to forcibly abort it." Or, "You're old and you're draining a lot of money that could be used for other beneficial uses, for the public at large and therefore, we're going to have to euthanize you." We've crossed a boundary where doctors are no longer the confidant's of their patients but now are agents of state policy, that's dangerous.

**Robert F. Kennedy, Jr.:** CDC is really a vaccine company. It's a captured, regulatory agency and I've been suing regulatory agencies that are capturing, my whole life, EPA and all the state agencies. The industries that those agencies are supposed to regulate, have mechanisms for co-opting those agencies. But, I've never seen anything like what pharma has done to the public health agencies.

**Robert F. Kennedy, Jr.:** Part of it is, that CDC itself, is a vaccine company. HHS which is the uber-agency within which the CDC, actually, the CDC own vaccine patents. So they make money when vaccines are sold. CDC has a budget of about \$11 billion, but almost \$5 billion of that go to buying vaccines and distributing or marketing them and that tail has begun to wag the dog at CDC.

*Robert F. Kennedy, Jr.:* Oh, it's like the EPA is a captured agency but what would it look like if EPA had to make half of its budget from selling coal? It's an agency captured on steroids. If you live in California or in New York today, there is really, your options for avoiding vaccination for your child, no matter how vulnerable that child is, are very, very low.

*Robert F. Kennedy, Jr.:* The one thing that you can do is fight medical tyranny, fight for medical freedom. And what I would recommend people do is, support the Children's Health Defense, because we know that we can win this battle and we can't win it through lobbying because the law makers have been corrupted by this industry. The one place where we can win is through litigation and we're bringing litigation. We're bringing litigation in New York, in California and Illinois and other states, but we're also bringing national cases.

*Robert F. Kennedy, Jr.:* So we're swatting the bees. We're also going after the hive and we will win ultimately. But we need resources. People should go, even if you can't give money, join the Children's Health Defense. Follow me on Instagram, Robert F. Kennedy, Jr. We will give you action alerts and ask for your help to show up at rallies, to join the truth army, to be a soldier, and we'll help educate you.

*Robert F. Kennedy, Jr.:* Children's Health Defense is a 501(c)(3), an advocacy group that advocates for ending toxic exposures to children and ending the epidemic of chronic disease, in vaccines, from glyphosate, from pesticides, from 5g, from all of the big threats to our children, from fluoride. Many of our children today, are walking around in a toxic soup.

*Robert F. Kennedy, Jr.:* If you were born prior to 1989, your chance of getting a chronic disease is about 12%. If you were born after 1989, your chance of coming down with a chronic disease is 54%. These are neurodevelopmental diseases like ADD, ADHD, ASD, autism, narcolepsy, Tourette's syndrome ticks, the allergic diseases like food allergies, peanut allergies, anaphylaxis, asthma, the autoimmune diseases like rheumatoid arthritis, lupus, juvenile diabetes.

*Robert F. Kennedy, Jr.:* There is an epidemic of these diseases now, and we know a lot of it is environmental, it's connected with toxics, a lot of it is connected to the vaccine schedule, which exploded in 1989. Well, Ty and Charlene have done something extraordinary which is, they've unified the leadership of a community of people who understand that good health does not come in a pill. It doesn't come in the syringe. It comes from living a healthy life. That the pharmaceutical model for good health has failed our society.

*Robert F. Kennedy, Jr.:* And it's not just the truth about cancer, is the truth of autoimmune diseases, it's the truth about neurodevelopmental diseases. It's the truth about the entire retinue of afflictions that is now epidemic in our children. The people that you see here, are the best minds and the best speakers on these issues.

*Robert F.  
Kennedy, Jr.:*

I love coming here because I learn so much. I learned from Marty Goldstein about veterinary medicine and I learned from all of the people that come here because they're really the best minds in the field. I think, Ty and Charlene have done a huge public service by bringing these people together, by empowering them, by awakening a much larger community and networking and helping them feel, to empower them so they can go out and bring this message and wake up the rest of the world.

[End of Transcript]

*INTERVIEW WITH*

# Dr. Judy Mikovits

*The* **TRUTH** *About*  
**VACCINES** 2020™

*Dr. Judy*

**Mikovits:** Sure. My lecture was about persecution and cover up, and it was basically what happened to me and top level scientists when we found that vaccines and the blood supply were contaminated with human retroviruses related to mice and similar to HIV. So you actually have AIDS viruses in blood supply and in vaccine at 25 times the amount that was there in the early days of HIV, back in the '80s.

