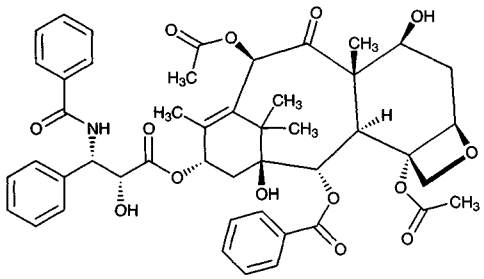
Paclitaxel

Molecular formula: $C_{47}H_{51}NO_{14}$
Molecular weight: 853.92
CAS Registry No.: 33069-62-4
Merck Index: 7117



SAMPLE

Matrix: blood
Sample preparation: Add 100 µL 10 µg/mL docetaxel in MeOH:water 50:50 and 5 mL MeCN: n-butyl chloride 20:80 to 1 mL plasma, vortex for 5 min, centrifuge at 4000 g for 5 min, evaporate the organic layer to dryness under a stream of nitrogen at 60°, reconstitute the residue with MeOH:water 50:50 with sonication for 1 min, inject a 100 µL aliquot.

HPLC VARIABLES

Column: 150 × 4.6 5 µm Inertsil ODS-80A (GL Science, Japan)
Mobile phase: MeOH:THF:water:ammonium hydroxide 60:2.5:37.5:0.1, pH adjusted to 6.0 with formic acid
Column temperature: 60
Flow rate: 1
Injection volume: 100
Detector: UV 230

CHROMATOGRAM

Retention time: 7.5
Internal standard: docetaxel (8.5)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES

Noninterfering: acetaminophen, alizapride, codeine, dexamethasone, domperidone, lorazepam, metoclopramide, morphine, ranitidine
Interfering: paroxetine

KEY WORDS

pharmacokinetics; plasma

REFERENCE

Sparreboom,A.; de Bruijn,P.; Nooter,K.; Loos,W.J.; Stoter,G.; Verweij,J. Determination of paclitaxel in human plasma using single solvent extraction prior to isocratic reversed-phase high-performance liquid chromatography with ultraviolet detection, *J.Chromatogr.B*, **1998**, *705*, 159–164.

SAMPLE

Matrix: blood, urine
Sample preparation: Condition a 1 mL Baker Bond cyanopropyl SPE cartridge with 1 mL MeCN, 1 mL mobile phase, and 1 mL 50 mM KH_2PO_4. Free paclitaxel. Add 500 µL plasma or urine to the SPE cartridge, wash with 1 mL water, 1 mL MeCN:water 30:70, and 1 mL 50 mM KH_2PO_4, elute with two 300 µL portions of mobile phase, inject a 200 µL aliquot of the eluate. Total paclitaxel. To 500 µL plasma or urine add 500 µL MeOH:100 mM KH_2PO_4 50:50 (pH 7.5), hydrolyze at 22° for 20 h, stop the hydrolysis by adding an equal volume of 500 mM KH_2PO_4. Add the hydrolyzed sample to the SPE cartridge, wash with 1 mL water, 1 mL MeCN: water 30:70, and 1 mL 50 mM KH_2PO_4, elute with two 300 µL portions of mobile phase, inject a 200 µL aliquot of the eluate.

HPLC VARIABLES

Guard column: 4 × 4 4 µm LiChrospher 100 RP-8e
Column: 250 × 4 4 µm Superspher 60 RP-8e
Mobile phase: MeCN:175 mM pH 4.6 KH_2PO_4 buffer 55:45
Flow rate: 0.45

Injection volume: 200
Detector: UV 229

CHROMATOGRAM
Retention time: 14

OTHER SUBSTANCES
Extracted: degradation products

SAMPLE
Matrix: bulk, formulations
Sample preparation: Bulk. Dilute sample with MeOH containing 0.1% acetic acid. Injections. Dilute sample with MeCN:water:acetic acid 70:30:0.1. Method 1. Column A, gradient A. Method 2. Column B, gradient B. Method 3. Column A, gradient C. Method 4. Column B, gradient D. Methods 1 and 2 are for bulk drug potency determination. Methods 3 and 4 are for the determination of the degradation profile for bulk and injections, potency and content uniformity of the injections and chromatographic purity profile of the bulk drug.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Curosil PFP (Phenomenex) (A), 250 × 4.6 5 μm Whatman TAC-1 (PFP) (Whatman) (B)
Mobile phase: Gradient A. MeCN:water from 40:60 by linear gradient at 0.444%/min until the paclitaxel peak elutes, return rapidly to initial composition and equilibrate. Gradient B. MeCN:water 38:62 for 12 min, by linear gradient at 4%/min until paclitaxel peak elutes, return to initial composition and equilibrate. Gradient C. MeCN:water from 40:60 to 60:40 over 45 min, to 80:20 over 5 min, hold for 5 min, return to initial composition and equilibrate. Gradient D. MeCN:water 38:62 for 12 min, to 70:30 over 8 min, hold for 15 min, return to initial composition and equilibrate.
Flow rate: 1 (column A), 1.5 (column B)
Injection volume: 15
Detector: UV 230

CHROMATOGRAM
Retention time: 24 (Method 1), 22.5 (Method 3), 17 (Method 4)
Limit of detection: 370 ng/mL (method 1), 310 ng/mL (method 2)
Limit of quantitation: 1.11 μg/mL (method 1), 930 ng/mL (method 2)

OTHER SUBSTANCES
Simultaneous: 13-acetyl-9-dihydrobaccatin, baccatin III, cephalomannine, 10-deacetyl baccatin III, N-debenzoyl-N-phenylacetyl taxol, 10-deacetyl-7-epi-taxol, 10-deacetyl taxol, 10-deacetyl-7-xylosyl taxol, 10-deacetyl-7-xylosyl taxol B, 10-deacetyl-7-xylosyl taxol C, 7-epi-taxol, taxinine M, taxol C, 7-xylosyl taxol
Noninterfering: degradation products, Cremophor EL

KEY WORDS
injections

SAMPLE
Matrix: cell culture

Sample preparation: Pulverize dry callus cell culture, pass through 40-mesh sieve. Extract ultrasonically with MeOH:dichloromethane 10:1 for 30 min. Evaporate extract to dryness, dissolve residue in MeOH. Add an aliquot to a Sep-Pak C18 SPE cartridge, wash with water, wash with MeOH:water 30:70, elute with MeOH:water 85:15. Evaporate the eluate to dryness and redissolve in a minimum amount of MeOH, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Spherisorb C18
Mobile phase: MeCN:MeOH:water 35:25:45
Flow rate: 1.0
Injection volume: 10
Detector: UV 227

CHROMATOGRAM
Retention time: 27
Limit of quantitation: 11.5 ng

OTHER SUBSTANCES
Extracted: baccatin, cephalomannine, 10-deacetyltaxol, 10-deacetylcephalomannine, baccatin, 10-deacetylbaccatin

SAMPLE
Matrix: plant
Sample preparation: Bark. Condition a Supelclean LC-18 SPE cartridge with MeOH and water. Homogenize (Ystral) 20 g dried bark with 100 mL MeOH. Sonicate the homogenate in a bath for 10 min, shake at 110 rpm for 30 min, filter through a glass filter. Re-extract residue with 50 mL MeOH, combine two MeOH extracts, evaporate to dryness at 40-45°, reconstitute the residue with 5 mL MeOH. Add a 500 μL aliquot to the SPE cartridge. Needles, clippings. Add 3 g sample to 100 mL chloroform:EtOH 50:50 (Caution! Chloroform is a carcinogen!), sonicate, filter though a glass filter, evaporate the filtrate to dryness, reconstitute the residue in 5 mL MeOH. Add a 500 μL aliquot to the SPE cartridge. Wash the cartridge twice with 2 mL portions of water, with 2 mL MeOH:water 20:80, and with 2 mL MeOH:water 50:50. Elute with 2 mL MeOH, evaporate the fractions to dryness in a speed vac, reconstitute the residue with two 100 μL aliquots of MeCN, inject 10 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 10 μm Lichrosorb RP-18
Column: 150 × 3.9 4 μm Novapak Phenyl
Mobile phase: Gradient. A was MeCN:50 mM ammonium acetate 30:70. B was MeCN:50 mM ammonium acetate 90:10. A:B 100:0, to 66:34 over 30 min, return to initial conditions over 2 min.
Flow rate: 0.8 (UV), 1 (MS)
Injection volume: 10
Detector: UV 227; MS, Finnigan MAT TSQ-70, electrospray, positive ion mode 150 V, sheath flow MeOH:water:acetic acid 80:20:1, mobile phase split 19:1 before MS

CHROMATOGRAM
Retention time: 22 (UV), 20 (MS)

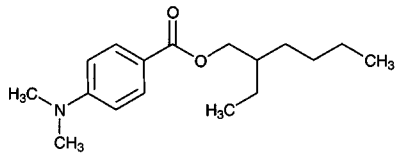
Padimate O



Molecular formula: $C_{17}H_{27}NO_2$
Molecular weight: 277.41
CAS Registry No.: 21245-02-3
Merck Index: 3282

SAMPLE
Matrix: formulations
Sample preparation: Lotion. Weigh out lotion equivalent to about 90 mg oxybenzone, add 7 mL water, add MeOH slowly with vigorous shaking until total volume was 100 mL. Remove a 10 mL aliquot and make up to 100 mL with MeOH, filter (paper), discard first 5 mL of filtrate. Mix 4 mL filtrate and 1 mL 200 μg/mL sulfathiazole in MeOH, make up to 10 mL with MeOH, filter (0.45 μm), inject a 20 μL aliquot. Lipstick. Weigh out an amount equivalent to 25-90 mg oxybenzone, add 10 mL chloroform, add MeOH slowly with vigorous shaking until total volume was 100 mL. Remove a 10 mL aliquot and make up to 100 mL with MeOH, filter (paper), discard first 5 mL of filtrate. Mix 4 mL filtrate and 1 mL 200 μg/mL sulfathiazole in MeOH, make up to 10 mL with MeOH, filter (0.45 μm), inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 40 × 4.6 25-37 μm Co:Pell ODS
Column: 250 × 4.6 10 μm Partisil PXS ODS-2
Mobile phase: MeCN:MeOH 10:90
Flow rate: 0.7
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 7.4
Internal standard: sulfathiazole (3.9)
Limit of quantitation: 40 ng

OTHER SUBSTANCES
Simultaneous: oxybenzone, propyl paraben

KEY WORDS
lotion; lipstick; sun-screen

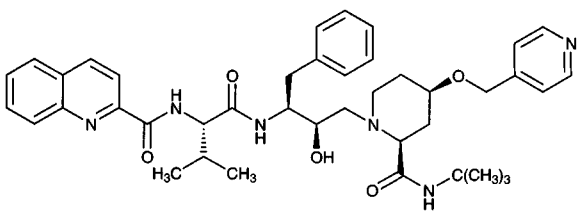
Palinavir



Molecular formula: $C_{41}H_{52}N_6O_5$
Molecular weight: 708.91
CAS Registry No.: 154612-39-2

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 50 μL 1.5 M NaOH, extract three times with 2 mL portions of diethyl ether, vortex for 30 s, centrifuge at 3000 rpm for 10 min at 4°. Evaporate

the ether extract under a stream of nitrogen. Reconstitute the residue with 100 μL mobile phase. Inject an 80 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 C-8 Nova-Pak
Mobile phase: MeCN:50 mM pH 3.0 potassium phosphate buffer 50:50 containing 0.1% dimethyloctylamine
Flow rate: 1.5
Injection volume: 80
Detector: UV 237

CHROMATOGRAM
Limit of detection: 2 nM

KEY WORDS
plasma; pharmacokinetics; rat

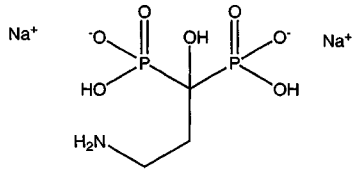
Pamidronate

Molecular formula: $C_3H_9NNa_2O_7P_2$
Molecular weight: 279.01
CAS Registry No.: 57248-88-1, 109552-15-0 (pentahydrate), 40391-99-9 (free acid)
Merck Index: 7135



SAMPLE
Matrix: blood
Sample preparation: Condition a 3 mL 500 mg Bakerbond quaternary amine SPE cartridge (J.T.Baker) with 2.5 mL water, 1 mL 1 mg/mL etidronate solution, 2.5 mL 100 mM nitric acid, and 5 mL water. Add 20 μL 5 mg/mL etidronate solution, 35 μL 100 mg/mL citric acid (to serum only), and 30 μL 2050 ng/mL neridronic acid solution to 1 mL serum or citrated plasma. Add 200 μL 20% trichloroacetic acid, vortex vigorously, centrifuge at 14000 g for 5 min. Add 30 μL 1 M calcium chloride, 40 μL 100 mM NaH_2PO_4, and 200 μL 1 M NaOH to the clear supernatant, vortex, centrifuge at 3900 g for 2 min, discard the liquid phase. Dissolve the residue in 25 μL 1 M HCl, dilute with 2.5 mL water, add to the SPE cartridge, wash with 1 mL water at 2 mL/min, wash with 4 mL water and 2.5 mL 10 mM nitric acid at 3 mL/min. Elute with 2.5 mL 100 mM nitric acid at 2.5 mL/min, evaporate the eluate to dryness under 0.6 bar nitrogen at 80° for 50-75 min, reconstitute the residue in 500 μL water, vortex. Add 50 μL 1 mg/mL etidronate, 75 μL triethylamine, and 500 μL 20 mg/mL 1-naphthylisothiocyanate in pyridine, mix by air bubbling to form a clear yellow solution. Heat the mixture at ca.80° for 15 min, extract twice with 2 mL 10 mg/mL tetrabutylammonium bromide in chloroform (Caution! Chloroform is a carcinogen!), mix the two phases by bubbling 3 mL air through the liquid, let the phases separate for 1 min, remove the lower organic layer. Mix 300 μL of the resulting sample and 90 μL 3% hydrogen peroxide, heat at ca.80° for 5 min, inject a 100 μL aliquot.

HPLC VARIABLES
Guard column: 10 × 2 reversed-phase R2 (Chrompack)
Column: 100 × 4.6 3 μm Microspher C18 (Chrompack)
Mobile phase: MeCN:10 mM phosphate buffer containing 10 mM tetraoctylammonium bromide and 2 mM etidronate 62:38, pH 8.0
Flow rate: 0.8
Injection volume: 100
Detector: F ex 285 em 390

CHROMATOGRAM
Retention time: 12
Internal standard: neridronic acid (10.5)
Limit of detection: 10 ng/mL
Limit of quantitation: 20 ng/mL

KEY WORDS
derivatization; plasma; serum; SPE

SAMPLE
Matrix: formulations
Sample preparation: Add 10 μL 300 μg/mL IS to 100 μL 30 μL aqueous solution prepared from injections or tablets, vortex with 50 μL EtOH, 40 μL pyridine, 10 μL triethylamine, and 2 μL phenylisothiocyanate to yield a clear solution. Heat at 80° for 5 min and evaporate under nitrogen at 80°. Reconstitute the dry residue in 1 mL water, wash twice by vortexing with 1 mL 2 g/L tetrabutylammonium bromide in chloroform (Caution! Chloroform is an carcinogen!), centrifuge at 3900 g for 2 min, discard the organic layer. Add 90 μL 0.06% hydrogen peroxide to 900 μL of the aqueous phase, heat at 80° for 2 min, evaporate to dryness at 80°, reconstitute the residue in 100 μL mobile phase. Inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 10 × 2 R2 (Chrompack, Netherlands)
Column: 100 × 4.6 3 μm Microspher C18 (Chrompack, Netherlands)
Mobile phase: MeCN:buffer 22.5:77.5 (Buffer was 30 mM pH 7.0 phosphate buffer containing 5 mM tetrabutylammonium hydroxide and 2 mM etidronate.)

SAMPLE
Matrix: blood, urine
Sample preparation: 2 mL Plasma or urine + 100 μL 25 μg/mL IS in 100 mM NaOH, adjust pH to 3 with concentrated HCl, filter (0.45 μm fluoro-membrane, Skan Model Acro LC 13). Add 0.5 mL 1.5 M trichloroacetic acid to the filtrate, centrifuge at 1500 g for 15 min. Remove the supernatant, add 20 μL 2.5 M calcium chloride solution, add 40 μL 500 mM NaH_2PO_4, adjust pH to 12.0 with 6.25 M NaOH then with 0.5 M NaOH, centrifuge at 1500 g for 15 min. Wash the precipitate with water, dissolve the precipitate in 200 μL 130 mM disodium EDTA adjusted to pH 10 with 6.25 M NaOH, add 100 μL 3 mg/mL fluorescamine in MeCN while vortexing vigorously, add 200 μL dichloromethane, extract, centrifuge at 1000 g for 3 min, remove the aqueous phase, inject a 10 μL aliquot of the aqueous phase.

HPLC VARIABLES
Column: 250 × 4 10 μm Nucleosil C18
Mobile phase: MeOH:1 mM disodium EDTA adjusted to pH 6.5 with 1 M NaOH 3:97
Column temperature: 40
Flow rate: 1
Injection volume: 10
Detector: F ex 395 em 480

CHROMATOGRAM
Retention time: 3.9
Internal standard: 6-amino-1-hydroxypentilidenebisphosphonate (CGP 33 637) (4.8)
Limit of detection: 10 nM (plasma, urine)
Limit of quantitation: 800 nM (plasma), 700 nM (urine)

KEY WORDS
derivatization; pharmacokinetics; plasma

REFERENCE
Flesch,G.; Tominaga,N.; Degen,P. Improved determination of the bisphosphonate pamidronate disodium in plasma and urine by pre-column derivatization with fluorescamine, high-performance liquid chromatography and fluorescence detection, *J.Chromatogr.*, **1991**, *568*, 261–266.

SAMPLE
Matrix: bone
Sample preparation: Dissolve 25 mg ground (<20 μm) bone in 2 mL 200 mM HCl, add 5 μg IS, vortex, let stand overnight at room temperature, centrifuge. Remove a 500 μL aliquot and add it to 1 mL 10 mM NaOH and 50 μL 1 M NaOH, centrifuge at 1000 g for 10 min, wash the

pellet with 1 mL water, centrifuge, discard the supernatant. Dissolve the pellet in 200 μL 200 mM phosphoric acid, add 250 μL 200 mM pH 10.3 EDTA in 200 mM NaOH, add 200 μL resin, vortex, centrifuge, filter (0.2 μm) a 550 μL aliquot of the supernatant, add 10 μL 10 M NaOH to the filtrate. Remove a 50 μL aliquot and add it to 50 μL 1 M pH 10.7 carbonate buffer, add 10 μL 1 mg/mL 2,3-naphthalenedicarboxaldehyde, add 10 μL 1 mg/mL N-acetyl-D-penicillamine, mix, let stand for 2 min, inject a 20-50 μL aliquot. (The resin was AG 50W-X8 (K^+ form) resin. Prepare the resin by adding 3 volumes of 1 M KOH to 200-400 mesh AG 50W-X8 cation-exchange resin H^+ form (Bio-Rad), stir for 30 s, decant the supernatant, repeat the procedure twice, wash five times with 3 volumes of water, store at 4°, before use wash 2 or 3 times with three volumes of water (J. Chromatogr. 1992, 584, 213).)

HPLC VARIABLES

SAMPLE

Matrix: urine

Sample preparation: Filter dog urine through filter paper. 2 mL Urine + 100 μL IS in water, adjust pH to 3 with concentrated HCl, filter (0.45 μm fluoro-membrane, Skan Model Acro LC 13). Add 0.5 mL 1.5 M trichloroacetic acid to the filtrate, centrifuge at 1500 g for 15 min. Remove the supernatant, add 20 μL 2.5 M calcium chloride solution, add 40 μL 500 mM NaH_2PO_4, adjust pH to 12.0 with 6.25 M NaOH then with 0.5 M NaOH, centrifuge at 1500 g for 15 min. Wash the precipitate with water, dissolve the precipitate in 200 μL 130 mM disodium EDTA adjusted to pH 9 with 6.25 M NaOH, add 100 μL 1 mg/mL fluorescamine in MeCN while vortexing vigorously, add 200 μL dichloromethane, extract, centrifuge at 1000 g for 3 min, remove the aqueous phase, inject a 10 μL aliquot of the aqueous phase.

HPLC VARIABLES

Column: 250 × 4 10 μm Nucleosil C18
Mobile phase: MeOH:1 mM disodium EDTA adjusted to pH 6.5 with 1 M NaOH 3:97
Column temperature: 40
Flow rate: 1
Injection volume: 10
Detector: F ex 395 em 480

CHROMATOGRAM

Retention time: 4
Internal standard: 6-amino-1-hydroxyhexylidenebisphosphonate (CGP 38 146) (8)
Limit of detection: 50 nM
Limit of quantitation: 1000 nM

KEY WORDS

derivatization; human; dog; pharmacokinetics

SAMPLE

Matrix: urine

Sample preparation: Condition a 3 mL 500 mg Bakerbond quaternary amine SPE cartridge with 2.5 mL water, 1 mL 1 mg/mL etidronate, 2.5 mL 100 mM nitric acid, and two 2.5 mL portions of water. 2.5 mL Urine + 100 μL 1 mg/mL etidronate + 100 μL 2.16 μg/mL IS, mix, add 30 μL 1 M calcium chloride, vortex, add 25 μL portions of 1 M NaOH (vortexing after each addition) until a precipitate is clearly present, add 25 μL 1 M NaOH, vortex, centrifuge at 3900 g for 2 min. Remove the pellet and dissolve it in 50 μL 1 M HCl, add 2.5 mL water, add 50 μL 1 M NaOH, centrifuge. Remove the pellet and dissolve it in the minimum amount of 1 M HCl (30-50 μL), add 2.5 mL water, add 30 μL 1 M NaOH, centrifuge. Remove the pellet and dissolve it in the minimum amount of 1 M HCl (30-50 μL), add 2.5 mL water, add to the SPE cartridge, wash with two 2.5 mL portions of water, wash with 2.5 mL 10 mM nitric acid, elute with 2.5 mL 100 mM nitric acid. Evaporate the eluate to dryness under 0.8 bar nitrogen at 60° for 1.65-2 h, add 500 μL water, vortex. Remove a 250 μL aliquot and add it to 25 μL 1 mg/mL etidronate, add 40 μL triethylamine, add 250 μL 20 mg/mL 1-naphthylisothiocyanate in pyridine, vortex, heat at 80° for 15 min, cool, add 2 mL 10 mg/mL tetrabutylammonium bromide (?) in chloroform, vortex, centrifuge, discard the lower organic phase, repeat the procedure. Remove a 250 μL aliquot of the aqueous phase and add it to 75 μL 3% hydrogen peroxide (to convert the thiourea derivative to the corresponding urea), mix, heat at 80° for 5 min, inject a 100 μL aliquot.

HPLC VARIABLES

Guard column: 10 × 2 R2 (Chrompack)
Column: 100 × 4.6 3 μm Microspher C18 (Chrompack)
Mobile phase: MeCN:buffer 65:35 (Buffer was 10 mM phosphate containing 10 mM tetraoctylammonium bromide and 2 mM etidronate (monosodium (1-hydroxyethylidene)bisphosphonate) (as adsorption suppressor), pH 7.6-7.9.)

Column temperature: 30
Flow rate: 0.8
Injection volume: 100
Detector: F ex 285 em 390

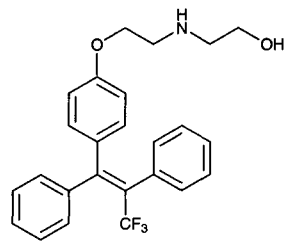
Panomifene



Molecular formula: $C_{25}H_{24}F_3NO_2$
Molecular weight: 427.47
CAS Registry No.: 77599-17-8

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL phenyl SPE cartridge with five 1 mL portions of MeCN, 1 mL water, and 1 mL 2.5 mL/L triethylamine in 50 mM pH 3.0 phosphate buffer. 980 μL Plasma + 20 μL MeOH:water 50:50 + 10 μL 2 μg/mL tamoxifen in MeOH:water 50:50 + 1 mL MeCN, vortex for 1 min, centrifuge at -10° at 2500 g for 1 h. Remove a 1.6 mL aliquot of the supernatant and add it to 400 μL 2% heptanesulfonic acid in 50 mM pH 3.0 KH_2PO_4/phosphoric acid buffer, add to the SPE cartridge, wash with two 100 μL portions of MeCN:buffer 80:20,

wash with 50 μL 25 mM sulfuric acid, elute with five 100 μL portions of MeCN:buffer 80:20. Evaporate the eluate to dryness under a stream of nitrogen at room temperature, reconstitute the residue in 100 μL MeCN:buffer 70:30, inject a 10-30 μL aliquot. (Buffer was 5 mM heptanesulfonic acid in 50 mM pH 3.0 phosphate buffer.)

HPLC VARIABLES
Guard column: 20 × 4.6 10 μm Si-100-S Phenyl (BST, Budapest)
Column: 250 × 4.6 10 μm Si-100-S Phenyl (BST, Budapest)
Mobile phase: MeCN:buffer 75:25 (Buffer was 50 mM pH 3.0 KH_2PO_4/phosphoric acid buffer containing 5 mM heptanesulfonic acid and 300 μL/L triethylamine. Temperature of MeCN was 60° and temperature of buffer was 80°.)
Flow rate: 1.2
Injection volume: 10-30
Detector: F ex 257 em 378 following post-column reaction. The column effluent flowed through a 10 m × 0.3 mm ID knitted PTFE coil irradiated by a mercury lamp at 254 nm to the detector.

CHROMATOGRAM
Retention time: 5.73
Internal standard: tamoxifen (7.03)
Limit of detection: 1 ng/mL

SAMPLE
Matrix: blood
Sample preparation: 4 mL Whole blood + 100 μL 8 μg/mL mepyramine maleate in water (prepare fresh daily), vortex, add 10 mL pH 10.0 phosphate buffer (μ = 0.4), vortex, add 5 mL chloroform:hexane 40:60, shake gently horizontally for 30 min, centrifuge. Remove 3 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 250 μL dichloromethane, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 10 μm Micropak CN-10
Mobile phase: n-Hexane:dichloromethane:MeCN:propylamine 50:25:25:0.1
Column temperature: 30
Flow rate: 2
Injection volume: 100
Detector: UV 254

CHROMATOGRAM
Retention time: 3.4
Internal standard: pyrilamine maleate (mepyramine maleate) (4.0)
Limit of detection: 5 ng/mL

OTHER SUBSTANCES
Simultaneous: carbetapentane, cocaine, diamorphine, dioxyline, ethaverine, fluphenazine, imipramine, papaveraldine, promethazine, strychnine, thonzylamine
Interfering: methapyrilene, procaine, yohimbine

KEY WORDS
whole blood; pharmacokinetics

Hoogewijs,G.; Michotte,Y.; Lambrecht,J.; Massart,D.L. High-performance liquid chromatographic determination of papaverine in whole blood, *J.Chromatogr.*, **1981**, *226*, 423–430.

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 50 μL 100 μg/mL noscapine + 1 mL 100 mM HCl + 6 mL dichloromethane, extract, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 100 μL mobile phase, inject a 40 μL aliquot.

HPLC VARIABLES
Column: Lichrosorb Si-60
Mobile phase: Hexane:dichloromethane:MeOH:diethylamine 95:4:1:0.03
Injection volume: 40
Detector: F ex 238 no emission filter

CHROMATOGRAM
Internal standard: noscapine
Limit of detection: 5 ng/mL

KEY WORDS
plasma; normal phase; pharmacokinetics

REFERENCE
Berg,G.; Jonsson,K.-Å.; Hammar,M.; Norlander,B. Variable bioavailability of papaverine, *Pharmacol.Toxicol.*, **1988**, *62*, 308–310.

SAMPLE
Matrix: blood
Sample preparation: Rock 5 mL whole blood + 10 mL water + 8.5 mL Na_2WO_4 in a 50 mL stoppered tube for 1 min, add 6 mL $NiCl_2$, rock for 5 min, add 15 mL dichloromethane:isobutyl alcohol:THF 30:45:25, centrifuge at 2500 g for 15 min. Remove organic phase and repeat the process. Filter all organic phases through a 40-90 μm filter and evaporate to dryness in a 100 mL porcelain dish at a moderate temperature in a sand bath. Take up residue in 500 μL MeCN: water 80:20, inject a 20 μL aliquot. (Na_2WO_4 prepared by mixing 10 g $Na_2WO_4.2H_2O$ in 38 mL of 2 M NaOH and 2.5 g of $NaHCO_3$ and making up to 100 mL. $NiCl_2$ was 17% w/v $NiCl_2$ in water.)

HPLC VARIABLES
Column: 200 × 4.6 5 μm Hypersil C8
Mobile phase: Gradient A was MeCN. B was 20 mM n-propylamine adjusted to pH 5 with 85% phosphoric acid. A:B from 15:85 to 20:80 over 5 min to 45:55 over another 15 min to 65:35 over another 5 min.
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Retention time: 14
Limit of detection: 0.05 ppm

OTHER SUBSTANCES
Extracted: buprenorphine, caffeine, cocaine, codeine, diamorphine, ethylmorphine, lidocaine, methaqualone, morphine, naloxone, noscapine, pentazocine, procaine
Also analyzed: bromazepam, clonazepam, diazepam, flunitrazepam, flurazepam, medazepam, nitrazepam, oxazepam

KEY WORDS
whole blood

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma or urine + 300 μL 200 μg/mL laudanosine, mix, add 10 mL chloroform:isopropanol 95:5, vortex for 2 min, centrifuge for 30 min. Remove 8 mL of the organic layer and evaporate it to dryness under a stream of air at room temperature, reconstitute the residue in 100 μL MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 10 μm C8 (Brownlee)
Mobile phase: MeOH:15 mM pH 8.5 sodium borate buffer 58:42
Flow rate: 2.7
Injection volume: 20
Detector: UV 239

CHROMATOGRAM
Retention time: 5.0
Internal standard: laudanosine (9.5)
Limit of detection: 25 ng/mL

OTHER SUBSTANCES
Noninterfering: caffeine, chlorothiazide, gentamicin, hydrochlorothiazide, oxytetracycline, tetracycline, theobromine, theophylline

KEY WORDS
plasma

REFERENCE
Gautam,S.R.; Nahum,A.; Baechler,J.; Bourne,D.W. Determination of papaverine in plasma and urine by high-performance liquid chromatography, *J.Chromatogr.*, **1980**, *182*, 482–486.

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. Condition a Toxiclean SPE cartridge (Alltech) with 3 mL MeOH, two 3 mL portions of water, and 2 mL buffer. 100 μL Plasma or serum + 100 μL MeOH + 200 μL MeCN + 100 μL buffer, vortex for 1 min, centrifuge at 4000 rpm for 15 min, add the supernatant to the SPE cartridge, wash with two 3 mL portions of water, dry under vacuum for 10 min, elute with 2 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 45°, reconstitute the residue in 100 μL 2.5 μg/mL flufenamic acid in MeOH (?), inject an aliquot. Urine. Condition a Bond Elut C8 SPE cartridge with 3 mL MeOH, two 3 mL portions of water, and 2 mL buffer. 100 μL Urine + 100 μL MeOH + 200 μL MeCN + 500 μL buffer, vortex for 1 min, centrifuge at 2000 rpm for 5 min, add the supernatant to the SPE cartridge, wash with two 3 mL portions of water, dry under vacuum for 10 min, elute with 2 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 45°, reconstitute the residue in 100 μL 2.5 μg/mL flufenamic acid in MeOH (?), inject an aliquot. (Buffer was 250 mL 25 mM sodium borate and 18 mL 100 mM NaOH, pH 9.2.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Adsorbosphere HS C18
Mobile phase: MeCN:MeOH:1.2% ammonium acetate 15:40:45
Flow rate: 0.8
Detector: UV 239

CHROMATOGRAM
Retention time: 19.06
Internal standard: flufenamic acid (24.39)
Limit of quantitation: 60 ng/mL (urine), 20 ng/mL (plasma, serum)

OTHER SUBSTANCES
Extracted: codeine, monoacetylmorphine, morphine

KEY WORDS
SPE; plasma; serum

REFERENCE
Theodoridis,G.; Papadoyannis,I.; Tsoukali-Papadopoulou,H.; Vasilikiotis,G. A comparative study of different solid phase extraction procedures for the analysis of alkaloids of forensic interest in biological fluids by RP-HPLC/Diode array, *J.Liq.Chromatogr.*, **1995**, *18*, 1973–1975.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 251.1

CHROMATOGRAM
Retention time: 12.12

KEY WORDS
whole blood

SAMPLE
Matrix: bulk
Sample preparation: Prepare a 750 μg/mL solution in 10 mM pH 2.5 orthophosphoric acid, sonicate for 10 min, filter (0.2 μm), inject a 15 μL aliquot.

HPLC VARIABLES
Guard column: 4 × 4 5 μm LiChrospher 100
Column: 125 × 4 3 μm Spherisorb ODS-1
Mobile phase: Gradient. A was water containing 5 mL/L 85% orthophosphoric acid and 0.56 mL/L hexylamine. B was MeCN:water 90:10 containing 5 mL/L 85% orthophosphoric acid and 0.56 mL/L hexylamine. A:B from 91:9 to 86:14 over 4 min, maintain at 86:14 for 13 min, to 55:45 over 11 min, maintain at 55:45 for 8 min, re-equilibrate at initial conditions for 20 min.
Flow rate: 0.7
Injection volume: 15
Detector: UV 210

CHROMATOGRAM
Retention time: 29.6

OTHER SUBSTANCES
Simultaneous: acetaminophen, acetylcodeine, benzocaine, caffeine, cocaine, codeine, diamorphine, lidocaine, 6-monoacetylmorphine, morphine, noscapine, procaine

SAMPLE
Matrix: formulations
Sample preparation: Ampules. Dilute a 2 mL aliquot to 100 mL with buffer, dilute further with water to a papaverine concentration of 60 μg/mL, inject a 20 μL aliquot. Tablets. Crush a tablet, shake with 70 mL buffer for 10 min, make up to 100 mL with buffer, filter, dilute a 10 mL aliquot to 50 mL with water, inject a 20 μL aliquot. (The buffer was 1.248% NaH_2PO_4 adjusted to pH 3 with orthophosphoric acid.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelco C18
Mobile phase: MeCN:buffer 70:30 (Buffer contained 2.88% sodium lauryl sulfate and 1.248% NaH_2PO_4 adjusted to pH 3 with orthophosphoric acid.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 3.16

OTHER SUBSTANCES
Simultaneous: moxaverine, drotaverine, ethaverine, codeine

KEY WORDS
ampules; tablets

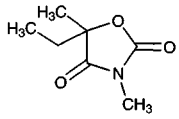
Paramethadione



Molecular formula: $C_7H_{11}NO_3$
Molecular weight: 157.17
CAS Registry No.: 115-67-3
Merck Index: 7161
Lednicer No.: 1 232

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 50 μL 7 μg/mL IS in water + 1 mL buffer, vortex for 10 s, add 5 mL n-hexane:ether:n-propanol 49:49:2, shake gently for 20 min, centrifuge at 1000 g for 5 min, repeat the extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 50°, reconstitute the residue in 300 μL mobile phase, inject a 50-100 μL aliquot. (Buffer was 10 mM sodium acetate:10 mM acetic acid 88.5:11.5, pH 5.5.) [Note: Extraction of paramethadione is implied but not explicitly stated.]

HPLC VARIABLES
Column: 250 × 4.6 5 μm Partisil 5 ODS-3
Mobile phase: MeCN:buffer 28:72 (Buffer was 300 μL 1 M KH_2PO_4 and 50 μL 900 mM phosphoric acid in 1.8 L water, pH 4.4.)
Column temperature: 50
Flow rate: 2.8
Injection volume: 50-100
Detector: UV 195

CHROMATOGRAM
Retention time: 3.8
Internal standard: 5-(4-methylphenyl)-5-phenylhydantoin (11.5)

OTHER SUBSTANCES
Extracted: carbamazepine, ethosuximide, phenytoin, secobarbital
Simultaneous: mephobarbital, phenobarbital, primidone
Noninterfering: chlorazepate, clonazepam, diazepam, thioridazine, valproic acid

KEY WORDS
serum

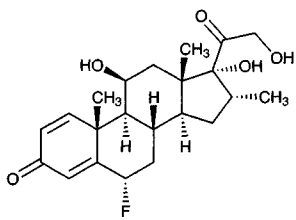
Paramethasone



Molecular formula: $C_{22}H_{29}FO_5$
Molecular weight: 392.47
CAS Registry No.: 53-33-8, 1597-82-6 (acetate)
Merck Index: 7162
Lednicer No.: 1 200

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 100 μL water containing 5 μg/mL 2,3-diaminonaphthalene and 3.5 μg/mL 18-hydroxy-11-deoxycorticosterone + 1 mL 250 mM NaOH + 7 mL diethyl ether, shake on a rotary shaker for 15 min, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 30-40°, reconstitute the residue in 70 μL MeOH:100 mM perchloric acid 50:50, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova-Pak C18
Mobile phase: Gradient. A was 58 mM NaH_2PO_4 containing 6 mM sodium heptanesulfonate, adjusted to pH 3.1 with concentrated phosphoric acid. B was MeCN:MeOH 85:15. A:B from 100:0 to 78:22 over 5 min, to 70:30 over 12 min, maintain at 70:30 for 4 min, to 65:35 over 9 min.
Flow rate: 1
Injection volume: 20
Detector: UV 245, 256, 343

CHROMATOGRAM
Retention time: 19.19
Internal standard: 2,3-diaminonaphthalene (10.71), 18-hydroxy-11-deoxycorticosterone (15.85)
Limit of detection: 1-10 ng/mL (245 nm)

OTHER SUBSTANCES
Extracted: betamethasone, chloroquine, corticosterone, cortisone, dexamethasone, fluendrenolide, fluocinolone acetonide, fluorometholone, hydrocortisone, hydroxychloroquine, 17δ-hydroxyprogesterone, meprednisone, methylprednisolone, methylprednisolone acetate, prednisolone, prednisone, progesterone, triamcinolone
Noninterfering: aspirin, ibuprofen, indomethacin, phenylbutazone, pregnenolone
Interfering: fluprednisolone

KEY WORDS
serum

Parathyroid hormone

Molecular weight: ca. 9500
CAS Registry No.: 902-64-6
Merck Index: 7168

SAMPLE
Matrix: reaction mixtures
Sample preparation: Prepare a 40 μM solution in 100 mM pH 10.0 borate/NaOH/HCl buffer, add hydrogen peroxide to a concentration of 1 mM, inject an aliquot.

HPLC VARIABLES
Column: 150 × 6.4 YMC-Pack ODS-A A312 (YMC)
Mobile phase: Gradient. A was 0.1% trifluoroacetic acid in water. B was 0.1% trifluoroacetic acid in MeCN:water 60:40. A:B from 60:40 to 50:50 over 10 min, to 40:60 over 40 min.
Flow rate: 1
Detector: UV 215

CHROMATOGRAM
Retention time: 41

OTHER SUBSTANCES
Simultaneous: degradation products

KEY WORDS
recombinant

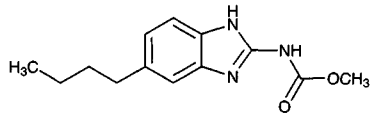
Parbendazole



Molecular formula: $C_{13}H_{17}N_3O_2$
Molecular weight: 247.30
CAS Registry No.: 14255-87-9
Merck Index: 7169

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 207.5

CHROMATOGRAM
Retention time: 18.15

KEY WORDS
whole blood

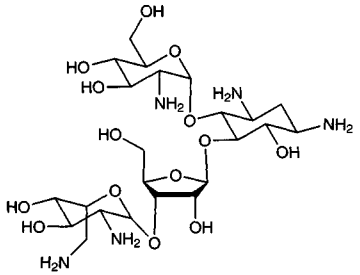
Paromomycin



Molecular formula: $C_{23}H_{45}N_5O_{14}$
Molecular weight: 615.64
CAS Registry No.: 7542-37-2, 1263-89-4 (sulfate)
Merck Index: 7173

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 300 μL Plasma + 30 μL 101.4 μg/mL kanamycin B in water + 100 μL 2 M perchloric acid, vortex for 2-3 s, centrifuge at 1000 g for 5 min. Remove the supernatant and neutralize it with 1.5 M NaOH, add 300 μL buffer, add 400 μL DMSO, add 100 μL 2% 2,4-dinitrofluorobenzene in EtOH, vortex, heat at 64° for 30 min, add 3 mL toluene, vortex, centrifuge, discard the upper toluene layer, add 3 mL MeCN:toluene 50:50, vortex for 5-10 s. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at 30-40°, reconstitute the residue in 1 mL MeCN:water 50:50, inject a 20 μL aliquot. Urine. Dilute urine 100-fold with water. 300 μL Diluted urine + 30 μL 101.4 μg/mL kanamycin B in water + 300 μL buffer + 400 μL DMSO + 100 μL 2% 2,4-dinitrofluorobenzene in EtOH, vortex, heat at 64° for 30 min, add 3 mL toluene, vortex, centrifuge, discard the upper toluene layer, add 3 mL MeCN:toluene 50:50, vortex for 5-10 s. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at 30-40°, reconstitute the residue in 1 mL MeCN: water 50:50, inject a 20 μL aliquot. (Prepare buffer by mixing 80 mL 100 mM Na_2HPO_4 and 20 mL 100 mM NaH_2PO_4, adding 1 g Tris HCl, and adjusting the pH to 7.8 with 6 M HCl.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax SB-C18
Mobile phase: MeOH:water 64:36, adjusted to pH 3.0 with phosphoric acid
Column temperature: 50
Flow rate: 2
Injection volume: 10-20
Detector: UV 350

CHROMATOGRAM
Retention time: 14.0
Internal standard: kanamycin B (24.0)
Limit of detection: 200 ng/mL (plasma), 500 ng/mL (urine)
Limit of quantitation: 500 ng/mL (plasma), 1 μg/mL (urine)

KEY WORDS
derivatization; plasma; pharmacokinetics

SAMPLE
Matrix: solutions
Sample preparation: Inject an aliquot of an aqueous solution.

HPLC VARIABLES
Column: 250 × 4.6 8 μm PLRP-S 1000 Å poly(styrene-divinylbenzene) (Polymer Laboratories)
Mobile phase: Water containing 70 g/L sodium sulfate, 1.4 g/L sodium 1-octanesulfonate, and 50 mL/L 200 mM pH 3.0 phosphate buffer
Column temperature: 35
Flow rate: 1
Injection volume: 20
Detector: E, Dionex PED-1 pulsed electrochemical detector at 35°, 3 mm dia. gold working electrode, E_1 +0.05 V, E_2 +0.75 V, E_3 -0.15 V, t_1 0-0.40 s, t_2 0.41-0.60 s, t_3 0.61-1.00 s, measure signal between 0.2 and 0.4 s, stainless steel counter electrode, Ag/AgCl reference electrode, following post-column reaction. The column effluent mixed with 500 mM NaOH pumped at 0.3 mL/min and the mixture flowed through a 1.2 m long 500 μL coil to the detector. (Prepare 500 mM NaOH solution by diluting 50% NaOH with helium-degassed water. Clean gold electrode after each 60 analyses.)

CHROMATOGRAM
Retention time: 9 (paromomycin II), 11 (paromomycin I)
Limit of detection: 5 ng
Limit of quantitation: 15 ng

OTHER SUBSTANCES
Simultaneous: neamine, neomycin B, neomycin C, neomycin LP-A, neomycin LP-B, paromamine

KEY WORDS
post-column reaction

REFERENCE

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Tissumizer) 1 g Ground tissue + 4 mL buffer at medium speed for 1 min, centrifuge at 3600 g for 20 min, remove the supernatant, re-homogenize pellet in 4 mL buffer for 10 min, centrifuge. Combine the supernatants, heat in a boiling water bath with occasional mixing for 5 min, centrifuge at 2000 g for 20 min, remove the supernatant, vortex the precipitate with 2 mL buffer for 30 s, centrifuge at 2000 g for 10 min. Combine the supernatants, acidify to pH 3.5-4 with 50-60 μL sulfuric acid, centrifuge at 2000 g for 10 min,

inject an aliquot of the supernatant. (Buffer was 33.46 g K_2HPO_4 and 1.046 g KH_2PO_4 in 1 L water, pH 8.0.)

HPLC VARIABLES
Guard column: 10 μm RP-18
Column: 150 × 4.6 5 μm Supelcosil LC-8-DB
Mobile phase: MeOH:buffer 1.5:98.5 (Buffer was 10 mM sodium 1-pentanesulfonate, 56 mM sodium sulfate, and 7 mM acetic acid.)
Flow rate: 1.5
Detector: F ex 340 em 455 following post-column reaction with derivatization reagent pumped at 0.9 mL/min. (Derivatization reagent was commercially available (Pierce) or prepared by adding 2.5 mL 2-mercaptoethanol and 2.5 mL Brij-35 to 850 mg o-phthalaldehyde in 10 mL MeOH, mix until decolorization is complete, add 1 L buffer, filter (0.45 μm), and refrigerate until used. Buffer was prepared by adjusting pH of 250 mM boric acid to 9.5 with 5 M KOH.)

CHROMATOGRAM
Retention time: 19

OTHER SUBSTANCES
Extracted: neomycin
Simultaneous: dihydrostreptomycin, streptomycin

KEY WORDS
kidney; muscle; cow; pig; post-column reaction

SAMPLE
Matrix: blood

Sample preparation: 1 mL Plasma + 250 μL buffer + 200 μL water + 100 μL 25 ng/mL maprotiline in water + 4 mL toluene, extract on a tumble mixer for 15 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 55°, reconstitute the residue in 50 μL acetone, add 25 μL 100 mM sodium bicarbonate, add 10 μL 1 mg/mL dansyl chloride in acetone (prepare fresh daily), vortex for 15 s, heat at 55° for 1 min, centrifuge for 1 min, let stand at room temperature for 30 min, add 25 μL 25 mg/mL L-proline in water (prepare fresh daily), vortex briefly, centrifuge for 1 min, let stand at room temperature for 5 min, add 500 μL water, add 2 mL toluene, agitate on a tumble mixer for 10 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 55°, reconstitute the residue in 100 μL mobile phase, vortex for 30 s, inject an aliquot. (Buffer was 8.6 g $Na_2HPO_4.12H_2O$ in 100 mL water, adjusted to pH 12.0 with 4 M NaOH, made up to 200 mL with water.)

HPLC VARIABLES
Guard column: 30 mm long 5 μm Spherisorb ODS
Column: 200 × 4 5 μm Spherisorb ODS
Mobile phase: MeOH:50 mM pH 4.5 sodium acetate buffer 84:16 (At the end of the day wash column with 95:5.)
Flow rate: 1.5
Injection volume: 100
Detector: F ex 340 em 520

CHROMATOGRAM
Retention time: 5.8
Internal standard: maprotiline (8.2)
Limit of detection: 0.2 ng/mL
Limit of quantitation: 0.5-1 ng/mL

OTHER SUBSTANCES
Noninterfering: cimetidine, digoxin, methyldopa, phenobarbital, phenytoin, procyclidine, tranylcypromine

SAMPLE
Matrix: blood

Sample preparation: 1 mL Plasma + 75 μL 1.3 μg/mL norfemoxetine in water + 200 μL 1 M perchloric acid + 5 mL toluene, extract in a tumble mixer for 20 min, centrifuge at 1500 g for 10 min, let stand at -20° for 20 min. Remove the aqueous phase and add it to 750 μL 25 mM pH 12 phosphate buffer and 200 μL 1% lauryl sulfate, add 5 mL heptane:toluene 80:20, extract on a tumble mixer for 20 min, centrifuge at 2000 g for 10 min. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at 50°, reconstitute the residue in 220-250 μL MeOH:pH 4.5 acetate buffer 30:70, mix thoroughly, inject a 180-200 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 RP-Select B
Mobile phase: MeCN:EtOH:buffer 21:14:65 (Buffer was 50 mM acetic acid adjusted to pH 4.5 with 1 M NaOH containing 2 g/L (?) tetrabutylammonium hydrogen sulfate.)
Flow rate: 1
Injection volume: 180-200
Detector: UV 295

CHROMATOGRAM
Retention time: 11.5
Internal standard: norfemoxetine (9.5)
Limit of quantitation: 6 ng/mL

KEY WORDS
plasma

REFERENCE

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 15.275

KEY WORDS
whole blood

SAMPLE
Matrix: dialysate
Sample preparation: Inject dialysate onto column A and column B in series, elute with mobile phase, monitor the effluent from column B, after 15.3 min remove column B from the circuit, continue to elute column A with mobile phase, monitor the effluent from column A. (Serotonin elutes from column A and column B. The more highly retained paroxetine is eluted from the shorter column A.)

HPLC VARIABLES
Column: A 50 × 2.0 μm Nucleosil C18; B 250 × 2.1 5 μm Supelcosil LC-18-DB (Supelco, USA)
Mobile phase: MeCN:buffer 33:67 (Buffer was 0.23 mM 1-octanesulfonic acid sodium salt in 65 mM acetic acid, adjusted to pH 2.8 with glacial acetic acid.)
Flow rate: 0.127 for 13.7 min then 0.4
Injection volume: 10
Detector: F ex 280 em 340

CHROMATOGRAM
Retention time: 18.5
Limit of detection: 300 fmol
Limit of quantitation: 4.2 pmol

OTHER SUBSTANCES
Extracted: serotonin

SAMPLE
Matrix: formulations
Sample preparation: Weight out powdered tablets equivalent to 20 mg paroxetine. Suspend the powder in three 5 mL portions of MeOH, stir for 30 min, filter, dry under a gentle stream of nitrogen. Reconstitute the residue in 20 mL 2-propanol. Inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Chiralpak AD
Mobile phase: n-Hexane:EtOH:diethylamine 94:6:0.5 (At the end of each day wash column with ca. 100 mL n-hexane:2-propanol 90:10.)
Flow rate: 0.5
Injection volume: 20
Detector: UV 296

SAMPLE
Matrix: blood, tissue
Sample preparation: Plasma. Mix 500 μL plasma with 5 μg IS, add 4 mL dichloromethane and 100 μL pH 7.4 phosphate buffer, agitate for 10 min, centrifuge at 5300 g for 10 min. Collect 3.5 mL organic phase. Add 4 mL dichloromethane to the aqueous phase again, agitate, centri-

fuge. Combine the organic phases, evaporate at 60°, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot. Tissue. Mix 500 μL epiploic-fat and 4 mL dichloromethane and keep at 4°, add 5 μg IS, mix by using an automatic grinder (Ultra Turrax, Ika-Werk, Stauffen, Germany). Collect the mixture, centrifuge at 5300 g for 10 min. Add 4 mL 100 mM NaOH to the dichloromethane, agitate for 10 min, centrifuge at 5300 g for 5 min. Eliminate the organic phase, adjust the aqueous phase to pH 7.4 with concentrated trichloroacetic acid, add 4 mL dichloromethane, agitate for 10 min and centrifuge at 5300 g for 5 min. Evaporate the organic phase at 60°. Reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 25 × 4 5 μm 100 RP-18 Lichrosphere
Column: 125 × 4 5 μm 100 RP-18 endcapped Lichrosphere
Mobile phase: MeCN:pH 4.8 citrate buffer 85:15
Flow rate: 1
Injection volume: 20
Detector: F ex 330 em 418

CHROMATOGRAM
Internal standard: 4844P (pefloxacin analog)
Limit of quantitation: 20 ng/mL

OTHER SUBSTANCES
Extracted: norfloxacin

KEY WORDS
epiploic-fat; plasma; pharmacokinetics; fat

SAMPLE
Matrix: blood, tissue
Sample preparation: Blood. Briefly vortex 500 μL plasma and 500 μL pH 7.4 phosphate buffer, add 5 mL dichloromethane:isopropanol 80:20, vortex for 30 s, shake gently for 15 min on an electric shaker, centrifuge at 1500 g for 10 min. Separate the lower layer using phase-separating filter paper (Whatman 1 PS), evaporate the organic phase under nitrogen at 25°, dissolve the residue in 100 μL mobile phase, inject a 20μL aliquot. Tissue. Pulverize prostatic tissue under liquid nitrogen, weigh a 200 mg aliquot, add 500 μL pH 7.4 phosphate buffer and 5 mL dichloromethane:isopropanol 80:20, vortex for 30 s, shake gently for 15 min on an electric shaker, centrifuge at 1500 g for 10 min. Separate the lower layer using phase-separating filter paper (Whatman 1 PS), evaporate the organic phase under nitrogen at 25°, dissolve the residue in 100 μL mobile phase, inject a 20 μL aliquot. (The pH 7.4 phosphate buffer was 28.2 g K_2HPO_4 and 5.17 g KH_2PO_4 in 1 L water.)

HPLC VARIABLES
Guard column: 4 × 4 5 μm LiChrospher 100 RP-18
Column: 250 × 4 5 μm Nucleosil C18
Mobile phase: MeCN:pH 2.1 buffer 20.9:79.1 (Prepare the mobile phase by dissolving 18.1 g citric acid and 4.1 g ammonium perchlorate in about 300 mL distilled water, add 209 mL MeCN, dilute to 1 L with water, and add 3 mL tetrabutylammonium hydroxide. Filter through a 0.45 μm HV Millipore filter.)
Flow rate: 0.9
Injection volume: 20
Detector: UV 340

CHROMATOGRAM
Retention time: 6.8
Internal standard: pefloxacin

OTHER SUBSTANCES
Extracted: enoxacin, 4-oxo-enoxacin

Noninterfering: amikacin, ciprofloxacin, fosfomycin, ofloxacin, rifampicin, roxithromycin, tobramycin, vancomycin

KEY WORDS
plasma; prostatic tissue; prostate; pefloxacin is IS

SAMPLE
Matrix: blood, tissue
Sample preparation: Tissue. Homogenize 100-250 mg tissue with 5 mL 500 mM pH 7.0 phosphate buffer, remove a 1 mL aliquot, add 100 µL 10 µg/mL IS, mix, add 10 mL chloroform: isopentanol 90:10, shake for 15 min, centrifuge , repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of air at 60°, reconstitute the residue in 100 µL 1% ammonia, inject a 25 µL aliquot. Plasma. 250-500 µL Plasma + 100 µL 10 µg/mL IS + 1 mL 500 mM pH 7.0 sodium phosphate buffer, mix, add 10 mL chloroform:isopentanol 90:10, shake for 15 min, centrifuge, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of air at 60°, reconstitute the residue in 100 µL 1% ammonia, inject a 25 µL aliquot.

HPLC VARIABLES
Column: 100 × 5 10 µm Nucleosil C18
Mobile phase: MeCN:water 15:85 containing 2 g/L sodium acetate trihydrate, 2 g/L citric acid monohydrate, and 1 mL/L triethylamine
Flow rate: 2
Injection volume: 25
Detector: F ex 330 em 440

CHROMATOGRAM
Retention time: 4.8
Internal standard: 1-allyl-6-fluoro-1,4-dihydro-4-oxo-7-(4-methyl-1-piperazinyl)quinoline-3-carboxylic acid (Roger Bellon Laboratories) (6.6)
Limit of detection: 20 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, norfloxacin

KEY WORDS
prostate

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 278.3

CHROMATOGRAM
Retention time: 8.942

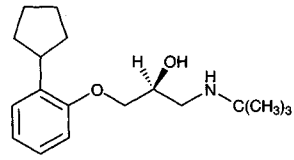
Penbutolol



Molecular formula: $C_{18}H_{29}NO_2$
Molecular weight: 291.43
CAS Registry No.: 38363-40-5, 38363-32-5 (sulfate)
Merck Index: 7209

SAMPLE
Matrix: blood
Sample preparation: 200 μL Plasma or serum + 50 μL 100 ng/mL protriptyline hydrochloride in 2 M pH 10.6 aqueous Tris buffer + 200 μL MTBE, vortex for 30 s, centrifuge at 9950 g for 2 min, inject a 100 μL aliquot of the organic layer.

HPLC VARIABLES
Column: 250 × 5 5 μm Spherisorb S5W
Mobile phase: Isooctane:MeOH:buffered MeOH:MTBE 55:15:10:20, apparent pH 5.7 (Buffered MeOH was 1 L 100 mM ammonium perchlorate in MeOH to which was added 10 mL 100 mM NaOH in MeOH, apparent pH 6.5.)
Flow rate: 2
Injection volume: 100
Detector: F ex 200 em no filter

CHROMATOGRAM
Retention time: 5.3
Internal standard: protriptyline (8)
Limit of detection: 5 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: N-acetylprocainamide, ajmaline, atenolol, betaxolol, chlorpromazine, desipramine, dipyridamole, doxazosin, flecainide, gallopamil, imipramine, labetalol, metoprolol, mianserin, nadolol, norverapamil, orphenadrine, oxprenolol, pindolol, prajmaline, prazosin, procainamide, propranolol, quinidine, quinine, terazosin, trazodone, triamterene, verapamil
Noninterfering: acebutolol, amiodarone, desethylamiodarone, disopyramide, lidocaine, lorcainide, methyldopa, nifedipine, propafenone, sotalol, timolol, tocainide
Interfering: mexiletine, pyrimethamine

KEY WORDS
plasma; serum; normal phase

SAMPLE
Matrix: blood
Sample preparation: 0.5-1 mL Plasma or 0.5 mL plasma water + 1 mL 1 M NaOH + 12 mL n-heptane:isoamyl alcohol 98.5:1.5, shake mechanically for 10 min, centrifuge at 1680 g for 5 min. Remove the organic layer and evaporate it to dryness under reduced pressure at 40°, reconstitute the residue in 50 μL EtOH, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm Hitachi Gel 3013 spherical styrene-divinylbenzene

Mobile phase: EtOH:buffer 65:35 (Buffer was 20 mM pH 2.0 perchloric acid/sodium perchlorate.)
Column temperature: 30
Flow rate: 0.2
Injection volume: 10
Detector: F ex 285 em 340

CHROMATOGRAM

Retention time: 18
Internal standard: penbutolol

OTHER SUBSTANCES

Extracted: propranolol
Simultaneous: quinidine, reserpine
Noninterfering: allopurinol, benzbromarone, diazepam, digoxin, diltiazem, dipyridamole, disopyramide, furosemide, isosorbide dinitrate, maprotiline, nifedipine, nitrazepam, trichlormethiazide, verapamil

KEY WORDS

penbutolol is IS; plasma; plasma water

SAMPLE

Matrix: blood
Sample preparation: 100-500 μL Plasma + 5 ng bufarolol, mix, add 4 mL 500 mM pH 7.0 potassium phosphate buffer, add to a Sep-Pak C18 SPE cartridge, wash with 5 mL water, wash with 5 mL EtOH:water 30:70, elute with 5 mL EtOH:methylamine 99.9:0.1, evaporate to dryness, add 100 μL 2 mg/mL (aS)-2'-methoxy-1,1'-binaphthalene-2-carbonyl cyanide in MeCN containing 0.1% quinuclidine, heat at 60° for 20 min, add 50 μL MeOH, evaporate to dryness under a stream of nitrogen, reconstitute with 1 mL in EtOH:water 90:10, add to an 18 × 6 column packed with 100 mg carboxymethyl Sephadex LH-200, wash with EtOH:water 90:10 at 0.2 mL/min, elute with 5 mL 100 mM methylamine in EtOH:water 90:10. Evaporate the eluate to dryness, reconstitute with 50-100 μL mobile phase, inject an aliquot. (Derivatization occurs on the alcohol. Preparation of (aS)-2'-methoxy-1,1'-binaphthalene-2-carbonyl cyanide is as follows. Treat 1-bromo-2-naphthol with sodium hydride in DMF, add iodomethane, stir at room temperature overnight to obtain 1-bromo-2-methoxynaphthalene (mp 85-86°). Add a solution of 37.7 g 1-bromo-2-methylnaphthalene in 200 mL ether over 1 h to a sonicated mixture of 7 g magnesium turnings in 50 mL ether, the mixture should reflux rapidly (Caution! There may be in an induction period!), sonicate for 2 h after addition is complete, add 200 mL benzene (Caution! Benzene is a carcinogen!), add this mixture dropwise to a stirred mixture of 100 mmoles 1-bromo-2-methoxynaphthalene and 655 mg bis(triphenylphosphine)nickel(II) chloride ($NiCl_2(PPh_3)_2$) in 150 mL benzene at room temperature over 1 h, stir at room temperature overnight, reflux for 3 h, remove the ether by distillation through a short Vigreux column, remove the solvent by evaporation under reduced pressure, remove excess 1-bromo-2-methylnaphthalene by heating at 150°/0.1 mm Hg, cool, dissolve the residue in hexane, pass through silica gel, evaporate to dryness, recrystallize from hexane to obtain 1-methoxy-2'-methylbinaphthalene (mp 118-121°). Reflux 10 mmoles 1-methoxy-2'-methyl-binaphthalene, 1.96 g N-bromosuccinimide, and 100 mg benzoyl peroxide in 70 mL carbon tetrachloride for 3 h, filter, evaporate the filtrate to obtain crude 1-bromomethyl-2'-methoxy-binaphthalene. Dissolve the crude 1-bromomethyl-2'-methoxy-binaphthalene in 60 mL DMSO under nitrogen, slowly add a sodium ethoxide/nitropropane mixture, stir at room temperature for 3 h, stir at 60° for 3 h, pour into 300 mL ice-water, extract with dichloromethane, wash with 2 M HCl, wash with 1 M sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to obtain crude 2'-methoxy-1,1'-binaphthalene-2-carboxaldehyde. (Prepare the sodium ethoxide/nitropropane mixture by dissolving 580 mg sodium in 35 mL EtOH, add 3.25 g 2-nitropropane.) Reflux the crude 2'-methoxy-1,1'-binaphthalene-2-carboxaldehyde in 60 mL acetone, add a solution of 2.36 g potassium permanganate in 60 mL hot water dropwise over 1 h, heat for an additional hour, pass sulfur dioxide through the solution until it becomes clear (sodium metabisulfite may work). Filter off the precipitate and dissolve it in 200 mL hot toluene, add a small amount of activated charcoal, filter while hot, concentrate to about a third of the volume, recrystallize

from EtOH:water 1:2 to obtain 2'-methoxy-1,1'-binaphthalene-2-carboxylic acid (mp 258.5-260°) (Bull. Chem. Soc. Japan 1986, 59, 2044). Reflux 9.15 g racemic 2'-methoxy-1,1'-binaphthalene-2-carboxylic acid in 55 mL freshly distilled thionyl chloride for 5 h, evaporate under reduced pressure, add a little benzene, evaporate under reduced pressure, repeat the benzene evaporation twice more to obtain 2'-methoxy-1,1'-binaphthalene-2-carbonyl chloride as a brown solid. Dissolve the acid chloride in 70 mL benzene, add dropwise to 12.8 g (-)-menthol in 100 mL benzene containing 1 g 4-dimethylaminopyridine and 5 mL pyridine, stir overnight at room temperature, heat at 70° for 3 h, cool, dilute with benzene, wash with 2 M HCl, wash with 1 M sodium carbonate, wash with water, dry over anhydrous magnesium sulfate in the presence of activated charcoal, evaporate to dryness, remove as much menthol as possible by sublimation under vacuum, chromatograph twice on a column of silica gel with toluene to obtain the (aS,R) menthol ester (mp 145-146° from hexane) and the (aR,R) menthol ester (mp 126-129° from hexane) as well as a mixture of diastereomers. Reflux the (aS,R) menthol ester with KOH in aqueous EtOH for 8-10 h to obtain (aS)-2'-methoxy-1,1'-binaphthalene-2-carboxylic acid (Bull. Chem. Soc. Japan 1989, 62, 1528). Add 1.5 mL oxalyl chloride to a solution of (aS)-2'-methoxy-1,1'-binaphthalene-2- carboxylic acid in 10 mL anhydrous benzene, reflux for 10 h, evaporate to dryness under reduced pressure. Take up the residue in 10 mL anhydrous benzene, add 1 mL trimethylsilyl cyanide, add 1 mg zinc iodide, stir at room temperature for 5 h, evaporate to dryness, recrystallize from hexane/acetone to obtain (aS)-2'-methoxy-1,1'-binaphthalene-2-carbonyl cyanide as orange-yellow needles (mp 143-146°).)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Cosmosil 5SL (Nacalai Tesque, Kyoto)
Mobile phase: Hexane:ethyl acetate:triethylamine 83.3:16.7:0.005
Flow rate: 2
Detector: F ex 290 em 405

CHROMATOGRAM

Retention time: 10.5 (R), 13.5 (S)
Internal standard: bufarolol (8.5 (R), 12 (S))
Limit of detection: 30 pg

SAMPLE

Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 270

CHROMATOGRAM

Retention time: 8.65
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood, urine

Sample preparation: Evaporate 0.5 mL 100 ng/mL propranolol in MeOH to dryness in a glass tube under a stream of nitrogen at 37°, add 1 mL plasma or urine, add 500 μL 1 M NaOH, add 8 mL freshly distilled diethyl ether, shake on a rotating shaker at 60 rpm for 15 min, centrifuge at 1200 g for 15 min. Remove 6.5 mL of the organic layer and pass it through a 20 × 4 column filled with glass wool, evaporate to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 μL mobile phase, inject a 20 μL aliquot. For conjugated compounds proceed as follows. Evaporate 0.5 mL 100 ng/mL propranolol in MeOH to dryness in a glass tube under a stream of nitrogen at 37°, add 1 mL plasma or urine, add 1 mL 100 mM pH 5 acetate buffer, add 100 μL solution containing 10000 U/mL β-glucuronidase and 0.6 U/mL sulfatase (Sigma), heat at 37° for 48 h, cool to room temperature, add 500 μL 1 M NaOH, add 8 mL freshly distilled diethyl ether, shake on a rotating shaker at 60 rpm for 15 min, centrifuge at 1200 g for 15 min. Remove 6.5 mL of the organic layer and add it to 6 mL 100 mM HCl, shake at 60 rpm on a rotating shaker for 15 min, centrifuge at 1200 g for 10 min. Remove 5.5 mL of the aqueous layer and add it to 700 μL 1 M NaOH, add 6 mL diethyl ether, shake on a rotating shaker at 60 rpm for 15 min, centrifuge at 1200 g for 10 min, remove 5 mL of the organic layer, evaporate to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 10 μm LiChrosorb RP-8

Mobile phase: MeCN:buffer 48:52 containing 1 g/L sodium heptanesulfonate (Buffer was 100 mM citric acid-sodium citrate buffer adjusted to pH 2.85 with 1 M HCl.)
Column temperature: 28
Flow rate: 1.7
Injection volume: 20
Detector: F ex 278 em 310

CHROMATOGRAM
Retention time: 7.75
Internal standard: propranolol (F ex 290 em 330) (4)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, 4-hydroxypenbutolol (F ex 290 em 330)

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma + 100 µL 400 ng/mL propranolol in water + 20 µL 25 mg/mL ascorbic acid in water (prepare fresh daily) + 500 µL buffer, vortex, add 6 mL hexane:n-butanol 96:4, shake vigorously for 2 min, centrifuge briefly. Remove 5 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 µL MeOH:21 mM pH 5.5 ammonium acetate buffer 50:50, vortex, inject a 50 µL aliquot. To deconjugate samples proceed as follows. 300 µL Plasma or urine + 50 µL 200 mg/mL sodium bisulfite in water (prepare fresh daily) + 600 µL glucuronidase solution, vortex, flush tube with nitrogen, heat at 45 for 2 h, add 100 µL 400 ng/mL propranolol in water, add 20 µL 25 mg/mL ascorbic acid in water (prepare fresh daily), add 500 µL buffer, vortex, add 6 mL hexane:n-butanol 96:4, shake vigorously for 2 min, centrifuge briefly. Remove 5 mL of the organic layer and wash it with 2 mL buffer:25 mg/mL ascorbic acid 100:1. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 µL MeOH:21 mM pH 5.5 ammonium acetate buffer 50:50, vortex, inject a 50 µL aliquot. (Buffer was prepared by mixing saturated sodium carbonate and saturated sodium bicarbonate to pH 9.4. Glucuronidase solution was 50000 U type G-0258 (abalone entrails) and 40000 U type L-II (limpet) glucuronidases (Sigma) in 10 mL 50 mM pH 5 acetate buffer.)

HPLC VARIABLES
Column: 250 × 4.6 Zorbax CN
Mobile phase: MeOH:THF:buffer 60:6:34 (Buffer was 0.8 g ammonium acetate in 340 mL water, pH adjusted to 5.5 with acetic acid (if necessary).)
Column temperature: 35
Flow rate: 1.5
Injection volume: 50
Detector: F ex 275 (slit width 6 nm) em 324 (slit width 10 nm)

SAMPLE

Matrix: solutions

Sample preparation: Dissolve 100 ng penbutolol and 200 μg (-)-2-methyl-1,1'-binaphthalene-2'-carbonyl cyanide in 200 μL 0.01% quinuclidine in MeCN, heat at 60° for 10 min, inject an aliquot. (Synthesis of (-)-2-methyl-1,1'-binaphthalene-2'-carbonyl cyanide is as follows. Reflux 210 g 1-bromo-2-methylnaphthalene, 160 g N-bromosuccinimide, 1 g benzoyl peroxide, and 250 mL carbon tetrachloride for 2.5 h, add 250 mL carbon tetrachloride, filter while warm, wash the residue several times with solvent. Concentrate and cool the filtrate to give 1-bromo-2-bromomethylnaphthalene (mp 230-240°) (J. Org. Chem. 1949, 14, 375). Dissolve 90 g 1-bromo-2-bromomethylnaphthalene in 400 mL chloroform, reflux, add 46.5 g powdered hexamine in portions, remove the hexaminium salt by filtration. Reflux this salt in 650 mL 50% acetic acid for 1 h, add 105 mL concentrated HCl, reflux for 5 min, cool, obtain 1-bromo-2-naphthaldehyde (mp 119-120°) by filtration. Heat 11 g 1-bromo-2-naphthaldehyde in 275 mL acetone at 60-68°, add a hot solution of 14 g potassium permanganate in 330 mL water over 30 min, heat for another 30 min, pass in sulfur dioxide (sodium metabisulfite ?) until the solution is clear, pour into water to give 1-bromo-2-naphthoic acid, purify by forming the ammonium salt and reprecipitating. Reflux 1-bromo-2-naphthoic acid in MeOH in the presence of sulfuric acid to give methyl 1-bromo-2-naphthoate. Heat methyl-1-bromo-2-naphthoate with copper bronze at 270-280° for 20 min, while still hot extract with toluene, cool to obtain dimethyl 1,1'-binaphthalene-2,2'- dicarboxylate, obtain more crystals by evaporating some of the solvent, recrystallize from EtOH to give dimethyl 1,1'-binaphthalene-2,2'-dicarboxylate (mp 158°) (J. Chem. Soc. 1955, 1242). Add 8 g lithium tri-tert-butoxyaluminohydride in portions to 2.8 g dimethyl 1,1'-binaphthalene-2,2'-dicarboxylate in 150 mL anhydrous benzene:ether 50:50 (Caution! Benzene is a carcinogen!), heat at 80° for 2 h, acidify with 5% HCl. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness, chromatograph on 50 g silica gel with

hexane:ethyl acetate 80:20, recrystallize the product from hexane/acetone to give methyl 2-hydroxymethyl-1,1'-binaphthalene-2'-dicarboxylate (mp 117.5-118.5°). Add 5 mL 30% hydrogen bromide in acetic acid to 2 g methyl 2-hydroxymethyl-1,1'- binaphthalene-2'-dicarboxylate in 10 mL acetic acid, stir at 50° for 10 min, pour into ice-water, filter, chromatograph the solid on 40 g silica gel with hexane:ethyl acetate 30:1 to give methyl 2-bromomethyl-1,1'-binaphthalene-2'-dicarboxylate as pale yellow needles (mp 137-138°). Add 400 mg sodium borohydride to 1.9 g methyl 2-bromomethyl-1,1'-binaphthalene-2'-dicarboxylate in 10 mL DMSO, stir at 60° for 15 min, pour into ice-water, acidify with concentrated HCl, chromatograph the crude product on 40 g silica gel with hexane:ethyl acetate 10:1, recrystallize from MeOH to give methyl 2-methyl-1,1'-binaphthalene-2'-carboxylate as colorless needles mp 97-98°. Add 30 mL 10% KOH to 1.2 g methyl 2-methyl-1,1'-binaphthalene-2'-carboxylate in 50 mL MeOH, reflux for 3 h, pour into ice-water, filter, recrystallize from hexane/ethyl acetate to give 2-methyl-1,1'-binaphthalene-2'-carboxylic acid as colorless needles (mp 232-233°). Add 4.1 g (-)-brucine in 20 mL EtOH to 3.3 g 2-methyl-1,1'-binaphthalene-2'-carboxylic acid dissolved in 60 mL EtOH, allow to stand overnight, filter, recrystallize the precipitate several times from EtOH. Add 5% HCl to the salt and extract with ethyl acetate, wash the organic layer with water, dry over anhydrous sodium sulfate, evaporate to dryness, recrystallize from hexane/acetone to give (-)-2-methyl-1,1'-binaphthalene-2'-carboxylic acid as colorless needles (mp 229-229.5°; $[\alpha]_D^{20}$ -41.3° (c = 0.58 in chloroform). Add 3 mL oxalyl chloride to 500 mg (-)-2-methyl-1,1'-binaphthalene-2'-carboxylic acid in 30 mL anhydrous dichloromethane, stir at room temperature for 2 h, evaporate to give an oily residue, take up in 10 mL dichloromethane, add 2 mL trimethylsilyl cyanide, add 1 mg zinc iodide, stir at room temperature for 2 h, evaporate to dryness, chromatograph on 5 g silica gel with hexane to give (-)-2-methyl-1,1'-binaphthalene-2'-carbonyl cyanide as a yellow oil ($[\alpha]_D^{20}$ -42.8° (c = 1.05 in chloroform).)

HPLC VARIABLES

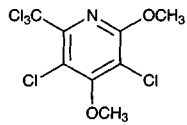
Penclomedine



Molecular formula: $C_8H_6Cl_5NO_2$
Molecular weight: 325.41
CAS Registry No.: 108030-77-9

SAMPLE
Matrix: bile, blood, tissue
Sample preparation: Plasma, red cells. Add 1 mL plasma or red cells to 2.8 mL ethyl acetate and 200 μL 700 mM pH 2.7 ammonium phosphate buffer, homogenize, centrifuge. Draw off the organic layer, add 50 μL dimethyl sulfoxide, evaporate to approximately 100 μL under nitrogen, add 50 μL MeCN, inject an aliquot. Liver slices. Add 1 mL incubation to 500 μL Krebs-Henseleit buffer containing 2.25% bovine serum albumin, homogenize, centrifuge. Draw off the organic layer, add 50 μL dimethyl sulfoxide, evaporate to approximately 100 μL under nitrogen, add 50 μL MeCN, inject an aliquot. Bile. Dilute bile with an equal volume mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Adsorbosphere HS C18 (Alltech)
Mobile phase: Gradient. A was MeCN. B was 10 mM pH 2.7 ammonium phosphate buffer. A:B from 0:100 to 100:0 in 25 min, maintain at 100:0 for 15 min.
Flow rate: 1
Detector: UV 240; Radioactivity, Radiomatic Flo-One/Beta A140, with 500 μL cell, using Flo-Scint VI scintillant at ratio 2:1

SAMPLE

Matrix: blood, cells
Sample preparation: Blood. Mix 9 mL whole blood with 1 mL 3.8% sodium citrate, centrifuge at 4° at 150 g for 15 min, wash the erythrocytes three times with isotonic saline. Suspend 100 μL erythrocytes in 700 μL 6 mM EDTA, mix gently for 1 min, add 200 μL 25% metaphosphoric acid, mix for 10 min, centrifuge at 5000 g for 15 min, filter (0.45 μm) the supernatant, inject a 10 μL aliquot of the filtrate. Cells. Wash 500 mg (wet weight) E. coli cells with water, add 2 mL 5% metaphosphoric acid, sonicate, centrifuge at 4° at 15000 g for 15 min, filter (0.45 μm) the supernatant, inject an aliquot of the filtrate.

HPLC VARIABLES

Column: 250 × 4.6 Fine Sil C18-10 (Japan Spectroscopic)
Mobile phase: 33 mM KH_2PO_4 adjusted to pH 2.2 with phosphoric acid
Flow rate: 1
Injection volume: 10
Detector: UV 344 following post-column reaction. The column effluent mixed with the 1.5 mM 6,6'-dithiodinicotinic acid in 200 mM pH 7.0 sodium phosphate buffer pumped at 1 mL/min and the mixture flowed through a 60 cm × 0.5 mm ID stainless steel coil to the detector.

CHROMATOGRAM

Retention time: 8.2
Limit of detection: 0.1 nmole

OTHER SUBSTANCES

Extracted: cysteamine, cysteine, glutathione, homocysteine

SAMPLE

Matrix: blood, tissue
Sample preparation: Plasma. 1 mL Plasma + 1 mL ice-cold 2 M perchloric acid containing 4 mM EDTA, vortex, centrifuge at 4° at 4000 g for 10 min. Neutralize an aliquot of the supernatant with cold 2 M LiOH solution, adjust to 10% with pH 8.4 borate buffer. Remove a 100 μL aliquot and add it to 100 μL 50 mM N-acetylcysteine solution, 100 μL reagent solution, and 700 μL pH 8.4 borate buffer, vortex for a few s, let stand at room temperature for 1 h, add an equal volume of the mobile phase, inject a 10 μL aliquot. Tissue. Powder tissue at low temperature. Add 4 volumes ice-cold 2 M perchloric acid containing 25 mM EDTA to 0.1-0.5 g powdered tissue, vortex quickly, homogenize (Brinkman). Neutralize an aliquot with cold 2 M LiOH solution, adjust to 1% (brain, lung, liver, kidney, testes, small intestine) or 2.5% (aorta, heart, spleen) with pH 8.4 borate buffer. Remove a 100 μL aliquot and add it to 100 μL 50 mM N-acetylcysteine solution, 100 μL reagent solution, and 700 μL pH 8.4 borate buffer, vortex for a few s, let stand at room temperature for 1 h, add an equal volume of the mobile phase, inject a 10 μL aliquot. (Prepare reagent, 2-(4-N-maleimidephenyl)-6-methylbenzothiazole, as follows. Recrystallize 2-(4-aminophenyl)-6-methylbenzothiazole from chloroform before use. Add 500 mg maleic anhydride in 2 mL chloroform dropwise to 1.2 g 2-(4-aminophenyl)-6-methylbenzothiazole in 10 mL DMF, stir at room temperature for 2 h, filter, wash with 30 mL chloroform, recrystallize from DMF to give 2-(4-N-phenylmaleamic acid)-6-methylbenzothiazole as yellow crystals (mp 242°). Reflux 2 g 2-(4-N-phenylmaleamic acid)-6-methylbenzothiazole, 100 mg anhydrous sodium acetate, and 25 mL acetic anhydride for 2 h, cool on ice, filter, wash the solid with water. Neutralize the filtrate with cold 10% NaOH, extract with chloroform. Dry the organic layer over anhydrous magnesium sulfate and evaporate it to dryness under reduced pressure. Combine this product with the solid obtained earlier and recrystallize from isopropanol to give 2-(4-N-maleimidephenyl)-6-methylbenzothiazole as yellow needles (mp 254-6°). Prepare the reagent solution by dissolving 50 μmoles of this compound in 10 mL DMF and diluting 25-fold with MeCN.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Ultrasphere ODS
Mobile phase: MeCN:buffer 35:65, pH 4.5 (Buffer was 10 mM KH_2PO_4 containing 0.1% sodium hexanesulfonate.)
Flow rate: 1.5
Injection volume: 10

Detector: F ex 320 em 405

SAMPLE
Matrix: formulations
Sample preparation: Dissolve about 1 mg of the contents of a capsule in 10 mL water and dilute with MeCN to a penicillamine concentration of 8 mM. 50 μL Solution + 200 μL buffer + 150 μL reagent, heat at 60° for 30 min, cool, inject a 10 μL aliquot. (Buffer was prepared by adjusting the pH of a solution containing 100 mM boric acid and 100 mM KCl to 8.5 with 100 mM sodium carbonate. Reagent was 200 μM N-[4-(6-dimethylamino-2-benzofuranyl)phenyl]maleimide (DBPM) in MeCN. Synthesis of N-[4-(6-dimethylamino-2-benzofuranyl)phenyl]maleimide is as follows. Add 8.8 g aluminum trichloride to 12.50 g 3-dimethylaminophenol in 185 mL chloroform and 84 g triethyl orthoformate, mix at room temperature for 10 min, when the exothermic reaction ceases add 50 mL 10% HCl, stir to hydrolyze the acetal, neutralize with 10% NaOH, filter through a short column of Celite, wash through with chloroform, wash the filtrate with saturated aqueous NaCl, dry over magnesium sulfate, concentrate under reduced pressure, recrystallize from chloroform to give 4-(dimethylam-

ino)salicylaldehyde (mp 78-79°). Add 400 mg KOH in 3 mL EtOH to a solution of 1 g 4-(dimethylamino)salicylaldehyde and 1.3 g (?) 4-nitrobenzylbromide in 12 mL EtOH, reflux for 7 h, cool, filter to recover the crystals, wash with water, dry under vacuum, recrystallize from EtOH to give 4-dimethylamino-2-(4-nitrobenzyloxy)benzaldehyde (mp 179-180°). Add a solution of 900 mg 4-dimethylamino-2-(4-nitrobenzyloxy)benzaldehyde in 6 mL DMF to a sodium methoxide solution (prepared from 69 mg sodium in 1 mL MeOH), reflux for 20 min, add 1 mL MeOH, filter the crystals, recrystallize from EtOH to give 6-dimethylamino-2-(4-nitrophenyl)benzofuran as red needles (mp 209.5-210.5°). Reflux 1 g 6-dimethylamino-2-(4-nitrophenyl)benzofuran in 20 mL benzene (Caution! Benzene is a carcinogen!) and 18 mL MeOH containing 80 mg active carbon and a catalytic amount of ferric chloride hexahydrate for 10 min, add 2.30 g 98% hydrazine hydrate (Caution! Hydrazine hydrate is a carcinogen!) dropwise, reflux for 7 h, filter, concentrate the filtrate, recrystallize from cyclohexane to give 6-dimethylamino-2-(4-aminophenyl)benzofuran as orange needles (mp 198.5-200°). Stir 605 mg 6-dimethylamino-2-(4-aminophenyl)benzofuran and 230 mg maleic anhydride in 5 mL chloroform at room temperature for 3 h, filter the crystals, wash with a small amount of chloroform, recrystallize from EtOH to obtain N-[4-(6-dimethylamino-2-benzofuranyl)phenyl]maleamic acid (mp 219.5-221°). Reflux a mixture of 1.17 g N-[4-(6-dimethylamino-2-benzofuranyl)phenyl]maleamic acid and 30 mg sodium acetate in 18 mL acetic anhydride, cool in an ice bath, collect the crystals of product, wash with water. Neutralize the filtrate with 20% NaOH, extract twice with 30 mL portions of chloroform, wash the organic layers with saturated aqueous NaCl, dry over anhydrous magnesium sulfate, evaporate to give more product. Combine the products and recrystallize them from acetone to give N-[4-(6-dimethylamino-2-benzofuranyl)phenyl]maleimide as reddish purple crystals (mp 203-204°) (Bull.Chem.Soc.Jpn. 1985, 58, 2192).)

SAMPLE
Matrix: solutions
Sample preparation: Mix 20 μL of a 30 μM solution in 2 mM disodium EDTA containing 3% triethylamine with 10 μL 12 mM R-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole in MeCN, let stand for 40 min, inject a 10 μL aliquot. (Synthesis of (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole, (R)-(-)-NBD-PyNCS, is as follows. Cool a solution of 16.4 g (S)-(-)-1-benzyl-3-pyrrolidinol in 164 mL pyridine to +5°, add 19.35 g p-toluenesulfonyl chloride, stir at +10° for 48 h, evaporate to dryness, chromatograph using dichloromethane:acetone 95:5 to obtain (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine (mp 68°). Heat a solution of (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine in 200 mL anhydrous DMF to 65°, add 33.5 g sodium azide (Caution! Sodium azide is highly toxic!), stir at 60° for 7 h, filter, evaporate the filtrate to dryness under reduced pressure, dissolve the residue in ethyl acetate, wash twice with water, dry over anhydrous magnesium sulfate, evaporate to obtain (3R)-3-azido-1-(phenylmethyl)pyrrolidine as an oil. Add 3.5 g 10% palladium on carbon under nitrogen to a solution of 7.05 g (3R)-3-azido-1-(phenylmethyl)pyrrolidine in 34.8 mL 1 M HCl in water and 245 mL EtOH, hydrogenate at atmospheric pressure for 30 min, add 3.5 g catalyst, hydrogenate for 2 h, filter, add 34.8 mL 1 M HCl to the filtrate, evaporate to dryness under reduced pressure, take up the residue in 70 mL EtOH, filter, evaporate the filtrate to dryness under reduced pressure, repeat this operation twice, crystallize with the

minimum amount of EtOH to obtain (3R)-3-aminopyrrolidine dihydrochloride (J. Med. Chem. 1992, 35, 4205). 3R-(+)-aminopyrrolidine is also reported to be available from Tokyo Kasei. Add 100 mg 4-fluoro-7-nitro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to a stirred solution of 200 mg 3R-(+)-aminopyrrolidine in 20 mL MeCN at 0-10°, stir at room temperature for 30 min, remove the MeCN by evaporation under reduced pressure, dissolve the residue in 50 mL water, extract 4 times with 80 mL portions of ethyl acetate. Combine the organic layers and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane to obtain (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole as dark red crystals (mp 178-181°) (Analyst 1992, 117, 727). Add 100 μL thiophosgene in 10 mL benzene (Caution! Benzene is a carcinogen!) to 100 mg (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole in 100 mL acetone, reflux for 1 h, remove the solvent by evaporation under reduced pressure, suspend the residue in 100 mL water, extract 4 times with 25 mL portions of benzene. Combine the extracts and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane:benzene 1:2 to obtain (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole as red crystals (mp 165-170°) (Analyst 1995, 120, 385).)

Matrix: tissue

Sample preparation: Freeze tissue in liquid nitrogen and pulverize. Homogenize 50-100 mg tissue in 1 mL MeCN:20 mM EDTA 30:70, centrifuge at 4° at 4000 g for 5 min, adjust to 1-2.5% w/v with pH 8.4 borate buffer, keep on ice. 100 μL Sample + 100 μL 0.05 mM N-acetylcysteine + 100 μL 0.25 mM reagent in MeCN:DMF 95:5 + 700 μL pH 8.4 borate buffer, vortex for a few s, let stand for 1 h at room temperature, dilute with an equal volume of mobile phase, inject a 10 μL aliquot. (Reagent was 2-(4-maleimidophenyl)-6-methoxybenzofuran, a partial synthesis is given in the paper.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Ultrasphere-ODS

Mobile phase: MeCN:buffer 35:65 adjusted to pH 4.5 (Buffer was 10 mM KH_2PO_4 containing 0.1% sodium hexanesulfonate.)

Flow rate: 1.5

Injection volume: 10

Detector: F ex 310 em 390

CHROMATOGRAM

Retention time: 10

Internal standard: N-acetylcysteine (8)

Limit of detection: 75 fmole

OTHER SUBSTANCES

Extracted: glutathione, homomocysteine, acetylpenicillamine

KEY WORDS

rat; heart; lung; liver; kidney; testes; spleen; derivatization

REFERENCE

SAMPLE

Matrix: urine

Sample preparation: For each 1 mL urine add 1-2 mg EDTA and 5 μg homocysteine, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 45 × 4.6 5 μm ODS Hypersil

Column: 100 × 4.6 5 μm ODS Hypersil

Mobile phase: 1 g/L pH 4 Heptanesulfonic acid in water containing 150 mg/L sodium EDTA

Flow rate: 1

Injection volume: 20

Detector: UV 412 following post-column reaction. The column effluent mixed with the reagent pumped at 0.5 mL/min and the mixture flowed through a 150 × 2 column filled with 40 μm glass beads to the detector. (Prepare reagent by dissolving 200 mg 5,5'-dithiobis(2-nitrobenzoic acid) and 10 g tripotassium citrate in 100 mL 250 mM pH 7.4 phosphate buffer, dilute 10-fold with water immediately before use.)

CHROMATOGRAM

Retention time: 1.3

Internal standard: homocysteine (0.8)

Limit of quantitation: 10 ng

OTHER SUBSTANCES
Extracted: cysteine

KEY WORDS
post-column reaction

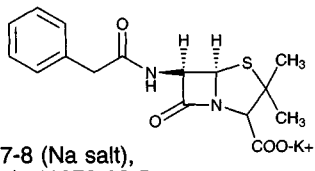
Penicillin G



Molecular formula: $C_{16}H_{18}N_2O_4S$
Molecular weight: 334.40
CAS Registry No.: 113-98-4 (potasium salt), 61-33-6 (free acid), 69-57-8 (Na salt), 751-84-8 (penicillin G benethamine), 1538-09-6 (penicillin G benzathine), 41372-02-5 (penicillin G benzathine tetrahydrate), 1538-11-0 (penicillin G benzhydrylamine), 973-53-5 (Ca salt), 3344-16-9 (penicillin G hydrabamine), 6130-64-9 (penicillin G procaine monohydrate), 54-35-3 (penicillin G procaine)
Merck Index: 7225

SAMPLE
Matrix: bile, blood, urine
Sample preparation: Serum. 0.5 mL serum + 0.5 mL MeCN mix in 7 mL tube on vortex mixer; shake by rotation (20 rpm) 10 min; centrifuge 10 min 1000 g; transfer supernatant to another tube, add 7 aliquots dichloromethane; equilibrate 10 min; shake by rotation (20 rpm) 10 min; centrifuge 10 min 1000 g; inject aliquot of upper aqueous layer. Urine. Centrifuge urine and dilute 1:20. Bile. Centrifuge bile and dilute 1:10

HPLC VARIABLES
Column: 150 × 4.6 5 μm Ultrasphere ODS
Mobile phase: 24:76 MeCN:20 mM ammonium acetate adjusted to pH 5 with glacial acetic acid
Flow rate: 1
Injection volume: 20
Detector: UV 214

CHROMATOGRAM
Retention time: 4.8
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Also analyzed: ampicillin, azlocillin, aztreonam, cefmenoxime, cefoperazone, cefsulodin, cefotaxime, ceftazidime, ceftriaxone, cloxacillin, desacetylcefotaxime, mezlocillin, piperacillin, ticarcillin

KEY WORDS
serum

SAMPLE
Matrix: blood

Sample preparation: Condition a Bond Elut phenyl SPE cartridge with 3 mL MeOH and 3 mL buffer. 1 mL Plasma + 2 mL buffer, vortex, add to SPE cartridge, wash with buffer, elute with 500 μL MeOH:10 mM pH 5.2 potassium phosphate buffer 90:10, inject a 25 μL aliquot. (Buffer was 121 g Trizma base in 1 L water, adjust pH to 7.0 with concentrated HCl. Dilute 1:100 to obtain the 10 mM buffer.)

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova-Pak phenyl
Mobile phase: MeOH:10 mM pH 5.2 potassium phosphate buffer 20:80 (Buffer was 1 M KH_2PO_4 adjusted to pH 5.2 with 5 M KOH, dilute 1:100 with water to give working buffer.)
Column temperature: 50
Flow rate: 0.9
Injection volume: 25
Detector: UV 225

CHROMATOGRAM
Retention time: 412
Internal standard: penicillin G

OTHER SUBSTANCES
Extracted: cefteran (ceftetrane)

KEY WORDS
plasma; SPE; method stated to be applicable to urine (no details); penicillin G is IS

SAMPLE
Matrix: blood
Sample preparation: Condition a 55 × 5 100-200 mesh AG 50W-X8 (H^+) column (Bio-Rad) with 10 mL MeCN:water 50:50. 600 μL Serum + 600 μL MeCN, vortex for 1 min, centrifuge at 2000 g for 5 min, add a 1 mL aliquot of the supernatant to the column, discard the first 200 μL effluent, collect the rest of the effluent. Remove a 450 μL aliquot and add it to 50 μL 10% sodium carbonate solution, heat at 60° for 1 h (to hydrolyse the β-lactam ring), cool in an ice bath. Remove a 100 μL aliquot and add it to 15 μL 200 mM pH 6.0 phosphate buffer, add 35 μL 80 mM 7-fluoro-4-nitrobenzo-2-oxa-1,3-diazole in MeCN, heat at 60° for 10 min, cool in an ice bath, add 30 μL 1 M HCl, inject a 5-10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 ODS-80TM (Tosoh)
Mobile phase: MeOH:100 mM pH 3.0 phosphate buffer 40:60
Flow rate: 1
Injection volume: 5-10
Detector: F ex 470 em 530

CHROMATOGRAM
Retention time: 10
Limit of detection: 30 ng/mL

OTHER SUBSTANCES
Extracted: methicillin, piperacillin

KEY WORDS
derivatization; serum; SPE

SAMPLE

Matrix: blood

Sample preparation: Condition a Baker C18 SPE cartridge with 5 mL water and 5 mL 2% NaCl, do not allow to run dry. 2 mL Plasma + 120 μL 5 μg/mL penicillin V + 30 mL water + 2 mL 170 mM sulfuric acid +2 mL 5% sodium tungstate solution, vortex for 30 s, centrifuge at 2200 g for 10 min, filter supernatant (GF/B glass fiber filter), add 10 mL 20% NaCL, mix, add to SPE cartridge at 3 mL/min, wash with 5 mL 2% NaCl, wash with 5 mL water, draw air through cartridge for 5 min, elute with 500 μL elution solution. Add 500 μL derivatization reagent to the eluate, vortex for 20 s, allow to react at 65° for 30 min, cool to room temperature, vortex, filter (0.45 μm), inject 50-100 μL aliquots. (Prepare derivatization reagent by dissolving 34.45 g 1,2,4-triazole in 150 mL water, add 25 mL 10 mM mercuric chloride solution, mix, adjust the pH to 9.0 ± 0.5 with 5 M NaOH, dilute to 250 mL with water. Prepare elution solution by mixing 60 mL MeCN and 5 mL buffer and making up to 100 mL with water. The buffer was 0.994 g Na_2HPO_4 + 1.794 g $NaH_2PO_4.H_2O$ in 100 mL water, pH 6.5.)

HPLC VARIABLES

Column: 150 × 3.9 4 μm Nova-Pak C18

Mobile phase: MeCN:buffer 25:75 (Buffer contained 4.969 g Na_2HPO_4 + 8.969 g $NaH_2PO_4.H_2O$ + 2.482 g anhydrous sodium thiosulfate per liter.)

Flow rate: 1

Injection volume: 50-100

Detector: UV 325

CHROMATOGRAM

Retention time: 4.5

Internal standard: penicillin V (5.8)

Limit of detection: 5 ng/mL

KEY WORDS

plasma; cow; SPE; derivatization

REFERENCE

SAMPLE

Matrix: blood, CSF

Sample preparation: 200 μL Serum, plasma, or CSF + 300 μL reagent. Flush column A to waste with 500 μL 500 mM ammonium sulfate, inject sample onto column A, flush column A to waste with 500 μL 500 mM ammonium sulfate, elute the contents of column A onto column B with mobile phase, monitor the effluent from column B. (Reagent was 8.05 M guanidine hydrochloride and 1.02 M ammonium sulfate in water.)

HPLC VARIABLES

Column: A 30 × 2.1 40 μm preparative grade C18 (Analytichem); B 250 × 4.6 10 μm Partisil C8

Mobile phase: Gradient. A was 50 mM pH 4.5 KH_2PO_4. B was MeCN:isopropanol 80:20. A:B 90:10 for 1 min, to 30:70 over 15 min, maintain at 30:70 for 4 min.

Column temperature: 50

Flow rate: 1.5

Detector: UV 280 for 5 min then UV 254

CHROMATOGRAM

Retention time: 10.28

Internal standard: heptanophenone (19.2)

OTHER SUBSTANCES

Extracted: acetazolamide, ampicillin, bromazepam, caffeine, carbamazepine, chloramphenicol, chlorothiazide, diazepam, droperidol, ethionamide, furosemide, isoniazid, methadone, phenobarbital, phenytoin, prazepam, propoxyphene, pyrazinamide, rifampin, trimeprazine, trimethoprim

KEY WORDS
plasma; serum; column-switching

SAMPLE
Matrix: blood, CSF, gastric contents, urine
Sample preparation: 200 μL Serum, urine, CSF, or gastric fluid + 300 μL reagent. Flush column A to waste with 500 μL 500 mM ammonium sulfate, inject sample onto column A, flush column A to waste with 500 μL 500 mM ammonium sulfate, backflush the contents of column A onto column B with mobile phase, monitor the effluent from column B. (Reagent was 8.05 M guanidine HCl and 1.02 M ammonium sulfate in water.)

HPLC VARIABLES
Column: A 40 μm preparative grade C18 (Analytichem); B 75 × 2.1 pellicular C18 (Whatman) + 250 × 4.6 5 μm C8 end-capped (Whatman)
Mobile phase: Gradient. A was 50 mM pH 4.5 KH_2PO_4. B was MeCN:isopropanol 80:20. A:B 90:10 for 1 min, to 30:70 over 20 min.
Column temperature: 50
Flow rate: 1.5
Detector: UV 220

CHROMATOGRAM
Retention time: 8.5
Internal standard: heptanophenone (19)

OTHER SUBSTANCES
Extracted: acetaminophen, allobarbital, azinphos, barbital, brallobarbitone, bromazepam, butethal, caffeine, carbamazepine, carbaryl, cephaloridine, chloramphenicol, chlordiazepoxide, chlorothiazide, chlorvinphos, clothiapine, cocaine, coomassie blue, desipramine, diazepam, diphenhydramine, dipipanone, ethylbromphos, flufenamic acid, formothion, griseofulvin, indomethacin, lidocaine, lorazepam, malathion, medazepam, midazolam, oxazepam, paraoxon, pentobarbital, prazepam, propoxyphene, prothiophos, quinine, salicylic acid, secobarbital, strychnine, sulfamethoxazole, theophylline, thiopental, thioridazine, trimethoprim

SAMPLE
Matrix: blood, CSF, urine
Sample preparation: Plasma. Add 500 μL MeCN to 500 μL plasma while mixing on a Whirlmixer, rotate for 10 min, centrifuge at 1000 g for 5 min. Remove a 700 μL aliquot of the supernatant and ad it to 3.5 mL dichloromethane, mix for 30 s, centrifuge at 1000 g for 1 min, inject a 20 μL aliquot of the aqueous layer. Urine. Dilute with Sörensen buffer, inject an aliquot. CSF. Inject an aliquot directly.

HPLC VARIABLES
Column: 100 × 3 5 μm MOS-Hypersil C8
Mobile phase: MeCN:MeOH:buffer 12:26:62 containing 3 mM tetrabutylammonium bromide (Buffer was 5 mM pH 5.0 sodium acetate.)
Column temperature: 22
Flow rate: 1
Injection volume: 20

Detector: UV 231

CHROMATOGRAM
Retention time: 3
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: probenecid

KEY WORDS
plasma

SAMPLE
Matrix: blood, tissue, urine
Sample preparation: Plasma. 50 μL Plasma + 50 μL IS solution + 50 μL MeCN, mix for 30 s, centrifuge at 5000 g for 15 min. Inject an aliquot of the supernatant. Urine. Mix 100 μL IS solution with 200 μL MeCN and 100 μL urine for 30 s, centrifuge at 5000 g for 15 min. Inject an aliquot. Tissue. Weight out finely chopped tissue and suspend it in 200 μL water. Add 100 μL 100 μg/mL IS, sonicate for 60 s. Add 200 μL MeCN, vortex for 30 s, centrifuge at 10000 g for 15 min. Inject an aliquot.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Newguard C18 (Alltech)
Column: 250 × 4.6 5 μm Alltima C18 (Alltech)
Mobile phase: MeCN:50 mM pH 5.0 sodium dihydrogen phosphate 30:70
Flow rate: 1.0
Detector: UV 214

CHROMATOGRAM
Retention time: 6.4
Internal standard: dicloxacillin (13.9)
Limit of quantitation: 800 ng/mL (plasma), 1 μg/mL (urine), 5 μg/g (tissue)

OTHER SUBSTANCES
Extracted: flucloxacillin

SAMPLE
Matrix: milk
Sample preparation: 50 g Milk + 2 drops penicillinase (Difco Laboratories), let stand 1 h at 37°, add 50 mL MeCN, shake vigorously for 1 min, centrifuge at 9000 g for 10 min, decant, add 5 g NaCl, swirl to dissolve, add 100 mL dichloromethane, shake for 1 min, centrifuge at 1000 g for 10 min. Remove top aqueous layer and extract organic layer with 25 mL 10% NaCl by shaking and centrifuging as before. Combine aqueous layers, add 1 mL 0.3% mercuric chloride in water, let stand 30 min, add 1 mL 2 M HCl, extract with three 50 mL portions of dichloromethane by shaking each portion for 1 min and centrifuging at 1000 g for 10 min, filter dichloromethane extracts through 30 g anhydrous sodium sulfate, evaporate to dryness under reduced pressure at 35°, if water remains add 5-10 mL MeOH to flask and complete evaporation. Dissolve residue in 1 mL 10% acetic acid, add 0.5 mL 0.08% dansyl hydrazine in 10% acetic acid, let stand 90 min to overnight in the dark, transfer reaction mixture to a separatory funnel with three 25 mL portions of dichloromethane, add 5 mL 2 M HCl, shake for 1 min, wash organic layer with 5 mL 5% $NaHCO_3$ solution, filter through 10-20 g anhydrous sodium sulfate. Extract acid aqueous layer again with 25 mL dichloromethane. Combine dichloromethane layers and evaporate to dryness at 35° under reduced pressure. Dissolve residue in 2 mL IS solution, inject a 20 μL aliquot. (Prepare IS solution by dissolving 10 μL benzaldehyde in 100 mL dichloromethane, evaporate 1 mL to dryness under reduced pressure, dissolve res-

idue in 1 mL 10% acetic acid, add 0.5 mL 0.08% dansyl hydrazine in 10% acetic acid, let stand 90 min to overnight in the dark, transfer reaction mixture to a separatory funnel with three 25 mL portions of dichloromethane, add 5 mL 2 M HCl, shake for 1 min, wash organic layer with 5 mL 5% $NaHCO_3$ solution, filter through 10-20 g anhydrous sodium sulfate. Extract acid aqueous layer again with 25 mL dichloromethane. Combine dichloromethane layers and evaporate to dryness at 35° under reduced pressure. Dissolve residue in 100 mL MeCN then dilute an aliquot 1:4 with MeCN.)

HPLC VARIABLES
Column: 250 × 4 10 μm Lichrosorb RP-18
Mobile phase: MeCN:water 58:42
Flow rate: 1
Injection volume: 20

SAMPLE
Matrix: milk
Sample preparation: Condition a 500 mg tC18 SPE cartridge (Waters) with 20 mL MeOH, 20 mL water, and 10 mL 2% NaCl. Centrifuge 30 mL milk at 1500 g for 10 min. Dilute a 10 mL portion of the defatted milk with 20 mL water, add 200 μL 2 μg/mL penicillin V in pH 9.0 buffer, add 6 mL 170 mM sulfuric acid, add 5.6 mL 5% sodium tungstate, shake vigorously for 1 min, allow to stand for 5 min, check that the pH is in the range 4.6-4.8 (if it is outside this range start again using a different volume of sodium tungstate solution), centrifuge at 1500 g for 10 min, adjust the pH of the supernatant to 8.1-8.2 with 5 M and 0.1 M NaOH, filter (glass fiber) the clear liquid phase. Pass the filtrate through the SPE cartridge at 2 mL/min, wash with 2 mL water, dry by pulling air through the cartridge for 1 min, elute with 2 mL MeCN. Add 150 μL pH 9.0 buffer to the eluate and evaporate to about 100 μL under a stream of nitrogen at 45-50°, add 400 μL pH 9.0 buffer, add 75 μL reagent I, vortex for 30 s, let stand at room temperature for 10 min, use 500 μL water to transfer the mixture to a separatory funnel, add 20 mL dichloromethane, add 5 mL pH 2.45 buffer, shake for 1 min, let stand for no more than 5 min. Remove the organic layer and evaporate it to dryness under reduced pressure at 35-40°, dissolve the residue in 500 μL pH 9.0 buffer, add 75 μL reagent I, vortex for 30 s, let stand at room temperature for 10 min, add 450 μL reagent II, vortex for 1 min, heat at 55 ± 1° for 30 min, cool, filter (0.45 μm), inject a 150 μL aliquot. (Prepare pH 9.0 buffer by dissolving 0.34 g KH_2PO_4 in water, adjusting the pH to 9.0 with NaOH, and making up to 100 mL with water. Prepare pH 2.45 buffer by dissolving 2.72 g KH_2PO_4 in water, adjusting the pH to 2.45 with phosphoric acid, and making up to 100 mL with water. Prepare reagent 1 by dissolving 1.13 g benzoic anhydride in MeCN, make up to 25 mL with MeCN. Prepare reagent II by dissolving 6.905 g 1,2,4-triazole in 30 mL water and adding 5 mL 26 mM mercuric chloride in water, adjust pH to 9.0 ± 0.05 with 5 M NaOH, make up to 50 mL. Prepare reagents I and II 1-4 h before use. Silanize glassware with dichlorodimethylsilane.)

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova-Pak C18
Mobile phase: Gradient. A as MeCN:buffer 10:90. B was MeCN:buffer 30:70. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 13 min, return to initial conditions over 2 min, re-equilibrate at initial conditions for 5 min. (Prepare buffer by dissolving 9.938 g Na_2HPO_4, 17.938 g $NaH_2PO_4.H_2O$, and 4.964 g sodium thiosulfate in water, make up to 2 L with water, pH 6.5.)

SAMPLE

Matrix: milk, tissue

Sample preparation: Milk. Mix 10 mL milk with 2 mL 100 mM tetraethylammonium chloride, add 40 mL MeCN slowly with continual stirring, let stand for 10 min, decant the supernatant through a plug of glass wool. Collect 40 mL filtrate, add 2 mL buffer, evaporate to 1-2 mL under reduced pressure at 40-50°, dilute to 4 mL with water, filter (0.45 μm PVDF). Inject a 2 mL aliquot onto a 150 × 4.6 5 μm Supelcosil LC-18 column, elute with MeCN:10 mM KH_2PO_4 0:100 for 3 min, to 60:40 over 37 min at 1 mL/min, collect a 1.5-2 mL aliquot containing the compound in a tube containing 100 μL Na_2HPO_4 (ca. 24.5 min), evaporate to <1 mL under reduced pressure, make up to 1 mL with water, inject an aliquot. Tissue. Blend 5 g tissue, 5 mL water, 2 mL 100 mM tetraethylammonium chloride (for liver and kidney 1 mL 200 mM tetraethylammonium chloride and 1 mL 5 mM KH_2PO_4), and 40 mL MeCN at half power for 1 min, let stand for 10 min, decant the supernatant through a plug of glass wool. Collect 40 mL filtrate (20 mL for liver and kidney), add 2 mL buffer, add 5 mL water, add 5 mL t-butanol, evaporate to 1-2 mL under reduced pressure at 40-50°, dilute to 4 mL with water, filter (0.45 μm PVDF). Proceed as above. (Prepare the buffer by mixing 10 mM KH_2PO_4 and 10 mM Na_2HPO_4 in a 5:1 ratio, pH 6.)

SAMPLE
Matrix: solutions
Sample preparation: React the antibiotic, triethylamine, and 1-(2,5-dihydroxyphenyl)-2-bromoethanone in a 1:2:4 molar ratio in DMF at 45° for 2 h (use dibenzo-18-crown-6 to make the sodium salt soluble), inject a 10 μL aliquot. (Preparation of 1-(2,5-dihydroxyphenyl)-2-bromoethanone is as follows. Stir 27.6 g 1,4-dimethoxybenzene and 28 mL bromoacetyl bromide at 0°, add 53.4 g aluminum bromide over 10 min (an exothermic reactions ensues), let stand at room temperature for 12 h, add 100 mL 48% HBr, add 100 g ice, stir for 1 h, extract twice with 200 mL portions of diethyl ether. Combine the extracts and wash them 3 times with 200 mL portions of water, dry over 40 g anhydrous magnesium sulfate, evaporate to dryness, recrystallize the product 3 times from EtOH to yield 1-(2,5-dihydroxyphenyl)-2- bromoethanone monobromoacetate (mp 105-107°). Dissolve 11 g 1-(2,5-dihydroxyphenyl)-2-bromoethanone monobromoacetate in 200 mL warm dry MeOH saturated with HBr, stir for 18 h, add 200 mL water, cool to -10°. Collect the yellow solid and dry it under vacuum at 50° for 48 h, recrystallize from toluene:heptane 50:50 then toluene to obtain 1-(2,5-dihydroxyphenyl)-2-bromoethanone as yellow needles (mp 117-119°).)

SAMPLE

Matrix: tissue

Sample preparation: Condition a 6 mL 500 mg Bond Elut C18 SPE cartridge with 20 mL MeOH, 20 mL water, and 10 mL 2% NaCl, do not allow to go dry. 5 g Tissue + 75 μL 20 μg/mL penicillin V in water + 20 mL water, homogenize (Polytron, 20 mm probe), rinse probe with water so that total volume is 35 mL, shake mechanically for 5 min, add 5 mL 170 mM sulfuric acid, add 5 mL 5% sodium tungstate, vortex for 20 s, centrifuge at 2200 g for 10 min, remove the supernatant, add 15 mL water to the residue, shake for 5 min, centrifuge at 2200 g for 10 min. Combine the supernatants and filter (Whatman GF/B) them, add 10 mL 20% NaCl to the filtrate, mix thoroughly, add to the SPE cartridge at 3 mL/min, wash with 10 mL 2% NaCl, wash with 10 mL water, draw air through the cartridge for 5 min, immediately elute with 1 mL MeCN:200 mM pH 6.5 sodium phosphate buffer:water 60:5:35. Add 1 mL reagent to the eluate, vortex, heat at 65° for 30 min, cool rapidly to room temperature, vortex, filter (Acro 0.45 μm), inject a 80-100 μL aliquot of the filtrate. (Prepare reagent by dissolving 34.45 g 1,2,4-triazole in 150 mL water, add 25 mL 10 mM mercuric chloride solution, mix, adjust pH to 9.0 ± 0.5 with 5 M NaOH, make up to 250 mL with water.)

HPLC VARIABLES

Column: 150 × 3.9 4 μm Nova-Pak C18

Mobile phase: MeCN:buffer 25:75 (Buffer was 4.969 g Na_2HPO_4, 8.969 g $NaH_2PO_4.H_2O$, and 2.482 g anhydrous sodium thiosulfate in 1 L water.)

Flow rate: 0.8

Injection volume: 80-100

Detector: UV 325

CHROMATOGRAM

Retention time: 5.8

Internal standard: penicillin V (7.6)

Limit of detection: 5 ng/g

OTHER SUBSTANCES

Simultaneous: ampicillin, chloramphenicol

KEY WORDS

muscle; liver; kidney; derivatization; cow; SPE

REFERENCE

SAMPLE

Matrix: tissue

Sample preparation: Blend 15 g tissue with 45 mL (60 mL for liver and kidney) water in a 300 or 500 mL blender jar at half power (or less to control foaming) for 2 min. Add a 20 mL aliquot of homogenate to 40 mL MeCN, mix, after 5 min decant supernatant through a plug of glass wool, collect 30 mL. Shake vigorously 30 mL filtrate, 10 mL 200 mM phosphoric acid, and 20 mL dichloromethane, remove organic layer and extract aqueous layer with 10 mL dichloromethane (and 10 mL MeCN for liver and kidneys). Combine dichloromethane layers, add 15 mL MeCN, add 40 mL hexane, wash the mixture twice with 4 mL portions of water, extract the organic layer four times with 1 mL 10 mM pH 7 buffer. Combine extracts and add 0.1-0.2 mL tert-butanol, place in a rotary evaporator without heating at first. When the flask becomes cold warm to 50°, concentrate to less than 1 mL, adjust to a final volume of 1 mL, filter (Gelman Acrodisc LCPVDF), inject a 200 μL aliquot.

HPLC VARIABLES

Guard column: Polymer Labs guard cartridge

Column: 150 × 4.6 5 μm 100 Å PLRP-S polystyrene-divinylbenzene (Polymer Labs)

Mobile phase: MeCN:buffer 15:85, after run was over flush at 35:65 for 5 min then re-equilibrate with 15:85 for 9 min. (Buffer was 10 mM pH 7 phosphate buffer prepared from 1.36 KH_2PO_4 and 2.84 g Na_2HPO_4 in 3 L water.)
Flow rate: 1
Injection volume: 200
Detector: UV 210

SAMPLE
Matrix: tissue
Sample preparation: Condition a 6 mL 500 mg Bond Elut C18 SPE cartridge with 20 mL MeOH, 20 mL water, and 20 mL 2% NaCl. Shake 10 g tissue and 20 mL MeCN on a mechanical shaker for 30 min, centrifuge, remove the supernatant, repeat the extraction with 20 and 10 mL portions of MeCN. Combine the extracts and add them to 30 mL 4% NaCl, remove the MeCN under reduced pressure at 40°, filter (Whatman GF/C and Gelman 0.45 μm membrane) the remaining aqueous mixture, add the filtrate to the SPE cartridge at <2 mL/min, wash with 15 mL 2% NaCl, elute with 5 mL MeCN. Add 100 μL 20 μg/mL penicillin V in MeCN to the eluate, evaporate to dryness under a stream of nitrogen at 37°, reconstitute the residue in 1 mL water, vortex, add 1 mL 2 M pH 9 1,2,4-triazole containing 1 mM mercuric chloride, vortex, heat at 65° for 30 min, cool, filter (0.45 μm), inject a 50 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova-Pak C18
Mobile phase: MeCN:buffer 22.5:77.5 (Prepare buffer by dissolving 4.96 g Na_2HPO_4, 10.14 g $NaH_2PO_4.2H_2O$, and 3.90 g sodium thiosulfate in 1 L water.)
Flow rate: 1.2
Injection volume: 50
Detector: UV 325

CHROMATOGRAM
Retention time: 5
Internal standard: penicillin V (6.5)
Limit of detection: 5 ng/g

OTHER SUBSTANCES
Extracted: cloxacillin

KEY WORDS
derivatization; cow; sheep; kidney; liver; muscle; SPE

REFERENCE
Gee,H.-E.; Ho,K.-B.; Toothill,J. Liquid chromatographic determination of benzylpenicillin and cloxacillin in animal tissues and its application to a study of the stability at -20°C of spiked and incurred residues of benzylpenicillin in ovine liver, *J.AOAC Int.*, **1996**, *79*, 640–644.

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Ultra-Turrax) 25 g tissue with 25 mL MeCN for 1 min, add 5 mL 500 mM pH 2.2 phosphate buffer while the homogenizer is still running, add 65 mL MeCN, homogenize for 1 min, centrifuge at 4000 g for 10 min. Remove the supernatant and add it to 7 g NaCl and 50 mL dichloromethane, shake for 2 min, allow to stand for 30 min.

Remove the upper organic layer and add it to 5 g anhydrous sodium sulfate, shake for 30 s, filter through a cotton-wool plug, evaporate to about 4 mL under reduced pressure at 30°, add 3 mL dichloromethane, evaporate to about 4 mL, add 3 mL light petroleum, evaporate to about 0.5 mL, Suspend this residue with sonication in three 3 mL portions of light petroleum and place these fractions in a separate tube, rinse the original tube with 2 mL pH 7 phosphate buffer. Add the phosphate buffer rinse to the light petroleum extracts, vortex for 30 s, centrifuge, remove the aqueous layer. Extract the light petroleum layer with 2 mL pH 7 phosphate buffer and with two 1.5 mL portions of pH 7 phosphate buffer, combine all the aqueous phase, centrifuge, inject a 200 μL aliquot on to column A and elute to waste with mobile phase B, after 15 min elute to waste with mobile phase C at 2 mL/min, after 10 min elute the contents of column A on to column B with mobile phase D, after 2 min remove column A from the circuit, elute column B with mobile phase D, monitor the effluent from column B. (Wash column A with mobile phase A at 2 mL/min for 7 min, with mobile phase A at 1 mL/min for 5 min, with mobile phase B at 2 mL/min for 8 min, and with mobile phase B at 1 mL/min for 6 min.)

HPLC VARIABLES

Column: A 4 × 4 5 μm LiChrospher 100 RP-18e; B 250 × 4 5 μm LiChrospher 100 RP-18e

SAMPLE

Matrix: milk

Sample preparation: Condition a 500 mg tC18 SPE cartridge (Waters) with 20 mL MeOH, 20 mL water, and 10 mL 2% NaCl. Centrifuge 30 mL milk at 1500 g for 10 min. Dilute a 10 mL portion of the defatted milk with 20 mL water, add 200 μL pH 9.0 buffer, add 6 mL 170 mM sulfuric acid, add 5.6 mL 5% sodium tungstate, shake vigorously for 1 min, allow to stand for 5 min, check that the pH is in the range 4.6-4.8 (if it is outside this range start again using a different volume of sodium tungstate solution), centrifuge at 1500 g for 10 min, adjust the pH of the supernatant to 8.1-8.2 with 5 M and 0.1 M NaOH, filter (glass fiber) the clear liquid phase. Pass the filtrate through the SPE cartridge at 2 mL/min, wash with 2 mL water, dry by pulling air through the cartridge for 1 min, elute with 2 mL MeCN. Add 150 μL pH 9.0 buffer to the eluate and evaporate to about 100 μL under a stream of nitrogen at 45-50°, add 400 μL pH 9.0 buffer, add 75 μL reagent I, vortex for 30 s, let stand at room temperature for 10 min, use 500 μL water to transfer the mixture to a separatory funnel, add 20 mL dichloromethane, add 5 mL pH 2.45 buffer, shake for 1 min, let stand for no more than 5 min. Remove the organic layer and evaporate it to dryness under reduced pressure at 35-40°, dissolve the residue in 500 μL pH 9.0 buffer, add 75 μL reagent I, vortex for 30 s, let stand at room temperature for 10 min, add 450 μL reagent II, vortex for 1 min, heat at 55 ± 1° for 30 min, cool, filter (0.45 μm), inject a 150 μL aliquot. (Prepare pH 9.0 buffer by dissolving 0.34 g KH_2PO_4 in water, adjusting the pH to 9.0 with NaOH, and making up to 100 mL with water. Prepare pH 2.45 buffer by dissolving 2.72 g KH_2PO_4 in water, adjusting the pH to 2.45 with phosphoric acid, and making up to 100 mL with water. Prepare reagent 1 by dissolving 1.13 g benzoic anhydride in MeCN, make up to 25 mL with MeCN. Prepare reagent II by dissolving 6.905 g 1,2,4-triazole in 30 mL water and adding 5 mL 26 mM mercuric chloride in water, adjust pH to 9.0 ± 0.05 with 5 M NaOH, make up to 50 mL. Prepare reagents I and II 1-4 h before use. Silanize glassware with dichlorodimethylsilane.)

HPLC VARIABLES

Column: 150 × 3.9 4 μm Nova-Pak C18

Mobile phase: Gradient. A as MeCN:buffer 10:90. B was MeCN:buffer 30:70. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 13 min, return to initial conditions over 2 min, re-equilibrate at initial conditions for 5 min. (Prepare buffer by dissolving 9.938 g Na_2HPO_4, 17.938 g $NaH_2PO_4.H_2O$, and 4.964 g sodium thiosulfate in water, make up to 2 L with water, pH 6.5.)

SAMPLE
Matrix: blood
Sample preparation: Condition an SPE-C8 SPE cartridge (Jones Chromatography) with two 1 mL aliquots of MeOH, two 1 mL aliquots of MeCN:1 M pH 3 ammonium acetate 75:25, and five 1 mL aliquots of water, do not allow to dry. 100 μL Plasma + 100 μL water, mix, add to the SPE cartridge, wash with three 1 mL aliquots of MeOH, add 80 μL 500 ng/mL melphalan in MeOH to the SPE cartridge, elute with 1 mL MeCN:1 M pH 3 ammonium acetate 75:25. Evaporate the eluate to dryness under reduced pressure, reconstitute in 200 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 5 μm Resolve C18 (Waters)
Mobile phase: MeCN:MeOH:triethylamine:200 mM ammonium acetate 18:2:0.5:79.5, pH adjusted to 3.8 with acetic acid
Flow rate: 1.4
Injection volume: 50
Detector: F ex 265 em 345

CHROMATOGRAM
Retention time: 5.5
Internal standard: melphalan (10)
Limit of detection: 8.6 ng/mL

SAMPLE
Matrix: blood
Sample preparation: Let blood stand at 4° for 4 h, centrifuge at 15000 g for 10 min, add sodium azide to a concentration of 0.01%, inject a 25 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax RX-C8
Mobile phase: Gradient. A was 4.2 mM phosphoric acid containing 10 mM sodium heptanesulfonate and 10 mM tetramethylammonium chloride. B was MeCN:water 75:25 containing 4.2 mM phosphoric acid, 10 mM sodium heptanesulfonate, and 10 mM tetramethylammonium chloride. A:B from 90:10 to 10:90 over 30 min, return to initial conditions over 7 min, re-equilibrate for 3 min.
Flow rate: 1.5
Injection volume: 25
Detector: UV 265

CHROMATOGRAM
Retention time: 18
Internal standard: pentamidine

OTHER SUBSTANCES
Extracted: guanylhydrazones

KEY WORDS
serum; mouse; pentamidine is IS; rat

SAMPLE
Matrix: blood, broncho-alveolar lavage fluid, cells, urine
Sample preparation: Plasma. 0.5 mL Plasma + 1 mL 30 ng/mL hexamidine in MeCN, vortex, centrifuge at 1000 g for 10 min, add the supernatant to a Bond Elut C8 SPE cartridge, wash with 1 mL water, wash with 1 mL MeOH:water 50:50, wash with 1 mL MeOH, elute with MeOH:water:sodium heptanesulfonate:tetramethylammonium chloride:phosphoric acid 97.2:2.2:0.5:0.02:0.1, evaporate the eluate to 200 μL under a stream of nitrogen, inject a 50 μL aliquot. Bronchoalveolar lavage fluid. Centrifuge bronchoalveolar lavage fluid, add 1 mL supernatant to 1 mL Sorensen's buffer and 1 mL 30 ng/mL hexamidine in MeCN, vortex, centrifuge, add the supernatant to a Bond Elut C8 SPE cartridge, wash with water, wash with MeOH:water 50:50, wash with MeOH, elute with MeOH:water:sodium heptanesulfonate:tetramethylammonium chloride:phosphoric acid 97.2:2.2:0.5:0.02:0.1, evaporate the eluate to 200 μL under a stream of nitrogen, inject a 50 μL aliquot. Alveolar cells. Wash alveolar cells (from 10 mL bronchoalveolar lavage fluid) twice with phosphate buffered saline, resuspend in 1 L Sorensen's buffer, vortex for 1 min. 250 μL Suspension + 250 μL Sorensen's buffer + 1 mL 30 ng/mL hexamidine in MeCN, vortex, centrifuge, add the supernatant to a Bond Elut C8 SPE cartridge, wash with water, wash with MeOH:water 50:50, wash with MeOH, elute with MeOH:water:sodium heptanesulfonate:tetramethylammonium chloride:phosphoric acid 97.2:2.2:0.5:0.02:0.1, evaporate the eluate to 200 μL under a stream of nitrogen, inject a 50 μL aliquot. Urine. 200 μL Urine + 1 mL 750 ng/mL hexamidine in MeCN, vortex for 1 min, centrifuge at 1000 g for 5 min, inject a 20 μL aliquot (J.Infect.Dis. 1986, 154, 823).

HPLC VARIABLES
Column: 250 × 4.6 5 μm Ultrasphere Octyl 5
Mobile phase: MeCN:water 21:79 containing 0.02% tetramethylammonium chloride and 0.1% phosphoric acid
Flow rate: 1
Injection volume: 50
Detector: F ex 275 em 340

CHROMATOGRAM
Internal standard: hexamidine
Limit of detection: 2.29 ng/mL

KEY WORDS

SAMPLE
Matrix: microsomal incubations
Sample preparation: 6 mL microsomal incubation + 500 μL MeCN + hexamidine, add to a Prep-Sep C18 SPE cartridge (Fisher), wash with water, wash with MeCN, elute with 1 mL MeCN: buffer 95:5. Evaporate the eluate to near dryness under a stream of air, reconstitute the residue in 200 μL mobile phase, inject a 5 μL aliquot. (Buffer was 4.2 mM phosphoric acid containing 10 mM heptanesulfonate and 10 mM tetramethylammonium chloride.)

HPLC VARIABLES
Column: 250 X 4.6 Zorbax 5 μm RX diisopropyl C8
Mobile phase: Gradient. MeCN:buffer from 22.5:77.5 to 45:55 over 25 min (Buffer was 4.2 mM phosphoric acid containing 10 mM heptanesulfonate and 10 mM tetramethylammonium chloride.)
Column temperature: 40
Injection volume: 5
Detector: UV 265

CHROMATOGRAM
Retention time: 16
Internal standard: hexamidine

OTHER SUBSTANCES
Extracted: metabolites

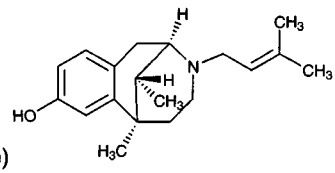
Pentazocine



Molecular formula: $C_{19}H_{27}NO$
Molecular weight: 285.45
CAS Registry No.: 359-83-1, 64024-15-3 (HCl), 17146-95-1 (lactate)
Merck Index: 7261
Lednicer No.: 1 297; 2 325

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 200 ng doxepin or desipramine + 100 μL 1 M NaOH + 9 mL freshly prepared hexane:isoamyl alcohol 99:1, shake vigorously for 5 min, centrifuge. Remove 8.5 mL of the organic phase and add it to 200 μL 50 mM HCl, shake well for 1 min, centrifuge, inject a 50 μL aliquot of the aqueous phase.

HPLC VARIABLES
Column: 300 × 4 μBondapak phenyl
Mobile phase: MeCN:0.01% phosphoric acid containing 0.01% NaCl 35:65, final pH 2.8

Flow rate: 1.5
Injection volume: 50
Detector: UV 210

CHROMATOGRAM
Retention time: 7.4
Internal standard: doxepin (12.2), desipramine (14.2)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Extracted: cocaine, dextromoramide, meperidine, methadone, normeperidine, norpropoxyphene, propoxyphene
Simultaneous: amitriptyline, buprenorphine, chlorpromazine, codeine, desmethyldoxepin, diphenhydramine, ephedrine, imipramine, nortriptyline, oxazepam, oxycodone, pericyazine, pheniramine, propranolol, quinine, thiopropazate, thioridazine

SAMPLE
Matrix: blood
Sample preparation: Rock 5 mL whole blood + 10 mL water + 8.5 mL Na_2WO_4 in a 50 mL stoppered tube for 1 min, add 6 mL $NiCl_2$, rock for 5 min, add 15 mL dichloromethane:isobutyl alcohol:THF 30:45:25, centrifuge at 2500 g for 15 min. Remove organic phase and repeat the process. Filter all organic phases through a 40-90 μm filter and evaporate to dryness in a 100 mL porcelain dish at a moderate temperature in a sand bath. Take up residue in 500 μL MeCN: water 80:20, inject a 20 μL aliquot. (Na_2WO_4 prepared by mixing 10 g $Na_2WO_4.2H_2O$ in 38 mL of 2 M NaOH and 2.5 g of $NaHCO_3$ and making up to 100 mL. $NiCl_2$ was 17% w/v $NiCl_2$ in water.)

HPLC VARIABLES

Column: 200 × 4.6 5 μm Hypersil C8
Mobile phase: Gradient A = MeCN; B = 20 mM n-propylamine adjusted to pH 5 with 85% phosphoric acid. A:B from 15:85 to 20:80 over 5 min to 45:55 over another 15 min to 65:35 over another 5 min
Injection volume: 20
Detector: UV 230

CHROMATOGRAM

Retention time: 20
Limit of detection: 0.50 ppm

OTHER SUBSTANCES

Extracted: buprenorphine, caffeine, cocaine, codeine, diamorphine, ethylmorphine, lidocaine, methaqualone, morphine, naloxone, noscapine, papaverine, procaine
Also analyzed: bromazepam, clonazepam, diazepam, flunitrazepam, flurazepam, medazepam, nitrazepam, oxazepam

KEY WORDS

whole blood

SAMPLE

Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM

Retention time: 1.9
Internal standard: protriptyline (4)

OTHER SUBSTANCES

Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, dextromethorphan, diazepam, diphenhydramine, doxepin, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, ibuprofen, imipramine, maprotiline, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordiazepam, nordoxepin, norfluoxetine, nortriptyline, norverapamil, promazine, propafenone, propoxyphene, protriptyline, quinidine, temazepam, trazodone, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol,

MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin

Interfering: encainide, lidocaine, propranolol

SAMPLE

Matrix: blood, saliva, tissue, urine

Sample preparation: Homogenize (Polytron) tissue with 4 (whole brain) or 8 (brain striata) volumes of 100 mM pH 4.5 NaH_2PO_4 containing 0.5% NaF. Add 500 μL brain homogenate or 500 μL plasma, saliva, or urine containing 15 μL saturated NaF solution to 75 μL 150 μg/mL IS, add 50 μL 50% perchloric acid, mix vigorously for 10 s, let stand at room temperature for 10 min, add 1 mL water, mix briefly, centrifuge at 10° at 2500 (?) for 30 min. Remove the supernatant and add it to 750 μL saturated sodium carbonate solution, mix briefly, add 7.5 mL pentane:chloroform 95:5, rock gently for 10 min, centrifuge in a desk-top centrifuge for 2 min, freeze in dry ice/acetone for 2 min. Remove the organic layer and add it to 250 μL 100 mM HCl, mix vigorously for 10 s, centrifuge in a desk-top centrifuge for 1-2 min, freeze in dry ice/acetone for 3-5 min, discard the organic layer. Allow the aqueous layer to thaw, remove any trace of organic solvent with a stream of nitrogen, inject a 75 μL aliquot of the aqueous layer.

CHROMATOGRAM
Retention time: 11.5
Internal standard: 2β-carbomethoxy-3β-(4-chlorophenyl)tropane (RTI-31) (Research Biochemical International, Natick MA) (11.4)

OTHER SUBSTANCES
Extracted: chlordiazepoxide, clozapine, cocaine, gepirone, methylphenidate, pseudococaine
Simultaneous: acetaminophen, acetophenazine, amoxapine, amphetamine, atropine, benperidol, buspirone, caffeine, carbamazepine, chlorpheniramine, codeine, dextromethorphan, diazepam, diphenhydramine, flupenthixol, flurazepam, haloperidol, hydergine, hydrocodone, hydromorphone, lidocaine, loxapine, mepazine, meperidine, mesoridazine, methaquaalude, 3,4-methylenedioxyamphetamine, 3,4-methylenedioxyethylamphetamine, 3,4-methylenedioxymethamphetamine, morphine, norcocaine, oxazepam, pentobarbital, phenylpropanolamine, procainamide, procaine, propyl benzoylecgonine, quinidine, quinine, salicylic acid, secobarbital, theophylline, trazodone, 3-tropanyl-3,5-dichlorobenzoate, vancomycin, WIN 35428
Noninterfering: amitriptyline, benztropine methanesulfonate, butaperazine, butriptyline, carphenazine, chlorpromazine, clomipramine, cyclobenzaprine, dextropropoxyphene, dronabinol, ephedrine, ethchlorvynol, fluoxetine, fluphenazine, imipramine, meprobamate, methadone, methamphetamine, nicotine, norfluoxetine, nortriptyline, PCP, phenothiazine, pseudoephedrine

KEY WORDS
rat; cow; plasma; brain

Bonate,P.L.; Davis,C.M.; Silverman,P.B.; Swann,A. Determination of cocaine in biological matrices using reversed phase HPLC: Application to plasma and brain tissue, *J.Liq.Chromatogr.*, **1995**, *18*, 3473–3494.

SAMPLE
Matrix: blood, tissue, vitreous humor
Sample preparation: Blood, vitreous humor. Mix 1 mL sample with 500 μL 2% pH 9.5 sodium tetraborate and 8 mL n-butanol:hexane 5:95. Extract for 30 min, centrifuge. Remove the organic layer and add it to 200 μL 0.2% orthophosphoric acid. Extract for 30 min, inject a 30 μL aliquot of the aqueous layer. Tissue. Mix 500 μL liver homogenate with 500 μL 2% pH 9.5 sodium tetraborate and 8 mL n-butanol:hexane 5:95. Extract for 30 min, centrifuge. Remove the organic layer and add it to 400 μL 0.2% orthophosphoric acid. Extract for 30 min, inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Column: 150 × 3.9 5 μm NovaPak-Phenyl
Mobile phase: MeCN:10 mM KH_2PO_4 55:45, adjusted to pH 3.0
Flow rate: 1.5
Injection volume: 30
Detector: UV 214

OTHER SUBSTANCES
Extracted: pimozide, sertraline

KEY WORDS
liver; pentazocine is IS

REFERENCE
McIntyre,I.M.; King,C.V.; Staikos,V.; Gall,J.; Drummer,O.H. A fatality involving moclobemide, sertraline, and pimozide, *J.Forensic Sci.*, **1997**, *42*, 951–953.

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 200.5

CHROMATOGRAM

Retention time: 12.522

KEY WORDS

whole blood

SAMPLE

Matrix: formulations

Sample preparation: Tablets. Powder tablets, weigh out amount equivalent to about 10 mg, add 75 mL mobile phase, sonicate for 20 min, dilute to 100 mL with mobile phase, mix, filter (0.45 μm) (discard first 10 mL of filtrate), inject a 20 μL aliquot of the filtrate. Syrups, elixirs, injectables. Measure out amount equivalent to about 10 mg, add 75 mL mobile phase, sonicate for 20 min, dilute to 100 mL with mobile phase, mix, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 300 × 3.9 10 μm μBondapak CN

Mobile phase: MeOH:3 mM ammonium acetate 90:10

Flow rate: 1.3

Injection volume: 20

Detector: UV 254

CHROMATOGRAM

Retention time: 5.3

OTHER SUBSTANCES

Also analyzed: chlorpheniramine, cyclizine, doxylamine, mesoridazine, promethazine, protriptyline, pyrilamine, pyrimethamine, tripelennamine

KEY WORDS

tablets; syrups; elixirs; injections

SAMPLE
Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 5 Spherisorb S5W
Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 2.21

OTHER SUBSTANCES
Simultaneous: thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine, ethoheptazine, morphine-3-glucuronide, pholcodeine, norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine, pemoline, benzphetamine, diethylpropion, mazindol, tranylcypromine, caffeine, fenethyline, phendimetrazine, methylphenidate, phenelzine, norpseudoephedrine, phentermine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, trimethoxyamphetamine, phenylephrine, pseudoephedrine, ephedrine, methylephedrine, dimethylamphetamine, methamphetamine, mescaline, mephentermine, buprenorphine, dextromoramide, phenoperidine, fentanyl, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene, nalorphine, phenazocine, norpipanone, levallorphan, hydroxypethidine
Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine
Interfering: epinephrine, pipradol, phenylpropanolamine, fencamfamin, chlorphentermine, normethadone, meperidine, dipipanone, diamorphine, acetylcodeine, monoacetylmorphine

SAMPLE

Matrix: urine

Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)

Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)

Column temperature: ambient (column A), 40 (columns B and C)

Flow rate: A 5; B-E 1

Injection volume: 500

Detector: UV 210, UV 235

CHROMATOGRAM

Retention time: k' 2.8

Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)

Limit of detection: 300 ng/mL

OTHER SUBSTANCES

Extracted: nortriptyline, diphenhydramine, methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine, phentermine

Interfering: amphetamine, phenmetrazine, lidocaine, ephedrine, methamphetamine, desipramine

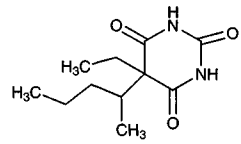
Pentobarbital



Molecular formula: $C_{11}H_{18}N_2O_3$
Molecular weight: 226.28
CAS Registry No.: 76-74-4, 57-33-0 (Na salt)
Merck Index: 7272
Lednicer No.: 1 269

SAMPLE

Matrix: blood
Sample preparation: 200 µL Serum + 200 µL 50 µg/mL hexobarbital in MeCN + 25 µL glacial acetic acid, vortex for 10 s, centrifuge for 1 min, inject a 30-100 µL aliquot of the supernatant.

HPLC VARIABLES

Column: µBondapak C18
Mobile phase: Gradient. MeCN:7.5 g/L NaH_2PO_4 adjusted to pH 3.2 with phosphoric acid 5:95 to 22:78 over 24 min, to 45:55 over 10 min, maintain at 45:55 for 5 min. Re-equilibrate with 5:95 for 5 min.
Column temperature: 50
Flow rate: 3
Injection volume: 30-100
Detector: UV 210

CHROMATOGRAM

Retention time: 22.4
Internal standard: hexobarbital (20.6)
Limit of detection: 200-2000 ng/mL

OTHER SUBSTANCES

Extracted: acetaminophen, amobarbital, butabarbital, butalbital, chlordiazepoxide, diazepam, ethchlorvynol, flurazepam, glutethimide, methaqualone, methyprylon, nitrazepam, phenobarbital, phenytoin, primidone, salicylic acid, secobarbital, theophylline
Simultaneous: amitriptyline, caffeine, clomipramine, codeine, desipramine, ethotoin, imipramine, lidocaine, mesantoin, methsuximide, nirvanol, nortriptyline, oxazepam, procainamide, phenylpropanolamine, propranolol, quinidine

KEY WORDS

serum

SAMPLE
Matrix: blood
Sample preparation: 2 mL Serum + 1 mL buffer, vortex, add 10 mL n-butyl chloride containing 10 μg/mL barbital and 4 μg/mL thiamylal, extract vigorously for 3 min, centrifuge at 3000 g for 5 min. Remove the upper organic layer and add it to 100 μL 450 mM NaOH, extract vigorously for 3 min, centrifuge for 10 min or until lower aqueous phase is clear, inject a 15 μL aliquot of the lower aqueous phase. (Soak glassware in 1 M HCl overnight, rinse with water, dry. Buffer was prepared from equal volumes of 22 g/L KH_2PO_4 and 18 g/L Na_2HPO_4, pH 6.6 ± 0.2.)

HPLC VARIABLES
Column: 125 × 4.6 5 μm C-18 (Perkin-Elmer)
Mobile phase: MeOH:THF:buffer 50:7:43 (Buffer was prepared from equal volumes of 22 g/L KH_2PO_4 and 18 g/L Na_2HPO_4, pH 6.6 ± 0.2.)
Flow rate: 2
Injection volume: 6
Detector: UV 240

CHROMATOGRAM
Retention time: 2.4
Internal standard: barbital (0.8), thiamylal (5.2)
Limit of detection: 2 μg/mL

OTHER SUBSTANCES
Extracted: thiopental
Simultaneous: acetaminophen, acetazolamide, aspirin, butabarbital, cefazolin, chlorothiazide, chlorzoxazone, dicloxacillin, ethosuximide, furosemide, hydrochlorothiazide, ibuprofen, oxacillin, phenobarbital, phenylbutazone, phenytoin, salicylic acid, secobarbital, sulfamethoxazole, theophylline, ascorbic acid
Noninterfering: ampicillin, penicillin G, valproic acid
Interfering: amobarbital

KEY WORDS
serum

Kelner,M.; Bailey,D.N. Reversed-phase liquid-chromatographic simultaneous analysis for thiopental and pentobarbital in serum, *Clin.Chem.*, **1983**, *29*, 1097–1100.

SAMPLE
Matrix: blood
Sample preparation: 50 μL 25 μg/mL 5-Ethyl-5-p-tolylbarbituric acid in MeOH added to 150 × 10 mm glass centrifuge tube and blow dry under a stream of nitrogen, add 500 μL plasma, add 5 mL dichloromethane, mix on rotary mixer for 5 min, centrifuge. Remove organic layer, evaporate to dryness under nitrogen, take up in 500 μL mobile phase, inject a 40 μL aliquot.

HPLC VARIABLES
Guard column: 50 × 4 μBondapak C18 Corasil B
Column: 300 × 4 5 μm μBondapak C18
Mobile phase: MeOH:10 mM potassium phosphate adjusted to pH 4.40 ± 0.05 with 150 mM phosphoric acid 50:50
Flow rate: 1.7
Injection volume: 40
Detector: UV 212

CHROMATOGRAM
Retention time: 8.90
Internal standard: 5-ethyl-5-p-tolylbarbituric acid (4.62)
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: thiopental (UV 284)

Simultaneous: acetaminophen, amobarbital, barbital, butalbital, butabarbital, caffeine, carbamazepine, phenacetin, phenobarbital, phenytoin, secobarbital, theobromine, theophylline, vinbarbital

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: Condition a 100 mg Bond-Elut C8 SPE cartridge with 2 volumes of MeOH, 2 volumes of water, and 1 volume of 100 mM pH 5.59 Sörensen's phosphate buffer. 500 μL Plasma + 10 μL 1 mg/mL sodium secobarbital in EtOH, add to the SPE cartridge, wash with 2 volumes of 100 mM pH 5.59 Sörensen's phosphate buffer, wash with 1 volume of water, elute with 500 μL MeOH. Evaporate the eluate to dryness under vacuum, reconstitute in 50 μL MeOH, inject an aliquot.

HPLC VARIABLES
Guard column: 10 μm Guard-Pak C18 (Waters)
Column: 100 × 8 10 μm Radial-Pak C8 (Waters)
Mobile phase: MeOH:THF:100 mM pH 7.72 Sörensen's phosphate buffer 28:16:52
Flow rate: 2.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 5.21
Internal standard: secobarbital (6.39)
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Extracted: methohexital, thiopental
Noninterfering: ketamine

KEY WORDS
plasma; dog; pharmacokinetics; SPE

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 100 μL buffer + 1.5 mL IS in 5% isopropanol in chloroform, vortex for 30 s, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of air at room temperature, reconstitute the residue in 100 μL mobile phase, inject a 6-10 μL aliquot. (Buffer was 13.6 g KH_2PO_4 in 90 mL water, pH adjusted to 6.8 with about 3 mL 10 M NaOH, made up to 100 mL.)