*Dr. Judy*

**Mikovits:** Well, in my world and in the vaccine world, we've been giving scientific expert opinion in vaccine court. So we had only just started that at the end of 2015 so we've worked on maybe 10 to 15 cases in vaccine court. And we found that court to be, as I've said, beyond corruption to just pure evil. So most of the cases we do right now are Gardasil injury and they're things including like cancers, leukemias, lymphomas, death, seizures, ME/CFS. The Gardasil vaccine is so, so toxic.

*Dr. Judy*

**Mikovits:** And then flu vaccines for the elderly, where the elderly are literally dropping dead or dying within months of the flu and Prevnar shots. So what's happened for me and Dr. Rosetti, my colleague, is we've delved down in maybe 10 or 15, 20 cases that we've been working and seeing at the molecular level and scientific level how the fetal tissue in the vaccines, how the aluminum contaminates, how they're literally destroying not only our children's brains, but every organ system. Bladder cancer, kidney cancer, leukemia, just incredible. And the government is covering it all up, and the advisory committee on immunization practices has accelerated recommending vaccines across the board. They are almost 270 vaccines in the pipeline as they mandate across the board and force vulnerable children in populations to be vaccinated and killed.

*Dr. Judy*

**Mikovits:** I would say it's both a Chernobyl situation, and in fact, the other thing that's happened is we've written a second book called Plague of Corruption, and Plague of Corruption essentially centers on the corruption in vaccine court. And the idea in the science, in the media, in the news media, our journals, are literally fake news. So what we've done is we've covered it up at every level, and yes, it's trillions of dollars, but it's everything else. It reveals decades, four decades, maybe five or six, of corruption where, for instance, we know the polio vaccine has always caused polio and that there was another woman scientist whose career in life were destroyed by her refusing to give up that information and make that public. So this has been going on for 40 or 50 years. So it's trillions of dollars and it's our entire medical public health machine would simply break down from lack of trust because one can't even imagine the evil of inoculating these known carcinogens and known viruses into vulnerable children.

*Speaker 2:*

Why does the CDC continue increasing their list of mandated vaccines when they haven't been proven to be safe?

*Dr. Judy*

**Mikovits:** Yeah, they haven't been proven to be safe and they keep... because there is no liability. So there's no liability. They can't make safe drugs, they can't make the kind of money, they don't have to advertise, they don't have to do anything. Just call it a vaccine. They don't have to do a single test, and not a single test is done. And they have a population that's right there to take their drug because it's mandated. So it's a vicious circle, and states taking away, as we've discussed a lot, our religious freedom is what we're fighting for, to reveal the truth to all and stop. This is unconstitutional. There's nothing about any of this that has anything to do with public health. It's simply the wealth of public officials.

*Dr. Judy*

**Mikovits:** A retrovirus is a virus that has an RNA for its nucleic acid. We have DNA, so a retrovirus has to reverse transcribe its RNA genome into DNA, and then it has an enzyme called integrase that cuts open your DNA and inserts itself into your genes, because a retrovirus can't make up particle without using all of your cell machinery in your cell enzyme. So all viruses need your cells, and that's why we have to grow them on human tissues. So HIV is the retrovirus that most people know about killing an entire continent with AIDS in the '80s and '90s.

*Dr. Judy*

**Mikovits:** I think the number one thing we need to do is repeal the 1986 Vaccine Injury Compensation Program and Act because it's unconstitutional, and that number one thing would change everything. Reverse all mandates, give us freedom of choice, give liability back to the pharmaceutical companies, back to the doctors, and insist that all the safety studies be done just like they're done with every other cancer drug or any other drug I've made over 40 years. We spent decades testing them and that kind of testing needs to be done. And if we have a moratorium on all vaccines until that testing is done, then what you're going to see is the fear go away because the health is going to come back.

*Dr. Judy*

**Mikovits:** People are going to be healthy and they're going to realize what everyone said was a big lie. "Oh, we're going to all die of this if you're not vaccinated." No, we have God-given immune systems and we can do what we're learning here at The Truth About Cancer with natural products and improving our lives and our spirituality and heal everything. So once that number one thing is to give liability back and demand testing and put a moratorium on every single shot until it's done.