HPLC VARIABLES
Guard column: 20 × 4.6 Supelguard LC-1 (Supelco)
Column: 250 × 4.6 5 μm Supelcosil LC-1 (Supelco)
Mobile phase: MeOH:MeCN:buffer 17.5:17.5:65 (Buffer was 2.72 g KH_2PO_4 in 1.9 L water, pH adjusted to 6.3 with about 2 mL 1 M NaOH, made up to 2 L.)
Flow rate: 2
Injection volume: 6-10
Detector: UV 204

CHROMATOGRAM
Retention time: 5.86
Internal standard: 5-ethyl-5-p-tolybarbituric acid (tolybarb) (4.80)

OTHER SUBSTANCES
Extracted: acetaminophen, amobarbital, barbital, caffeine, carbamazepine, chloramphenicol, ethosuximide, mephobarbital, methsuximide, phenobarbital, phenytoin, primidone, secobarbital, theophylline, thiopental
Simultaneous: acetanilide, N-acetylcysteine, N-acetylprocainamide, ampicillin, aspirin, butabarbital, butalbital, chlorpropamide, cimetidine, codeine, cyheptamide, diazoxide, diflunisal, diphylline, disopyramide, ethchlorvynol, gentisic acid, glutethimide, heptabarbital, hexobarbital, ibuprofen, indomethacin, ketoprofen, mefenamic acid, mephenytoin, methaqualone, methsuximide, methyl salicylate, methyprylon, morphine, naproxen, nirvanol, oxphenylbutazone, phenacetin, phensuximide, phenylbutazone, procainamide, salicylamide, salicylic acid, sulfamethoxazole, sulindac, tolmetin, trimethoprim, vancomycin
Noninterfering: amikacin, gentamicin, meprobamate, netilmicin, quinidine, tetracycline, tobramycin, valproic acid

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: Vigorously shake equal volumes of plasma and MeCN, centrifuge at 10000 g for 3 min, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 110 × 4.6 PartiSphere C8 (Whatman)
Mobile phase: MeCN:120 mM pH 6.2 phosphate buffer 50:50
Flow rate: 1
Injection volume: 20
Detector: UV 270 following post-column reaction. The column effluent flowed through a 6 m × 0.25 mm ID crocheted PTFE coil irradiated with a Sylvania G8-T5 lamp at 254 nm to the detector.

CHROMATOGRAM
Retention time: 3.28
Limit of detection: 200 ng/mL

OTHER SUBSTANCES
Extracted: thiopental

KEY WORDS
post-column reaction; post-column photochemical derivatization; plasma

SAMPLE
Matrix: blood
Sample preparation: Prepare an SPE cartridge by plugging the end of a 1 mL disposable pipette tip with glass wool and adding about 100 mg Chromosorb P/NAW. Add 50 μL plasma then 50 μL 10 μg/mL tolylphenobarbital in 200 mM HCl to the SPE cartridge, let stand for 2 min, elute with 1 mL chloroform:isopropanol 6:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 15 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Supelcosil-LC-8
Mobile phase: MeCN:water 20:80
Flow rate: 3.3
Injection volume: 15
Detector: UV 208

CHROMATOGRAM
Retention time: 9.18
Internal standard: tolylphenobarbital (7.57)
Limit of detection: 50-100 ng/mL

OTHER SUBSTANCES
Extracted: theophylline, caffeine, barbital, ethosuximide, primidone, carbamazepinediol, phenacemide, methyprylon, nirvanol, phenobarbital, chloramphenicol, butabarbital, carbamazepine epoxide, mephenytoin, amobarbital, carbamazepine, glutethimide, phenytoin, secobarbital, methaqualone
Noninterfering: acetaminophen, amikacin, amitriptyline, clonazepam, cyclosporine, desipramine, diazepam, digoxin, disopyramide, gentamicin, imipramine, lidocaine, methotrexate, N-acetylprocainamide, netilmicin, nortriptyline, procainamide, quinidine, salicylic acid, sulfamethoxazole, tobramycin, trimethoprim, valproic acid, p-hydroxyphenobarbital, vancomycin

SAMPLE

Matrix: blood, CSF, gastric contents, urine
Sample preparation: 200 μL Serum, urine, CSF, or gastric fluid + 300 μL reagent. Flush column A to waste with 500 μL 500 mM ammonium sulfate, inject sample onto column A, flush column A to waste with 500 μL 500 mM ammonium sulfate, backflush the contents of column A onto column B with mobile phase, monitor the effluent from column B. (Reagent was 8.05 M guanidine HCl and 1.02 M ammonium sulfate in water.)

HPLC VARIABLES

Column: A 40 μm preparative grade C18 (Analytichem); B 75 × 2.1 pellicular C18 (Whatman) + 250 × 4.6 5 μm C8 end-capped (Whatman)
Mobile phase: Gradient. A was 50 mM pH 4.5 KH_2PO_4. B was MeCN:isopropanol 80:20. A:B 90:10 for 1 min, to 30:70 over 20 min.
Column temperature: 50
Flow rate: 1.5
Detector: UV 220

CHROMATOGRAM

Retention time: 12.12
Internal standard: heptanophenone (19)

OTHER SUBSTANCES

Extracted: acetaminophen, allobarbital, azinphos, barbital, brallobarbitone, bromazepam, butethal, caffeine, carbamazepine, carbaryl, cephaloridine, chloramphenicol, chlordiazepoxide, chlorothiazide, chlorvinphos, clothiapine, cocaine, coomassie blue, desipramine, diazepam, diphenhydramine, dipipanone, ethylbromphos, flufenamic acid, formothion, griseofulvin, indomethacin, lidocaine, lorazepam, malathion, medazepam, midazolam, oxazepam, paraoxon, penicillin G, prazepam, propoxyphene, prothiophos, quinine, salicylic acid, secobarbital, strychnine, sulfamethoxazole, theophylline, thiopental, thioridazine, trimethoprim

SAMPLE

Matrix: blood, tissue

Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES

Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM

Retention time: 1.50
Internal standard: cianopramine (8.93)

OTHER SUBSTANCES

Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, desipramine, diphenhydramine, dothiepin, doxepin, fluoxetine, haloperidol, imipramine, loxapine, maprotiline, meperidine, mesoridazine, methadone, mianserin, nomifensine, nordoxepin, norfluoxetine, norpropoxyphene, northiaden, nortriptyline, pheniramine, promethazine, propoxyphene, propranolol, protriptyline, quinidine, quinine, sulforidazine, thioridazine, thiothixene, trazodone, trihexyphenidyl, trimipramine, triprolidine

Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine

Interfering: moclobemide, tranylcypromine, metoclopramide

KEY WORDS

serum; whole blood; liver

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 16.437

SAMPLE
Matrix: formulations
Sample preparation: Dissolve injection in mobile phase to give a pentobarbital sodium concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 10 μm Partisil ODS-3 or 300 × 4 10 μm μBondapak C18
Mobile phase: MeOH:buffer:propylene glycol 55:45:4 (Buffer was 4.1 g anhydrous sodium acetate and 15 mL acetic acid in 1 L water.)
Flow rate: 2
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Retention time: 3

OTHER SUBSTANCES
Simultaneous: degradation products

KEY WORDS
rugged; injections

SAMPLE
Matrix: solutions
Sample preparation: Mix 50 μL of a 20-200 μg/mL solution in acetone with 50 μL of a 0.4-1.6 mg/mL solution of 2-bromo-2'-acetonaphthone in acetone, add 5-10 mg cesium carbonate, heat at 30° for 30 min, add 50 μL glacial acetic acid, mix, inject an aliquot.

HPLC VARIABLES
Column: 300 × 4 μBondapak C18
Mobile phase: MeOH:water 80:20
Flow rate: 2
Detector: UV 249

CHROMATOGRAM
Retention time: 8.75
Limit of detection: 1 ng

OTHER SUBSTANCES
Simultaneous: amobarbital, barbital, butobarbital, heptobarbital, hexobarbital, mephobarbital, phenobarbital, secobarbital

KEY WORDS
derivatization

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

SAMPLE
Matrix: urine
Sample preparation: 2 mL Urine +1 mL 500 mM pH 5.5 phosphate buffer, add to an Extrelut 3 SPE cartridge, let stand for 10 min, elute with 15 mL dichloromethane:isopropanol 95:5. Evaporate the eluate to dryness under a stream of nitrogen at 40°, reconstitute the residue in 100 µL mobile phase, inject a 20 µL aliquot.

HPLC VARIABLES
Guard column: 4 × 4 5 µm Lichrospher 100 RP8
Column: 250 × 4 5 µm Lichrospher 100 RP8
Mobile phase: Gradient. MeCN:10 mM pH 4.4 phosphate buffer from 30:70 to 40:60 over 8 min, maintain at 40:60 for 6 min, to 30:70 over 1 min
Flow rate: 1
Injection volume: 20
Detector: UV 212

CHROMATOGRAM
Retention time: 11.1
Limit of detection: 300 ng/mL

OTHER SUBSTANCES
Extracted: barbital, allobarbital, butabarbital, phenobarbital, secobarbital
Noninterfering: acetaminophen, aspirin, amitriptyline, buprenorphine, caffeine, carbamazepine, chlorpromazine, desipramine, dextromethorphan, doxepin, ephedrine, fenfluramine, imipramine, lidocaine, loxapine, meperidine, methadone, methaqualone, naloxone, naltrexone, nicotine, orphenadrine, oxycodone, papaverine, pentazocine, phendimetrazine, phenmetrazine, phentermine, phenylpropanolamine, phenytoin, primidone, procaine, promethazine, propoxyphene, propyphenazone, theobromine, theophylline, trazodone, triflupromazine, trimethoprim, trimipramine

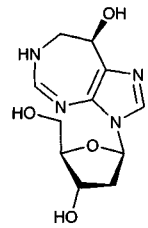
Pentostatin



Molecular formula: $C_{11}H_{16}N_4O_4$
Molecular weight: 268.27
CAS Registry No.: 53910-25-1
Merck Index: 7277

SAMPLE

Matrix: blood
Sample preparation: 200 μL Serum + 20 μL isoamyl alcohol + 50 μL chloroform, vortex for 30 s, centrifuge at 20931 g for 10 min. Remove the aqueous layer and add it to 1 mL cold acetone (0°), vortex for 10 s, centrifuge for 5 min. Remove the supernatant and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 50 μL water, inject an aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm LiChrosorb RP-8
Mobile phase: MeCN:buffer 4:96 (Buffer was 5 mM sodium pentanesulfonate, pH 7.2.)
Column temperature: 40
Flow rate: 1
Detector: UV 250

CHROMATOGRAM

Retention time: 5.82

OTHER SUBSTANCES

Extracted: vidarabine
Noninterfering: chlorothiazide, cytosine arabinoside, guanine arabinoside, hydroxyzine, kanamycin, metaproterenol, nystatin, penicillin G, phenobarbital, prednisone, sulfamethoxazole, theophylline, trimethoprim, uracil arabinoside

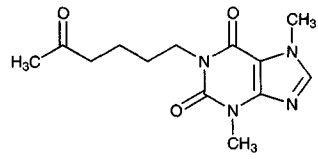
Pentoxifylline



Molecular formula: $C_{13}H_{18}N_4O_3$
Molecular weight: 278.31
CAS Registry No.: 6493-05-6
Merck Index: 7278
Lednicer No.: 2 466

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 206.4

CHROMATOGRAM

Retention time: 11.477

KEY WORDS

whole blood

SAMPLE

Matrix: microsomal incubations
Sample preparation: Add 6 mL ice-cold dichloromethane to 500 μL microsomal incubation, add 100 μL 10 μg/mL CT-2410 R, shake on a reciprocal shaker for 10 min, centrifuge at 3000 g for 10 min, evaporate the organic layer to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL mobile phase, inject 30-60 μL aliquot.

HPLC VARIABLES

Guard column: Opti-Guard (Optimize Technologies, Inc.)
Column: 100 × 4.6 3 μm Microsorb-MV C18
Mobile phase: MeOH:buffer 35:65 (Buffer was 25 mM ammonium phosphate containing 0.25% acetic acid, pH adjusted to 4.5 with ammonium hydroxide.)
Flow rate: 0.7
Injection volume: 30-60
Detector: UV 273

CHROMATOGRAM

Retention time: 9.3

Internal standard: CT-2410 R (20.0)
Limit of detection: 10 nM

OTHER SUBSTANCES
Extracted: lisofylline

KEY WORDS
human; liver

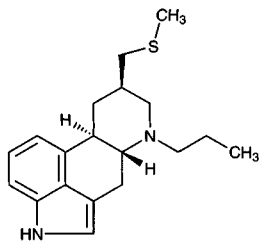
Pergolide



Molecular formula: $C_{19}H_{26}N_2S$
Molecular weight: 314.49
CAS Registry No.: 66104-22-1, 66104-23-2 (mesylate)
Merck Index: 7304
Lednicer No.: 3 249

SAMPLE
Matrix: cell cultures
Sample preparation: Evaporate 100 μL 1 mg/mL lergotrile in MeOH in the bottom of a glass tube under a stream of nitrogen, add 2 mL culture homogenate (Polytron), add 2 mL 100 mM pH 8.5 sodium carbonate/sodium bicarbonate buffer, add 4 mL isoamyl alcohol, shake at 30 oscillations/min for 30 min, centrifuge at 1230 g for 10 min. Remove 2 mL of the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 250-500 μL mobile phase, filter, inject an aliquot.

HPLC VARIABLES
Column: 300 × 3.9 μBondapak C18
Mobile phase: MeCN:10 mM pH 8.4 ammonium carbonate buffer 65.2:34.8
Flow rate: 2
Injection volume: 50
Detector: UV 290

CHROMATOGRAM
Retention time: 6.74
Internal standard: lergotrile (2.42)
Limit of quantitation: 10 μg/mL

OTHER SUBSTANCES
Extracted: metabolites

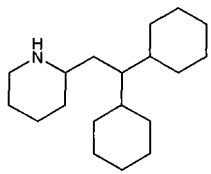
Perhexiline



Molecular formula: $C_{19}H_{35}N$
Molecular weight: 277.49
CAS Registry No.: 6621-47-2, 6724-53-4 (maleate)
Merck Index: 7305

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 200 μL 1.4 μg/mL hexadiline hydrochloride in 100 mM HCl + 50 μL 2 M pH 8.75 Tris-HCl buffer + 4 mL n-hexane, shake horizontally at 100 oscillations/min for 15 min, centrifuge at 2500 rpm for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL 100 mM pH 10 sodium bicarbonate buffer, add 100 μL 5 mM dansyl chloride in acetone (freshly prepared), vortex, heat at 37° for 20 min, add 1.5 mL n-hexane, vortex, centrifuge at 10° at 2500 rpm for 3 min, freeze in dry ice/EtOH. Remove the organic layer and evaporate it to dryness at 60°, reconstitute the residue in 100 μL mobile phase, inject a 25 μL aliquot.

HPLC VARIABLES
Column: 100 × 3.2 3 μm Velosep (Brownlee)
Mobile phase: MeOH:water 86:14
Column temperature: 45
Flow rate: 0.5
Injection volume: 25
Detector: F ex 366 em 470

CHROMATOGRAM
Retention time: 15.9, 16.8 (isomers)
Internal standard: hexadiline (19.5)
Limit of quantitation: 150 ng/mL

OTHER SUBSTANCES
Noninterfering: metabolites

KEY WORDS
derivatization; plasma; pharmacokinetics

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 10 µg/mL solution in MeOH, inject a 20 µL aliquot.

HPLC VARIABLES

Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 400 µL Plasma + 400 µL 1 M diammonium hydrogen phosphate + 50 µL 2.5 µg/mL di-n-hexylamine in water + 100 µL 1 mg/mL diisopropylethylamine + 5 mL isopentane:dichloromethane 60:40, vortex for 1.5 min, centrifuge at 1500 g for 5 min, freeze in dry ice/acetone. Remove the organic layer and evaporate it to dryness under reduced pressure at room temperature, reconstitute the residue in 100 µL 10 mg/mL trans-4-nitrocinnamoyl chloride in dry MeCN, vortex for 15 s, let stand at room temperature for 30 min, add 100 µL 25 mM sodium carbonate, vortex for 15 s, let stand at room temperature for 5 min, add 100 µL MeCN:50 mM ammonium acetate 50:50, vortex for 30 s, centrifuge at 1500 g for 5 min, inject a 130 µL aliquot of the supernatant.

HPLC VARIABLES
Column: 250 × 4.6 5 µm Spherisorb phenyl
Mobile phase: MeCN:water:glacial acetic acid 46:53.5:0.5
Flow rate: 2
Injection volume: 130
Detector: UV 340

CHROMATOGRAM
Retention time: 18.4
Internal standard: di-n-hexylamine (10.2)
Limit of detection: 30 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: dealkyldisopyramide, desethylamiodarone, desipramine, flecainide, mexiletine, nortriptyline, protriptyline, sotalol

KEY WORDS
derivatization; plasma

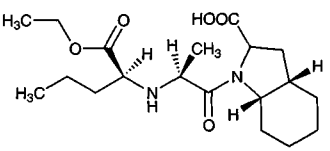
Perindopril



Molecular formula: $C_{19}H_{32}N_2O_5$
Molecular weight: 368.47
CAS Registry No.: 82834-16-0, 107133-36-8 (erbumine salt)
Merck Index: 7311
Lednicer No.: 5 111

SAMPLE
Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 206.4

CHROMATOGRAM

Retention time: 13.698

KEY WORDS

whole blood

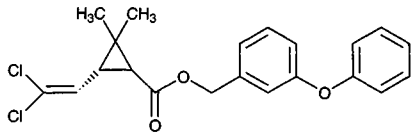
Permethrin



Molecular formula: $C_{21}H_{20}Cl_2O_3$
Molecular weight: 391.29
CAS Registry No.: 52645-53-1
Merck Index: 7321

SAMPLE

Matrix: blood, tissue
Sample preparation: Homogenize (Labsonic 2000 U sonicator with titanium probe) sciatic nerve or brain with 2 mL water. Homogenize (Stomacher Lab Blender) liver samples. Shake plasma or tissue homogenate with 8 mL n-pentane, centrifuge, repeat twice more. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 30°, reconstitute the residue in 500 µL MeOH, inject an aliquot.

HPLC VARIABLES

Column: 120 × 4 5 µm Nucleosil 120 C18
Mobile phase: MeOH:water:chloroform:acetic acid 54.5:39.5:5:1
Flow rate: 1.1
Detector: UV 254

CHROMATOGRAM

Limit of quantitation: 200 ng/mL (tissue), 100 ng/mL (plasma)

OTHER SUBSTANCES

Extracted: metabolites

SAMPLE
Matrix: fruit, vegetables
Sample preparation: Prepare a cleanup column by placing 4 g Florisil, 1 g activated charcoal, and a 20 mm layer of anhydrous sodium sulfate in a 400 × 10 glass column, wash with 40 mL toluene, wash with 40 mL toluene:MeCN 99:1. Homogenize 25 g chopped fruit or vegetable with 70 mL MeOH at high speed for 3 min, filter, homogenize solid with 30 mL MeOH, filter. Combine the filtrates and add them to 60 mL toluene and 300 mL 10% NaCl in water, shake well for 3 min, let layers separate. Dry the organic layer by passing it through 20 g anhydrous sodium sulfate in a 20 mm diameter column, concentrate to about 5 mL under reduced pressure at 80°, add to the cleanup column, elute with 40 mL toluene:MeCN 99:1. Evaporate the eluate just to dryness under reduced pressure at 80°, reconstitute with 1 mL MeOH, inject an aliquot. (Reflux activated charcoal (20-40 mesh) with 1 M HCl for 4 h, wash with water until the washings are neutral, dry at 95-100° (J.Assoc.Off.Anal.Chem. 1983, 66, 1013). Heat 60-100 mesh Florisil at 200° for 24 h, cool, add 4% water, mix thoroughly, store in a sealed jar (J.Assoc.Off.Anal.Chem. 1983, 66, 1003).)

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: Gradient. MeCN:water from 62:38 to 78:22 over 32 min (Waters curve 6).
Column temperature: 50
Flow rate: 1.5
Detector: UV 206

CHROMATOGRAM
Retention time: 24.60, 27.01
Limit of detection: 50 ng/g

OTHER SUBSTANCES
Simultaneous: allethrin, biphenthrin, cypermethrin, fenpropathrin, fenvalerate, flucythrinate, methothrin, Py-115, tetramethrin

SAMPLE
Matrix: solutions
Sample preparation: Inject 100 mL river water on to column A at 5 mL/min and let the effluent flow to waste, backflush the contents of column A on to column B and start the gradient, monitor the effluent from column B. At the end of each run backflush column A with 5 mL water, with 30 mL 100 mM pH 2 sodium citrate buffer, with 10 mL water, with 5 mL MeCN, and with 10 mL hexane:dichloromethane 50:50. Wash new column A with 10 mL water.

HPLC VARIABLES
Column: A 20 × 3 10 μm PRP-1 (Hamilton); B 30 × 4.6 10 μm RP-18 (Brownlee) + 250 × 4.6 5 μm LiChrospher C18
Mobile phase: Gradient. MeCN:water from 5:95 to 90:10 over 1 h, maintain at 90:10 for 4 min, return to initial conditions (?) over 1 min, re-equilibrate for 10 min.
Flow rate: 1 for 64 min, to 1.5 over 1 min, maintain at 1.5 for 5 min, to 1 over 5 min
Injection volume: 100000
Detector: UV 210

CHROMATOGRAM
Retention time: 62.2 (trans), 63.6 (cis)
Limit of detection: 100 ng/L

OTHER SUBSTANCES
Simultaneous: alachlor, aldicarb, aldicarb oxime, atrazine, carbofuran, chlorobenzilate, chlorothalonil, chlorpyrifos methyl, chlortoluron, cypermethrin, DDT, deltamethrin, diazinon, diclofop methyl, dimethoate, diuron, ethofumesate, fenitrothion, fenvalerate, fluazifop butyl, fluometuron, linuron, metalaxyl, metamitron, methomyl, metobromuron, metolachlor, molinate, oxamyl, paraoxon, paraoxon methyl, parathion, parathion methyl, pendimethalin, phenmedipham, pirimphos, pirimphos methyl, prometryne, propanil, propiconazole, simazine, terbuthylazine, trifluraline
Interfering: p,p'-DDE

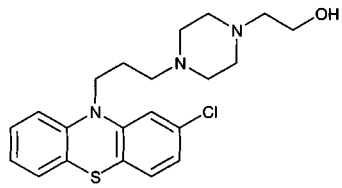
Perphenazine



Molecular formula: $C_{21}H_{26}ClN_3OS$
Molecular weight: 403.98
CAS Registry No.: 58-39-9
Merck Index: 7323

SAMPLE
Matrix: blood
Sample preparation: 3 mL Serum + 50 ng thiethylperazine maleate + 3 mL diluted Titrisol (pH 10 borate buffer, Merck) + 4 mL heptane:isoamyl alcohol 97:3, shake thoroughly for 15 s,

centrifuge at 2500 g for 5 min. Remove the organic phase and add it to 1.5 mL 50 mM sulfuric acid containing 0.1% $Na_2S_2O_2$, mix for 15 s, centrifuge at 2500 g for 10 min. Remove the aqueous phase. Repeat the extraction and back extraction. Combine the aqueous phases and add them to 1.5 mL 2 M pH 9.1 glycine buffer, add 200 μL n-hexane:isoamyl alcohol 97:3, vortex for 25 s. Remove the organic phase and evaporate it to dryness in a desiccator, reconstitute in mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:water:acetic acid 65:35:3 containing 10 mM dodecyl hydrogen sulfate
Flow rate: 2
Detector: UV 257

CHROMATOGRAM
Retention time: 8.5
Internal standard: thiethylperazine (13)
Limit of detection: 0.3 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Noninterfering: alimemazine, biperidine, carbamazepine, chlorpromazine, clomipramine, diazepam, dihydroergotamine, disulfiram, dixyrazine, haloperidol, levomepromazine, nitrazepam, orphenadrine, promethazine, propiomazine, thioridazine, trimipramine, vitamins

SAMPLE
Matrix: formulations
Sample preparation: Add 5 mL water to powdered tablets containing 4 mg perphenazine, heat on a water-bath for 3 min. Cool, add 50 mL water, shake for 15 min and make up to 100 mL with MeOH. Filter, remove a 5 mL aliquot, add IS to a concentration of 3 μg/mL, make up to 50 mL with mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 150 × 3.9 Novapak-phenyl-4
Mobile phase: MeOH:15 mM pH 6.5 sodium acetate buffer 81:19
Flow rate: 1.0
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 4.4
Internal standard: pindolol (2.5)
Limit of detection: 100 pg

OTHER SUBSTANCES
Simultaneous: degradation products

KEY WORDS
tablets

SAMPLE
Matrix: formulations
Sample preparation: Syrup, injections. Measure amount of syrup equivalent to about 5 mg perphenazine, add 5 mL 0.5 mg/mL trifluoperazine hydrochloride in MeOH, make up to 50 mL with MeOH, mix, inject a 10 μL aliquot. Tablets. Finely powder tablets, weigh out amount equivalent to 10 mg perphenazine, add 20 mL 1% HCl, shake for 20 min, centrifuge. Remove a 10 mL aliquot and add it to 5 mL 0.5 mg/mL trifluoperazine hydrochloride in MeOH, make up to 50 mL with MeOH, mix, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Zorbax CN
Mobile phase: MeCN:MeOH:25 mM pH 4.5 acetate buffer 40:30:30
Flow rate: 2.5
Injection volume: 10
Detector: UV 229

CHROMATOGRAM
Retention time: 4.6
Internal standard: trifluoperazine (6)

OTHER SUBSTANCES
Simultaneous: perphenazine sulfoxide, degradation products

KEY WORDS
tablets; syrup; injections

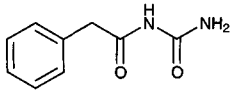
Phenacemide



Molecular formula: $C_9H_{10}N_2O_2$
Molecular weight: 178.19
CAS Registry No.: 63-98-9
Merck Index: 7343
Lednicer No.: 1 95

SAMPLE
Matrix: blood
Sample preparation: Prepare an SPE cartridge by plugging the end of a 1 mL disposable pipette tip with glass wool and adding about 100 mg Chromosorb P/NAW. Add 50 μL plasma then 50 μL 10 μg/mL tolylphenobarbital in 200 mM HCl to the SPE cartridge, let stand for 2 min, elute with 1 mL chloroform:isopropanol 6:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 15 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Supelcosil-LC-8
Mobile phase: MeCN:water 20:80
Flow rate: 3.3
Injection volume: 15
Detector: UV 208

CHROMATOGRAM
Retention time: 2.36
Internal standard: tolylphenobarbital (7.57)

Limit of detection: 50-100 ng/mL

OTHER SUBSTANCES
Extracted: theophylline, caffeine, barbital, ethosuximide, primidone, carbamazepinediol, nirvanol, phenobarbital, chloramphenicol, butabarbital, carbamazepine epoxide, mephenytoin, pentobarbital, amobarbital, carbamazepine, glutethimide, phenytoin, secobarbital, methaqualone
Noninterfering: acetaminophen, amikacin, amitriptyline, clonazepam, cyclosporine,desipramine, diazepam, digoxin, disopyramide, gentamicin, imipramine, lidocaine, methotrexate, N-acetylprocainamide, netilmicin, nortriptyline, procainamide, quinidine, salicylic acid, sulfamethoxazole, tobramycin, trimethoprim, valproic acid, p-hydroxyphenobarbital, vancomycin
Interfering: methyprylon

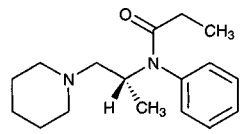
Phenampromide



Molecular formula: $C_{17}H_{26}N_2O$
Molecular weight: 274.41
CAS Registry No.: 129-83-9
Merck Index: 7353

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2

Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 2.2

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES
Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)

Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 262

CHROMATOGRAM

Retention time: 5.22
Limit of detection: <120 ng/mL

KEY WORDS

whole blood; plasma; interferences may occur–compounds (all of which are extracted) elute in this order tenoxicam; iproniazid; methocarbamol; methotrexate; caffeine; nialamide; colchicine; cytarabine; benzoylecgonine; acetaminophen; diazoxide; dacarbazine; sulfinpyrazole; flumazenil; sulpride; morphine; atenolol; toloxatone; terbutaline; albuterol; phenobarbital; ranitidine; tiapride; phenol; chlormezanone; aspirin; metformin; ritodrine; codeine; sultopride; amisulpride; naltrexone; lisinopril; benzocaine; nizatidine; nalorphine; mephenesin; naloxone; sotalol; carteolol; procainamide; carbamazepine; bromazepam; nalbuphine; nadolol; procarbazine; dihydralazine; omeprazole; strychnine; acebutolol; glutethimide; chlorpropamide; glipizide; triazolam; prazosin; flunitrazepam; clonazepam; metoclopramide; melphalan; estazolam; tolbutamide; ephedrine; clonidine; pindolol; clobazam; minoxidil; disopyramide; nitrazepam; dextromethorphan; tofisopam; zopiclone; debrisoquine; sulindac; alprazolam; cycloguanil; lorazepam; methaqualone; ketamine; piroxicam; metoprolol; nifedipine; quinine; mephentermine; prilocaine; pentazocine; oxazepam; tiaprofenic acid; quinidine; celiprolol; ajmaline; yohimbine; lidocaine; secobarbital; viloxazine; mepivacaine; meperidine; doxylamine; labetalol; temazepam; amodiaquine; benperidol; droperidol; hydroxychloroquine; zolpidem; ketoprofen; alminoprofen; cicletanine; moclobemide; chloroquine; cocaine; timolol; nomifensine; ticlopidine; acenocoumarol; vindesine; mexiletine; dipyridamole; trazodone; pipamperone; pyrimethamine; benazepril; vincristine; metapramine; chlordiazepoxide; oxprenolol; warfarin; clorazepate; flecainide; phencyclidine; thiopental; fenfluramine; metipranolol; triprolidine; naproxen; buprenorphine; verapamil; buspirone; tianeptine; midazolam; bupivacaine; carbinoxamine; loprazolam; cetirizine; chlorpheniramine; moperone; cibenzoline; medifoxamine; astemizole; vinblastine; nicardipine; bisoprolol; diltiazem; glibornuride; reserpine; aconitine; nitrendipine; diazepam; mianserin; ramipril; haloperidol; tetracaine; alprenolol; acepromethazine; glibenclamide; chlorophenacinone; doxepin; nimodipine; diphenhydramine; cyclizine; histapyrrodine; phenylbutazone; demexiptiline; clozapine; proguanil; trifluperidol; medazepam; cyamemazine; bumadizone; suriclone; propranolol; acepromazine; dothiepin; dextromoramide; fenoprofen; dextropropoxyphene; loxapine; betaxolol; propafenone; promethazine; thioproperazine; methadone; amoxapine; quinupramine; opipramol; cyproheptadine; brompheniramine; mefenidramine; protriptyline; flurbiprofen; tetrazepam; zorubicin; prazepam; alimemazine; loperamide; imipramine; desipramine; levomepromazine; hydroxyzine; niflumic acid; penbutolol; fluvoxamine; pimozide; daunorubicin; indomethacin; maprotiline; tropatenine; etodolac; fluoxetine; amitriptyline; nortriptyline; tioclomarol; diclofenac; mefloquine; trimipramine; chlorambucil; lidoflazine; ibuprofen; floctafenine; alpidem; loratadine; chlorpromazine; clomipramine; carpipramine; thioridazine; fentiazac; clemastine; mefenamic acid; fluphenazine; prochlorperazine; penfluridol; bepridil; terfenadine; trifluoperazine

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 40°, reconstitute the residue in 200 μL buffer, inject a 20 μL aliquot. (Buffer was 5 mM heptanesulfonic acid in MeCN:water:triethylamine 70:30:0.4.)

HPLC VARIABLES
Guard column: 50 × 4.6 30 μm C8
Column: 250 × 4.6 Spherisorb S5 ODS2 C18
Mobile phase: Gradient. MeCN:buffer:water 0:75:25 for 5 min, 15:85:0 for 12 min (step gradient). (Buffer was 5 mM heptanesulfonic acid in MeCN:water:triethylamine 70:30:0.4.)
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 11.09
Internal standard: phenelzine

OTHER SUBSTANCES
Extracted: isoniazid, hydrazine, monoacetylhydrazine

KEY WORDS
derivatization; phenelzine is IS

REFERENCE
Walubo,A.; Smith,P.; Folb,P.I. Comprehensive assay for pyrazinamide, rifampicin and isoniazid with its hydrazine metabolites in human plasma by column liquid chromatography, *J.Chromatogr.B*, **1994**, *658*, 391–396.

SAMPLE
Matrix: blood, CSF
Sample preparation: 200-500 μL Plasma or CSF + 100 μL 10% (?) aqueous acetic acid + 5 mL n-hexane, shake for 30 min, centrifuge at 1870 g for 10 min. Discard the organic layer. Add 300 μL 0.1% salicaldehyde in EtOH and 400 μL 10% aqueous acetic acid to the aqueous layer, heat at 60° for 30 min, cool, add 1 mL 1 M pH 6.5 K_2HPO_4, shake for 10 s, add 5 mL diethyl ether, shake for 10 min, centrifuge at 1870 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 50 μL mobile phase, inject a 25 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 30 μm C8 (Waters)
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:water:triethylamine 70:30:0.4 containing 5 mM heptanesulfonic acid, pH adjusted to 6.0 with acetic acid
Flow rate: 1
Injection volume: 25
Detector: UV 320

CHROMATOGRAM
Retention time: 3
Internal standard: phenelzine sulfate

OTHER SUBSTANCES
Extracted: hydrazine, isoniazid
Noninterfering: p-aminosalicylic acid, pyrazinamide, rifampin

KEY WORDS
plasma; rabbit; derivatization; phenelzine is IS

SAMPLE
Matrix: formulations
Sample preparation: Mix powdered tablet with 5 mL 200 mM pH 6 sodium acetate buffer, rotate at 30 rpm for 30 min, centrifuge. Remove a 1 mL aliquot of the supernatant and add it

to 1 mL 15 mg/mL benzaldehyde in MeOH:water 50:50, rotate at 30 rpm for 10 min, add 20 mL 3 μg/mL IS in mobile phase, rotate at 30 rpm for 30 min, inject a 50 μL aliquot of the upper layer.

HPLC VARIABLES
Column: 150 × 4.6 Ultrasphere Si
Mobile phase: n-Hexane:chloroform 95:5
Flow rate: 2
Injection volume: 50
Detector: UV 313

CHROMATOGRAM
Retention time: 17
Internal standard: iminodibenzyl (2)

OTHER SUBSTANCES
Simultaneous: hydrazine

KEY WORDS
derivatization; tablets; normal phase

SAMPLE
Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 5 Spherisorb S5W
Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 1.81

OTHER SUBSTANCES
Simultaneous: normethadone, meperidine, dipipanone, diamorphine, pentazocine, acetylcodeine, monoacetylmorphine, thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine, ethoheptazine, morphine-3-glucuronide, pholcodeine, norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine, pemoline, benzphetamine, diethylpropion, mazindol, epinephrine, pipradol, phenylpropanolamine, fencamfamin, chlorphentermine, norpseudoephedrine, phentermine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, trimethoxyamphetamine, phenylephrine, pseudoephedrine, ephedrine, methylephedrine, dimethylamphetamine, methamphetamine, mescaline, mephentermine, buprenorphine, dextromoramide, phenoperidine, fentanyl, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene
Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine
Interfering: tranylcypromine, caffeine, fenethyline, phendimetrazine, methylphenidate, nalorphine, phenazocine, norpipanone, levallorphan, hydroxypethidine

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX

Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

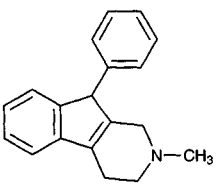
Phenindamine



Molecular formula: $C_{19}H_{19}N$
Molecular weight: 261.37
CAS Registry No.: 82-88-2, 569-59-5 (tartrate)
Merck Index: 7380

SAMPLE

Matrix: bulk
Sample preparation: Disperse 100 mg phenindamine tartrate in 5 mL 1 mM nitric acid with gentle shaking, make up to 10 mL with MeOH, shake until dissolution is complete, inject a 5 μL aliquot.

HPLC VARIABLES

Column: μBondapak C18
Mobile phase: MeOH:buffer 50:50 (Protect mobile phase from light, prepare fresh daily.) (Buffer was 40 g/L silver nitrate in 1 mM nitric acid.)

Flow rate: 0.8
Injection volume: 5
Detector: UV 254

CHROMATOGRAM
Retention time: 15

OTHER SUBSTANCES
Simultaneous: isophenindamine

KEY WORDS
protect from light

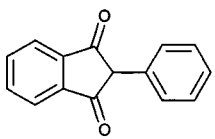
Simultaneous: thonzylamine, pheniramine, tripelennamine, chlorpheniramine, brompheniramine, phenyltoxamine, clemizole

REFERENCE

Roos,R.W.; Lau-Cam,C.A. General reversed-phase high-performance liquid chromatographic method for the separation of drugs using triethylamine as a competing base, *J.Chromatogr.*, **1986**, *370*, 403–418.

Phenindione



Molecular formula: $C_{15}H_{10}O_2$
Molecular weight: 222.24
CAS Registry No.: 83-12-5
Merck Index: 7381

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 226.3

CHROMATOGRAM
Retention time: 18.062

KEY WORDS
whole blood

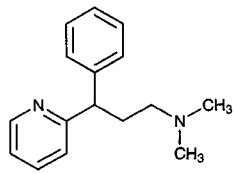
Pheniramine



Molecular formula: $C_{16}H_{20}N_2$
Molecular weight: 240.35
CAS Registry No.: 86-21-5, 132-20-7 (maleate)
Merck Index: 7383
Lednicer No.: 1 77

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 30 μL 10 μg/mL amitriptyline in water + 500 μL 1 M sodium carbonate, vortex for 30 s, add 5 mL diethyl ether, vortex for 2 min, centrifuge at 4000 rpm for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 250 μL mobile phase, vortex for 30 s, centrifuge at 12000 rpm for 5 min, inject an aliquot of the supernatant.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:water 62:38 adjusted to pH 3.5 with phosphoric acid
Column temperature: 40
Flow rate: 1.2
Detector: UV 262

CHROMATOGRAM
Retention time: 4.5
Internal standard: amitriptyline (6.1)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Simultaneous: diazepam, diltiazem, flurbiprofen, ibuprofen, itraconazole, ketoprofen, mebeverine, metoclopramide, phenylbutazone
Interfering: chlorpheniramine

KEY WORDS
plasma; pharmacokinetics; dog

SAMPLE
Matrix: blood, tissue
Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM
Retention time: 4.07
Internal standard: cianopramine (8.93)

OTHER SUBSTANCES
Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, desipramine, diphenhydramine, dothiepin, doxepin, fluoxetine, haloperidol, imipramine, loxapine, maprotiline, meperidine, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluoxetine, norpropoxyphene, northiaden, nortriptyline, pentobarbital, promethazine, propoxyphene, propranolol, protriptyline, quinidine, quinine, sulforidazine, thioridazine, thiothixene, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine
Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine

KEY WORDS
serum; whole blood; liver

McIntyre,I.M.; King,C.V.; Skafidis,S.; Drummer,O.H. Dual ultraviolet wavelength high-performance liquid chromatographic method for the forensic or clinical analysis of seventeen antidepressants and some selected metabolites, *J.Chromatogr.*, **1993**, *621*, 215–223.

SAMPLE
Matrix: cell incubations
Sample preparation: 40 mL Cell incubation + 50 mL MeOH, shake vigorously for 1 min, centrifuge at 2000 rpm for 10 min, wash the pellet twice with 50 mL portions of MeOH. Combine the supernatants and add 100 mL water, extract three times with 150 mL portions of dichloromethane. Filter the extracts through anhydrous sodium sulfate, evaporate the filtrate to dryness under reduced pressure at 40°, reconstitute with mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm cyano-propyl (Beckman)
Mobile phase: MeCN:buffer 40:60 (Buffer was 10 mM KH_2PO_4 containing 20 mM triethylamine, pH 7.0.)
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 8.9

OTHER SUBSTANCES
Extracted: metabolites
Interfering: brompheniramine, chlorpheniramine

KEY WORDS
also semipreparative details

REFERENCE
Hansen,E.B.,Jr.; Cho,B.P.; Korfmacher,W.A.; Cerniglia,C.E. Fungal transformations of antihistamines: metabolism of brompheniramine, chlorpheniramine, and pheniramine to *N*-oxide and *N*-demethylated metabolites by the fungus *Cunninghamella elegans*, *Xenobiotica*, **1995**, *25*, 1081–1092.

SAMPLE
Matrix: formulations
Sample preparation: Crush 10 tablets, add 250 mL 50 mM HCl in EtOH:water 50:50, heat for 15 min on a steam bath, shake mechanically for 2 h, filter (glass fiber GF/A, Whatman), inject a 30 μL aliquot of the filtrate.

HPLC VARIABLES
Column: 250 × 4.6 10 μm Partisil-10-ODS
Mobile phase: MeCN:buffer 50:50 (Buffer was 2.85 mM ethylenediamine sulfate adjusted to pH 7.44 ± 0.02 with 1 M ammonium hydroxide.)
Flow rate: 3.8
Injection volume: 30
Detector: UV 216.5

CHROMATOGRAM
Retention time: 20

OTHER SUBSTANCES
Simultaneous: aposcopolamine, methscopolamine, phenylpropanolamine, pyrilamine, tropic acid

KEY WORDS
tablets

REFERENCE
Heidemann,D.R. High-pressure liquid chromatographic determination of methscopolamine nitrate, phenylpropanolamine hydrochloride, pyrilamine maleate, and pheniramine maleate in tablets, *J.Pharm.Sci.*, **1981**, *70*, 820–822.

SAMPLE
Matrix: formulations
Sample preparation: Tablets. One tablet + 50 mL MeOH, sonicate, make up to 100 mL with MeOH, centrifuge for 15 min. Remove 1 mL supernatant, make up to 10 mL with mobile phase, inject a 50 μL aliquot. Drops. Dilute drops with the mobile phase so that the concentration of pheniramine maleate is 25 μg/mL, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 Cyclobond I (Advanced Separation Technologies)
Mobile phase: MeOH:50 mM NaH_2PO_4 adjusted to pH 7.0 with 0.1 M NaOH 30:70
Column temperature: 35
Flow rate: 1.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 6.2

OTHER SUBSTANCES
Simultaneous: pyrilamine (mepyramine), phenylpropanolamine

KEY WORDS
tablets; drops

REFERENCE
el-Gizawy,S.M.; Ahmed,A. High-performance liquid chromatographic determination of mepyramine maleate, pheniramine maleate and phenylpropanolamine hydrochloride in tablets and drops, *Analyst*, **1987**, *112*, 867–869.

SAMPLE
Matrix: formulations, urine
Sample preparation: Tablets. Crush tablets, add 100 mL water and 30-40 mL MeCN, dissolve, add N,N-dimethylbenzylamine, make up to 250 or 500 mL with water, centrifuge an aliquot, inject a 20 μL aliquot of the supernatant. Urine. Inject a 100 μL aliquot of urine directly.

HPLC VARIABLES
Column: 150 × 4.6 Asahipak ODP-50 C18
Mobile phase: MeCN:200 mM pH 7.0 phosphate buffer 27:73
Flow rate: 0.8
Injection volume: 20-100
Detector: Chemiluminescence following post-column reaction. Oxidize a 1 mM tris(2,2'-bipyridine) ruthenium(II) hexachloride solution in 50 mM pH 5.5 acetate buffer to Ru(III) using a Princeton Applied Research polarographic analyzer with a platinum gauze working electrode, platinum wire auxiliary electrode, and a silver wire reference electrode, +950 mV. Pump the reagent solution at 0.28 mL/min and mix with the column effluent, allow to flow through detector. The chemiluminescence detector was a fluorescence detector with the light source removed.

CHROMATOGRAM
Retention time: 3.5
Internal standard: N,N-dimethylbenzylamine
Limit of detection: 90 ng/mL

OTHER SUBSTANCES
Simultaneous: brompheniramine, chlorpheniramine, pyrilamine, diphenhydramine

KEY WORDS
tablets

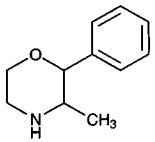
Phenmetrazine



Molecular formula: $C_{11}H_{15}NO$
Molecular weight: 177.25
CAS Registry No.: 134-49-6, 1707-14-8 (HCl)
Merck Index: 7385
Lednicer No.: 1 260

SAMPLE

Matrix: blood
Sample preparation: Buffer 1 mL plasma to 9.1 with 50 mM Tris buffer, extract with diethyl ether. Extract the diethyl ether layer with 10 mM phosphoric acid, wash the aqueous layer with n-hexane, inject an aliquot.

HPLC VARIABLES

Guard column: CO:PELL:ODS
Column: 110 × 4.6 5 μm Partisphere C8 (Whatman)
Mobile phase: MeCN:10 mM pH 2.3 phosphate buffer 64:36
Flow rate: 0.45
Detector: UV 210

CHROMATOGRAM
Internal standard: phenmetrazine

OTHER SUBSTANCES
Extracted: reboxetine

KEY WORDS
plasma; phenmetrazine is IS

Single oral doses, linearity and plasma protein binding, *Biopharm.Drug Dispos.*, **1995**, *16*, 443–460.

SAMPLE
Matrix: bulk
Sample preparation: Mix a 1 mg/mL solution in 1 M sodium carbonate with 2 mL 5 mg/mL 8-quinolinesulfonyl chloride in acetone, heat at 65° for 20 min, cool, extract twice with 30 mL portions of chloroform. Combine the extracts and dry them over anhydrous magnesium sulfate, evaporate to dryness under a stream of air, reconstitute, inject an aliquot.

HPLC VARIABLES
Guard column: 70 × 2.1 Co:Pell ODS
Column: 300 × 3.9 μBondapak C18
Mobile phase: MeCN:water:acetic acid 40:59:1
Flow rate: 1.5
Detector: UV 254, UV 280

CHROMATOGRAM
Retention time: 16

OTHER SUBSTANCES
Simultaneous: amphetamine, ephedrine, methamphetamine, phentermine, phenylpropanolamine, pseudoephedrine

KEY WORDS
derivatization

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 2.4

OTHER SUBSTANCES

Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE

Matrix: urine

Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)

Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.);

D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)
Column temperature: ambient (column A), 40 (columns B and C)
Flow rate: A 5; B-E 1
Injection volume: 500
Detector: UV 210, UV 235

CHROMATOGRAM
Retention time: k' 2.7
Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)
Limit of detection: 300 ng/mL

OTHER SUBSTANCES
Extracted: methamphetamine, desipramine, nortriptyline, diphenhydramine, methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine
Interfering: phentermine, amphetamine, lidocaine, ephedrine, pentazocine

KEY WORDS
column-switching

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma + 200 μL 1 M HCl saturated with ammonium sulfate, vortex for 20 s, add 60 μL 10 μg/mL 4-methylprimidone in MeCN, vortex for 20 s, centrifuge at 2700 g for 5 min, inject a 5-10 μL aliquot of the MeCN layer.

HPLC VARIABLES
Column: 250 × 4 5 μm LiChrosorb RP-18
Mobile phase: MeOH:THF:50 mM pH 5.9 phosphate buffer 44:1:55
Column temperature: 50
Flow rate: 1.1
Injection volume: 5-10
Detector: UV 210

CHROMATOGRAM
Retention time: 4
Internal standard: 4-methylprimidone (5)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Extracted: carbamazepine, phenytoin, primidone, valproic acid
Simultaneous: acetaminophen, salicylic acid, ethylphenylmalonamide, theophylline, caffeine, ethosuximide, chloramphenicol, methylphenobarbital, glutethimide, pentobarbital, lidocaine, diazepam

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 1 mL saturated solution of $NaH_2PO_4.H_2O$ + 5 μg mephobarbital, vortex for 15 s, add 6 mL dichloromethane, rotate for 3 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 1 mL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 100 × 5 5 μm Waters Radial-Pak C18
Mobile phase: MeOH:200 mM NaCl 40:60
Flow rate: 1.6
Injection volume: 50
Detector: E, Bioanalytical Systems LC4B, glassy carbon working electrode operated in parallel mode, stainless steel auxiliary electrode, W1 +0.85 V, W2 +1.00, V Ag/AgCl reference electrode following a 9.144 m × 0.5 mm i.d. figure eight Teflon tubing UV irradiation unit maintained at 0-5° with an ice bath

CHROMATOGRAM
Retention time: 4.5
Internal standard: mephobarbital 8.5
Limit of detection: 10 ng/mL

SAMPLE
Matrix: blood
Sample preparation: 200 μL Serum + 1 mL 5 μg/mL 5-tolyl-5-phenylhydantoin in MeCN, agitate for 3 min. Remove the supernatant and evaporate it to dryness, dissolve the residue in 1 mL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: pellicular reversed phase (Chrompack 28653)
Column: 100 × 3 octyl CP-tm-Spher C8 glass column (Chrompack)
Mobile phase: MeCN:50 mM NaH_2PO_4 30:70 adjusted to pH 2.2 with phosphoric acid
Flow rate: 0.9
Injection volume: 50
Detector: UV 210

CHROMATOGRAM
Retention time: 3
Internal standard: 5-tolyl-5-phenylhydantoin (11)
Limit of detection: 1000 ng/mL

OTHER SUBSTANCES
Simultaneous: phenytoin

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 100 μL buffer + 1.5 mL IS in 5% isopropanol in chloroform, vortex for 30 s, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of air at room temperature, reconstitute the residue in 100 μL mobile phase, inject a 6-10 μL aliquot. (Buffer was 13.6 g KH_2PO_4 in 90 mL water, pH adjusted to 6.8 with about 3 mL 10 M NaOH, made up to 100 mL.)

HPLC VARIABLES
Guard column: 20 × 4.6 Supelguard LC-1 (Supelco)
Column: 250 × 4.6 5 μm Supelcosil LC-1 (Supelco)
Mobile phase: MeOH:MeCN:buffer 17.5:17.5:65 (Buffer was 2.72 g KH_2PO_4 in 1.9 L water, pH adjusted to 6.3 with about 2 mL 1 M NaOH, made up to 2 L.)
Flow rate: 2
Injection volume: 6-10
Detector: UV 204

CHROMATOGRAM
Retention time: 3.45
Internal standard: 5-ethyl-5-p-tolybarbituric acid (tolybarb) (4.80)

OTHER SUBSTANCES
Extracted: acetaminophen, amobarbital, barbital, caffeine, carbamazepine, chloramphenicol, ethosuximide, mephobarbital, methsuximide, pentobarbital, phenytoin, primidone, secobarbital, theophylline, thiopental
Also analyzed: acetanilide, N-acetylcysteine, N-acetylprocainamide, ampicillin, aspirin, butabarbital, butalbital, chlorpropamide, cimetidine, codeine, cyheptamide, diphylline, disopyramide, ethchlorvynol, gentisic acid, glutethimide, heptabarbital, hexobarbital, ibuprofen, indomethacin, ketoprofen, mefenamic acid, mephenytoin, methaqualone, methsuximide, methyl salicylate, methyprylon, morphine, naproxen, oxphenylbutazone, phenacetin, phensuximide, phenylbutazone, procainamide, salicylamide, salicylic acid, sulfamethoxazole, sulindac, tolmetin, trimethoprim, vancomycin

Noninterfering: amikacin, gentamicin, meprobamate, netilmicin, quinidine, tetracycline, tobramycin, valproic acid
Interfering: diflunisal, diazoxide, nirvanol

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: Prepare an SPE cartridge by plugging the end of a 1 mL disposable pipette tip with glass wool and adding about 100 mg Chromosorb P/NAW. Add 50 μL plasma then 50 μL 10 μg/mL tolylphenobarbital in 200 mM HCl to the SPE cartridge, let stand for 2 min, elute with 1 mL chloroform:isopropanol 6:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 15 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Supelcosil-LC-8
Mobile phase: MeCN:water 20:80
Flow rate: 3.3
Injection volume: 15
Detector: UV 208

CHROMATOGRAM
Retention time: 3.59
Internal standard: tolylphenobarbital (7.57)
Limit of detection: 50-100 ng/mL

OTHER SUBSTANCES
Extracted: theophylline, caffeine, barbital, ethosuximide, primidone, carbamazepinediol, phenacemide, methyprylon, nirvanol, chloramphenicol, butabarbital, carbamazepine epoxide, mephenytoin, pentobarbital, amobarbital, carbamazepine, glutethimide, phenytoin, secobarbital, methaqualone
Noninterfering: acetaminophen, amikacin, amitriptyline, clonazepam, cyclosporine, desipramine, diazepam, digoxin, disopyramide, gentamicin, imipramine, lidocaine, methotrexate, N-acetylprocainamide, netilmicin, nortriptyline, procainamide, quinidine, salicylic acid, sulfamethoxazole, tobramycin, trimethoprim, valproic acid, p-hydroxyphenobarbital, vancomycin

SAMPLE
Matrix: blood
Sample preparation: Inject 20 μL serum onto column A with mobile phase A and elute to waste, after 1.5 min backflush the contents of column A onto column B with mobile phase B, after 1 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. Re-equilibrate column A with mobile phase A.

HPLC VARIABLES
Column: A 30 × 4.6 IRSP silica (for preparation see Anal. Chem. 1989, 61, 2445); B 150 × 4.6 5 μm Nucleosil C18
Mobile phase: A 14 mM NaH_2PO_4 containing 6 mM Na_2HPO_4; B MeCN:MeOH:14 mM NaH_2PO_4 containing 6 mM Na_2HPO_4 15:20:65
Flow rate: 0.8
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Retention time: 11
Limit of detection: 200 ng/mL

OTHER SUBSTANCES
Extracted: carbamazepine, phenytoin, primidone

SAMPLE
Matrix: blood
Sample preparation: Condition an Extrashot-Silica (diatomaceous earth) SPE cartridge (Kusano Scientific) with 200 μL EtOH and 200 μL dichloromethane, force out the remaining solvent with 500 μL air. Add 5 μL serum to the surface of the cartridge and pass 130 μL dichloromethane gently through the cartridge into the 100 μL sample loop.

HPLC VARIABLES
Column: 125 × 4 5 μm LiChrosorb Si60
Mobile phase: n-Hexane:dichloromethane:EtOH:acetic acid 82.8:15:2:0.2
Flow rate: 1
Injection volume: 100
Detector: UV 240

CHROMATOGRAM
Retention time: 7.2
Limit of quantitation: 5000 ng/mL

OTHER SUBSTANCES
Extracted: carbamazepine, phenytoin

SAMPLE
Matrix: blood
Sample preparation: 500 μL Serum + 600 μL allobarbital in 75 mM pH 6.8 buffer, add 200 units β-glucuronidase (Type VII-A from E. coli), incubate at 37° for 30 min, add 1 mL of the sample to an Extrelut-1 SPE cartridge, after 10 min elute with 2.5 mL MTBE, dry the eluate under a stream of nitrogen, dissolve the residue in 50 μL MeOH:water 1:1, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 25 × 4 4 μm Superspher RP-18e (Merck)
Mobile phase: MeOH:11.2 mM β-cyclodextrin in 20 mM KH_2PO_4 5:95
Flow rate: 0.8
Injection volume: 10
Detector: UV 210

CHROMATOGRAM
Retention time: 5
Internal standard: allobarbital (16)
Limit of detection: 1.9 ng/mL

SAMPLE
Matrix: blood, CSF
Sample preparation: 200 μL Serum, plasma, or CSF + 300 μL reagent. Flush column A to waste with 500 μL 500 mM ammonium sulfate, inject sample onto column A, flush column A to waste with 500 μL 500 mM ammonium sulfate, elute the contents of column A onto column B with mobile phase, monitor the effluent from column B. (Reagent was 8.05 M guanidine hydrochloride and 1.02 M ammonium sulfate in water.)

HPLC VARIABLES
Column: A 30 × 2.1 40 μm preparative grade C18 (Analytichem); B 250 × 4.6 10 μm Partisil C8
Mobile phase: Gradient. A was 50 mM pH 4.5 KH_2PO_4. B was MeCN:isopropanol 80:20. A:B 90:10 for 1 min, to 30:70 over 15 min, maintain at 30:70 for 4 min.
Column temperature: 50
Flow rate: 1.5
Detector: UV 280 for 5 min then UV 254

CHROMATOGRAM
Retention time: 9.75
Internal standard: heptanophenone (19.2)

OTHER SUBSTANCES
Extracted: acetazolamide, ampicillin, bromazepam, caffeine, carbamazepine, chloramphenicol, chlorothiazide, diazepam, droperidol, ethionamide, furosemide, isoniazid, methadone, penicillin G, phenytoin, prazepam, propoxyphene, pyrazinamide, rifampin, trimeprazine, trimethoprim

SAMPLE
Matrix: blood, dialysate
Sample preparation: Dialyze 400 μL plasma against 175 μL acceptor solution through a Cuprophane membrane (15 kDa cut-off) at 37° for 10 min, inject 500 μL acceptor solution (including the portion used for dialysis) onto column A at 0.71 mL/min, elute the contents of column A onto column B with mobile phase, remove column A from circuit and condition it with 1 mL acceptor solution, elute column B with mobile phase and monitor the effluent. Flush acceptor channel with 5 mL acceptor solution and plasma channel with 8 mL acceptor solution containing 25 μg/mL Triton X-100. (Acceptor solution contained 5.9 g NaCl, 4.1 g sodium acetate, 0.3 g KCl, and 1.65 g sodium citrate in 1 L water, adjusted to pH 7.4 with citric acid.)

HPLC VARIABLES
Column: A 5 × 1.6 Hypersil ODS-2; B 100 × 3 5 μm Spherisorb ODS-2
Mobile phase: MeCN:THF:20 mM pH 6.0 phosphate buffer 22:6.5:71.5
Column temperature: 37
Flow rate: 0.6
Detector: UV 240

CHROMATOGRAM
Retention time: 3
Limit of detection: 300 ng/mL

SAMPLE

Matrix: blood, tissue

Sample preparation: Tissue. Homogenize 20-200 mg brain tissue with 1 mL 1.5 μg/mL IS in 1% ammonium acetate + 1% sodium azide buffer:MeCN 99:1, flush apparatus with 1 mL extraction buffer, add 1 mL acetone, shake for 5 min, centrifuge for 10 min. Add sample to an Extrelut-3 SPE cartridge (Kieselguhr), add 1 mL extraction buffer, wait for 10 min, elute with 15 mL extraction solvent. Evaporate the eluate, take up residue in 50 μL MeOH, add 50 μL water, inject a 10-25 μL aliquot. Serum. 100 μL Serum + 1 mL 1.5 μg/mL IS in 1% ammonium acetate + 1% sodium azide buffer:MeCN 99:1,mix, add 1 mL extraction buffer, mix, add 1 mL acetone, shake for 5 min, centrifuge for 10 min. Add sample to an Extrelut-3 SPE cartridge (Kieselguhr), add 1 mL extraction buffer, wait for 10 min, elute with 15 mL extraction solvent. Evaporate the eluate, take up residue in 50 μL MeOH, add 50 μL water, inject a 10-25 μL aliquot. (Extraction buffer was 20 g $NaH_2PO_4.2H_2O$ + 4.5 g $Na_2HPO_4.2H_2O$ + 1.5 NaN_3 in 1 L water, pH 6. Extraction solvent was dichloromethane:isopropanol 97:3.)

HPLC VARIABLES

Column: 200 × 2.1 5 μm Hypersil ODS

Mobile phase: Gradient. A was MeCN:50 mM $(NH_4)H_2PO_4$ (pH 4.4) 10:90. B was MeCN:50 mM $(NH_4)H_2PO_4$ (pH 4.4) 60:40. A:B from 85:15 to 55:45 over 9.5 min, keep at 55:45 for 0.5 min, return to 85:15 over 0.5 min.

Column temperature: 65
Flow rate: 0.3
Injection volume: 10-25
Detector: UV 207

CHROMATOGRAM
Retention time: 6.22
Internal standard: 5-ethyl-5-(p-tolyl)barbituric acid (9.07)
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Simultaneous: primidone, N-desmethylmethsuximide, carbamazepine-10,11-epoxide, phenytoin, carbamazepine

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation.

Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 13.993

KEY WORDS
whole blood

SAMPLE
Matrix: solutions
Sample preparation: Evaporate a solution in water, MeOH, or diethyl ether to dryness, add a 3-fold molar excess of triethylamine, add 0.5-3 mL MeCN, add a 3-fold molar excess of N-chloromethyl-4-nitrophthalimide, heat at 60° for 1 h, inject an aliquot. (Preparation of N-chloromethyl-4-nitrophthalimide is as follows. Suspend 130 g 4-nitrophthalimide in 80 mL 40% formaldehyde solution, add 200 mL water, reflux for 4 h, filter while hot, N-(hydroxymethyl-4-nitrophthalimide crystallizes on cooling (cf. J. Am. Chem. Soc. 1922, 44, 817). Mix a suspension of 2.26 g N-hydroxymethyl-4-nitrophthalimide in 10-15 mL ether with a suspension of 2.1 g phosphorus pentachloride in 10-15 mL ether, after 10 min heat on a water bath, cool in an ice-salt mixture, add ice-water dropwise with shaking, filter to obtain N-chloromethyl-4-nitrophthalimide, dry under vacuum (cf. Chem. Ber. 1959, 9, 1258).)

HPLC VARIABLES
Column: 7 μm LiChrosorb RP8
Mobile phase: MeCN:water 60:40
Flow rate: 1.5
Detector: UV 254

CHROMATOGRAM
Retention time: 4.5
Limit of detection: 4 ng

SAMPLE

Matrix: solutions

Sample preparation: Mix 3.5 mL of a 40 nM-50 μM solution in benzene with 500 μL 3 mM reagent in benzene and 100 μL 3.7 mM pyridine in benzene (Caution! Benzene is a carcinogen!), heat in the dark at 100° for 40 min (primary and secondary alcohols) or at 140° for 50 min (tertiary alcohols), cool, dilute 100-fold with mobile phase, inject a 20 μL aliquot. (The reagent is 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran (Dojindo Laboratories, Kumamoto, Japan). Synthesis is as follows. Add ethyl oxalyl chloride in ether to a solution of diazomethane in ether at 0° to give ethyl diazopyruvate (Caution! Diazo compounds are explosive and toxic!) (cf. Buehler,C.A.; Pearson,D.E. Survey of Organic Syntheses, Wiley, New York, 1970, p. 179). Heat 100 mg ethyl diazopyruvate, a few mg copper(II) acetylacetonate, and 400 μL chloroacetonitrile in benzene at 60° overnight (Caution! Benzene is a carcinogen!), cool, add to sodium bicarbonate solution, extract with ether, dry the organic layer, evaporate, chromatograph on silica with petroleum ether:ethyl acetate 90:10, distil the product at 90°/12 mm Hg to give ethyl 2-chloromethyl-5-oxazolecarboxylate as an oil in 18% yield (US Patent 4 603 209 (July 29, 1986)). Add 2 mL phosphorus oxychloride dropwise to a solution of 2 g sesamol in 3 mL DMF at 0°, heat on a steam bath with frequent shaking for 1 h, cool in ice, add 50 mL saturated sodium acetate solution, heat on a steam bath for 30 min, cool, filter, recrystallize the solid from EtOH to give 2-hydroxy-4,5-methylenedioxybenzaldehyde as colorless needles (mp 125-126°) (Bull. Chem. Soc. Jpn. 1962, 35, 1321). Stir 1.4 g ethyl 2-chloromethyl-5-oxazolecarboxylate, 1.5 g 2-hydroxy-4,5-methylenedioxybenzaldehyde, 2 g potassium carbonate, and 50 mL anhydrous DMF at 120° overnight, cool, filter. Evaporate the filtrate to dryness under reduced pressure to give 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 186°) (yield 39%). Reflux 260 mg 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran, 100 mg KOH, 20 mL EtOH, and 30 mL water for 2 h, concentrate under reduced pressure, dissolve the residue in 100 mL water, wash with ethyl acetate, treat the aqueous layer with activated carbon, acidify the aqueous layer to pH 2 with 2 M HCl. Filter the precipitate and recrystallize it from EtOH to give 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 294-295°). Reflux 150 mg 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran and 5 mL thionyl chloride for 2 h, pour the reaction mixture into 300 mL petroleum ether. Filter the precipitate and dry it over KOH to give 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran (mp 290°).)

SAMPLE
Matrix: solutions
Sample preparation: Filter (0.2 μm) water, remove a 100 μL aliquot and add it to 500 μL 2.59 μM 2-(9-anthryl)ethyl chloroformate in MeCN and 200 μL 25 mM pH 9.6 borate buffer, heat at 43° for 35 min, inject a 10 μL aliquot. (Prepare 2-(9-anthryl)ethyl chloroformate as follows. Stir a solution of 3 g of 9-bromoanthracene in 100 mL ether at 0° under argon or nitrogen, add 9 mL 1.6 M n-butyllithium over 5 min, stir for 30 min, add an ice-cold solution of 3 g ethylene oxide (Caution! Ethylene oxide is a carcinogen!) in 16 mL ether, stir for 1 h, add 70 mL water, add 50 mL ether, remove the organic layer, extract the aqueous layer with 100 mL dichloromethane. Combine the organic layers and wash them with water, dry over anhydrous sodium sulfate, evaporate to dryness, chromatograph on silica gel with dichloromethane to give 2-(9-anthryl)ethanol as pale yellow crystals (mp 106-8°) (J.Org.Chem. 1986, 51, 2956). Stir a solution of 2-(9-anthryl)ethanol in ether in the presence of pyridine (as an HCl scavenger) at 0°, add a solution of phosgene in toluene. 2-(9-anthryl)ethyl chloroformate is obtained as colorless crystals (mp 86-87° from pentane). Protect stock solutions from light and store them in the refrigerator (Anal.Chem. 1991, 63, 292).)

HPLC VARIABLES
Column: 125 × 4 5 μm LiChrospher 100 RP-18

Blo,G.; Dondi,F.; Bighi,C. High-performance liquid chromatographic determination of phenols as 4-aminoantipyrine derivatives; silver chloride as oxidizing agent in the derivatization reaction, *J.Chromatogr.*, **1984**, *295*, 231–235.

SAMPLE
Matrix: water
Sample preparation: Condition a Baker amino SPE cartridge with dichloromethane, dry with nitrogen. Adjust pH to 12 with 1 M NaOH. Remove a 500 μL aliquot and add it to 100 μL 30 mg/mL pH 12 tetrabutylammonium bromide in water, add 500 μL pH 12 water, add 600 μL 100 μg/mL dansyl chloride in dichloromethane, vortex vigorously for 2 min, add a 500 μL aliquot of the dichloromethane layer to the amino SPE cartridge, let stand for 10 min, elute with 3 mL dichloromethane. Evaporate the eluate to dryness, reconstitute the residue in 500 μL MeOH:water 50:50, inject a 100 μL aliquot. (Excess dansyl chloride reacts with the amino groups in the SPE cartridge.)

HPLC VARIABLES
Column: 200 × 3.1 3 μm LiChrosorb RP-18
Mobile phase: Gradient. A was MeOH:100 mM pH 7.0 imidazole buffer 97.5:2.5. B was MeOH: 2.5 mM pH 7.0 imidazole buffer 2.5:97.5. A:B 75:25 for 9.5 min, to 85:15 over 0.5 min, maintain at 85:15 for 4.5 min, to 95:5 over 0.5 min, maintain at 95:5 for 4.5 min, to 100:0 over 0.5 min, maintain at 100:0 for 20 min, return to initial conditions over 1 min, re-equilibrate for 20 min.
Flow rate: 0.5
Injection volume: 100
Detector: Chemiluminescence (470 nm cut-off filter) following post-column reaction. The column effluent flowed through a 130 × 0.3 mm ID PTFE coil irradiated with a fan-cooled 90 w Philips Model 93110E mercury lamp. The effluent from this coil mixed with 50 mM hydrogen peroxide in MeCN containing 5 mM bis(2-nitrophenyl) oxalate pumped at 0.3 mL/min and this mixture flowed to the detector.

CHROMATOGRAM
Retention time: 14
Limit of detection: 0.1 ng/mL

OTHER SUBSTANCES
Simultaneous: 4-chloro-3-methylphenol, 2-chlorophenol, 2,4-dichlorophenol, 2,4-dimethylphenol, 2-nitrophenol, 4-nitrophenol, pentachlorophenol, 2,4,6-trichlorophenol

KEY WORDS
derivatization; post-column reaction; SPE; post-column photochemical derivatization

REFERENCE

Sensitive liquid chromatographic determination of alkyl-, nitro- and chlorophenols by precolumn derivatization with dansyl chloride, postcolumn photolysis and peroxyoxalate chemiluminescence detection, *J.Chromatogr.*, **1991**, *553*, 345–356.

SAMPLE
Matrix: water
Sample preparation: Prepare an SPE cartridge by adding 500 mg 120-400 mesh Carbograph 4 graphitized carbon black (210 m^2/g, Carbochimica Romana, Rome) to a 65 × 13 polypropylene tube using polyethylene frits. Condition with 10 mL 10 mM tetrabutylammonium chloride in dichloromethane:MeOH 80:20, 2 mL MeOH, and 14 mL water acidified to pH 2 with HCl. Filter (Whatman GF/C 1.5 μm glass fiber) river water, pass 4 L through the SPE cartridge at 100 mL/min, wash with 7 mL water at 5-7 mL/min, pull air through the SPE cartridge for 1 min, wash with 800 μL MeOH, dry under vacuum for 1 min, elute in a reverse fashion with 6 mL 10 mM tetrabutylammonium chloride in dichloromethane:MeOH 80:20 at 6 mL/min. Remove a 3 mL aliquot of the eluate and evaporate it to dryness under a stream of nitrogen at 27°, reconstitute the residue in 150 μL 100 mM sodium carbonate in MeCN:water 20:80, add 40 μL acetic anhydride, heat at 50° for 6 min, inject a 50 μL aliquot. (Phenols can also be determined without derivatization. Derivatization provides confirmation of peak identity.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Alltima LC-18 (Alltech)
Mobile phase: Gradient. A was 0.025% trifluoroacetic acid in water. B was 0.0125% trifluoroacetic acid in MeCN. A:B from 78:22 to 10:90 over 27 min.
Flow rate: 1
Injection volume: 50
Detector: UV 280 for 18 min then UV 220

CHROMATOGRAM
Retention time: 12.4
Limit of detection: <50 ng/mL

OTHER SUBSTANCES
Simultaneous: 4-chloro-3-methylphenol, 2-chlorophenol, 2,4-dichlorophenol, 2,4-dimethylphenol, 4,6-dinitro-2-methylphenol, 2,4-dinitrophenol, 2-nitrophenol, 4-nitrophenol, pentachlorophenol, 2,4,6-trichlorophenol

SAMPLE
Matrix: water
Sample preparation: Condition a 500 mg ENVI Chrom P highly cross-linked styrene-divinylbenzene SPE cartridge (Supelco) with 10 mL MeOH, 10 mL water, and 2 mL 5 mM tetrabutylammonium bromide, dry. Filter (0.45 μm) sample, add 3 mL 10% sodium sulfite solution to each 1 L of water, adjust pH to 9 with 1 M NaOH, add tetrabutylammonium bromide to a final concentration of 5 mM, pass a 500 mL aliquot through the SPE cartridge, elute with 5 mL MeOH, acidify with 1% acetic acid, evaporate to 1 mL under reduced pressure, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm Spherisorb ODS-2
Mobile phase: Gradient. MeOH:1% pH 2.8 acetic acid from 25:75 to 40:60 over 25 min, to 100:0 over 5 min, maintain at 200:0 for 2 min, return to initial conditions over 2 min
Column temperature: 65
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 6
Limit of detection: 0.1 ng/mL

OTHER SUBSTANCES
Simultaneous: other phenolic compounds

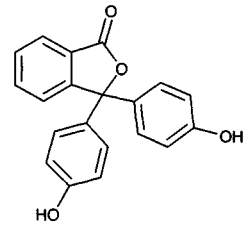
Phenolphthalein



Molecular formula: $C_{20}H_{14}O_4$
Molecular weight: 318.33
CAS Registry No.: 77-09-8
Merck Index: 7392

SAMPLE
Matrix: bile, blood, urine
Sample preparation: Condition a 1 mL Bond-Elut C18 SPE cartridge with 2 column volumes of MeOH and 2 column volumes of water, do not allow to go dry. Serum. 1 mL Serum + 25 μL 400 μg/mL bromocresol purple in water + 3 mL acidified acetone, vortex for 5 min, centrifuge at 1200 g for 10 min. Remove 3 mL of the supernatant and evaporate it to dryness under reduced pressure, reconstitute the residue in 1 mL 100 mM pH 7.4 sodium phosphate buffer containing 0.9% NaCl, sonicate for 10 min, add to the SPE cartridge, wash with 2 column volumes of water, allow to dry. Elute with two 800 μL aliquots of MeOH, evaporate the eluate to dryness under reduced pressure, reconstitute in 1 mL MeCN:50 mM NaH_2PO_4 10:90, centrifuge at 1200 g for 10 min, inject a 100 μL aliquot. Urine. 100 μL Urine + 25 μL 400 μg/mL bromocresol purple in water + 875 μL 100 mM pH 7.4 sodium phosphate buffer containing 0.9% NaCl, mix, add 3 mL acetone:water 88:12, vortex for 5 min, centrifuge at 1200 g for 10 min. Remove 3 mL of the supernatant and evaporate it to dryness under reduced pressure, reconstitute the residue in 1 mL 100 mM pH 7.4 sodium phosphate buffer containing 0.9% NaCl, sonicate for 10 min, add to the SPE cartridge, wash with 2 column volumes of water, allow to dry. Elute with two 800 μL aliquots of MeOH, evaporate the eluate to dryness under reduced pressure, reconstitute in 1 mL MeCN:50 mM NaH_2PO_4 10:90, centrifuge at 1200 g for 10 min, inject a 100 μL aliquot. Bile. 50 μL Bile + 950 μL MeCN:50 mM NaH_2PO_4 10:90, centrifuge at 1200 g for 10 min, inject a 50 μL aliquot of the supernatant. (Acidified acetone was 0.5 mL glacial acetic acid in 880 mL acetone, made up to 1 L with water.)

HPLC VARIABLES
Guard column: 5.3 × 4 10 μm Bondapak C18 guard-pak
Column: 150 × 4.6 5 μm LC-18DB (Supelco)

Mobile phase: Gradient. A was MeCN:50 mM NaH_2PO_4 10:90. B was MeCN:50 mM NaH_2PO_4. A:B 65:35 for 5 min, to 40:60 over 0.1 min, maintain at 40:60 for 8 min, re-equilibrate at initial conditions for 5 min.
Flow rate: 1
Injection volume: 100
Detector: UV 230

CHROMATOGRAM
Retention time: 11.4
Internal standard: bromocresol purple (9.5)
Limit of detection: 10 μg/mL (bile), 500 ng/mL (urine), 100 ng/mL (serum)

OTHER SUBSTANCES
Extracted: metabolites, glucuronides

KEY WORDS
serum; dog; SPE; pharmacokinetics

SAMPLE
Matrix: blood, tissue
Sample preparation: Tissue. Homogenize tissue with 2 volumes of water. 1 mL Homogenate + 300 μL MeOH + 1 mL buffer + 10 mL dichloromethane, rotate, centrifuge. Remove the organic layer and add it to 3 mL 100 mM NaOH, rotate, centrifuge. Remove the aqueous layer and acidify it with 1 mL 1 M HCl, extract with 10 mL dichloromethane. Remove the organic layer and evaporate it to dryness at 40°, reconstitute the residue in 300 μL MeOH, inject a 20 μL aliquot. Blood. 500 μL Whole blood + 500 μL buffer + 200 μL MeOH + 5 mL dichloromethane, rotate, centrifuge. Remove the organic layer and evaporate it to dryness at 40°, reconstitute the residue in 300 μL MeOH, inject a 20 μL aliquot. (Buffer was prepared by mixing 500 mM Na_2HPO_4 with 500 mM KH_2PO_4 to pH 5.5.)

HPLC VARIABLES
Column: 250 × 4.6 10 μm RP-8 (Hewlett-Packard) or 260 × 4.6 10 μm Spherisorb C18
Mobile phase: MeOH:water 60:40
Flow rate: 2
Injection volume: 20
Detector: UV 290

CHROMATOGRAM
Retention time: 2.96
Internal standard: phenolphthalein

OTHER SUBSTANCES
Extracted: thiopental
Simultaneous: carbamazepine, pentobarbital (UV 210)
Noninterfering: amobarbital, butabarbital, glutethimide, meprobamate, methaqualone, methyprylon, phenobarbital, phenytoin, secobarbital

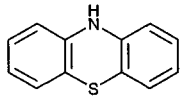
Phenothiazine



Molecular formula: $C_{12}H_9NS$
Molecular weight: 199.28
CAS Registry No.: 92-84-2
Merck Index: 7404

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 204

CHROMATOGRAM

Flow rate: 2
Injection volume: 6-10
Detector: UV 204

CHROMATOGRAM
Retention time: 4.22
Internal standard: 5-ethyl-5-p-tolybarbituric acid (tolybarb) (4.80)

OTHER SUBSTANCES
Simultaneous: acetaminophen, acetanilide, N-acetylcysteine, N-acetylprocainamide, amobarbital, ampicillin, aspirin, barbital, butalbital, caffeine, carbamazepine, chloramphenicol, chlorpropamide, cimetidine, codeine, cyheptamide, diazoxide, diflunisal, diphylline, disopyramide, ethchlorvynol, ethosuximide, gentisic acid, glutethimide, heptabarbital, hexobarbital, ibuprofen, indomethacin, ketoprofen, mefenamic acid, mephenytoin, mephobarbital, methaqualone, methsuximide, methyl salicylate, methyprylon, morphine, naproxen, nirvanol, oxphenylbutazone, pentobarbital, phenacetin, phenobarbital, phenylbutazone, phenytoin, primidone, procainamide, salicylamide, salicylic acid, secobarbital, sulfamethoxazole, sulindac, theophylline, thiopental, tolmetin, vancomycin
Noninterfering: amikacin, gentamicin, meprobamate, netilmicin, quinidine, tetracycline, tobramycin, valproic acid
Interfering: butabarbital, trimethoprim

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 100 × 4.6 3 μm 208HS3410 (Vydac)
Mobile phase: Gradient. MeCN:water from 15:85 to 60:40 over 10 min.
Flow rate: 1.5
Detector: UV 210 (?)

CHROMATOGRAM
Retention time: 5.2

OTHER SUBSTANCES
Simultaneous: barbital, carbamazepine, diazepam, ethotoin, mephenytoin, methsuximide, phenacemide, phenobarbital

REFERENCE
Vydac HPLC Catalog, 1994-5, **1994**, p. 26.

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyril-

amine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

SAMPLE

Matrix: urine

Sample preparation: 500 μL Urine + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)

Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)

Column temperature: ambient (column A), 40 (columns B and C)

Flow rate: A 5; B-E 1

Injection volume: 500

Detector: UV 210, UV 235

CHROMATOGRAM

Retention time: k' 2.4

Internal standard: chlorpheniramine (k' 5.9)

Limit of detection: 300 ng/mL

OTHER SUBSTANCES

Extracted: pentazocine, methamphetamine, desipramine, nortriptyline, diphenhydramine, methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam

Interfering: phenylpropanolamine, amphetamine, phenmetrazine, lidocaine, ephedrine

KEY WORDS
column-switching

SAMPLE
Matrix: urine
Sample preparation: Condition a 100 mg Adsorbex SCX cation-exchange SPE cartridge (Merck) with 2 mL MeOH, 1 mL water, and 1 mL 17 mM KH_2PO_4, do not allow to dry. Centrifuge urine at 2000 g for 5 min. 1 mL Urine + 500 μL 50 mM KH_2PO_4, sonicate for 1 min, add to the SPE cartridge, rinse vial with 50 μL 50 mM KH_2PO_4 and add to cartridge, dry cartridge for 1 min, wash with three 500 μL portions of 17 mM KH_2PO_4, wash with 1 mL MeOH, dry under vacuum for 1 min, elute with four 500 μL portions of MeOH:7.3% HCl (97.5:2.5) at a flow rate of 0.5 mL/min, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 125 × 4 3 μm Spherisorb ODS-1
Mobile phase: Gradient. A was water containing 5 mL (8.5 g) 85% orthophosphoric acid and 280 μL (0.22 g) hexylamine per liter. B was MeCN containing 100 mL water, 5 mL (8.5 g) 85% orthophosphoric acid, and 280 μL (0.22 g) hexylamine per liter. A:B 94.5:5.5 for 10.6 min, then to 61:39 over 11 min.
Column temperature: 40
Flow rate: 0.8
Injection volume: 10
Detector: UV 198

CHROMATOGRAM
Retention time: 10
Limit of detection: 30 ng/mL

OTHER SUBSTANCES
Extracted: 3,4-methylenedioxyamphetamine, amphetamine, 4-methoxyamphetamine, methamphetamine, 3,4-methylenedioxymethamphetamine, 5-methoxy-3,4-methylenedioxyamphetamine, 3,4,5-trimethoxyamphetamine, 3,4-methylenedioxyethylamphetamine, 2,5-dimethoxyamphetamine, 4-bromo-2,5-dimethoxyphenylethylamine, 2,5-dimethoxy-4-methylamphetamine, 4-bromo-2,5-dimethoxyamphetamine, 2,5-dimethoxy-4-ethylamphetamine, mescaline, methoxamine

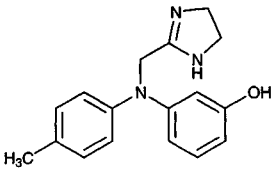
Phentolamine



Molecular formula: $C_{17}H_{19}N_3O$
Molecular weight: 281.36
CAS Registry No.: 50-60-2, 73-05-2 (HCl), 65-28-1 (mesylate)
Merck Index: 7417
Lednicer No.: 1 242

SAMPLE

Matrix: blood, tissue
Sample preparation: Serum. 200-450 μL Serum + 20 μL 50-100 μg/mL yohimbine in water + 800 μL 1 M pH 9.2 Delory King carbonate buffer, vortex, add 5 mL diethyl ether, mix for 30 s, centrifuge at 1000 g for 2 min. Remove the organic phase and add it to 100 μL 100 mM HCl, mix for 30 s, centrifuge at 1000 g for 2 min, discard the ether, volatilize residual ether from the aqueous phase under a stream of nitrogen, inject a 10-70 μL of the aqueous phase. Liver. Homogenize 1 g of liver in 3 mL ice cold 1 M pH 9.2 Delory King carbonate buffer, add 2 g yohimbine, add 5 mL diethyl ether, mix for 30 s, centrifuge at 1000 g for 2 min. Remove the organic phase and add it to 100 μL 100 mM HCl, mix for 30 s, centrifuge at 1000 g for 2 min, discard the ether, volatilize residual ether from the aqueous phase under a stream of nitrogen, inject a 10-70 μL of the aqueous phase.

HPLC VARIABLES

Column: 100 × 3.2 3 μm Phase-2 ODS
Mobile phase: MeCN:15 mM pH 3.0 monochloroacetate buffer 25:75 containing 350 mg/L EDTA
Flow rate: 0.6
Injection volume: 10-70
Detector: E, Bioanalytical Systems LC-4B, LC-17 oxidative flow cell, TL-5 glassy carbon electrode + 900 mV, Ag/AgCl reference electrode

CHROMATOGRAM

Retention time: 4.75
Internal standard: yohimbine (3.0)
Limit of detection: 10 ng/mL (liver homogenate), 5 ng/mL (serum)

KEY WORDS

serum; liver; mouse; pharmacokinetics

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 1 mL Plasma + 50 μL 500 ng/mL mefenamic acid or indomethacin + 1 mL 100 mM HCl + 10 mL dichloromethane, rotate for 10 min, centrifuge at 1500 g for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 45°. Redissolve the residue in mobile phase, inject a 20 μL aliquot. Urine. 50 μL Urine + 1 mL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 75 × 4.6 3 μm Supelcosil LC-8
Mobile phase: MeCN:50 mM phosphoric acid 45:55
Flow rate: 1
Injection volume: 20
Detector: UV 235

CHROMATOGRAM
Retention time: 4.0

Internal standard: mefenamic acid (8) or indomethacin (5)
Limit of detection: 50-250 ng/mL

OTHER SUBSTANCES
Simultaneous: naproxen, flunixin, thiosalicylic acid, ethacrynic acid

KEY WORDS
plasma

REFERENCE
Singh,A.K.; Jang,Y.; Mishra,U.; Granley,K. Simultaneous analysis of flunixin, naproxen, ethacrynic acid, indomethacin, phenylbutazone, mefenamic acid and thiosalicyclic acid in plasma and urine by high-performance liquid chromatography and gas chromatography-mass spectrometry, *J.Chromatogr.*, **1991**, *568*, 351–361.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 24.098

KEY WORDS
whole blood

SAMPLE
Matrix: perfusate
Sample preparation: Inject an aliquot of perfusate. (Perfusion fluid contained 104 mM NaCl, 25 mM sodium bicarbonate, 2.3 mM sodium biphosphate, 10 mM sodium acetate, 1.2 mM calcium chloride, 1 mM magnesium sulfate, 5 mM KCl, 5 mM dextrose, and 5 mM alanine.)

HPLC VARIABLES
Column: 300 × 2 10 μm μBondapak C18
Mobile phase: MeOH:water 52:48
Flow rate: 0.13
Injection volume: 0.2

Detector: F ex 295 em 376 following post-column reaction. The column effluent mixed with 4 M NaOH pumped at 0.0013 mL/min and the mixture flowed through a 130 μL PTFE coil at 64° to the detector.

CHROMATOGRAM
Internal standard: phenylbutazone

OTHER SUBSTANCES
Extracted: indomethacin

KEY WORDS
post-column reaction; microbore; phenylbutazone is IS

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 500 μg/mL solution in MeOH:water 50:50, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax C8
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L MeCN:water 20:80. A:B from 100:0 to 0:100 over 30 min. (Purify triethylamine as follows. Wash neutral alumina (Merck) 3 times with 2 bed volumes of pentane, 3 times with 2 bed volumes of dichloromethane, and 3 times with 2 bed volumes of MeOH, allow solvent to evaporate in a fume hood overnight, heat alumina at 130° for 2 h. Prepare a 14 cm column of the washed alumina in a 290 × 22 tube, pass through a head volume of MeOH, pass through triethylamine. When triethylamine starts to elute discard the first 20 mL, use the next 20 mL, discard the column.)
Flow rate: 2
Injection volume: 5
Detector: UV 210

CHROMATOGRAM
Retention time: 26.7

OTHER SUBSTANCES
Simultaneous: acetophenone, amphetamine, desipramine, ethylmorphine, imipramine, mefenamic acid, methamphetamine, morphine, salicylic acid

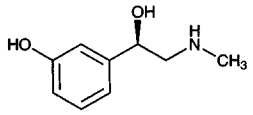
Phenylephrine



Molecular formula: $C_9H_{13}NO_2$
Molecular weight: 167.21
CAS Registry No.: 59-42-7, 61-76-7 (HCl)
Merck Index: 7440
Lednicer No.: 1 63

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL Bond Elut phenyl SPE cartridge with 2 mL MeOH, 3 mL water, and 3 mL buffer. Add 1-2 mL plasma to the SPE cartridge, let it sit on the column for 2 min, wash with 2 mL buffer, wash with 1 mL water, elute with three 200 μL aliquots of mobile phase, inject a 200 μL aliquot of the eluate. (Buffer was prepared by mixing 50 mL 50 mM sodium bicarbonate and 5 mL 100 mM NaOH, make up to 100 mL with water, adjust pH to 9.6 with 10 mM NaOH (if necessary).)

HPLC VARIABLES
Column: 300 mm long 10 μm μBondapak C18
Mobile phase: MeOH:1% acetic acid 10:90
Flow rate: 1
Injection volume: 200
Detector: F ex 270 em 305

CHROMATOGRAM
Retention time: 4.25
Limit of quantitation: 0.5 ng/mL

Retention time: 8.0

OTHER SUBSTANCES
Simultaneous: bromhexine, chlorpheniramine, codeine, dextromethorphan, diphenhydramine, ephedrine, papaverine

KEY WORDS
syrup; indirect conductometric detection; presence of compound causes a decrease in mobile phase conductivity

REFERENCE
Lau,O.-W.; Mok,C.-S. High-performance liquid chromatographic determination of active ingredients in cough-cold syrups with indirect conductometric detection, *J.Chromatogr.A*, **1995**, *693*, 45–54.

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Grind tablets, weigh out a portion, dissolve in 50 mL mobile phase, sonicate, filter (No. 4 sintered glass plate), dilute, inject an aliquot. Capsules. Dissolve 10 capsules (without opening) in 100 mL mobile phase, sonicate, inject an aliquot. Injections, ampules, sprays. Dilute, inject an aliquot.

HPLC VARIABLES
Column: 120 × 4.6 Spherisorb C18 ODS-2
Mobile phase: Isopropanol:buffer 5:95 (Buffer was 100 mM sodium dodecyl sulfate containing 25 mM Na_2HPO_4, pH adjusted to 3.0 with HCl.)

Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 7.5
Limit of detection: 7 ng/mL

OTHER SUBSTANCES
Simultaneous: carbidopa, dopamine, epinephrine, hydrochlorothiazide, isoproterenol, levodopa, methyldopa, norepinephrine

KEY WORDS
tablets; capsules; injections; ampules; sprays

REFERENCE

SAMPLE
Matrix: perfusate
Sample preparation: 30 μL Perfusate (artificial CSF) + 10 μL 200 mM perchloric acid. Mix a 25 μL aliquot with 12.5 μL reagent, let stand for 2 min, inject an aliquot. (Prepare a stock solution by dissolving 27 mg o-phthalaldehyde in 1 mL MeOH, add 5 μL β-mercaptoethanol, add 9 mL 100 mM pH 9.3 sodium tetraborate containing 10 μM EDTA. This solution is good for 5 days in a sealed amber bottle at room temperature. Prepare the working reagent by diluting 1 mL of the stock solution with 3 mL 100 mM pH 9.3 sodium tetraborate containing 10 μM EDTA, allow to stand for 24 h before use.)

HPLC VARIABLES
Column: two columns 150 × 4.6 5 μm M.S. Gel C18 (ESA)
Mobile phase: MeOH:buffer 8:92 adjusted to pH 3.0 with phosphoric acid (Buffer was 54 mM NaH_2PO_4 containing 1.24 mM sodium heptanesulfonate.)
Column temperature: 33
Flow rate: 1.2
Detector: E, ESA Coulochem Electrode Array System Model 5500, detector temp 33°, oxidation potential 700 mV

CHROMATOGRAM
Retention time: 7.60
Limit of quantitation: 0.5 ng/mL

OTHER SUBSTANCES
Extracted: apomorphine, dopamine, hydralazine, isoproterenol, methoxamine, morphine, norepinephrine

KEY WORDS
rat; derivatization

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 5 Spherisorb S5W

Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 3.49

OTHER SUBSTANCES
Simultaneous: norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine, pemoline, benzphetamine, diethylpropion, mazindol, tranylcypromine, caffeine, fenethyline, phendimetrazine, methylphenidate, phenelzine, epinephrine, pipradol, phenylpropanolamine, fencamfamin, chlorphentermine, norpseudoephedrine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, methylephedrine, dimethylamphetamine, methamphetamine, mescaline, mephentermine, buprenorphine, dextromoramide, phenoperidine, fentanyl, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene, nalorphine, phenazocine, norpipanone, levallorphan, hydroxypethidine, normethadone, meperidine, dipipanone, diamorphine, pentazocine, acetylcodeine, monoacetylmorphine, thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine
Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine
Interfering: trimethoxyamphetamine, pseudoephedrine, ephedrine, ethoheptazine, morphine-3-glucuronide, pholcodeine

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 48

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol,

mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 5 μm Partisil ODS-3
Mobile phase: MeOH:buffer 30:70 (Buffer was 10 mM octanesulfonic acid in 0.2% acetic acid.)
Flow rate: 1
Detector: UV 220

CHROMATOGRAM

Retention time: 19

OTHER SUBSTANCES

Simultaneous: epinephrine, isoproterenol, levonordefrin, metaraminol

REFERENCE

Phenomenex Catalog, **1994**, p. 1.077.

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone,

naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

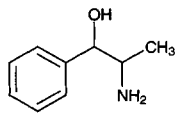
Phenylpropanolamine



Molecular formula: $C_9H_{13}NO$
Molecular weight: 151.21
CAS Registry No.: 14838-15-4, 154-41-6 (HCl)
Merck Index: 7461

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 205.2

CHROMATOGRAM

Retention time: 5.015

KEY WORDS

whole blood

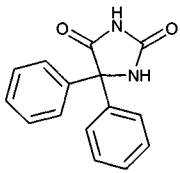
Phenytoin



Molecular formula: $C_{15}H_{12}N_2O_2$
Molecular weight: 252.27
CAS Registry No.: 57-41-0, 630-93-3 (sodium salt)
Merck Index: 7475
Lednicer No.: 1 246

SAMPLE
Matrix: blood
Sample preparation: 200 μL Serum + 100 μL 30 mg/L IS in water + 200 μL 25% saturated ammonium acetate, mix. Add the sample to the reservoir of a primed 4 mm/1 mL Empore C8 SPE disk cartridge suspended in a test tube (16 × 100 mm). Force the liquid then 500 μL water through the disk by centrifuging at 100-120 g for 5 min. Suspend disk cartridge in a tube, elute the drug with 100 μL MeCN and 300 μL water. Combine the eluates, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 2 30 μm Permaphase ETH (DuPont)
Column: 250 × 4.6 Zorbax Stable-Bond CN
Mobile phase: MeCN:MeOH:acetic acid:triethylamine: water 15:12.5:0.1:0.06:72.5 (Connect a 250 × 4.6 column dry packed with 37-53 μm silica gel (Whatman) as a mobile-phase saturating column between the pump and the injector .)
Column temperature: 50
Flow rate: 1.2
Injection volume: 50
Detector: UV 214

CHROMATOGRAM
Retention time: 10.5
Internal standard: cyheptamide (14)
Limit of detection: 20-35 ng/mL

OTHER SUBSTANCES
Extracted: carbamazepine, carbamazepine diol, carbamazepine epoxide, lamotrigine, 5-(p-hydroxyphenyl)-5-phenylhydantoin

ronidazole, midazolam, moclobemide, morphine, nadolol, nalbuphine, naloxone, naphazoline, naproxen, nifedipine, nizatidine, norepinephrine, nortriptyline, oxazepam, oxycodone, oxymetazoline, paroxetine, pemoline, pentazocine, pentobarbital, pentoxifylline, perphenazine, pheniramine, phenobarbital, phenol, phenolphthalein, phentolamine, phenylbutazone, phenytoin, pimozide, pindolol, piroxicam, pramoxine, prazepam, prazosin, probenecid, procainamide, procaine, prochlorperazine, procyclidine, promazine, promethazine, propafenone, propantheline, propiomazine, propofol, propranolol, protriptyline, quazepam, quinidine, quinine, racemethorphan, ranitidine, remoxipride, risperidone, salicylic acid, scopolamine, secobarbital, sertraline, sotalol, spironolactone, sulfinpyrazone, sulindac, temazepam, terbutaline, terfenadine, tetracaine, theophylline, thiethylperazine, thiopental, thioridazine, thiothixene, timolol, tocainide, tolbutamide, tolmetin, trazodone, triamterene, triazolam, trifluoperazine, triflupromazine, trimeprazine, trimethoprim, trimipramine, verapamil, warfarin, xylometazoline, yohimbine, zopiclone

SAMPLE
Matrix: blood, milk
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL water and MeOH: water 20:80. Add 80 μg/mL mephenytoin solution to 1 mL human breast milk or plasma, add 5 mL 0.5% pH 6.0 KH_2PO_4, mix briefly, add the sample to the SPE cartridge, elute with 5 mL MeOH, evaporate the eluate to dryness, dissolve the residue in 200 μL mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 150 × 4.6 Develosil C8-5 (Nomura Chemicals)
Mobile phase: MeCN:0.5% KH_2PO_4 buffer 30:70 (The pH of mobile phase was adjusted to 4.5 with 50% H_3PO_4.)
Flow rate: 1
Detector: UV 254

CHROMATOGRAM
Retention time: 9
Internal standard: mephenytoin (13)

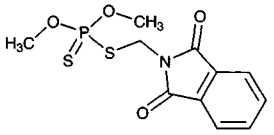
Phosmet



Molecular formula: $C_{11}H_{12}NO_4PS_2$
Molecular weight: 317.33
CAS Registry No.: 732-11-6
Merck Index: 7492

SAMPLE
Matrix: bulk
Sample preparation: Dissolve 150 mg phosmet in 5 mL THF, add 10 mL 1.3 mg/mL diphenylamine in THF, make up to 50 mL with n-hexane, add 1 g anhydrous sodium sulfate, mix well, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 250 × 2 MicroPak CN-10
Mobile phase: n-Hexane:THF 8:92
Flow rate: 0.83
Injection volume: 5
Detector: UV 280

CHROMATOGRAM
Retention time: 6
Internal standard: diphenylamine (2)

OTHER SUBSTANCES
Simultaneous: impurities

SAMPLE
Matrix: amniotic fluid
Sample preparation: Centrifuge amniotic fluid, remove a 1.5 mL aliquot and add it to 1.5 mL MeOH, vortex for 30 s, add 6 mL chloroform, vortex for 30 s, centrifuge at 1500 g for 10 min. Remove the lower chloroform layer and evaporate it to dryness under a stream of nitrogen at 50°, chill the residue in a deep freeze for 10 min, add ice-cold acetone. Dry the precipitate thoroughly, take it up in 20 μL 22 μM gamma-capryloyl lysolecithin in chloroform:MeOH 2:1, inject a 10 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 5 μm SI 60 silica (Merck)

Column: 125 × 4.6 5 μm DIOL (Merck)
Mobile phase: Gradient. A was MeCN. B was MeCN:water 3.5:1. A:B 88:12 for 4.2 min, to 25: 75 over 8 min.
Column temperature: 38
Flow rate: 2
Injection volume: 10
Detector: UV 203

CHROMATOGRAM
Retention time: 13
Internal standard: gamma-capryloyl lysolecithin (16)
Limit of detection: 500 nM

OTHER SUBSTANCES
Extracted: phosphatidyl glycerol, phosphatidyl inositol, phosphatidyl serine, phosphatidyl ethanolamine, sphingomyelin

---

KEY WORDS
mobile phase temperature 40°

REFERENCE
Andrews,A.G. Estimation of amniotic fluid phospholipids by high-performance liquid chromatography, *J.Chromatogr.*, **1984**, *336*, 139–150.

SAMPLE
Matrix: bile
Sample preparation: Shake 2 mL bile and 8 mL isopropanol, centrifuge. Purify 100 μL on a 10 × 10 cm Kieselgel 60 F254 TLC plate (Merck) by eluting with chloroform:MeOH:benzene: ammonia 65:30:10:6 (Caution! Benzene is a carcinogen!), visualize using iodine. Scrape off the band, elute with 5 mL chloroform:MeOH 4:3. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 200 μL mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 3 μm mod HS-3 C18 (Perkin-Elmer)
Mobile phase: MeCN:MeOH:water 3:90:8 containing 20 mM choline chloride
Column temperature: 50
Flow rate: 1 for 2 min, increase to 2 over 20 min, maintain at 2 for 10 min
Injection volume: 10
Detector: UV 205

CHROMATOGRAM
Retention time: 12-25

REFERENCE

SAMPLE
Matrix: bulk
Sample preparation: Emulsify 150 μg phosphatidylcholine in 8 mL 100 mM pH 5.5 acetate buffer and 1.5 mL 1 M calcium chloride, add 100 μg cabbage phospholipase D, add 4 mL diethyl ether, stir at rom temperature for 20 h, add 3 mL 500 mM EDTA, extract with chloroform/ MeOH. Dissolve the extracted phosphatidate in 2 mL chloroform:MeOH:water 63.5:31.5:5, add 500 μL 100 mM HCl, mix rapidly. Remove the lower phase and evaporate it to dryness, reconstitute the residue in 500 μL diethyl ether, add 1 mL diazomethane in diethyl ether, evaporate to dryness under a stream of nitrogen, dissolve the residue in 20 μL MeOH, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm LiChrosorb RP-18
Mobile phase: MeCN:MeOH:isopropanol:water 50:18:27:5

Flow rate: 1.5
Detector: UV 205

CHROMATOGRAM
Retention time: 9.4-36.0 (depending on structure)

KEY WORDS
derivatization

SAMPLE
Matrix: formulations
Sample preparation: Dilute liposome dispersions 10-fold with chloroform:MeOH 60:40, centrifuge at 2700 g for 15 min, inject an aliquot of the supernatant.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax amino
Mobile phase: MeCN:MeOH:buffer 64:28:8 (Buffer was 10 mM phosphoric acid adjusted to pH 4.8 with dilute ammonium hydroxide solution. To prepare mobile phase mix MeCN and MeOH and then add buffer.)
Flow rate: 1.5
Injection volume: 5-20
Detector: RI

CHROMATOGRAM
Retention time: 5
Limit of detection: 22 μg/mL

OTHER SUBSTANCES
Simultaneous: acyl lysophosphatidylcholine, acyl lysophosphatidylglycerol, phosphatidylglycerol

KEY WORDS
liposome dispersions

REFERENCE

SAMPLE
Matrix: lung lavage fluid
Sample preparation: Centrifuge lung lavage fluid at 4° at 450 g for 10 min. Shake 10 mL supernatant and 40 mL chloroform:MeOH 2:1 at 4° for 3 min. Remove the lower organic phase and wash it with 2 mL 50 mM NaCl, centrifuge, dry under a stream of nitrogen at 45°, reconstitute with 500 μL mobile phase, vortex at 4° for 1 min, inject a 100 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 2.1 5 μm Encapharm 100 spherical silica gel (Molnar, Berlin)
Column: 120 × 4.6 5 μm Encapharm 100 spherical silica gel (Molnar, Berlin)
Mobile phase: Gradient. A was chloroform:MeOH:ammonium hydroxide 80:19.5:0.5. B was chloroform:MeOH:water:ammonium hydroxide 60:34:5.5:0.5. A:B from 100:0 to 0:100 over 14 min, return to initial conditions over 7 min, re-equilibrate for 10 min.
Column temperature: 30
Flow rate: 1
Injection volume: 100
Detector: evaporative light-scattering, SEDERE Sedex-45, evaporation temperature 50°, nebulization gas nitrogen, pressure 200 kPa, flow 6 L/min, response is non-linear but proportional to the power 1.7 of the mass and must be calibrated for each compound

CHROMATOGRAM
Retention time: 13.11
Limit of detection: 40 ng

OTHER SUBSTANCES
Extracted: diarachidoylphosphatidylcholine, dilinoleylphosphatidylcholine, dipalmitoylphosphatidylcholine, diphosphatidylglycerol, lysophosphatidylcholine, phosphatidic acid, phosphatidylethanolamine, phosphatidylglycerol, phosphatidylinositol, phosphatidylserine, sphingomyelin

SAMPLE
Matrix: solutions
Sample preparation: Inject a 50 μL aliquot of a solution in chloroform:MeOH 98:2 on to column A and column B in series and elute with mobile phase A, after 10 min elute with mobile phase B, after 10 min remove column A from the circuit, monitor the effluent from column B, after 30 min elute column A with mobile phase B and monitor the effluent from column A.

HPLC VARIABLES
Column: A 250 × 4 5 μm LiChrosorb diol; B 250 × 4 5 μm LiChrospher Si100
Mobile phase: A MeCN; B MeCN:MeOH:phosphoric acid 93:5:1.5
Flow rate: 1
Injection volume: 50
Detector: UV 205

CHROMATOGRAM
Retention time: 46

OTHER SUBSTANCES
Simultaneous: lysophosphatidylcholine, lysophosphatidylethanolamine, phosphatidylethanolamine, phosphatidylinositol, phosphatidylserine, sphingomyelin

SAMPLE
Matrix: tissue
Sample preparation: Blend squid skin, add 5 volumes acetone, agitate at 25° for 2 h, filter, wash the solids three times with one volume of cold acetone. Keep the filtrate at -20° for 16 h, centrifuge at 2500 rpm for 10 min, discard the acetone supernatant, dry the pellet under a stream of nitrogen. Dissolve in the initial mobile phase, inject an aliquot. (All solvents contain 0.1% BHT.)

HPLC VARIABLES
Column: 250 × 7.2 5μm Lichrosorb Si 60
Mobile phase: Gradient. A:B:C from 42:52:6 to 32:52:16 over 20 min. A was hexane; B was isopropanol:chloroform (80:20); C was isopropanol:water (50:50).
Flow rate: 2.5
Injection volume: 250
Detector: ELSD (Cunow, France)

OTHER SUBSTANCES
Extracted: phosphatidylethanolamine, phosphatidylinotisol, phosphatidylserine, sphingomyelin

KEY WORDS
skin; squid; normal phase

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Potter-Elvehjem) liver or lung with 20 volumes chloroform: MeOH 2:1, filter (paper), wash with a volume of 50 mM NaCl equal to one-fifth the volume of extract, centrifuge (J.Biol.Chem. 1957, 226, 497). Remove the lower organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in chloroform, add 100 μL 1 mM IS in chloroform. Purify by normal phase HPLC using hexane:isopropanol:water 42:56:6.3 at 1 mL/min on a 300 × 4.9 10 μm μPorasil column using UV 200 detection, collect fraction eluting between 26 and 32 min, evaporate, dissolve in the minimum amount of trifluoroethanol, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Apex ODS 2
Mobile phase: MeOH:water 92.5:7.5 containing 40 mM choline chloride

Column temperature: 50
Flow rate: 1
Detector: F ex 340 em 460 following post-column derivatization. The column effluent was mixed with the reagent pumped at 3 mL/min in a 15 μL mixing chamber and the mixture flowed through a 3 m × 0.5 mm i.d. PTFE coil at 50° to the detector. Reagent was water containing 150 μL/L 3 mM 1,6-diphenyl-1,3,5-hexatriene in THF:Tween 20 99.999:0.001

CHROMATOGRAM
Retention time: 35-57
Internal standard: phosphatidylcholine 14:0/14:0 (20)

KEY WORDS
rat; liver; lung; post-column reaction

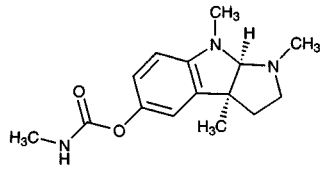
Physostigmine



Molecular formula: $C_{15}H_{21}N_3O_2$
Molecular weight: 275.35
CAS Registry No.: 57-47-6, 57-64-7 (salicylate), 64-47-1 (sulfate)
Merck Index: 7540
Lednicer No.: 1 111

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 10 μL 1 mg/mL neostigmine + 20 μL 1 μg/mL dimethylphysostigmine + 500 μL 100 mM pH 7 picric acid (Caution! Do not allow to dry! Dry picric acid is explosive!) + 500 μL 100 mM NaH_2PO_4, vortex thoroughly, add 10 mL water-saturated dichloromethane, mix vigorously by inverting and vortexing for 15 s, centrifuge at 1000 g for 10 min. Discard the upper aqueous phase and add 2 mL water-saturated dichloromethane, mix vigorously by inverting and vortexing for 15 s, centrifuge at 1000 g for 7 min. Remove the organic phase and add it to 200 μL 1 mM pH 1.8 tetrabutylammonium hydrogen sulfate, mix vigorously by inverting and vortexing for 15 s, centrifuge at 1000 g for 7 min, inject a 50 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: 5 × 3.2 7 μm silica
Column: 250 × 4.6 5 μm Ultrasphere-Si
Mobile phase: MeCN:buffer 20:80 (Buffer was 10 mM NaH_2PO_4 containing 2.5 mM tetramethylammonium chloride, pH 3.0.)
Flow rate: 1
Injection volume: 50
Detector: F ex 240 em 360

CHROMATOGRAM
Retention time: 7.08
Internal standard: dimethylphysostigmine (9.63)
Limit of detection: 0.1 ng/mL
Limit of quantitation: 0.5 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Noninterfering: neostigmine

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: 200 μL Plasma + 50 μL 50 μg/mL neostigmine bromide in water, filter (Amicon Centricon, 10000 molecular mass cut-off) while centrifuging at 4° at 7000 g for 70 min, inject an aliquot of the ultrafiltrate.

HPLC VARIABLES
Guard column: C18 (Waters)
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:buffer 40:60, pH adjusted to 2.1 (Buffer was 5 mM NaH_2PO_4 containing 1% acetic acid and 0.5 mM 1-octanesulfonic acid.)
Flow rate: 1.5
Injection volume: 100
Detector: radioactivity (Radiomatic Instruments Flo-One B) (The column effluent mixed with Ultrafluor (National Diagnostics) pumped at 4 mL/min and passed to the flow cell.)

CHROMATOGRAM
Retention time: 10.1
Limit of detection: 0.05 ng/mL

OTHER SUBSTANCES
Extracted: eseroline

KEY WORDS
tritium labeled; guinea pig; plasma; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: Condition a 3 mL 200 mg octadecyl SPE cartridge with 2 column volumes of MeOH and 2 column volumes of 100 mM pH 4 phosphate buffer. 1 mL Serum + 5 μL 1 mg/mL neostigmine bromide in 100 mM pH 4 NaH_2PO_4, vortex for 15 s, add 1 mL 1 mM reagent in 100 mM pH 4 phosphate buffer, mix for 30 s, add to the SPE cartridge, wash with 4 mL water, elute with 200 μL MeOH:water 95:5. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 50 μL aliquot. (Synthesize reagent, sodium α-(3,4-dimethoxyphenyl) cinnamonitrile-2'-sulfonate, as follows. Add 5 mL 10% KOH in water to a stirred solution of 20 mmoles 3,4-(dimethoxyphenyl)acetonitrile and 20 mmoles 2-formylbenzenesulfonic acid, sodium salt hydrate (sodium benzaldehyde-2-sulfonate) in 50 mL EtOH at 50°, stir at 50° for 5 min, cool (evaporate to near dryness, if necessary), filter to obtain sodium α-(3,4-dimethoxyphenyl) cinnamonitrile-2'-sulfonate (mp of p-toluidine salt is 218-223°) (J. Chem. Eng. Data 1975, 20, 215).)

HPLC VARIABLES
Column: 250 × 4.6 5 μm diol (ES Industries, Marlton NJ)
Mobile phase: MeOH:50 mM pH 4 NaH_2PO_4 20:80 containing 500 μM sodium α-(3,4-dimethoxyphenyl) cinnamonitrile-2'-sulfonate
Flow rate: 1
Injection volume: 50

Detector: F ex 243 em 418 (cutoff filter) following post-column extraction. The column effluent mixed with dichloromethane pumped at 1 mL/min and the mixture flowed through a 90 cm × 0.3 mm ID knitted PTFE coil to a 50 μL membrane phase separator using a polyethylene-backed 0.5 μm Fluoropore membrane filter (design in paper). The organic phase flowed to the detector.

CHROMATOGRAM
Retention time: 6.42
Internal standard: neostigmine (11.16)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, eseroline
Also analyzed: amantadine, amphetamine, atropine, chlorpheniramine, clidinium bromide, N,N-dimethyl-N-benzyltetradecylammonium chloride, guanethidine, hydralazine, imipramine, malachite green, promazine, propantheline bromide
Noninterfering: chlordiazepoxide

KEY WORDS
post-column extraction; SPE; serum; silanize glassware; post-column reaction

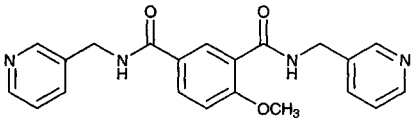
Picotamide



Molecular formula: $C_{21}H_{20}N_4O_3$
Molecular weight: 376.41
CAS Registry No.: 32828-81-2
Merck Index: 7560

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma + 20 μL 0.05 mg/mL bamifylline in MeOH + 60 μL 25% aqueous ammonia, mix, add 5 mL chloroform:isopropanol 95:5, shake for 20 min, centrifuge at 2000 g for 15 min. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 100 μL 0.6 M HCl, add 600 μL ethyl acetate, vortex for 15 s, centrifuge at 2000 g for 3 min. Remove the acidic aqueous phase and evaporate it to dryness under vacuum, reconstitute the residue in 100 μL MeOH:water 50:50, inject a 25 μL aliquot. Urine. 0.1-1 mL Urine + 20 μL 2.5 mg/mL bamifylline in MeOH + 100 μL 25% aqueous ammonia, mix, add 5 mL chloroform:isopropanol 95:5, shake for 20 min, centrifuge at 2000 g for 15 min. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 100 μL 1.2 M HCl, add 600 μL ethyl acetate, vortex for 15 s, centrifuge at 2000 g for 3 min. Remove the acidic aqueous phase and evaporate it to dryness under vacuum, reconstitute the residue in 100 μL MeOH: water 50:50, inject a 25 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm LiChrosorb RP-Select B C8
Mobile phase: MeCN:50 mM pH 5.5 NaH_2PO_4 28:72
Flow rate: 1
Injection volume: 25
Detector: UV 230

CHROMATOGRAM
Retention time: 10
Internal standard: bamifylline (7)
Limit of quantitation: 1 μg/mL (urine), 5 ng/mL (plasma)

KEY WORDS
plasma; pharmacokinetics

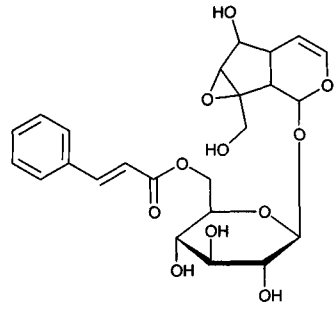
Picroside



Molecular formula: $C_{24}H_{28}O_{11}$
Molecular weight: 492.47
CAS Registry No.: 27409-30-9

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 500 μL MeOH, vortex for 2 min, centrifuge at 3000 rpm for 10 min. Transfer the supernatant to another tube and evaporate the MeOH under a stream of nitrogen, extract 3 times with 500 μL portions of ethyl acetate. Evaporate the combined ethyl acetate layers to dryness. Reconstitute the residue with 50 μL MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 4 × 4 5 μm C18
Column: 250 × 4 5 μm C18
Mobile phase: MeCN:100 mM acetic acid 25:75
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 8.5
Limit of quantitation: 100 ng/ mL

KEY WORDS
plasma; rabbit

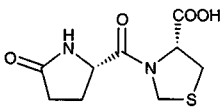
Pidotimod



Molecular formula: $C_9H_{12}N_2O_4S$
Molecular weight: 244.27
CAS Registry No.: 121808-62-6
Merck Index: 7574

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 50 μL 400 μg/mL oxiracetam + 100 μL 35% perchloric acid, vortex for 15 s, sonicate for 10 min, centrifuge at 12000 rpm for 10 min. Remove a 500 μL aliquot of the supernatant and add it to 500 μL mobile phase, vortex for 15 s, centrifuge at 12000 rpm for 10 min, inject an aliquot of the supernatant.

HPLC VARIABLES
Guard column: 15 × 3.2 PRP (Brownlee)

Column: 300 × 7.8 Aminex Ion-Exclusion HPX 874 (Bio-Rad)
Mobile phase: MeCN:0.05% sulfuric acid 12:88
Flow rate: 0.6
Injection volume: 40
Detector: UV 210

CHROMATOGRAM
Retention time: 16.5
Internal standard: oxiracetam (13.8)
Limit of detection: 100 ng/mL

KEY WORDS
plasma; pharmacokinetics

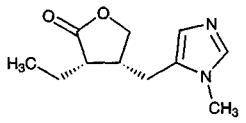
Pilocarpine



Molecular formula: $C_{11}H_{16}N_2O_2$
Molecular weight: 208.26
CAS Registry No.: 92-13-7, 54-71-7 (HCl), 148-72-1 (nitrate)
Merck Index: 7578

SAMPLE
Matrix: aqueous humor
Sample preparation: 100 μL Aqueous humor + 500 μL 300 mM pH 8.4 potassium bicarbonate + 1 mL dichloromethane, vortex for 1 min, centrifuge at 2000 rpm for 5 min, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 40°, reconstitute the residue in 200 μL 250 μg/mL p-nitrobenzyl bromide in MeCN, heat in a sealed tube at 40° for 24 h, cool, inject an aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:water 80:20 containing 1 mM sodium octanesulfonate
Flow rate: 1.6
Detector: UV 254

CHROMATOGRAM
Retention time: 11
Limit of detection: <50 ng/mL

OTHER SUBSTANCES
Simultaneous: isopilocarpine

KEY WORDS
derivatization; rabbit; silanize glassware with dimethyldichlorosilane

SAMPLE
Matrix: blood
Sample preparation: Add 125 mg NaF to each 1 mL of blood collected. 500 μL Plasma + 500 μL clonidine in water + 3 mL dichloromethane, shake gently for 10 min, centrifuge at 2100 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 150 μL 1 mM HCl, vortex for 4 min, sonicate for 45 s, add 2 mL diethyl ether, vortex for 2 min, centrifuge at 2100 g for 5 min, discard the ether phase, apply a vacuum to the aqueous phase for 10 s, inject a 35-100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: 15 × 4.6 37 μm Corasil C18
Column: 150 × 4.6 5 μm Spherisorb ODS-1
Mobile phase: MeCN:MeOH:7 mM pH 4.0 potassium phosphate buffer 30:15:55
Flow rate: 1.2
Injection volume: 35-100
Detector: UV 214

CHROMATOGRAM
Retention time: 7.2
Internal standard: clonidine (12)
Limit of detection: 5 ng/mL
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Extracted: pentobarbital

KEY WORDS
plasma; human; dog

SAMPLE

Matrix: blood, saliva, urine

Sample preparation: Mix 50 μL urine with 5 μL 10% sodium bicarbonate solution add 50 μL 500 ng/mL pilosine in MeOH. Mix 1.5 mL saliva with 90 μL 10% sodium bicarbonate, add 50 μL 500 ng/mL pilosine in MeOH. Mix 3 mL Plasma with 50 μL 500 ng/mL pilosine in MeOH. Extract these samples twice with 3 mL portions of chloroform. Combine the organic layers and evaporate them to dryness, reconstitute the residue in 200 μL 0.08% 4-bromomethyl-7-methoxycoumarin in acetone, heat at 37° for 48 h, evaporate to dryness, reconstitute with 1 mL mobile phase, centrifuge at 20000 g for 5 min, inject an aliquot of the supernatant.

HPLC VARIABLES

Guard column: 20 × 4.6 cyanopropyl silica (Brownlee)
Column: 220 × 4.6 cyanopropyl silica (Brownlee)
Mobile phase: MeCN:buffer 30:70 (Buffer was 3 mM diethylamine adjusted to pH 3.5 with 1 M phosphoric acid.)
Column temperature: 37
Flow rate: 1
Injection volume: 100
Detector: F ex 324 em 400

CHROMATOGRAM

Retention time: 13.86
Internal standard: pilosine (12.36)
Limit of detection: 1 ng/mL

OTHER SUBSTANCES

Interfering: isopilocarpine

KEY WORDS

derivatization; silanize all glassware with dichlorodimethylsilane for 12 h; plasma; pharmacokinetics

SAMPLE

Matrix: blood, urine

Sample preparation: Blood. 10 mL Whole blood + 250 μL 5% disodium EDTA, vortex, centrifuge at 1500 g for 10 min. Remove a 4 mL aliquot of the plasma and add it to 125 μL 5% disodium EDTA, mix. Remove a 1 mL aliquot and filter (Amicon Centrifree with 30000 Da cut-off), while centrifuging at 2000 g for 15 min, inject a 25 μL aliquot of the ultrafiltrate. Urine. Adjust urine to pH 5 with 100 mM HCl, dilute 20-fold with 200 mM pH 3.7 sodium acetate buffer, inject a 25 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Inertsil ODS
Mobile phase: MeCN:50 mM ammonium acetate buffer adjusted to pH 4.0 with trifluoroacetic acid 3:97
Flow rate: 1
Injection volume: 25
Detector: MS, PE Sciex API III plus, positive ion mode, multiple monitoring mode, APCI, nebulizer 500 °, m/z 209

CHROMATOGRAM

Retention time: 18
Limit of detection: 500 pg/mL (plasma), 10 ng/mL (urine)
Limit of quantitation: 2 ng/mL (plasma), 40 ng/mL (urine)

OTHER SUBSTANCES

Extracted: degradation products

KEY WORDS
plasma; ultrafiltrate; whole blood

Determination of pilocarpine, isopilocarpine, pilocarpic acid and isopilocarpic acid in human plasma and urine by high-performance liquid chromatography with tandem mass spectrometric detection, *J.Chromatogr.B*, **1998**, *708*, 103–112.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 214.6

CHROMATOGRAM
Retention time: 4.622

KEY WORDS
whole blood

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL Bond Elut PH SPE cartridge with 3 mL MeOH and 3 mL water. 100 μL Plasma + 1 mL 100 mM pH 9.5 phosphate buffer, add to the SPE cartridge, wash with 3 mL water, dry by pulling air through the cartridge for 15 min, elute with 1 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 60°, reconstitute the residue in 200 μL EtOH:n-hexane 50:50, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Sumchiral OA-4400 (Sumika)
Mobile phase: n-Hexane:EtOH:acetic acid 300:120:1
Column temperature: 40
Flow rate: 0.8
Injection volume: 100
Detector: F ex 330 em 415 following post-column reaction. The column effluent mixed with EtOH:acetic acid pumped at 0.3 mL/min and the mixture flowed to the detector.

CHROMATOGRAM
Retention time: 14.4 (-), 15.1 (+)
Limit of detection: 1.25 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
chiral; post-column reaction; plasma; rat; SPE; pharmacokinetics

SAMPLE
Matrix: cell incubations
Sample preparation: Inject 200 μL cell incubation on to column A with mobile phase A then switch to mobile phase B (start the gradient) and elute to waste, after 4 min direct the effluent from column A on to column B, after 30 min remove column A from the circuit.

HPLC VARIABLES
Column: A 40 × 4.6 37-75 μm Porasil B; B 30 mm long 5 μm Hypersil ODS + 125 × 4.6 5 μm Hypersil ODS
Mobile phase: A 1% pH 6.8 ammonium acetate buffer; B Gradient. A was water:25% ammonia 100:0.02. B was MeOH. A:B 100:0 for 6.9 min, to 95:5 over 0.1 min, to 85:15 over 11 min, to 0:100 over 9 min, maintain at 0:100 for 3 min, re-equilibrate at initial conditions for 2 min.
Column temperature: 28
Flow rate: 1
Injection volume: 200
Detector: F ex 332 em 405 following post-column reaction. The column effluent mixed with MeOH:water:85% orthophosphoric acid 60:20:20 pumped at 0.2 mL/min and flowed to the detector.

CHROMATOGRAM
Retention time: 28

OTHER SUBSTANCES
Extracted: metabolites

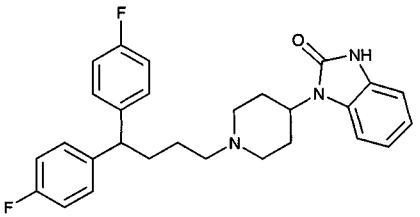
Pimozide



Molecular formula: $C_{28}H_{29}F_2N_3O$
Molecular weight: 461.55
CAS Registry No.: 2062-78-4
Merck Index: 7589
Lednicer No.: 2 290

SAMPLE
Matrix: blood
Sample preparation: Mix 1 mL whole blood with 500 ng IS, add 500 μL 2% pH 9.5 sodium tetraborate and 8 mL n-butanol:hexane 5:95. Extract for 30 min, centrifuge. Remove the organic layer and add it to 200 μL 0.2% orthophosphoric acid. Extract for 30 min, inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Column: 150 × 3.9 5 μm NovaPak-Phenyl
Mobile phase: MeCN:10 mM KH_2PO_4 55:45, adjusted to pH 3.0
Flow rate: 1.5
Injection volume: 30
Detector: UV 214

CHROMATOGRAM
Internal standard: pentazocine
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Extracted: sertraline

REFERENCE
McIntyre,I.M.; King,C.V.; Staikos,V.; Gall,J.; Drummer,O.H. A fatality involving moclobemide, sertraline, and pimozide, *J.Forensic Sci.*, **1997**, *42*, 951–953.

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 200 ng/mL 3-methylpimozide in 1% phosphoric acid + 1 mL 1 M NaOH + 5 mL n-hexane:isoamyl alcohol 98:2, shake reciprocally for 10 min, centrifuge at 1900 g for 5 min. Remove the organic layer and ad it to 100-200 μL 100 mM phosphoric acid, shake, centrifuge, discard the organic layer, inject almost all of the aqueous layer.

HPLC VARIABLES
Guard column: 10 × 4 5 μm TSK-GEL LS-410 (Toyo Soda)
Column: 150 × 4 5 μm TSK-GEL LS-410 (Toyo Soda)
Mobile phase: MeCN:buffer 48:52 (Buffer was 20 mM KH_2PO_4 adjusted to pH 2.5 with 20 mM phosphoric acid.)
Flow rate: 1
Injection volume: 100-200
Detector: F ex 210 em >320 or UV 280

CHROMATOGRAM
Retention time: 6
Internal standard: 3-methylpimozide (8)
Limit of detection: 0.3 ng/mL, 5 ng/mL (UV)

OTHER SUBSTANCES
Noninterfering: haloperidol, levomepromazine, sulpride, thioridazine, thiothixene

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES
Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 281

CHROMATOGRAM
Retention time: 8.77
Limit of detection: <120 ng/mL

SAMPLE
Matrix: microsomal incubations, urine
Sample preparation: Urine. Add 0.1-1 mL urine to a Sep-Pak C18 SPE cartridge, wash with 7.5 mL water, elute with 5 mL MeOH, elute with 5 mL EtOH, evaporate the eluate to dryness under reduced pressure, reconstitute in MeOH, inject an aliquot. Microsomal incubations. 3 mL Microsomal incubation + 2 mL water + 50 μL 200 μg/mL phenacetin in MeOH, homogenize. Remove a 2 mL aliquot and add it to 1 mL 10% perchloric acid, centrifuge at 3000 rpm for 5 min, add the supernatant to a Sep-Pak C18 SPE cartridge, wash with 7.5 mL water, elute with 5 mL MeOH, elute with 5 mL EtOH, evaporate the eluate to dryness under reduced pressure, reconstitute in MeOH, inject an aliquot.

HPLC VARIABLES
Guard column: 50 × 4.6 Cosmosil-10-phenyl (Nakarai Tesque)
Column: 150 × 4.6 Chemcosorb-7-ODS-L (Chemco)
Mobile phase: MeCN:MeOH:50 mM pH 5.0 sodium acetate buffer 15:20:65
Flow rate: 1
Detector: UV 277

CHROMATOGRAM
Retention time: 17.6

Internal standard: phenacetin (11.32)

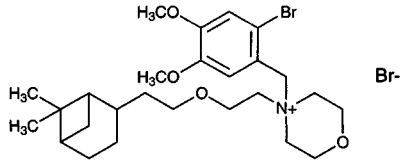
Pinaverium bromide



Molecular formula: $C_{26}H_{41}Br2NO_4$
Molecular weight: 591.42
CAS Registry No.: 53251-94-8
Merck Index: 7595

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 213.4

SAMPLE
Matrix: bulk
Sample preparation: Dissolve 10 μmole compound (as free base or hydrochloride) in 500 μL MeCN, add 250 μL 5% sodium carbonate (for hydrochlorides only), add 500 μL 100 mM reagent in MeCN, vortex for 1 min, heat at 60° for 2 h, add 100 μmole L-proline, heat at 60° for 30 min. Remove a 100 μL aliquot and dilute it with mobile phase, neutralize with acetic acid, inject a 10 μL aliquot. Prepare the reagent ((R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexyl-isothiocyanate) as follows. Add 0.7 mL carbon disulfide to 6 mL (1R,2R)-(-)-1,2-diaminocyclohexane, 12 mL water, and 12 mL EtOH, heat the oil bath to 80°, add 2.8 mL carbon disulfide dropwise (making sure that the product does not start to precipitate), when addition is complete reflux for 1 h, acidify with 500 μL 5 M HCl, reflux for 12 h, cool, filter, wash the solid with a

little cold EtOH to give trans-4,5-tetramethyleneimidazolidine-2-thione as a white fluffy solid (mp 148-150°) (Tetrahedron 1993, 49, 4419). Stir 7.97 g 3,5-dinitrobenzoyl chloride in 30 mL dichloroethane at 50°, add a solution of 6 g trans-4,5-tetramethyleneimidazolidine-2-thione in 120 mL dichloroethane containing a catalytic amount of 4-(dimethylamino)pyridine over 15 min, reflux for 2 h, remove the crystals of (R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate by filtration, evaporate the filtrate to dryness and dissolve the residue in 60 mL dichloroethane, reflux for 16 h to obtain more (R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate (mp >250°, $[\alpha]_{546}$ = -133° (c = 1) in MeCN).

SAMPLE
Matrix: saliva

Sample preparation: Condition a 100 mg 1 mL Bond-Elut C2 SPE cartridge with 1 mL MeOH, 1 mL water, and 1 mL pH 9.0 borate buffer. Centrifuge a cotton roll soaked with saliva at 1000 g for 5 min, remove the liquid supernatant. 1 mL Supernatant + 50 μL 100 μg/mL tertatolol, add to the SPE cartridge, wash with 500 μL water, wash with 500 μL MeCN, elute with two 500 μL portions of acidified MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 60°, reconstitute the residue in 50 μL mobile phase, mix for 15 s, inject a 40 μL aliquot. (Acidified MeOH was 50 mL MeOH + 300 μL 96% acetic acid.)

HPLC VARIABLES
Guard column: RCSS silica guard-pack (Waters)
Column: 250 × 4.6 Chiralcel OD-H
Mobile phase: n-Hexane:EtOH:diethylamine 50:50:1
Flow rate: 1
Injection volume: 40
Detector: F ex 225 em 290 cut-off filter

CHROMATOGRAM
Internal standard: (R,S)-tertatolol

SAMPLE

Matrix: solutions

Sample preparation: Mix a 100 μL of a 10 μM solution in MeCN:water:triethylamine 50:50:0.1 with 100 μL 1 mM (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole in MeCN, heat in the dark at 65° for 1.5 h, inject an aliquot. (Synthesis of (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene from EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate: benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ TLC plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei. Cool a solution of 16.4 g (S)-(-)-1-benzyl-3-pyrrolidinol in 164 mL pyridine to +5°, add 19.35 g p-toluenesulfonyl chloride, stir at +10° for 48 h, evaporate to dryness, chromatograph using dichloromethane: acetone 95:5 to obtain (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine (mp 68°). Heat a solution of (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine in 200 mL anhydrous DMF to 65°, add 33.5 g sodium azide (Caution! Sodium azide is highly toxic!), stir at 60° for 7 h, filter, evaporate the filtrate to dryness under reduced pressure, dissolve the residue in ethyl acetate, wash twice with water, dry over anhydrous magnesium sulfate, evaporate to obtain (3R)-3-azido-1-(phenylmethyl)pyrrolidine as an oil. Add 3.5 g 10% palladium on carbon under nitrogen to a solution of 7.05 g (3R)-3-azido-1-(phenylmethyl)pyrrolidine in 34.8 mL 1 M HCl in water and 245 mL EtOH, hydrogenate at atmospheric pressure for 30 min, add 3.5 g catalyst, hydrogenate for 2 h, filter, add 34.8 mL 1 M HCl to the filtrate, evaporate to dryness under reduced pressure, take up the residue in 70 mL EtOH, filter, evaporate the filtrate to dryness under reduced pressure, repeat this operation twice, crystallize with the minimum amount of EtOH to obtain (3R)-3-aminopyrrolidine dihydrochloride (J. Med. Chem. 1992, 35, 4205). 3R-(+)-aminopyrrolidine is also reported to be available from Tokyo Kasei. Add 100 mg 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to a stirred solution of 200 mg 3R-(+)-aminopyrrolidine in 20 mL MeCN at 0-10°, stir at room temperature for 30 min, remove the MeCN by evaporation under reduced pressure, dissolve the residue in 50 mL 5% HCl, wash 3 times with 50 mL portions of ethyl acetate, adjust the pH of the aqueous solution to 13-14 with 5% NaOH, extract 6 times with 50 mL portions of ethyl acetate. Combine the organic layers and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane to obtain (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole as orange crystals (mp 96-98°) (Analyst 1992, 117, 727). Add 100 μL thiophosgene in 10 mL benzene (Caution! Benzene is a carcinogen!) to 100 mg (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole in 100 mL acetone, reflux for 1 h, remove the solvent by evaporation under reduced pressure, suspend the residue in 100 mL water, extract 4 times with 25

mL portions of benzene. Combine the extracts and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane:benzene 1:2 to obtain (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole as yellow crystals (mp 160-170° d) (Analyst 1995, 120, 385).)

HPLC VARIABLES
Column: 150 × 4.6 5 μm Inertsil ODS-80A
Mobile phase: MeCN:water:trifluoroacetic acid 44:56:0.1
Column temperature: 40
Flow rate: 1
Detector: F ex 460 em 550

CHROMATOGRAM
Retention time: 30.9, 39.4 (enantiomers)
Limit of detection: 296-320 fmole

KEY WORDS
derivatization; chiral

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: 1 mL Urine + 10 mg β-glucuronidase/arylsulfatase (Helix pomatia, Sigma), heat at 37° overnight, add an equal volume of buffer, centrifuge at 2000 g for 5 min, inject an aliquot of the supernatant onto column A with mobile phase A and elute to waste. After 2.5 min backflush the contents of column A onto column B with mobile phase B, monitor the effluent from column B. Re-equilibrate both columns for 12.5 min before the next injection. (Buffer was 200 mM boric acid adjusted to pH 9.5 with 5 M NaOH.)

HPLC VARIABLES
Column: A 10 × 4.6 5 μm Spherisorb cyanopropyl; B 250 × 4.6 Capcell Pak C18 UG-120 (Shiseido)
Mobile phase: A water; B Gradient. MeCN:buffer from 3:97 to 30:70 over 30 min, to 40:60 over 8 min (Buffer was 3.4 mL/L phosphoric acid adjusted to pH 3.0 with 5 M NaOH.)
Flow rate: A 1.25; B 1
Injection volume: 100
Detector: UV 220

CHROMATOGRAM
Retention time: 10.3
Limit of detection: 250 ng/mL

OTHER SUBSTANCES
Extracted: acebutolol, alprenolol, amphetamine, atenolol, bopindolol, codeine, ephedrine, labetalol, metoprolol, morphine, nadolol, oxprenolol, propranolol, timolol

KEY WORDS
column-switching

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 200.5

CHROMATOGRAM

Retention time: 10.918

KEY WORDS

whole blood

SAMPLE
Matrix: urine
Sample preparation: Make up 1 mL urine to 25 mL with mobile phase, filter (0.45 μm). Inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 Nova-Pak C18
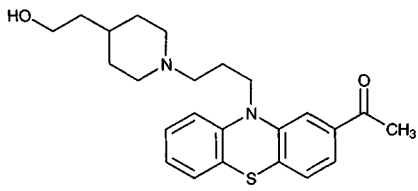
Mobile phase: MeCN:400 μM oxalic acid in water 28:72
Flow rate: 2.0
Injection volume: 20
Detector: UV 265

CHROMATOGRAM
Retention time: 2.97
Limit of detection: 1.15 μg/mL

OTHER SUBSTANCES
Simultaneous: cinoxacin, nalidixic acid, oxolinic acid, piromidic acid

REFERENCE
Durán Meré,I.; Galeano Díaz,T.; Rodríguez Cáceres,M.I.; Salinas López,F. Determination of the chemotherapeutic quinolonic and cinolonic derivatives in urine by high-performance liquid chromatography with ultraviolet and fluorescence detection in series, *J.Chromatogr.A*, **1997**, *787*, 119–127.

Piperacetazine



Molecular formula: $C_{24}H_{30}N_2O_2S$
Molecular weight: 410.58
CAS Registry No.: 3819-00-9
Merck Index: 7615
Lednicer No.: 1 386

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 2.5

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine,

buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

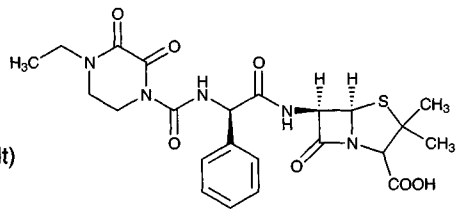
Piperacillin



Molecular formula: $C_{23}H_{27}N_5O_7S$
Molecular weight: 517.56
CAS Registry No.: 61477-96-1, 59703-84-3 (sodium salt)
Merck Index: 7616
Lednicer No.: 3 207; 4 179, 188

SAMPLE

Matrix: aqueous humor
Sample preparation: 150 μL Aqueous humor + 30 μL 2.5 μg/mL cephalothin + 50 μL 400 mM HCl, mix, add 700 μL chloroform:1-pentanol 3:1, mix by swirl-mixing for 5 min, centrifuge at 300 g for 5 min, discard the organic layer. Centrifuge the aqueous layer briefly, hold it at 4°, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.5 5 μm Ultrasphere RP-ODS
Mobile phase: MeOH:water:buffer 40:48:12, the final pH was adjusted to 6.7 with triethylamine (Buffer was 50 mM pH 6.7 morpholinopropanesulfonic acid (MOPS)-triethylamine.)
Column temperature: 32
Flow rate: 1

Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 6.86
Internal standard: cephalothin (4.74)
Limit of detection: 130 ng/mL

OTHER SUBSTANCES
Simultaneous: acetaminophen, ampicillin, caffeine, salicylic acid, azlocillin, cefamandole, cefoxitin, cefuroxime, scopolamine, sulfamethoxazole, theophylline, ticarcillin, timolol
Noninterfering: acetazolamide, amitriptyline, atropine, carbachol, cefazolin, cefoperazone, cefotaxime, chlorpheniramine, codeine, diazepam, echothiophate, epinephryl borate, imipramine, prednisolone acetate, tropicamide, xylazine
Interfering: carbenicillin, mezlocillin

KEY WORDS
rabbit

SAMPLE
Matrix: bile, blood, urine
Sample preparation: Serum. 0.5 mL serum + 0.5 mL MeCN mix in 7 mL tube on vortex mixer; shake by rotation (20 rpm) 10 min; centrifuge 10 min 1000 g; transfer supernatant to another tube, add 7 aliquots dichloromethane; equilibrate 10 min; shake by rotation (20 rpm) 10 min; centrifuge 10 min 1000 g; inject aliquot of upper aqueous layer. Urine. Centrifuge urine and dilute 1:20. Bile. Centrifuge bile and dilute 1:10

HPLC VARIABLES
Column: 150 × 4.6 5 μm Ultrasphere ODS
Mobile phase: 20:80 MeCN:20 mM ammonium acetate adjusted to pH 5 with glacial acetic acid
Flow rate: 1
Injection volume: 20
Detector: UV 214

CHROMATOGRAM
Retention time: 5.6
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Also analyzed: ampicillin, azlocillin, aztreonam, cefmenoxime, cefoperazone, cefsulodin, cefotaxime, ceftazidime, ceftriaxone, cloxacillin, desacetylcefotaxime, mezlocillin, penicillin G, ticarcillin

KEY WORDS
serum

SAMPLE
Matrix: bile, blood, urine
Sample preparation: Plasma, serum. 200 μL Plasma or serum + 200 μL 25 μg/mL penicillin G in 50 mM pH 6.0 sodium phosphate buffer + 800 μL MeCN, vortex for 30 s, centrifuge at 3000 g for 10 min. Remove the clear supernatant and add it to 2 mL dichloromethane, mix for 30 s, centrifuge at 3000 g for 10 min, inject a 25 μL aliquot of the upper aqueous layer. Bile. 200

μL Bile + 400 μL 50 mM pH 7.0 sodium phosphate buffer + 2 mL MeCN, vortex for 30 s, centrifuge at 3000 g for 10 min. Remove the clear supernatant and add it to 2 mL dichloromethane, mix for 30 s, centrifuge at 3000 g for 10 min, inject a 25 μL aliquot of the upper aqueous layer. Urine. 100 μL Urine + 50 μL 5 mg/mL penicillin G in water, vortex for 30 s, make up to 10 mL with 50 mM pH 6.0 sodium phosphate buffer, inject a 25 μL aliquot.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Brownlee C 18 guard column
Column: 250 × 4.6 5 μm Hypersil ODS (Keystone)
Mobile phase: Gradient. A was MeCN:10 mM sodium phosphate adjusted to pH 2.7 with concentrated phosphoric acid 3:97. B was MeCN:10 mM sodium phosphate adjusted to pH 2.7 with concentrated phosphoric acid 90:10. A:B from 95:5 to 50:50 over 9 min and then to 95:5 over 1 min.
Flow rate: 1.5
Injection volume: 25
Detector: UV 220

CHROMATOGRAM
Retention time: 11.8
Internal standard: penicillin G (12.5)
Limit of quantitation: 50000 ng/mL (urine), 1000 ng/mL (plasma, serum, bile)

OTHER SUBSTANCES
Extracted: tazobactam
Simultaneous: amoxicillin, ampicillin, cefoperazine, cefometazole, cefotaxime, cefotetan, cefuroxime, mezlocillin

KEY WORDS

SAMPLE
Matrix: blood, tissue, urine
Sample preparation: Serum, plasma. Dilute serum or plasma 1:2 to 1:10 with buffer, centrifuge, inject a 20 μL aliquot of supernatant. Urine. Dilute urine 1:10 to 1:100 with buffer, centrifuge, inject a 20 μL aliquot of supernatant. Tissue (lung, gut). Cut tissue with a scalpel, homogenize with 1-3 mL buffer, centrifuge at 9600 g for 5 min three times, inject a 20 μL aliquot. Tissue (chondral). Cut tissue with a scalpel, homogenize with 3-6 mL buffer in an ice bath for 2-3 min, centrifuge at 9600 g for 5 min four or five times, inject a 100 μL aliquot. Dilute human pleural samples with buffer, centrifuge, inject a 20 μL aliquot. (Buffer was 66.6 mM K_2HPO_4 adjusted to pH 7.40 with KH_2PO_4.)