*Dr. Judy*

**Mikovits:** I believe that vaccine freedom and the vaccine injury and everything we've talked about today should be at the front of every single candidate in the 2020 election for any race in any city, any state, and certainly at the presidential level. In our new book, Plague of Corruption, I believe it was the last chapter when I was at a meeting in March and I asked Roger Stone, when was Donald Trump going to do exactly that? Why isn't this question asked? Why do we have debate after debate? And the most important thing to everything about our country, our health, and our freedom, and nobody asked the question.

*Dr. Judy*

**Mikovits:** In the 2020 election, so these vaccines, chronic diseases, 25 million Americans suffer chronic diseases. One in two American children is sick in ways that we were never chronically ill before with asthma, allergies, cancer. The cancer rates are skyrocketing. We're literally bankrupting our country with these dangerous biologicals, these vaccines, being forced upon our children and our families. So it's got to be the number one thing in the election because we won't have a country if we continue to remove religious freedom, freedom of choice. This is the foundation upon which our country was built. And in California alone, I mean many don't know, I'm from the University of Virginia and in the 1770s Thomas Jefferson and the people who wrote The Constitution and The Declaration of Independence were in part upset because the Church of England said, "If you don't worship at the Church of England, you don't go to school."

*Dr. Judy*

**Mikovits:** Well, now in 2020, if you don't worship at the church of big pharma, you don't go to school. You don't participate in our freedoms. If that's not at the basic level of The Constitution in everything our country stands on, I just don't know what is. Well, the Plague of Corruption is the title of our new book with Ken Heckenlively, and I mentioned on stage that RFK Jr. wrote the forward and he went into great depths that dated from back to the 1930s about how science and doctors have been destroyed. So what's good about meetings like The Truth About Cancer is they're about the truth and we can celebrate these brave physicians and scientists who've really lost everything, and the losses of the families.

*Dr. Judy*

**Mikovits:** So what I usually say, families are fighting each other over this. And what I usually say is, "We didn't know what we didn't know," to the physicians, to the scientists, "But now that we know, forgive each other and treat each other kindly, and let's all fix it." We did fix HIV/AIDS. We don't hear about it anymore, do we? They're fine. I mean, sure, they're still infected, but they're not dying as they were in the '80s, so we can reverse this. We have the technologies, we have the brain power. We can reverse this, we can generate new stem cells and heal these children. We know this, we've done it before and we could do it again, and that will bring our country together.

*Dr. Judy*

**Mikovits:** Well, the best way to get involved and learn about the plague and The Plague of Corruption is at our website [www.plaguethebook.com](http://www.plaguethebook.com). So P-L-A-G-U-E thebook.com, and that usually lists places I'm going and things like that. It's got a lot about what Del Bigtree does, how we, Physicians for Informed Consent, which we're members of, so there's a lot of information there, a lot of talks, and I think there's also my phone number. So if you email the [info@](mailto:info@plaguethebook.com) it comes directly to me or you can simply call or text. So my passion is simply just to end this, to get the information to the people.

*INTERVIEW WITH*

# Dr. Sherri Tenpenny

*The* **TRUTH** *About*  
**VACCINES** 2020™

*Dr. Sherri Tenpenny:*

So, my talk today was about the connection between vaccines and cancer. We have known since the 1940s that there were viruses that contaminate vaccines made with eggs that actually can cause cancer and can turn on oncogenes. So, the presentation, I also talked about the various viral contaminations and some of the chemical contaminations in vaccines that are known carcinogens. So, at the end of my talk, one of the most important things, takeaways, that I said was that we need to reevaluate public health. We need to redefine the fact that public health needs to be more than just high vaccination rates and low infection rates of a very short list of infections. We need to look at a complete moratorium on the entire vaccination program because of all these known contaminants and all these things that we may be causing autoimmune disease, neurologic and cancer type of problems.

*Dr. Sherri Tenpenny:*

And we need to actually take action and get involved and stand up against all of these things that are taking away our rights to refuse. Well, in the last two years since I was interviewed to be in part of The Truth About Vaccines, things have really ratcheted up on the pro-vaccine side. I believe that what was happening is that more and more people were becoming aware of problems associated with vaccines through all the work that I've done for the last 19 years, through The Truth About Vaccines, through all the other types of... Vaccines revealed the other types of programs that are out there. And more and more people were saying, "What? Should I be questioning this?" And then they were doing their own research and once you know what you know, you can't unknow it. And people were saying, "No, thank you. I think I'll take my risk with a fever, a cough and a rash and maybe having a short term infection, rather than dealing with a lifetime of chronic illness."