HPLC VARIABLES
Column: 200 × 4 5 μm Nucleosil C18

Mobile phase: MeCN:buffer 23:77, adjusted to pH 5.2 with phosphoric acid (Buffer was 57.4 mM K_2HPO_4 adjusted to pH 5.2 with phosphoric acid.)
Flow rate: 1
Injection volume: 20-100
Detector: UV 220

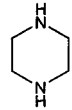
Piperazine



Molecular formula: $C_4H_{10}N_2$
Molecular weight: 86.14
CAS Registry No.: 110-85-0, 18534-18-4 (phosphate monohydrate), 14538-56-8 (phosphate), 142-88-1 (adipate), 144-29-6 (citrate), 41372-10-5 (citrate hydrate), 12002-30-1 (edetate calcium), 50322-15-1 (edetate calcium dihydrate), 133-36-8 (tartrate)
Merck Index: 7617

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Grind tablets to a fine powder, weigh out amount equivalent to about 200 mg piperazine citrate, dissolve in 50 mL water, sonicate for 15 min, make up to 100 mL with water, filter (0.45 μm). Remove a 3 mL aliquot and add it to 2 mL 4 mg/mL 1-benzylpiperazine in acetone:water 50:50, add 10 mL of a filtered 5 mg/mL solution of dansyl chloride in acetone, add 10 mL base solution, mix, sonicate for 10 min, let stand in the dark for 30 min, add 20 mL water, add 20 mL chloroform, shake vigorously for 1 min, filter the chloroform layer through anhydrous sodium sulfate, dilute 2 mL of the filtrate to 5 mL with mobile phase, inject an aliquot. Syrup. Dilute 5 mL syrup to 100 mL with water, mix, measure out an aliquot equivalent to about 200 mg piperazine citrate, make up to 100 mL with water, mix. Remove a 3 mL aliquot and add it to 2 mL 4 mg/mL 1-benzylpiperazine in acetone:water 50:50, add 10 mL of a filtered 5 mg/mL solution of dansyl chloride in acetone, add 10 mL base solution, mix, sonicate for 10 min, let stand in the dark for 30 min, add 20 mL water, add 20 mL chloroform, shake vigorously for 1 min, filter the chloroform layer through anhydrous sodium sulfate, dilute 2 mL of the filtrate to 5 mL with mobile phase, inject an aliquot. Granules, powders (effervescent). Weigh out amount equivalent to about 200 mg piperazine citrate, slowly

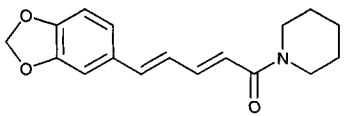
Piperine



Molecular formula: $C_{17}H_{19}NO_3$
Molecular weight: 285.34
CAS Registry No.: 94-62-2
Merck Index: 7625

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 341.5

CHROMATOGRAM
Retention time: 20.373

SAMPLE
Matrix: fruit, grain, vegetables
Sample preparation: Homogenize (Polytron) 150 g high moisture sample and 300 mL MeOH at half speed for 30 s and full speed for 1 min, filter (paper) under vacuum, remove portion of filtrate equal to 100 g sample and make up to 100 mL with water. Homogenize (Polytron) 75 g low moisture sample and 300 mL MeOH at half speed for 30 s and full speed for 1 min, filter (paper) under vacuum, remove portion of filtrate equal to 50 g sample and make up to 100 mL with water. Concentrate samples to 75 mL under reduced pressure at 35°, add 15 g NaCl, add 75 mL MeCN, shake for 30 s, let stand for 5 min. Remove the aqueous phase and add it to 50 mL MeCN, shake for 20 s, let layers separate, discard the aqueous layer. Combine the MeCN layers, wash with 25 mL 20% NaCl, wash with 100 mL petroleum ether, extract petroleum ether layer with 10 mL MeCN. Combine the MeCN layers and add them to 50 mL 2% NaCl, extract with 100 mL dichloromethane, extract twice with 25 mL portions of dichloromethane. Combine the dichloromethane layers and pass them through a 22 mm i.d. column containing 5 g anhydrous sodium sulfate. Evaporate the eluate to dryness under reduced pressure at 35°, reconstitute in 10 mL dichloromethane, add to the charcoal column, rinse flask with 10 mL dichloromethane, rinse flask with 25 mL MeCN:toluene 75:25. Evaporate the eluate to dryness under reduced pressure at 35°, reconstitute with 5 mL MeOH, filter (5 μm), inject a 10 μL aliquot (J. Assoc. Off.Anal. Chem. 1980, 63, 1114). (Charcoal column was 5 g silanized Celite 545:Nuchar S-N 4:1 on top of 0.5 g silanized Celite 545 in a 300 × 22 glass column, wash with 50 mL MeCN:toluene 75:25, do not allow to go dry. Prepare silanized Celite 545 as follows. Boil 150 g Celite 545 in 1 L 6 M HCl with stirring for 10 min, cool, filter, wash with water until filtrate is neutral, wash with 500 mL MeOH, wash with 500 mL dichloromethane, air dry in hood, heat to 120° in a flask, cool in a desiccator, add 3 mL dichlorodimethylsilane, mix

well, let stand at room temperature for 4 h, add 500 mL MeOH, mix, let stand for 15 min, filter, wash with isopropanol until neutral, air dry in hood, dry at 105° for 2 h, cool in desiccator, store in stoppered container. Totally silanized Celite should float on water and appear yellow (not pink) in toluene saturated with methyl red (J. Assoc. Off.Anal. Chem. 1980, 63, 1114).)

HPLC VARIABLES
Guard column: 70 × 2.1 25-37 μm Co-Pell ODS
Column: 250 × 4.6 6 μm Zorbax C8
Mobile phase: Gradient. MeCN:water from 12:88 to 70:30 over 30 min, 100:0 for 5 min.
Column temperature: 35
Flow rate: 1.5
Injection volume: 10
Detector: F ex 288 em 330 following post-column reaction. The column effluent mixed with 200 mM NaOH pumped at 0.5 mL/min and flowed through a 3 m × 0.48 mm stainless steel column to the detector.

CHROMATOGRAM
Retention time: 35
Limit of quantitation: 50 ppb

OTHER SUBSTANCES
Extracted: carbaryl, carbofuran, napropamide, phosalone

KEY WORDS
post-column reaction; pears; green beans

REFERENCE

SAMPLE
Matrix: rice
Sample preparation: 30 g Rice + 50 mL acetone, let stand with occasional shaking for 48 h, evaporate a 1 mL aliquot to near dryness under a stream of nitrogen, shake the remaining few drops twice with 1 mL portions of hexane. Add the hexane extracts to a Florisil Sep-Pak SPE cartridge, elute with 3 mL acetone:hexane 15:85. Collect all the eluates and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL MeOH, inject a 100 μL aliquot on to column A and elute to waste with mobile phase A, after 30 s elute the contents of column A onto column B with mobile phase B, elute with mobile phase B and monitor the effluent from column B.

HPLC VARIABLES
Column: A Guard Pak; B 150 × 3.9 Novapak C18
Mobile phase: A MeCN:water 40:60; B MeCN:water 75:25
Flow rate: 1
Injection volume: 100
Detector: UV 225

CHROMATOGRAM
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Extracted: bioremethrin, deltamethrin, fenvalerate, permethrin, phenothrin

KEY WORDS
column-switching; SPE

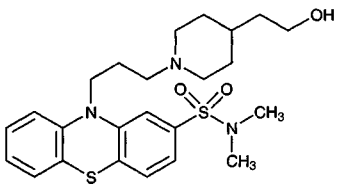
Pipotiazine



Molecular formula: $C_{24}H_{33}N_3O_3S_2$
Molecular weight: 475.68
CAS Registry No.: 39860-99-6, 37517-26-3 (palmitic ester)
Merck Index: 7636

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 262.9

CHROMATOGRAM
Retention time: 14.695

KEY WORDS
whole blood

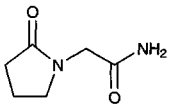
Piracetam



Molecular formula: $C_6H_{10}N_2O_2$
Molecular weight: 142.16
CAS Registry No.: 7491-74-9
Merck Index: 7641

SAMPLE
Matrix: blood, urine
Sample preparation: Urine. Dilute sample with MeOH:water 50:50, inject a 100 μL aliquot. Serum. Mix 1 mL serum with 8 mL cold MeOH:dichloromethane 10:40, centrifuge at 3000-5000 rpm for 20 min. Remove the upper MeOH-water layer and add it to 9.5 mL cold MeOH. Cool a 2 mL sample at 8° for 20 min, centrifuge for 10 min, dry the clear MeOH/water residue at 60° under a stream of nitrogen. Extract the residue three times with 100 μL MeOH:dichloromethane 20:80, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 125 5 μm LiChrospher 60 RP-Select-B
Flow rate: 0.8
Injection volume: 100
Detector: UV 218, UV 212

CHROMATOGRAM
Limit of quantitation: 100 μg/mL (urine), 4 μg/mL (serum)

KEY WORDS
serum

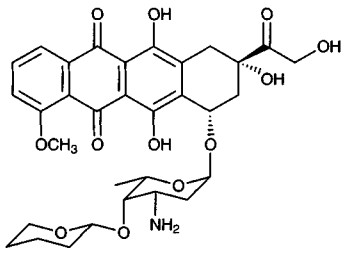
Pirarubicin



Molecular formula: $C_{32}H_{37}NO_{12}$
Molecular weight: 627.65
CAS Registry No.: 72496-41-4
Merck Index: 7642

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma or blood + 3 mL 100 mM pH 9.5 ammonia-ammonium chloride buffer + 20 ng daunorubicin + 13.5 mL chloroform:MeOH 2:1, shake mechanically for 30 min, centrifuge at 3000 g for 10 min, repeat the extraction with 9 mL chloroform. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 30°, reconstitute the residue in 3 mL chloroform:MeOH 2:1, evaporate this mixture, reconstitute the residue in 300 μL mobile phase, centrifuge a 75 μL aliquot at 10000 g for 1 min, inject the supernatant.

HPLC VARIABLES
Column: 250 × 4 5 μm STR ODS-M (Shimadzu)
Mobile phase: MeCN:buffer 30:70 (Buffer was 200 mM acetic acid-ammonium formate, pH 4.0.)
Column temperature: 22
Flow rate: 0.7
Injection volume: 75
Detector: F ex 470 em 550

CHROMATOGRAM
Retention time: 24.1
Internal standard: daunorubicin (16.2)
Limit of detection: 0.5 ng/mL

OTHER SUBSTANCES
Extracted: doxorubicin

KEY WORDS
plasma; whole blood; pharmacokinetics

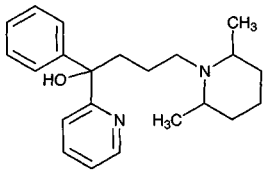
Pirmenol



Molecular formula: $C_{22}H_{30}N_2O$
Molecular weight: 338.49
CAS Registry No.: 68252-19-7, 61477-94-9 (HCl)
Merck Index: 7656
Lednicer No.: 3 48

SAMPLE

Matrix: blood
Sample preparation: 1 mL Serum + 150 μL 1 M NaOH + 50 μL 40 μg/mL chlorodisopyramide in MeOH + 5 mL dichloromethane, shake (Labquake) for 10 min, centrifuge at 1000 g for 10 min. Remove the organic layer (avoid contamination with aqueous phase) and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 200 μL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES

Column: 250 × 4 5 μm C18 (Altex) (At the beginning of each series of analyses use a conditioning injection of 4 μg pirmenol and IS.)
Mobile phase: MeCN:buffer 6:94 (Buffer was 10 mM K_2HPO_4 adjusted to pH 2.4 using phosphoric acid containing 375 μL nonylamine.)
Flow rate: 2
Injection volume: 100
Detector: UV 210

CHROMATOGRAM

Retention time: 2.9
Internal standard: chlorodisopyramide (3.6)
Limit of detection: 5 ng/mL

OTHER SUBSTANCES

Noninterfering: acetaminophen, N-acetylprocainamide, amikacin, amitriptyline, carbamazepine, chloramphenicol, desipramine, digoxin, disopyramide, ethosuximide, gentamicin, imipramine, lidocaine, lithium, methotrexate, netilmicin, nortriptyline, phenobarbital, phenytoin, primidone, procainamide, propranolol, quinidine, salicylic acid, theophylline, tobramycin, valproic acid, vancomycin

KEY WORDS

serum

SAMPLE

Matrix: blood

Sample preparation: 500 μL Plasma + 100 μL 10 mM HCl + 100 μL 2.5 μg/mL (+)-propranolol in 10 mM HCl + 200 μL 1 M NaOH + 5 mL toluene, shake for 10 min, centrifuge at 750 g for 5 min, freeze in dry ice/acetone. Remove the toluene layer and add it to 500 μL 100 mM HCl, shake for 10 min, centrifuge at 420 g for 5 min, freeze in dry ice/acetone. Discard the toluene layer and thaw the aqueous layer, add 200 μL 1 M NaOH to the aqueous layer, add hexane, shake for 10 min, centrifuge at 420 g for 5 min, freeze in dry ice/acetone. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 200 μL mobile phase, inject a 175 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 10 μm Chiralcel OJ
Mobile phase: Hexane:isopropanol:diethylamine 98.9:1:0.1
Column temperature: 65
Flow rate: 1
Injection volume: 175
Detector: UV 262

CHROMATOGRAM

Retention time: 7.4 (+), 9.2 (-)
Internal standard: (+)-propranolol hydrochloride (20.9)
Limit of quantitation: 20 ng/mL

KEY WORDS

SAMPLE

Matrix: blood, urine
Sample preparation: Blood. Mix 500 μL whole blood or plasma with 50 μL 20 μg/mL IS in 10 mM phosphoric acid, 100 μL 1 M NaOH, and 4 mL diethyl ether. Extract using a Labquake automatic shaker for 10 min, centrifuge at 1000 g for 5 min. Freeze the aqueous phase and remove the organic phase. Add 80 μL 100 mM phosphoric acid to the organic phase, vortex for 40 s, centrifuge, inject a 50 μL aliquot of the aqueous layer. Urine. Mix 500 μL urine with 50 μL 20 μg/mL IS in 10 mM phosphoric acid, 2 mL 100 mM sodium carbonate, and 4 mL diethyl ether. Extract using a Labquake automatic shaker for 10 min, centrifuge at 1000 g for 5 min. Freeze the aqueous phase and remove the organic phase. Add 80 μL 100 mM phosphoric acid to the organic layer, vortex for 40 s, centrifuge, inject a 50 μL aliquot of the aqueous layer.

HPLC VARIABLES

Column: 250 × 4.6 6 μm Zorbax TMS
Mobile phase: MeCN:triethylamine:50 mM ammonium dihydrogen phosphate 15:0.5:85, adjusted to pH 2.6 with 1 M phosphoric acid
Flow rate: 1.1
Injection volume: 50
Detector: UV 262

CHROMATOGRAM

Retention time: 5
Internal standard: disopyramide (11)
Limit of quantitation: 100 ng/mL (blood, plasma), 5 μg/mL (urine)

KEY WORDS

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 1 mL Plasma + 500 μL 50 mM HCl + 500 μL 3.33 μg/mL IS in 50 mM HCl + 4 mL cyclohexane + 150 μL 1 M NaOH, shake horizontally for 10 min, centrifuge at 206 g for 5 min. Remove 3 mL of the organic layer and evaporate it to dryness, reconstitute the residue in 200 μL mobile phase, inject a 50 μL aliquot. Urine. 1 mL Urine + 250 μL 50 mM HCl + 4 mL cyclohexane + 200 μL 1 M NaOH, shake horizontally for 10 min, centrifuge at 206 g for 5 min. Remove 3 mL of the organic layer and evaporate it to dryness, reconstitute the residue in 1 mL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 6 μm Zorbax TMS
Mobile phase: MeCN:buffer 15:85 (Buffer was 6.9 g $NaH_2PO_4.H_2O$ and 5 mL triethylamine in water, adjust pH to 2.6 with phosphoric acid, make up to 1 L with water.)
Flow rate: 1.5
Injection volume: 50-100
Detector: UV 254

CHROMATOGRAM
Retention time: 6.4
Internal standard: (±)-cis-2-[4-(2,6-dimethyl-1-piperidinyl)-1-phenylbutyl]pyridine monohydrochloride (9.5)
Limit of quantitation: 1 μg/mL (urine), 125 ng/mL (plasma)

OTHER SUBSTANCES
Simultaneous: aspirin, bretylium tosylate, chlorthalidone, naproxen, oxazepam, quinidine salicylic acid, triamterene, zomepirac
Noninterfering: acetaminophen, clonidine, diazepam, disopyramide, ethacrynic acid, fenoprofen, furosemide, hydralazine, hydrochlorothiazide, ibuprofen, methotrimeprazine, methyldopa, prazepam, prazosin, procainamide, propranolol, propoxyphene, reserpine, tolmetin

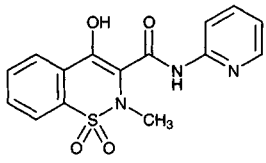
Piroxicam



Molecular formula: $C_{15}H_{13}N_3O_4S$
Molecular weight: 331.35
CAS Registry No.: 36322-90-4, 87234-24-0 (cinnamic acid ester), 85056-47-9 (piroxicam olamine)
Merck Index: 7661
Lednicer No.: 4 173

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 50 μL 40 μg/mL tenoxicam in MeOH + 1 mL pH 2 phosphate buffer + 10 mL diethyl ether, vortex for 1 min, centrifuge at 1300 g for 5 min. Evaporate the organic layer to dryness under a stream of nitrogen. Reconstitute the residue with 100 μL 10 mM HCl in MeOH, inject a 40 μL aliquot.

HPLC VARIABLES

Column: 300 × 3.9 10 μm μBondapak ODS
Mobile phase: MeOH:10 mM pH 2 phosphate buffer 45:55
Flow rate: 1.5
Injection volume: 40
Detector: UV 361

CHROMATOGRAM

Retention time: 9.85
Internal standard: tenoxicam (5.81)
Limit of detection: 20 ng/mL
Limit of quantitation: 200 ng/mL

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 16.57

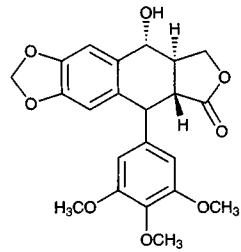
Podofilox



Molecular formula: $C_{22}H_{22}O_8$
Molecular weight: 414.41
CAS Registry No.: 518-28-5
Merck Index: 7704

SAMPLE
Matrix: blood
Sample preparation: Condition a 3 mL 500 mg Bond-Elut PH SPE cartridge with 6 mL MeOH and 3 mL 20 mM pH 5.5 ammonium acetate. Mix 500 µL serum with 500 µL 20 mM pH 5.5 ammonium acetate and 50 µL 760 mM sodium dodecyl sulfate. Add to the SPE cartridge, wash with 3 mL 20 mM ammonium acetate and 3 mL MeOH:water 10:90. Elute with 2 mL MeOH, evaporate to dryness at 43° under reduced pressure, reconstitute in 150 µL MeOH:water 36:64.

HPLC VARIABLES
Column: 300 × 3.9 Bondclone 10 C18 (Phenomenex, Torrance, CA, USA)
Mobile phase: MeOH:40 mM pH 6.9 KH_2PO_4:0.14 mM 1-heptanesulfonic acid 40:60:0.6
Flow rate: 2
Detector: F ex 230 em 330

CHROMATOGRAM
Retention time: 28
Internal standard: podofilox
Limit of detection: 200 ng/mL
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Extracted: etoposide

KEY WORDS
serum; SPE; pharmacokinetics; podofilox is IS

SAMPLE

Matrix: blood, urine
Sample preparation: Plasma. 3 mL Plasma + 1.5 mL 10 mM NaOH + 800 μL 100 mM HCl + 10 mL dichloromethane, shake on a platform shaker for 20 min, centrifuge at -10° at 3000 rpm for 15 min, repeat extraction twice more. Combine all organic layers and evaporate them to dryness under a stream of nitrogen at 50°, reconstitute the residue in 50 μL, vortex, inject whole amount. Urine. 5 mL Urine + 2 mL 10 mM NaOH + 2 mL 0.68% KH_2PO_4 adjusted to pH 6.1 + 10 mL dichloromethane, shake on a platform shaker for 20 min, centrifuge at -10° at 3000 rpm for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 50°, reconstitute the residue in 100 μL, vortex, inject a 20 μL aliquot.

HPLC VARIABLES

Column: μBondapak C18
Mobile phase: MeCN:glacial acetic acid:water 35:2:63 (plasma) or MeCN:water 40:60 (urine)
Flow rate: 2
Injection volume: 20-50
Detector: UV 280

CHROMATOGRAM

Retention time: 9 (plasma), 8 (urine)

Internal standard: polythiazide

OTHER SUBSTANCES
Extracted: benzthiazide

KEY WORDS
polythiazide is IS; plasma

SAMPLE
Matrix: urine
Sample preparation: 2 mL Urine + 0.5 g solid buffer I (pH 5-5.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and vortex it with 2 mL 5% aqueous lead acetate for 10 s, centrifuge at 600 g for 5 min, remove and keep organic phase. 2 mL Urine + 0.5 g solid buffer II (pH 9-9.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and combine it with previous organic layer. Evaporate to dryness at 50° under a stream of nitrogen, reconstitute in 300 μL 50 μg/mL β-hydroxyethyltheophylline in MeOH, inject 5 μL aliquot. (Solid buffer I was KH_2PO_4:Na_2HPO_4 99:1, solid buffer II was $NaHCO_3$:K_2CO_3 3:2.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm HP Hypersil ODS (A) or HP LiChrosorb RP-18 (B)
Mobile phase: Gradient. MeCN:buffer from 15:85 at 2 min to 80:20 at 20 min (Buffer was 50 mM NaH_2PO_4 containing 16 mM propylamine hydrochloride, adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 5
Detector: UV 230, UV 275

CHROMATOGRAM
Retention time: 14.5 (A), 15.2 (B)
Internal standard: β-hydroxyethyltheophylline (3.7 (A), 4.4 (B))
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: furosemide, metolazone, amiloride, acetazolamide, chlorothiazide, hydrochlorothiazide, quinethazone, triamterene, hydroflumethiazide, chlorthalidone, dichlorphenamide, trichloromethiazide, methyclothiazide, benzthiazide, cyclothiazide, ethacrynic acid, bumetanide, probenecid, spironolactone, canrenone, flumethiazide
Noninterfering: acetaminophen, aspirin, caffeine, diflunisal, fenoprofen, ibuprofen, indomethacin, methocarbamol, naproxen, phenylbutazone, sulindac, tetracycline, theobromine, theophylline, tolmetin, trimethoprim, verapamil
Interfering: bendroflumethiazide

SAMPLE
Matrix: urine
Sample preparation: 5 mL Urine + 50 μL 100 μg/mL 7-propyltheophylline in MeOH + 200 μL ammonium chloride buffer + 2 g NaCl, extract with 6 mL ethyl acetate by rocking at 40 movements/min for 20 min and centrifuging at 800 g for 5 min, repeat extraction, combine organic layers, evaporate to dryness at 40° under a stream of nitrogen. Reconstitute in 200 μL MeCN: water 15:85 and inject 20 μL aliquots. (Ammonium chloride buffer was 28 g ammonium chloride in 100 mL water with the pH adjusted to 9.5 with concentrated ammonia solution.)

HPLC VARIABLES
Column: 75 × 4.6 3 μm Ultrasphere ODS

Mobile phase: Gradient. MeCN:100 mM ammonium acetate adjusted to pH 3 with concentrated phosphoric acid. From 10:90 to 15:85 over 2 min to 55:45 over 3 min to 60:40 over 3 min. Kept at 60:40 for 1 min, decreased to 10:90 over 1 min and equilibrated at 10:90 for 2 min.
Flow rate: 1
Injection volume: 20
Detector: UV 270

CHROMATOGRAM
Retention time: 6.9
Internal standard: 7-propyltheophylline (4.5)

OTHER SUBSTANCES
Simultaneous: xipamide, bumetanide, acetazolamide, amiloride, buthiazide, benzthiazide, canrenone, caffeine, clopamide, chlorthalidone, cyclothiazide, diclofenamide, furosemide, hydrochlorothiazide, mesocarb, morazone, piretanide, probenecid, spironolactone, torsemide, triamterene
Interfering: bendroflumethiazide, ethacrynic acid

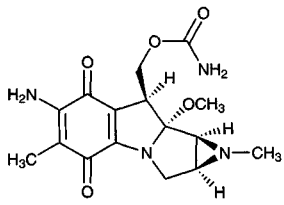
Porfiromycin



Molecular formula: $C_{16}H_{20}N_4O_5$
Molecular weight: 348.36
CAS Registry No.: 801-52-5
Merck Index: 7756

SAMPLE
Matrix: blood
Sample preparation: Centrifuge plasma at 15800 g at 4° for 5 min. 500 µL Plasma + 1 mL MeCN, stir for 1 min, centrifuge at 15800 g for at 4° for 10 min. Lyophilize the supernatant in a vacuum centrifuge (Hetovac VR-1, Allerod, Denmark). Reconstitute the residue in 150 µL MeOH:10 mM pH 6.5 NaH_2PO_4 30:70. Inject a 50 µL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 µm Hypersil ODS
Mobile phase: MeOH:10 mM pH 6.5 NaH_2PO_4 30:70
Column temperature: 30
Flow rate: 1.3
Injection volume: 50
Detector: UV 365

CHROMATOGRAM
Retention time: 6.64
Internal standard: porfiromycin

OTHER SUBSTANCES
Extracted: mitomycin
Noninterfering: dexamethasone, lorazepam, mezlocillin, ondansetron, meperidine

KEY WORDS
plasma; porfiromycin is IS

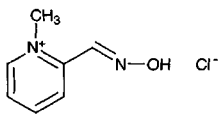
Pralidoxime chloride



Molecular formula: $C_7H_9ClN_2O$
Molecular weight: 172.61
CAS Registry No.: 51-15-0, 94-63-3 (iodide), 154-97-2 (mesylate)
Merck Index: 7884

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30
Detector: UV 295

CHROMATOGRAM
Retention time: 2.863

KEY WORDS
whole blood

Pramlintide

Molecular formula: $C_{171}H_{267}N_{51}O_{53}S_2$
Molecular weight: 3949.47
CAS Registry No.: 151126-32-8

SAMPLE
Matrix: formulations
Sample preparation: Condition a 6 mL 200 mg C4 SPE cartridge (Baker) with MeCN and water. Add the liquid formulation to the SPE cartridge, wash with water, elute with MeCN:water 40:60 containing 0.1% trifluoroacetic acid. Evaporate the eluate to dryness and dissolve the residue in 30 mM pH 4.0 sodium acetate so as to obtain a 2 mg/mL solution. Inject an aliquot.

HPLC VARIABLES
Column: 100 × 4.6 5 μm PolySULFOETHYL Aspartamide column (Poly LC, Columbia MD)
Mobile phase: Gradient. A was MeCN:5 mM potassium dihydrogen phosphate containing 5 mM sodium perchlorate 40:60, pH 5.8. B was MeCN:5 mM potassium dihydrogen phosphate containing sodium perchlorate 40:60, pH 5.8. A:B from 98:2 to 76:24 over 24 min, maintain at 76:24 for 37 min, to 12:88 over 20 min.
Column temperature: 40
Flow rate: 0.8
Detector: UV 220

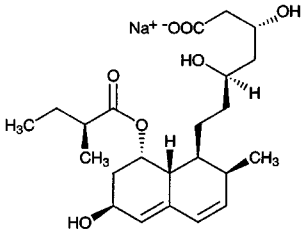
Pravastatin sodium



Molecular formula: $C_{23}H_{35}NaO_7$
Molecular weight: 446.52
CAS Registry No.: 81131-70-6, 81093-37-0 (free acid)
Merck Index: 7894

SAMPLE
Matrix: blood, feces, urine
Sample preparation: Plasma. 2 mL Plasma + 4 mL MeCN, centrifuge at 700 g for 10 min, remove the supernatant and wash the precipitate twice with 2 mL MeCN:water 2:1. Combine the supernatants and evaporate them to dryness under vacuum, reconstitute the residue in 1 mL MeCN:water 2:1, centrifuge at 10000 g, remove the supernatant and add it to 500 µL

water, centrifuge at 10000 g, inject a 1 mL aliquot. Urine. Centrifuge at 10000 g, inject an aliquot. Feces. Homogenize feces, 1 g homogenate + 2 mL MeCN, sonicate for 5 min, shake in a wrist action shaker for 20 min, centrifuge at 700 g for 10 min. Remover the supernatant and wash the precipitate twice with 1 mL MeCN:water 2:1, combine the supernatants, inject a 500 μL aliquot.

HPLC VARIABLES

Guard column: present but not specified
Column: 500 × 9.4 Partisil 10 ODS-3 C18
Mobile phase: Gradient. MeCN:10 mM pH 7.2 potassium phosphate buffer containing 5 mM tetrabutylammonium hydrogen sulphate at 25:75 for 20 min, then to 50:50 over 45 min, hold at 50:50 for 10 min
Flow rate: 4
Injection volume: 500-1000
Detector: Collect fractions and measure radioactivity (UV maximum absorbance at 245 nm)

CHROMATOGRAM

Retention time: 33

OTHER SUBSTANCES

Extracted: metabolites

Lednicer No.: 2 405

SAMPLE

Matrix: bile, blood, gastric contents, tissue, urine
Sample preparation: Chop 5-g tissue and homogenize (Ultra Turrax T25) at 8500, 9500, 13500, 20500, and 24000 rpm for 1 min each. Add homogenate to 20 mL water. Dilute blood, urine, gastric contents, and bile four times with water. Mix 4 mL sample with 4 mL diethyl ether and mix for 15 min (Spiramix 10, Denley, UK). Separate the organic layer, add 4 mL diethyl ether to extraction sample, mix. Evaporate combined organic layers to dryness under a stream of dry air at 50°. Purify extracts by partition between 1 mL MeCN and 2 mL heptane, separate MeCN layer, evaporate it to dryness, reconstitute the residue in 100 μL MeOH and inject a 20 μL aliquot of the solution.

HPLC VARIABLES

Guard column: 20 × 4.6 5 μm Apex II ODS
Column: 150 × 4.6 5 μm Apex II ODS
Mobile phase: MeCN:MeOH:10 mM phosphoric acid:10 mM Na_2HPO_4 40:20:36:4
Flow rate: 1
Injection volume: 20
Detector: UV 240

CHROMATOGRAM

Retention time: 14.5
Internal standard: prazepam
Limit of quantitation: 100 ng/mL

OTHER SUBSTANCES

Extracted: diazepam, nitrazepam, oxazepam, temazepam

KEY WORDS

liver; lung; muscle; urine; pericardial fluid; prazepam is IS

REFERENCE

SAMPLE

Matrix: blood
Sample preparation: 200 mg Extrelut + 400 μL blood + 100 μL MeOH, mix, let dry at room temperature for 1-2 h. Add to a 30 × 4.6 stainless steel extraction column, extract with carbon dioxide:ethyl acetate 95:5 at 2 mL/min, 65°, and 300 psi. for 10 min, collect by expansion into MeOH. Dry the collected extract at 65° under nitrogen. Reconstitute the residue in 50 μL mobile phase. Inject a 20 μL aliquot. Condition ca. 10 g Extrelut in a 10 mL plastic syringe with dichloromethane. Add 250 μL 5% ammonia to the top. Mix 900 μL blood with 100 μL MeOH. Add 1 mL pH 4 phosphate buffer and 250 μL 5% ammonia solution, mix thoroughly, add to the extraction column. After 5 min elute with diethyl ether under the influence of gravity. Collect 8 mL eluate, evaporate to dryness at 65° under nitrogen. Reconstitute the residue in 180 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 4.6 5 μm Hypersil ODS
Column: 250 × 4.6 5 μm Hypersil ODS
Mobile phase: MeOH:Na_2HPO_4 70:30

SAMPLE
Matrix: urine
Sample preparation: 1 mL Urine + 100 µL 5 mM pH 5.5 acetate buffer + 25 µL β-glucuronidase/arylsulfatase (0.235/0.065 U, Calbiochem), mix, heat at 37° for 16 h, add 50 µL MeOH, add 1 mL saturated trisodium phosphate, add 3 mL dichloromethane, vortex for 2 min, centrifuge at 1610 g for 5 min. Remove a 2 mL aliquot of the organic layer and add it to 2 mL hexane and 2 mL 6 M HCl, vortex for 2 min, centrifuge at 1610 g for 5 min. Remove 1 mL of the aqueous phase and adjust pH to 6 with 1 mL 6 M NaOH and 1 mL saturated trisodium phosphate, add 3 mLL dichloromethane, vortex for 2 min, centrifuge at 1610 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 50°, reconstitute the residue in 150 µL mobile phase, inject a 60 µL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 µm LiChrospher 100 RP-18(e)
Mobile phase: MeOH:water:triethylamine 30:70:0.1 adjusted to pH 5.5 with phosphoric acid
Flow rate: 0.7
Injection volume: 60
Detector: UV 240

CHROMATOGRAM
Retention time: 17.0
Internal standard: prazepam

OTHER SUBSTANCES
Extracted: desmethyldiazepam, diazepam, oxazepam, temazepam
Simultaneous: amitriptyline, caffeine, carbamazepine, chlordiazepoxide, chlorpromazine, clonazepam, desipramine, flunitrazepam, flurazepam, haloperidol, imipramine, levomepromazine, maprotiline, mianserin, nitrazepam, nortriptyline, perphenazine, phenobarbital, phenytoin, sulpride, thioridazine, triazolam

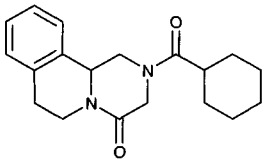
Praziquantel



Molecular formula: $C_{19}H_{24}N_2O_2$
Molecular weight: 312.41
CAS Registry No.: 55268-74-1
Merck Index: 7896
Lednicer No.: 4 213

SAMPLE
Matrix: blood
Sample preparation: Acidify 1 mL plasma with 300 µL 1 M phosphoric acid, add 4 mL toluene, shake mechanically for 20 min, centrifuge at 1800 g, remove 3.5 mL of the organic layer. Add 1 mL water and 200 µL 1.5 M NaOH, shake in a mixer for 1 min, centrifuge. Remove a 3 mL aliquot of the organic layer and evaporate it under a stream of air. Dissolve the residue in 100 µL mobile phase, inject a 50 µL aliquot.

HPLC VARIABLES
Guard column: 4 × 4 CN (Merck)
Column: 150 × 4.6 5 µm Chiralcel OD-H (Daicel, Chiral Technology)
Mobile phase: Hexane:EtOH 85:15
Flow rate: 1
Injection volume: 50
Detector: UV 220

CHROMATOGRAM
Retention time: 9 (R-(-)), 12 (S-(+))
Limit of quantitation: 5 ng/mL (R-(-)-), 10 ng/mL (S-(+))

OTHER SUBSTANCES
Interfering: albendazole sulfone, albendazole metabolite, carbamazepine, clonazepam, lorazepam, triazolam

KEY WORDS
chiral

SAMPLE
Matrix: blood
Sample preparation: Condition a 100 mg Sep-Pak Vac C18 SPE cartridge with 3 mL MeOH, 1 mL water, and 5 mL 100 mM sodium carbonate. Mix 1.5 mL heparinized plasma with 1.5 mL 100 mM sodium carbonate, add to the SPE cartridge, wash with 5 mL 100 mM sodium carbonate, dry the cartridge in air for 30 s, elute with 750 µL MeCN:0.2% phosphoric acid 50:50, vortex the eluate (protect from light), inject an aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 5 µm BST Nucleosil C18
Column: 150 × 3.9 4 µm Novapak C18
Mobile phase: MeCN:buffer 33:67 (Buffer was 50 mM KH_2PO_4 adjusted to pH 3.0 with 20% phosphoric acid.)

Flow rate: 1.5
Injection volume: 50
Detector: UV 220

CHROMATOGRAM
Retention time: 8.2
Limit of detection: 4 ng/mL
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Extracted: fenbendazole

SAMPLE
Matrix: blood, tissue
Sample preparation: Plasma. 250 μL Plasma + 100 μL water + 1 mL acetone, homogenize for 10 s, add 50 μL 1 M naOH, add 2 mL hexane:diethyl ether 40:60, mix for 10 s, centrifuge at 3000 rpm for 3 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 200 μL MeOH:buffer 70:30, add 500 μL hexane, mix, centrifuge for 3 min, discard the hexane layer. Remove 100 μL of the MeOH layer and add it to 100 μL 10 mM phosphoric acid, mix, filter (Costar Spin-X 0.2 μm nylon) while centrifuging at 5600 g for 4 min, inject a 25 μL aliquot of the filtrate. Muscle. 3 g Muscle + 300 μL water + 4.7 mL acetone, homogenize (Ultra-Turrax TP 18/2) for 6 s, centrifuge at 5000 rpm for 3 min. Remove 4 mL of the supernatant and add it to 5 mL hexane:diethyl ether 40:60, shake vigorously for 10 s, centrifuge at 3000 rpm for 3 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 400 μL MeOH:buffer 70:30, let stand at -20° for 5 min, centrifuge at 3000 rpm for 3 min. Remove 300 μL of the MeOH based phase and add it to 300 μL water, filter (Costar Spin-X 0.2 μm nylon) while centrifuging, inject a 25 μL aliquot of the filtrate. Liver. 3 g Liver + 300 μL water + 4.7 mL acetone, homogenize (Ultra-Turrax TP 18/2) for 6 s, centrifuge at 5000 rpm for 3 min. Remove 4 mL of the supernatant and add it to 5 mL hexane:diethyl ether 40:60, shake vigorously for 10 s, centrifuge at 3000 rpm for 3 min. Remove the organic layer and add it to 50 μL 1 M NaOH, shake vigorously for 5 s, centrifuge for 2 min. Remove the upper layer and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 600 μL MeOH:

buffer 70:30, add 1 mL hexane, mix, centrifuge for 3 min. Discard the hexane layer and add 240 μL of the MeOH based layer to 160 μL 20 mM phosphoric acid, mix for 3 s, filter (Costar Spin-X 0.2 μm nylon) while centrifuging, inject a 25 μL aliquot of the filtrate. (Buffer was 4.45 g sodium heptanesulfonate and 1.779 g Na_2HPO_4 in 750 mL water, adjust pH to 6 with 2 M phosphoric acid, make up to 1 L with water.)

HPLC VARIABLES
Guard column: 20 × 4.6 5 μm Supelcosil LC-ABZ
Column: 150 × 4.6 5 μm Supelcosil LC-ABZ
Mobile phase: MeCN:water 40:60 (muscle) or 39:61 (liver, plasma) (After each injection wash with MeCN for 5 min at 1.5 mL/min, wash with mobile phase for 7 min at 1.8 mL/min and for 3 min at 1 mL/min.)
Flow rate: 1 for 3 min then 0.8 for 6 min
Injection volume: 25
Detector: UV 205

CHROMATOGRAM
Retention time: 8.5
Limit of quantitation: 15 ng/g (liver), 20 ng/mL (plasma), 5 ng/g (muscle)

KEY WORDS
plasma; fish; trout; muscle; liver

REFERENCE

SAMPLE
Matrix: blood, tissue, urine
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL MeOH and 5 mL 50 mM pH 5.0 phosphate buffer. 2 mL plasma, urine, or 10% liver homogenate + 100 μL 10 μg/mL IS + 1 mL 200 mM NaOH, vortex for 15 s, add to the SPE cartridge, wash with 20 mL 50 mM pH 5.0 phosphate buffer, wash with 8 mL MeOH, elute with two 3 mL aliquots of ethyl acetate:diisopropyl ether 70:30 (plasma, urine) or 30:70 (liver) (Caution! Diisopropyl ether readily forms explosive peroxides!). Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Ultrasphere ODS C18
Mobile phase: MeCN:water 45:55 (plasma, urine) or 50:50 (liver)
Flow rate: 1.5
Injection volume: 20
Detector: UV 217

CHROMATOGRAM
Retention time: 6.1 (plasma, urine), 4.9 (liver)
Internal standard: 2-cycloheptylcarbonyl-4-oxo-1,2,3,6,7,11b-hexahydro-4H-pyrzino[2,1-a]isoquinoline (8.7 (plasma, urine), 6.5 (liver))
Limit of detection: 31.2 ng/mL

SAMPLE

Matrix: blood, urine

Sample preparation: 50 μL Plasma or urine + 100 μL saturated NaCl + 50 μL 2 μg/mL dimethothiazine mesylate in water + 50 μL 4 M NaOH, vortex for 10 s, add 200 μL MTBE, vortex for 30 s, centrifuge at 9950 g for 2 min, inject a 110 μL aliquot of the organic phase.

HPLC VARIABLES

Column: 250 × 5 5 μm Spherisorb S5W

Mobile phase: MeOH:10 mM ammonium perchlorate adjusted to pH 6.7 with 1 mL/L methanolic NaOH (0.1 M)

Flow rate: 2

Injection volume: 110

Detector: F ex 370 em 370-700

CHROMATOGRAM

Retention time: 3

Internal standard: dimethothiazine mesylate (5)

Limit of detection: 1000 ng/mL

OTHER SUBSTANCES

Simultaneous: N-acetylprocainamide, ajmaline, chlorpromazine, desipramine, dipyridamole, doxazosin, flecainide, flurazepam, gallopamil, imipramine, ketanserin, metoprolol, mexiletine, mianserin, nadolol, nitrazepam, orphenadrine, oxprenolol, penbutolol, pindolol, prajmalium, procainamide, propranolol, protriptyline, pyrimethamine, quinidine, quinine, terazosin, triamterene, trimipramine, verapamil

Noninterfering: amiodarone, atenolol, disopyramide, labetalol, lignocaine, lorcainide, methyldopa, nifedipine, prenalterol, propafenone, sotalol, timolol

KEY WORDS

plasma

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 246.4

CHROMATOGRAM

Retention time: 10.608

KEY WORDS

whole blood

SAMPLE

Matrix: perfusate

Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 10 mL MeOH and 10 mL water. 1 mL Perfusate + 1 μg propranolol + 2 mL water, add to the SPE cartridge, wash with 10 mL water, dry under vacuum, elute with 5 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 40°, reconstitute the residue in 50 μL mobile phase, centrifuge at 700 g for 5 min, inject a 30 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Alltima C18 (Alltech)

Mobile phase: MeOH:50 mM pH 5.8 phosphate buffer 55:45, final pH 5.1

Column temperature: 40

Flow rate: 1

Injection volume: 30

Detector: F ex 280 em 395

CHROMATOGRAM

Retention time: 4.9

Internal standard: propranolol (7.1)

Limit of detection: 0.1 ng/mL

OTHER SUBSTANCES

Noninterfering: albuterol, alcuronium, aminophylline, atenolol, atropine, betamethasone, bupivacaine, cortisone, dexamethasone, diazepam, diltiazem, hydrocortisone, hyoscine, hyoscine-N-butylbromide, labetalol, lidocaine, methimazole, metoclopramide, norepinephrine, phenobarbital, L-phenylephrine, phenytoin, prednisolone, prednisone, promethazine, propylthiouracil, pyridoxine, ranitidine, verapamil

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 1.6

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

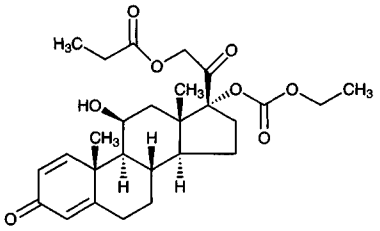
Prednicarbate



Molecular formula: $C_{27}H_{36}O_8$
Molecular weight: 488.58
CAS Registry No.: 73771-04-7
Merck Index: 7899
Lednicer No.: 4 71

SAMPLE
Matrix: tissue
Sample preparation: Extract incubation suspension twice with 3 mL portions of ethyl acetate, vortex for 1 min, centrifuge at 1000 rpm for 5 min, dry the combined organic phases under nitrogen, reconstitute with 1 mL MeOH, vortex 1 min, dry in a conical tube, reconstitute with 100 µL MeOH, centrifuge, inject a 20 µL aliquot.

HPLC VARIABLES
Column: 125 × 4 5 µm LiChrospher 100 RP-18
Mobile phase: Gradient. A was MeCN. B was water. A:B from 20:80 to 100:0 over 20 min
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 15.1
Internal standard: betamethasone (9.4)
Limit of detection: 10 ng/mL
Limit of quantitation: 100 ng/mL-50 µg/mL

OTHER SUBSTANCES
Extracted: metabolites

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 5 mL water + 1 mL 2 μg/mL equilenin in MeOH + 50 μL 0.1 M NaOH to adjust pH to 10, vortex briefly after each addition, shake with 10 mL dichloromethane for 10 min, centrifuge at 2000 g for 10 min. Wash organic layer twice with 2 mL water, centrifuge 5 min, evaporate 8 mL of organic phase to dryness at 40° under a stream of nitrogen, reconstitute residue in 150 μL mobile phase, inject 25 μL aliquot

HPLC VARIABLES
Column: 300 × 4 10 μm μBondapak C18
Mobile phase: MeOH:buffer 60:40 (Buffer was 10 mL 200 mM acetic acid + 15 mL 200 mM sodium acetate made up to 1 L, pH 4.8.)

Flow rate: 1
Injection volume: 25
Detector: UV 254

CHROMATOGRAM
Retention time: 4.5
Internal standard: equilenin (7.5)
Limit of detection: 5 ng/mL

OTHER SUBSTANCES
Simultaneous: deoxycortisol, hydrocortisone, prednisone, triamcinolone, dexamethasone, betamethasone
Interfering: hydrocortisone

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: Prepare a Sep-Pak Plus Environmental C18 cartridge by washing with 15 mL MeOH then 15 mL water. 1 mL Serum + 100 μL 3 μg/mL betamethasone in isopropanol: MeCN 1:1 + 100 μL isopropanol:acetonitrile 1:1, mix, add to SPE cartridge, wash with 10 mL water, elute with 3 mL MeOH. Evaporate the eluate at 50° under a stream of nitrogen, reconstitute in 200 μL mobile phase A, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: μBondapak C18 guard column
Column: 250 × 4.6 5 μm Hypersil ODS
Mobile phase: Gradient. A was isopropanol:50 mM pH 4.5 acetate buffer 10:90. B was isopropanol:50 mM pH 4.5 acetate buffer 30:70. A:B from 90:10 to 30:70 over 25 min, hold at 30:70 for 5 min, to 90:10 over 5 min, hold at 90:10 for 15 min before next injection.
Column temperature: 40
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 26.5
Internal standard: betamethasone (33)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Simultaneous: metabolites, prednisone, cortisone, hydrocortisone

KEY WORDS
serum; SPE

SAMPLE
Matrix: blood
Sample preparation: Condition an Empore C8 extraction disc SPE cartridge (3M Co.) by adding 500 μL MeOH and forcing through three drops, discard the remaining liquid, add water, force through three drops, discard the water. 300 μL Serum + 150 μL IS solution, let stand at room temperature for 10 min, add 800 μL saturated sodium borate solution, mix, centrifuge at 12400 g for 3 min (if necessary), add to SPE cartridge, centrifuge at 100-120 g for 5 min, force through 200 μL water, force through 500 μL MeOH:water 18:82, elute with 50 μL MeCN then 150 μL water, mix the eluates, inject a 20 μL aliquot. (IS solution contained 0.5 mg/L fludrocortisone and 0.75 mg/L methylprednisolone in 400 mM HCl.) (The extraction disc permits use of lower volumes of eluate than a conventional SPE cartridge.)

HPLC VARIABLES
Guard column: 20 × 2 30 μm Permaphase ETH (Du Pont)
Column: 250 × 2 Ultrasphere C18 or 250 × 4.6 Ultrasphere C18
Mobile phase: THF:water 20:80 (Use a 150 × 4.6 37-53 μm silica gel (Whatman) saturating column (held at 55°) between the pump and the injector.)
Column temperature: 55

Flow rate: 0.18 (250 × 2 column) or 0.8 (250 × 4.6 column)
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 12
Internal standard: fludrocortisone (15), methylprednisolone (20)
Limit of detection: 4 ng/mL

OTHER SUBSTANCES
Extracted: hydrocortisone, cortisone, prednisone, corticosterone
Simultaneous: aldosterone, triamcinolone, metyrapone, 11-deoxycortisol, dexamethasone, 21-deoxycortisone, androsteindione, beclomethasone, 11-deoxycorticosterone, testosterone, 17-hydroxyprogesterone, progesterone, pregnenolone

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a Sep-Pak Plus C18 SPE cartridge with 7 mL MeOH and 14 mL water. Add 40 ng 6β-hydroxycortisone to 400 μL plasma or urine, add the mixture to the SPE cartridge, wash with 6 mL water, 3 mL MeOH:water 12:88, and 3 mL petroleum ether, elute with 5 mL ethyl acetate. Dry the eluate under reduced pressure at 40°, add 200 μL MeCN: triethylamine 90:10 and MeCN:0.1% quinuclidine 20:80 to the residue, vortex. Add 200 μL 0.02% 9-anthroyl nitrile and a few molecular sieves (4A), let stand for 30 min, evaporate under reduced pressure at 40°, dissolve the residue in 200 μL acetone, dilute with 2 mL n-hexane. Add the mixture to a Sep-Pak Plus Silica SPE cartridge, wash with 14 mL 1,2-dichloroethane, elute with 5 mL ethyl acetate. Evaporate the eluate under reduced pressure at 40°, reconstitute the residue in 200 μL mobile phase, inject a 30-60 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Cosmosil 5SL (Nacalai Tesque, Japan)
Mobile phase: Dioxane:ethyl acetate:chloroform:n-hexane:pyridine 58.1:11.6:11.6:16.3:2.4 (Caution! Dioxane and chloroform are carcinogens!)
Flow rate: 1 for 45 min, to 1.2 over 5 min
Injection volume: 30-60
Detector: F ex 360 em 460

CHROMATOGRAM
Retention time: 32.5
Internal standard: 6β-hydroxycortisone (86)
Limit of detection: 100 pg/mL

SAMPLE
Matrix: solutions
Sample preparation: Evaporate solution (eluate from preparative HPLC) to dryness under a stream of nitrogen, reconstitute with 10 μL 2 μg/mL 9-anthroylnitrile (Wako) in MeCN and 10 μL triethylamine:MeCN 30:70 under nitrogen, let stand at room temperature for 20 min, add 5 μL water, after 6 min add 50 μL 600 mM acetic acid in MeCN, evaporate to dryness under a stream of nitrogen at 37°, reconstitute with 90 μL MeOH:0.4 N NaH_2PO_4 60:40, add to a Cyclobond I silica-bonded β-cyclodextrin SPE cartridge (Astec), wash with 1 mL water, wash with 8 mL MeOH:water 25:75 containing 7.5 mM pH 7.0 phosphate buffer, elute with 1 mL MeOH, evaporate to dryness under a stream of nitrogen, reconstitute with mobile phase, inject an aliquot on to column A and elute to waste with mobile phase, after the solvent front has passed through divert the effluent from column A on to column B, monitor the effluent from column B.

HPLC VARIABLES
Column: A 30 × 2.1 silica (Brownlee); B 150 × 2 Hypersil
Mobile phase: Hexane:ethyl acetate 67:33 (half-saturated with water)
Flow rate: 0.5
Detector: F ex 305-395 em 430-470

CHROMATOGRAM
Retention time: 7.21

OTHER SUBSTANCES
Simultaneous: cortisone, hydrocortisone

KEY WORDS
derivatization; SPE; column-switching; normal phase

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Sample + 400 μL 5 mM DBD-PZ + 70 mM diethylphosphorocyanidate in MeCN, react for 6 h, inject a 1 μL aliquot. (Synthesis of 4-(N,N-dimethylaminosulfonyl)-7-N-piperazino-2,1,3-benzoxadiazole (DBD-PZ) is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene form EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-

hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei (TCI America, Portland OR). Add 123 mg 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to 129 mg piperazine in 20 mL MeCN at room temperature, stir for 30 min, evaporate under reduced pressure, dissolve residue in 50 mL 5% HCl, wash three times with 20 mL ethyl acetate, discard ethyl acetate extracts, adjust pH of aqueous solution to 13-14 with 5% NaOH, extract five times with 50 mL ethyl acetate, combine extracts, wash with 20 mL water, dry over anhydrous sodium sulfate, evaporate under vacuum to give 4-(N,N-dimethylaminosulfonyl)-7-N-piperazino-2,1,3-benzoxadiazole as orange crystals (mp 121-2°).)

HPLC VARIABLES
Column: 150 × 4.6 5 μm Inertsil ODS-2
Mobile phase: MeCN:water 45:55
Column temperature: 40
Flow rate: 1
Injection volume: 1
Detector: F ex 437 em 561

CHROMATOGRAM
Retention time: 12 (prenisolone succinate)
Limit of detection: 12 fmol

OTHER SUBSTANCES
Simultaneous: hydrocortisone succinate, alprostadil
Interfering: dinoprost

KEY WORDS
derivatization

Sample preparation: Prepare solutions in MeCN, dilute to an appropriate concentration with mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 120 × 4.6 5 μm octadecyl Bakerbond
Mobile phase: MeCN:water 30:70 containing 16 mM β-cyclodextrin
Column temperature: 5
Flow rate: 1
Injection volume: 20
Detector: UV 240

CHROMATOGRAM

Retention time: 1.0

OTHER SUBSTANCES

Simultaneous: hydrocortisone, testosterone, cortisone, 17α-methyltestosterone, 17α-hydroxyprogesterone

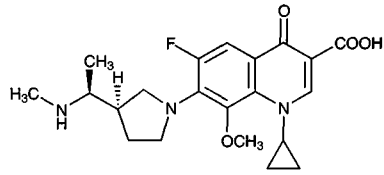
Premafloxacin



Molecular formula: $C_{21}H_{26}FN_3O_4$
Molecular weight: 403.45
CAS Registry No.: 143383-65-7

SAMPLE
Matrix: bulk
Sample preparation: Prepare a 250-500 μg/mL solutions in mobile phase. Inject a 10 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 3 μm YMC ODS-AQ
Mobile phase: A was MeCN:MeOH:THF:buffer 1.75:20.925:2.325:75 (Buffer was 100 mM phosphoric acid containing 46 mM tetrabutylammonium hydroxide, pH 3.)
Flow rate: 0.7
Injection volume: 10
Detector: UV 298

CHROMATOGRAM
Retention time: ca. 16

OTHER SUBSTANCES
Simultaneous: impurities

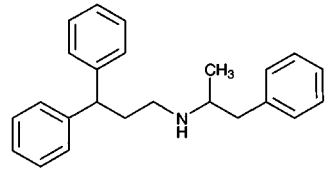
Prenylamine



Molecular formula: $C_{24}H_{27}N$
Molecular weight: 329.49
CAS Registry No.: 390-64-7, 69-43-2 (lactate)
Merck Index: 7919
Lednicer No.: 1 76

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 1.8

OTHER SUBSTANCES

Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

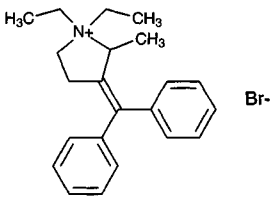
Prifinium bromide



Molecular formula: $C_{22}H_{28}BrN$
Molecular weight: 386.38
CAS Registry No.: 4630-95-9
Merck Index: 7923

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 15.622

KEY WORDS
whole blood

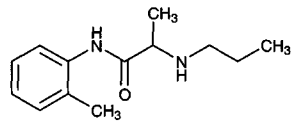
Prilocaine



Molecular formula: $C_{13}H_{20}N_2O$
Molecular weight: 220.31
CAS Registry No.: 721-50-6, 1786-81-8 (HCl)
Merck Index: 7924
Lednicer No.: 1 17

SAMPLE
Matrix: blood
Sample preparation: Condition a diol AASP SPE cartridge (Jones Chromatography) with 1 mL MeOH, 1 mL water, 1 mL mobile phase, 0.5 mL MeOH, 0.5 mL toluene. 200 μL Plasma + 100 μL 1 μg/mL etidocaine in 100 mM K_2HPO_4, mix, add 1 mL toluene, vortex for 1 min, centrifuge at 12000 g for 1 min. Add 750 μL of the toluene layer to the SPE cartridge, wash with 500 μL MeCN, elute the contents of the SPE onto the column with mobile phase (MeCN used for purge (6 strokes) and afterwash (10 strokes), valve reset time 2 min).

HPLC VARIABLES
Guard column: 20 × 2 30-40 μm Co:Pell ODS
Column: 150 × 4.6 Spherisorb 5 CN
Mobile phase: MeCN:water 40:60 containing 10 mM phosphoric acid
Flow rate: 1
Detector: E, Environmental Science Associates Model 5100A Coulochem, screen mode, electrode 1 +0.7 V, electrode 2 +0.9 V, palladium reference electrode, guard cell +1.2 V (before injection valve)

CHROMATOGRAM
Retention time: 8.0
Internal standard: etidocaine (10.8)
Limit of detection: 5 ng/mL

KEY WORDS
plasma; pharmacokinetics; SPE

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 200 μL Plasma + 10 μL 15 mg/mL bupivacaine, mix, add 100 μL 2 M NaOH, vortex briefly, add 5 mL anhydrous ethyl ether, vortex for 30 s, rotate for 10 min, centrifuge at 1000 g for 5 min. Remove 4.5 mL ether and add to 250 μL 12.5 mM sulfuric acid, vortex for 30 s, rotate for 10 min, centrifuge for 5 min, inject a 50 μL aliquot of the lower aqueous phase.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Octyl 1B (Keystone)
Mobile phase: MeCN:50 mM Na_2HPO_4 27:73 pH adjusted to 5.8 with 50% phosphoric acid
Flow rate: 1
Injection volume: 50
Detector: UV 210

CHROMATOGRAM
Retention time: 3.32
Internal standard: bupivacaine (9.81)
Limit of detection: 4 ng/mL
Limit of quantitation: 200 ng/mL

OTHER SUBSTANCES
Extracted: lidocaine, o-toluidine

KEY WORDS
plasma; pig; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES
Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 227

CHROMATOGRAM
Retention time: 4.32
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood
Sample preparation: 500 µL Serum + 50 µL 5 µg/mL IS in water + 50 µL 1 M KOH, add 2.5 mL hexane:isopropanol 97:3 containing 1 mL/L N,N'-dimethyloctylamine, vortex vigorously for 1 min, centrifuge at 4° at 1000 g for 10 min, freeze in liquid nitrogen, remove the organic layer, repeat extraction twice more. Combine the organic layers and evaporate under reduced pressure, reconstitute in 200 µL solvent containing 1 mL/L N,N'-dimethyloctylamine, inject an aliquot. (Solvent was MeCN:50 mM KH_2PO_4 60:40 adjusted to pH 7.5 with orthophosphoric acid. Rinse glass ware with hexane:isopropanol 97:3 containing 1 mL/L N,N'-dimethyloctylamine.)

HPLC VARIABLES

Guard column: 30 × 4.6 C18 (Pierce)
Column: 100 × 4.6 5 µm C18 (Pierce)
Mobile phase: MeCN:THF:buffer 60:1:39 containing 500 µL/L N,N'-dimethylactylamine (Buffer was 50 mM K_2HPO_4 adjusted to pH 6 with 20% orthophosphoric acid.)
Flow rate: 0.7
Injection volume: 50
Detector: UV 269

CHROMATOGRAM

Retention time: 3.9

Internal standard: 3-bromoprimaquine diphosphate (6.4)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Extracted: CDRI compound 80/53

KEY WORDS
serum

REFERENCE
Paliwal,J.K.; Gupta,R.C.; Grover,P.K. Simultaneous determination of a new antimalarial agent, CDRI compound 80/53, and its metabolite primaquine in serum by high-performance liquid chromatography, *J.Chromatogr.*, **1993**, *616*, 155–160.

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 100 μL 10 μg/mL IS in MeOH + 750 μL MeCN, mix, let stand at 4° in the dark for 1 h, centrifuge at 9500 g for 5 min. Remove the supernatant and evaporate under a stream of nitrogen for 45-60 min, reconstitute the residue in 100 μL mobile phase, centrifuge at 9500 g for 5 min, inject a 10 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Ultrasphere C8
Mobile phase: MeCN:MeOH:buffer 24:20:56 (Buffer was 7 mM monochloroacetic acid containing 0.5 mM 1-decanesulfonic acid.)
Column temperature: 35
Flow rate: 1.4
Injection volume: 10
Detector: E, Bioanalytical Systems LC-4B, CC-4 cell, +0.82 V, clean electrode every 100 injections

CHROMATOGRAM
Retention time: 15
Internal standard: N1,N1-diethyl-N6-(6-methoxy-4-methyl-8-quinolinyl)-1,6-hexanediamine (WR6026) (35)
Limit of detection: 2 ng/mL
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: carbenicillin, cefamandole, dicloxacillin, minocycline, moxalactam
Noninterfering: amikacin, amoxicillin, ampicillin, azlocillin, aztreonam, cefaclor, cefazolin, cefonicid, cefoperazone, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cephalothin, cephalexin, chloramphenicol, chloroquine, ciprofloxacin, clindamycin, cloxacillin, erythromycin, gentamicin, imipenem, kanamycin, lincomycin, methicillin, nafcillin, neomycin, netilmicin, oxacillin, penicillin, piperacillin, rifampin, streptomycin, sulfamethoxazole, tetracycline, ticarcillin, trimethoprim, WR238605, WR242511, zidovudine

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma or blood cells + 100 μL 0.5 μg/mL 6-methoxyprimaquine + 2 mL 25% ammonia (specific gravity 0.91), vortex for 2 min, add n-hexane:ethyl acetate 87.5:12.5, centrifuge at 1000 g for 10 min. Remove the organic layer and evaporate it to dryness on

a vortex evaporator at 60°, reconstitute the residue in 100-250 μL mobile phase, inject a 20-250 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 5 μm μBondapak C18
Mobile phase: MeCN:MeOH:1 M perchloric acid:water 30:9:1:95
Flow rate: 1.5
Injection volume: 20-250
Detector: UV 254

CHROMATOGRAM
Retention time: 12.5
Internal standard: 6-methoxyprimaquine (Walter Reed) (8)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: chloroquine, dapsone, pyrimethamine, quinine, sulfadoxine, sulfalene

KEY WORDS
plasma; blood cells

SAMPLE
Matrix: blood, saliva, urine
Sample preparation: Dilute 1 mL urine to 10 mL with water. 1 mL Plasma, saliva, or diluted urine + 200 μL perchloric acid, mix for 5 s, add 1 mL 5 M NaOH, add 4 mL diethyl ether, mix for 1 min, centrifuge at 3000 g for 10 min. Remove the organic layer and add it to 100 μL 100 mM HCl, mix for 1 min, centrifuge for 5 min, inject a 10 μL aliquot of the aqueous layer.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:MeOH:20 mM KH_2PO_4 10:15:75 containing 74 mM perchloric acid, pH 2.8
Flow rate: 1.2
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 10.8
Internal standard: primaquine

OTHER SUBSTANCES
Extracted: quinine
Noninterfering: acetaminophen, amodiaquine, chloroquine, chlorpheniramine, proguanil, promethazine, pyrimethamine

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma + 200 μL 1 M HCl saturated with ammonium sulfate, vortex for 20 s, add 60 μL 10 μg/mL 4-methylprimidone in MeCN, vortex for 20 s, centrifuge at 2700 g for 5 min, inject a 5-10 μL aliquot of the MeCN layer.

HPLC VARIABLES
Column: 250 × 4 5 μm LiChrosorb RP-18
Mobile phase: MeOH:THF:50 mM pH 5.9 phosphate buffer 44:1:55
Column temperature: 50
Flow rate: 1.1
Injection volume: 5-10
Detector: UV 210

CHROMATOGRAM
Retention time: 3
Internal standard: 4-methylprimidone (5)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Extracted: carbamazepine, phenobarbital, phenytoin, valproic acid
Simultaneous: acetaminophen, salicylic acid, ethylphenylmalonamide, theophylline, caffeine, ethosuximide, chloramphenicol, methylphenobarbital, glutethimide, pentobarbital, lidocaine, diazepam

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: 200 μL Serum + 1 mL 5 μg/mL 5-ethyl-5-tolylhydantoin in MeCN, agitate for 3 min. Remove the supernatant and evaporate it to dryness, dissolve the residue in 1 mL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: pellicular reversed phase (Chrompack 28653)
Column: 100 × 3 octyl CP-tm-Spher C8 glass column (Chrompack)
Mobile phase: MeCN:50 mM NaH_2PO_4 25:75 adjusted to pH 2.2 with phosphoric acid
Flow rate: 0.9
Injection volume: 50
Detector: UV 210

CHROMATOGRAM
Retention time: 1.7
Internal standard: 5-ethyl-5-tolylhydantoin (7.8)
Limit of detection: 1000 ng/mL

OTHER SUBSTANCES
Simultaneous: phenobarbital, ethylphenylmalonamide

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 100 μL buffer + 1.5 mL IS in 5% isopropanol in chloroform, vortex for 30 s, centrifuge. Remove the organic layer and evaporate it to dryness under a stream of air at room temperature, reconstitute the residue in 100 μL mobile phase, inject a 6-10 μL aliquot. (Buffer was 13.6 g KH_2PO_4 in 90 mL water, pH adjusted to 6.8 with about 3 mL 10 M NaOH, made up to 100 mL.)

HPLC VARIABLES
Guard column: 20 × 4.6 Supelguard LC-1 (Supelco)
Column: 250 × 4.6 5 μm Supelcosil LC-1 (Supelco)
Mobile phase: MeOH:MeCN:buffer 17.5:17.5:65 (Buffer was 2.72 g KH_2PO_4 in 1.9 L water, pH adjusted to 6.3 with about 2 mL 1 M NaOH, made up to 2 L.)
Flow rate: 2
Injection volume: 6-10
Detector: UV 204

CHROMATOGRAM
Retention time: 2.71

Internal standard: 5-ethyl-5-p-tolybarbituric acid (tolybarb) (4.80)

OTHER SUBSTANCES

Extracted: acetaminophen, amobarbital, barbital, caffeine, carbamazepine, chloramphenicol, ethosuximide, mephobarbital, methsuximide, pentobarbital, phenobarbital, phenytoin, secobarbital, theophylline, thiopental

Also analyzed: acetanilide, N-acetylcysteine, N-acetylprocainamide, ampicillin, aspirin, butabarbital, butalbital, chlorpropamide, cimetidine, codeine, cyheptamide, diazoxide, diflunisal, diphylline, disopyramide, ethchlorvynol, gentisic acid, glutethimide, heptabarbital, hexobarbital, ibuprofen, indomethacin, ketoprofen, mefenamic acid, mephenytoin, methaqualone, methsuximide, methyl salicylate, methyprylon, morphine, naproxen, nirvanol, oxphenylbutazone, phenacetin, phensuximide, procainamide, salicylamide, salicylic acid, sulfamethoxazole, tolmetin, trimethoprim, vancomycin

Noninterfering: amikacin, gentamicin, meprobamate, netilmicin, quinidine, tetracycline, tobramycin, valproic acid

Interfering: sulindac, phenylbutazone

SAMPLE

Matrix: blood

Sample preparation: Prepare an SPE cartridge by plugging the end of a 1 mL disposable pipette tip with glass wool and adding about 100 mg Chromosorb P/NAW. Add 50 μL plasma then 50 μL 10 μg/mL tolylphenobarbital in 200 mM HCl to the SPE cartridge, let stand for 2 min, elute with 1 mL chloroform:isopropanol 6:1. Evaporate the eluate to dryness under a stream of nitrogen at 30°, reconstitute the residue in 100 μL mobile phase, inject a 15 μL aliquot.

HPLC VARIABLES

Column: 150 × 4.6 5 μm Supelcosil-LC-8
Mobile phase: MeCN:water 20:80
Flow rate: 3.3
Injection volume: 15
Detector: UV 208

CHROMATOGRAM

Retention time: 1.61
Internal standard: tolylphenobarbital (7.57)
Limit of detection: 50-100 ng/mL

OTHER SUBSTANCES

Extracted: theophylline, caffeine, barbital, ethosuximide, carbamazepinediol, phenacemide, methyprylon, nirvanol, phenobarbital, chloramphenicol, butabarbital, carbamazepine epoxide, mephenytoin, pentobarbital, amobarbital, carbamazepine, glutethimide, phenytoin, secobarbital, methaqualone

Noninterfering: acetaminophen, amikacin, amitriptyline, clonazepam, cyclosporine, desipramine, diazepam, digoxin, disopyramide, gentamicin, imipramine, lidocaine, methotrexate, N-acetylprocainamide, netilmicin, nortriptyline, procainamide, quinidine, salicylic acid, sulfamethoxazole, tobramycin, trimethoprim, valproic acid, p-hydroxyphenobarbital, vancomycin

SAMPLE
Matrix: blood, tissue
Sample preparation: Tissue. Homogenize 20-200 mg brain tissue with 1 mL 1.5 μg/mL IS in 1% ammonium acetate + 1% sodium azide buffer:MeCN 99:1, flush apparatus with 1 mL extraction buffer, add 1 mL acetone, shake for 5 min, centrifuge for 10 min. Add sample to an Extrelut-3 SPE cartridge (Kieselguhr), add 1 mL extraction buffer, wait for 10 min, elute with 15 mL extraction solvent. Evaporate the eluate, take up residue in 50 μL MeOH, add 50 μL water, inject a 10-25 μL aliquot. Serum. 100 μL Serum + 1 mL 1.5 μg/mL IS in 1% ammonium acetate + 1% sodium azide buffer:MeCN 99:1,mix, add 1 mL extraction buffer, mix, add 1 mL acetone, shake for 5 min, centrifuge for 10 min. Add sample to an Extrelut-3 SPE cartridge (Kieselguhr), add 1 mL extraction buffer, wait for 10 min, elute with 15 mL extraction solvent. Evaporate the eluate, take up residue in 50 μL MeOH, add 50 μL water, inject a 10-25 μL aliquot. (Extraction buffer was 20 g $NaH_2PO_4.2H_2O$ + 4.5 g $Na_2HPO_4.2H_2O$ + 1.5 NaN_3 in 1 L water, pH 6. Extraction solvent was dichloromethane:isopropanol 97:3.)

HPLC VARIABLES
Column: 200 × 2.1 5 μm Hypersil ODS
Mobile phase: Gradient. A was MeCN:50 mM $(NH_4)H_2PO_4$ (pH 4.4) 10:90. B was MeCN:50 mM $(NH_4)H_2PO_4$ (pH 4.4) 60:40. A:B from 85:15 to 55:45 over 9.5 min, keep at 55:45 for 0.5 min, return to 85:15 over 0.5 min.
Column temperature: 65
Flow rate: 0.3
Injection volume: 10-25
Detector: UV 207

CHROMATOGRAM
Retention time: 3.73
Internal standard: 5-ethyl-5-(p-tolyl)barbituric acid (9.07)
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Simultaneous: phenobarbital, N-desmethylmethsuximide, carbamazepine-10,11-epoxide, phenytoin, carbamazepine

SAMPLE
Matrix: solutions
Sample preparation: Inject a 50 μL aliquot of a solution in mobile phase.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Spheri-5 RP-8
Mobile phase: MeOH:buffer 30:70 (Prepare buffer by mixing 4 mM Na_2HPO_4 and 7 mM KH_2PO_4 to achieve pH 7.)
Flow rate: 1
Injection volume: 50
Detector: F ex 355 em 460 (408 nm cutoff filter) following post-column extraction. The column effluent mixed with 50 μg/mL reagent in mobile phase pumped at 0.5 mL/min and then with chloroform pumped at 1 mL/min and the mixture flowed through a 1.8 m × 0.3 mm ID knitted PTFE coil to a 50 μL membrane phase separator using a polyethylene-backed 0.5 μm Fluoropore membrane filter (design in paper). The organic phase flowed to the detector. (Synthesize the reagent, α-(3,4-dimethoxyphenyl)-4'-trimethylammoniummethylcinnamonitrile methosulfate, as follows. Stir 20 mmoles 3,4-dimethoxyphenylacetonitrile and 20 mmoles p-toluamide in 50 mL EtOH at 50°, add 5 mL 50% aqueous KOH slowly, stir at 50° for 5 min, cool to room temperature, filter, dry the precipitate of α-(3,4-dimethoxyphenyl)-4'- methylcinnamonitrile. Dissolve 20 mmoles α-(3,4-dimethoxyphenyl)-4'-methylcinnamonitrile, 20 mmoles N-bromosuccinimide, and 20 mg benzoyl peroxide in 100 mL carbon tetrachloride (Caution! Carbon tetrachloride is a carcinogen!), reflux with stirring for 1.5 h , cool, filter, evaporate to dryness under reduced pressure, recrystallize from MeOH to give α-(3,4-dimethoxyphenyl)-4'-bromomethylcinnamonitrile. Vigorously stir 30 mmoles anhydrous dimethylamine in 100 mL dry benzene (Caution! Benzene is a carcinogen!) at 0°, very slowly add 10 mmoles α-(3,4-dimethoxyphenyl)-4'-bromomethylcinnamonitrile while stirring at 0°, stir at room temperature overnight, add 150 mL water, remove the organic phase, extract the aqueous phase twice with 100 mL portions of diethyl ether, wash the organic layers with saturated NaCl solution, dry over anhydrous magnesium sulfate, evaporate under reduced pressure to give α-(3,4-dimethoxyphenyl)-4'-dimethylaminomethylcinnamonitrile (J.Chem.Eng.Data 1987, 32, 387). Reflux 10 mmoles α-(3,4-dimethoxyphenyl)-4'-dimethylaminomethylcinnamonitrile, 20 mmoles dimethyl sulfate (Caution! Dimethyl sulfate is a carcinogen and acutely toxic!), and 5 g potassium carbonate in 50 mL acetone for 1 h, cool to room temperature, filter, dry the precipitate under vacuum at room temperature overnight, recrystallize from chloroform containing 2-3 drops of 95% EtOH to give α-(3,4-dimethoxyphenyl)-4'-trimethylammoniummethylcinnamonitrile methosulfate (mp 212-215°). Protect solutions from light.)

CHROMATOGRAM
Retention time: k' 1.2791
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Simultaneous: ibuprofen, ketoprofen, mefenamic acid, naproxen, salicylic acid, valproic acid

KEY WORDS
post-column extraction; post-column reaction

REFERENCE

CHROMATOGRAM

Retention time: 15.78 (A), 16.1 (B)

Internal standard: β-hydroxyethyltheophylline (3.7 (A), 4.4 (B))

Limit of detection: 5000 ng/mL

OTHER SUBSTANCES

Extracted: furosemide, metolazone, amiloride, acetazolamide, chlorothiazide, hydrochlorothiazide, quinethazone, triamterene, hydroflumethiazide, chlorthalidone, dichlorphenamide, trichloromethiazide, methyclothiazide, benzthiazide, cyclothiazide, polythiazide, bendroflumethiazide, spironolactone, canrenone, flumethiazide, bumetanide, ethacrynic acid

Noninterfering: acetaminophen, aspirin, caffeine, diflunisal, fenoprofen, ibuprofen, indomethacin, methocarbamol, naproxen, phenylbutazone, sulindac, tetracycline, theobromine, theophylline, tolmetin, trimethoprim, verapamil

SAMPLE

Matrix: urine

Sample preparation: Make 5 mL urine alkaline (pH 9-10), add 2 g NaCl, extract twice with 6 mL ethyl acetate. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 200 μL MeCN/water, inject a 10-20 μL aliquot.

HPLC VARIABLES

Column: 100 × 4 5 μm SGE 100 GL-4 C18P (Scientific Glass Engineering)

Mobile phase: MeCN:MeOH:water:trifluoroacetic acid 15:15:70:0.5

Flow rate: 0.8 or 1

Injection volume: 10-20

Detector: MS, ZAB2-SEQ (VG), PSP source coupled to LC, source 250°, probe 240-260°, scan m/z 200-550 or UV 270

CHROMATOGRAM

Retention time: 3.2

Limit of detection: 50 ng (by MS)

OTHER SUBSTANCES

Extracted: bumetanide, ethacrynic acid, spironolactone

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: Buffer urine to 4.9 by mixing with an equal volume of pH 4.9 200 mM sodium phosphate buffer. Inject a 40 μL aliquot onto column A with mobile phase A, after 3 min backflush the contents of column A onto column B with mobile phase B and start the gradient. At the end of the run re-equilibrate for 10 min.

HPLC VARIABLES
Column: A 20 × 4 5 μm Hypersil octadecylsilica ODS; B 200 × 4.6 5 μm Shiseido SG-120 polymer-based C18
Mobile phase: A water; B Gradient. MeCN:buffer from 7:93 to 15:85 over 3.5 min, to 50:50 over 8.5 min, maintain at 50:50 for 11 min (Buffer was 6.9 g $NaH_2PO_4.H_2O$ in 1 L water, pH adjusted to 3.1 with phosphoric acid.)
Flow rate: 1
Injection volume: 40
Detector: UV 230

CHROMATOGRAM
Retention time: 19.9
Limit of detection: 1000 ng/mL

OTHER SUBSTANCES
Extracted: acetazolamide, amiloride, bendroflumethiazide, benzthiazide, bumetanide, caffeine, carbamazepine, chlorothiazide, chlorthalidone, clopamide, dichlorfenamide, ethacrynic acid, furosemide, hydrochlorothiazide, metyrapone, spironolactone, triamterene, trichlormethiazide

KEY WORDS
column-switching; optimum detection wavelengths vary for each drug

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: 5 mL Urine + 50 μL 100 μg/mL 7-propyltheophylline in MeOH + 200 μL ammonium chloride buffer + 2 g NaCl, extract with 6 mL ethyl acetate by rocking at 40 movements/min for 20 min and centrifuging at 800 g for 5 min, repeat extraction, combine organic layers, evaporate to dryness at 40° under a stream of nitrogen. Reconstitute in 200 μL MeCN: water 15:85 and inject 20 μL aliquots. (Ammonium chloride buffer was 28 g ammonium chloride in 100 mL water with the pH adjusted to 9.5 with concentrated ammonia solution.)

HPLC VARIABLES
Column: 75 × 4.6 3 μm Ultrasphere ODS
Mobile phase: Gradient. MeCN:100 mM ammonium acetate adjusted to pH 3 with concentrated phosphoric acid. From 10:90 to 15:85 over 2 min to 55:45 over 3 min to 60:40 over 3 min. Kept at 60:40 for 1 min, decreased to 10:90 over 1 min and equilibrated at 10:90 for 2 min.
Flow rate: 1
Injection volume: 20
Detector: UV 270

CHROMATOGRAM
Retention time: 7.3
Internal standard: 7-propyltheophylline (4.5)
Limit of detection: 100 ng/mL

OTHER SUBSTANCES
Simultaneous: xipamide, bumetanide, acetazolamide, amiloride, bendroflumethiazide, buthiazide, benzthiazide, canrenone, caffeine, clopamide, chlorthalidone, cyclothiazide, diclofenamide, ethacrynic acid, furosemide, hydrochlorothiazide, mesocarb, morazone, piretanide, polythiazide, spironolactone, torsemide, triamterene

REFERENCE

SAMPLE
Matrix: urine
Sample preparation: Direct injection into column A with mobile phase A for 1 min then back flush onto column B with mobile phase B.

HPLC VARIABLES
Column: A 20 × 2.1 30 μm Hypersil ODS-C18; B 250 × 4 Hypersil ODS-C18
Mobile phase: A Water; B Gradient. MeCN:buffer 15:85 for 1.5 min then to 80:20 over 8 min. Keep at 80:20 for 2.5 min then re-equilibrate with 15:85. (Buffer was 50 mM NaH_2PO_4 + 1.4 mL propylamine hydrochloride per liter adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 50
Detector: UV 230

CHROMATOGRAM
Retention time: 10.3
Limit of detection: 200 ng/mL.

OTHER SUBSTANCES
Simultaneous: bumetanide, ethacrynic acid, acetazolamide, amiloride, bendroflumethiazide, chlorthalidone, cyclothiazide, furosemide, hydrochlorothiazide, spironolactone, triamterene

KEY WORDS
column-switching

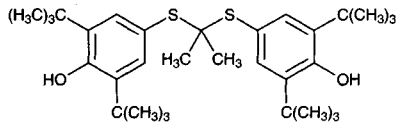
Probucol



Molecular formula: $C_{31}H_{48}O_2S_2$
Molecular weight: 516.85
CAS Registry No.: 23288-49-5
Merck Index: 7935
Lednicer No.: 2 126

SAMPLE
Matrix: blood
Sample preparation: Dilute 1 mL serum 0.5-5 times with saline. Add 1 mL 10 μg/mL IS in EtOH to 1 mL diluted serum dropwise while vortexing, add 1.5 mL n-heptane, vortex for 1 min, centrifuge at 3000 rpm (Labofuge) for 15 min. Remove 1.3 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 40 μL MeCN:THF 50:50, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 200 × 2.1 5 μm ODS Hypersil

Mobile phase: MeCN:water:THF 81.3:5.7:13
Column temperature: 40
Flow rate: 0.4
Injection volume: 5
Detector: UV 244

CHROMATOGRAM
Retention time: 2.763
Internal standard: 2-pentanone bis(3,5-di-tert)mercaptole (3.666)
Limit of detection: 2 ng

OTHER SUBSTANCES
Extracted: vitamin E (α-tocopherol), gamma-tocopherol, vitamin A (retinol), lycopene, α-carotene, β-carotene, metabolites

KEY WORDS
serum

REFERENCE
Schäfer Elinder,L.; Walldius,G. Simultaneous measurement of serum probucol and lipid-soluble antioxidants, *J.Lipid Res.*, **1992**, *33*, 131–137.

SAMPLE
Matrix: blood
Sample preparation: 50 μL Plasma + 400 μL 20 μg/mL IS in EtOH + 800 μL isooctane + 500 μL water, vortex for 20 s, centrifuge at 960 g for 5 min. Remove the upper organic layer and evaporate it to dryness under a stream of nitrogen at room temperature, reconstitute the residue in 50 μL MeCN, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 200 × 3 5 μm 5 μm Hypersil ODS
Mobile phase: MeCN:water 96:4
Flow rate: 1
Injection volume: 10
Detector: UV 241

CHROMATOGRAM
Retention time: 5
Internal standard: 4,4'-[1-methylbutylidene-bis(thio)]-bis[2,6-bis(1,1-dimethylethyl)]phenol (MDL 27272) (7)
Limit of detection: 500 ng/mL

KEY WORDS
plasma; rabbit

SAMPLE
Matrix: blood
Sample preparation: 50 μL Serum + 50 μL buffer + 50 μL 10 μg/mL N-propionylprocainamide in MeCN + 3 mL chloroform:isopropanol 95:5, mix for 30 s, centrifuge at 3000 g for 3 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 50 μL MeOH, inject a 20 μL aliquot. (Buffer was 2.9 g/L sodium bicarbonate in water, adjusted to pH 11.0 with NaOH.)

HPLC VARIABLES
Column: μBondapak C18
Mobile phase: MeCN:buffer 9.75:90.25 (Buffer was 100 mM KH_2PO_4 adjusted to pH 4.0 with phosphoric acid.) (At the end of each day clean with water for 20 min and MeOH for 30 min.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 3.8
Internal standard: N-propionylprocainamide (6)
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: N-acetylprocainamide
Simultaneous: dyphylline, theophylline, caffeine, aspirin, salicylic acid, acetaminophen
Noninterfering: benzoic acid

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 5 mL MTBE, place on a reciprocating shaker at low speed for 15 min, centrifuge at 1250 g for 10 min. Remove organic layer and evaporate under a stream of nitrogen. Reconstitute in 200 μL mobile phase, inject 100 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 Supelco Pelliguard C18
Column: 150 × 4.6 3 μm Hypersil ODS
Mobile phase: MeCN:7 mM sodium heptanesulfonate 18:82, containing 1% glacial acetic acid and 0.035% triethylamine
Flow rate: 0.8
Injection volume: 100
Detector: UV 272

CHROMATOGRAM
Retention time: 10.1
Internal standard: procainamide.HCl

OTHER SUBSTANCES
Simultaneous: hydrochlorothiazide
Noninterfering: aspirin, acetaminophen, ibuprofen

KEY WORDS
plasma; procainamide is IS

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20

Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 3.6

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelcosil LC-DP (A) or 250 × 4 5 μm LiChrospher 100 RP-8 (B)
Mobile phase: MeCN:0.025% phosphoric acid:buffer 25:10:5 (A) or 60:25:15 (B) (Buffer was 9 mL concentrated phosphoric acid and 10 mL triethylamine in 900 mL water, adjust pH to 3.4 with dilute phosphoric acid, make up to 1 L.)
Flow rate: 0.6
Injection volume: 25
Detector: UV 229

CHROMATOGRAM
Retention time: 6.32 (A), 3.52 (B)

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetaminophen, acetazolamide, acetophenazine, albuterol, alprazolam, amitriptyline, amobarbital, amoxapine, antipyrine, atenolol, atropine, azatadine, baclofen, benzocaine, bromocriptine, brompheniramine, brotizolam, bupivacaine, buspirone, butabarbital, butalbital, caffeine, carbamazepine, cetirizine, chlorcyclizine, chlordiazepoxide, chlormezanone, chloroquine, chlorpheniramine, chlorpromazine, chlorpropamide, chlorprothixene, chlorthalidone, chlorzoxazone, cimetidine, cisapride, clomipramine, clonazepam, clonidine, clozapine, cocaine, codeine, colchicine, cyclizine, cyclobenzaprine, dantrolene, desipramine, diazepam, diclofenac, diflunisal, diltiazem, diphenhydramine, diphenidol, diphenoxylate, dipyridamole, disopyramide, dobutamine, doxapram, doxepin, droperidol, encainide, ethidium bromide, ethopropazine, fenoprofen, fentanyl, flavoxate, fluoxetine, fluphenazine, flurazepam, flurbiprofen, fluvoxamine, furosemide, glutethimide, glyburide, guaifenesin, haloperidol, homatropine, hydralazine, hydrochlorothiazide, hydrocodone, hydromorphone, hydroxychloroquine, hydroxyzine, ibuprofen, imipramine, indomethacin, ketoconazole, ketoprofen, ketorolac, labetalol, levorphanol, lidocaine, loratadine, lorazepam, lovastatin, loxapine, mazindol, mefenamic acid, meperidine, mephenytoin, mepivacaine, mesoridazine, metaproterenol, metformin, methadone, methdilazine, methocarbamol, methotrexate, methotrimeprazine, methoxamine, methyldopa, methylphenidate, metoclopramide, metolazone, metoprolol, metronidazole, midazolam, moclobemide, morphine, nadolol, nalbuphine, naloxone, naphazoline, naproxen, nifedipine, nizatidine, norepinephrine, nortriptyline, oxazepam, oxycodone, oxymetazoline, paroxetine, pemoline, pentazocine, pentobarbital, pentoxifylline, perphenazine, pheniramine, phenobarbital, phenol, phenolphthalein, phentolamine, phenylbutazone, phenyltoloxamine, phenytoin, pimozide, pindolol, piroxicam, pramoxine, prazepam, prazosin, probenecid, procaine, prochlorperazine, procyclidine, promazine, promethazine, propafenone, propantheline, propiomazine, propofol, propranolol, protriptyline, quazepam, quinidine, quinine, racemethorphan, ranitidine, remoxipride, risperidone, salicylic acid, scopolamine, secobarbital, sertraline, sotalol, spironolactone, sulfinpyrazone, sulindac, temazepam, terbutaline, terfenadine, tetracaine, theophylline, thiethylperazine, thiopental, thioridazine, thiothixene, timolol, tocainide, tolbutamide, tolmetin, trazodone, triamterene, triazolam, trifluoperazine, triflupromazine, trimeprazine, trimethoprim, trimipramine, verapamil, warfarin, xylometazoline, yohimbine, zopiclone

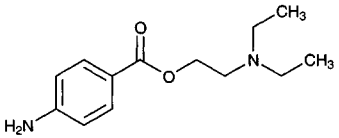
Procaine



Molecular formula: $C_{13}H_{20}N_2O_2$
Molecular weight: 236.31
CAS Registry No.: 59-46-1, 51-05-8 (HCl), 149-13-3 (borate)
Merck Index: 7937
Lednicer No.: 1 9

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 1 M NaOH + 3 mL heptane:ethyl acetate 90:10, shake for 2 min, centrifuge at 1200 g for 10 min. Remove the organic phase and add it to 50 μL 50 mM sulfuric acid, shake for 2 min, centrifuge at 1200 g for 5 min. Remove the aqueous phase and add it to 820 μg sodium acetate, inject a 40 μL aliquot. (The sodium acetate was measured out by adding 50 μL 200 mM sodium acetate in MeOH to the tube and evaporating the MeOH.)

HPLC VARIABLES

Column: 250 × 4 10 μm μBondapak C18
Mobile phase: MeCN:10 mM NaH_2PO_4 20:80, adjusted to pH 2.1
Column temperature: 30
Flow rate: 1
Injection volume: 40
Detector: UV 205

CHROMATOGRAM

Retention time: 10
Limit of detection: 5 ng/mL

OTHER SUBSTANCES

Extracted: lidocaine

KEY WORDS

plasma; rabbit

SAMPLE

Matrix: blood
Sample preparation: Rock 5 mL whole blood + 10 mL water + 8.5 mL Na_2WO_4 in a 50 mL stoppered tube for 1 min, add 6 mL $NiCl_2$, rock for 5 min, add 15 mL dichloromethane:isobutyl alcohol:THF 30:45:25, centrifuge at 2500 g for 15 min. Remove organic phase and repeat the process. Filter all organic phases through a 40-90 μm filter and evaporate to dryness in a 100 mL porcelain dish at a moderate temperature in a sand bath. Take up residue in 500 μL MeCN: water 80:20, inject a 20 μL aliquot. (Na_2WO_4 prepared by mixing 10 g $Na_2WO_4.2H_2O$ in 38 mL of 2 M NaOH and 2.5 g of $NaHCO_3$ and making up to 100 mL. $NiCl_2$ was 17% w/v $NiCl_2$ in water.)

HPLC VARIABLES

Column: 200 × 4.6 5 μm Hypersil C8
Mobile phase: Gradient A = MeCN; B = 20 mM n-propylamine adjusted to pH 5 with 85% phosphoric acid. A:B from 15:85 to 20:80 over 5 min to 45:55 over another 15 min to 65:35 over another 5 min
Injection volume: 20
Detector: UV 230

CHROMATOGRAM
Retention time: 11
Limit of detection: 0.20 ppm

OTHER SUBSTANCES
Extracted: buprenorphine, caffeine, cocaine, codeine, diamorphine, ethylmorphine, lidocaine, methaqualone, morphine, naloxone, noscapine, papaverine, pentazocine
Also analyzed: bromazepam, clonazepam, diazepam, flunitrazepam, flurazepam, medazepam, nitrazepam, oxazepam

KEY WORDS
whole blood

SAMPLE
Matrix: blood, urine
Sample preparation: Urine. Adjust pH of urine to 5 before freezing. 5 mL Urine + 3-30 μg tetracaine, adjust pH to 9.5 with borax buffer, extract twice with 7 mL portions of dichloromethane. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 1 mL MeOH, inject a 20-100 μL aliquot. Blood. 4 mL Plasma or whole blood + 1 μg tetracaine, adjust pH to 9.5 with borax buffer, extract twice with 7 mL portions of dichloromethane. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 0.2-2 mL MeOH, inject a 125 μL aliquot.

HPLC VARIABLES
Column: 10 μm Radial Pak C18
Mobile phase: MeCN:16.5 mM triethylamine 85:15, pH adjusted to 3 with concentrated phosphoric acid
Flow rate: 2
Injection volume: 20-125
Detector: UV 288

CHROMATOGRAM
Internal standard: tetracaine
Limit of detection: 10 ng/mL (urine), 1 ng/mL (plasma)

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 292.6

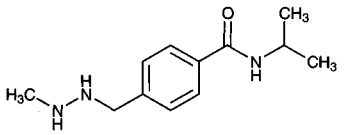
Procarbazine



Molecular formula: $C_{12}H_{19}N_3O$
Molecular weight: 221.30
CAS Registry No.: 671-16-9, 366-70-1 (HCl)
Merck Index: 7938
Lednicer No.: 2 27

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform:isopropanol: n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 µL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 µL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES
Column: 300 × 3.9 4 µm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 231

CHROMATOGRAM
Retention time: 3.69
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood, microsomal incubation

Sample preparation: Rat plasma, microsomal incubation. 1 mL Rat plasma or microsomal incubation, extract with five 3 mL portions of cold diethyl ether. Evaporate combined ether extracts to dryness under a stream of nitrogen. Redissolve the residue in 250-500 μL MeOH, add 10 μL 670 μg/mL IS in MeOH. Vortex, centrifuge at 12000 g for 1 min, inject a 15 μL aliquot. Human plasma. 1 mL Human plasma, extract with three 4 mL portions of diethyl ether. Evaporate combined ether extracts to dryness under a stream of nitrogen. Re-dissolve the residue in 20 μL MeOH, add 5 μL 670 μg/mL IS. Centrifuge at 12000 g for 1 min, inject a 15-20 μL aliquot.

HPLC VARIABLES

Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:water 80:20
Flow rate: 2.0
Injection volume: 15-20
Detector: UV 254

CHROMATOGRAM

Internal standard: 4-methylacetophenone
Limit of detection: 2 nmol/mL

SAMPLE

Matrix: blood, gastric contents, tissue, urine, vitreous humor

Sample preparation: Homogenize tissue with 4 volumes water. Extract 3 mL blood, gastric contents, urine, vitreous humor, or homogenized tissue with 1.5 mL saturated pH 9.5 ammonium chloride buffer and 5 mL chloroform:2-propanol:n-heptane 25:10:65 for 10 min. (Caution! Chloroform is a carcinogen!). Centrifuge at 3500 g for 10 min, evaporate the organic layer at 45°. Reconstitute with 30μL MeOH. Centrifuge at 10000 g for 5 min, remove 20 μL of the supernatant, inject an aliquot.

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPak C18
Mobile phase: MeOH:THF:10 mM pH 2.6 KH_2PO_4 buffer 65:5:30
Flow rate: 0.8
Injection volume: 7
Detector: UV 228

CHROMATOGRAM

Internal standard: prochlorperazine

OTHER SUBSTANCES

Extracted: zuclopenthixol

KEY WORDS
liver; kidney; lung; brain; skeletal muscle; prochlorperazine is IS

REFERENCE

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Pulverize tablet, add 1 L water, stir for 2 h, filter. Remove 9 mL filtrate, add 1 mL 100 μg/mL imipramine hydrochloride in water, mix, inject a 200 μL aliquot. Injections. Dilute a 2 mL aliquot to 1 L with water, mix. Remove a 9 mL aliquot, add 1 mL 100 μg/mL imipramine hydrochloride in water, mix, inject a 200 μL aliquot. Syrup. Dilute a 1 mL aliquot to 100 mL with water, mix. Remove a 9 mL aliquot, add 1 mL 100 μg/mL imipramine hydrochloride in water, mix, inject a 200 μL aliquot. Suppositories. Weigh out amount equivalent to about 1 mg prochlorperazine, add 80 mL pentane:isopropanol 97:3, shake thoroughly, stir for 15 min, make up to 100 mL with pentane:isopropanol 97:3, mix thoroughly, filter. Remove an aliquot, add imipramine, evaporate to dryness under a stream of nitrogen, reconstitute in 200 μL mobile phase, inject whole sample.

HPLC VARIABLES
Guard column: Guard Pak CN

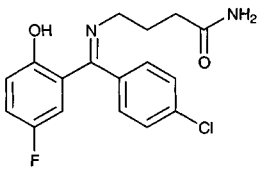
Progabide



Molecular formula: $C_{17}H_{16}ClFN_2O_2$
Molecular weight: 334.78
CAS Registry No.: 62666-20-0
Merck Index: 7955
Lednicer No.: 4 47

SAMPLE

Matrix: blood

Sample preparation: Evaporate 20 μL of a 20 μg/mL solution of IS in MeCN into the bottom of a tube using a stream of nitrogen, add 500 μL plasma, add 500 μL 2 M sodium acetate adjusted to pH 4.9 with HCl, add 9 mL hexane:isopropanol 96:4, shake for 5 min, centrifuge. Remove the organic layer and add it to a glass tube (pretreated with MeOH:triethylamine 80:20), add 500 μL 0.4% sodium borohydride in EtOH, vortex, let stand at room temperature for 10 min, add 2 mL 250 mM sodium citrate (adjusted to pH 2 with HCl), shake for 5 min, centrifuge, discard the organic layer, add 9 mL hexane:isopropanol, shake for 5 min, centrifuge, discard the organic layer. Add 200 μL 5 M NaOH to the aqueous layer, add 500 μL 1 M sodium citrate adjusted to pH 4.8 with HCl, add 9 mL dichloromethane, shake for 5 min, centrifuged.

Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 400 μL MeOH, inject a 10 μL aliquot.

SAMPLE
Matrix: blood
Sample preparation: 2 mL Plasma + 70 μL 10 μg/mL thiopental in water + 1.2 mL buffer, mix gently, add 10 mL toluene, shake for 5 min (break any emulsion with sonication), centrifuge at 1000 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of air at 37°, reconstitute the residue in 100 μL MeOH, inject a 50 μL aliquot. (Buffer was 100 mM acetic acid:100 mM sodium acetate 76:24, pH 4.5.)

HPLC VARIABLES
Column: 300 × 4.6 5 μm Nucleosil C18
Mobile phase: MeCN:MeOH:buffer:150 mM NaCl 27:27:36:10 (Buffer was 9.00 g KH_2PO_4 and 140 mg $Na_2HPO_4.7H_2O$ in 1 L water, pH 5.05.)
Flow rate: 2.5
Injection volume: 20
Detector: UV 340

CHROMATOGRAM
Retention time: 7.9
Internal standard: thiopental (4)
Limit of detection: 20 ng/mL

KEY WORDS
plasma

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma, whole blood, urine + 50 μL 10 μg/mL IS in MeOH + 500 μL 2 M pH 4.5 acetate buffer + 8 mL toluene, shake on a rotary shaker for 20 min, centrifuge

at 4° at 1000 g for 10 min. Remove the organic layer and add it to 500 μL 0.5% sodium borohydride in EtOH, vortex vigorously, let stand at room temperature for 20 min, add 2 mL 250 mM pH 1.8 citrate buffer, extract for 20 min. Remove the aqueous layer and add 200 μL 5 M NaOH, add 500 μL 1 M pH 7.7 citrate buffer, add 7 mL freshly distilled diethyl ether, extract for 20 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 μL MeOH:15 mM pH 7.1 phosphate buffer 40:60, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 3 μm Hypersil ODS
Mobile phase: MeCN:MeOH:33 mM pH 5.05 phosphate buffer:1.5 M NaCl 30:30:40:9
Column temperature: 54
Flow rate: 1
Injection volume: 100
Detector: E, Kipp Analytica Model 9205, +850 mV, Ag/AgCl reference electrode

CHROMATOGRAM
Retention time: 4.1
Internal standard: 4-[[(4-chlorophenyl)(5-chloro-2-hydroxyphenyl)methylene]amino]butanamide (SL 78050) (5.9)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Noninterfering: carbamazepine, carbamazepine epoxide, ethosuximide, phenobarbital, phenytoin, valproic acid

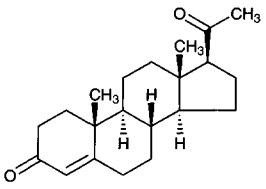
Progesterone



Molecular formula: $C_{21}H_{30}O_2$
Molecular weight: 314.47
CAS Registry No.: 57-83-0
Merck Index: 7956
Lednicer No.: 2 164

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 2 μg/mL dexamethasone in EtOH:water 10:90 + 100 μL 250 mM NaOH + 7 mL ether:dichloromethane 60:40, vortex for 30 s, centrifuge at 2000 rpm for 5 min. Remove 6 mL of the organic layer and evaporate it to dryness under a stream of air at 40°, reconstitute the residue in 100 μL dichloromethane:EtOH:water 95:4:1, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.5 5 μm Partisil silica
Mobile phase: Dichloromethane:EtOH:water 95:4:1
Flow rate: 1.5
Injection volume: 50
Detector: UV 239

CHROMATOGRAM
Retention time: 2
Internal standard: dexamethasone (11.5)
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Extracted: corticosterone, 11-deoxycortisol, hydrocortisone, 17-hydroxyprogesterone, 6α-methylprednisolone, prednisolone, prednisone

KEY WORDS
plasma; normal phase

SAMPLE
Matrix: blood
Sample preparation: Prepare an SPE column by suspending 250 mg 80-120 mesh Carbopack B (Supelco) in chloroform and adding to a 150 × 6 glass column, wash with 5 mL MeOH, wash with 10 mL water. 1 mL Serum + 9 mL MeOH:water 35:65, add to the SPE column, rinse vial with two 5 mL portions of water, add rinses to SPE column, wash with 15 mL MeCN, wash with 1 mL MeCN:chloroform 70:30, elute with 5 mL MeOH:chloroform 10:90. Collect 4.5 mL eluate (as soon as eluant is added to column), evaporate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 50 μL MeCN:MeOH 50:50, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 5 μm C18 (PoliConsult Scientifica, Rome)
Column: 250 × 4.6 5 μm C18 (PoliConsult Scientifica, Rome)
Mobile phase: MeCN:water 46:54
Flow rate: 1.6
Injection volume: 20
Detector: UV 242

CHROMATOGRAM
Retention time: 13.6
Limit of detection: 0.2 ng/mL

OTHER SUBSTANCES
Simultaneous: adrenosterone, aldosterone, androstenedione, corticosterone, cortisone, 11-dehydrocorticosterone, 11-deoxycorticosterone, 11-deoxycortisol, 21-deoxycortisol, 20α-dihydroprogesterone, hydrocortisone, 19-hydroxyandrostenedione, 18-hydroxycorticosterone, 6α-hydroxyprogesterone, 16α-hydroxyprogesterone, 17α-hydroxyprogesterone, 7α-hydroxytestosterone, prednisolone, prednisone, testosterone
Noninterfering: acebutolol, allopurinol, aminophylline, amitriptyline, aspirin, caffeine, carbamazepine, diazepam, digoxin, disopyramide, doxepin, indapamide, meprobamate, methyldopa, oxazepam, phenobarbital, propranolol, theophylline, ascorbic acid

SAMPLE
Matrix: blood
Sample preparation: Condition a Bond-Elut C18 SPE cartridge with MeOH and water. Add 500 μL plasma to the SPE cartridge, wash with 2 mL water, wash with 2 mL MeOH:water 20:80, elute with two 500 μL aliquots of MeOH. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 50 μL MeOH:water 20:80, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 100 × 1 5 μm Hypersil ODS
Mobile phase: MeCN:MeOH:water 25:25:50
Flow rate: 0.1
Injection volume: 20
Detector: UV (wavelength not given)

CHROMATOGRAM
Retention time: 17
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Extracted: androstenedione, 20α-hydroxy-4-pregnen-3-one, 17α-hydroxyprogesterone, norethindrone, testosterone

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 500 μL water + 100 μL 10 μg/mL 3,7-dimethoxyflavone in EtOH + 8 mL diethyl ether, shake, centrifuge at 4° at 1000 g for 5 min, freeze in acetone/dry ice. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeOH:water 40:60, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 3 μm NS-Gel C18
Mobile phase: Gradient. MeOH:water from 40:60 to 55:45, maintain at 55:45 for 24 min, to 80:20 over 25 min
Column temperature: 50
Flow rate: 1
Injection volume: 50
Detector: UV 210, UV 240

CHROMATOGRAM
Retention time: 52.25
Internal standard: 3,7-dimethoxyflavone (47)

OTHER SUBSTANCES
Extracted: aldosterone, androstenedione, dehydroepiandrosterone, deoxycorticosterone, 11-deoxycortisol, estradiol, estrone, hydrocortisone, 17-hydroxyprogesterone, pregnenolone

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 100 μL water containing 5 μg/mL 2,3-diaminonaphthalene and 3.5 μg/mL 18-hydroxy-11-deoxycorticosterone + 1 mL 250 mM NaOH + 7 mL diethyl ether, shake on a rotary shaker for 15 min, repeat extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 30-40°, reconstitute the residue in 70 μL MeOH:100 mM perchloric acid 50:50, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova-Pak C18
Mobile phase: Gradient. A was 58 mM NaH_2PO_4 containing 6 mM sodium heptanesulfonate, adjusted to pH 3.1 with concentrated phosphoric acid. B was MeCN:MeOH 85:15. A:B from 100:0 to 78:22 over 5 min, to 70:30 over 12 min, maintain at 70:30 for 4 min, to 65:35 over 9 min.
Flow rate: 1
Injection volume: 20
Detector: UV 245, 256, 343

CHROMATOGRAM
Retention time: 25.66
Internal standard: 2,3-diaminonaphthalene (10.71), 18-hydroxy-11-deoxycorticosterone (15.85)
Limit of detection: 1-10 ng/mL (245 nm)

OTHER SUBSTANCES
Extracted: betamethasone, chloroquine, corticosterone, cortisone, dexamethasone, fluendrenolide, fluocinolone acetonide, fluorometholone, fluprednisolone, hydrocortisone, hydroxychloroquine, 17δ-hydroxyprogesterone, meprednisone, methylprednisolone, methylprednisolone acetate, paramethasone, prednisolone, prednisone, triamcinolone
Noninterfering: aspirin, ibuprofen, indomethacin, phenylbutazone, pregnenolone

KEY WORDS
serum

REFERENCE
Volin,P. Simple and specific reversed-phase liquid chromatographic method with diode-array detection for simultaneous determination of serum hydroxychloroquine, chloroquine and some corticosteroids. *J.Chromatogr.B*, **1995**, *666*, 347–353.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation.

Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 242.9

CHROMATOGRAM
Retention time: 23.835

KEY WORDS
whole blood

SAMPLE
Matrix: solutions
Sample preparation: 100 μL 200 μg/mL progesterone in toluene + 100 μL 2.5% trifluoroacetic acid (?) in toluene + 100 μL 1 mg/mL acenaphthene-5-sulfonyl hydrazine in EtOH:toluene 10:90, evaporate to dryness under reduced pressure at 60°, reconstitute with 100 μL MeCN, inject a 20 μL aliquot. (Preparation of acenaphthene-5-sulfonyl hydrazine is as follows. Dissolve 20 g acenaphthene in 100 g nitrobenzene, cool to 0°, add 9 mL chlorosulfonic acid dropwise with stirring, maintain the temperature below 5°, when the addition is complete allow the temperature to rise to 20° over 30 min, add 500 mL water. Remove the aqueous layer and neutralize it with solid sodium carbonate, heat and add NaCl until precipitation occurs, cool in an ice bath for 1 h, filter, heat at 140° to remove traces of water and nitrobenzene to give acenaphthene-5-sulfonic acid sodium salt as a pale yellow solid (mp >300°). Grind 10 g acenaphthene-5-sulfonic acid sodium salt with 3.5 g phosphorus pentachloride in a mortar for 3 min, add ice and water, extract with 100 mL ethyl acetate. Wash the ethyl acetate layer with 5% sodium bicarbonate and with water until neutral, dry over anhydrous sodium sulfate, evaporate the ethyl acetate under a stream of nitrogen, chromatograph on a 300 × 20 column of silica gel H with toluene to give acenaphthene-5-sulfonyl chloride (mp 98-101°) as the first yellow band to elute. Cool a solution of 1 g acenaphthene-5-sulfonyl chloride in 3 mL THF to 10° and pass nitrogen through the solution, add 400 μL 85% hydrazine hydrate dropwise with stirring, maintain the temperature between 10° and 15°, stir for a further 15 min. Filter the upper THF layer through Celite, wash the Celite with 1 mL THF. Stir the filtrate vigorously and add two 10 mL portions of water, cool in a refrigerator for 1 h, filter the precipitate, wash with water, dry, recrystallize from EtOH to give acenaphthene-5-sulfonyl hydrazine (mp 132-4°).)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Hypersil C18
Mobile phase: Gradient. A was 0.5 g/L pH 7 Tris buffer. B was MeCN:water 90:10. A:B from 50:50 to 30:70 over 10 min.
Flow rate: 2
Injection volume: 20
Detector: F ex 230 em 350

SAMPLE
Matrix: tissue
Sample preparation: Dry pack 60 × 8 mm glass columns with 250 mg Carbopack B (200-400 mesh) and 60 × 4 mm glass columns with 50 mg Amberlite CG-400 I (100-200 mesh). Wash Carbopack column with 5 mL MeOH, 15 mL dichloromethane:MeOH 70:30, and MeOH:water 85:15. Wash Amberlite column with 3 mL 0.5 M NaOH, 8 mL dichloromethane:MeOH 70:30, 1 mL water, and 3 mL 1 M HCl. Repeat this cycle 4 times. Finally pass through 20 mL 50 mM NaOH then 1 mL water. Keep column in water. (Process converts Amberlite to OH form.) Homogenize 1 g of tissue in 5 mL MeOH, sonicate 5 min, centrifuge at 6000 rpm for 10 min. Add another 5 mL MeOH to pellet and repeat. Combine supernatants, make up to 6.8 mL with MeOH, add 1.2 mL water. Pass through Carbopack column, wash column with 2 mL MeOH: water 85:15 then 2 mL MeOH, elute column with 8 mL dichloromethane:MeOH 70:30. Pass eluate onto Amberlite column, add 1 mL MeOH to column, collect all eluates from column, evaporate to dryness under nitrogen at 40°, take up in 200 μL MeOH:water 50:50, add 25 μL 10 μg/mL p-chlorophenol, inject 50 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 5 μm Supelguard LC-18
Column: 250 × 4.6 5 μm Supelco C18
Mobile phase: Gradient. MeCN:water from 40:60 to 65:35 in 30 min
Flow rate: 1.2
Injection volume: 50
Detector: UV 242

CHROMATOGRAM
Retention time: 26
Internal standard: p-chlorophenol (7)
Limit of detection: 1 ng/g

OTHER SUBSTANCES
Simultaneous: testosterone, trenbolone

KEY WORDS
muscle; liver; chicken; ox

Limit of detection: 10 ng/mL

OTHER SUBSTANCES
Simultaneous: acetophenazine, amitriptyline, benztropine, butaperazine, carphenazine, fluphenazine, promethazine, haloperidol, imipramine, mesoridazine, nortriptyline, orphenadrine, piperacetazine, trifluoperazine, chlorpromazine, thiothixene, thioridazine, triflupromazine, trihexyphenidyl, trimeprazine, metabolites

KEY WORDS
plasma

REFERENCE
Curry,S.H.; Brown,E.A.; Hu,O.Y.-P.; Perrin,J.H. Liquid chromatographic assay of phenothiazine, thioxanthene and butyrophenone neuroleptics and antihistamines in blood and plasma with conventional and radial compression columns and UV and electrochemical detection, *J.Chromatogr.*, **1982**, *231*, 361–376.

SAMPLE
Matrix: blood
Sample preparation: Condition a Bond-Elut C18 column with 2 volumes MeOH then 2 volumes water. Add 1 mL serum then MeOH:0.1 M HCl 13:87 to each column, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with MeOH/water, add 200 μL 10 mM ammonium acetate in MeOH, wait for 30 s, elute with vacuum, repeat elution process two more times. Combine eluates and evaporate them to dryness at 56-8° under compressed air. Reconstitute with 200 μL mobile phase, vortex 10 s, inject 75-100 μL aliquot. (MeOH/water was 500 mL MeOH:water 65:35 plus 25 μL concentrated HCl.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelco silica
Mobile phase: EtOH:MeCN:t-butylamine 98:2:0.05 (Mix 1 gallon EtOH with 77 mL MeCN and 1.9 mL t-butylamine.)
Flow rate: 2
Injection volume: 75-100
Detector: UV 254

CHROMATOGRAM
Retention time: 5.2
Internal standard: promazine

OTHER SUBSTANCES
Extracted: amitriptyline, desipramine, desmethyldoxepin, doxepin, imipramine, nortriptyline, protriptyline
Simultaneous: thioridazine, hydroxyamoxapine, meperidine, chlorpromazine, disopyramide, amphetamine, 2-hydroxyimipramine, iprindole, pyrilamine, promethazine, prolixin, amoxapine, N-acetylprocainamide, procainamide, zimeldine, morphine, codeine, trifluoperazine, desmethyldisopyramide, 10-hydroxynortriptyline, prochlorperazine, oxaprotiline, 2-hydroxydesipramine, chlorpheniramine, maprotiline, norzimeldine, iminostilbene, desmethylchlordiazepoxide, buprion, diazepam, demoxepam, chlordiazepoxide, propoxyphene, dextropropoxyphene, cocaine, oxapam, trimipramine, mianserin, trimeprazine, loxepin, fluphenazine, methadone, trifluopromazine, phenteramine, chlorimipramine, perphenazine, quinidine
Noninterfering: thiopropazine

KEY WORDS
serum; normal phase; promazine is IS

Beierle,F.A.; Hubbard,R.W. Liquid chromatographic separation of antidepressant drugs: I. Tricyclics, *Ther.Drug Monit.*, **1983**, *5*, 279–292.

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L

methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM

Retention time: 3.9

OTHER SUBSTANCES

Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, dextromethorphan, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, imipramine, lidocaine, maprotiline, methadone, mexiletine, midazolam, norchlorimipramine, nordoxepin, nordiazepam, norfluoxetine, nortriptyline, pentazocine, propoxyphene, propranolol, quinidine, temazepam, trazodone, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: desipramine, methaqualone, norverapamil, ibuprofen, propafenone, protriptyline

KEY WORDS

plasma; SPE

SAMPLE

Matrix: formulations
Sample preparation: Tablets. Grind 5 tablets to a fine powder, dissolve in 100 mL MeOH:0.5% acetic acid 1:1, filter (paper), inject an aliquot. Suppositories. Cut up 3 suppositories, add to 100 mL MeOH:0.5% acetic acid 1:1, heat at 40° until all the fat melted, shake, filter (paper), inject a 25 μL aliquot. Liquid formulations. Dilute 10 mL formulation to 100 mL with MeOH: 0.5% acetic acid 1:1, inject a 25 μL aliquot.

HPLC VARIABLES

Column: 300 × 4 μBondapak phenyl
Mobile phase: Gradient. A was 10 mM heptanesulfonic acid in 1 mM acetic acid. B was 10 mM heptanesulfonic acid and 1 mM acetic acid in MeOH. A:B from 60:40 to 25:75 over 30 min
Column temperature: 35
Flow rate: 1.75
Injection volume: 25
Detector: UV 225

CHROMATOGRAM
Retention time: 20

OTHER SUBSTANCES
Simultaneous: diphenhydramine, dipyrone (metamizol), adiphenine, ethyldiphenacetate, drofenine, impurities

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85: 15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 251.1

CHROMATOGRAM

Retention time: 14.482

KEY WORDS

whole blood

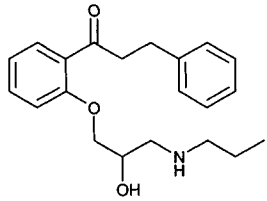
Propafenone



Molecular formula: $C_{21}H_{27}NO_3$
Molecular weight: 341.45
CAS Registry No.: 54063-53-5, 34183-22-7 (HCl)
Merck Index: 7978
Lednicer No.: 5 17

SAMPLE

Matrix: blood
Sample preparation: Mix 400 µL serum with 20 µL 10 µg/mL IS in MeOH and 50 µL 10% sodium carbonate. Add 4 mL diisopropyl ether, shake vigorously for 4 min, centrifuge, freeze at -20°. Mix the organic layer with 100 µL 10 mM HCl, vortex carefully for 45 s using a microshaker, centrifuge, evaporate the aqueous phase to dryness under a stream of argon in a 56° water bath. Reconstitute the residue in 100 µL mobile phase, inject a 50 µL aliquot. (Caution! Diisopropyl ether readily forms explosive peroxides!)

HPLC VARIABLES

Guard column: 20 × 4.6 5 µm Supelguard LC-CN
Column: 150 × 4.6 5 µm Supelcosil LC-CN
Mobile phase: MeCN:water:500 mM KH_2PO_4 36:62:2
Flow rate: 1.8
Injection volume: 50
Detector: UV 210

CHROMATOGRAM

Retention time: 9.3
Internal standard: LU41616 (2'-[2-hydroxy-3-(3"-hydroxy-3"-methylbutylamino)propoxy]-3-phenylpropiophenone hydrochloride) (7.7)
Limit of detection: 5 ng/mL
Limit of quantitation: 20 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, diltiazem, mexiletine
Simultaneous: acebutolol, amiodarone, aprobarbital, atenolol, bupranolol, celiprolol, clobazam, debrisoquine, diazepam, flecainide, gallopamil, hexobarbiltal, lidocaine, mephenytoin, metopolol, nadolol, pentobarbital, phenacetin, prazosin, procainamide, progesterone, propranolol, quinidine, sotalol, theophylline, verapamil

KEY WORDS
serum

SAMPLE
Matrix: blood
Sample preparation: Condition a 6 mL 500 mg ENVI-18 (Supelco) SPE cartridge with 2 mL MeOH and 2 mL water. 1 mL Plasma + 25 μL 100 μg/mL IS, add to the SPE cartridge, wash with 5 mL water and 1 mL MeOH, dry under vacuum for 10 min, elute with 2 mL 700 mM ammonium hydroxide in MeOH, evaporate the eluate to dryness under a stream of air. Reconstitute the residue in 100 μL mobile phase and 100 μL hexane, vortex for 1 min, centrifuge at 1800 g for 5 min, inject a 20 μL aliquot of the lower phase.

HPLC VARIABLES
Guard column: 4 × 4 RP-8 endcapped (Merck)
Column: 250 × 4.6 10 μm Chiracel OD-R
Mobile phase: MeCN:250 mM sodium perchlorate adjusted to pH 4.0 with perchloric acid 40:60
Flow rate: 0.7
Injection volume: 20
Detector: UV 300

CHROMATOGRAM
Retention time: 16.5 (S), 18 (R)
Internal standard: propranolol (9, 12 (enantiomers))
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Simultaneous: atenolol, bromazepam, carbamazepine, clobazam, clonazepam, dexamethasone, diazepam, diclofenac, flunitrazepam, flurazepam, lidocaine, lorazepam, mebendazole, metoprolol, oxyphenbutazone, phenytoin, praziquantel, procainamide, propoxyphene, salicylic acid, triazolam, trimethoprim, verapamil, warfarin
Noninterfering: acetaminophen, albendazole, albuterol, alprazolam, cimetidine, disopyramide, fenfluramine, mexiletine, phenobarbital, pindolol, primidone
Interfering: amitriptyline, diltiazem, haloperidol, imipramine

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 1 μg/mL (-)-ephedrine in water + 200 μL saturated sodium carbonate + 4 mL hexane:isopropanol:heptafluoro-1-butanol 95:5:1.25, vortex for 30 s, centrifuge at 1800 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 100 μL reagent, vortex for 5 s, let stand at room temperature for 3 min, add 100 μL bupranolol solution, evaporate to dryness under a stream of nitrogen, reconstitute the residue in 400 μL hexane, add 200 μL 100 mM HCl, vortex for 15 s, centrifuge at 1800 g for 5 min, inject a 100 μL aliquot of the upper organic layer. (Prepare reagent by diluting commercially available R-(-)-1-(1-naphthyl)ethyl isocyanate 10-fold with hexane, pass through a 50 mm column of silica, dilute the eluate with hexane to a concentration of 0.1%, store in amber containers at -30°. Prepare working reagent immediately before use by diluting to 0.005% with hexane:isopropanol 95:5. Prepare bupranolol solution by dissolving bupranolol hydrochloride in 1 mL water, add 500 μL saturated sodium carbonate solution, extract with 25 mL hexane, use the hexane solution.)

HPLC VARIABLES
Guard column: 50 × 4.6 pellicular silica (Whatman)
Column: 100 × 4.6 5 μm Partisil 5 silica
Mobile phase: Hexane:isopropanol:isobutanol 96:2:2
Flow rate: 1.5
Injection volume: 100
Detector: UV 220

CHROMATOGRAM
Retention time: 8.3 (-), 10.1 (+)
Internal standard: (-)-ephedrine (16.4)
Limit of quantitation: 6.25 ng/mL

OTHER SUBSTANCES
Simultaneous: alprenolol, methoxamine, mexiletine, pindolol, propranolol, tocainide

SAMPLE

Matrix: blood

Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM

Retention time: 4.2

OTHER SUBSTANCES

Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, dextromethorphan, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, imipramine, lidocaine, maprotiline, methadone, mexiletine, midazolam, norchlorimipramine, nordoxepin, nordiazepam, norfluoxetine, nortriptyline, pentazocine, propoxyphene, propranolol, quinidine, temazepam, trazodone, trimipramine, verapamil

Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide,

primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: desipramine, methaqualone, norverapamil, ibuprofen, promazine, protriptyline

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30
Detector: UV 211.1

CHROMATOGRAM
Retention time: 15.128

KEY WORDS
whole blood

SAMPLE
Matrix: bulk
Sample preparation: Dissolve 10 μmole compound (as free base or hydrochloride) in 500 μL MeCN, add 250 μL 5% sodium carbonate (for hydrochlorides only), add 500 μL 100 mM reagent in MeCN, vortex for 1 min, heat at 60° for 2 h, add 100 μmole L-proline, heat at 60° for 30 min. Remove a 100 μL aliquot and dilute it with mobile phase, neutralize with acetic acid, inject a 10 μL aliquot. Prepare the reagent ((R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate) as follows. Add 0.7 mL carbon disulfide to 6 mL (1R,2R)-(-)-1,2-diaminocyclohexane, 12 mL water, and 12 mL EtOH, heat the oil bath to 80°, add 2.8 mL carbon disulfide dropwise (making sure that the product does not start to precipitate), when addition is complete reflux for 1 h, acidify with 500 μL 5 M HCl, reflux for 12 h, cool, filter, wash the solid with a little cold EtOH to give trans-4,5-tetramethyleneimidazolidine-2-thione as a white fluffy solid (mp 148-150°) (Tetrahedron 1993, 49, 4419). Stir 7.97 g 3,5-dinitrobenzoyl chloride in 30 mL dichloroethane at 50°, add a solution of 6 g trans-4,5-tetramethyleneimidazolidine-2-thione in 120 mL dichloroethane containing a catalytic amount of 4-(dimethylamino)pyridine over 15 min, reflux for 2 h, remove the crystals of (R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate by filtration, evaporate the filtrate to dryness and dissolve the residue in 60 mL dichloroethane, reflux for 16 h to obtain more (R,R)-N-(3,5-dinitrobenzoyl)-2-aminocyclohexylisothiocyanate (mp >250°, $[\alpha]_{546}$ = -133° (c = 1) in MeCN).

HPLC VARIABLES
Column: 125 × 4 5 μm Hypersil ODS
Mobile phase: MeCN:20 mM ammonium acetate 70:30

SAMPLE
Matrix: solutions
Sample preparation: Mix a 50 μL aliquot of a solution in MeOH:triethylamine 99:1 with 20 μL 0.1% FLOPIC in dry toluene, vortex briefly, let stand at room temperature in the dark for 30 min, add 50 μL 1% ethanolamine in MeOH, let stand at room temperature for 15 min, evaporate to dryness under reduced pressure, reconstitute with 100 μL mobile phase, sonicate for 30 s, inject a 20 μL aliquot. (FLOPIC is (-)-(S)-flunoxaprofen isocyanate; synthesis is as follows. Dissolve 1 g (+)-(S)-flunoxaprofen in 30 mL acetone, cool to 0°, add a solution of 500 μL triethylamine in 2 mL acetone dropwise, add a solution of 370 μL ethyl chloroformate in 2 mL acetone dropwise, stir at 0° for 15 min, add a solution of 250 mg sodium azide in 1 mL water dropwise (Caution! Sodium azide is highly toxic!), stir for 1 h, pour into 60 mL ice water, stir for 10 min, filter, wash the solid with two 50 mL aliquots of ice-water, dry under reduced pressure to obtain flunoxaprofen azide. Dissolve 100 mg flunoxaprofen azide in 3 mL dry toluene, reflux for 10-15 min, cool to room temperature, filter. Evaporate the filtrate to dryness under reduced pressure and dry under reduced pressure to obtain FLOPIC as a crystalline solid (mp 93-94°), store in a desiccator under reduced pressure.)

HPLC VARIABLES
Column: 150 × 3.9 4 μm Nova Pak C18

SAMPLE
Matrix: solutions
Sample preparation: Mix 300 μL of a 30 μM solution in dichloromethane with 10 μL 20 mM 1-(6-methoxy-2-naphthyl)ethyl isothiocyanate in anhydrous dichloromethane and 50 μL 0.1% triethylamine in dichloromethane, vortex thoroughly, heat at 50° for 1.5 h, inject an aliquot. (Synthesize 1-(6-methoxy-2-naphthyl)ethyl isothiocyanate as follows (protect from light). Dissolve 500 mg (S)-(+)-naproxen in 50 mL dry toluene, slowly add 5 mL freshly distilled thionyl chloride, reflux for 1 h, evaporate to dryness under vacuum, dry the acyl chloride (mp 87.5°) under vacuum over KOH for 2 days. Dissolve 0.5 mmoles acyl chloride in 5 mL acetone, stir at 0°, add 0.6 mmoles sodium azide dissolved in ice water, stir at 0° for 30 min, add 10 mL ice-cold water, filter, dry solid in a desiccator under vacuum. Dissolve the solid in 1 mL toluene or dichloromethane (dried over 3 Å molecular sieve), reflux for 10 min, evaporate, store resulting isocyanate (mp 51°) under vacuum over a desiccant. Dissolve 0.5 mmole isocyanate in 5 mL acetone, add 20 mL 8.5% phosphoric acid, heat to 80° for 1.5 h, adjust to pH 13, extract with diethyl ether:dichloromethane 4:1. Wash the organic layer twice with water, dry over anhydrous sodium sulfate, evaporate to dryness, dissolve in 1 mL toluene, evaporate to give the amine from naproxen as crystals (mp 53°) (Pharm.Res. 1990, 7, 1262). Dissolve 1 mmole 1,1-thiocarbonyldiimidazole in 15 mL ice-cold chloroform, stir at 0°, add dropwise 1 mmole of the amine dissolved in 10 mL chloroform, stir at room temperature for 1.5 h, evaporate to dryness, reconstitute with carbon tetrachloride (Caution! Carbon tetrachloride is a carcinogen!), filter, evaporate the filtrate to dryness, store the resulting oil in a desiccator, purify on a short silica gel column with dichloromethane:light petroleum 50:50 to give 1-(6-methoxy-2-naphthyl)ethyl isothiocyanate as a slightly yellow liquid (store in the freezer under argon).)

HPLC VARIABLES
Column: 250 × 4 5 μm Zorbax ODS

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 150 × 4.5 5 μm Ultrasphere octyl
Mobile phase: MeCN:triethylamine:1.65% glacial acetic acid 505:0.65:495, pH 4.35
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 2.33
Internal standard: naproxen (3.89)

OTHER SUBSTANCES
Simultaneous: bacitracin, cortisone acetate, diazepam, diclofenac, fluorometholone, flurbiprofen, hydrocortisone acetate, imipramine, indomethacin, ketoprofen, ketorolac tromethamine, levobunolol, meclofenamic acid, neomycin, prednisolone acetate, salicylic acid, sulfacetamide, suprofen
Noninterfering: acebutolol, acetaminophen, acetazolamide, alprenolol, apraclonidine, atenolol, atropine, betamethasone, betaxolol, bupivacaine, caffeine, cyclopentolate, dexamethasone, diphenhydramine, erythromycin, haloperidol, lidocaine, phenylephrine, polymyxin B, procaine, scopolamine, timolol, tropicamide
Interfering: metipranolol, propranolol

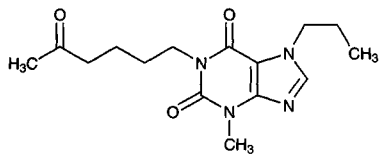
Propentofylline



Molecular formula: $C_{15}H_{22}N_4O_3$
Molecular weight: 306.36
CAS Registry No.: 55242-55-2
Merck Index: 7997

SAMPLE
Matrix: blood
Sample preparation: 100 μL Plasma + 100 μL 20 μg/mL tetracaine hydrochloride + 8 mL dichloromethane, shake for 20 min, centrifuge at 2500 rpm for 20 min. Remove 7 mL of the organic layer and evaporate it to dryness under nitrogen or at 60°. Dissolve residue in 200 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 6 Shimpack CLS-ODS (Shimadzu)
Mobile phase: MeCN:MeOH:0.5 mM phosphoric acid 21:20:59
Column temperature: 40
Flow rate: 1.5
Injection volume: 20
Detector: UV 273

CHROMATOGRAM
Internal standard: tetracaine hydrochloride

KEY WORDS
plasma; rat

SAMPLE
Matrix: solutions
Sample preparation: Inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 6 5 μm 3-aminopropylsilyl silica gel with the amino group derivatized with 1,8-naphthalic anhydride (Bunseki Kagaku 1993, 42, 817)
Mobile phase: MeOH:buffer 50:50 (Prepare buffer by dissolving 6.183 g boric acid and 1.461 g NaCl in 500 mL water, adjust pH to 6.4 with sodium borate solution.)
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 270

CHROMATOGRAM
Retention time: 18
Internal standard: 1,3-dimethyl-7-(2-hydroxyethyl)xanthine (12)

OTHER SUBSTANCES
Simultaneous: caffeine, hypoxanthine, pentoxifylline, theobromine, theophylline, uric acid, xanthine

REFERENCE

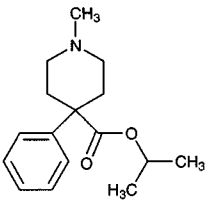
Properidine



Molecular formula: $C_{16}H_{23}NO_2$
Molecular weight: 261.36
CAS Registry No.: 561-76-2
Lednicer No.: 1 299

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 3.1

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

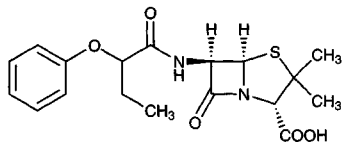
Propicillin



Molecular formula: $C_{18}H_{22}N_2O_5S$
Molecular weight: 378.45
CAS Registry No.: 551-27-9, 1245-44-9 (potassium salt)
Merck Index: 8002

SAMPLE
Matrix: perfusate
Sample preparation: Vortex perfusate, centrifuge at 11600 g for 5 min, inject an aliquot of the supernatant.

HPLC VARIABLES
Guard column: 20 × 2 5 μm Hypersil ODS

Column: 150 × 4.6 5 μm Hypersil ODS
Mobile phase: MeCN:50 mM pH 7 KH_2PO_4 buffer 30:70
Flow rate: 1
Injection volume: 100
Detector: UV 218

CHROMATOGRAM
Retention time: 4.1
Limit of detection: 20 ng/mL
Limit of quantitation: 100 ng/mL

REFERENCE

SAMPLE
Matrix: tissue
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL MeOH and 5 mL water. Homogenize kidney with a kitchen grinder. Weigh out a 5 g sample and add 20 mL MeCN with

continuous gentle mixing, mix vigorously on a vibromixer at 1500 rpm for 30 s, sonicate for 2 min, centrifuge at 4000 g for 5 min. Mix 7.5 mL sample extract and 40 mL 10% NaCl and add to SPE cartridge, wash with 1 mL 10 mM sulfuric acid, wash with 2 mL air, elute with 2 mL acidic MeCN. Place eluate in a washed tube and evaporate to 300 μL at 70° under a stream of nitrogen, mix gently, add 1 mL n-hexane, mix on a vibromixer for 30 s, centrifuge at 2000 g, inject a 50 μL aliquot of the aqueous phase. (Acidic MeCN was 1 mL 50 mM sulfuric acid and 100 mL MeCN. The washed tube was prepared by rinsing with concentrated ammonia, water, and acetone and drying under a stream of nitrogen.)

HPLC VARIABLES
Guard column: 10 × 2.1 37-50 μm Bondapak C18
Column: 300 × 3.9 Bondapak C18
Mobile phase: MeCN:water 55:45 containing 2.46 g/L anhydrous sodium acetate, pH adjusted to 6.5 with acetic acid
Flow rate: 1.2
Injection volume: 50
Detector: UV 240

CHROMATOGRAM
Retention time: 18
Limit of detection: 4 ng/g

OTHER SUBSTANCES
Extracted: azaperol, carazolol, acepromazine, xylazine, azaperone, haloperidol, chlorpromazine

KEY WORDS
SPE; pig; kidney

SAMPLE
Matrix: tissue
Sample preparation: Condition a Bond-Elut C18 SPE cartridge with 5 mL MeOH and 5 mL water. Cut pig kidney or liver into small pieces and homogenize. 5 g Homogenate + 10 mL MeCN, shake, vortex for 30 s, sonicate for 3 min, vortex for 30 s, sonicate for 3 min, centrifuge at 10000 g for 20 min. Add 7.5 mL supernatant + 40 mL 10% NaCl to the SPE cartridge at about 1 mL/min, do not allow cartridge to dry out, wash with 850 μL 10 mM sulfuric acid, dry with air, elute with 3.5 mL acidic MeCN. Evaporate the eluate to dryness under a stream of nitrogen at 50°, reconstitute the residue in 300 μL 10 mM sulfuric acid, vortex briefly, add 1 mL hexane, vortex for 30 s, centrifuge at 2000 g for 5 min, inject an aliquot of the aqueous layer. (Acidic MeCN was 1 mL 50 mM sulfuric acid in 100 mL MeCN.)

HPLC VARIABLES
Guard column: Hypersil 5 μm SAS C1
Column: 250 mm long 5 μm Hypersil SAS C1
Mobile phase: MeCN:water 50:50 containing 0.77 g/L ammonium acetate
Flow rate: 2
Detector: E, ESA Model 5100A Coulochem, first electrode +0.4 V, second electrode (which was monitored) +0.7 V, Model 5020 guard cell after pump but before injector at +0.75 V

CHROMATOGRAM
Retention time: 25
Limit of detection: 2 ng/g

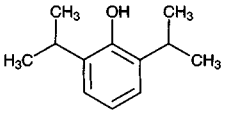
Propofol



Molecular formula: $C_{12}H_{18}O$
Molecular weight: 178.27
CAS Registry No.: 2078-54-8
Merck Index: 8020

SAMPLE

Matrix: blood

Sample preparation: To 2 mL whole blood or plasma containing 20 μL thymol in MeOH, solid blood elements obtained by centrifuging 2 mL blood containing 20 μL thymol in MeOH, solid blood elements without plasma (obtained by centrifuging 2 mL blood containing 20 μL thymol in MeOH and by washing with four portions of 0.9% NaCl), or lysed solid elements (obtained by centrifuging 2 mL blood containing 20 μL thymol in MeOH and by washing with four portions of 0.9% NaCl, and mixing with three volumes of water), add 1 mL 100 mM NaH_2PO_4 and 5 mL cyclohexane. Shake vigorously at 200 rpm for 15 min, centrifuge at 1200 g for 5 min. Add 50 μL tetraethylammonium hydroxide solution to ca. 5 mL of the cyclohexane layer, evaporate to dryness under a stream of nitrogen, reconstitute the residue in mobile phase, inject an aliquot. (Prepare tetraethylammonium hydroxide solution by mixing a 25% solution of tetraethylammonium hydroxide in EtOH with EtOH in the ratio of 3:37.)

HPLC VARIABLES

Column: 250 × 4 RP octadecyl silane (prepared as described in J. Chromatogr. Sci. 1995, 33, 377-382)
Mobile phase: MeCN:buffer 67:33 (Buffer was water adjusted to pH 4.0 with acetic acid.)
Detector: UV (wavelength not given)

CHROMATOGRAM

Retention time: 12
Internal standard: thymol (7.5)

SAMPLE
Matrix: blood, tissue
Sample preparation: Plasma, serum. 20-100 μL Plasma or serum + 100-200 μL IS in MeOH:water 50:50. Make up to 1 mL with water. Add 4 mL pentane, rock at 40 cycles per min for 15 min, centrifuge at 1500 g for 5-10 min. Remove the organic layer and add it to 1 mL 100 mM HCl, rock for 10 min, centrifuge at 1500 g for 5 min. Remove the organic layer and add it to 500 μL isopropanol:100 mM NaOH 90:10, evaporate to dryness under a stream of nitrogen, reconstitute the residue in 140-240 μL mobile phase. Add 10 μL 600 mM phosphoric acid, inject an aliquot. Tissue. Homogenize 0.5-1.5 g tissue divided into 2 × 2 mm pieces with MeCN:50 mM pH 7.0 phosphate buffer 50:50 equal to four times the tissue weight. Mix the homogenate from 20-100 μg tissue with 100 μL 500 mM pH 7.0 phosphate buffer and 100-200 μL IS in MeOH:water 50:50. Make up to a total volume 1 mL with water. Add 4 mL pentane, rock at 40 cycles per min for 15 min, centrifuge at 1500 g for 5-10 min. Remove the organic layer and add it to 1 mL 100 mM HCl, rock for 10 min, centrifuge at 1500 g for 5 min. Remove organic layer and add it to 500 μL isopropanol:100 mM NaOH 90:10, evaporate to dryness under a stream of nitrogen, reconstitute the residue in 490 μL mobile phase. Add 10 μL 600 mM phosphoric acid, inject an aliquot. Fat, skin. 100 mg fat or skin + 20 mL 5 mM sodium deoxycholate + 1 mL 500 mM phosphate buffer + 150 μL 10 (skin) or 100 (fat) μg/mL IS in MeOH:water 50:50, homogenize, steam-distill immediately at a rate of 2 mL/min. Collect 8 mL distillate in a tube containing 8 mL pentane, add 4 mL pentane, rock on a LabQuake for 15 min, centrifuge at 1500 g for 10 min. Remove the organic layer and add it to 2 mL 500 mM NaOH, rock for 10 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to about 4-5 mL under a stream of nitrogen, add 500 μL isopropanol:100 mM NaOH 90:10, evaporate to dryness under a stream of nitrogen, reconstitute the residue in 990 μL mobile phase and 10 μL 600 mM phosphoric acid for skin and 10 mL mobile phase and 10 μL 600 mM phosphoric acid for fat, inject an aliquot.

HPLC VARIABLES
Column: 100 × 4.6 3 μm Rainin Microsorb MV phenyl RP
Mobile phase: MeOH:50 mM pH 2.8 phosphate buffer 60:40
Column temperature: 40
Flow rate: 0.8
Injection volume: 50-100
Detector: E, ESA Coulochem model 5100A, Model 5020 guard cell +850 mV, Model 5010 dual analytical cell, detector 1 +300 m V, detector 2 +800 m V (monitored)

CHROMATOGRAM
Retention time: 9-10
Internal standard: 2,6-tert-butylmethylphenol (7.5-8)
Limit of quantitation: 5 ng/mL (serum), 50 ng/g (tissue)

SAMPLE
Matrix: fruit, vegetables
Sample preparation: Homogenize (Omni-Mixer) 100 g chopped sample with 250 mL MeOH at half-speed for 5 min, filter (Whatman No. 1 PS paper), make up filtrate to 500 mL with MeOH. Remove 100 mL filtrate and add it to 125 mL 4% aqueous sodium sulfate, shake well, extract mixture with 75, 50, and 50 mL portions of dichloromethane with 30 s shaking each time, drain organic layers through anhydrous sodium sulfate. Combine the organic layers and evaporate them to 1 mL under reduced pressure at 30°, transfer residue to a tube with two 2 mL rinses of dichloromethane:cyclohexane 50:50, make volume up to 10 mL with dichloromethane:cyclohexane 50:50, filter (0.45 μm), add 5 mL to a 600 × 25 tube containing 60 g 200-400 mesh BioBeads SX-3 resin (Analytical BioChemistry Laboratories), pump through at 5 mL/min with dichloromethane:cyclohexane 50:50 mobile phase, discard mobile phase for 24 min, collect fraction containing the compound for 12 min, evaporate under reduced pressure at 30° to low volume, add 15 mL MeOH, evaporate to about 1 mL, filter (0.45 μm), inject a 20 μL aliquot. Alternatively, run output from BioBeads column through a column containing 0.5 g of a mixture of Nuchar S-N(Fisher):Celite 545 1:4, at the end of the chromatography elute this column with 10 mL MeCN:toluene 75:25, evaporate the eluate under reduced pressure at 30° to low volume, add 15 mL MeOH, evaporate to about 1 mL, filter (0.45 μm), inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 50 × 4.6 Pellicular ODS (Whatman)
Column: 250 × 4.6 5 μm Apex ODS (Jones Chromatography)
Mobile phase: Gradient. MeOH:water from 10:90 to 90:10 over 23 min, to 10:90 over 4 min, re-equilibrate at 10:90 for 10 min
Flow rate: 1
Injection volume: 20
Detector: F ex 340 em 455, following post-column derivatization. The column effluent is mixed with 200 mM NaOH at 0.8 mL/min and the mixture flows through a 1 mL coil at 95° and is mixed with 500 mg/L o-phthalaldehyde and 1 mL/L 2-mercaptoethanol in 50 mM sodium tetraborate pumped at 0.8 mL/min. The mixture flows through a 0.5 mL coil at ambient temperature to the detector.

CHROMATOGRAM
Retention time: 24
Limit of detection: 5-10 ppb

OTHER SUBSTANCES
Extracted: oxamyl, methomyl, aldicarb, carbaryl, carbofuran, methiocarb

KEY WORDS
apples; broccoli; cabbage; cauliflower; potatoes; post-column reaction

REFERENCE
Chaput,D. Simplified multiresidue method for liquid chromatographic determination of N-methyl carbamate insecticides in fruits and vegetables, *J.Assoc.Off.Anal.Chem.*, **1988**, *71*, 542–546.

SAMPLE
Matrix: fruit, vegetables
Sample preparation: Blend (Waring) 100 g chopped fruit or vegetable with 200 mL acetone at low speed for 1 min, filter. 80 mL Filtrate + 100 mL petroleum ether + 100 mL dichloromethane,

shake vigorously, filter the organic phase through anhydrous sodium sulfate. Saturate the aqueous phase with 7 g NaCl, extract with 100 mL dichloromethane, filter the organic layer through anhydrous sodium sulfate. Wash the anhydrous sodium sulfate with 50 mL dichloromethane, combine the organic layers, evaporate to about 4 mL through a Snyder column on a steam bath, add 40 μL 1 mg/mL IS solution, adjust volume to 4 mL, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 220 × 4.6 5 μm Spheri-5 C18
Mobile phase: Gradient. MeCN:water:13 mM ammonium acetate from 20:65:15 to 80:5:15 over 30 min.
Flow rate: 1
Injection volume: 50
Detector: MS, Vestec Model 301 thermospray, positive ion discharge mode, vaporizer tip 225-235°, SIM, m/z 210

CHROMATOGRAM

Retention time: 17
Internal standard: 2-fluoro-9-fluorenone (25)
Limit of detection: 0.25 ppm

OTHER SUBSTANCES

Extracted: aldicarb, aldicarb sulfoxide, bufencarb, carboxin, chlorbromuron, diuron, linuron, methiocarb, methomyl, metobromuron, monuron, neburon, oxamyl, thiodicarb

KEY WORDS

apples; beans; lettuce; peppers; potatoes; tomatoes

SAMPLE

Matrix: solutions
Sample preparation: Pass 100 mL water through column A at 5 mL/min then elute the contents of column A onto column B with the mobile phase, elute column B with the mobile phase and monitor the effluent from column B.

HPLC VARIABLES

Column: A 30 × 4.6 5 μm Spherisorb ODS C18; B 250 × 4.6 5 μm Supelcosil LC-8 C8
Mobile phase: Gradient. MeCN:water 30:70 for 5 min, to 60:40 over 10 min, maintain at 60:40 for 10 min, to 30:70 over 5 min, maintain at 30:70 for 5 min and inject next sample.
Flow rate: 1.5
Injection volume: 100000
Detector: UV 220

CHROMATOGRAM

Retention time: 16.00
Limit of detection: 65 pg/mL

OTHER SUBSTANCES

Simultaneous: carbaryl, carbofuran, captan, propham, chloropropham, barban, butylate

KEY WORDS

water; drinking water; column-switching

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Condition a 10 × 4 55 mg 40 μm C18/OH Bondesil SPE cartridge (Varian/Analytichem) with 1 mL MeOH and 1 mL water, pass through 5 mL test water at 1 mL/min, pass through 500 μL pure water, elute the contents of the SPE cartridge onto the analytical column with mobile phase.

HPLC VARIABLES
Guard column: 10 × 4 4 μm Supersphere RP-8 (Merck)
Column: 250 × 4 4 μm Supersphere RP-8 (Merck)
Mobile phase: Gradient. A was MeCN:water 20:80 containing 2.5 mM sodium acetate. B was MeOH:water 20:80 containing 2.5 mM sodium acetate. C was MeCN:water 60:40 containing 2.5 mM sodium acetate. A:B:C 75:25:0 for 5 min, to 0:0:100 over 20 min, maintain at 0:0:100 for 5 min, re-equilibrate at initial conditions for 15 min.
Column temperature: 35
Flow rate: 0.75
Injection volume: 100
Detector: F ex 340 em 445 following post-column reaction. The column effluent flowed through a 50 × 4 Aminex A-27 (Bio-Rad) column at 120-140° and was mixed with reagent pumped at 1 mL/min, this mixture flowed through a 200 × 0.12 PTFE tube to the detector. (Reagent was prepared by adding 2 mL 25 mg/mL o-phthalaldehyde in MeCN and 100 μL 2-mercaptoethanol to 200 mL 5 mg/mL disodium tetraborate in water then making up to 250 mL with water.)