*Dr. Sherri Tenpenny:*

And I think that the powers a be were seeing that the jig was up and that more and more people were going to say no, and their only last tool in the tool box to hammer people to make them be injected with their liability free toxic products, was to introduce mandatory vaccination laws. So, we've seen that in multiple States across the country. And we've also started to see whispers now that they're going to ratchet that up to the federal level and the pharmaceutical industry is going to pay off Congress and say, "We're really tired of fighting this in all 50 States. Let's just bring this up to the federal level and mandate it like vaccinations for all and shut down all of this noise."

*Dr. Sherri Tenpenny:*

So, I believe on the one hand, that's the bad news. The good news is that people are waking up and fighting back. They are getting educated, they are getting informed. They're setting their fear aside of being called a name and the anti-vaxxer, they're being not caring anymore if they get unfriended on Facebook or Instagram, and they're stepping forward and saying, "This is my body, my choice, my child, and we're just going to have to say no." So, I believe that activism in the last two years has really accelerated, but it's been met with a lot of other powerful voices from the top down.

*Speaker 2:*

Great answer. Why do you think that you have been vilified by the pro-vaxxers?

*Dr. Sherri Tenpenny:*

I have? I didn't even know I was. How about that? I've been vilified, really? See, I don't Google myself so I don't really know.

*Speaker 2:*

There have been times of abuse, so.

*Dr. Sherri*

*Tenpenny:*

Well, why would I be vilified? Well, I think the main reason that I would be vilified or any of the rest of us that stand up and tell the truth, is because all of the information that I give in my talks and my radio interviews, and in all of the products that we put out through courses for mastery and all the other things that I do, is just a review of their literature. So, all of my slides are documented from peer reviewed medical journals. They're documented from the FDA, the World Health Organization. So, I have just spent 19 years and 40,000 hours of my life and talking about this, doing a review of their literature that their doctors are supposed to be reading, but don't.

*Dr. Sherri*

*Tenpenny:*

And so it's very hard for them to do anything to refute what I say because I'm just saying, "Well wait, didn't you say that in this article right here?" So, their only tool that they have left is disparaging your reputation and name calling. That's their biggest tool that they have left. So, if that's how they're vilifying me, it's laughable because it just shows how weak their argument is. And we know that we've won and science is on our side. And how many times have we asked them, invited them kindly, to come to the table and let's have an open forum debate with a legitimate moderator with preformed questions so there's no gotcha, we know exactly what each side's going to say, come on up. This is your opportunity to put your boot on Sherri Tenpenny's neck and drill me firmly to the ground, and they don't show up.

*Dr. Sherri*

*Tenpenny:*

So, the only thing they have left to do is call me names and say that I'm not a real doctor. I don't really see patients or some other ridiculous statement like that. Why do they keep adding vaccines to the schedule because it's all about the money. I mean because they have a completely liability free product as of the 1986 Injury Compensation Act. Think about it, if you had a company that had a faulty product and you were allowed to manufacture as much of it as you want to and you were never going to be sued, wouldn't you manufacture much of it as you wanted to? You would have zero incentive to do anything safer, better, purer, anything like that. So, it's an open door, these mandatory vaccination laws, the most egregious part of it, next to forcing people to be injected with a solution that could harm them against their will.

*Dr. Sherri*

*Tenpenny:*

The second thing is it's an absolute open checkbook to the pharmaceutical industry because we're mandating the current vaccination schedule, but there's more than 200 depending on whose study you read, as many as 300 vaccines in the developmental pipeline. So, all they can say is, "This one's mandatory. This one's mandatory. This one's mandatory." And now there's about four million live births in the U.S. per year, that's a guaranteed customer base of four million customers per year. Think about that. Is there any other industry that has that? I have a really good friend who used to be this... He's retired now, but he was the CEO of an engineering company that they made products in the engineering space and he used to say to me, "Gee, Sherri, I would just love it if the government would mandate that everybody in the country had to buy my product and I had a guaranteed four million customers every year." He said, "It would be like home free." Well, that's what we've allowed the pharmaceutical industry to get away with and it's just going to get worse.

*Dr. Sherri*

*Tenpenny:*

The most important thing anybody can do and everybody needs to do that's listening to this, is stand up and get involved. Leave your fear, park it at the door. I think about how this country was founded on a bunch of incredibly courageous individuals. They got on a tiny little boat, came all the way across the Atlantic ocean with nothing, and they started from nowhere. And then we built and built, and more and more people came and we had nothing. And we founded this country based on true grit and a lot of courage. Where did our courage go? How did we allow our government to get so out of control?

*Dr. Sherri*

*Tenpenny:*

Benjamin Rush, who was one of the original signers of the Declaration of Independence, who was a physician, said that, "We need to put a guarantee of medical freedom into the Constitution because of future potential tyranny, we need to put a medical guarantee at the same level that we have a constitutionally guaranteed freedom of speech. We have constitutionally guarantee of religion and separation of religion and state. We need to put a guarantee of medical right to choose in the Constitution." And unfortunately, that did not get written into our constitution and so therefore, here we are.

*Dr. Sherri*

*Tenpenny:*

I think that the right to choose the type of healthcare you want, the right to choose the doctor you want, the type of medical procedure you want to have or not have, should be constitutionally guaranteed. I believe that this whole mandatory vaccination issue is the most critically important issue, not just in American politics, but globally around the world. If we don't stop this, we are going to lose the next generation of humans. We already know that up to 26% of girls that were vaccinated with the Gardasil vaccine are infertile. We have countless numbers of boys that were vaccinated with the Gardasil vaccine that have a low sperm count or inactive sperm because of the aluminum.

*Dr. Sherri*

*Tenpenny:*

If they can't depopulate the planet from wars and pestilence, I guess the next most easy way to do that is to make the next generation infertile and not be able to have babies. We have this thing in science called insertional mutagenesis where the viruses get inserted into human DNA and corrupted and make it when those cells replicate, turn it into cancer. Vaccination is the most critically important healthcare issue of our time and it really needs to stop. It's a 200 year multigenerational indoctrination, even started from its very inception on bad science, faulty claims intertwining between physicians, politics and big money.

[End of Transcript]

*INTERVIEW WITH*

# Dr. Andrew Wakefield

*The* **TRUTH** *About*  
**VACCINES** 2020™

*Dr. Andrew*

**Wakefield:** Okay, in summary of the lecture, what I wanted people to do was to understand the history of measles vaccination. Measles vaccination is the rod that the public are being beaten with at the moment. Measles outbreaks here, there, anti-vaxxers to blame, and so what I wanted people to do was to know the truth. In particular, about this concept of herd immunity, because that's what's thrown at them. We must preserve herd immunity with the vaccine.

*Dr. Andrew*

**Wakefield:** I illustrated what natural herd immunity meant before vaccination, which was incredibly effective at protecting populations over time against measles, and allowing measles to occur in childhood when it was safe, and to prevent measles occurring in babies or in adults when it was less safe. And that had led to a 99.96 reduction in the case fatality rate, the deaths from measles in a very short space of time. We should never have intervened. We intervened with vaccination, and now we've destroyed natural herd immunity and replaced it with something that doesn't work.

*Dr. Andrew*

**Wakefield:** There is no herd immunity from vaccines, and the data prove that. We are in a precarious situation because we have no herd immunity, particularly as an adult population because of vaccine failure. And we have a group of people who are susceptible to measles again in an environment where mutations of the virus are emerging which are not susceptible to vaccine immunity. It's like we're all seeing measles again for the very first time, and that's not a good situation, and it's one we've created. Why was I vilified after the release of Vaxxed? A very good question. I've been vilified long before the release of Vaxxed. I was vilified from really 1992 onwards about being involved in measles vaccine safety research at all.

*Dr. Andrew*

**Wakefield:** But after Vaxxed, it took on a whole new level of vilification, because Vaxxed presented for the first time someone from the other side, a senior scientist from the CDC coming forward and saying, "We've committed fraud." We've looked at the relationship between vaccination against measles or MMR, vaccination and autism risk, and we found a clear link. We've proven our hypothesis. We found a link. We didn't want to disclose that, so we destroyed the documents. We destroyed the data and we lied to the public, and that was the whistleblower story that for the first time had someone from the other side telling the truth.

*Dr. Andrew*

**Wakefield:** It wasn't my opinion. It wasn't my producer's opinion. It was their opinion, and that was devastating to the pro-vaccine narrative, and they had to do everything they can to discredit that. They tried and they tried, but they failed, because people said, "Well, Vaxxed was just made up. It was just made up. It was just fraud." And I would say to them, "It's interesting you should say that, because we have accused those scientists from the CDC of one of the worst humanitarian crimes of all time." Their job, their duty was to protect children's health in this country and they did completely the opposite. They recklessly and willfully put children in harm's way.

*Dr. Andrew*

**Wakefield:** If there'd been one word of a lie in that film, one mistake, they would have sued us to the moon and back again, and there was not a whisper, not a single whisper. Why? Because they knew it was true. The underlying reason for people to react in the way they react from the pro-vaccine lobby is many fold. I mean, some people just ideologically believe in vaccination. Some people are part of a bureaucracy like the CDC, and the collective responsibility is to protect vaccination policy. Not necessarily protect children, but to protect vaccination policy, and they will do everything they can to justify that. "Well, he told me to do that and he's doing it as well, and my boss told me, so I'm just a functionary here. I just do what I'm told." Any number of excuses for doing what they do.

*Dr. Andrew*

**Wakefield:** From the pharmaceutical company's perspective, it's a lot of money, a huge amount of money, a massive market, and they don't want to lose that by the truth coming out, so that's really their reason. People operate in this way for different reasons, and it's really a question that I would love to put to them as a filmmaker. Why did you do this? Well, I think what's happened since my interview in truth about vaccines before and now in the intervening two years, is that so many people have become aware of the problem. And that's happened for a very large number of reasons, but first and foremost is that vaccines are causing injury in a large number of children, and so it becomes self evident on every street, in every school, in every community.

*Dr. Andrew*

**Wakefield:** There's so many children who are damaged that everybody's waking up and saying, "Hang on. I've just seen it. I've just seen it in my sister's daughter. I've just seen it in this. We've got a classroom at school now dedicated to children with autism. What's going on? That didn't happen when I was a kid." That's one reason. The other is that they've seen Vaxxed or they've seen the truth about vaccines, or they have witnessed the extraordinarily oppressive approach of the government and the industry to forcing us into mandatory vaccination policy, or they've witnessed the censorship of any debate in the mainstream media and now in social media about vaccine safety. And they're saying, "Hang on. I don't necessarily believe vaccines cause autism, but I know that when you have to throw the Constitution out the window, when you have to rip up the First Amendment to protect your narrative from people merely expressing their opinions that these vaccines are unsafe, then I know in my heart there's something wrong."

*Dr. Andrew*

**Wakefield:** Why do the CDC pursue this program of intensifying the vaccination program when they've never done the proper safety studies or never demanded the proper safety studies of the industry? It's a very good question, and I don't have an answer. It seems to me utter madness. They know that they committed fraud in the setting of the MMR vaccine study. They know they did that. Beyond a certain point, when you have knowledge, then it becomes deliberate. If you continue with a policy beyond the point of knowledge that as a problem that you could address and prevent, then it is deliberate. They are deliberately harming children right now. Why they would want to intensify that by adding more vaccines to the schedule that are untested, I have absolutely no idea. It is utter madness, but I'm afraid that government bureaucracy, particularly when they're driven by links to very, very powerful corporate institutions like the pharmaceutical companies, tend to behave in that way.

*Dr. Andrew*

**Wakefield:** Who knows what they have on them? Who knows? I don't know. And I, again, this is a question that as a filmmaker, I would love to pose to them. What madness possesses you to want to go on doing this without first saying, "Hang on. Let's just pause. Let's just stop. Let's just go back and reevaluate what we're doing to see if it's safe." Why continue helter skelter down this path? I don't know.

*Speaker 2:*

With that being said, what's the number one thing that you think that we can do to maintain freedom of choice and medicine specifically with vaccines?

*Dr. Andrew*

**Wakefield:** Well, we have to protest. It is absolutely imperative that at every level, we protest and we refuse. We simply have to refuse in numbers that are sufficient to terrify the politicians into doing the right thing. It has to be the case that we say to the politicians, "You work for us, not the pharmaceutical companies, and we are going to determine whether you are elected or not. And we will elect only those people who will look after our interests and not those of the pharmaceutical industry." Because without that, then we are facing a very, very bleak future and people need to wake up to that. They need to put everything else to one side. The environment isn't going to kill us in anything like the same timeframe that vaccines are going to kill us.

*Dr. Andrew*

**Wakefield:** See, vaccines, if we have one in 32 children... Sorry, one in two children by 2032, which is the predicted numbers based upon the CDC's own data, one in two children with autism, then you have an environment where you either have autism or you look after someone with autism. There is no economy. The environment's irrelevant. Public policy, foreign policy, everything is irrelevant. There's nothing. There's no standing army. There's no police force. There's no economy. There's nothing. That's what we face. And people, it's so enormous that people really can't even conceptualize where we are, but I've watched this emerge over the last 20, 30 years, and I know it to be true that this is what we face. And autism is just a small part of it, small part of the damage done, and they have 270 new vaccines in the pipeline. If you're happy with 72 doses by age 18, then are you going to be happy when it's in the hundreds? I doubt it very much.

*Dr. Andrew*

**Wakefield:** California has now passed bills which mandate vaccination according to the CDC's recommended schedule for all public and private school attendance. You have to be vaccinated to do that. The next policy they enacted was to pass SB-276, which went after doctors who were writing medical exemptions. In many states, you could have philosophical, religious, and medical exemptions, and they felt that doctors were giving inappropriate medical exemptions despite severe reactions in children or in siblings or in parents that you would intuitively be very cautious about vaccinating a child with that kind of history. Not anymore. Now they've taken that right away from the children's doctor, the person who knows these children, and put it in the hands of a state official who's never met them, doesn't know them, and frankly doesn't care.

*Dr. Andrew*

**Wakefield:** There is a dramatic limitation of medical exemptions in order to exert control over vaccination policy. It's catastrophic. Firstly, there is no place whatsoever in medicine for any mandated procedure. None. Zero. And Nazi Germany taught us that. Experimental medical programs in people who did not have informed consent is abhorrent, is totally unacceptable to the conduct of ethical medicine. You can't do it. You must never do it, but that's what's happening here in California. People are being forced into a medical procedure with known risks, with quantifiable risks, where they have to pick up the consequences of a permanently damaged child. No one cares. There's nothing there for them, no infrastructure in place to protect that family. They bear all the liability.

*Dr. Andrew*

**Wakefield:** When that parent hands their baby over to the doctor to be vaccinated, then the least informed person in that relationship, because you can't sue the doctor, you can't sue the pharmaceutical companies, the least informed person bears all the liability and all the risk, the mother, and that's atrocious. There is no place whatsoever for mandated medical procedures in any civilized country in the world. And that is what is happening here and what they intend for the world, and it's got to stop. I'm currently making a new film, and that film is due to come out in April 2020 with the deliberate and direct intention of influencing the outcome of the presidential election that year. That is the single purpose of the film I made.

*Dr. Andrew*

**Wakefield:** It's about the 1986 National Childhood Vaccine Injury Act, and it is to put front and center to the American people and to the politicians the importance of this act, it's significance in increasing, dramatically increasing the risk of vaccine-damaged without giving any liability to the pharmaceutical industry. The industry had essentially blanket immunity from liability and a mandated market. They had a perfect business model that is not good business for America, and someone, whatever side of the aisle they're on, needs to get that. And if they don't get it, they don't get the vote. They don't get voted in and that's it, and nothing else matters. This is the issue. This is the issue of the moment, and the presidential election must be decided upon this issue.

# ABOUT TY & CHARLENE BOLLINGER

---

**Ty & Charlene Bollinger are devoted Christians, parents to 4 beautiful children, health freedom advocates, health researchers, documentary film producers, and best-selling authors.**

After losing several family members to cancer, Ty & Charlene began a quest many years ago to learn all they possibly could about natural health and the medical industry. What they uncovered was shocking. Most of what we know about treatment and healing is a lie and the multinational pharmaceutical companies are running the show.

There was nothing more important to them than the health and safety of their children... and as they dug deeper, they couldn't ignore what they saw: vaccines are hurting our children and corporations are making billions from these virtually "un-tested" vaccinations.

They have produced several documentary series including: **The Truth About Vaccines™**.

In total, these documentary films have been viewed by over 20 million people worldwide. Ty & Charlene speak frequently at seminars, expos, conferences, and churches.