CHROMATOGRAM
Retention time: 23.09
Internal standard: trimethacarb (26.12)
Limit of detection: 0.03-0.05 ng/mL

OTHER SUBSTANCES
Simultaneous: aldicarb, bendiocarb, bufencarb, butocarboxim, carbanolate, carbaryl, carbofuran, cloethocarb, dioxacarb, ethiofencarb, fenobucarb, isoprocarb, methiocarb, methomyl, oxamyl, promecarb, thiofanox, tranid

KEY WORDS
water; SPE; post-column reaction

SAMPLE
Matrix: solutions
Sample preparation: Flush column A with 5 mL MeOH and 5 mL MeOH:pH 5.0 ammonium acetate, pass a 100 mL sample through the column at 4 mL/min, backflush the contents of column A onto column B and start the gradient, monitor the effluent from column B.

HPLC VARIABLES
Column: A 10 × 2 15-25 μm PLRP-S styrene-divinylbenzene co-polymer (Spark Holland); B 200 × 4 5 μm Spherisorb ODS2
Mobile phase: MeOH:100 mM pH 5.0 ammonium acetate from 30:70 to 88:12 over 34 min.
Column temperature: 40
Flow rate: 0.4
Injection volume: 100000
Detector: UV 280 or MS, Hewlett-Packard 5989 A, dual EI/chemical ionization source, ion source block 250°, quadrupole 100°, m/z 64-400, desolvation chamber 65°, helium nebulizer 50 psi, second-stage momentum separator 0.5 Torr, ion source chamber 15 μTorr

CHROMATOGRAM
Retention time: 20
Limit of detection: <1 ng/mL

OTHER SUBSTANCES
Simultaneous: carbaryl, aldicarb, atrazine, barban, carbofuran, cyanazine, diuron, fluometuron, linuron, methomyl, monuron, oxamyl, simazine

KEY WORDS
water; column-switching

REFERENCE
Marcé,R.M.; Prosen,H.; Crespo,C.; Calull,M.; Borrull,F.; Brinkman,U.A.T. On-line trace enrichment of polar pesticides in environmental waters by reversed-phase liquid chromatography-diode array detection-particle beam mass spectrometry, *J.Chromatogr.A*, **1995**, *696*, 63–74.

SAMPLE
Matrix: solutions
Sample preparation: Inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 10 × 3 5 μm Kromasil-100-C18 (Akzo Nobel)
Column: 150 × 4 5 μm Kromasil-100-C18 (Akzo Nobel)
Mobile phase: MeCN:buffer 28:72 (Buffer was 820 mg/L sodium tetraborate decahydrate containing 50 μg/mL phthalaldehyde and 0.06 μL/mL 2-mercaptoethanol, adjusted to pH 8.5 with 100 mM HCl.)
Flow rate: 1
Injection volume: 20
Detector: F ex 340 em 460 following post-column reaction. The column effluent flowed through a 3 m × 0.51 mm ID stainless steel tube at 140° to the detector. (Although the reagents are in the mobile phase the derivatization reaction does not take place until the post-column reactor where the insecticides are hydrolyzed to methylamine that is then derivatized. This procedure avoids the use of a second pump for the post-column reagent.)

CHROMATOGRAM
Retention time: 14
Limit of detection: 400 pg

OTHER SUBSTANCES
Simultaneous: aldicarb, butocarboxim, carbaryl, carbofuran, dioxacarb, methomyl

KEY WORDS
post-column reaction

REFERENCE
Sabala,A.; Portillo,J.L.; Broto-Puig,F.; Comellas,L. Development of a new high-performance liquid chromatography method to analyse N-methylcarbamate insecticides by a simple post-column derivatization system and fluorescence detection, *J.Chromatogr.A*, **1997**, *778*, 103–110.

SAMPLE
Matrix: tissue
Sample preparation: 21 g Liver + 60 g anhydrous sodium sulfate, mix with spatula, add 200 mL dichloromethane, mix with spatula, homogenize (VirTis 45) for 2 min at medium speed, filter through 5 g anhydrous sodium sulfate, re-extract tissue and sodium sulfate with 100 mL dichloromethane, filter, wash out flask with 25 mL dichloromethane, filter. Combine filtrates and filter them through 2 g anhydrous sodium sulfate, rinse flask with 20 mL dichloromethane, wash filter with 10 mL dichloromethane. Concentrate filtrate to 1-2 mL under reduced pressure at 30° (do not allow to go dry), transfer residue to a tube with 1-2 mL cyclohexane, wash in with dichloromethane:cyclohexane 50:50, make volume in tube 7.5 mL, filter (0.45 μm), add 5 mL to a 600 × 25 tube containing 60 g 200-400 mesh BioBeads SX-3 resin (Analytical Bio-Chemistry Laboratories), pump through at 5 mL/min with dichloromethane:cyclohexane 50:50 mobile phase, collect fraction containing the compound, evaporate under reduced pressure at 30° to about 1 mL, make up to 2 mL with dichloromethane, add 1 mL to a 1 mL 100 mg Bond Elut aminopropyl SPE cartridge (previously conditioned with 1 mL dichloromethane), elute with 3-5 mL dichloromethane:MeOH 98.5:1.5, evaporate eluate to dryness at 30° under reduced

pressure (do not over dry), reconstitute in 200 μL MeOH, vortex for 5 s, filter (0.45 μm), inject a 20-30 μL aliquot.

HPLC VARIABLES
Guard column: Guard-PAK (Waters no. 88070)
Column: 250 × 4.6 5 μm Zorbax C8
Mobile phase: Gradient. MeCN:water from 12:88 to 70:30 over 30 min, to 80:20 over 1 min, maintain at 80:20 for 8 min, re-equilibrate at initial conditions for 10 min.
Flow rate: 1.5
Injection volume: 20-30
Detector: F ex 340 em 418, following post-column derivatization. The column effluent is mixed with 50 mM NaOH at 0.27 mL/min and the mixture flows through a 1 mL coil at 80° and is mixed with 140 μg/mL o-phthalaldehyde and 1 mL/L mercaptoethanol in 50 mM pH 10.5 potassium borate buffer pumped at 0.27 mL/min. The mixture flows through a 1 mL coil at 40° to the detector.

CHROMATOGRAM
Retention time: 22.1
Limit of quantitation: 5 ppb

OTHER SUBSTANCES
Extracted: aldicarb, bendiocarb, bufencarb, carbaryl, carbofuran, dioxacarb, isoprocarb, methiocarb, methomyl, oxamyl, promecarb

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX

Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.

Column temperature: 30

Flow rate: 2

Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenyl-

butazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 20 μL 25 mg/mL ascorbic acid in water (prepare fresh daily) + 500 μL buffer, vortex, add 6 mL hexane:n-butanol 96:4, shake vigorously for 2 min, centrifuge briefly. Remove 5 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 200 μL MeOH:21 mM pH 5.5 ammonium acetate buffer 50:50, vortex, inject a 50 μL aliquot. (Buffer was prepared by mixing saturated sodium carbonate and saturated sodium bicarbonate to pH 9.4.)

HPLC VARIABLES
Column: 250 × 4.6 Zorbax CN
Mobile phase: MeOH:THF:buffer 60:6:34 (Buffer was 0.8 g ammonium acetate in 340 mL water, pH adjusted to 5.5 with acetic acid (if necessary).)
Column temperature: 35
Flow rate: 1.5
Injection volume: 50
Detector: F ex 275 (slit width 6 nm) em 324 (slit width 10 nm)

CHROMATOGRAM
Retention time: 8
Internal standard: propranolol

OTHER SUBSTANCES
Extracted: penbutolol
Simultaneous: metoprolol, pergolide, physostigmine

Noninterfering: acetaminophen, aspirin, atenolol, bromocriptine, chloroquine, doxorubicin, hydrochlorothiazide, indomethacin, 17-methyltestosterone, nadolol, nandrolone, practolol, quinidine, salicyluric acid, sulfadiazine, sulfamerazine, sulfamethazine, timolol, triamterene, vinzolidine, warfarin
Interfering: carazolol

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 10 μL 600 ng/mL IS in water + 200 μL 10% sodium bicarbonate + 5 mL diethyl ether, shake at 20 rpm for 15 min, centrifuge at 400 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at room temperature. Add 50 μL 5 μL/mL R(+)-phenylethylisocyanate in diethyl ether to the residue, vortex vigorously for 30 s, keep at 4° for 30 min, allow to warm to room temperature, vortex for 15 s, evaporate under nitrogen, reconstitute in 100 μL mobile phase, let stand at room temperature for 20 min, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 25-37 μm Whatman Co:Pell ODS pellicular C18
Column: 250 × 4.6 5 μm Ultrasphere C8
Mobile phase: MeOH:isopropanol:dichloromethane:water 67:7.5:1:25.5
Flow rate: 0.7
Injection volume: 20
Detector: F ex 220 em 300 (cut-off filter)

CHROMATOGRAM
Retention time: 13.7 (S(-)), 14.9 (R(+))
Internal standard: (±)-N-cyclopentyldesisopropylpropranolol (19.3, 21.2)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Simultaneous: metabolites

KEY WORDS
serum; human; rat; chiral; derivatization

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 1 mL 0.5 N pH 10 sodium bicarbonate/sodium carbonate buffer + 100 μL 300 ng/mL IS, vortex for 10 s, add to a 150 × 14 column packed with a 45

mm layer of Extrelut on top of a 25 mm layer of anhydrous sodium sulfate. elute with 15 mL diethyl ether. Add the eluate to 100 μL 10 mM trichloroacetic acid in dry dichloromethane, add 100 μL 250 mM (R,R)-O,O-diacetyltartaric acid anhydride in acetic acid:dichloromethane 20:80, mix, heat at 40° for 4 h, evaporate to dryness under a stream of nitrogen, wash the tube down with 1 mL MeOH, evaporate to dryness under a stream of nitrogen, reconstitute with 20 μL acetic acid, add 20 μL MeOH, add 60 μL water, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 15 × 4 10 μm Lichrosorb RP18
Column: 125 × 4 5 μm C18 Hypersil
Mobile phase: MeCN:2% aqueous acetic acid 70:30, adjusted to pH 4.0 with concentrated ammonia
Flow rate: 1
Injection volume: 50
Detector: F ex 290 em 335

CHROMATOGRAM
Retention time: 4 (R), 6 (S)
Internal standard: N-tert-butylpropranolol (Synthesize as follows. Reflux 2.9 g 1-naphthol, 30 mL epichlorohydrin (Caution! Epichlorohydrin is a carcinogen!), and 4.4 g (ca. 22 mequiv OH^-, Merck) ion-exchange resin for 4 h, filter, evaporate to dryness, take the residue up in toluene, evaporate to dryness, take the residue up in toluene, evaporate to dryness, take up the residue in hot petroleum ether, evaporate to dryness. Reflux the residue with 30 mL tert-butylamine for 16 h, evaporate to dryness, take up the residue in 30 mL diethyl ether, wash with two 15 mL portions of water, add 4.5 mL 4 M HCl. Remove the organic phase and the product crystallizes after several h, recrystallize from water to give N-tert-butylpropranolol hydrochloride (mp 180°).) (5 (R), 7 (S))
Limit of detection: 0.5 ng/mL (R), 1 ng/mL (S)

KEY WORDS
derivatization; plasma; chiral; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 1 mL pH 10 boric acid/KCl buffer + 5 mL toluene, shake on a mechanical shaker for 30 min, centrifuge at 2500 g for 10 min. Remove the organic layer and evaporate it to dryness under reduced pressure, reconstitute with 50 μL MeOH:triethylamine 99:1, add 20 μL 0.1% NAPIC in dry toluene, vortex briefly, let stand at room temperature in the dark for 30 min, add 50 μL 1% ethanolamine in MeOH, let stand at room temperature for 15 min, evaporate to dryness under reduced pressure, reconstitute with 100 μL mobile phase, sonicate for 30 s, inject a 20 μL aliquot. (NAPIC is (-)-(S)-naproxen isocyanate; synthesis is as follows (protect from light). Dissolve 1 g (+)-(S)-naproxen in 30 mL acetone, cool to 0°, add a solution of 700 μL triethylamine in 2 mL acetone dropwise, add a solution of 450 μL ethyl chloroformate in 2 mL acetone dropwise, stir at 0° for 15 min, add a solution of 310 mg sodium azide in 1 mL water dropwise (Caution! Sodium azide is highly toxic!), stir for 1 h, pour into 60 mL ice water, stir for 10 min, filter, wash the solid with two 50 mL aliquots of ice-water, dry under reduced pressure to obtain flunoxaprofen azide. Dissolve 100 mg flunoxaprofen azide in 3 mL dry toluene, reflux for 10-15 min, cool to room temperature, filter. Evaporate the filtrate to dryness under reduced pressure and dry under reduced pressure to obtain NAPIC as an oil that crystallized in the desiccator (mp 48°), store in a desiccator under reduced pressure.)

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 10 ng (+)-bufuralol + 4 mL 500 mM pH 7.0 sodium phosphate buffer, mix, add to a Sep-Pak C18 SPE cartridge, wash with 5 mL water, wash with 5 mL EtOH:water 30:70, elute with 8 mL EtOH. Evaporate the eluate to dryness, reconstitute the residue in 100 μL 2 mg/mL (-)-2-methyl-1,1'-binaphthalene-2'-carbonyl cyanide in MeCN containing 0.01% quinuclidine, heat at 60° for 20 min, add 50 μL MeOH, evaporate to dryness, reconstitute with 1 mL EtOH:water 90:10, add to an 18 × 6 column containing 100 mg carboxymethyl Sephadex LH-20, wash with EtOH:water 90:10 at 0.2 mL/min, elute with 3 mL 100 mM methylamine in EtOH:water 90:10. Evaporate the eluate to dryness, reconstitute the residue in 50-100 μL mobile phase, inject a 10-20 μL aliquot. (Synthesis of (-)-2-methyl-1,1'-binaphthalene-2'-carbonyl cyanide is as follows. Reflux 210 g 1-bromo-2-methylnaphthalene, 160 g N-bromosuccinimide, 1 g benzoyl peroxide, and 250 mL carbon tetrachloride for 2.5 h, add 250 mL carbon tetrachloride, filter while warm, wash the residue several times with solvent. Concentrate and cool the filtrate to give 1-bromo-2-bromomethylnaphthalene (mp 230-240°) (J. Org. Chem. 1949, 14, 375). Dissolve 90 g 1-bromo-2-bromomethylnaphthalene in 400 mL chloroform, reflux, add 46.5 g powdered hexamine in portions, remove the hexaminium salt by filtration. Reflux this salt in 650 mL 50% acetic acid for 1 h, add 105 mL concentrated HCl, reflux for 5 min, cool, obtain 1-bromo-2-naphthaldehyde (mp 119-120°) by filtration. Heat 11 g 1-bromo-2-naphthaldehyde in 275 mL acetone at 60-68°, add a hot solution of 14 g potassium permanganate in 330 mL water over 30 min, heat for another 30 min, pass in sulfur dioxide (sodium metabisulfite ?) until the solution is clear, pour into water to give 1-bromo-2-naphthoic acid, purify by forming the ammonium salt and reprecipitating. Reflux 1-bromo-2-naphthoic acid in MeOH in the presence of sulfuric acid to give methyl 1-bromo-2-naphthoate. Heat methyl-1-bromo-2-naphthoate with copper bronze at 270-280° for 20 min, while still hot extract with toluene, cool to obtain dimethyl 1,1'-binaphthalene-2,2'-dicarboxylate, obtain more crystals by evaporating some of the solvent, recrystallize from EtOH to give dimethyl 1,1'-binaphthalene-2,2'-dicarboxylate (mp 158°) (J. Chem. Soc. 1955, 1242). Add 8 g lithium tri-tert-butoxyaluminohydride in portions to 2.8 g dimethyl 1,1'-binaphthalene-2,2'-dicarboxylate in 150 mL anhydrous benzene:ether 50:50 (Caution! Benzene is a carcinogen!), heat at 80° for 2 h, acidify with 5% HCl. Remove the organic layer and dry it over anhydrous sodium sulfate, evaporate to dryness, chromatograph on 50 g silica gel with hexane:ethyl acetate 80:20, recrystallize the product from hexane/acetone to give methyl 2-hydroxymethyl-1,1'-binaphthalene-2'-dicarboxylate (mp 117.5-118.5°). Add 5 mL 30% hydrogen bromide in acetic acid to 2 g methyl 2-hydroxymethyl-1,1'-binaphthalene-2'-dicarboxylate in 10 mL acetic acid, stir at 50° for 10 min, pour into ice-water, filter, chromatograph the solid on 40 g silica gel with hexane:ethyl acetate 30:1 to give methyl 2-bromomethyl-1,1'-binaphthalene-2'-dicarboxylate as pale yellow needles (mp 137-138°). Add 400 mg sodium borohydride to 1.9 g methyl 2-bromomethyl-1,1'-binaphthalene-2'-dicarboxylate in 10 mL DMSO, stir at 60° for 15 min, pour into ice-water, acidify with concentrated HCl, chromatograph the crude product on 40 g silica gel with hexane:ethyl acetate 10:1, recrystallize from MeOH to give methyl 2-methyl-1,1'-binaphthalene-2'-carboxylate as colorless needles mp 97-98°. Add 30 mL 10% KOH to 1.2 g methyl 2-methyl-1,1'-binaphthalene-2'-carboxylate in 50 mL MeOH, reflux for 3 h, pour into ice-water, filter, recrystallize from hexane/ethyl acetate to give 2-methyl-1,1'-binaphthalene-2'-carboxylic acid as colorless needles (mp 232-233°). Add 4.1 g (-)-brucine in 20 mL EtOH to 3.3 g 2-methyl-1,1'-binaphthalene-2'-carboxylic acid dissolved in 60 mL EtOH, allow to stand overnight, filter, recrystallize the precipitate several times from EtOH. Add 5% HCl to the salt and extract with ethyl acetate, wash the organic layer with water, dry over anhydrous sodium sulfate, evaporate to dryness, recrystallize from hexane/acetone to give (-)-2-methyl-1,1'-binaphthalene-2'-carbox-

ylic acid as colorless needles (mp 229-229.5°; $[\alpha]_D^{20}$ -41.3° (c = 0.58 in chloroform). Add 3 mL oxalyl chloride to 500 mg (-)-2-methyl-1,1'-binaphthalene-2'-carboxylic acid in 30 mL anhydrous dichloromethane, stir at room temperature for 2 h, evaporate to give an oily residue, take up in 10 mL dichloromethane, add 2 mL trimethylsilyl cyanide, add 1 mg zinc iodide, stir at room temperature for 2 h, evaporate to dryness, chromatograph on 5 g silica gel with hexane to give (-)-2-methyl-1,1'-binaphthalene-2'-carbonyl cyanide as a yellow oil ($[\alpha]_D^{20}$ -42.8° (c = 1.05 in chloroform) (Anal. Sci. 1990, 6, 261).)

Knowledge-based system for the automated solid-phase extraction of basic drugs fom plasma coupled with their liquid chromatographic determination. Application to the biodetermination of β-receptor bocking agents, *J.Chromatogr.A*, **1994**, *665*, 87–99.

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 2.1
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, ibuprofen, imipramine, maprotiline, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordiazepam, nordoxepin, norfluoxetine, nortriptyline, norverapamil, promazine, propafenone, propoxyphene, protriptyline, quinidine, temazepam, trazodone, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: dextromethorphan, lidocaine, pentazocine

KEY WORDS
plasma; SPE

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 600 μL 100 mM pH 8.9 borate buffer + 500 mg NaCl + 100 μL 1 mg/mL 4-methylpropranolol + 6 mL hexane:butanol 96:4, shake for 10 min, centrifuge at 2500 g for 10 min. Remove the organic layer and add it to 180 μL 5 mM sulfuric acid, shake for 10 min, centrifuge at 2500 g for 10 min, inject a 50 μL aliquot of the aqueous layer. Alternatively, to determine unbound propranolol filter (Amicon centricon-30) plasma while centrifuging at 5500 g for 45-50 min. 1.4 mL Ultrafiltrate + 600 μL 100 mM pH 8.9 borate buffer + 500 mg NaCl + 100 μL 1 mg/mL 4-methylpropranolol + 6 mL hexane:butanol 96:4, shake for 10 min, centrifuge at 2500 g for 10 min. Remove the organic layer and add it to 150 μL 5 mM sulfuric acid, shake for 10 min, centrifuge at 2500 g for 10 min, inject a 100 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: Permaphase ODS (DuPont)

Column: 110 × 4.7 5 μm Partisil 5 ODS 3
Mobile phase: MeCN:MeOH:40 mM ammonium chloride:triethylamine 20:40:40:0.08 containing 5 mM sodium 1-octanesulfonate, adjusted to pH 6.9 with 85% phosphoric acid
Flow rate: 1.4
Injection volume: 50-100
Detector: F ex 293 em 375

CHROMATOGRAM
Retention time: 3.7
Internal standard: 4-methylpropranolol (5.5)
Limit of quantitation: 10 ng/mL

SAMPLE
Matrix: blood
Sample preparation: Condition an Styrosorb cross-linked polystyrene (Biochrom, Moscow) or Sep-Pak C18 SPE cartridge with two 3 mL portions of MeOH and two 3 mL portions of water.

Add 1 mL serum containing 2.5 μg metoprolol to the SPE cartridge, wash with two 3 mL portions of water, elute with 600 μL MeOH:diethylamine 99.7:0.3. Evaporate the eluate to dryness under a stream of air at 40°, reconstitute with 50 μL n-heptane:isopropanol:MeOH 83:13:4, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 10 μm Silasorb-NH2 (Elsico, Moscow)
Mobile phase: n-Heptane:isopropanol:MeOH 83:13:4
Flow rate: 2.5
Injection volume: 20
Detector: F ex 220 em 320 (cut-off filter)

CHROMATOGRAM
Retention time: 3.4
Internal standard: metoprolol (4.1)

SAMPLE
Matrix: blood, perfusate
Sample preparation: 1 mL Serum, plasma, or liver perfusate + 100 μL 10% ascorbic acid + 100 μL 1.5 μg/mL 4-methylpropranolol + 2 mL pH 10 1 M sodium carbonate + 5 mL diethyl ether, vortex for 3 min, centrifuge at 1200 g for 10 min. Remove upper organic phase and evaporate to dryness under a stream of nitrogen at room temperature. Reconstitute in 2 mL mobile phase, inject a 100 μL aliquot. (Acidic metabolites can be determined by adding 250 μL 6 M HCl to the lower aqueous phase, inject 250 μL directly. It may be necessary to extract into ether first.)

HPLC VARIABLES
Column: 250 × 4 5 μm LiChroSpher RP-18
Mobile phase: MeCN:MeOH:water 22:33:45 containing 0.033% triethylamine and 0.044% concentrated phosphoric acid, pH 3.2
Flow rate: 1
Injection volume: 100
Detector: F ex 300 em 375 (em 440 from 8 to 11.5 min)

CHROMATOGRAM
Retention time: 8.58
Internal standard: 4-methylpropranolol (12.98)
Limit of detection: 533 ng/mL

OTHER SUBSTANCES
Simultaneous: metabolites, hydroxypropranolol, desisopropylpropranolol, propranolol glycol

KEY WORDS
serum; plasma; rat; dog

Semple,H.A.; Xia,F. Simplified high-performance liquid chromatographic method for propranolol and five metabolites in liver perfusate, rat serum and dog plasma, *J.Chromatogr.B*, **1994**, *655*, 293–299.

SAMPLE
Matrix: blood, saliva
Sample preparation: 50 μL Plasma or saliva + 350 μL 1 μM oxprenolol hydrochloride in water + 100 μL 4 M NaOH, sonicate for 10 min, extract with 3 mL ethyl acetate, centrifuge at 3000 rpm for 3 min. Remove the organic layer and wash it with saturated NaCl solution, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, reconstitute the res-

idue in 100 μL MeCN:water:triethylamine 50:50:0.1, add 100 μL 1 mM (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole in MeCN, heat in the dark at 65° for 1.5 h, inject a 50 μL aliquot. (Synthesis of (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene from EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ TLC plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei. Cool a solution of 16.4 g (S)-(-)-1-benzyl-3-pyrrolidinol in 164 mL pyridine to +5°, add 19.35 g p-toluenesulfonyl chloride, stir at +10° for 48 h, evaporate to dryness, chromatograph using dichloromethane:acetone 95:5 to obtain (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine (mp 68°). Heat a solution of (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine in 200 mL anhydrous DMF to 65°, add 33.5 g sodium azide (Caution! Sodium azide is highly toxic!), stir at 60° for 7 h, filter, evaporate the filtrate to dryness under reduced pressure, dissolve the residue in ethyl acetate, wash twice with water, dry over anhydrous magnesium sulfate, evaporate to obtain (3R)-3-azido-1-(phenylmethyl)pyrrolidine as an oil. Add 3.5 g 10% palladium on carbon under nitrogen to a solution of 7.05 g (3R)-3-azido-1-(phenylmethyl)pyrrolidine in 34.8 mL 1 M HCl in water and 245 mL EtOH, hydrogenate at atmospheric pressure for 30 min, add 3.5 g catalyst, hydrogenate for 2 h, filter, add 34.8 mL 1 M HCl to the filtrate, evaporate to dryness under reduced pressure, take up the residue in 70 mL EtOH, filter, evaporate the filtrate to dryness under reduced pressure, repeat this operation twice, crystallize with the minimum amount of EtOH to obtain (3R)-3-aminopyrrolidine dihydrochloride (J. Med. Chem. 1992, 35, 4205). 3R-(+)-aminopyrrolidine is also reported to be available from Tokyo Kasei. Add 100 mg 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to a stirred solution of 200 mg 3R-(+)-aminopyrrolidine in 20 mL MeCN at 0-10°, stir at room temperature for 30 min, remove the MeCN by evaporation under reduced pressure, dissolve the residue in 50 mL 5% HCl, wash 3 times with 50 mL portions of ethyl acetate, adjust the pH of the aqueous solution to 13-14 with 5% NaOH, extract 6 times with 50 mL portions of ethyl acetate. Combine the organic layers and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane to obtain (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole as orange crystals (mp 96-98°) (Analyst 1992, 117, 727). Add 100 μL thiophosgene in 10 mL benzene (Caution! Benzene is a carcinogen!) to 100 mg (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole in 100 mL acetone, reflux for 1 h, remove the solvent by evaporation under reduced pressure, suspend the residue in 100 mL water, extract 4 times with 25 mL portions of benzene. Combine the extracts and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane:benzene 1:2 to

obtain (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole as yellow crystals (mp 160-170° d) (Analyst 1995, 120, 385).)

SAMPLE

Matrix: blood, tissue
Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES

Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM

Retention time: 2.15
Internal standard: cianopramine

OTHER SUBSTANCES

Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, desipramine, diphenhydramine, dothiepin, doxepin, fluoxetine, haloperidol, imipramine, loxapine, maprotiline, meperidine, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluoxetine, norpropoxyphene, northiaden, nortriptyline, pentobarbital, pheniramine, promethazine, propoxyphene, protriptyline, quinidine, quinine, sulforidazine, thioridazine, thiothixene, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine
Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine

KEY WORDS

serum; whole blood; liver

SAMPLE
Matrix: bulk
Sample preparation: Mix the compound with (aS)-2'-methoxy-1,1'-binaphthalene-2-carbonyl cyanide in MeCN containing 0.1% quinuclidine, heat at 60° for 20 min, take up the reaction mixture in EtOH:water 90:10, add to an 18 × 6 column packed with 100 mg carboxymethyl Sephadex LH-200, elute with 100 mM methylamine in EtOH:water 90:10. Evaporate the eluate to dryness, reconstitute with ethyl acetate, inject an aliquot. (Derivatization occurs on the alcohol. Preparation of (aS)-2'-methoxy-1,1'-binaphthalene-2-carbonyl cyanide is as follows. Treat 1-bromo-2-naphthol with sodium hydride in DMF, add iodomethane, stir at room temperature overnight to obtain 1-bromo-2-methoxynaphthalene (mp 85-86°). Add a solution of 37.7 g 1-bromo-2-methylnaphthalene in 200 mL ether over 1 h to a sonicated mixture of 7 g magnesium turnings in 50 mL ether, the mixture should reflux rapidly (Caution! There may be in an induction period!), sonicate for 2 h after addition is complete, add 200 mL benzene (Caution! Benzene is a carcinogen!), add this mixture dropwise to a stirred mixture of 100 mmoles 1-bromo-2-methoxynaphthalene and 655 mg bis(triphenylphosphine)nickel(II) chloride ($NiCl_2(PPh_3)_2$) in 150 mL benzene at room temperature over 1 h, stir at room temperature overnight, reflux for 3 h, remove the ether by distillation through a short Vigreux column, remove the solvent by evaporation under reduced pressure, remove excess 1-bromo-2-methylnaphthalene by heating at 150°/0.1 mm Hg, cool, dissolve the residue in hexane, pass through silica gel, evaporate to dryness, recrystallize from hexane to obtain 1-methoxy-2'-methylbinaphthalene (mp 118-121°). Reflux 10 mmoles 1-methoxy-2'-methyl-binaphthalene, 1.96 g N-bromosuccinimide, and 100 mg benzoyl peroxide in 70 mL carbon tetrachloride for 3 h, filter, evaporate the filtrate to obtain crude 1-bromomethyl-2'-methoxy-binaphthalene. Dissolve the crude 1-bromomethyl-2'-methoxy-binaphthalene in 60 mL DMSO under nitrogen, slowly add a

sodium ethoxide/nitropropane mixture, stir at room temperature for 3 h, stir at 60° for 3 h, pour into 300 mL ice-water, extract with dichloromethane, wash with 2 M HCl, wash with 1 M sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to obtain crude 2'-methoxy-1,1'-binaphthalene-2-carboxaldehyde. (Prepare the sodium ethoxide/nitropropane mixture by dissolving 580 mg sodium in 35 mL EtOH, add 3.25 g 2-nitropropane.) Reflux the crude 2'-methoxy-1,1'-binaphthalene-2-carboxaldehyde in 60 mL acetone, add a solution of 2.36 g potassium permanganate in 60 mL hot water dropwise over 1 h, heat for an additional hour, pass sulfur dioxide through the solution until it becomes clear (sodium metabisulfite may work). Filter off the precipitate and dissolve it in 200 mL hot toluene, add a small amount of activated charcoal, filter while hot, concentrate to about a third of the volume, recrystallize from EtOH:water 1:2 to obtain 2'-methoxy-1,1'-binaphthalene-2-carboxylic acid (mp 258.5-260°) (Bull. Chem. Soc. Japan 1986, 59, 2044). Reflux 9.15 g racemic 2'-methoxy-1,1'-binaphthalene-2-carboxylic acid in 55 mL freshly distilled thionyl chloride for 5 h, evaporate under reduced pressure, add a little benzene, evaporate under reduced pressure, repeat the benzene evaporation twice more to obtain 2'-methoxy-1,1'-binaphthalene-2-carbonyl chloride as a brown solid. Dissolve the acid chloride in 70 mL benzene, add dropwise to 12.8 g (-)-menthol in 100 mL benzene containing 1 g 4-dimethylaminopyridine and 5 mL pyridine, stir overnight at room temperature, heat at 70° for 3 h, cool, dilute with benzene, wash with 2 M HCl, wash with 1 M sodium carbonate, wash with water, dry over anhydrous magnesium sulfate in the presence of activated charcoal, evaporate to dryness, remove as much menthol as possible by sublimation under vacuum, chromatograph twice on a column of silica gel with toluene to obtain the (aS,R) menthol ester (mp 145-146° from hexane) and the (aR,R) menthol ester (mp 126-129° from hexane) as well as a mixture of diastereomers. Reflux the (aS,R) menthol ester with KOH in aqueous EtOH for 8-10 h to obtain (aS)-2'-methoxy-1,1'-binaphthalene-2-carboxylic acid (Bull. Chem. Soc. Japan 1989, 62, 1528). Add 1.5 mL oxalyl chloride to a solution of (aS)-2'-methoxy-1,1'-binaphthalene-2-carboxylic acid in 10 mL anhydrous benzene, reflux for 10 h, evaporate to dryness under reduced pressure. Take up the residue in 10 mL anhydrous benzene, add 1 mL trimethylsilyl cyanide, add 1 mg zinc iodide, stir at room temperature for 5 h, evaporate to dryness, recrystallize from hexane/acetone to obtain (aS)-2'-methoxy-1,1'-binaphthalene-2-carbonyl cyanide as orange-yellow needles (mp 143-146°).)

SAMPLE

Matrix: perfusate

Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 10 mL MeOH and 10 mL water. 1 mL Perfusate + 2 mL water, add to the SPE cartridge, wash with 10 mL water, dry under vacuum, elute with 5 mL MeOH. Evaporate the eluate to dryness under a stream of

nitrogen at 40°, reconstitute the residue in 50 μL mobile phase, centrifuge at 700 g for 5 min, inject a 30 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Alltima C18 (Alltech)
Mobile phase: MeOH:50 mM pH 5.8 phosphate buffer 55:45, final pH 5.1
Column temperature: 40
Flow rate: 1
Injection volume: 30
Detector: F ex 280 em 395

CHROMATOGRAM
Retention time: 7.1
Internal standard: propranolol
Limit of detection: 0.1 ng/mL

OTHER SUBSTANCES
Extracted: prazosin
Noninterfering: albuterol, alcuronium, aminophylline, atenolol, atropine, betamethasone, bupivacaine, cortisone, dexamethasone, diazepam, diltiazem, hydrocortisone, hyoscine, hyoscine-N-butylbromide, labetalol, lidocaine, methimazole, metoclopramide, norepinephrine, phenobarbital, L-phenylephrine, phenytoin, prednisolone, prednisone, promethazine, propylthiouracil, pyridoxine, ranitidine, verapamil

SAMPLE
Matrix: saliva
Sample preparation: Condition a 100 mg 1 mL Bond-Elut C2 SPE cartridge with 1 mL MeOH, 1 mL water, and 1 mL pH 9.0 borate buffer. Centrifuge a cotton roll soaked with saliva at 1000 g for 5 min, remove the liquid supernatant. 1 mL Supernatant + 50 μL 10 μg/mL alprenolol, add to the SPE cartridge, wash with 500 μL water, wash with 500 μL MeCN, elute with two 500 μL portions of acidified MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 60°, reconstitute the residue in 50 μL mobile phase, mix for 15 s, inject a 40 μL aliquot. (Acidified MeOH was 50 mL MeOH + 300 μL 96% acetic acid.)

HPLC VARIABLES
Guard column: RCSS silica guard-pack (Waters)
Column: 250 × 4.6 Chiralcel OD-H
Mobile phase: n-Hexane:EtOH:diethylamine 91:9:0.1
Flow rate: 1
Injection volume: 40
Detector: F ex 225 em 320 cut-off filter

CHROMATOGRAM
Retention time: 11 (R), 14 (S)
Internal standard: (S)-alprenolol (6.5)
Limit of detection: 1.33 ng
Limit of quantitation: 3 ng

SAMPLE
Matrix: solutions
Sample preparation: Mix 10 μL of a 1 mM amine solution in MeCN:water:triethylamine 50:50:2 with 10 μL 5 mM (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazolein MeCN, heat at 55° for 10 min, add 480 μL 1 M acetic acid in MeCN:water 50:50, dilute 10-fold with MeCN, inject a 5 μL aliquot. (Synthesis of (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole, (R)-(-)-NBD-PyNCS, is as follows. Cool a solution of 16.4 g (S)-(-)-1-benzyl-3-pyrrolidinol in 164 mL pyridine to +5°, add 19.35 g p-toluenesulfonyl chloride, stir at +10° for 48 h, evaporate to dryness, chromatograph using dichloromethane:acetone 95:5 to obtain (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine (mp 68°). Heat a solution of (3S)-3-[(4-tolylsulfonyl)oxy]-1-(phenylmethyl)pyrrolidine in 200 mL anhydrous DMF to 65°, add 33.5 g sodium azide (Caution! Sodium azide is highly toxic!), stir at 60° for 7 h, filter, evaporate the filtrate to dryness under reduced pressure, dissolve the residue in ethyl acetate, wash twice with water, dry over anhydrous magnesium sulfate, evaporate to obtain (3R)-3-azido-1-(phenylmethyl)pyrrolidine as an oil. Add 3.5 g 10% palladium on carbon under nitrogen to a solution of 7.05 g (3R)-3-azido-1-(phenylmethyl)pyrrolidine in 34.8 mL 1 M HCl in water and 245 mL EtOH, hydrogenate at atmospheric pressure for 30 min, add 3.5 g catalyst, hydrogenate for 2 h, filter, add 34.8 mL 1 M HCl to the filtrate, evaporate to dryness under reduced pressure, take up the residue in 70 mL EtOH, filter, evaporate the filtrate to dryness under reduced pressure, repeat this operation twice, crystallize with the minimum amount of EtOH to obtain (3R)-3-aminopyrrolidine dihydrochloride (J. Med. Chem. 1992, 35, 4205). 3R-(+)-aminopyrrolidine is also reported to be available from Tokyo Kasei. Add 100 mg 4-fluoro-7-nitro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to a stirred solution of 200 mg 3R-(+)-aminopyrrolidine in 20 mL MeCN at 0-10°, stir at room temperature for 30 min, remove the MeCN by evaporation

under reduced pressure, dissolve the residue in 50 mL water, extract 4 times with 80 mL portions of ethyl acetate. Combine the organic layers and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane to obtain (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-nitro- 2,1,3-benzoxadiazole as dark red crystals (mp 178-181°) (Analyst 1992, 117, 727). Add 100 μL thiophosgene in 10 mL benzene (Caution! Benzene is a carcinogen!) to 100 mg (R)-(-)-4-(3-aminopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole in 100 mL acetone, reflux for 1 h, remove the solvent by evaporation under reduced pressure, suspend the residue in 100 mL water, extract 4 times with 25 mL portions of benzene. Combine the extracts and wash them with 20 mL water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize from hexane:benzene 1:2 to obtain (R)-(-)-4-(3-isothiocyanatopyrrolidin-1-yl)-7-nitro-2,1,3-benzoxadiazole as red crystals (mp 165-170°).)

HPLC VARIABLES

SAMPLE
Matrix: solutions

Sample preparation: Mix 300 μL of a 30 μM solution in dichloromethane with 10 μL 20 mM 1-(6-methoxy-2-naphthyl)ethyl isothiocyanate in anhydrous dichloromethane and 50 μL 0.1% triethylamine in dichloromethane, vortex thoroughly, heat at 50° for 1.5 h, inject an aliquot. (Synthesize 1-(6-methoxy-2-naphthyl)ethyl isothiocyanate as follows (protect from light). Dissolve 500 mg (S)-(+)-naproxen in 50 mL dry toluene, slowly add 5 mL freshly distilled thionyl chloride, reflux for 1 h, evaporate to dryness under vacuum, dry the acyl chloride (mp 87.5°) under vacuum over KOH for 2 days. Dissolve 0.5 mmoles acyl chloride in 5 mL acetone, stir at 0°, add 0.6 mmoles sodium azide dissolved in ice water, stir at 0° for 30 min, add 10 mL ice-cold water, filter, dry solid in a desiccator under vacuum. Dissolve the solid in 1 mL toluene or dichloromethane (dried over 3 Å molecular sieve), reflux for 10 min, evaporate, store resulting isocyanate (mp 51°) under vacuum over a desiccant. Dissolve 0.5 mmole isocyanate in 5 mL acetone, add 20 mL 8.5% phosphoric acid, heat to 80° for 1.5 h, adjust to pH 13, extract with diethyl ether:dichloromethane 4:1. Wash the organic layer twice with water, dry over anhydrous sodium sulfate, evaporate to dryness, dissolve in 1 mL toluene, evaporate to give the amine from naproxen as crystals (mp 53°) (Pharm.Res. 1990, 7, 1262). Dissolve 1 mmole 1,1-thiocarbonyldiimidazole in 15 mL ice-cold chloroform, stir at 0°, add dropwise 1 mmole of the amine dissolved in 10 mL chloroform, stir at room temperature for 1.5 h, evaporate to dryness, reconstitute with carbon tetrachloride (Caution! Carbon tetrachloride is a carcinogen!), filter, evaporate the filtrate to dryness, store the resulting oil in a desiccator, purify on a short silica gel column with dichloromethane:light petroleum 50:50 to give 1-(6-methoxy-2-naphthyl)ethyl isothiocyanate as a slightly yellow liquid (store in the freezer under argon).)

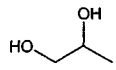
Propylene glycol



Molecular formula: $C_3H_8O_2$
Molecular weight: 76.10
CAS Registry No.: 57-55-6
Merck Index: 8040

SAMPLE
Matrix: formulations
Sample preparation: Remove the water from 10 μL syrup under reduced pressure for 10 min, reconstitute with 2 mL pyridine. Remove a 25 μL aliquot and add it to 75 μL reagent, shake well, let stand at room temperature for 10 min, evaporate to dryness under reduced pressure at room temperature, flush the tube with a stream of air or nitrogen, add 2 mL 5% sodium carbonate solution containing 2.5 mg/mL 4-dimethylaminopyridine, shake or sonicate for 5 min, extract with 2 mL chloroform. Wash the extract with 2 mL 5% sodium bicarbonate solution, wash twice with 3 mL portions of 50 mM HCl containing 5% NaCl, inject an aliquot. (Prepare reagent by dissolving 100 mg 4-nitrobenzoyl chloride in pyridine with gentle warming.)

HPLC VARIABLES
Column: 150 × 3 5 μm LiChrosorb SI 60
Mobile phase: n-Hexane:chloroform:MeCN 10:3:1.9 containing 0.1% water
Flow rate: 1.4
Injection volume: 50
Detector: UV 260

CHROMATOGRAM
Retention time: 1.5

OTHER SUBSTANCES
Simultaneous: dextrose, fructose, glycerin, saccharose, sorbitol

KEY WORDS
syrup; derivatization; normal phase

REFERENCE
Nachtmann,F.; Budna,K.W. Sensitive determination of derivatized carbohydrates by high-performance liquid chromatography, *J.Chromatogr.*, **1977**, *136*, 279–287.

SAMPLE
Matrix: formulations
Sample preparation: Condition a C18 Sep-Pak SPE cartridge with 2 mL MeOH and 20 mL water. Dilute formulation ten-fold with water, add a 0.5 mL aliquot to the SPE cartridge, elute with three 1 mL portions of water, inject a 10 μL aliquot of the eluate.

HPLC VARIABLES
Column: 8 mm i.d. C18 radial compression (Waters)
Mobile phase: Water
Flow rate: 1
Injection volume: 10
Detector: RI

CHROMATOGRAM
Retention time: 4.75

OTHER SUBSTANCES
Simultaneous: dihydroxyacetone, dioxane, ethylene glycol, formic acid, glyceraldehyde, glycerol, methylglyoxal

KEY WORDS
SPE

SAMPLE
Matrix: solutions
Sample preparation: Add 0.5 mmole propylene glycol to a solution of 0.5 g 3,5-dinitrobenzoyl chloride in 30 mL pyridine, mix well, heat at 60° for 15 min, adjust pH to 2.5 with 2 M HCl (Caution! Exothermic reaction!), cool to room temperature, add 25 mL butyl acetate, shake for 3 min. Remove the organic layer and add it to 50 mL 1% sodium carbonate solution, shake for 2 min. Remove the organic layer and add it to 25 mL 0.25 M sulfuric acid, shake for 2 min. Remove the organic layer and add it to 10 mL water, shake for 1 min, inject a 10 μL aliquot of the organic layer.

HPLC VARIABLES
Column: 2000 × 2.1 Corasil II
Mobile phase: Heptane:ethyl acetate 75:25
Flow rate: 1.7
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 5

OTHER SUBSTANCES
Simultaneous: diethylene glycol, ethylene glycol

KEY WORDS
derivatization; normal phase

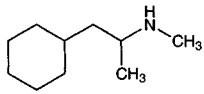
Propylhexedrine



Molecular formula: $C_{10}H_{21}N$
Molecular weight: 155.28
CAS Registry No.: 3595-11-7, 101-40-6
Merck Index: 8045
Lednicer No.: 1 37

SAMPLE
Matrix: bulk
Sample preparation: Dissolve 1.5 mg compound in 1 mL reagent, add 3 μL triethylamine, sonicate for 20 min, add 3 μL diethylamine, let stand for 15 min, inject an aliquot. (Reagent was 2 mg/mL (R)-(-)-(naphth-1-yl)ethylisocyanate solution in dry chloroform:DMF 80:20.)

HPLC VARIABLES
Column: 200 × 4.6 Silica 100 RP 18
Mobile phase: MeOH:water 70:30
Flow rate: 1.5
Detector: UV 254

CHROMATOGRAM
Retention time: k' 9.26 , k' 10.19 (enantiomers)

OTHER SUBSTANCES
Also analyzed: atenolol, methylphenidate, metipranolol, pindolol, propranolol, talinolol

KEY WORDS
derivatization; chiral

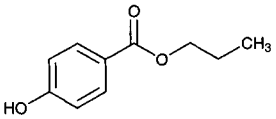
Propylparaben



Molecular formula: $C_{10}H_{12}O_3$
Molecular weight: 180.20
CAS Registry No.: 94-13-3
Merck Index: 8051

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendi-

metrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

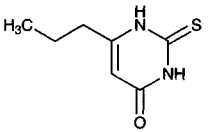
Propylthiouracil



Molecular formula: $C_7H_{10}N_2OS$
Molecular weight: 170.24
CAS Registry No.: 51-52-5
Merck Index: 8054
Lednicer No.: 1 265

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 1 M NaOH, shake, add 4 mL chloroform, vortex, centrifuge at 300 g for 10 min, discard the chloroform layer, add 300 μL 10% HCl to the aqueous layer, vortex, add 2 mL chloroform, vortex, centrifuge at 300 g for 10 min. Remove the lower organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 30 μL MeOH, add 20 μL mobile phase, mix, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 15 × 3.2 Newguard RP-18
Column: 250 × 4.6 Spheri-5 RP-18
Mobile phase: MeOH:50 mM pH 7.4 phosphate buffer 30:70
Column temperature: 37
Flow rate: 1.5
Injection volume: 20
Detector: UV 214

CHROMATOGRAM

Retention time: 7.25
Limit of detection: 40 ng/mL

OTHER SUBSTANCES

Extracted: metabolites
Noninterfering: acetaminophen, albuterol, atenolol, bupivacaine, caffeine, carbamazepine, clonazepam, cortisone, diazepam, estriol, hydrocortisone, hyoscine, methimazole, metoprolol, phenobarbital, prednisolone, prednisone, progesterone, propranolol, ritodrine, verapamil

KEY WORDS

plasma; pharmacokinetics

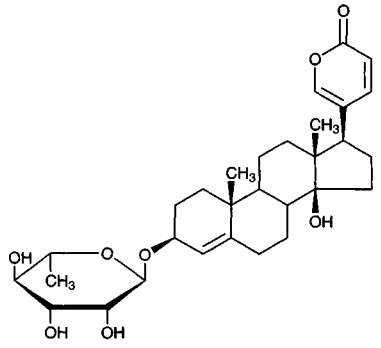
Proscillaridin

Molecular formula: $C_{30}H_{42}O_8$
Molecular weight: 530.66
CAS Registry No.: 466-06-8
Merck Index: 8060



SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 15.585

KEY WORDS
whole blood

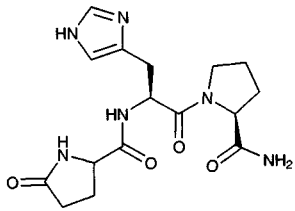
Protirelin



Molecular formula: $C_{16}H_{22}N_6O_4$
Molecular weight: 362.39
CAS Registry No.: 24305-27-9
Merck Index: 9720

SAMPLE
Matrix: formulations
Sample preparation: Dilute 4 mL injection to 200 mL with water. Remove a 5 mL aliquot and add it to 10 mL 1 mg/mL p-aminobenzoic acid in water, make up to 200 mL with water, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Nucleosil C18
Mobile phase: MeCN:MeOH:buffer:triethylamine 4:4:92:0.01 (Buffer was 0.05% sodium octanesulfonate adjusted to pH 2.2 with 3 M phosphoric acid.)
Flow rate: 1.5
Injection volume: 10
Detector: UV 215

CHROMATOGRAM
Retention time: 16
Internal standard: p-aminobenzoic acid (9.5)

OTHER SUBSTANCES
Simultaneous: benzaldehyde, benzoic acid, benzyl alcohol, degradation products.

KEY WORDS
stability-indicating; injections

Molecular weight: 263.38
CAS Registry No.: 438-60-8, 1225-55-4 (HCl)
Merck Index: 8088
Lednicer No.: 1 152

SAMPLE
Matrix: blood

Sample preparation: Condition a 100 mg Bond-Elut C18 SPE cartridge with 2 mL MeOH and 2 mL water. Add 1 mL plasma or serum to the SPE cartridge. Wash twice with 2 mL water. Acidify the cartridge with 1 mL MeOH:250 mM HCl 10:90, wash with 500 μL MeCN, elute twice with 500 μL 10 mM acetic acid and twice with 500 μL 5 mM diethylamine in MeOH. Evaporate the eluate to dryness with a gentle stream of air at 37°. Reconstitute the residue with 100 μL mobile phase. Inject a 40 μL aliquot.

HPLC VARIABLES

Column: 125 × 4 5 μm Select-B C8 (Merck)
Mobile phase: MeCN:MeOH:10 mM pH 3.7 dipotassium hydrogen phosphate 30:2:100
Flow rate: 1.5
Injection volume: 40
Detector: UV 220

CHROMATOGRAM

Retention time: 8.5
Internal standard: protriptyline

OTHER SUBSTANCES

Extracted: clozapine
Simultaneous: amitriptyline, clomipramine, chlorpromazine, chlorprothixene, citalopram, desipramine, desmethylcitalopram diazepam, doxepin, fluoxetine, haloperidol, imipramine, levomepromazine, maprotiline, medazepam, mianserin, midazolam, nitrazepam, norclomipramine, nordoxepin, norfluoxetine, normaprotiline, nortrimipramine, nortryptiline, thioridazine, thiothixene, trazodone, trimipramine
Noninterfering: carbamazepine, carbamazepine-10-epoxide, carbamazepine-11-epoxide, clobazam, ethosuximide, flunitrazepam, 10-hydroxycarbazepine, norclobazam, oxazepam, oxcarbazepine, pentobarbital, phenobarbital, primidone, temazepam

SAMPLE

Matrix: blood

Sample preparation: Condition a Bond-Elut C18 column with 2 volumes MeOH then 2 volumes water. Add 1 mL serum then 200 μL 700 ng/mL promazine in MeOH:0.1 M HCl 13:87 to each column, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with MeOH/water, add 200 μL 10 mM ammonium acetate in MeOH, wait for 30 s, elute with vacuum, repeat elution process two more times. Combine eluates and evaporate them to dryness at 56-8° under compressed air. Reconstitute with 200 μL mobile phase, vortex 10 s, inject 75-100 μL aliquot. (MeOH/water was 500 mL MeOH:water 65:35 plus 25 μL concentrated HCl.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Supelco silica

Mobile phase: EtOH:MeCN:t-butylamine 98:2:0.05 (Mix 1 gallon EtOH with 77 mL MeCN and 1.9 mL t-butylamine.)

Flow rate: 2

Injection volume: 75-100

Detector: UV 229

CHROMATOGRAM

Retention time: 12.1

Internal standard: promazine (5.2)

Limit of detection: 10 ng/mL

OTHER SUBSTANCES

Extracted: amitriptyline, desipramine, desmethyldoxepin, doxepin, imipramine, nortriptyline

Simultaneous: thioridazine, hydroxyamoxapine, meperidine, chlorpromazine, disopyramide, amphetamine, 2-hydroxyimipramine, iprindole, pyrilamine, promethazine, prolixin, amoxapine, N-acetylprocainamide, procainamide, zimeldine, morphine, codeine, trifluoperazine, desmethyldisopyramide, 10-hydroxynortriptyline, prochlorperazine, oxaprotiline, 2-hydroxydesipramine, chlorpheniramine, maprotiline, norzimeldine, iminostilbene, desmethylchlordiazepoxide, buprion, diazepam, demoxepam, chlordiazepoxide, propoxyphene, dextropropoxyphene, cocaine, oxapam, trimipramine, mianserin, trimeprazine, loxepin, fluphenazine, methadone, trifluopromazine, phenteramine, chlorimipramine, perphenazine, quinidine

Noninterfering: thiopropazine

SAMPLE

Matrix: blood

Sample preparation: 2 mL Serum or plasma + 0.6 mL water, vortex, extract with 10 mL toluene:isoamyl alcohol 99:1 for 10 min on a rotator, centrifuge for 5 min. Remove upper organic layer, evaporate under a stream of nitrogen at 37°, take up in 150 μL mobile phase, vortex for 2 min, add 0.5 mL hexane, vortex briefly, centrifuge for 5 min, discard upper hexane layer, inject a 100 μL aliquot of the lower layer.

HPLC VARIABLES

Column: 250 × 4 Bio-Sil ODS-10 (Bio-Rad)

Mobile phase: MeCN:pH 4.5 50 mM phosphate buffer 30:70 (Buffer was 6.9 g KH_2PO_4 in 1 L adjusted to pH 4.5 with orthophosphoric acid.)

Column temperature: 45

Flow rate: 2.5

Injection volume: 100

Detector: UV 202

CHROMATOGRAM
Retention time: 6.9

OTHER SUBSTANCES
Extracted: alprazolam, imipramine, nortriptyline, triazolam
Noninterfering: N-acetylprocainamide, amitriptyline, caffeine, chlordiazepoxide, chlorpromazine, diazepam, flurazepam, lorazepam, oxazepam, prazepam, procainamide, propranolol, thioridazine
Interfering: desipramine

SAMPLE
Matrix: blood
Sample preparation: Condition a Bond Elut C-18 SPE cartridge twice with MeOH and twice with water. 500 μL Serum + 50 μL 1 μg/mL N-propionylprocainamide in 2.5 mM HCl, add to SPE cartridge, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with 1 volume MeOH:2.5 mM HCl 10:90. Add 200 μL 10 mM acetic acid and 5 mM diethylamine in MeOH to column, let stand 1 min, elute under vacuum, repeat, evaporate eluents to dryness under nitrogen at room temperature, reconstitute in 100 μL mobile phase, inject a 40 μL aliquot.

HPLC VARIABLES
Guard column: Pelliguard LC-CN (Supelco)
Column: 150 × 4.6 5 μm Supelcosil LC-PCN
Mobile phase: MeCN:MeOH:10 mM pH 7.0 phosphate buffer 58:14:28
Flow rate: 1.2
Injection volume: 40
Detector: UV 280

CHROMATOGRAM
Retention time: 15.8
Internal standard: N-propionylprocainamide (6)
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, desipramine, doxepin, imipramine, nortriptyline, trimipramine
Simultaneous: atropine, butalbital, chlorpromazine, maprotiline, methadone, norpropoxyphene, phenylpropanolamine, procainamide, prochlorperazine, promethazine, propranolol, quinidine, trifluoperazine, trimeprazine
Noninterfering: acetaminophen, allopurinol, amikacin, amoxapine, amytal, bretylium, caffeine, carbamazepine, carisoprodol, chloramphenicol, chlordiazepoxide, chlorpropamide, clonazepam, codeine, diazepam, disopyramide, droperidol, ethinamate, ethinamate, ethosuximide, fluphenazine, flurazepam, furosemide, gentamicin, haloperidol, hydrochlorothiazide, hydroxyzine, ibuprofen, kanamycin, lidocaine, loxapine, meperidine, mephobarbital, meprobamate, methaqualone, methotrexate, morphine, nafcillin, naloxone, neomycin, perphenazine, phenacetin, phenobarbital, phenytoin, prazepam, primidone, procaine, propoxyphene, reserpine, salicylamide, salicylic acid, secobarbital, spironolactone, theophylline, thiopental, thioridazine, tobramycin, valproic acid, verapamil

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)

Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 4.0

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, dextromethorphan, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, imipramine, lidocaine, maprotiline, methadone, mexiletine, midazolam, norchlorimipramine, nordoxepin, nordiazepam, norfluoxetine, nortriptyline, pentazocine, propoxyphene, propranolol, quinidine, temazepam, trazodone, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: desipramine, methaqualone, norverapamil, ibuprofen, promazine, propafenone

SAMPLE

Matrix: blood

Sample preparation: 1 mL Serum + 1 mL 500 mM NaOH + 4 mL toluene:n-hexane:isoamyl alcohol 77:22:3, mix for 10 min, centrifuge at 3000 rpm for 5 min. Remove the upper organic layer and evaporate it to dryness under a stream of air at 40°, reconstitute the residue in 200 μL MeOH, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 150 × 4.7 5 μm Supelcosil LC-PCN cyanopropyl

Mobile phase: MeCN:MeOH:10 mM pH 7.2 potassium phosphate buffer 60:15:25 (Prepare buffer by mixing 194 mL 1.36 g/L KH_2PO_4 with 274 mL 1.74 g/L K_2HPO_4.)

Flow rate: 2

Injection volume: 50

Detector: UV 254

CHROMATOGRAM

Retention time: 8.1

Internal standard: protriptyline

OTHER SUBSTANCES

Extracted: amitriptyline, cyclobenzaprine, norcyclobenzaprine, nortriptyline

KEY WORDS
serum; protriptyline is IS

REFERENCE
Wong,E.C.C.; Koenig,J.; Turk,J. Potential interference of cyclobenzaprine and norcyclobenzaprine with HPLC measurement of amitriptyline and nortriptyline: resolution by GC-MS analysis, *J.Anal.Toxicol.*, **1995**, *19*, 218–224.

SAMPLE
Matrix: blood, milk
Sample preparation: Centrifuge milk at 1200 g, remove the middle aqueous layer. 1 mL Plasma or milk + 100 μL MeOH:water 50:50, mix, inject a 250 μL aliquot of this mixture on to column A and elute to waste with mobile phase A. After 3 min backflush the contents of column A on to column B with mobile phase B, monitor the effluent from column B.

HPLC VARIABLES
Column: A 37-50 μm 10 × 1.5 Corasil RP C18; B 100 × 4 Techsphere 3CN (HPLC Technology)
Mobile phase: A water; B MeCN:50 mM pH 7.2 acetate buffer 70:30
Flow rate: A 0.8; B 0.9
Injection volume: 250
Detector: UV 246

CHROMATOGRAM
Retention time: 6.8
Internal standard: protriptyline

OTHER SUBSTANCES
Extracted: tripelennamine

KEY WORDS
column-switching; cow; plasma; protriptyline is IS

SAMPLE
Matrix: blood, tissue
Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM
Retention time: 5.50
Internal standard: cianopramine (8.93)

OTHER SUBSTANCES
Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, diphenhydramine, dothiepin, doxepin, fluoxetine, haloperidol, imipramine, loxapine, maprotiline, meperidine, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluoxetine, northiaden, nortriptyline, pentobarbital, pheniramine, promethazine, propoxyphene, propranolol, quinidine, quinine, sulforidazine, thioridazine, thiothixene, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine
Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine
Interfering: norpropoxyphene, desipramine

KEY WORDS
serum; whole blood; liver

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Powder tablets, weigh out amount equivalent to about 10 mg, add 75 mL mobile phase, sonicate for 20 min, dilute to 100 mL with mobile phase, mix, filter (0.45 μm) (discard first 10 mL of filtrate), inject a 20 μL aliquot of the filtrate. Syrups, elixirs, injectables. Measure out amount equivalent to about 10 mg, add 75 mL mobile phase, sonicate for 20 min, dilute to 100 mL with mobile phase, mix, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak CN
Mobile phase: MeOH:3 mM ammonium acetate 90:10
Flow rate: 1.3
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 6.6

OTHER SUBSTANCES
Also analyzed: chlorpheniramine, cyclizine, doxylamine, mesoridazine, pentazocine, promethazine, pyrilamine, pyrimethamine, tripelennamine

KEY WORDS
tablets; syrups; elixirs; injections

SAMPLE
Matrix: hair
Sample preparation: Wash hair in water, rinse 3 times with MeOH, dry, weigh. 5-25 mg Washed hair + 1 mL 1 M NaOH, heat at 70° for 30 min, adjust pH to 9.5-10. 1 mL Extract + 1 mL water + 1 mL 200 mM sodium carbonate buffer, mix, extract with hexane:butanol 95:5 for 20 min. Remove the organic layer and add it to 100 μL 0.2% orthophosphoric acid, mix for 20 min, inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Newguard RP-18
Column: 100 × 4.6 Spheri-5 RP-C18

Mobile phase: MeCN:buffer 40:60 (Buffer was 1.2 L 100 mM pH 7.0 NaH_2PO_4 + 30 mL diethylamine.)
Flow rate: 2
Injection volume: 30
Detector: UV 214

CHROMATOGRAM
Retention time: 4
Internal standard: protriptyline

OTHER SUBSTANCES
Extracted: amitriptyline, clomipramine, desipramine, dothiepin, doxepin, haloperidol, imipramine, mianserin, nortriptyline

KEY WORDS
may be interferences; protriptyline is IS

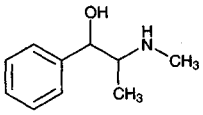
Pseudoephedrine



Molecular formula: $C_{10}H_{15}NO$
Molecular weight: 165.24
CAS Registry No.: 90-82-4, 345-78-8 (HCl), 7460-12-0 (sulfate)
Merck Index: 3645

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 0.1-1 μg IS + 500 μL 25% potassium carbonate + 10 mL diethyl ether, shake for 10 min, centrifuge at 1000 g for 5 min, freeze in MeOH/dry ice. Remove the organic layer and add it to 1 mL 50 mM HCl, shake for 5 min, centrifuge at 1000 g for 2 min, freeze in MeOH/dry ice, discard the organic layer, remove traces of ether with a stream of nitrogen. Thaw the aqueous layer and add 40 μL 1 M NaOH and 500 μL 200 mM pH 8.5 borate buffer, add 400 μL 0.5% 4-chloro-7-nitrobenzo-2,1,3-oxadiazole (NBD-Cl) in methylisobutylketone, heat at 79° for 1 h (mix at 5 min intervals), cool on ice, add 3 mL cyclohexane, vortex, centrifuge at 1000 g for 3 min, inject a 200 μL aliquot on to column A and elute to waste with mobile phase A, after 3 min elute the contents of column A on to column B with mobile phase B, after 2 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B.

HPLC VARIABLES

Column: A Guard Pak CN (Waters); B 250 × 4.6 silica (Alltech)
Mobile phase: A Cyclohexane; B Cyclohexane:toluene:MeOH:butanol 50:47:1:2
Flow rate: 2
Injection volume: 200
Detector: F ex 460-500 (bandpass filter) em >500 (cutoff filter)

CHROMATOGRAM

Retention time: 12.0
Internal standard: 2-phenylglycinol (2-amino-2-phenylethanol) (9.7)
Limit of detection: 2 ng/mL
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES

Simultaneous: dimethoxyphenethylamine, ephedrine, norpsdeudoephedrine, phenylephrine, phenylethanolamine, phenylethylamine, phenylpropanolamine, tyramine
Noninterfering: acetaminophen, aspirin, caffeine, salicylamide, theophylline

KEY WORDS

column-switching; normal phase; plasma; pharmacokinetics; derivatization

SAMPLE

Matrix: blood
Sample preparation: Condition a C18 SPE cartridge (J.T. Baker) with 5 mL MeOH, 7.5 mL 300 mM HCl in MeOH, and 10 mL water. Plasma + 1 mL water + 50 μL 10 μg/mL IS + 30 μL 25% ammonium hydroxide, vortex briefly, add to the SPE cartridge, rinse sample tube with 2 mL MeCN:30 mM pH 3.0 HCl 40:60, add rinse to the SPE cartridge, dry under vacuum, elute with 300 μL 100 mM HCl in MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 40°, reconstitute the residue in 100 μL water, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Ultrasphere C8
Mobile phase: MeCN:buffer 30:70 (Buffer was 30 mM sodium heptane sulfonate adjusted to pH 3.0 with 100 mM HCl.)

Flow rate: 1
Injection volume: 50
Detector: UV 220

CHROMATOGRAM
Retention time: 5.4
Internal standard: (±)α-methylaminomethyl benzyl alcohol (4.7)
Limit of detection: 20 ng/mL
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES
Noninterfering: guaifenesin

SAMPLE
Matrix: bulk
Sample preparation: Prepare a 10 mg/mL solution in 500 mM sodium bicarbonate solutions, extract a 10 mL aliquot twice with 15 mL portions of dichloromethane. Combine the extracts and add 10 μL phenylisothiocyanate, evaporate to dryness under a stream of air, reconstitute with 10 mL MeOH, inject a 10 μL aliquot.

HPLC VARIABLES
Guard column: 70 × 2.1 CO:PELL ODS
Column: 300 × 3.9 μBondapak C18
Mobile phase: MeOH:water:acetic acid 45:54:1
Flow rate: 2
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 12

OTHER SUBSTANCES
Simultaneous: ephedrine, lidocaine, phenylpropanolamine

KEY WORDS
derivatization

SAMPLE
Matrix: formulations
Sample preparation: Grind tablet, dissolve in 100 mL 100 mM pH 5.0 acetate buffer, let sit for 1 h with occasional mixing, filter (0.45 μm), inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax SCX
Mobile phase: MeCN:30 mM KH_2PO_4 50:50
Flow rate: 2
Injection volume: 50
Detector: UV 263

CHROMATOGRAM
Retention time: 10.0

OTHER SUBSTANCES
Simultaneous: chlorpheniramine, dextromethorphan

KEY WORDS
tablets

REFERENCE
Murtha,J.L.; Julian,T.N.; Radebaugh,G.W. Simultaneous determination of pseudoephedrine hydrochloride, chlorpheniramine maleate, and dextromethorphan hydrobromide by second-derivative photodiode array spectroscopy, *J.Pharm.Sci.*, **1988**, *77*, 715–718.

SAMPLE
Matrix: solutions
Sample preparation: Mix 40 mL of a 325-375 mM amine solution in THF with 150 mL 10% potassium carbonate, add dropwise 40 mL 275-325 mM reagent in THF, heat at 50° while maintaining at pH 8 or above for 3 h, cool, extract with chloroform. Evaporate the extracts to dryness, reconstitute, inject an aliquot. (Prepare reagent (1-[(4-nitrophenyl)sulfonyl]prolyl chloride) as follows. Mix 40-45 mmoles L-(-)-proline, 40 mL THF, and 200 mL 10% potassium carbonate, add 37-43 mmoles 4-nitrobenzenesulfonyl chloride in 40 mL THF dropwise, heat at 50° and maintain at pH 8 or above for 3 h, cool, acidify to pH 2, extract with chloroform. Extract the organic layers with potassium carbonate in water. Acidify the aqueous layer and extract it with chloroform. Dry the chloroform layer and evaporate it to dryness, recrystallize the resulting 1-[(4-nitrophenyl)sulfonyl]proline from petroleum ether and benzene (Caution! Benzene is a carcinogen!). Stir 15 mmoles 1-[(4-nitrophenyl)sulfonyl]proline in 100 mL benzene and add 75 mmoles thionyl chloride in 50 mL benzene dropwise, heat at 35-40° until the reaction is complete (about 48 h; monitor by IR), evaporate to dryness, recrystallize from n-heptane to give 1-[(4-nitrophenyl)sulfonyl]prolyl chloride (mp 110-110.5°).)

HPLC VARIABLES
Column: 150 × 4.6 5 μm Zorbax ODS
Mobile phase: MeOH:water 60:40
Flow rate: 1.5
Detector: UV 254

CHROMATOGRAM
Retention time: 7, 8.5 (enantiomers)

OTHER SUBSTANCES
Simultaneous: ephedrine

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 1.5 mg/mL solution of pseudoephedrine hydrochloride, inject a 10 μL aliquot.

HPLC VARIABLES

Guard column: Supelguard LC-8-DB (Supelco)
Column: 50 × 4.6 Supelcosil LC-8-DB
Mobile phase: MeCN:buffer 10:90 containing 0.02% triethylamine (Buffer was KH_2PO_4 adjusted to pH 2.0 with phosphoric acid.)
Column temperature: 35
Flow rate: 2
Injection volume: 10
Detector: UV 254

CHROMATOGRAM

Retention time: 1.3

OTHER SUBSTANCES

Simultaneous: chlorpheniramine, methscopolamine, phenylpropanolamine, triprolidine

REFERENCE

Supelco Catalog, **1992**, p. 179.

SAMPLE

Matrix: solutions

Sample preparation: Mix 50 μL of a 1 mg/mL solution in MeCN:500 mM pH 9.0 borate buffer 50:50 with 25 mg reagent, after 1 min elute with 1 mL dichloromethane, inject a 5 μL aliquot. (Reagent was dinitrophenyl carbamate benzotriazole polymeric reagent, synthesized as follows. (Caution! Chloroform, dichloromethane, dioxane, and hydrazine are carcinogenic in experimental animals! DMF may be carcinogenic! 3,5-dinitrobenzoyl chloride and aluminum chloride are corrosive! Nitrobenzene is toxic!) 10 g Dried macroporous polystyrene (Xe-305, Rohm and Haas) + 10 g 3-nitro-4-chlorobenzyl alcohol + 10 g anhydrous aluminum chloride + 50 mL nitrobenzene, heat at 65-70° for 3 days, cool, filter, wash polymer with three 50 mL portions of 1 M HCl in dioxane, with three 50 mL portions of DMF, with three 50 mL portions of MeOH, and with three 50 mL portions of dichloromethane, dry under vacuum at 100°. Reflux 19 g of this polymer in 60 mL hydrazine hydrate:ethylene glycol monoethyl ether 40:60 for 20 h, cool to room temperature, filter off the polymer and wash it thoroughly with water. Suspend the polymer in 100 mL concentrated HCl:dioxane 50:50, reflux for 20 h, filter the polymer and wash it with five 100 mL portions of water, with three 100 mL portions of MeOH, and with three 50 mL portions of ether, dry under vacuum at 80°. Functionalization was 1.17 mmoles/g (Eur.J.Biochem. 1975, 59, 55).Dissolve 3,5-dinitrobenzoyl chloride in the minimum amount of glacial acetic acid, add an equimolar amount of sodium azide, stir for 30 min, dilute with water, filter to obtain 3,5-dinitrobenzoyl azide (Caution! Azides are toxic and potentially explosive!) (J. Liq. Chromatogr. 1986, 9, 443). Heat 71 mg 3,5-dinitrobenzoyl azide in 15 mL toluene (dried over calcium hydride) at ??? for 30 min, cool using an ice bath, add 200 mg polymer, allow to warm to room temperature with stirring for 1 h, filter, wash the polymer with four 10 mL portions of warm (40°) dichloromethane, dry under high vacuum for 1 h.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm LC-(R)-naphthylurea (Supelco)
Mobile phase: Hexane:isopropanol:MeOH 83:12:5
Flow rate: 2

SAMPLE

Matrix: lung lavage fluid

Sample preparation: Centrifuge lung lavage fluid at 4° at 450 g for 10 min. Shake 10 mL supernatant and 40 mL chloroform:MeOH 2:1 at 4° for 3 min. Remove the lower organic phase and wash it with 2 mL 50 mM NaCl, centrifuge, dry under a stream of nitrogen at 45°, reconstitute with 500 μL mobile phase, vortex at 4° for 1 min, inject a 100 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 2.1 5 μm Encapharm 100 spherical silica gel (Molnar, Berlin)

Column: 120 × 4.6 5 μm Encapharm 100 spherical silica gel (Molnar, Berlin)

Mobile phase: Gradient. A was chloroform:MeOH:ammonium hydroxide 80:19.5:0.5. B was chloroform:MeOH:water:ammonium hydroxide 60:34:5.5:0.5. A:B from 100:0 to 0:100 over 14 min, return to initial conditions over 7 min, re-equilibrate for 10 min.

Column temperature: 30

Flow rate: 1

Injection volume: 100

Detector: Evaporative light-scattering, SEDERE Sedex-45, evaporation temperature 50°, nebulization gas nitrogen, pressure 200 kPa, flow 6 L/min, response is non-linear but proportional to the power 1.7 of the mass and must be calibrated for each compound

CHROMATOGRAM

Retention time: 5.37 (phosphatidylglycerol), 13.14 (dipalmitoylphosphatidylcholine)

Limit of detection: 100 ng (phosphatidylglycerol)

OTHER SUBSTANCES
Extracted: diarachidoylphosphatidylcholine, dilinoleylphosphatidylcholine, diphosphatidylglycerol, lysophosphatidylcholine, phosphatidic acid, phosphatidylcholine, phosphatidylethanolamine, phosphatidylinositol, phosphatidylserine, sphingomyelin

KEY WORDS
normal phase

SAMPLE
Matrix: solutions
Sample preparation: Centrifuge 10 mL rabbit lung or Eustachian tube washing saline at 1000 g for 5 min, lyophilize the supernatant, reconstitute with 5 mL chloroform, filter (0.45 μm). Evaporate the filtrate to dryness under a stream of nitrogen, reconstitute the residue in 500 μL MeOH, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 5 μm ODS Hypersil
Mobile phase: MeOH:THF 97:3 containing 40 mM choline chloride
Flow rate: 1
Injection volume: 100
Detector: F 340 ex 460 following post-column derivatization. The column effluent mixed with the reagent pumped at 1.2 mL/min and the mixture flowed through a 300 × 5 PTFE column filled with 250 μm glass beads and a 3 m × 0.5 mm i.d. coil of PTFE tubing at 50° to the detector. The reagent was 150 μL 3 μM 1,6-diphenyl-1,3,5-hexatriene in THF made up to 1 L with water containing 0.001% Tween 20.

CHROMATOGRAM
Retention time: 5 (dipalmitoylphosphatidylcholine)
Limit of detection: 1.5 μg/mL

KEY WORDS
post-column reaction; rabbit

REFERENCE
Kitsos,M.; Gandini,C.; Massolini,G.; De Lorenzi,E.; Caccialanza,G. High-performance liquid chromatography post-column derivatization with fluorescence detection to study the influence of ambroxol on dipalmitoylphosphatidylcholine levels in rabbit eustachian tube washings, *J.Chromatogr.*, **1991**, *553*, 1–6.

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Potter-Elvehjem) liver or lung with 20 volumes chloroform:MeOH 2:1, filter (paper), wash with a volume of 50 mM NaCl equal to one-fifth the volume of extract, centrifuge (J.Biol.Chem. 1957, 226, 497). Remove the lower organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute with chloroform:MeOH 25:75, inject an aliquot.

HPLC VARIABLES
Guard column: 10 × 4.6 5 μm Nucleosil 5 NH2
Column: 50 × 4.6 5 μm Nucleosil 5 NH2 + 175 × 4.6 5 μm Nucleosil 5 NH2
Mobile phase: MeCN:MeOH:water:50% methylphosphonic acid in water 73:25:1.5:0.03, adjusted to pH 3 with 25% ammonium hydroxide in water
Flow rate: 1
Detector: F ex 340 em 460 following post-column derivatization. The column effluent mixed with the reagent pumped at 4.5 mL/min and the mixture flowed through a 2 m × 0.8 mm i.d. coil of PTFE tubing at 50° to the detector.

CHROMATOGRAM
Retention time: 22 (phosphatidylglycerol) (dipalmitoylphosphatidylcoline is separated but retention time is not given)

KEY WORDS
pig; lung; liver; gastric mucosa; post-column reaction

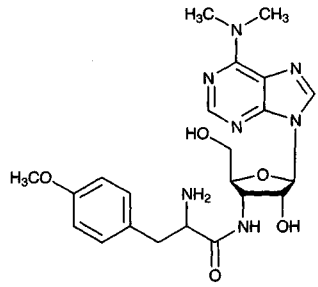
Puromycin



Molecular formula: $C_{22}H_{29}N_7O_5$
Molecular weight: 471.52
CAS Registry No.: 53-79-2
Merck Index: 8130

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic

acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

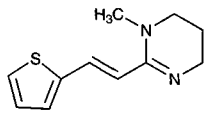
Pyrantel



Molecular formula: $C_{11}H_{14}N_2S$
Molecular weight: 206.31
CAS Registry No.: 15686-83-6, 22204-24-6 (pamoate), 33401-94-4 (tartrate)
Merck Index: 8139
Lednicer No.: 1 266

SAMPLE
Matrix: blood
Sample preparation: Condition a 100 mg Sep-Pak Vac C18 SPE cartridge with 3 mL MeOH, 1 mL water, and 5 mL 100 mM sodium carbonate. Mix 500 μL plasma with 500 μL 100 mM sodium carbonate, add to the SPE cartridge, wash with 5 mL 100 mM sodium carbonate, dry the cartridge in air for 30 s, elute with 750 μL MeCN:1% phosphoric acid 18:82, mix the eluate with 250 μL 20% ammonium acetate (pH adjusted to 4.6 with phosphoric acid), inject an aliquot.

HPLC VARIABLES
Guard column: 20 × 3.9 5 μm Symmetry C18 (Waters)
Column: 150 × 2.1 5 μm Symmetry C18 (Waters)
Mobile phase: MeOH:THF:buffer 2.5:2:95.5 (The buffer was 50 mM ammonium acetate adjusted to pH 4.6 with 20% phosphoric acid.)
Flow rate: 0.4
Injection volume: 50
Detector: UV 317

CHROMATOGRAM
Retention time: 3.8 (pyrantel pamoate)
Limit of detection: 4 ng/mL
Limit of quantitation: 15 ng/mL

KEY WORDS
dog; pharmacokinetics; plasma; SPE

REFERENCE
Morovján,G.; Csokán,P.; Makranaszki,L.; Abdellah-Nagy,E.A.; Tóth,K. Determination of fenbendazole, praziquantel and pyrantel pamoate in dog plasma by high-performance liquid chromatography, *J.Chromatogr.A*, **1998**, *797*, 237–244.

SAMPLE
Matrix: bulk, formulations, bulk
Sample preparation: Add a powdered tablet or 100 mg bulk pyrantel pamoate to 50 mL DMF, sonicate for 2 min, cool to room temperature, make up to 100 mL with DMF. Add a 10 mL aliquot to 10 mL 100 μg/mL carbaryl in MeCN, make up to 100 mL with mobile phase, filter (tablets only), inject an aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Spherisorb octyl
Mobile phase: MeCN:water 42:58 containing 100 mM n-butylamine, pH adjusted to 3.0 with perchloric acid
Flow rate: 1
Detector: UV 313

CHROMATOGRAM
Retention time: 7.80
Internal standard: carbaryl (11.40)

OTHER SUBSTANCES
Simultaneous: oxantel

KEY WORDS
tablets; protect from light

REFERENCE

SAMPLE
Matrix: feed
Sample preparation: 10 g Ground feed + 100 mL methanolic NaCl, sonicate for 1 h, cool to room temperature, filter through a glass wool pad, wash with three 20 mL portions of methanolic NaCl, make up filtrate to 200 mL with methanolic NaCl, mix. Add a 25 mL aliquot of the filtrate to 10 mL 550 mg/mL KI in water, mix, add 50 mL chloroform, shake vigorously for 10 s, repeat extraction. Combine the chloroform layers and add them to 25 mL 100 mM NaOH, shake vigorously for 10 s. Remove the organic layer and evaporate it to dryness under reduced pressure at 45°, reconstitute the residue in 10 mL mobile phase, inject a 25 μL aliquot. (Prepare methanolic NaCl by mixing 1 L 100 g/L NaCl in water and 1 L MeOH, prepare fresh daily.)

HPLC VARIABLES
Guard column: 400 mg Corasil II
Column: 250 × 4.6 Zorbax Sil
Mobile phase: MeCN:acetic acid:water:diethylamine 94:2.5:2.5:1
Flow rate: 1.6
Injection volume: 25
Detector: UV 313

CHROMATOGRAM
Retention time: 7.3

OTHER SUBSTANCES
Simultaneous: cis-isomer, degradation products, tylosin
Noninterfering: carbadox, lincomycin

KEY WORDS
protect from light; normal phase

SAMPLE
Matrix: feed
Sample preparation: Grind feed to pass 20 mesh sieve. 10 g Ground feed + 15 mL water, mix well, let stand for 5 min, add 25 mL MeCN:MeOH 50:50, shake vigorously for 30 min, centrifuge or filter (Whatman glass fiber GFA), pass 15 mL supernatant or filtrate through 4 g alumina in a 10 mm dia column, collect the first 4 mL eluate, inject a 25 μL aliquot. (Prepare alumina as follows. Stir 200 g Fisher neutral alumina (A-950) in 1 L water for 30 min, pour off fines, resuspend, filter (Whatman glass fiber GFA), dry with vacuum, wash 3 times with MeOH, dry at 80° overnight, store in desiccator.)

HPLC VARIABLES
Guard column: 30-40 μm pellicular C18 (Waters)
Column: 100 × 5 C18 radial compression (Waters)
Mobile phase: MeCN:buffer 18:82 (Buffer was 25 mL dibutylamine acetate made up to 1 L with water, pH 3.7. Dibutylamine acetate was prepared by titrating 100 mL dibutylamine to pH 2.5 with acetic acid (ca. 270 mL).)
Flow rate: 2
Injection volume: 25
Detector: UV 313

CHROMATOGRAM
Retention time: 2.4

OTHER SUBSTANCES
Simultaneous: carbadox (UV 365)

KEY WORDS
protect from light

SAMPLE
Matrix: milk
Sample preparation: 20 mL Milk + 1.5 mL HCl, heat at 95° with stirring for 2 h, cool in an ice bath, basify with 2.5 mL 12 M KOH, add 25 mL toluene, shake, centrifuge, repeat extraction. Combine the toluene layers and extract them vigorously twice with 4 mL portions of 100 mM HCl. Combine the aqueous layers and basify them with 2.5 mL 12 M KOH, heat at 95° for 5 h, acidify with 3 mL HCl, cool in an ice bath, extract twice with 5 mL portions of chloroform. Combine the organic layers, add 500 μL 100 mM NaOH, mix, centrifuge. Remove the aqueous layer and place it on a vortex evaporator for 5 min to remove residual chloroform, inject an aliquot. (Prepare 12 M KOH by cautiously dissolving 790 g KOH pellets in enough water to make 1 L in a fume hood, use an ice bath.)

HPLC VARIABLES
Guard column: 30 mm long μC18 Corasil Bondapak
Column: 100 × 5 Radial-Pak A (Waters)
Mobile phase: MeOH:MeCN:water:acetic acid 40:10:49:1
Flow rate: 1
Injection volume: 100
Detector: UV 313

CHROMATOGRAM
Retention time: 4.2 (as 3-(2-thienyl)-acrylic acid, the hydrolysis product)
Internal standard: pyrantel

OTHER SUBSTANCES
Extracted: morantel (as 3-(3-methyl-2-thienyl)acrylic acid, the hydrolysis product)

KEY WORDS
protect from light; pyrantel is IS

SAMPLE
Matrix: formulations
Sample preparation: Dilute 10-fold with MeOH. Remove a 20 μL aliquot and add it to 1 mL mobile phase, add 20 μL 1.5 mg/mL rifampin, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 160 × 4 5 μm Zorbax Rx-C8
Mobile phase: MeOH:buffer 70:30 (Buffer was 5 mM tetrabutylammonium hydroxide adjusted to pH 3.0 with phosphoric acid.)
Flow rate: 0.7
Injection volume: 10
Detector: UV 265

CHROMATOGRAM
Retention time: 2.1
Internal standard: rifampin (3.8)

KEY WORDS
suspensions; syrup; stability-indicating

SAMPLE
Matrix: urine
Sample preparation: Dilute urine 50-350 times with water, ultrafilter, inject a 20 µL aliquot.

HPLC VARIABLES
Guard column: 11 × 4 5 µm Nucleosil 100 C18
Column: 250 × 4 5 µm Nucleosil 100 C18
Mobile phase: 10 mM KH_2PO_4 adjusted to pH 5.2 with K_2HPO_4
Flow rate: 0.9
Injection volume: 20
Detector: UV

CHROMATOGRAM
Retention time: 26.19
Limit of detection: 300 ng/mL

OTHER SUBSTANCES
Simultaneous: metabolites

KEY WORDS
rat; ultrafiltrate

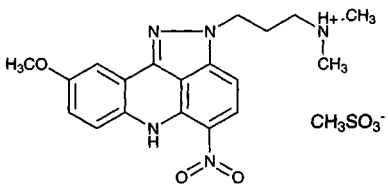
Pyrazoloacridine



Molecular formula: $C_{20}H_{25}N_5O_6S$
Molecular weight: 463.50
CAS Registry No.: 99009-20-8

SAMPLE
Matrix: blood
Sample preparation: Vortex 250 µL plasma with 40 µL 4 µg/mL IS for 10 s, add 600 µL MeOH. Vortex for 20 s, place on ice for 15 min, centrifuge at 1000 g for 10 min, inject a 20-40 µL aliquot of the supernatant.

HPLC VARIABLES
Guard column: CN
Column: 150 × 4.6 5 µm Ultrasphere CN (Beckman)
Mobile phase: MeCN:125 mM pH 4.75 ammonium acetate buffer 24:76 (Prepare buffer by dissolving 38.7 g ammonium acetate in 4.0 L water, adjust pH to 4.75 with 25% HCl.)
Flow rate: 0.9
Injection volume: 20-40
Detector: UV 460

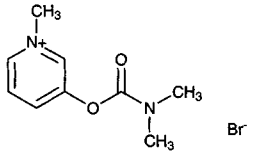
Pyridostigmine bromide



Molecular formula: $C_9H_{13}BrN_2O_2$
Molecular weight: 261.12
CAS Registry No.: 101-26-8
Merck Index: 8161

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 100 µL 500 ng/mL edrophonium in water + 500 µL 100 mM picric acid in 100 mM NaOH (pH adjusted to 7) + 400 µL 100 mM NaH_2PO_4 + 12 mL water saturated dichloromethane, shake vigorously for 5 min, centrifuge at 2000 g for 10 min. Remove 10 mL of the organic phase and add it to 200 µL 1 mM tetrabutylammonium hydrogen sulfate, shake vigorously for 30 s, centrifuge at 2000 g for 2 min, discard most of the organic layer, centrifuge at 2000 g for 1 min, inject a 50 µL aliquot of the aqueous layer. (Store glassware in 100 mM tetramethylammonium chloride solution and wash 5 times with water before use.)

HPLC VARIABLES
Guard column: 50 × 3.2 30-40 µm Perisorb RP-2 (Merck)
Column: 150 × 4.6 5 µm Ultrasphere octyl
Mobile phase: MeCN:water 17:83, pH adjusted to 3 with concentrated sulfuric acid
Flow rate: 2
Injection volume: 50
Detector: UV 214

CHROMATOGRAM
Retention time: 2.5
Internal standard: edrophonium (4.5)
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES
Extracted: neostigmine

KEY WORDS
serum

SAMPLE
Matrix: blood

Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 5 mL MeOH and 5 mL water. 2 mL Plasma + 4 mL 500 mM pH 10.6 phosphate buffer, add to the SPE cartridge, wash with 5 mL 50 mM pH 10.6 phosphate buffer, wash with 5 mL MeOH, elute with 3 mL 1% acetic acid in MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 60°, reconstitute in 60 μL water, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm CPS Hypersil NC-04
Mobile phase: MeCN:buffer 70:30 (Buffer was 0.1% triethylamine in water adjusted to pH 3.2 with acetic acid.)
Column temperature: 22
Flow rate: 1
Injection volume: 50
Detector: UV 272

REFERENCE
Michaelis,H.C. Determination of pyridostigmine plasma concentrations by high-performance liquid chromatography, *J.Chromatogr.*, **1990**, *534*, 291–294.

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a C18 Sep Pak SPE cartridge with 5 mL MeOH and 5 mL water. Adjust the pH of 5 mL urine or plasma to 10.2-10.5 with NaOH, centrifuge for 1 min. Filter (0.45 μm) (urine only) the supernatant and add it to the SPE cartridge, wash with 5 mL water. wash with 5 mL MeOH, push 3 mL air through the SPE cartridge, elute with two 1 mL aliquots of 100 mM acetic acid in MeOH, add 25 μL 25-50 μg/mL methylparaben in water, evaporate the eluate to dryness under nitrogen at 40°, reconstitute in MeOH:water 50:50, inject a 5-100 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 10 μm μBondapak C18
Mobile phase: MeCN:water:acetic acid 20:80:0.5 containing 5 mM 1-octanesulfonic acid (Pic B-8)
Flow rate: 2.5
Injection volume: 5-100
Detector: UV 270

CHROMATOGRAM
Retention time: 3.68
Internal standard: methylparaben (5.93)
Limit of quantitation: 40 ng/mL

OTHER SUBSTANCES
Noninterfering: metabolites

KEY WORDS
SPE; plasma; rat

SAMPLE
Matrix: blood, urine

Sample preparation: Plasma. Mix 4 volumes of plasma with 1 volume of 100 mM NaH_2PO_4. 1-2 mL Plasma + 0.5-1 mL buffer, add to a 100 mg Bond Elut CBA cation-exchange SPE cartridge, wash with 5 mL water, wash with 5 mL MeOH, elute with 1 mL acidified MeOH. Evaporate the eluate to dryness under nitrogen at 35°, reconstitute in 120 μL 50 mM sulfuric acid, inject a 100 μL aliquot. Urine. Add 0.2-2 mL urine to a 100 mg Bond Elut CBA cation-exchange SPE cartridge, wash with 5 mL water, wash with 5 mL MeOH, elute with 1.5 mL acidified MeOH. Evaporate the eluate to dryness under nitrogen at 35°, reconstitute in 120 μL 50 mM sulfuric acid, inject a 100 μL aliquot. (Buffer contained 5% sodium carbonate and 5% sodium bicarbonate. Acidified MeOH was 11.4 mL 10.2 M aqueous HCl and 88.6 mL MeOH.)

HPLC VARIABLES

Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:isopropanol:buffer 11.2:1:87.8 (Buffer was 10 mM NaH_2PO_4, 2 mM tetramethylammonium bromide, and 5 mM sodium 1-heptanesulfonate, pH adjusted to 2.8 with sulfuric acid.)
Flow rate: 1
Injection volume: 100
Detector: UV 275

CHROMATOGRAM

Retention time: 8
Limit of detection: 1 ng/mL
Limit of quantitation: 2 ng/mL

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 3.228

KEY WORDS

whole blood

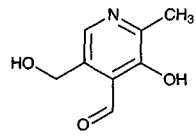
Pyridoxal



Molecular formula: $C_8H_9NO_3$
Molecular weight: 167.16
CAS Registry No.: 66-72-8
Merck Index: 8162

SAMPLE
Matrix: baker's yeast, eggs, milk
Sample preparation: Baker's yeast. Mix 50 mg yeast, 50 μL 1 mM isopyridoxal in water, and 3 mL 1 M perchloric acid, vortex for a few s, let stand for 30 min, vortex, centrifuge at 600 g for 15 min. Remove the supernatant, adjust pH to 3-4 with a 10 M KOH, let stand in the refrigerator for a few h. Centrifuge and remove 500 μL of the supernatant and filter (0.45 μm nylon-66) it. Inject a 20 μL aliquot of the filtrate. Egg yolk. Mix 2 g egg yolk with 100 μL 1 mM isopyridoxal water and 6 mL 1 M perchloric acid, vortex for a few s, let stand for 30 min, vortex, centrifuge at 600 g for 15 min. Remove the clear middle part of the extract, adjust pH to 3-4 with a 10 M KOH, let stand in the refrigerator for a few h. Centrifuge and remove 500 μL of the supernatant and filter (0.45 μm nylon-66) it. Inject a 20 μL aliquot of the filtrate. Milk. Mix 2 g egg yolk with 10 μL 1 mM isopyridoxal water and 1 mL 1 M perchloric acid, vortex for a few s, let stand for 30 min, vortex, centrifuge at 600 g for 15 min. Remove the clear middle part of the extract, adjust pH to 3-4 with a 10 M KOH, let stand in the refrigerator for a few h. Centrifuge and remove 500 μL of the supernatant and filter (0.45 μm nylon-66) it. Inject a 20 μL aliquot of the filtrate.

HPLC VARIABLES
Guard column: 30 mm long 5 μm Phenosphere ODS 2 (Phenomenex)
Column: 250 × 4.6 5 μm Phenosphere ODS 2 (Phenomenex)
Mobile phase: 150 mM NaH_2PO_4 adjusted to pH 2.5 with 70% perchloric acid (A 50 mm long column filled with ODS material was placed before the injector.)
Flow rate: 1
Injection volume: 20
Detector: F ex 290 em 389 following post-column derivatization. The column effluent mixed with 1 g/L sodium bisulfite in water pumped at 0.1 mL/min and the mixture flowed through a 2 m × 0.5 mm I.D. PTFE mixing coil to the detector. (The post-column derivatization is only required for pyridoxal phosphate. For the other compounds it is not necessary.)

CHROMATOGRAM
Retention time: 6 (pyridoxal phosphate), 9.5 (pyridoxal)
Internal standard: isopyridoxal (11)

OTHER SUBSTANCES
Extracted: pyridoxamine, pyridoxamine phosphate, 4-pyridoxic acid, 4-pyridoxic acid phosphate, pyridoxine, pyridoxine phosphate

KEY WORDS
post-column reaction

REFERENCE

SAMPLE
Matrix: blood

Sample preparation: 2 mL Serum + 100 μL 1 μM IS + 100 (200 ?) μL 4 M perchloric acid, mix, centrifuge at 1500 g for 5 min. Filter (0.45 μm) the supernatant, inject an aliquot of the filtrate.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Spherisorb ODS2 (12% C, endcapped)
Mobile phase: 67 mM KH_2PO_4 containing 125 μM sodium hexanesulfonate, adjusted to pH 2.5 with concentrated orthophosphoric acid (As column ages it may be necessary to increase concentration of sodium hexanesulfonate to 250 μM to maintain separation.)
Flow rate: 1
Injection volume: 200
Detector: F ex 325 em 400 following post-column reaction. The column effluent mixed with the reagent pumped at 0.5 mL/min and flowed through a 300 mm tube to the detector. (The reagent was 67 mM KH_2PO_4 containing 1 g/L sodium sulfite adjusted to pH 7.5 with Na_2HPO_4.)

CHROMATOGRAM

Retention time: 8.1 (pyridoxal-5'-phosphate), 13.4 (pyridoxal)
Internal standard: pyridoxamine-5'-phosphate (4.6)
Limit of detection: 12.5 nM (pyridoxal), 5 nM (pyridoxal-5'-phosphate)

OTHER SUBSTANCES

Extracted: pyridoxamine, pyridoxine

KEY WORDS

post-column reaction; serum

REFERENCE

SAMPLE
Matrix: tissue, CSF, blood
Sample preparation: Dilute rat plasma 1:10. Dilute human plasma 1:25. Homogenize 10 mg liver, 20 mg brain, or 250 μL CSF or diluted plasma with 250 μL 5 or 10% metaphosphoric acid by sonication at 300 W for 30 s, centrifuge at 0-4° at 10000 g for 20 min. Remove the supernatant and add it to 250 μL dichloromethane, vortex, centrifuge at 0-4° at for 15 min, filter (0.22 μm) the aqueous layer, inject a 25 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 3 μm Ultramex C18
Column: 150 × 4.6 3 μm Ultramex C18
Mobile phase: Gradient. A was 33 mM phosphoric acid containing 10 mM 1-octanesulfonic acid adjusted to pH 2.2 with 6 M KOH. B was isopropanol:330 mM phosphoric acid adjusted to pH 2.2 with 6 M KOH. A:B from 100:0 to 0:100 over 10 min, maintain at 0:100 for 15 min, return to initial conditions over 4.5 min, re-equilibrate for 5.5 min. (Every 30 samples flush with water at 0.5 mL/min for 1 h and with isopropanol at 0.2 mL/min for 1 h. Every morning flush with water at 0.5 mL/min for 1 h.)
Flow rate: 1.2
Injection volume: 25
Detector: F ex 328 em 393 following post-column reaction with the reagent. (Reagent was 1 mg/mL sodium bisulfite in 100 mM potassium phosphate buffer adjusted to pH 7.4 with 6 M KOH.)

CHROMATOGRAM
Retention time: 13.6 (pyridoxal), 2.04 (pyridoxal phosphate)
Limit of detection: 4.1 pmole
Limit of quantitation: 10.5 pmole

OTHER SUBSTANCES
Extracted: 4-deoxypyridoxine, pyridoxamine, pyridoxamine phosphate, 4-pyridoxic acid, pyridoxine

KEY WORDS
protect from light; rat; human; liver; brain; plasma; CSF; post-column reaction

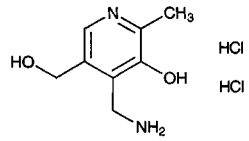
Pyridoxamine dihydrochloride

Molecular formula: $C_8H_{14}Cl_2N_2O_2$
Molecular weight: 241.12
CAS Registry No.: 524-36-7 (di HCl)
Merck Index: 8164



SAMPLE

Matrix: blood
Sample preparation: 2 mL Serum + 100 μL 1 μM IS + 100 (200 ?) μL 4 M perchloric acid, mix, centrifuge at 1500 g for 5 min. Filter (0.45 μm) the supernatant, inject an aliquot of the filtrate.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Spherisorb ODS2 (12% C, endcapped)
Mobile phase: 67 mM KH_2PO_4 containing 125 μM sodium hexanesulfonate, adjusted to pH 2.5 with concentrated orthophosphoric acid (As column ages it may be necessary to increase concentration of sodium hexanesulfonate to 250 μM to maintain separation.)
Flow rate: 1
Injection volume: 200
Detector: F ex 325 em 400 following post-column reaction. The column effluent mixed with the reagent pumped at 0.5 mL/min and flowed through a 300 mm tube to the detector. (The reagent was 67 mM KH_2PO_4 containing 1 g/L sodium sulfite adjusted to pH 7.5 with Na_2HPO_4.)

CHROMATOGRAM

Retention time: 5.5
Internal standard: pyridoxamine-5'-phosphate (4.6)
Limit of detection: 1.5 nM

OTHER SUBSTANCES

Extracted: pyridoxal, pyridoxal-5'-phosphate, pyridoxine

KEY WORDS

post-column reaction; serum

REFERENCE

Reynolds,T.M.; Brain,A. A simple internally-standardised isocratic HPLC assay for vitamin B_6 in human serum, *J.Liq.Chromatogr.*, **1992**, *15*, 897–914.

SAMPLE

Matrix: formulations
Sample preparation: Dilute injections with water, inject a 50 μL aliquot. Dissolve tablets or capsule contents in water (warm if necessary), filter (0.5 μm PTFE), inject a 50 μL aliquot of the filtrate. (Dissolve tablets or other formulations containing proteinaceous material in water at 60°, add 5% trichloroacetic acid (to pH 4.4), filter, inject a 50 μL aliquot.)

HPLC VARIABLES

Guard column: pellicular Corasil
Column: 10 μm μBondapak C18
Mobile phase: Gradient. A was prepared by dissolving 1 g sodium dioctylsulfosuccinate in 170 mL MeOH, add 10 mL concentrated formic acid, make up to 800 mL with water, adjust pH to 2.5 with 1 M KOH, make up to 1 L. B was prepared by dissolving 1 g sodium dioctylsulfosuccinate in 450 mL MeOH, add 10 mL concentrated formic acid, make up to 800 mL with water, adjust pH to 4.6, make up to 1 L. A:B from 100:0 to 0:100 over 25 min (concave curve 9), maintain at 0:100 for 3 min, return to initial conditions over 2 min.
Flow rate: 1.5
Injection volume: 50
Detector: UV 280

CHROMATOGRAM

Retention time: 19

OTHER SUBSTANCES
Simultaneous: folic acid, niacin (UV 254), niacinamide (UV 254), thiamine (UV 254), riboflavin (UV 254), pyridoxine, ascorbic acid

KEY WORDS
injections; capsules; tablets

SAMPLE
Matrix: solutions
Sample preparation: Inject a 10 μL aliquot of a 1 mg/mL solution in water.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax C8
Mobile phase: 5 mM Sodium perchlorate containing 10 mM sodium 1-hexanesulfonate, pH adjusted to 2.5 with perchloric acid
Column temperature: 45
Flow rate: 0.8
Injection volume: 10
Detector: UV 650 following post-column reaction. The column effluent mixed with 0.5 mg/mL 2,6-dibromo-N-chloro-p-benzoquinoneimine (2,6-dibromoquinone-4-chlorimide) (Eastman) at 1.4 mL/min and flowed through a 2 m × 0.5 mm ID stainless steel coil. The effluent from this coil mixed with 2.5% ammonia solution pumped at 1 mL/min and this mixture flowed through a 2 m × 0.5 mm ID stainless steel coil to the detector.

CHROMATOGRAM
Retention time: 12
Limit of detection: 10 ng

OTHER SUBSTANCES
Simultaneous: pyridoxal, 4-pyridoxic acid, pyridoxine

KEY WORDS
post-column reaction

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 5 μm Accubond Amino (J & W)
Mobile phase: MeCN:buffer 10 :90 (Buffer was 20 mM phosphoric acid adjusted to pH 3.0 with 20 mM NaOH.)
Flow rate: 1
Detector: UV 254

CHROMATOGRAM
Retention time: 1.3

OTHER SUBSTANCES
Simultaneous: p-aminobenzoic acid, niacinamide, pyridoxal, thiamine, riboflavin, pyridoxine, vitamin B12

REFERENCE
J & W Catalog, 1992-3, p. 277.

SAMPLE

Matrix: tissue, CSF, blood

Sample preparation: Dilute rat plasma 1:10. Dilute human plasma 1:25. Homogenize 10 mg liver, 20 mg brain, or 250 μL CSF or diluted plasma with 250 μL 5 or 10% metaphosphoric acid by sonication at 300 W for 30 s, centrifuge at 0-4° at 10000 g for 20 min. Remove the supernatant and add it to 250 μL dichloromethane, vortex, centrifuge at 0-4° at for 15 min, filter (0.22 μm) the aqueous layer, inject a 25 μL aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 3 μm Ultramex C18

Column: 150 × 4.6 3 μm Ultramex C18

Mobile phase: Gradient. A was 33 mM phosphoric acid containing 10 mM 1-octanesulfonic acid adjusted to pH 2.2 with 6 M KOH. B was isopropanol:330 mM phosphoric acid adjusted to pH 2.2 with 6 M KOH. A:B from 100:0 to 0:100 over 10 min, maintain at 0:100 for 15 min, return to initial conditions over 4.5 min, re-equilibrate for 5.5 min. (Every 30 samples flush with water at 0.5 mL/min for 1 h and with isopropanol at 0.2 mL/min for 1 h. Every morning flush with water at 0.5 mL/min for 1 h.)

Flow rate: 1.2

Injection volume: 25

Detector: F ex 328 em 393 following post-column reaction with the reagent. (Reagent was 1 mg/mL sodium bisulfite in 100 mM potassium phosphate buffer adjusted to pH 7.4 with 6 M KOH.)

CHROMATOGRAM

Retention time: 25.2 (pyridoxamine), 10 (pyridoxamine phosphate)

Limit of detection: 1.3 pmole

Limit of quantitation: 2.6 pmole

OTHER SUBSTANCES

Extracted: 4-deoxypyridoxine, pyridoxal, pyridoxal phosphate, 4-pyridoxic acid, pyridoxine

KEY WORDS

protect from light; rat; human; liver; brain; plasma; CSF; post-column reaction

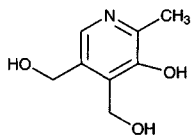
Pyridoxine



Molecular formula: $C_8H_{11}NO_3$

Molecular weight: 169.18

CAS Registry No.: 65-23-6, 58-56-0 (HCl)

Merck Index: 8166

SAMPLE

Matrix: baker's yeast, eggs, milk

Sample preparation: Baker's yeast. Mix 50 mg yeast, 50 μL 1 mM isopyridoxal in water, and 3 mL 1 M perchloric acid, vortex for a few s, let stand for 30 min, vortex, centrifuge at 600 g for 15 min. Remove the supernatant, adjust pH to 3-4 with a 10 M KOH, let stand in the refrigerator for a few h. Centrifuge and remove 500 μL of the supernatant and filter (0.45 μm nylon-66) it. Inject a 20 μL aliquot of the filtrate. Egg yolk. Mix 2 g egg yolk with 100 μL 1 mM isopyridoxal water and 6 mL 1 M perchloric acid, vortex for a few s, let stand for 30 min, vortex, centrifuge at 600 g for 15 min. Remove the clear middle part of the extract, adjust pH to 3-4 with a 10 M KOH, let stand in the refrigerator for a few h. Centrifuge and remove 500 μL of the supernatant and filter (0.45 μm nylon-66) it. Inject a 20 μL aliquot of the filtrate. Milk. Mix 2 g egg yolk with 10 μL 1 mM isopyridoxal water and 1 mL 1 M perchloric acid, vortex for a few s, let stand for 30 min, vortex, centrifuge at 600 g for 15 min. Remove the clear middle part of the extract, adjust pH to 3-4 with a 10 M KOH, let stand in the refrigerator

for a few h. Centrifuge and remove 500 μL of the supernatant and filter (0.45 μm nylon-66) it. Inject a 20 μL aliquot of the filtrate.

HPLC VARIABLES

Guard column: 30 mm long 5 μm Phenosphere ODS 2 (Phenomenex)
Column: 250 × 4.6 5 μm Phenosphere ODS 2 (Phenomenex)
Mobile phase: 150 mM NaH_2PO_4 adjusted to pH 2.5 with 70% perchloric acid (A 50 mm long column filled with ODS material was placed before the injector.)
Flow rate: 1
Injection volume: 20
Detector: F ex 290 em 389 following post-column derivatization. The column effluent mixed with 1 g/L sodium bisulfite in water pumped at 0.1 mL/min and the mixture flowed through a 2 m × 0.5 mm I.D. PTFE mixing coil to the detector. (The post-column derivatization is only required for pyridoxal phosphate. For the other compounds it is not necessary.)

CHROMATOGRAM

Retention time: 6.5 (pyridoxine phosphate), 13.5 (pyridoxine)
Internal standard: isopyridoxal (11)

OTHER SUBSTANCES

Extracted: pyridoxal, pyridoxal phosphate, pyridoxamine, pyridoxamine phosphate, 4-pyridoxic acid, 4-pyridoxic acid phosphate

KEY WORDS

post-column reaction

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM
Retention time: 2.895

SAMPLE
Matrix: formula, milk
Sample preparation: Mix 8.0 g powdered infant milk with 10 mL water to it. Mix the diluted powder or 10.5 g liquid infant milk with 1 g solid trichloroacetic acid, shake thoroughly with magnetic stirring for 10 min, centrifuge at 1250 g for 10 min, add 3 mL 4% trichloroacetic acid to the solid residue, mix thoroughly for 10 min, centrifuge, discard the solid phase. Combine the two acid extracts and make up to 10 mL with 4% trichloroacetic acid, filter (0.45 μm), inject an aliquot of the filtrate.

HPLC VARIABLES
Guard column: 5 μm Tracer Spherisorb ODS 2 C18 (Teknokroma, Spain)
Column: 250 × 4.6 5 μm Tracer Spherisorb ODS 2 C18 (Teknokroma, Spain)
Mobile phase: MeOH:buffer 15:85 (Buffer was 5 mM octanesulfonic acid and 0.5% triethylamine, pH 3.6.)
Flow rate: 1
Injection volume: 20
Detector: UV 261 for 6 min, UV 287 for 2 min, UV 290 for 5 min, UV 282 for 3 min, UV 268 for 3.5 min, UV 361 for 20.5 min, UV 246 for 20 min

SAMPLE

Matrix: formulations

Sample preparation: Tablets without iron. Grind 5 tablets to a fine powder, add 10 mL monothioglycerol and 800 mL buffer, sonicate for 30 min, add 150 mL MeOH, make up to 1 L with buffer, filter (GF/C paper), discard first few mL, remove a 10 mL aliquot, make up to 25 mL with mobile phase, inject an aliquot. Tablets with dioctyl sodium sulfosuccinate. Grind 5 tablets to a fine powder, add 10 mL 2-monothioglycerol and 1 g barium chloride, make up to 1 L with buffer, stir vigorously for 30 min, filter (GF/C paper), discard first few mL, inject an aliquot. Capsules with iron. Contents of one capsule + 5 mL 2-monothioglycerol + 2 mL glacial acetic acid + 75 mL buffer, sonicate for 5 min, make up to 100 mL with buffer, stir vigorously for 30 min, filter (GF/C paper), add 300 mg cupferron, stir for 10 min, let stand for 1 h at room temperature, filter (GF/C paper), let stand for 30 min, filter again (if necessary), discard first few mL, inject an aliquot. (Buffer was 48 mL glacial acetic acid and 10 mL triethylamine in 1 L water, adjust pH to 3.6 ± 0.05 with acetic acid or triethylamine, make up to 1.7 L with water.)

HPLC VARIABLES

Column: 100 × 8 Radial Pak A C18 (Waters)

Mobile phase: MeOH:buffer 15:85 (Buffer was 2.20 g sodium heptanesulfonate, 100 mg EDTA, 48 mL glacial acetic acid, and 10 mL triethylamine made up to 1.7 L with water, adjust pH to 3.6 ± 0.05 with acetic acid or triethylamine.)

Kawamoto,T.; Okada,E.; Fujita,T. Post-column derivatization of vitamin B6 using 2,6-dibromoquinone-4-chlorimide, *J.Chromatogr.*, **1983**, *267*, 414–419.

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 5 μm Accubond Amino (J & W)
Mobile phase: MeCN:buffer 10 :90 (Buffer was 20 mM phosphoric acid adjusted to pH 3.0 with 20 mM NaOH.)
Flow rate: 1
Detector: UV 254

CHROMATOGRAM
Retention time: 1.4

OTHER SUBSTANCES
Simultaneous: p-aminobenzoic acid, niacinamide, pyridoxal, pyridoxamine, thiamine, riboflavin, vitamin B12

REFERENCE
J & W Catalog, 1992-3, p. 277.

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 100 × 4.6 Spheri-5 RP-8
Mobile phase: Gradient. A was 100 mM pH 4.7 acetate buffer. B was MeCN:100 mM pH 4.7 acetate buffer 25:75.
Column temperature: 26
Flow rate: 4
Detector: UV 254

CHROMATOGRAM
Retention time: 1.5

OTHER SUBSTANCES
Simultaneous: niacin, riboflavin, thiamine, niacinamide, ascorbic acid

REFERENCE
Rainin Catalog, C1-94, **1994,** p. 7.21.

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 33 × 4.6 3 μm Supelcosil LC-8-DB
Mobile phase: MeOH:buffer 15:85 (Buffer was 4.3 mM sodium hexanesulfonate containing 0.1% triethylamine, adjusted to pH 2.8 with phosphoric acid.)
Column temperature: 35
Flow rate: 1
Detector: UV 200

CHROMATOGRAM
Retention time: 1.1

OTHER SUBSTANCES
Simultaneous: niacin, pantothenic acid, riboflavin, thiamine, niacinamide, ascorbic acid

REFERENCE
Rainin Catalog, C1-94, **1994,** p. 780.

SAMPLE
Matrix: tissue, CSF, blood
Sample preparation: Dilute rat plasma 1:10. Dilute human plasma 1:25. Homogenize 10 mg liver, 20 mg brain, or 250 μL CSF or diluted plasma with 250 μL 5 or 10% metaphosphoric acid by sonication at 300 W for 30 s, centrifuge at 0-4° at 10000 g for 20 min. Remove the supernatant and add it to 250 μL dichloromethane, vortex, centrifuge at 0-4° at for 15 min, filter (0.22 μm) the aqueous layer, inject a 25 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 3 μm Ultramex C18
Column: 150 × 4.6 3 μm Ultramex C18
Mobile phase: Gradient. A was 33 mM phosphoric acid containing 10 mM 1-octanesulfonic acid adjusted to pH 2.2 with 6 M KOH. B was isopropanol:330 mM phosphoric acid adjusted to pH 2.2 with 6 M KOH. A:B from 100:0 to 0:100 over 10 min, maintain at 0:100 for 15 min, return to initial conditions over 4.5 min, re-equilibrate for 5.5 min. (Every 30 samples flush with water at 0.5 mL/min for 1 h and with isopropanol at 0.2 mL/min for 1 h. Every morning flush with water at 0.5 mL/min for 1 h.)
Flow rate: 1.2
Injection volume: 25
Detector: F ex 328 em 393 following post-column reaction with the reagent. (Reagent was 1 mg/mL sodium bisulfite in 100 mM potassium phosphate buffer adjusted to pH 7.4 with 6 M KOH.)

CHROMATOGRAM
Retention time: 18.5
Limit of detection: 2.6 pmole
Limit of quantitation: 7.5 pmole

OTHER SUBSTANCES
Extracted: 4-deoxypyridoxine, pyridoxal, pyridoxal phosphate, pyridoxamine, pyridoxamine phosphate, 4-pyridoxic acid

KEY WORDS
protect from light; rat; human; liver; brain; plasma; CSF; post-column reaction

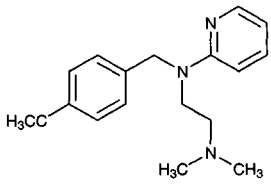
Pyrilamine



Molecular formula: $C_{17}H_{23}N_3O$
Molecular weight: 285.39
CAS Registry No.: 91-84-9, 59-33-6 (maleate)
Merck Index: 8168
Lednicer No.: 1 51

SAMPLE
Matrix: blood
Sample preparation: 4 mL Whole blood + 10 mL pH 10.0 phosphate buffer (μ = 0.4), vortex, add 5 mL chloroform:hexane 40:60, shake gently horizontally for 30 min, centrifuge. Remove 3 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 45°, reconstitute the residue in 250 μL dichloromethane, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 10 μm Micropak CN-10
Mobile phase: n-Hexane:dichloromethane:MeCN:propylamine 50:25:25:0.1
Column temperature: 30
Flow rate: 2
Injection volume: 100
Detector: UV 254

CHROMATOGRAM
Retention time: 4.0
Internal standard: pyrilamine maleate (mepyramine maleate)

OTHER SUBSTANCES
Extracted: papaverine
Simultaneous: carbetapentane, cocaine, dioxyline, ethaverine, fluphenazine, imipramine, methapyrilene, papaveraldine, procaine, promethazine, strychnine, yohimbine
Interfering: diamorphine, thonzylamine

KEY WORDS
whole blood; pyrilamine (mepyramine) is IS

SAMPLE
Matrix: formulations
Sample preparation: Crush 10 tablets, add 250 mL 50 mM HCl in EtOH:water 50:50, heat for 15 min on a steam bath, shake mechanically for 2 h, filter (glass fiber GF/A, Whatman), inject a 30 μL aliquot of the filtrate.

HPLC VARIABLES
Column: 250 × 4.6 10 μm Partisil-10-ODS
Mobile phase: MeCN:buffer 50:50 (Buffer was 2.85 mM ethylenediamine sulfate adjusted to pH 7.44 ± 0.02 with 1 M ammonium hydroxide.)
Flow rate: 3.8
Injection volume: 30
Detector: UV 216.5

REFERENCE

Heidemann,D.R. High-pressure liquid chromatographic determination of methscopolamine nitrate, phenylpropanolamine hydrochloride, pyrilamine maleate, and pheniramine maleate in tablets, *J.Pharm.Sci.*, **1981**, *70*, 820–822.

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Powder tablets, weigh out amount equivalent to about 10 mg, add 75 mL mobile phase, sonicate for 20 min, dilute to 100 mL with mobile phase, mix, filter (0.45 μm) (discard first 10 mL of filtrate), inject a 20 μL aliquot of the filtrate. Syrups, elixirs, injectables. Measure out amount equivalent to about 10 mg, add 75 mL mobile phase, sonicate for 20 min, dilute to 100 mL with mobile phase, mix, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak CN
Mobile phase: MeOH:3 mM ammonium acetate 90:10
Flow rate: 1.3
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 5.0

OTHER SUBSTANCES
Also analyzed: chlorpheniramine, cyclizine, doxylamine, mesoridazine, pentazocine, promethazine, protriptyline, pyrimethamine, tripelennamine

KEY WORDS
tablets; syrups; elixirs; injections

REFERENCE
Walker,S.T. Liquid chromatographic determination of organic nitrogenous bases in dosage forms: a progress report, *J.Assoc.Off.Anal.Chem.*, **1985**, *68*, 539–542.

SAMPLE
Matrix: formulations
Sample preparation: Tablets. One tablet + 50 mL MeOH, sonicate, make up to 100 mL with MeOH, centrifuge for 15 min. Remove 1 mL supernatant, make up to 10 mL with mobile phase, inject a 50 μL aliquot. Drops. Dilute drops with the mobile phase so that the concentration of pyrilamine maleate is 25 μg/mL, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 100 × 4.6 Cyclobond I (Advanced Separation Technologies)
Mobile phase: MeOH:50 mM NaH_2PO_4 adjusted to pH 7.0 with 0.1 M NaOH 30:70
Column temperature: 35
Flow rate: 1.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 8

OTHER SUBSTANCES
Simultaneous: pheniramine, phenylpropanolamine

KEY WORDS
tablets; drops

REFERENCE

SAMPLE
Matrix: formulations
Sample preparation: Crush tablets, add 100 mL water and 30-40 mL MeCN, dissolve, add N,N-dimethylbenzylamine, make up to 250 or 500 mL with water, centrifuge an aliquot, inject a 20 μL aliquot of the supernatant.

HPLC VARIABLES
Column: 150 × 4.6 Asahipak ODP-50 C18
Mobile phase: MeCN:200 mM pH 7.0 phosphate buffer 27:73
Flow rate: 0.8
Injection volume: 20-100
Detector: Chemiluminescence following post-column reaction. Oxidize a 1 mM tris(2,2'-bipyridine) ruthenium(II) hexachloride solution in 50 mM pH 5.5 acetate buffer to Ru(III) using a Princeton Applied Research polarographic analyzer with a platinum gauze working electrode, platinum wire auxiliary electrode, and a silver wire reference electrode, +950 mV. Pump the reagent solution at 0.28 mL/min and mix with the column effluent, allow to flow through detector. The chemiluminescence detector was a fluorescence detector with the light source removed.

CHROMATOGRAM
Retention time: 10
Internal standard: N,N-dimethylbenzylamine

OTHER SUBSTANCES
Simultaneous: brompheniramine, diphenhydramine, chlorpheniramine, pheniramine

KEY WORDS
tablets

REFERENCE

SAMPLE
Matrix: fungal incubations
Sample preparation: Cedntrifuge 30 mL fungal incubation, wash pellet with water then MeOH. Combine the supernatant and the washes and add 40 mL 1 M K_2HPO_4, extract five times with 100 mL portions of dichloromethane, filter the extracts through a plug of anhydrous sodium sulfate, evaporate the filtrate to dryness under reduced pressure at 40°, reconstitute with mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Ultrasphere cyano
Mobile phase: MeCN:buffer 40:60 (Buffer was 10 mM KH_2PO_4 containing 20 mM trimethylamine, adjusted to pH 7.0 with aqueous KOH.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 15

OTHER SUBSTANCES
Extracted: metabolites

SAMPLE
Matrix: solutions
Sample preparation: Prepare a solution in mobile phase, inject 75-100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelco
Mobile phase: EtOH:MeCN:t-butylamine 98:2:0.05 (Prepared from 1 gal EtOH + 77 mL MeCN + 1.9 mL t-butylamine.)
Flow rate: 2
Injection volume: 75-100
Detector: UV 254

CHROMATOGRAM
Retention time: 2.9
Internal standard: promazine (5.2)

OTHER SUBSTANCES
Simultaneous: N-acetylprocainamide, amitriptyline, buprion, chlordiazepoxide, chlorimipramine, chlorpheniramine, chlorpromazine, cocaine, codeine, demoxepam, desipramine, desmethylchlordiazepoxide, desmethyldisopyramide, desmethyldoxepin, dextropropoxyphene, diazepam, fluphenazine, hydroxyamoxapine (7- and 8-), 2-hydroxydesipramine, 10-hydroxynortriptyline, iminostilbene, imipramine, loxepin, maprotiline, meperidine, methadone, mianserin, morphine, nortriptyline, norzimeldine, oxapam, oxaprotiline, perphenazine, phentermine, procainamide, prochlorperazine, propoxyphene, protriptyline, quinidine, thioridazine, trifluoperazine, triflupromazine, trimeprazine, trimipramine, zimeldine
Noninterfering: thiopropazine
Interfering: amoxapine, amphetamine, disopyramide, doxepin, 2-hydroxyimipramine, iprindole, prolixin, promethazine

KEY WORDS
normal phase

SAMPLE
Matrix: blood
Sample preparation: Condition a 3 mL Bond Elut C8 SPE cartridge with 3 mL MeOH and 3 mL 50 mM pH 3.4 oxalate buffer. 1 mL Plasma + 1 mL 50 mM pH 3.4 oxalate buffer + 50 μL 200 μg/mL IS in MeOH:water 50:50, mix, add to the SPE cartridge. Wash with 3 mL 50 mM pH 3.4 oxalate buffer, 1 mL MeOH:water 20:80, and 2 mL hexane:ether 80:20. Elute with two 1 mL portions of MeOH:25% ammonia solution 99:1. Evaporate the eluate to dryness under a gentle stream of nitrogen at 30°. Dissolve the residue in 250 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 3.9 5 μm Symmetry C18 (Waters)
Column: 250 × 4.6 5 μm Symmetry C18 (Waters)
Mobile phase: MeCN:MeOH:water 25:10:65 containing 1% triethylamine, adjusted to pH 5.6 with phosphoric acid
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 240

CHROMATOGRAM
Internal standard: sulfadimethoxine
Limit of detection: 7.01 ng/mL
Limit of quantitation: 9.56 ng/mL

OTHER SUBSTANCES
Extracted: sulfadoxine
Simultaneous: acetaminophen, 4-chlorophenylbiguanide, cycloguanil, proguanil, quinine, sulfadiazine

KEY WORDS
plasma; SPE

SAMPLE
Matrix: blood
Sample preparation: Add 150 μL 100 mM zinc sulfate to 600 μL plasma while vortexing over 15 s, add 700 μL MeCN containing 4 μm WR 184806 and 75 μM sulfadimethoxine while vortexing over 15 s, , let stand for 15 min, centrifuge at 10000 g for 10 min. Remove the supernatant and add it to 2 mL pH 9.0 phosphate buffer, add 2 mL 60 mM tetrabutylammonium hydroxide, add 5 mL MTBE, shake for 10 min, centrifuge at 1200 g for 5 min. Remove the upper organic layer and evaporate it to dryness at 50°, reconstitute the residue in 200 μL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 150 × 4 3 μm Spherisorb S3-ODS-1
Mobile phase: MeCN:100 mM phosphate buffer 48:52, adjusted to pH 3.5
Flow rate: 0.5
Injection volume: 100
Detector: UV 229

CHROMATOGRAM
Retention time: 8.4
Internal standard: sulfadimethoxine (6.22), 2,8-bis(trifluoromethyl)-4-[1-hydroxy-3-(N-tert-butylamino)propyl]quinoline phosphate (WR 184806) (Walter Reed) (21.00)
Limit of detection: 50 nM

OTHER SUBSTANCES
Extracted: mefloquine, sulfadoxine

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: 150 μL Whole blood or plasma + 25 μL monopropionyldapsone in EtOH, mix at 2200 vibrations/min for 10 min, add 100 μL 2 M NaOH, add 3 mL MTBE, shake mechanically for 15 min, centrifuge at 1200 g for 10 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 37°, reconstitute the residue in 100 μL mobile phase, vortex for 20 s, centrifuge at 1200 g for 2 min, inject an 80 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Supelcosil LC-ABZ
Mobile phase: MeCN:MeOH:25 mM pH 2.3 phosphate buffer 20:10:70
Flow rate: 1.2
Injection volume: 80
Detector: UV 286

CHROMATOGRAM
Retention time: 2.5
Internal standard: monopropionyldapsone (7.5) (Reflux dapsone with propionic anhydride in ethyl acetate for 10 min, purify by preparative TLC.)

OTHER SUBSTANCES
Extracted: monoacetyldapsone, dapsone
Noninterfering: chloroquine, quinine, sulfamethoxazole, trimethoprim, acetaminophen
Interfering: proguanil

KEY WORDS
whole blood; plasma

REFERENCE
Lemnge,M.M.; Ronn,A.; Flachs,H.; Bygbjerg,I.C. Simultaneous determination of dapsone, monoacetyldapsone and pyrimethamine in whole blood and plasma by high-performance liquid chromatography, *J.Chromatogr.*, **1993**, *613*, 340–346.

SAMPLE
Matrix: blood
Sample preparation: Whole blood. 150 μL Whole blood + 25 μL 800 ng/mL monopropionyldapsone + 1.2 mL 200 mM NaOH + 5 mL MTBE, mix for 25 min, centrifuge at 1600 g for 10 min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of air at 37°, reconstitute the residue in 100 μL mobile phase, inject an 80 μL aliquot. Dried blood. Let 150 μL blood dry on filter paper. Cut paper into small pieces, add 25 μL 800 ng/mL monopropionyldapsone, add 1.2 mL 200 mM NaOH, mix gently for 30 min, add 5 mL MTBE, mix for 25 min, centrifuge at 1600 g for 10 min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of air at 37°, reconstitute the residue in 100 μL mobile phase, inject an 80 μL aliquot.

HPLC VARIABLES
Guard column: 20 × 4.6 Supelguard LC-ABZ (Supelco)
Column: 150 × 4.6 5 μm Supelcosil LC-ABZ
Mobile phase: MeCN:MeOH:buffer 14:7:49 (Buffer was 25 mM phosphate adjusted to pH 2.3 with orthophosphoric acid.)
Flow rate: 1.2
Injection volume: 80
Detector: UV 286

CHROMATOGRAM
Retention time: 2.3
Internal standard: monopropionyldapsone (7.1)
Limit of quantitation: 20 ng/mL

OTHER SUBSTANCES
Extracted: monoacetyldapsone, metabolites, dapsone
Noninterfering: acetaminophen, chloroquine, quinine, sulfadoxine, sulfamethoxazole, trimethoprim

KEY WORDS
whole blood; dried blood

SAMPLE

Matrix: solutions
Sample preparation: Prepare a solution in mobile phase, inject a 25 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Zorbax-Sil
Mobile phase: Dichloromethane:MeOH:1 M perchloric acid 100:9:0.4
Flow rate: 0.8
Injection volume: 25
Detector: UV 254

CHROMATOGRAM

Retention time: 9.6

OTHER SUBSTANCES

Simultaneous: amodiaquine, chloroquine, dapsone, desethylchloroquine, dihydroquinine, mefloquine, primaquine, proguanil, quinidine, quinine, sulfadoxine, sulfalene, sulfamethoxazole
Interfering: dihydroquinidine

KEY WORDS

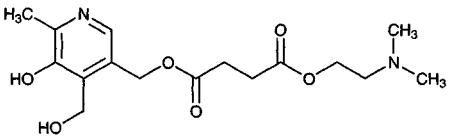
Pyrisuccideanol



Molecular formula: $C_{16}H_{24}N_2O_6$
Molecular weight: 340.38
CAS Registry No.: 33605-94-6, 53659-00-0 (dimaleate)
Merck Index: 8175

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 209.9

CHROMATOGRAM
Retention time: 3.462

KEY WORDS
whole blood

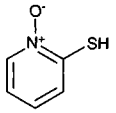
Pyrithione



Molecular formula: C_5H_5NOS
Molecular weight: 127.17
CAS Registry No.: 1121-30-8, 13463-41-7 (zinc derivative)
Merck Index: 8178

SAMPLE

Matrix: formulations
Sample preparation: Weigh out shampoo containing 10 mg zinc pyrithione and make up to 100 mL with buffer saturated with chloroform (if phases separate use water saturated with chloroform), shake well for a few min, sonicate for a few min. Remove a 10 mL aliquot and add it to 10 mL chloroform saturated with water, add 2 mL 1 M copper(II) sulfate, shake vigorously for 5 min, centrifuge at 1500 g for 5 min, inject a 5 μL aliquot of the lower organic layer. (Buffer was 100 mM citric acid:200 mM Na_2HPO_4 97:103, pH 5.0.)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Nucleosil 5C18
Mobile phase: MeOH:water 60:40 (Before use flush system with 0.1% EDTA at 0.5 mL/min, then water.)
Column temperature: 25
Flow rate: 1
Injection volume: 5
Detector: UV 320

CHROMATOGRAM

Retention time: 15
Limit of quantitation: 100 ng

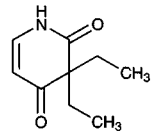
Pyrithyldione



Molecular formula: $C_9H_{13}NO_2$
Molecular weight: 167.21
CAS Registry No.: 77-04-3
Merck Index: 8179

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2

Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

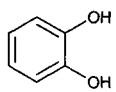
Pyrocatechol



Molecular formula: $C_6H_6O_2$
Molecular weight: 110.11
CAS Registry No.: 120-80-9
Merck Index: 8183

SAMPLE

Matrix: solutions

Sample preparation: Aqueous food simulants. Pipette 1.0 mL 200 mg/L IS in MeOH into a 25 mL volumetric flask and dilute to the mark with the food simulant obtained from migration experiment, shake. Repeat the procedure to obtain a duplicate sample, filter a portion through a 0.2 μm membrane filter, inject a 20 μL aliquot. Olive oil simulants. Weigh 25 g olive oil food simulant obtained from migration experiment into a beaker, pour oil into a separating funnel, allow beaker to drain for 30 s. Rinse it with 25 mL hexane and add washes to separating funnel. Add 1.0 mL 200 mg/L IS in MeOH into funnel and mix. Add 10 mL water, shake vigorously by hand for 30 s, allow to stand for 5 min. Collect aqueous phase and reextract oil with a 10 mL water. Combine aqueous extracts, make up to 25 mL with water, filter the extracts through a small cotton plug to remove any entrained oil. Repeat the procedure to obtain a duplicate sample. Inject a 20 μL aliquot. (Aqueous food simulants were: distilled water, 3% acetic acid in water; EtOH:water 15:85.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Hypersil ODS
Mobile phase: MeCN:buffer 15:85 (Prepare mobile phase as follows. Dissolve 7.5 g sodium dihydrogen orthophosphate in 800 mL water, add 150 mL MeCN and adjust to pH 3.6 with glacial acetic acid. Make up to 1000 mL with water.)
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM

Retention time: 8.7
Internal standard: 2-methyl-1,3-dihydroxybenzene (7.4)
Limit of detection: 300-400 ng/g

OTHER SUBSTANCES

Extracted: hydroquinone, resorcinol

KEY WORDS

aqueous food simulants; olive oil simulants

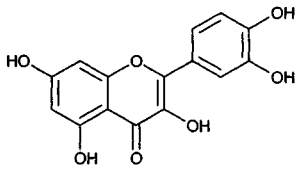
Quercetin



Molecular formula: $C_{15}H_{10}O_7$
Molecular weight: 302.24
CAS Registry No.: 117-39-5, 6151-25-3 (2.H2O)
Merck Index: 8216

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 202.8

CHROMATOGRAM
Retention time: 14.168

KEY WORDS
whole blood

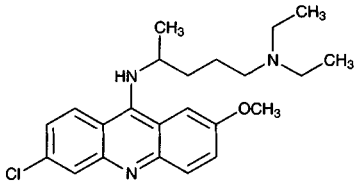
Quinacrine



Molecular formula: $C_{23}H_{30}ClN_3O$
Molecular weight: 399.96
CAS Registry No.: 83-89-6, 69-05-6 (di HCl), 6151-30-0 (di HCl dihydrate)
Merck Index: 8225
Lednicer No.: 1 396

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 300 µL 200 mM pH 8 Na_2HPO_4 containing 0.2 mM decylamine + 4 mL dichloromethane, extract (rotamixer), centrifuge at 1200 g. Remove 3 mL of the organic layer and evaporate it to dryness under a stream of air, reconstitute the residue in 200 µL mobile phase, inject a 40 µL aliquot.

HPLC VARIABLES
Column: 250 × 4 7 µm LiChroCart RP-18 (Merck)
Mobile phase: MeOH:10 mM phosphate buffer 65:35 containing 0.1 mM decylamine and 8 mM ethanolamine, adjust pH to 3.0 with HCl
Flow rate: 1
Injection volume: 40
Detector: F ex 270 em 495 following post-column reaction. The column effluent mixed with MeOH:500 mM NaOH 65:35 pumped at 0.3 mL/min and flowed to the detector. (Without post-column reaction use F 285 em 500, sensitivity 3 times less.)

CHROMATOGRAM
Retention time: 4
Limit of detection: 0.2 ng/mL

KEY WORDS

Molecular formula: $C_{10}H_{12}ClN_3O_3S$
Molecular weight: 289.74
CAS Registry No.: 73-49-4
Merck Index: 8240
Lednicer No.: 1 354

SAMPLE
Matrix: urine
Sample preparation: 2 mL Urine + 2 mL 1 M pH 4.1 NaH_2PO_4 + 4 mL ethyl acetate, vortex for 2 min, centrifuge at 1500 g for 5 min. Remove the organic phase and add it to 5 mL 100 mM pH 7.5 Na_2HPO_4, vortex for 2 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL MeCN:10 mM pH 3.0 phosphate buffer, inject a 5 μL aliquot.

HPLC VARIABLES
Column: 125 × 4 5 μm LiCHrosorb RP-18
Mobile phase: Gradient. MeCN:10 mM pH 3.0 phosphate buffer 10:90 for 1.5 min then to 35:65 over 2 min
Column temperature: 50
Flow rate: 1.5
Injection volume: 5
Detector: UV 271

CHROMATOGRAM
Retention time: 3.4
Limit of quantitation: 500 ng/mL

OTHER SUBSTANCES
Extracted: chlorothiazide, hydrochlorothiazide, chlorthalidone, methyclothiazide, clopamide, furosemide, metolazone, mefruside, bendroflumethiazide, cyclopenthiazide, bumetanide
Simultaneous: indapamide, clorexolone, ethacrynic acid
Noninterfering: aspirin, albuterol, allopurinol, alprenolol, atenolol, captopril, carbimazole, clonidine, coloxyl, danthron, diazepam, digoxin, doxepin, glibenclamide, hydralazine, indomethacin, labetalol, metformin, methyldopa, metoprolol, mianserin, minoxidil, nifedipine, nitrazepam, oxazepam, oxprenolol, pindolol, prazosin, propranolol, senokot, theophylline, trifluoperazine

SAMPLE
Matrix: urine
Sample preparation: 2 mL Urine + 0.5 g solid buffer I (pH 5-5.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and vortex it with 2 mL 5% aqueous lead acetate for 10 s, centrifuge at 600 g for 5 min, remove and keep organic phase. 2 mL Urine + 0.5 g solid buffer II (pH 9-9.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and combine it with previous organic layer. Evaporate to dryness at 50° under a stream of nitrogen, reconstitute in 300 μL 50 μg/mL β-hydroxyethyltheophylline in MeOH, inject 5 μL aliquot. (Solid buffer I was KH_2PO_4:Na_2HPO_4 99:1, solid buffer II was $NaHCO_3$:K_2CO_3 3:2.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm HP Hypersil ODS (A) or HP LiChrosorb RP-18 (B)
Mobile phase: Gradient. MeCN:buffer from 15:85 at 2 min to 80:20 at 20 min (Buffer was 50 mM NaH_2PO_4 containing 16 mM propylamine hydrochloride, adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 5
Detector: UV 230, UV 275

CHROMATOGRAM

Retention time: 7.6 (A), 7.8 (B)
Internal standard: β-hydroxyethyltheophylline (3.7 (A), 4.4 (B))
Limit of detection: 1500 ng/mL

OTHER SUBSTANCES

Extracted: furosemide, metolazone, amiloride, acetazolamide, chlorothiazide, hydrochlorothiazide, triamterene, flumethiazide, hydroflumethiazide, chlorthalidone, dichlorphenamide, trichloromethiazide, methyclothiazide, benzthiazide, cyclothiazide, polythiazide, bendroflumethiazide, ethacrynic acid, bumetanide, probenecid, spironolactone, canrenone
Noninterfering: acetaminophen, aspirin, caffeine, diflunisal, fenoprofen, ibuprofen, indomethacin, methocarbamol, naproxen, phenylbutazone, sulindac, tetracycline, theobromine, theophylline, tolmetin, trimethoprim, verapamil

SAMPLE
Matrix: blood
Sample preparation: 100 μL Serum + 100 μL 500 mM NaOH + 100 μL 5 μg/mL quinine in water, vortex briefly, add 5 mL dichloromethane:MeOH 85:15, shake for 10 min, centrifuge at 1000 g for 10 min. Remove 4 mL of the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 200 μL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 5 μm Altex ODS-C18 (Prior to analysis make a conditioning injection of 5 μg each of quinidine, quinine, and quinidine metabolites.)
Mobile phase: MeCN:buffer 4:96 (Buffer was 10 mM K_2HPO_4 adjusted to pH 2.4 with phosphoric acid containing 375 μL/L nonylamine.)
Flow rate: 2
Injection volume: 100
Detector: UV 235

CHROMATOGRAM
Retention time: 3.1
Internal standard: quinine (3.8)
Limit of quantitation: 100 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Noninterfering: acetaminophen, N-acetylprocainamide, amikacin, amiodarone, amitriptyline, carbamazepine, chloramphenicol, desipramine, digoxin, ethosuximide, gentamicin, lidocaine, methotrexate, mexiletine, netilmicin, nortriptyline, phenobarbital, phenytoin, pirmenol, primidone, procainamide, propafenone, salicylic acid, sotalol, theophylline, tobramycin, vancomycin

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 1.5
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, dextromethorphan, diazepam, diphenhydramine, doxepin, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, ibuprofen, imipramine, maprotiline, methadone, methaqualone, midazolam, norchlorimipramine, nordiazepam, nordoxepin, norfluoxetine, nortriptyline, norverapamil, pentazocine, promazine, propafenone, propoxyphene, propranolol, protriptyline, temazepam, trazodone, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: encainide, lidocaine, mexiletine

KEY WORDS
plasma; SPE

SAMPLE

Matrix: blood, urine

Sample preparation: 100 μl Plasma or urine + 1 mL 100 mM NaOH, vortex for 10 s, add 2 mL toluene:butanol 75:25, shake for 10 min, centrifuge at 3000 g for 10 min. Remove the organic layer, add it to 100 μL mobile phase, shake for 10 min, centrifuge at 3000 g for 10 min, discard the organic layer, inject a 40 μl aliquot of the aqueous layer.

HPLC VARIABLES

Column: 100 × 4.6 3 μm CT-sil C18 (Chrom Tech, Hägersten, Sweden)
Mobile phase: MeCN:THF:buffer:1 M phosphoric acid:triethylamine 6:2:92:4:1.6 adjusted to pH 2.7 with phosphoric acid (Buffer was 1 M phosphoric acid:1 M disodium hydrogen phosphate: water 10:10:80, adjusted to pH 2.2.)
Flow rate: 1
Injection volume: 40

Detector: F ex 350 em 450

CHROMATOGRAM
Retention time: 6
Internal standard: quinidine

OTHER SUBSTANCES
Extracted: quinine
Noninterfering: acetaminophen, chloroquine, clomipramine, imipramine, proguanil, salicylate

KEY WORDS
plasma; quinidine is IS

REFERENCE
Mirghani,R.A.; Ericsson,.; Gustafsson,L.L. High-performance liquid chromatographic method for the determination of the major quinine metabolite, 3-hydroxyquinine, in plasma and urine, *J.Chromatogr.B*, **1998**, *708*, 209–216.

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 1 mL Plasma + 200 μL 200μg/mL pronethalol in water + 1 mL 600 mM pH 9.0 borate buffer + 10 mL dichloromethane:isopropanol 80:20, vortex for 1 min, centrifuge at 540-1200 g for 5 min. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 200 μL mobile phase, inject a 50 μL aliquot. Urine. 200 μL Urine + 400 μL 200μg/mL pronethalol in water + 200 μL 600 mM pH 9.0 borate buffer + 10 mL dichloromethane:isopropanol 80:20, vortex for 1 min, centrifuge at 540-1200 g for 5 min. Remove the organic layer and evaporate it to dryness, reconstitute the residue in 200 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak alkyl phenyl
Mobile phase: MeCN:THF:50 mM pH 4.75 phosphate buffer 15:5:80
Flow rate: 1.5
Injection volume: 50
Detector: UV 230 (urine) or F ex 245 em 340 (cut-off filter) (plasma)

CHROMATOGRAM
Retention time: 18.1
Internal standard: pronethalol (12.1)
Limit of detection: 10 ng/mL (F)

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma

REFERENCE
Guentert,T.W.; Rakhit,A.; Upton,R.A.; Riegelman,S. An integrated approach to measurements of quinidine and metabolites in biological fluids, *J.Chromatogr.*, **1980**, *183*, 514–518.

SAMPLE
Matrix: blood, urine
Sample preparation: 250 μL Plasma or 100 μL urine + 25 (plasma) or 10 (urine) μL 1 M NaOH + 100 μL 10 μM quinine in MeOH + 3 mL dichloromethane, shake vigorously at 210 rpm for 5 min, centrifuge at 1400 g for 10 min, remove the aqueous phase, freeze at -50° for 1-2 min. Remove the organic layer and evaporate it to dryness at 50°, reconstitute the residue in 0.1-1 mL mobile phase, vortex for 10 s, centrifuge at 1400 g for 30 s, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 4 × 4 5 μm Lichrospher 60 RP-select B

Column: 125 × 4 5 μm Lichrospher 60 RP-select B
Mobile phase: MeCN:MeOH:buffer 6.2:17.3:76.5 (Buffer was 14.05 g sodium perchlorate and 1.6 mL 60% perchloric acid in 5 L water, pH 2.5.)
Flow rate: 1
Injection volume: 20
Detector: F ex 365 em 415

CHROMATOGRAM
Retention time: 8.87
Internal standard: quinine (10.51)
Limit of detection: 25 nM (urine), 10 nM (plasma)

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma

REFERENCE
Nielsen,F.; Nielsen,K.K.; Brosen,K. Determination of quinidine, dihydroquinidine, (3S)-3-hydroxyquinidine and quinidine N-oxide in plasma and urine by high-performance liquid chromatography, *J.Chromatogr.B*, **1994**, *660*, 103–110.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 208.7

CHROMATOGRAM
Retention time: 11.025

KEY WORDS
whole blood

SAMPLE
Matrix: formulations
Sample preparation: 1 mL Sample + 9 mL mobile phase, inject an aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm Spherisorb phenyl
Mobile phase: MeCN:500 mM KH_2PO_4:100 mM tetrabutylammonium hydrogen sulfate:water 22.5:10:25:42.5 adjusted to pH 5.9 with 10 M NaOH
Flow rate: 2
Injection volume: 20
Detector: UV 268

CHROMATOGRAM
Retention time: 3

OTHER SUBSTANCES
Simultaneous: milrinone

KEY WORDS
stability-indicating; 5% dextrose; injections

REFERENCE
Riley,C.M. Stability of milrinone and digoxin, furosemide, procainamide hydrochloride, propranolol hydrochloride, quinidine gluconate, or verapamil hydrochloride in 5% dextrose injection, *Am.J.Hosp.Pharm.*, **1988**, *45*, 2079–2091.

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 2.9

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine,

phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES

Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clen-

buterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine
